## SNL Sodium Fast Reactor Safety Research

Matthew Denman

Andrew Clark

Severe Accident Analysis and Risk and Reliability Analysis

Presentation to TerraPower

July 14<sup>th</sup> 2016

# Sandia Sodium Reactor Safety Research

## NRC CRBR Sodium Experimental Research

- 1975-1982
- Fuel Vaporization
- Core Debris Coolability
- Accident Precursor Studies

## Sodium Fire Experiments

- 2008-2010
- Pool and Spray Fires
- Proof of Capability

1980

1990

2000

2010

## Contain-LMR Development

- 1982-1992
- Models sodium fires and aerosol transport
- Contain-LMR used in the GE-PRISM Level 3 PRA
- Multiple Containment and Source Term Assessments

## SFR Safety and Licensing Research

- 2009-2016+
- Lead Multi-Lab Gap Analysis
- Contain-LMR ► MELCOR
- Mechanistic Source Term
- CREDO Reliability Database
- Dynamic Probabilistic Risk Assessment
- GIF Task Force

# Overview

- Sandia Historical NRC Sodium Research
  - ACRR fuel vaporization and debris coolability
  - CONTAIN-LMR development
  - Source term modeling for SFRs
- Sodium Fire Experiments
  - Sodium fire modeling
- Sandia Led CONTAIN-LMR revival
  - MELCOR/CONTAIN-LMR implementation
  - ANL/SNL source term
- SNL's SFR Probabilistic Risk Assessment Research
  - CREDO database
  - Advanced PRA
  - GIF

# NRC Sodium Research at Sandia 1975-1992

## Experiments to Support Clinch River

- Fuel Vaporization (Energetic Core Disruption)
- Debris Bed Coolability

## Contain-LMR Development

*Exceptional  
service  
in the  
national  
interest*

Sandia National Laboratories is a multi-program laboratory managed and operated by Sandia Corporation, a wholly owned subsidiary of Lockheed Martin Corporation, for the U.S. Department of Energy's National Nuclear Security Administration under contract DE-AC04-94AL85000.

SAND2016-XXXX PE

# Prompt Burst Excursion Experiments

- Where:
  - Sandia, Annular Core Research Reactor (ACRR)
- Why:
  - Understand mechanical loadings from Hypothetical Core Disruptive Accidents (HCDAs)
- Who:
  - Nuclear Regulatory Commission

PROMPT BURST EXCURSION EXPERIMENT

Figure 1. Instrumented Experimental Package

# Prompt Burst Excursion Experiments

(a)  $t = 7.056$  s  
AEROSOL RELEASE FROM A  
CRACK IN THE CLADDING

(b)  $t = 7.395$  s  
AEROSOL COALESCENCE AND  
CLAD RELOCATION

(c)  $t = 8.451$  s  
START OF FISSION  
GAS RELEASE

(d)  $t = 9.158$  s  
FUEL SURFACE BREAKUP

(f)  $t = 10.049$  s  
FINAL STATE OF FUEL SWELLING

(e)  $t = 9.240$  s  
FUEL SWELLING AND GAS  
RELEASE

# Core Debris Coolability (Results)

Figure 4-9. Dryout Power vs. Sodium Subcooling for all D-Series Experiments

# SNL CONTAIN Code Release History

Version	Date	Improvements
1.0	1984	First Release of Code
1.06	1987	CORCON-Mod2, VANESA, Water dropout,..
1.11*	1991	Moving-grid technique for solving aerosol growth by water vapor condensation
1.12	1991	Add DCH modeling, reactor cavity models for high pressure debris dispersal and vessel blowdown,..
1.2	1995	Film flow on wall structures, energy and mass conservation tracking, CORCON Mod3,..
2.0	1997	Improvements in the DCH and hydrogen burn models

Note that CONTAIN-LMR was derived from CONTAIN 1.11, but was brought to CONTAIN2.0 standards in 2015.

# CONTAIN-LMR Background

- Analysis tool for predicting the physical, chemical, and radiological conditions inside the containment and connected buildings of a nuclear reactor in the event of an accident.
- CONTAIN Code Models
  - Intercell gas flow, including natural circulation
  - Two-phase atmospheric thermodynamics
  - Conduction in structures
  - Convective and radiant heat transfer
  - Condensation/evaporation at structure and pool surfaces
  - Hydrogen combustion
  - Multi-component aerosol processes
  - Transport and decay heating from fission products
  - Ablation of concrete by core debris
  - Does not model reactor core/vessel and accident initiation

# PRISM PSAR - Level 3 PRA

interest*

Sandia National Laboratories is a multi-program laboratory managed and operated by Sandia Corporation, a wholly owned subsidiary of Lockheed Martin Corporation, for the U.S. Department of Energy's National Nuclear Security Administration under contract DE-AC04-94AL85000.

SAND2016-XXXX PE

# Sodium Fire Testing at SNL

- Goals
  - Establish a general metal fire expertise and analysis capability at SNL to address a key safety issue for the next generation of nuclear reactors.
- Experiments were performed back in 2009 and 2010 at Surtsey Facility; part of LDRD project.
- Sodium Pool Fire Experiments
  - 11 outdoor experiments.
  - Measured surface heat fluxes and pool temperatures.
  - Varied thickness ratio of the stainless steel substrate to the liquid sodium.
- Sodium Spray Fire Experiments
  - 2 outdoor and 2 in-vessel experiments.
  - Measured spray heat fluxes and temperatures.
  - Varied average droplet diameters and sodium temperatures.

# Sodium Fire Test Matrix

Test ID	Open or Closed to the Environment	Pool or Spray	Amount of Sodium (kg)	Average Peak Temperature (°C) (bottom of pan for pool)	Melt Generator Pressure at System Dump Time (psi)
P1	Open	Pool	2.6	320	2.6
P2	Open	Pool	2.6	320	2.2
P3	Open	Pool	4.4	800	2.4
P4	Open	Pool	1.0	780	2.5
P6	Open	Pool	4.8	480	3.2
P7	Open	Pool	7.8	600	3.4
P8	Open	Pool	1.6	220	3.6
P9	Open	Pool	6.0	490	3.6
P10	Open	Pool	11.6	746	3.2
P11	Open	Pool	9.6	648	3.9
T1	Open	Spray	4.0	>1200	310.7
T2	Open	Spray	4.0	880	28.4
T3	Closed	Spray	20	480	307
T4	Closed	Spray	20	1205	307

# Outdoor Pool Fire Test

## Small Pool Fire

- Time = 0, sodium introduced to pan.
- Time  $\approx$  4.5 mins, pool fire.
- Time  $\approx$  8 mins, significant crust formation.
- Time  $\approx$  13 mins, complete crust formation.

# Outdoor Pool Fire Test

## Large Pool Fire

- Time = 0, sodium introduced to pan.
- Time  $\approx$  6.5 mins, pool fire.
- Time  $\approx$  11.5 mins, significant crust formation.
- Time  $\approx$  16 mins, complete crust formation.

MELCOR/CONTAIN-LMR  
CNWG

*Exceptional  
service  
in the  
national  
interest*

Sandia National Laboratories is a multi-program laboratory managed and operated by Sandia Corporation, a wholly owned subsidiary of Lockheed Martin Corporation, for the U.S. Department of Energy's National Nuclear Security Administration under contract DE-AC04-94AL85000.

SAND2016-XXXX PE

# Sodium Models from CONTAIN-LMR Sandia National Laboratories

- DOE has funded Sandia for 4 years, starting from FY13
  - We are integrating all sodium physics and chemistry models into MELCOR 2.1 with the sodium coolant fluid capability.
    - Spray fire chemistry
    - Pool fire chemistry
    - Atmospheric chemistry
    - Sodium concrete interaction (SLAM model)
  - Internally, we are upgrading CONTAIN2 (latest version) with CONTAIN-LMR sodium models.
- Expected Schedule:
  - Implementation of all sodium chemistry models by the end of FY16.
  - A combination of experimental, code-to-code and benchmarking studies will be conducted in FY17.

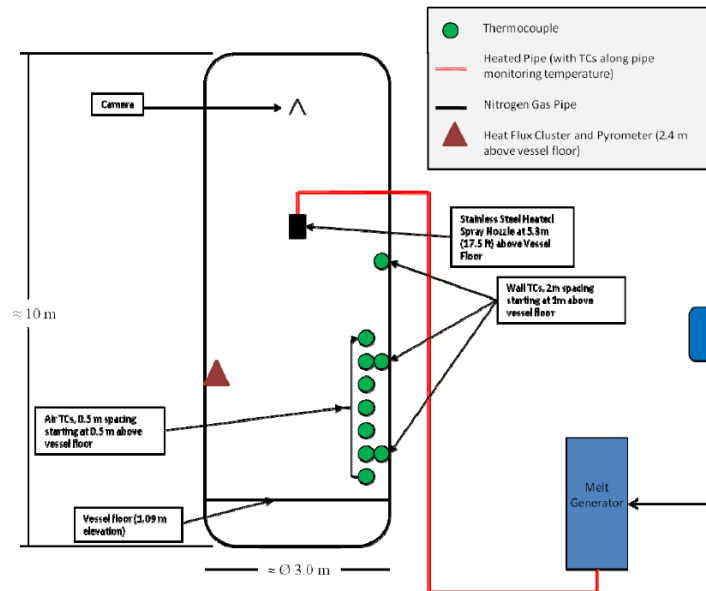

# MELCOR/CONTAIN-LMR Integration

- Motivation:
  - Provide CONTAIN-LMR sodium accident analysis capability under MELCOR integrated severe accident code for SFR source term assessments, level 2/3 PRA, and containment DBA analyses.
- Current Status:
  - Sodium chemistry models from CONTAIN-LMR are being implemented into MELCOR 2.1.
- The MELCOR sodium models will be used in:
  - Trial source term calculations funded by DOE or private vendors.
  - JAEA sodium fire modeling collaboration using SNL and JAEA experiments.
  - Planned MELCOR and ASTEC-Na crosswalk.

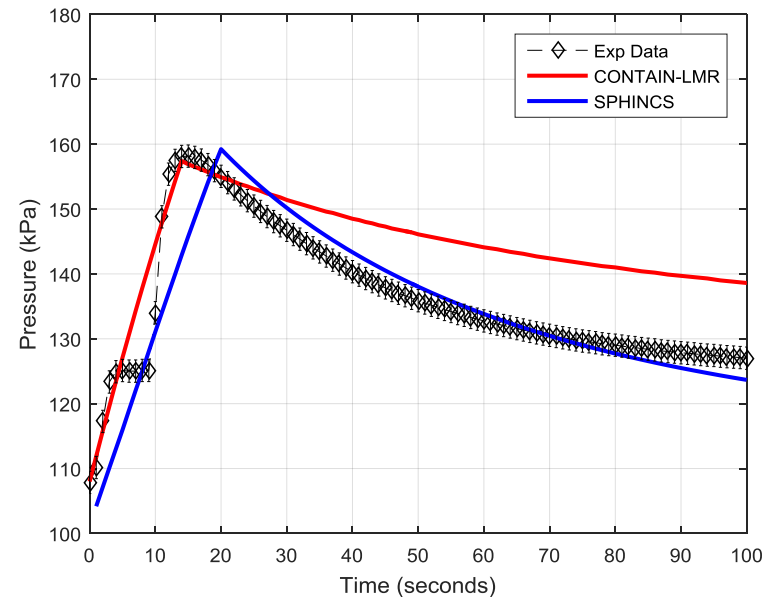

# US/Japan Bilateral

- Conducted under the Civil Nuclear Energy Working Group funded by DOE-NE.
- Focused on modeling:
  - SNL In-Vessel Spray Fire Tests (T3 and T4)
  - JAEA Small Scale Pool Fire Tests (F7-1, F7-2)
- This collaboration allowed SNL to begin modeling sodium fires with CONTAIN-LMR after nearly 20 years of dormancy.

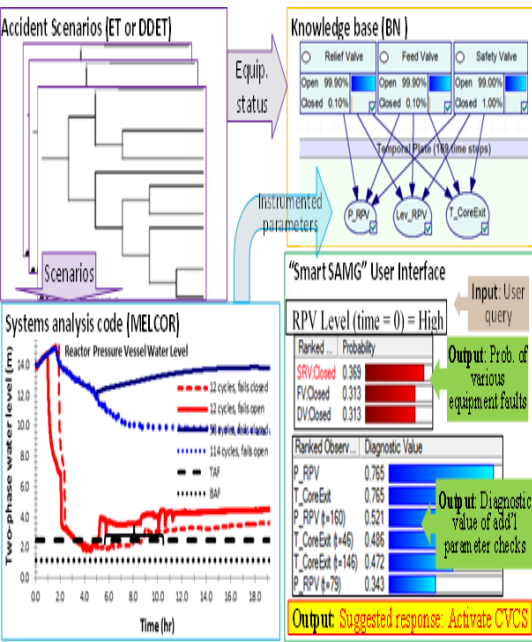

# Initial Results for SNL T3 Test

- Modeling the subsequent pool fire is important for reproducing the pressure response for large spray fires.
- SPHINCS pool fire model more advanced than CONTAIN-LMR pool fire model.
  - Better long term pressure response using SPHINCS pool fire model.

# SFR Reliability Assessments

- Centralized Reliability Data Organization (CREDO) – II
  - Funded by DOE-NE under ART - collaborative work between SNL and ANL
- Objectives:
  - Rebuilding sodium reactor component reliability database using primary sources
  - Support future risk assessments
  - Risk-inform future SFR designs

- Data Sources
  - EBR-II (Idaho, 1964-1994)
  - Fermi Unit 1 (Michigan, 1966-1972)
  - FFTF (Washington, 1980-1992)
  - SRE, Sodium Reactor Experiment (California, 1957-1964)
  - HNPF, Hallam Nuclear Power Facility (Nebraska, 1963-1964)
  - SEFOR, Southwest Experimental Fast Oxide Reactor (Arkansas, 1969-1972)

# Probabilistic Risk Assessments Research

## Dynamic Event Trees and Clustering

# Summary

- SNL has a long history of sodium reactor safety research.
- SNL knows how to do sodium experiments.
- SNL has been conducting safety research for DOE for the past 8 years:
  - Evaluating licensing gaps
  - Sodium Fire Modeling / Source Term Evaluations
  - Conducting PRA research
  - Supporting the Safety Design Criteria GIF Task Force
