A Design Revolution

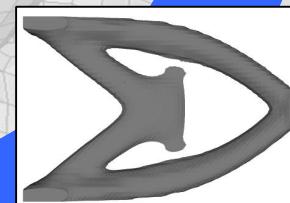

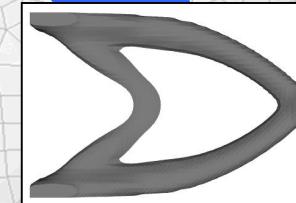

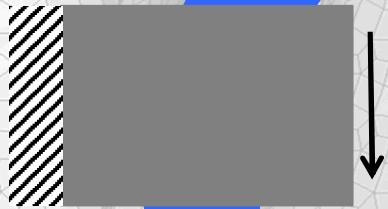

Topology Optimization

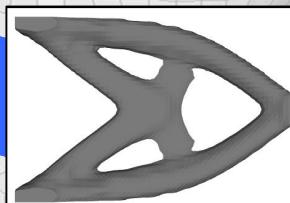

Specify design domain and functional requirements.

Iteratively solve physics simulations to determine optimal distribution of material.

The result is a design optimized for the functional requirements

Examples

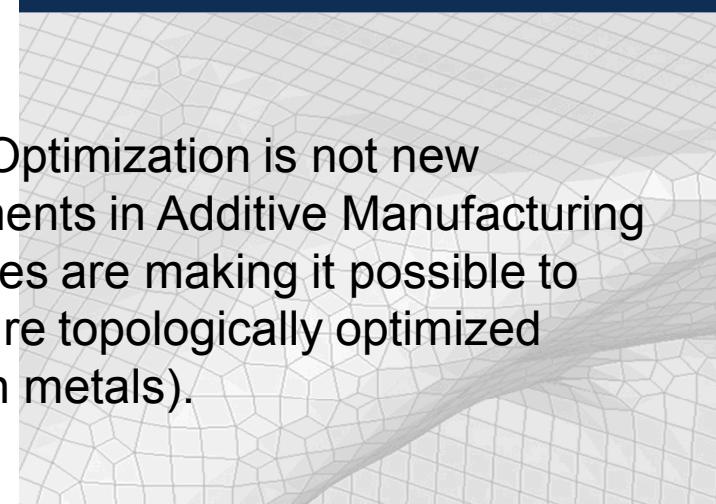

Examples

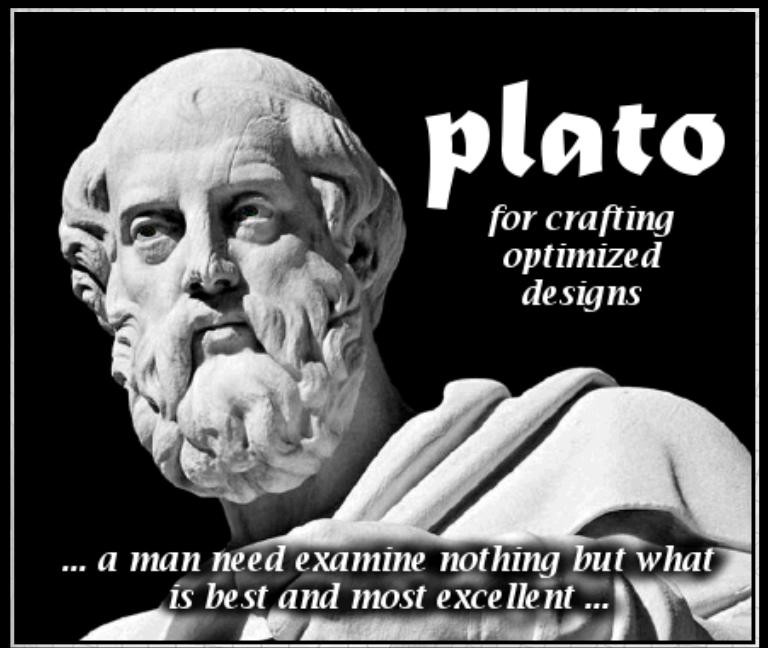

Why now?

- Topology Optimization is not new
- Advancements in Additive Manufacturing technologies are making it possible to manufacture topologically optimized designs (in metals).

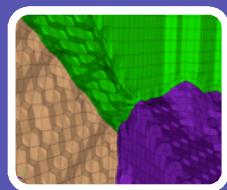

Topology Optimization

- PLATO

Physics Solvers

- SIERRA / ALBANY / ...

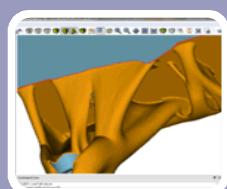

Meshing and Geometry

- CUBIT / ACIS / KCM

Optimization and UQ

- DAKOTA / ROL

Design Environment

- SAW

What are the challenges?

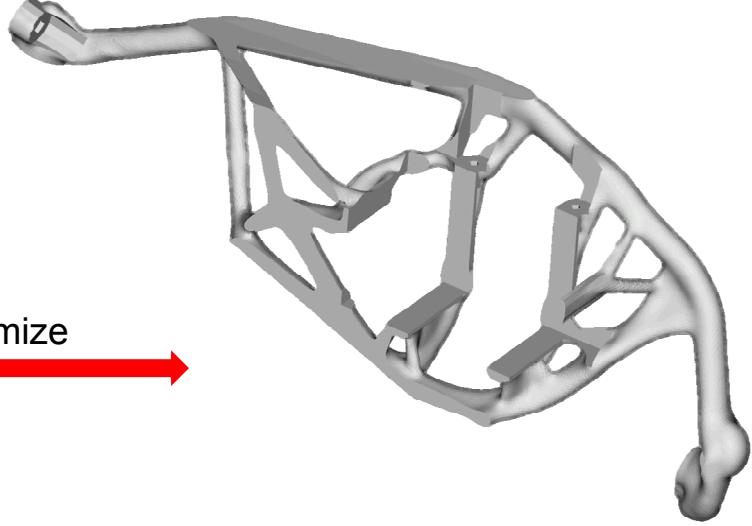

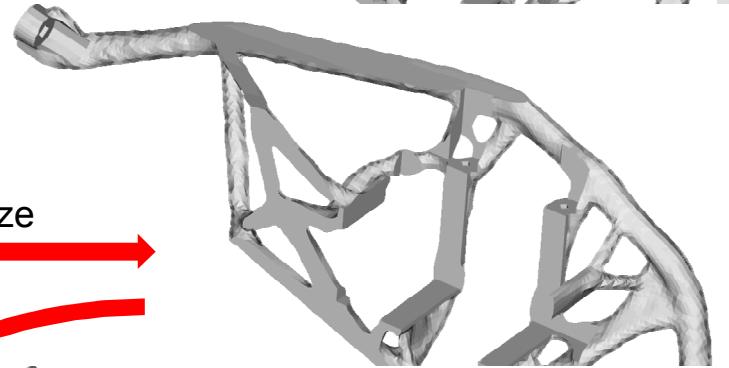

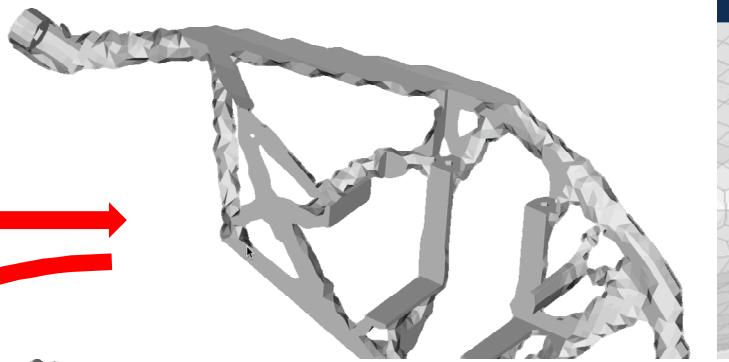

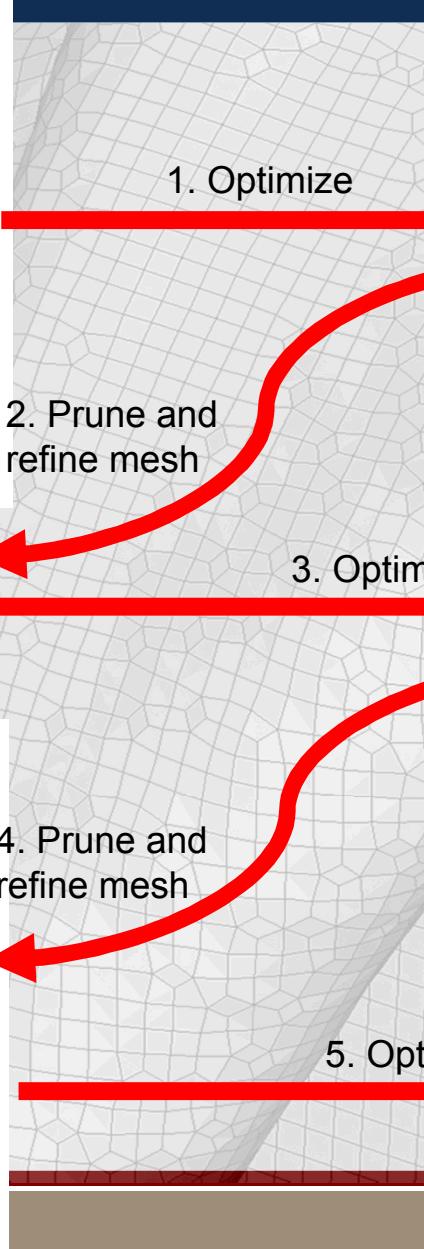

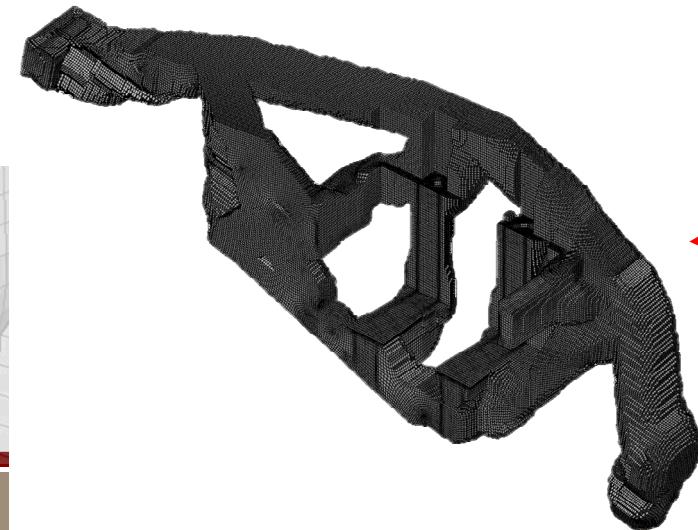

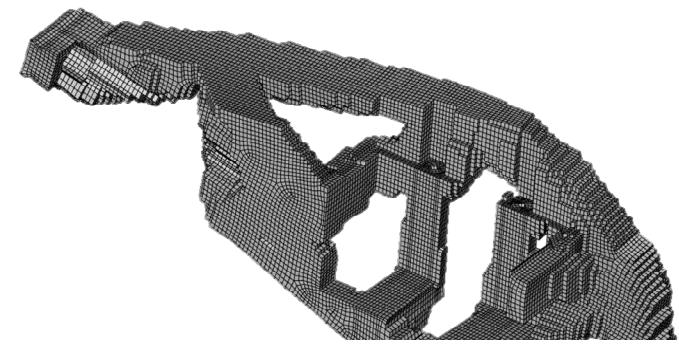

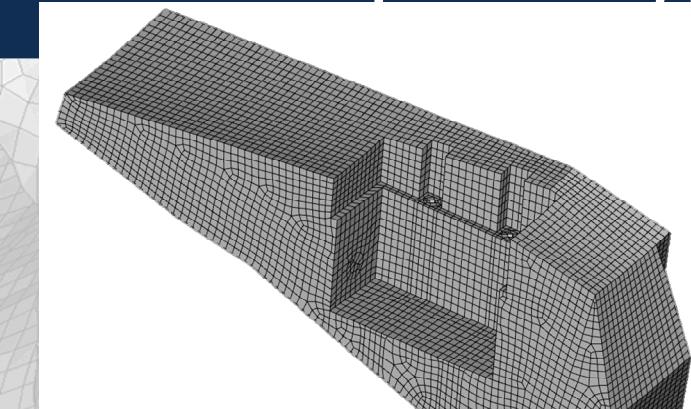

Challenges

1. Incorporating more challenging physics
2. Interfacing with multiple physics codes
3. Designing with lattices
4. Designing to avoid support material
5. Delivering topology optimization in a usable tool
6. Getting topologically optimized designs back into a traditional workflow
7. Robust vs. optimized designs—taking into account uncertainty in loads and materials
8. Model representations in CAD, analysis, and synthesis

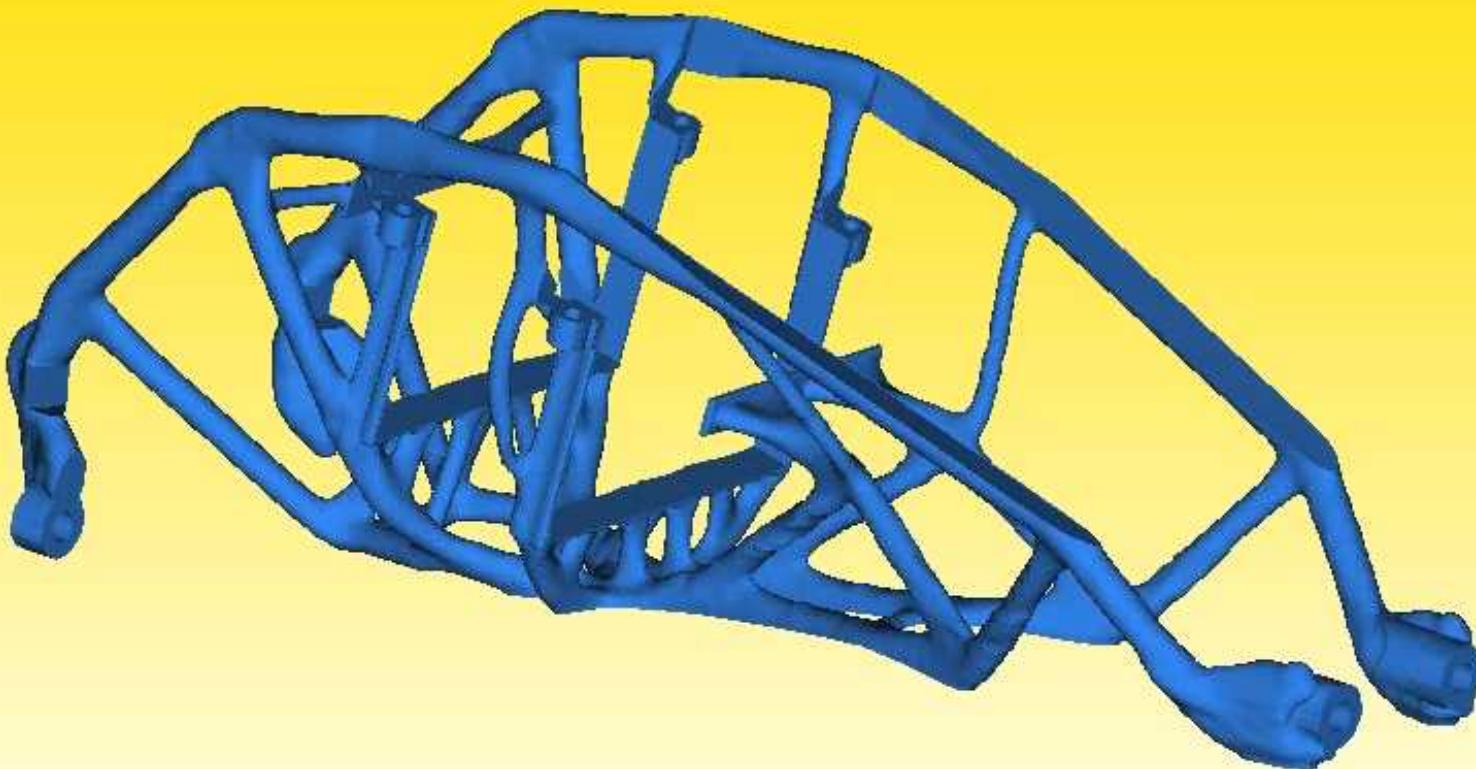

What we are doing...

1. Stress minimization, modal analysis, CG constraint
2. Plato “engine” architecture, multi-physics problems
3. Homogenization and conformal lattice insertion
4. <Future>
5. HPC-enabled interactive design environment, prune/refine work
6. STL->CAD conversion
7. Forays into load uncertainty-enabled topology optimization
8. Volumetric-based geometry representations using level-sets

Mesh pruning/refining

1. Government = FREE
2. Needs a Government Use Notice (GUN)
sierradist.sandia.gov
3. Questions?
plato3d-help@sandia.gov
4. Windows (sort of), Linux and Mac
5. Jobs can be run locally or on massively parallel environments
6. Includes user's manual and tutorials

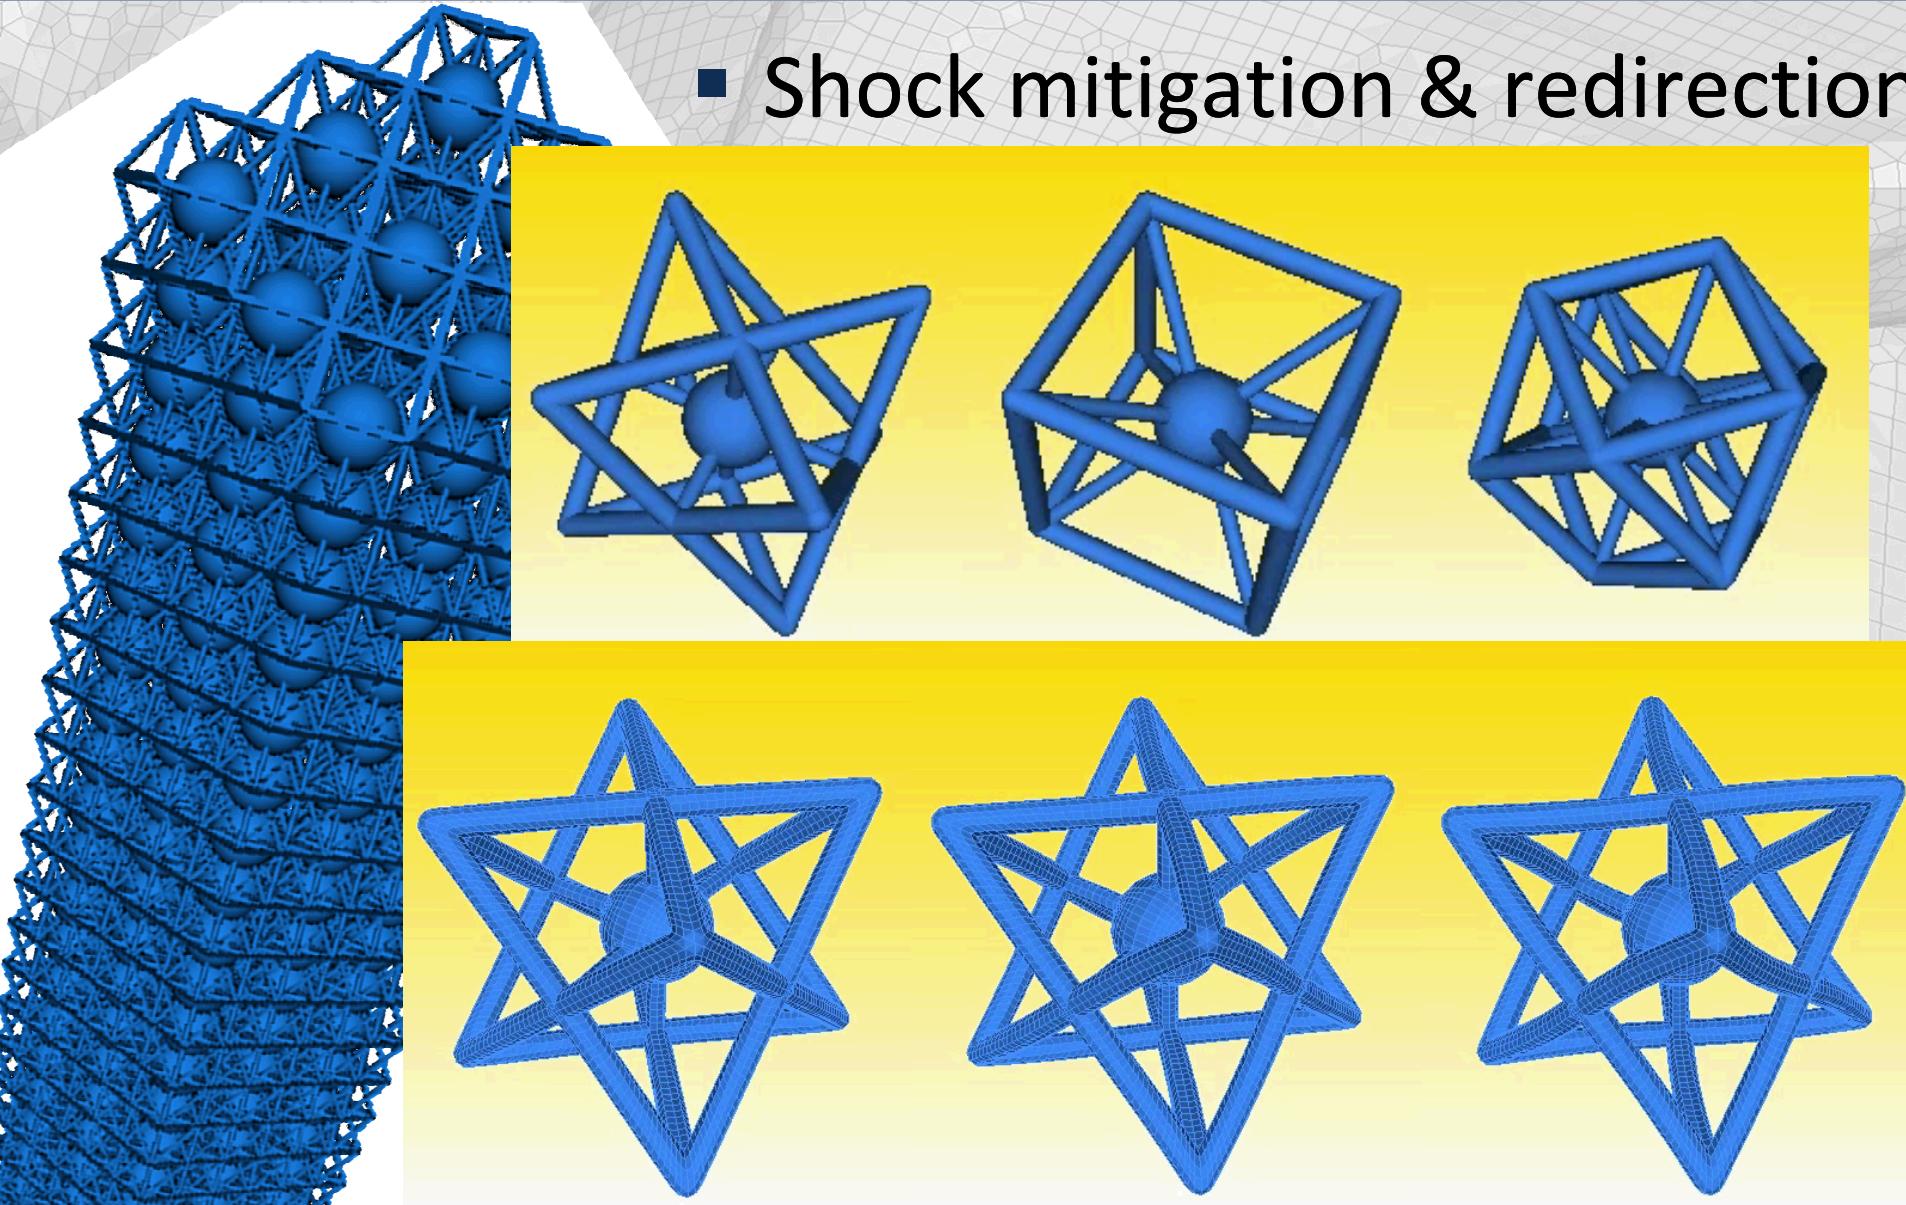

Revolution: Where Does It Go From Here?

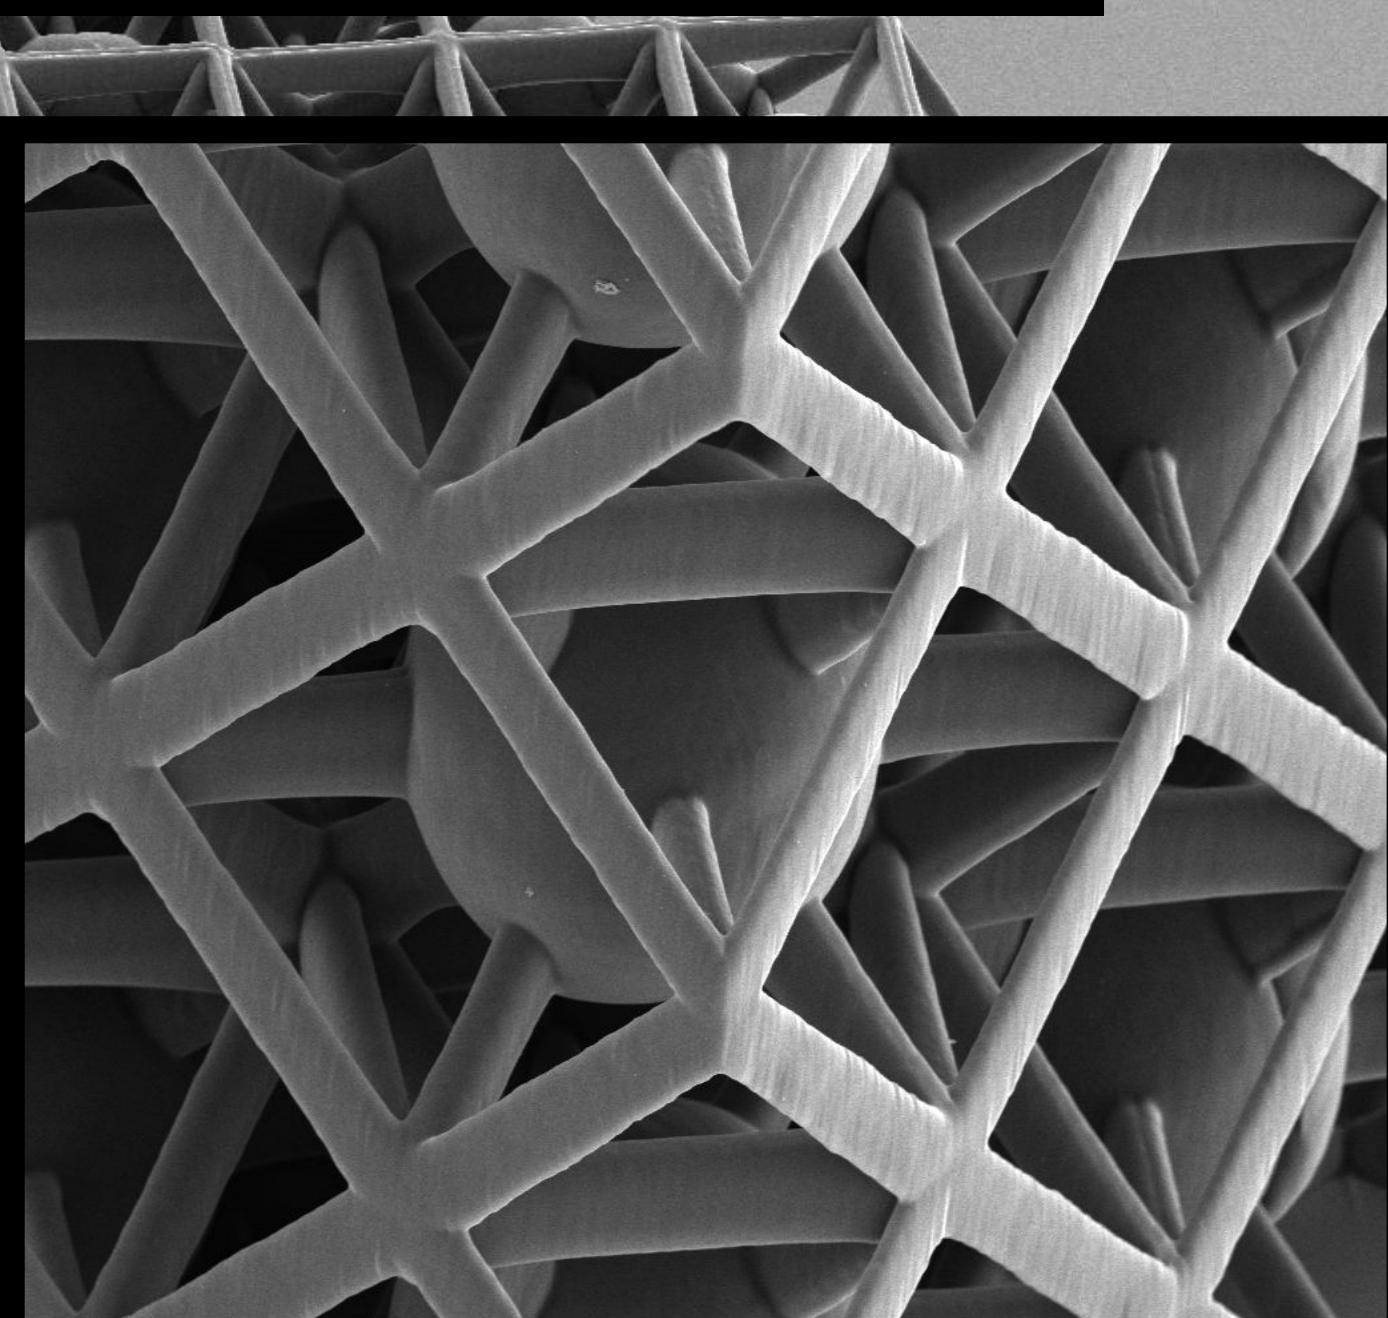

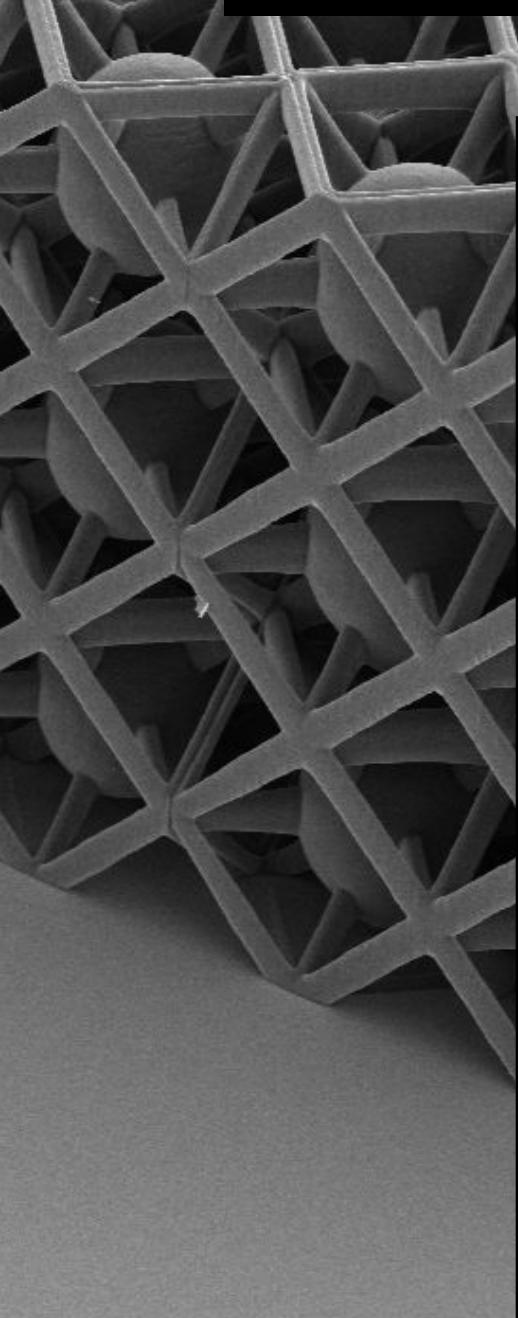

- Research to Production
- Meta-Material Design Focus
- AM Process-Aware / Process Optimal
- Plug-N-Play Solvers
- Level Sets: Shape Optimization Coupling
- Performance
- More Physics (Thermal / EM / Fluids)
- Design Option Overload

Transient Response Tailoring

- Shock mitigation & redirection
