

# PROJECT ON NUCLEAR GAMING

# Experimental Gaming: Introducing the Project on Nuclear Gaming's SIGNAL Framework

**PRESENTED BY**

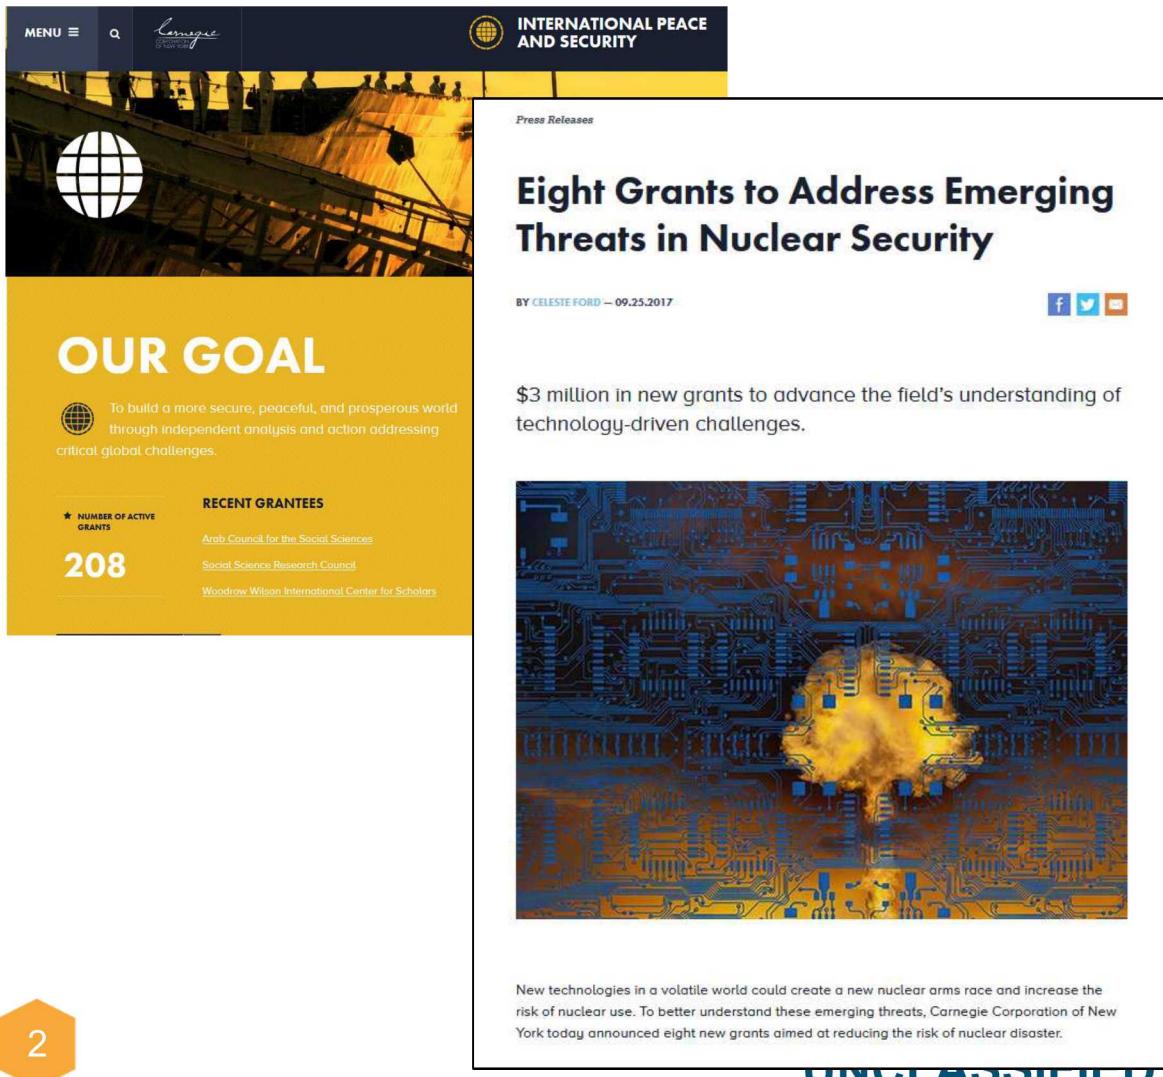

Andrew Reddie, *University of California, Berkeley*

A person with glasses is seen from behind, interacting with a large-scale touch screen display. The display features a large green hexagonal grid with a yellow flower icon in the center. To the right of the grid is a white rectangular box with text and a small illustration. Below the grid, the text "Soy un robot de mi casa" is visible. The overall scene is set within a hexagonal frame.

# The Project on Nuclear Gaming is supported by the CCNY International Peace and Security Program.

The screenshot shows the Carnegie Corporation of New York's website. The header includes a menu, a search bar, and the 'INTERNATIONAL PEACE AND SECURITY' logo. The main content features a large image of a construction site at night. The 'OUR GOAL' section includes a globe icon and text about building a secure, peaceful, and prosperous world. The 'RECENT GRANTEES' section shows a count of 208 grants. The central article is titled 'Eight Grants to Address Emerging Threats in Nuclear Security' by Celeste Ford on 09.25.2017. It discusses \$3 million in grants for understanding technology-driven challenges. The image for the article shows a yellow explosion on a blue circuit board. A footer note at the bottom of the article page states: 'New technologies in a volatile world could create a new nuclear arms race and increase the risk of nuclear use. To better understand these emerging threats, Carnegie Corporation of New York today announced eight new grants aimed at reducing the risk of nuclear disaster.'

\$500K funding over two years

*“...assess the implications for global strategic stability of advances in technologies...”*

# The Project on Nuclear Gaming is a consortium.

- UC Berkeley Goldman School of Public Policy
- Nuclear Science and Security Consortium, an NNSA-sponsored program to develop new generation of laboratory-integrated nuclear experts

- Systems Analysis and Engineering experience
- Support application of Sandia experimental and serious game technology & subject matter expertise
- Mentoring and hosting of student interns

- Center for Global Security Research
- Providing expertise in weapons effects and international security
- Mentoring and hosting of student interns
- Organizing and hosting project workshops

# The Project on Nuclear Gaming

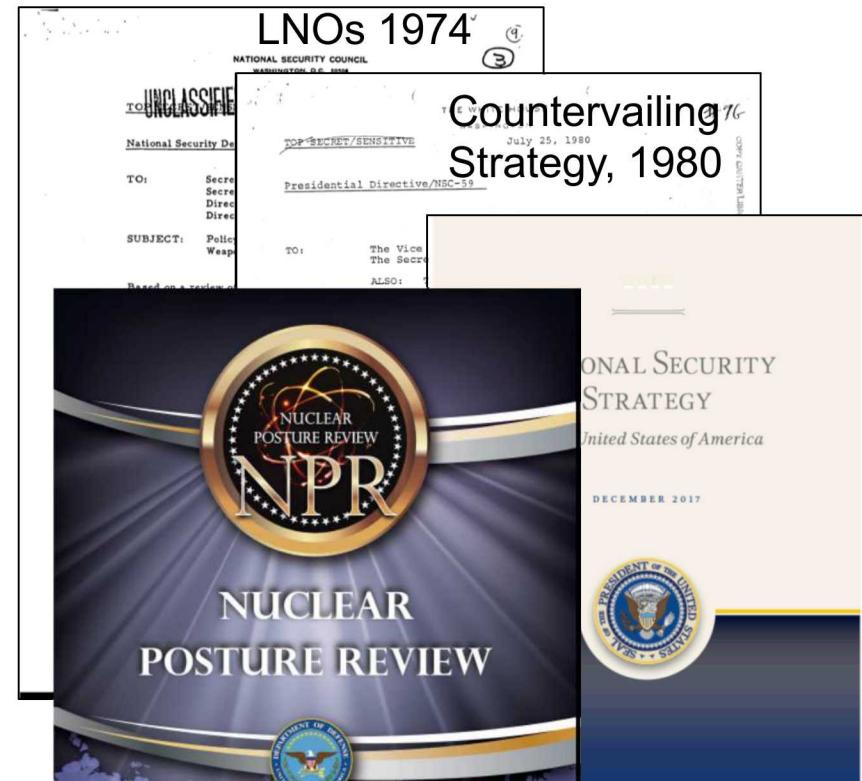

## Research Questions:

- How can experimental games be used to examine real-world problems?
- What impact might varying weapon capabilities have on deterrence and strategic stability?

## Partnering and Mentoring Objectives:

- Strengthen and leverage existing partnerships between National Labs and Universities
- Engage the next generation of scientists, analysts, and researchers on nuclear matters

PoNG is NOT making an assessment of any specific national policy or conflict scenario, but is informed by a long history of strategy and concepts.

# What happens when “tailored effects” nuclear weapons are introduced into a conflict scenario?

AR6

- Do these weapons change the dynamics of conflict escalation?
- Do they alter the nuclear threshold (morally, tactically, or otherwise)?

Build military base on an open hex.

Location	Requirements
Hex	Cannot contain resources or infrastructure
Territory	Occupied, owned, or neutral

Destroy multiple hexes.

Hex location	Effect
Determined by 1d6 roll blast pattern (see player aid)	Destroy hexes, including infrastructure and occupying forces, for remainder of the game.

Build a town in your state, or turn a town into a city.

Location	Requirements
Hex	Cannot contain resources
Territory	Owned

SIGNAL

Conventional Military

High-Precision Low-Yield Nuclear Weapon

Destroy a single hex.

**AR5** Do want to use this explicit RQ...

Andrew Reddie, 5/28/2019

**AR6** Complexity-scarcity gap diagram?

Andrew Reddie, 5/28/2019

# Research Design: How Should We Study Nuclear Deterrence?

AR7

## Traditional Approaches:

- Empirical data
- Formal models
- Computer-based models
- Survey Experiments

## Our Contribution:

- Experimental Gaming

## Slide 6

---

AR7

We need to tell a story about why alternative DGPs are inappropriate and concerning how we arrived at the method that we're using today.

Andrew Reddie, 5/29/2019

# Wargaming has a long history...

## Seminar and Scenario-based Wargaming

- Designing around identified policy challenges
  - Useful for policy-oriented inquiry
- “Open-ended” design with large game staffs and in-depth preparation
  - Blue, Red, and White Cell games
- Engaging high-level policy-makers
  - Training, education, and strategy
- Ex. Deterrence and Escalation Game and Review (DEGRE)

PoNG's SIGNAL TTX at LLNL, May 2018

## ... And some limitations

Existing wargaming methods do not provide for outcome-oriented inference:

- Generalizable insights require data to perform large-*n* analysis.
- Experiments have standards with regard to *replication* and *reproducability*
  - Often, existing games vary on the basis of how they are presented, the identity of the players, and actions taken within the adjudication cell.
  - Few games split their player populations into *treatment* and *control* groups to test a variable of interest.
  - Sponsor bias

# Experimental gaming aims to be...

## Replicable and Reproducible

- Strengthen our conclusions and address human variability by replicating a set of initial conditions and capturing significant quantities of data.

## Controllability

- Allow for variable manipulation in initial conditions as well as in-game manipulation.

## Clear Instrumentation

- Capture clear data about when a player chooses to perform actions in the game.

## Neutrality

- Researchers uninvolved with the actual data gathering, reducing bias.

## Fidelity/Complexity

- Creating a simulation that captures the key features of the world surrounding the research question.

# SIGNAL represents our team's first experimental gaming platform...

Incorporates “elements” of deterrence

- Military
- Economic
- Political/diplomatic

Incorporates “dynamics” of deterrence

- Bargaining
- Signaling
- Uncertainty

UNCLASSIFIED UNLIMITED RELEASE

# The Project on Nuclear Gaming uses controlled experiments...

## SIGNAL Online (Any Players)

- Highly structured scenarios
- Rules-based adjudication
- Structured player dynamics
- Quantitative data collection

## SIGNAL Board (Knowledgeable and Expert Players)

- Highly structured scenarios
- Rules-based adjudication
- Fluid conversation and over-the-table player dynamics
- Improved quantitative data collection

## ... and benchmarks

### SIGNAL TTX (Elite Players)

- Fluid exploration of scenario features, player concerns, and boundaries for outcomes
- Control team adjudication
- Qualitative and narrative data collection

### SIGNAL Survey Experiment

- Questionnaires focused on evaluating subject responses to specific situations
- No dynamic interaction
- Serves as a control set

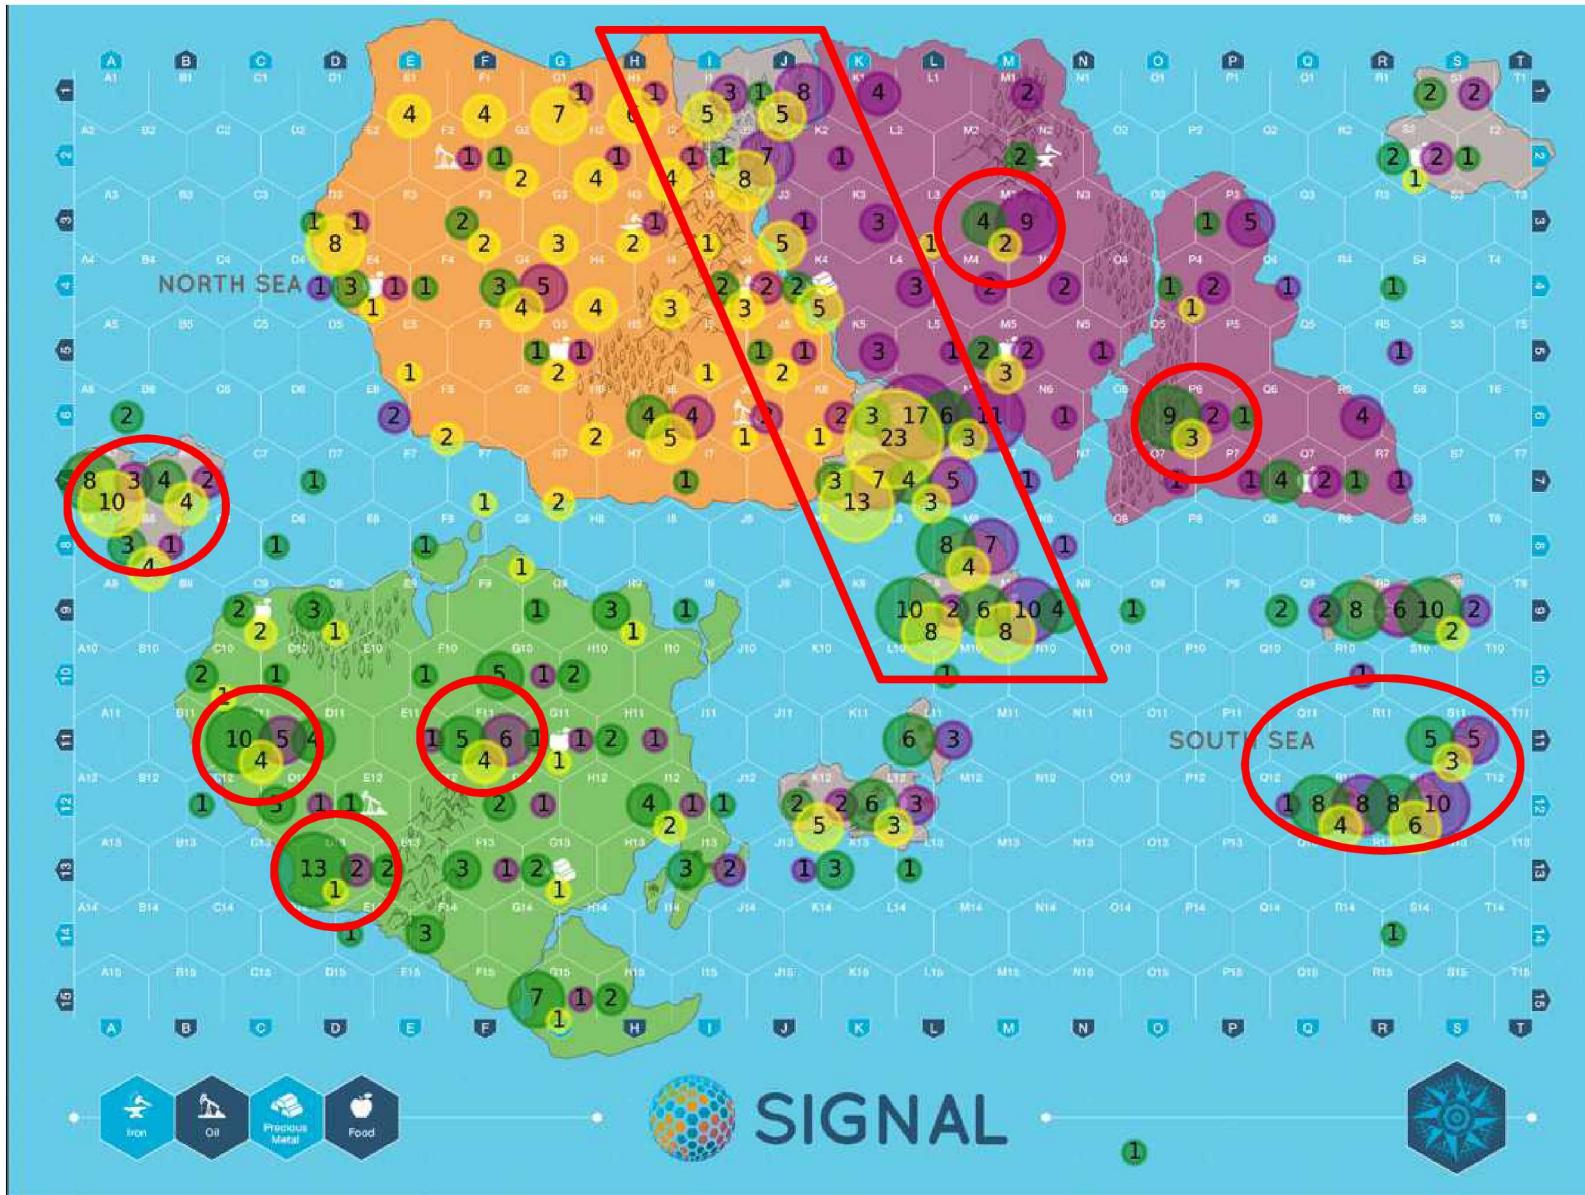

# High-level statistics from different treatments have similarities and differences.

Metric	All Rounds		Without Last Round	
	Traditional	Tailored	Traditional	Tailored
Number of Games	19	27	19	27
Total Actions	757	1103	504	839
Average Actions Per Game	39.8	40.9	26.5	31.1
Conflict Actions	276 (36%)	385 (35%)	163 (32%)	290 (35%)
Conventional Actions	175 (23%)	203 (18%)	106 (21%)	157 (19%)
Nuclear Actions	44 (6%)	124 (11%)	21 (4%)	90 (11%)
Traditional Nuclear Actions	44 (6%)	105 (10%)	21 (4%)	77 (9%)

NOTE: While based on real data, these results are preliminary, non-conclusive, and for illustration only.

# This method allows us to... Illustrate trends in player behaviors and strategies

# UNCLASSIFIED UNLIMITED RELEASE

## To analyze the likelihood of nuclear use...

Using probit regression models, the treatment condition in which player are given additional HPLY and EMP capabilities yields a **higher** predicted probability of nuclear use.

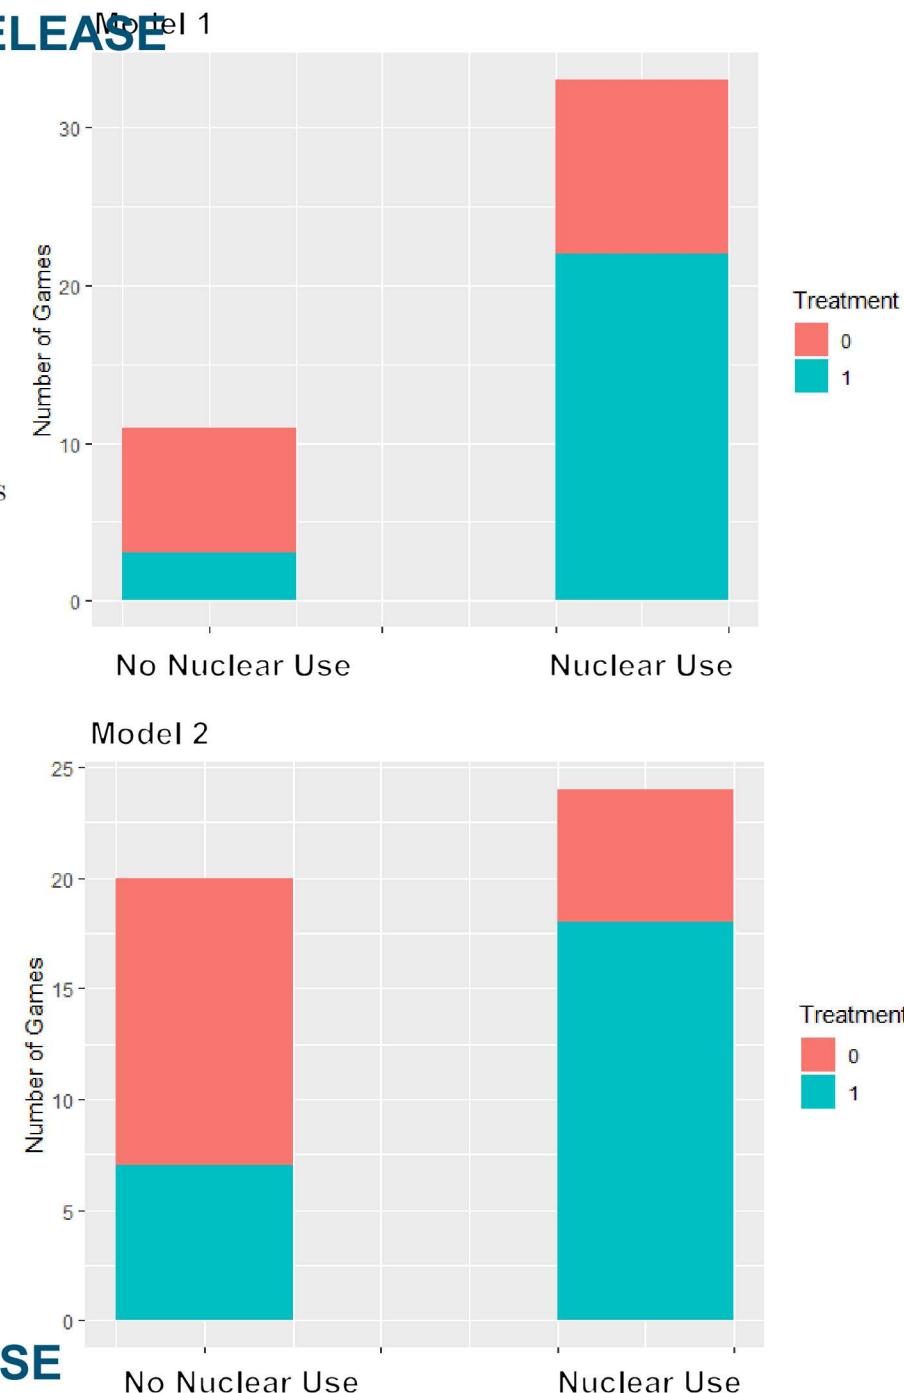

Table 1: The effect of the treatment variable (incl. EMP and HPLY capabilities in player arsenal) on nuclear first use.

	(1)	(2)
	Model 1	Model 2
Treatment	0.96 (.44)**	1.06 (.40)***
N	44	44
Log-likelihood	-22.11	-26.67
Constant	0.20 (.29)	-0.48 (.30)

\*  $p < 0.10$ , \*\*  $p < 0.05$ , \*\*\*  $p < 0.01$

\*Model 1 includes all rounds of each game in analysis.

\*Model 2 omits the final round of each game in analysis.

NOTE: While based on real data, these results are preliminary, non-conclusive, and for illustration only.

AR4

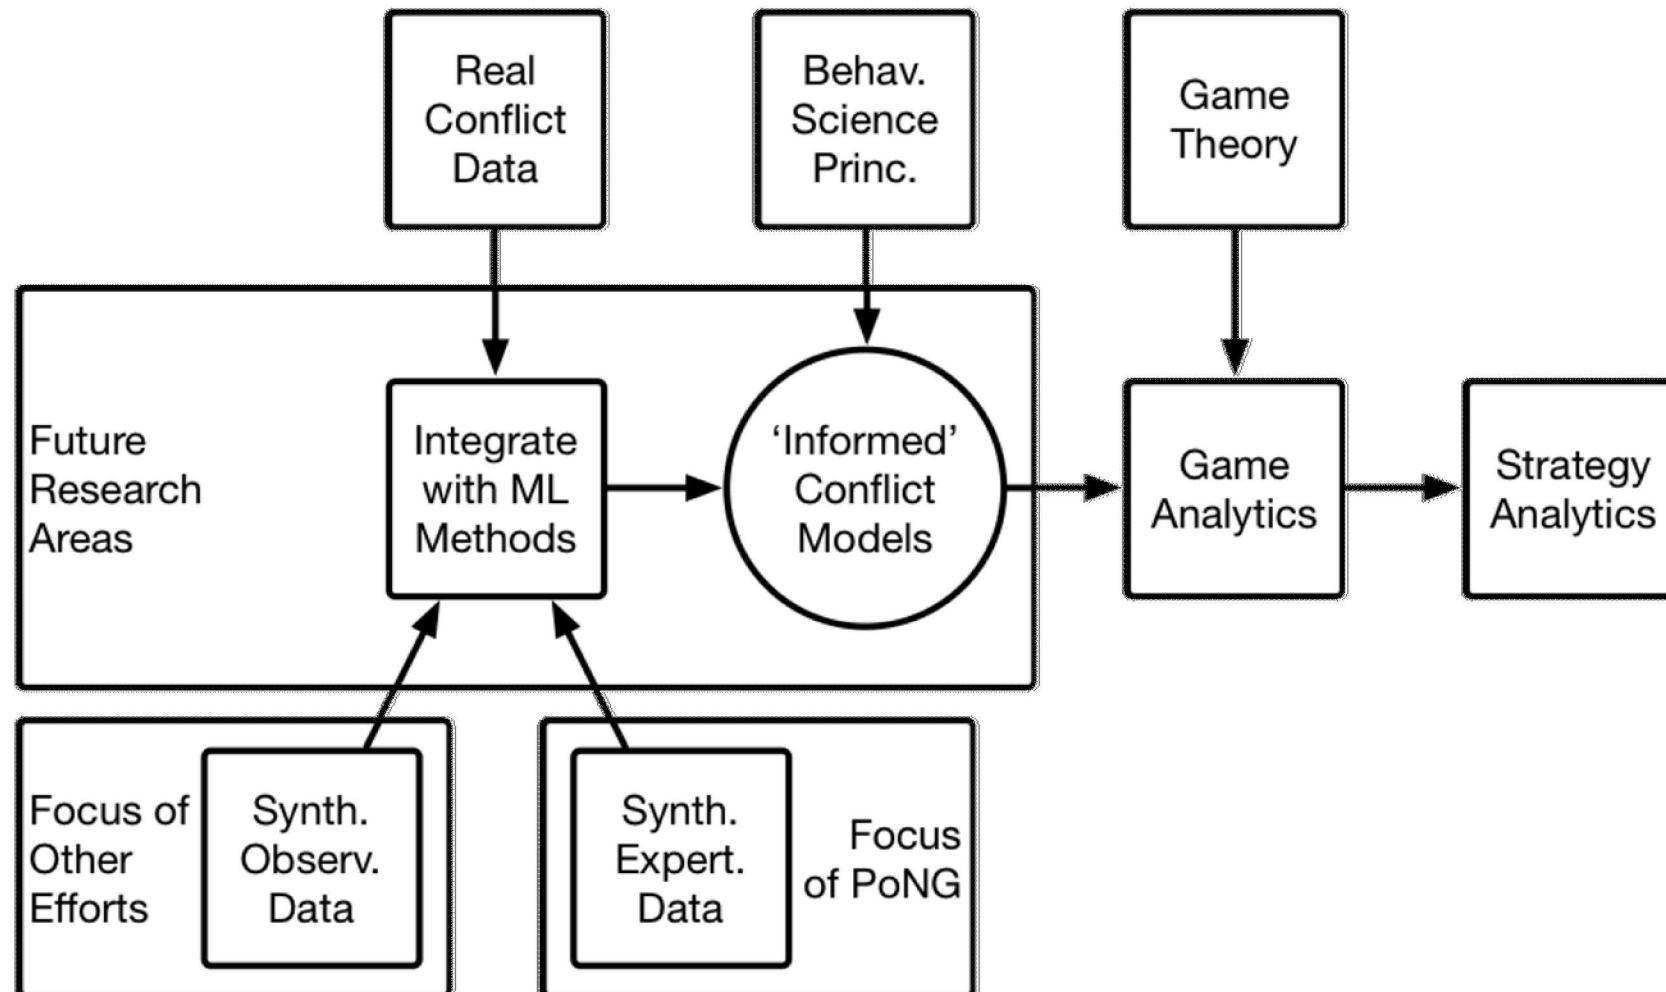

Adding the requested graphs makes for a busy slide so please do re-arrange as you'd like. The graphs strike me as descriptive statistics rather than a finding from analysis, too, if you'd like to move them up.

Andrew Reddie, 4/28/2019

**And to explore differences in escalation dynamics over time...**

# The Project on Nuclear Gaming is also part of a bigger vision for enhancing the study of conflict.

# The Project on Nuclear Gaming:

- Michael Nacht (PI), Bethany Goldblum, Andrew Reddie, Manseok Lee, Camila Valenzuela, Soravis Prakkamakul, Roshan Kirshnan, Jake Tibbetts, Chris Zheng, Vamshi Balanaga, Roshni Iyer, Sarah Laderman, Janani Mohan

- Sheryl Hingorani (PI), Jason Reinhardt, Kiran Lakkaraju, Jonathan Whetzel, Laura Epifanovskaya, Joshua Letchford, Alexandra Valdez, Vamshi Balanaga

- Wes Spain (PI), Craig Wuest, Andrew Reddie, Jake Tibbetts

## Q+A

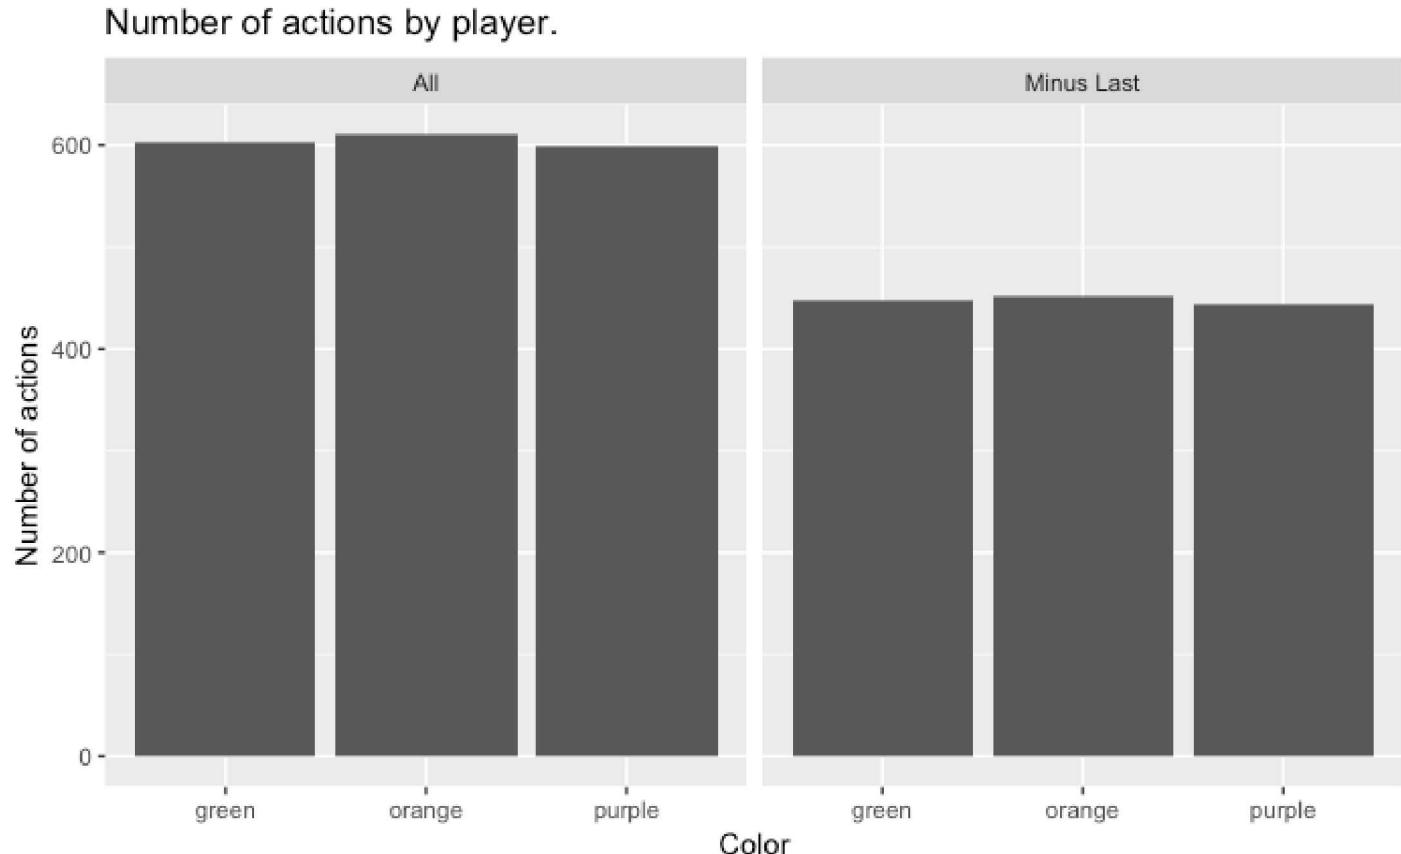

*[pong.berkeley.edu/signal/](http://pong.berkeley.edu/signal/)*

# Back-Up Slides

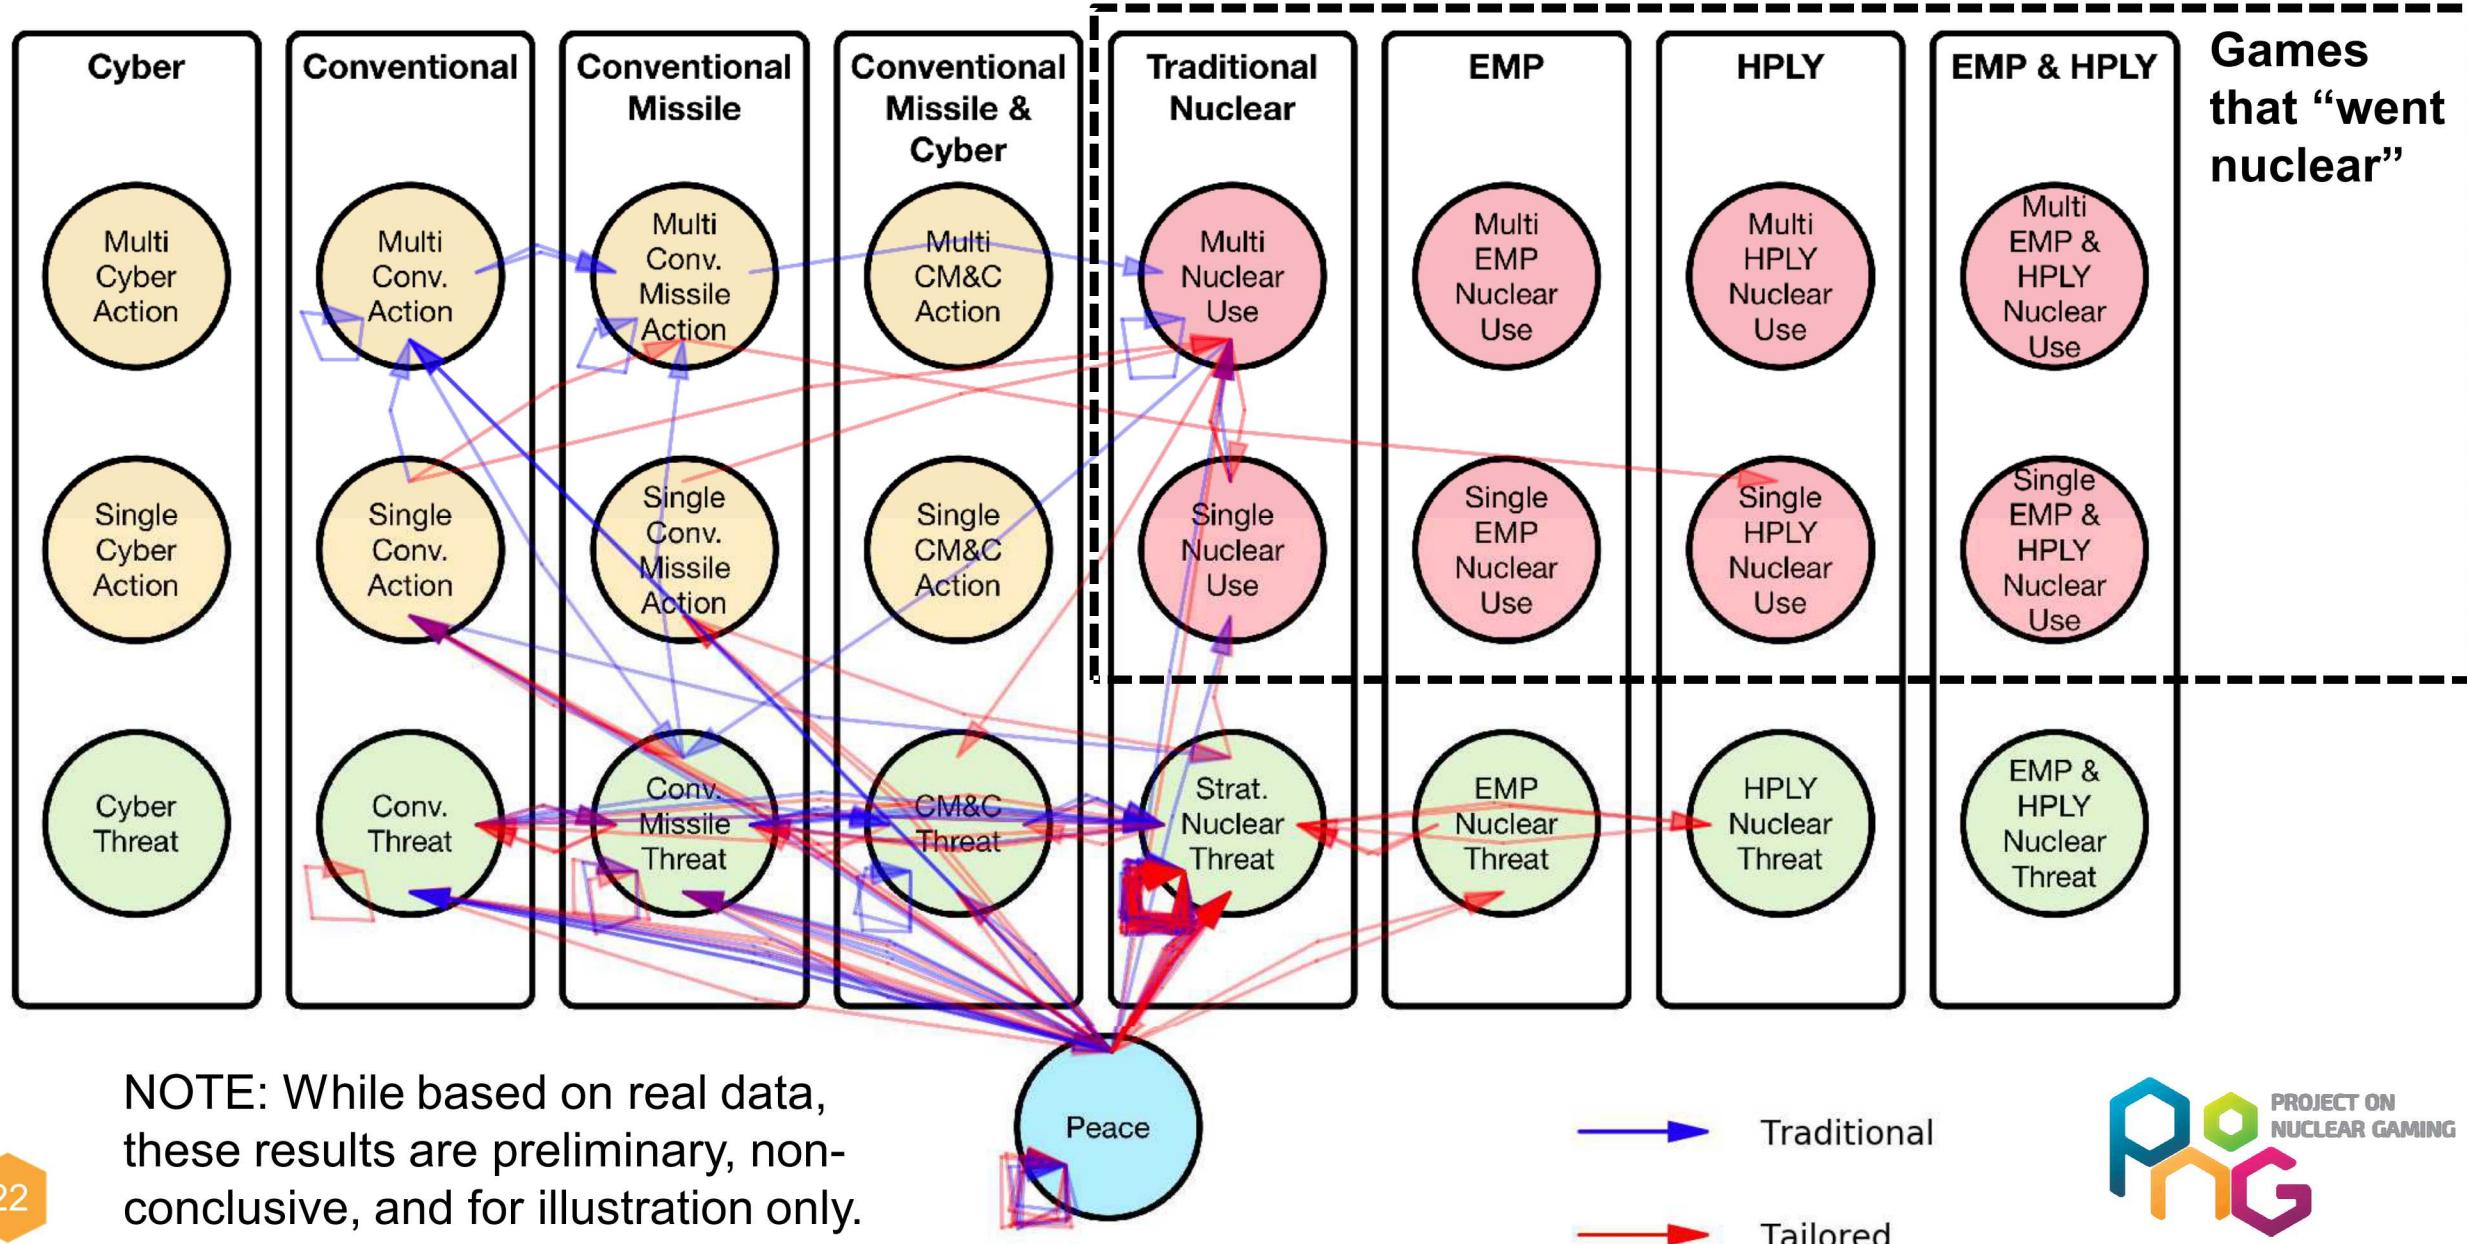

# **SIGNAL is designed for the research question and to minimize bias – the game IS the lab.**

- Non-nuclear and Nuclear players both won games.
  - Non-nuclear player won game ~38% more times than nuclear.
  - Each Nuclear player wins at approximately the same rate
- Players are not giving up, and engaging throughout the game
  - All players executed roughly similar numbers of actions

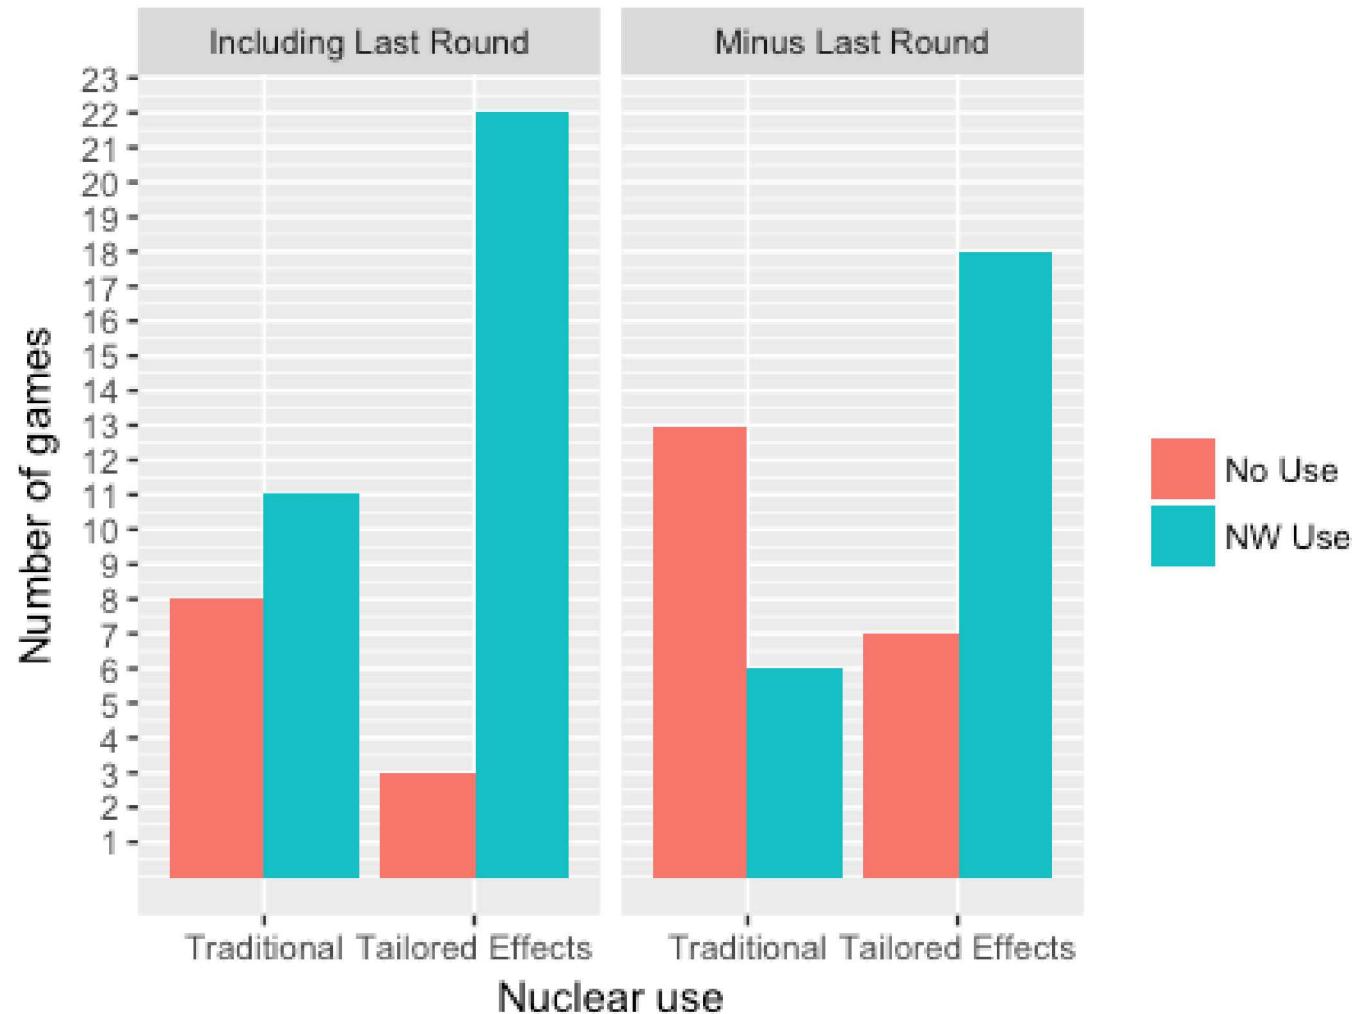

NOTE: While based on real data, these results are preliminary, non-conclusive, and for illustration only.

# Establishing Conflict Classes from raw data enables analysis of escalation dynamics.

# To answer our research question, we contrast games played with and without tailored-effects weapons

NW use by condition and last round

NOTE: While based on real data, these results are preliminary, non-conclusive, and for illustration only.

## High-level statistics from different treatments have similarities and differences.

Metric	All Rounds		Without Last Round	
	Traditional	Tailored	Traditional	Tailored
Number of Games	19	27	19	27
Total Actions	757	1103	504	839
Average Actions Per Game	39.8	40.9	26.5	31.1
Conflict Actions	276 (36%)	385 (35%)	163 (32%)	290 (35%)
Conventional Actions	175 (23%)	203 (18%)	106 (21%)	157 (19%)
Nuclear Actions	44 (6%)	124 (11%)	21 (4%)	90 (11%)
Traditional Nuclear Actions	44 (6%)	105 (10%)	21 (4%)	77 (9%)

NOTE: While based on real data, these results are preliminary, non-conclusive, and for illustration only.
