Test your Trinity knowledge, print a 75th anniversary poster

To commemorate the 75th anniversary of the Trinity test, award-winning artist and graphic designer **Paul Ziomek** (Communication Arts and Services, CPA-CAS), illustrated an original poster.

This one-of-a-kind work of art features Los Alamos Physicist Enrico Fermi witnessing the world's first detonation of a nuclear device, the Gadget, on July, 16, 1945. This moment marked one of the greatest scientific achievements of all time and the dawn of the nuclear age.

The work of those Los Alamos scientists – documented in their notebooks, photos, films, engineering drawings, and memos to each other – is part of the collections in the [National Security Research Center](#), the Lab's classified library located in the National Security Sciences Building.

2 ways to get a copy

1. Print it yourself. (The full-size version is at the right. Just click and print.)
2. Contact the Lab's [Print Shop](#) and submit a print request.

Hang these up anywhere you want! The National Security Research Center's Trinity posters have been approved to be displayed without restrictions.

And the trivia question is...

Trinity – the world's first detonation of a nuclear device – was July 16, 1945. The test was of an implosion-design plutonium device nicknamed the Gadget. The power from the Gadget's detonation was equivalent to around 21,000 tons of TNT and its mushroom cloud grew to about 3,280 feet wide, then rose in a column of smoke higher than 40,000 feet.

Which one of these photos is of the Trinity test?

Email your answer to nsrposters@lanl.gov and we'll let you know if you're correct.
