## Process Update for the Soil Treatability Study

*ETEC STIG; April 5, 2012*

Christi D. Leigh, PhD  
Repository Performance Department, 6212

SAND2012-XXXX

Sandia National Laboratories is a multi-program laboratory managed and operated by Sandia Corporation, a wholly owned subsidiary of Lockheed Martin Corporation, for the U.S. Department of Energy's National Nuclear Security Administration under contract DE-AC04-94AL85000.

## How will we select viable technologies for the ETEC site?

Soil Treatability Study

Soils Remedial Action Implementation Plan

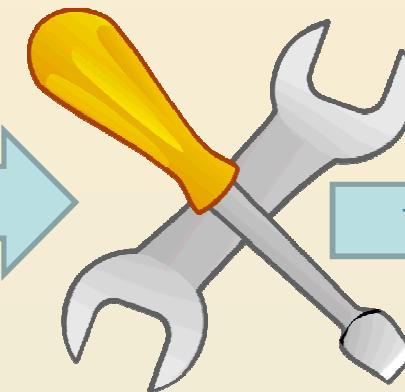

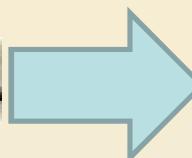

# Soil Treatability Study

Energy Technology Engineering Center • U.S. Department of Energy

## How do we put that toolbox together?

Testing

Many Technologies are Available

Many Criteria Must be Considered

Technology Groupings will Emerge

Phase I  
*Literature Search  
Stakeholder Input  
Expert Opinion Poll*

Phase II  
*Down Select Based on Criteria*

Phase III  
*Choose Technologies for Bench or Pilot Scale Testing*

# Soil Treatability Study

Energy Technology Engineering Center • U.S. Department of Energy

## Study Boundaries

The DOE sets  
the study  
boundaries

These are set in  
part based on  
consideration of  
the AOC

- The goal of the chosen remediation alternatives will be to meet the established cleanup levels or reduce the contaminant concentrations/volume of soil to be excavated
- There will be no "leave in place" or on site burial/landfilling of contaminated soils
- Remediation alternatives will be initiated by 2017
- Incineration (burning that forms an ash) will not be used as a remediation alternative
- Remediation alternatives will not exacerbate existing contamination issues or create new contamination problems
- Treatability studies being conducted for groundwater and unweathered bedrock are ongoing and will not be duplicated

# Soil Treatability Study

Energy Technology Engineering Center • U.S. Department of Energy

## Objectives

The objectives are consistent with the AOC and are a reflection of the expressed concerns of the public through this working group

- Dig and haul/excavation will be minimized as much as possible
- Remediation alternatives will be designed to consider the wild fires, native vegetation, and natural environment as much as possible
- Land and site disturbance will be minimized as much as possible
- Green and innovative/cutting edge technologies will be assessed as much as possible

## Treatment Strategies

- This is where we are.....

# Soil Treatability Study

Energy Technology Engineering Center • U.S. Department of Energy

## Treatment Strategies

This is where Sandia comes in.  
We have to think about the treatment strategies with the highest probability for success.  
**Success** is defined as meeting the Study Boundaries completely and meeting the objectives as much as possible

## Expert Opinion Poll

### Active (Short-Term Strategies)

In-Situ Thermal (0°-200°C)  
Ex-Situ Thermal (200°-500°C)  
Bioremediation  
Phytoremediation  
In-Situ Nanotechnology  
Ex-Situ Soil Washing

### Passive (Long-Term Strategies)

Phytoremediation (*if required*)  
Engineered Barrier  
(*only if recontamination is possible*)

		Summary of Strategies						
Contaminant Types	Contaminants	In-Situ Heat (0°C-200°C) <sup>1</sup>	Ex-Situ Heat (200°C-500°C)	Biostimulation/ Bioaugmentation	Phytoremediation/ Phytodegradation	In-Situ Nanotechnology	Ex-Situ Soil Washing <sup>2</sup>	
Dioxins	Dioxins	< 200°C	> 400°C	Dechlorinating Biota	Ryegrass, Fescue, Bermuda Grass and Yellow Clover, plus Dechlorinating Biota	nZVI; BNPs; SOMS; SAMMS™	Solvent Solution	
Metals	As					Ferns	<i>The metals could be remediated to a more stable, less hazardous, and less mobile state, but would not be removed</i>	
	Cd					Indian Mustard		
	Cr					Indian Mustard, Sunflower		
	Cu					Indian Mustard		
	Hg							
	Pb					Indian Mustard, Sunflower		
NDMA	NDMA	< 200°C	> 200°C	Dechlorinating Biota	Willows, Poplars, and Paulownia	nZVI; BNPs; SOMS; SAMMS™	Solvent Solution	
PAHs	PAHs	< 200°C	> 300°C	Dechlorinating Biota	Ryegrass, Fescue, Bermuda Grass and Yellow Clover, plus Dechlorinating Biota	nZVI; BNPs; SOMS; SAMMS™	Solvent Solution	
PCBs	PCBs	Partial remediation 200°C <	> 300°C	Dechlorinating Biota	Ryegrass, Fescue, Bermuda Grass and Yellow Clover, plus Dechlorinating Biota	nZVI; BNPs; SOMS; SAMMS™	Solvent Solution	
PCTs	PCTs	Partial remediation 200°C <	> 400°C	Dechlorinating Biota	Ryegrass, Fescue, Bermuda Grass and Yellow Clover, plus Dechlorinating Biota	nZVI; BNPs; SOMS; SAMMS™	Solvent Solution	
Perchlorate	Perchlorate			Dechlorinating Biota	Ryegrass, Fescue, Bermuda Grass and Yellow Clover, plus Dechlorinating Biota	nZVI; BNPs; SOMS; SAMMS™	Solvent Solution	
Pesticides/ Herbicides	Pesticides/ Herbicides	< 200°C - Type Dependent	> 200°C - Type dependent	Dechlorinating Biota - Type Dependent	Ryegrass, Fescue, Bermuda grass and Yellow Clover + Dechlorinating Biota - Type dependent	nZVI; BNPs; SOMS; SAMMSTM - Type dependent	Type dependent	
Rads	Co-60					Indian Mustard		
	Cs-137					Kochia, Sunflower and Indian Mustard		
	Sr-90					Kochia		
	U-238					Kochia		
SVOCs	SVOCs	< 200°C	> 400°C	Dechlorinating Biota	Ryegrass, Fescue, Bermuda Grass and Yellow Clover, plus Dechlorinating Biota	nZVI; BNPs; SOMS; SAMMS™	Solvent Solution	
TPHs	TPHs	< 200°C	> 400°C	Dechlorinating Biota	Ryegrass, Fescue, Bermuda Grass and Yellow Clover, plus Dechlorinating Biota	nZVI; Fenton Oxidation	Type dependent	
VOCs	PCE	< 200°C	> 200°C	Dechlorinating Biota	Ryegrass, Fescue, Bermuda Grass and Yellow Clover, plus Dechlorinating Biota	nZVI; BNPs; SOMS; SAMMS™	Solvent Solution	
	TCE	< 200°C	> 200°C	Dechlorinating Biota	Poplar or Mulberry Trees	nZVI; BNPs; SOMS; SAMMS™	Solvent Solution	

Not Applicable

<sup>1</sup> - Provided temperatures for In-Situ Heat are high to account for efficiency and expediency of the remediation cycle; the strategy could be applied at lower temperatures

<sup>2</sup> - Soil washing applicability is highly dependent on the soil characteristics, which have not been considered for this summary

## Bench- and Pilot-Scale Testing

- Bench-Scale Testing
  - Generally conducted in a laboratory under very controlled conditions.
  - Used as a general “proof-of-principle” test.
  - Considered for technologies that have not been fielded or that are being considered for use in an application that is unproven.
- Pilot-Scale Testing
  - Will be conducted on the ETEC site.
  - Used as specific “proof-of-principle” test.
  - Considered for technologies that have been fielded in conditions similar (site characteristics and contaminants) to those at ETEC.
