| 1. Why Should (or Shouldn't) We Care?      | 5m  |
| 2. The New Take                            | 40m |
| 3. Implications and What's Incomplete/Next | 10m |

Sandia National Laboratories is a multimission laboratory managed and operated by National Technology and Engineering Solutions of Sandia, LLC, a wholly owned subsidiary of Honeywell International Inc., for the U.S. Department of Energy's National Nuclear Security Administration under contract DE-NA0003525.

# Why Should (or Shouldn't) We Care?

## Science

## Technology

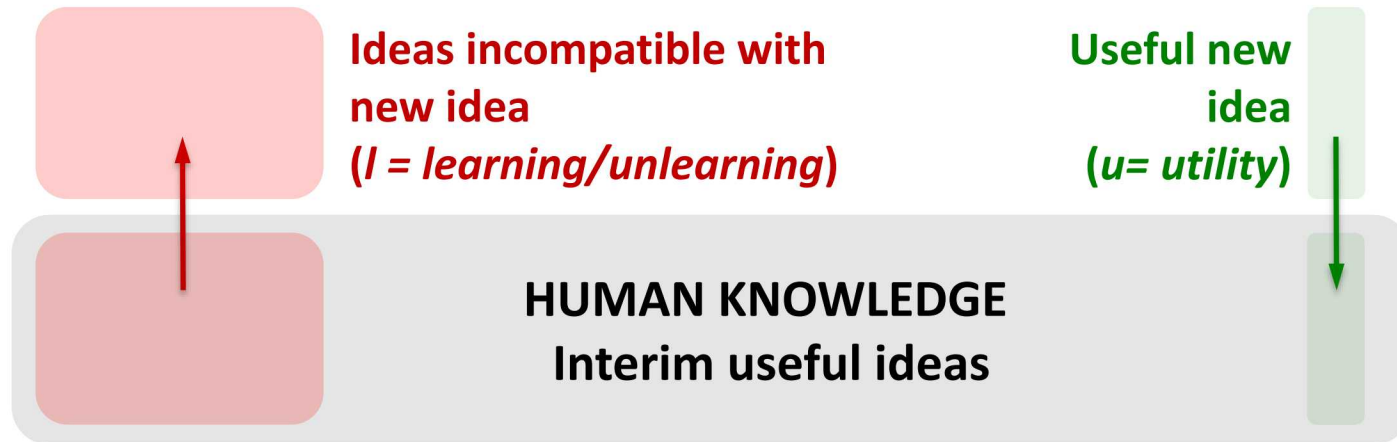

## Culture

- Why we should:  
Creativity is associated with the greatest advances in human knowledge, how could we not care
- Why we shouldn't:  
Creativity is too difficult a topic, better just “to do” and not overanalyze the “doing”  
*I don't buy this: we can learn from organizations that have successfully fostered creativity in S&T, and from creativity in artificial intelligence*

# Our Ansatz:

Creative Outcome = *Significant* Advance in Human Knowledge

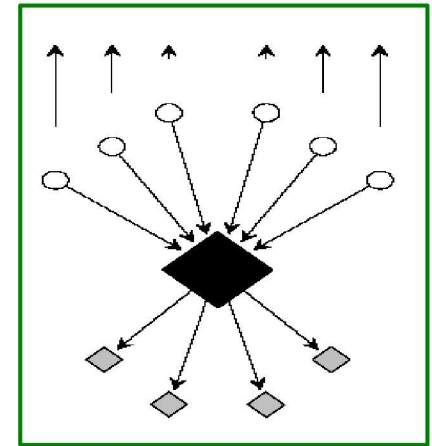

*What gets us into trouble isn't what we don't know.  
It's what we know for sure that just ain't so.  
– (not) Mark Twain*

# The idea of “creative destruction” isn’t new

<b>Gestaltists</b>	<b>1900’s</b>	<b>Psychology</b>	<b>Gestalt Shift</b>
<b>Joseph Schumpeter</b>	<b>1940’s</b>	<b>Economics</b>	<b>Creative Destruction</b>
<b>Thomas Kuhn</b>	<b>1960’s</b>	<b>History of Science</b>	<b>Paradigm Shift</b>
<b>Clay Christensen</b>	<b>1990’s</b>	<b>Business</b>	<b>Disruptive Innovation</b>
<b>Laurent Itti &amp; Pierre Baldi</b>	<b>2000’s</b>	<b>Psychology</b>	<b>Surprise and Human Learning</b>
<b>Russell Funk</b>	<b>2010’s</b>	<b>Bibliometrics</b>	<b>Citation Annihilation</b>

Moritz Koster, Miriam Langeloh and Stefanie Hoehl, “Visually entrained theta oscillations increase for unexpected events in the infant brain,” *Psychological Science* 1-8 (2019).

Russel Funk, Jason Owen-Smith, “A dynamic network measure of technological change,” *Management Science* 63, 791-817 (2017).

# How to combine *utility* and *learning*?

Dean Simonton's  
"Eightfold typology of creativity and uncreativity"  
Ansatz

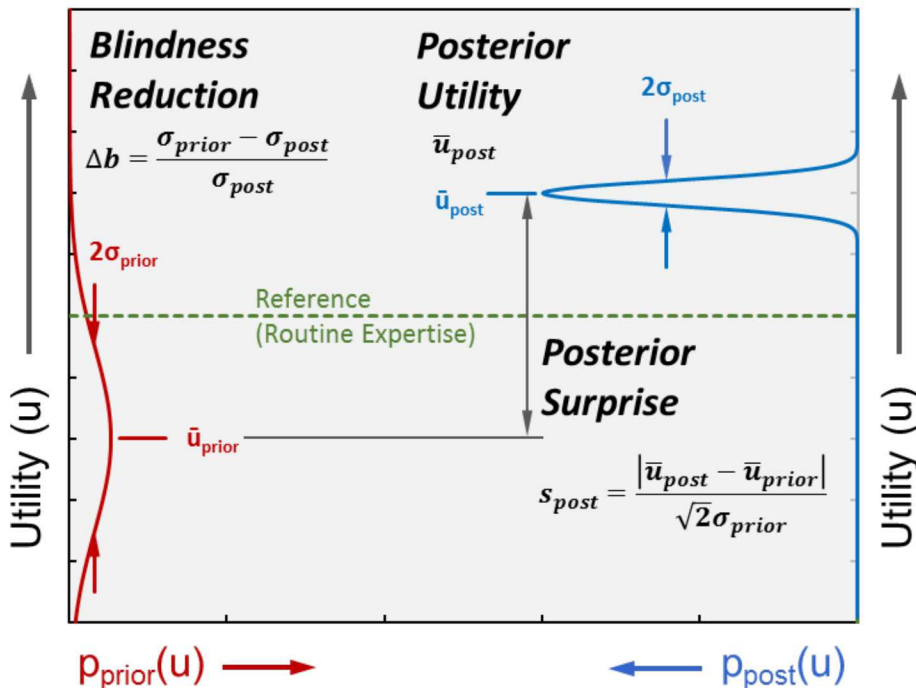

$$c = u \cdot \overbrace{(1 - p) \cdot (1 - v)}^{\text{Novelty Blindness}} = u \cdot l$$

"Leading indicators"  
of learning

*Useful  
Learning*

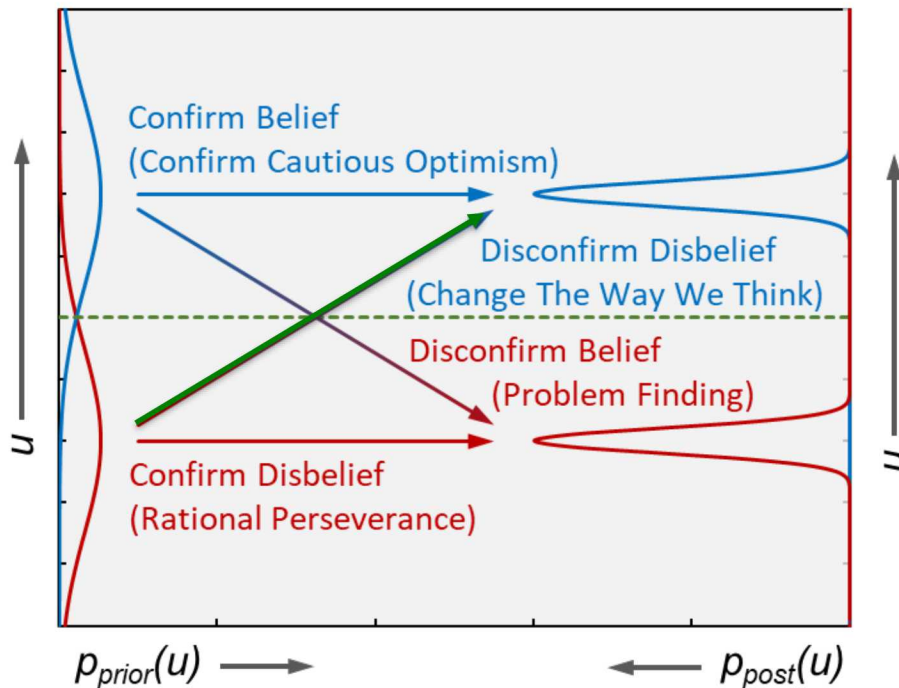

# Quantifying *learning*

## Kullback–Leibler (KL) divergence over prior and posterior assessments of utility

$$\begin{aligned}
 l &= D_{KL}(p_{\text{post}}, p_{\text{prior}}) \\
 &= \int_{-\infty}^{+\infty} p_{\text{post}}(u) \ln\left(\frac{p_{\text{post}}(u)}{p_{\text{prior}}(u)}\right) du \\
 &= \ln(1 + \Delta b) - \frac{1}{2} + \frac{1}{2(1 + \Delta b^2)} + s_{\text{post}}^2 \\
 &\sim s_{\text{post}}^2 \\
 &= \text{Implausibility}^2
 \end{aligned}$$

# Creative and uncreative outcome: fourfold typology

$$\text{Creative Outcome} = \text{Useful Learning} = \bar{u}_{post} \cdot l \sim \bar{u}_{post} \cdot s_{post}^2 = \text{Implausible Utility}$$

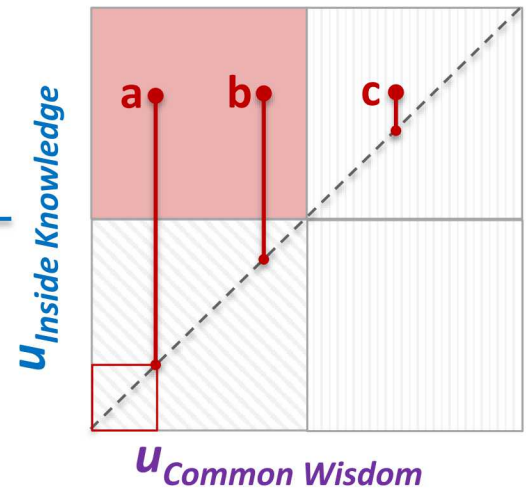

# Implications on creative process: how *not* to choose scientific & engineering research ideas

**Informed Contrariness = Research Arbitrage**

$$= U_{\text{Inside Knowledge}} - U_{\text{Common Wisdom}}$$
