Evaluation of Experimental Hyperion Infrasound Shrouds as an Improved Means of Wind Noise Attenuation

Laboratory testing

Effects of new wind attenuation shroud designs on sensor amplitude and phase response.

Field testing

Attenuation of wind-induced noise by new shroud designs.

Authors: George Slad and John Merchant, Sandia National Laboratories

Sandia National Laboratories is a multimission laboratory managed and operated by National Technology and Engineering Solutions of Sandia, LLC, a wholly owned subsidiary of Honeywell International, Inc., for the U.S. Department of Energy's National Nuclear Security Administration under contract DE-NA-0003525. This work was funded by the U.S. Department of Energy's National Nuclear Security Administration. The views expressed here do not necessarily reflect the views of the United States Government, the United States Department of Energy, or Sandia National Laboratories.
