

# Testing the Enhanced Data Authentication System (EDAS)

SAND2014-17709PE

EDAS is a technical concept to branch operator instrumentation signals to provide a secure copy to an inspectorate.

Direction générale  
de l'énergie

U.S. DEPARTMENT OF  
**ENERGY**

Sandia National Laboratories is a multi-program laboratory managed and operated by Sandia Corporation, a wholly owned subsidiary of Lockheed Martin Corporation, for the U.S. Department of Energy's National Nuclear Security Administration under contract DE-AC04-94AL85000. SAND NO. 2011-XXXXP

# EDAS E-Poster Agenda

- EDAS Technical Concept
- Requirements, robustness and integration testing and results

Operator Instrumentation

- Upcoming Field Trial and UK Springfields fuel fabrication facility
- Live demonstration

# Enhanced Data Authentication System

Technical Concept: branch operator instrumentation signals to provide a secure copy to an inspectorate.

Testing: EDAS meets both operator and inspector requirements

Field trial: demonstrate EDAS branching instrumentation under realistic operating conditions

[Acknowledgements](#)

# EDAS Technical Concept

- Branched data is a complete, accurate, and confidential replica of operator signal line
- Protects operator system by isolating instrumentation signal line from EDAS electronics
- Designed for low cost deployment, employs mainly commercially available hardware
- Conforms to standard communication interfaces

# Requirements Testing and Results

Testing performed with various communication patterns and operational scenarios

Requirement	Test
Non-interfering	Ensure the EDAS cannot corrupt the operator signal line, intentionally or unintentionally, under normal operations and failure modes
Cryptographic	Ensure the branched data line is confidential and authentic
Accuracy and Completeness	Ensure the branched data is a byte-by-byte replica of the operator signal line
Robustness	Ensure EDAS operates correctly under stressing data inputs
Longevity	Ensure EDAS operates correctly with normal data inputs for long time periods

EDAS passed all tests

# Field Trial at UK Fuel Fabrication Facility

- Demonstrate secure branching under realistic operating conditions
- Identify any unanticipated issues with EDAS operation and installation
- Derive narrative of facility activity from multiple operator instruments

# Acknowledgements

- EDAS teams:
  - EC Directorate-General for Energy, Luxembourg
  - EC Joint Research Centre, Ispra, Italy
  - Sandia National Laboratories, USA
