ABOUT THE PHOTONICS MICROSYSTEMS TECHNOLOGY DEPARTMENT

History	<ul style="list-style-type: none">• Fabricating traps for quantum computing since 2005• Leverage MESA and packaging facilities• Trapping experiments since 2009• >12 collaborations, >20 different designs
Experimental capabilities	<ul style="list-style-type: none">• Calcium and Ytterbium ion trapping• High fidelity single and two qubit gate operations• Room temperature and cryogenic operation• Custom electronic control system for qubit manipulation
Personnel	<ul style="list-style-type: none">• Primarily AMO experimentalists, computer scientists, & fabrication/packaging engineers in department [25 people total]• Strong collaborations with electrical engineers, QC theorists, & AMO theorists
Keywords	<ul style="list-style-type: none">• Ion traps, quantum computing, high voltage device fabrication, atomic clocks, heterogeneous integration, photonics

Trap design and fabrication

Matthew Blain
Ed Heller
Corrie Herrmann
Becky Loviza

John Rembetski
Paul Resnick
MESA team

Trap design and experimental work

Peter Maunz
Craig Hogle
Daniel Lobser
Melissa Revelle
Dan Stick
Christopher Yale

Trap packaging

Ray Haltli
Drew Hollowell
Anathea Ortega
Tipp Jennings

GST protocols

Robin Blume-Kohout
Kenneth Rudinger
Eric Nielsen

Theory Support

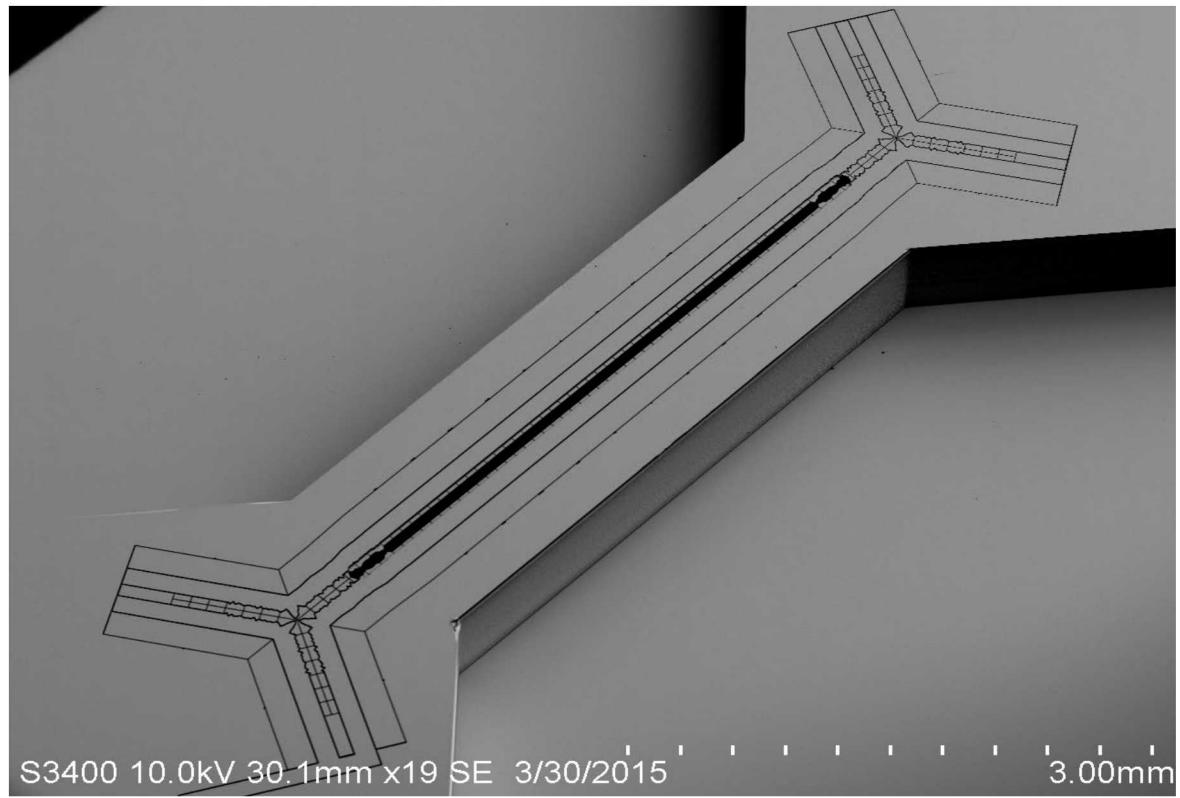

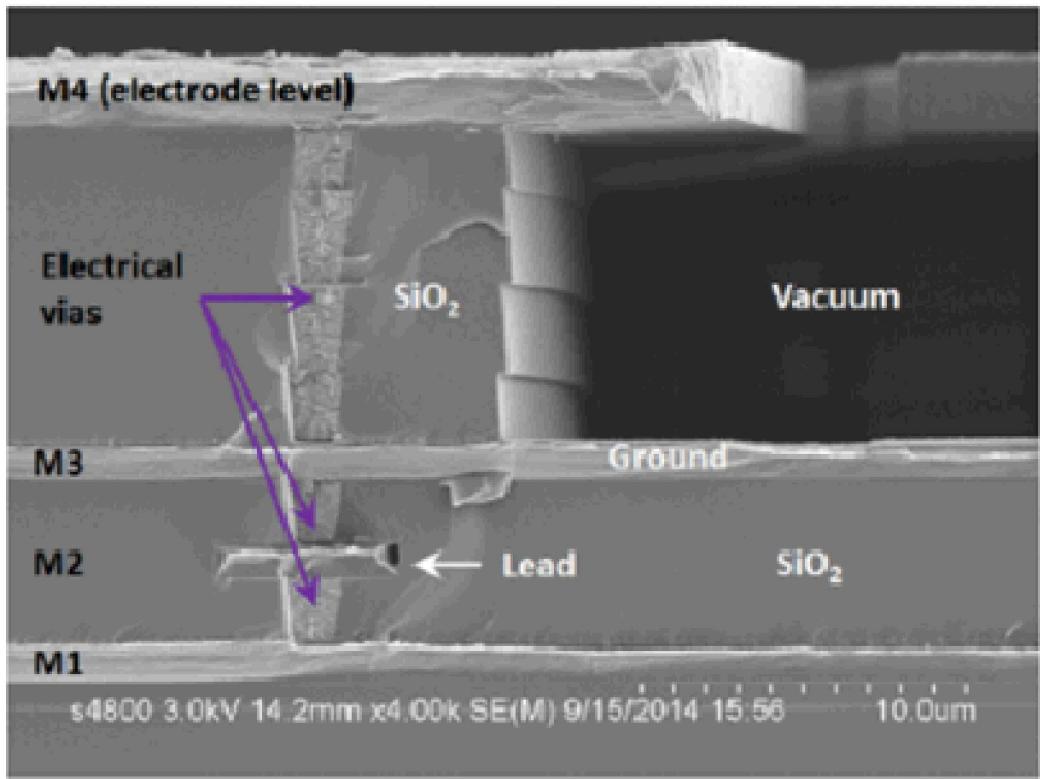

Brandon Ruzic
Kevin Young
Setso Metodi

RF Engineering

Christopher Nordquist
Stefan Lepkowski

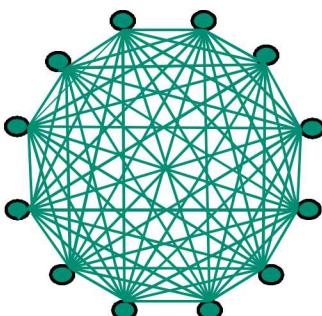

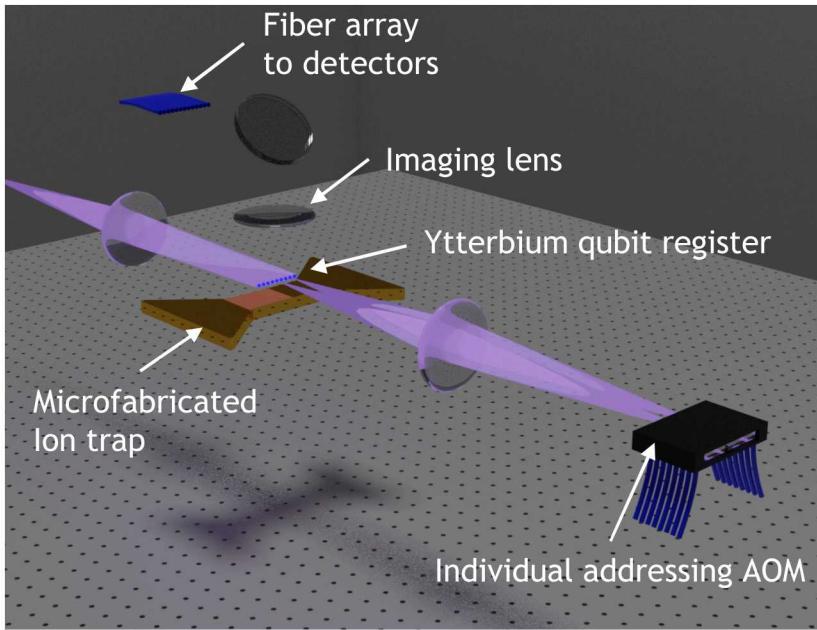

CURRENT WORK IN QUANTUM INFORMATION SCIENCES

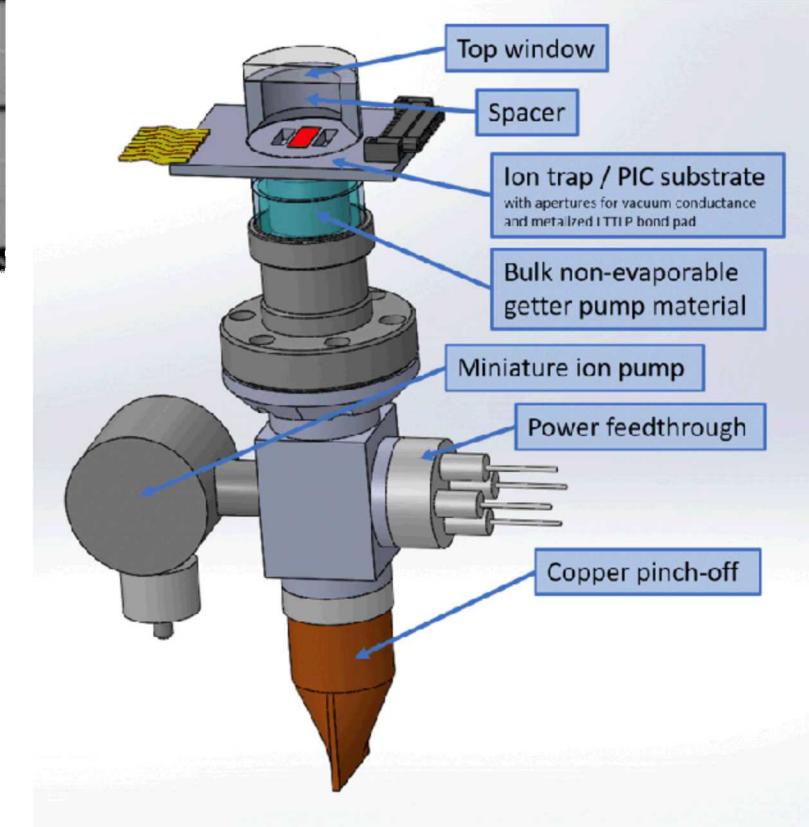

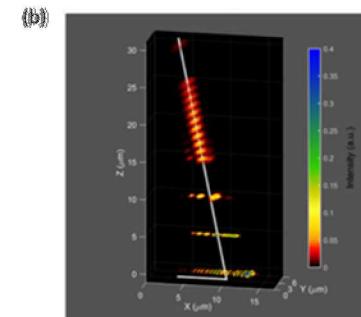

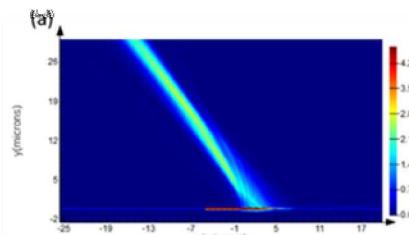

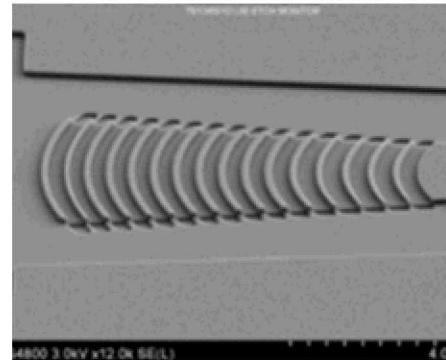

CURRENT WORK IN QUANTUM INFORMATION SCIENCES

QSCOUT *Quantum Science Open User Testbed*

TICTOC *Trapped Ion Clock using Technology On Chip*

Research Spotlight Forum

Collaboration opportunities

- Trap operation and characterization, e.g. material studies of electric field noise
- Novel uses of ion traps
- Incorporation of enabling technologies
- Mass spectrometry
- QSCOUT algorithm proposals
- Postdocs!
