

Exceptional service in the national interest

Division 8000 Website

Example of a current intranet project at Sandia

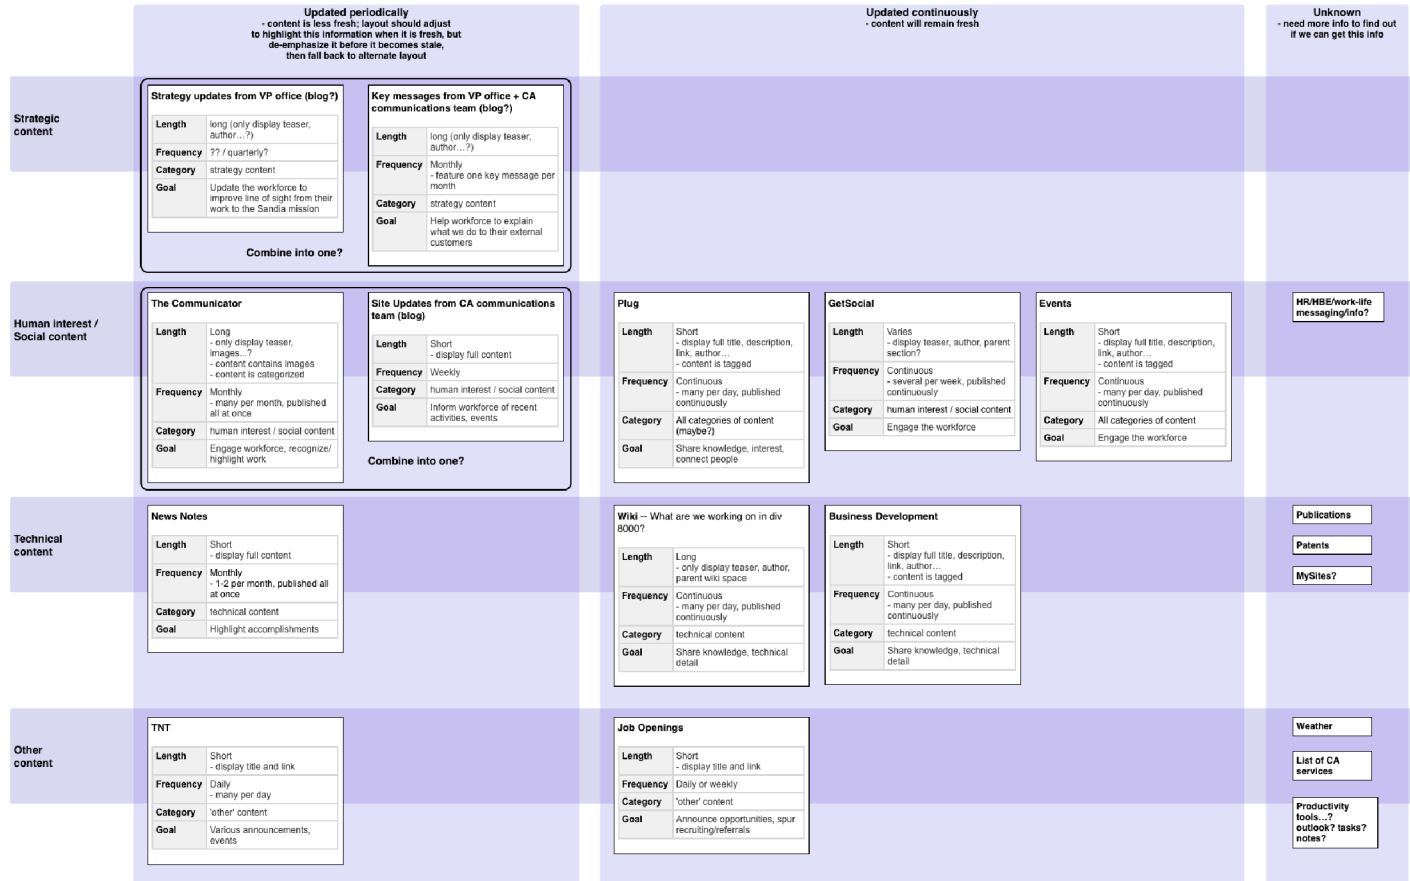

Pre-redesign evaluation

- Division 8000 is comprised primarily of staff from the Sandia/California campus. The existing internal website is in need of a refresh, so we evaluated the site using metrics and general observations.
- Findings:
 - Content on the site is not well-maintained
 - Most pages have very little traffic
 - Homepage is not engaging
 - *The Communicator* section **is** engaging and gets monthly traffic spikes when a new issue is released
- Goals:
 - Reduce the overall amount of content to be maintained
 - Provide more useful/engaging content
- Additionally, division executives would like a forum to communicate the strategic vision for the California laboratory.

Information/Context model

Division 8000 Web Presence

- all or most content is a feed from elsewhere on the intranet to ensure that content is always fresh/relevant;
- the site should be a model for Sandia's future intranet
- the project should be a pilot of future intranet technology

Information/Context model

Dynamic content

- In the model diagram:
 - Each box is a feed of content to be included in the site
 - Content that is updated periodically is very important for a certain length of time, after which it can be de-emphasized so that something else can be emphasized
 - Each type of content is important to different users. For example, researchers may be most interested in technical content, but management wants them to receive the strategic messages as well; both of these needs must be facilitated by the site.

News Notes is an internal listing of Division 8000 technical accomplishments. After the redesign, content will be written and maintained in WordPress by the Division 8000 communications office. (Currently our team is responsible for entering the content into a database.)

Project status

- We are in the process of developing this site using WordPress. It will be launched by the end of FY13 (Sept. 2013).
