Red Team Assessments of Critical Federal Networks

Critical federal networks are under constant cyber-attack from malicious actors looking to undermine our nation's security. Sandia's National-Security Cyber Red Team (NCRT) is tasked with assessing vulnerabilities in key DHS systems responsible for the defense of government networks. To detect and mitigate vulnerabilities, NCRT has performed multiple cyber security assessments using a rigorous methodology that originated with our mission to ensure a safe and reliable nuclear stockpile. The NCRT methodology has been developed and refined through decades of experience on cyber and cyber-physical systems.

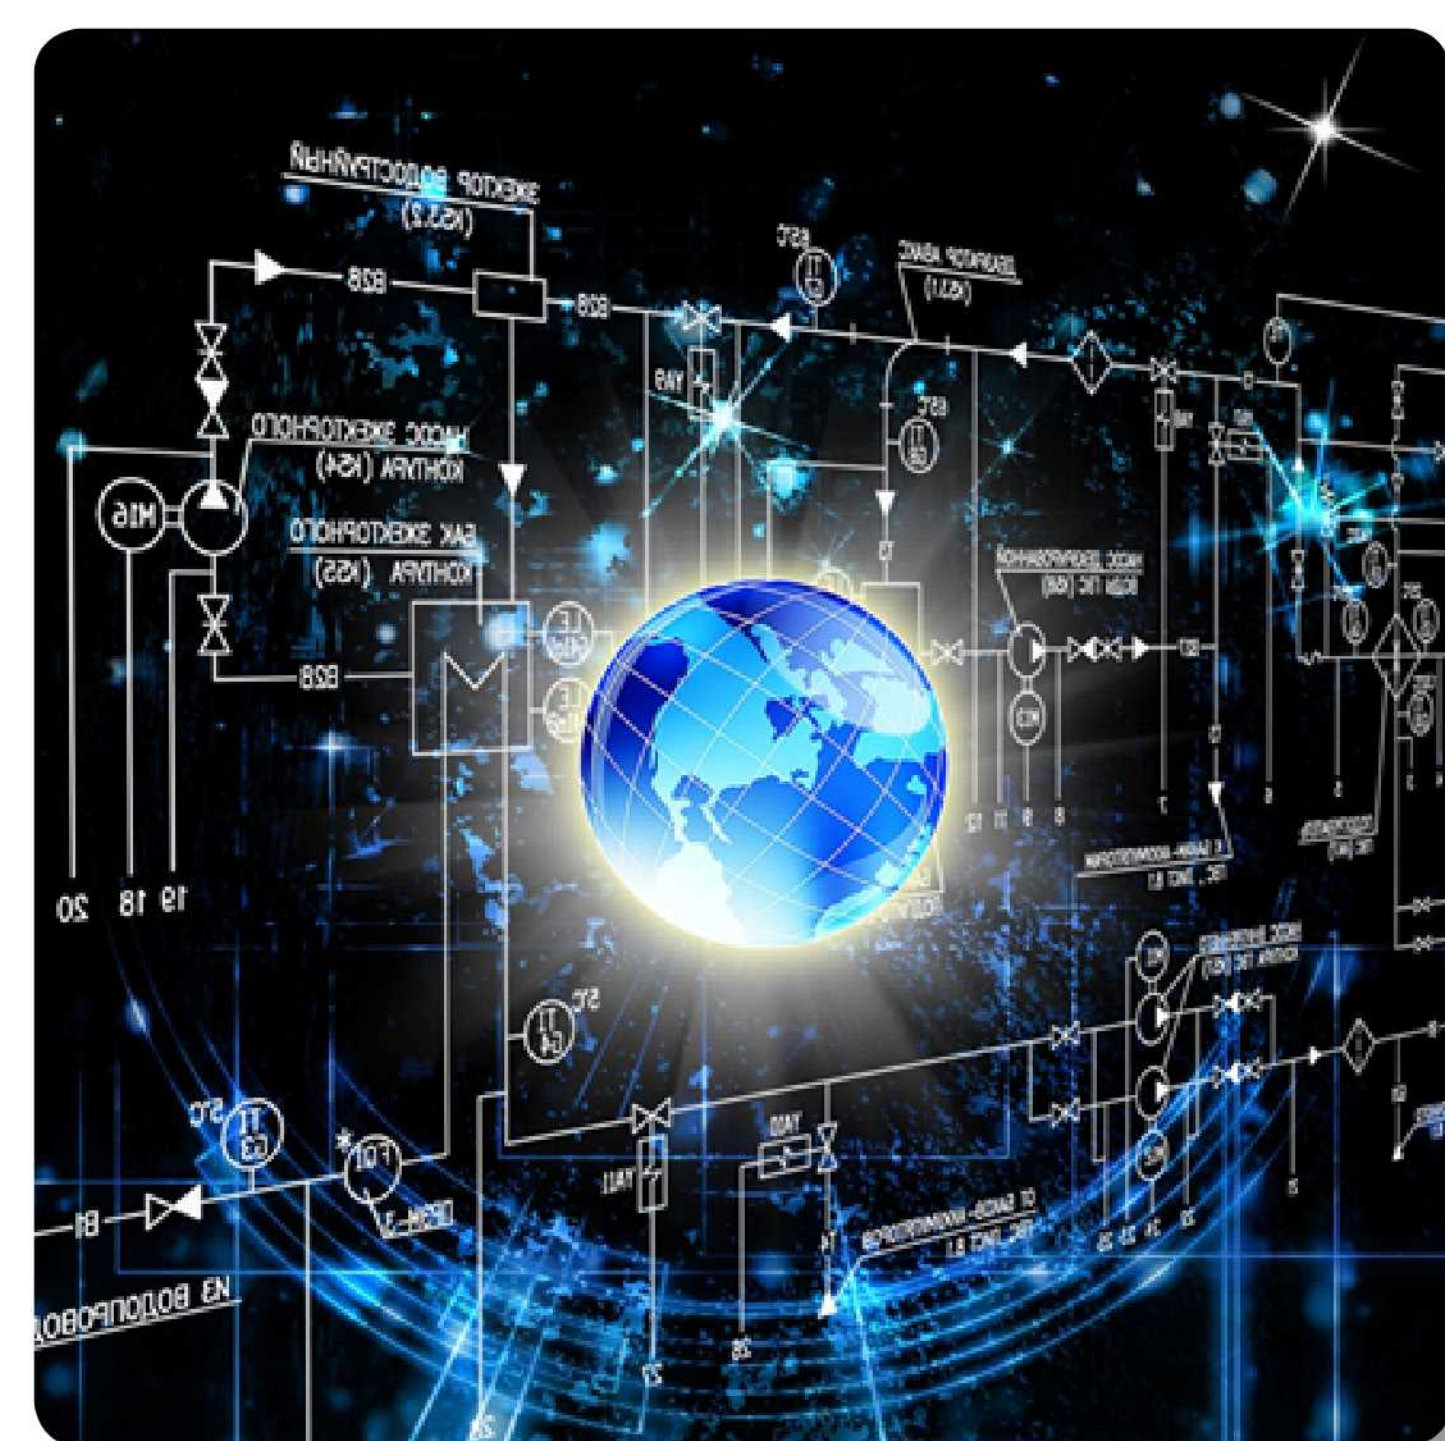

Point of Contact: **Russel Waymire**

NCRT leverages a rigorous methodology that originated with the lab's mission to ensure a safe and reliable nuclear stockpile.

NCRT specializes in non-traditional cyber assessments: Heterogeneous networks, cyber-physical, nation-scale networks, ad-hoc networks, mobile devices, and special systems. NCRT supports cybersecurity for critical civilian, homeland security, and defense programs.
