Division 6000 | Center 6600  
Sandia DataShare Application

Responding to a nuclear terrorism incident requires interdisciplinary technical teams dispersed across the nation to urgently diagnose and recommend course-of-action alternatives to render safe imminent threat devices. Distributing technical data from the field working point to home teams who analyze diagnostic images and technical data has now been greatly simplified using Sandia-developed DataShare applications. Sandia DataShare now automatically routes electronic files through specialized channels, accelerating timely decisions that include Presidential authorization for render safe field actions.
