

High Frequency Link Converters using Advanced Magnetics

Modeling and Motivation

Materials and Materials Synthesis

Magnetic Properties

Magnetic Material	J_s (T)	ρ ($\mu\Omega\cdot\text{m}$)
Metglas 2605SC	1.60	1.37
FINEMET (Hitachi)	1.25	1.20
VITROPERM (Vacuumschmelze)	1.20	1.15
Ferrite (Fexxocube)	0.52	5×10^6
α -Fe	2.15	0.05
γ -Fe ₄ N	1.89	~ 200

- Bulk FeN has high permeability
- High magnetic saturation point ($\sim 95\text{--}190\text{ A}\cdot\text{m}^2/\text{kg}$)
- Good candidate material for transformer core in high frequency link converter

Microstructural Characterization
