1.0 Introduction

This Environmental Restoration Consolidated Quarterly Report (ER Quarterly Report) discusses ongoing corrective actions being implemented by the Sandia National Laboratories (SNL) Environmental Restoration (ER) Project. The status of regulatory closure activities is outlined below. In this Section, the Quarter refers to the November 2009 through January 2010 quarterly reporting period.

2.0 ER Work Completed this Quarter

2.1 Mixed Waste Landfill (MWL)

- Activities completed during this reporting period consisted of final preparation of the MWL Corrective Measures Implementation (CMI) Report, which was submitted to the NMED on January 26, 2010. This report follows completion of the MWL Evapotranspirative (ET) Cover Construction project in September 2009.
- The DOE/Sandia response to the October 29, 2009 NMED Notice of Disapproval for the “MWL Groundwater Monitoring Report Calendar Year 2008” was submitted to the NMED on December 23, 2009.
- Mixed Waste Landfill groundwater monitoring activities for the second quarter of Fiscal Year 2010 were completed in January 2010. Results will be presented in the MWL Annual Groundwater Monitoring Report for Calendar Year 2010 (anticipated delivery to NMED in the spring of 2011).

2.1.1 MWL Documents Submitted to NMED Pending Regulatory Review and Approval

- The MWL CMI Report was submitted for NMED review and approval on January 26, 2010.

2.2 Project Management and Site Closure

ER Sites undergoing regulatory and administrative closure activities are presently addressed under project management. Two permit modification requests are currently in progress with the New Mexico Environment Department (NMED) and are outlined below. The sites, summarized below, were discussed with NMED and public stakeholders in June 2009 as part of comment resolution process for the renewal of the SNL Resource Conservation and Recovery Amendment (RCRA Permit). NMED indicated verbally at the meeting that some of the sites included in the March 2006 and January 2008 permit modification requests may require further groundwater

characterization and/or additional soil characterization; official written communication regarding these requirements is anticipated.

2.2.1 Permit Modification Request Submitted in March 2006

- Twenty-six sites were submitted to NMED for the final determination of Corrective Action Complete (CAC) in March 2006. The sites included nineteen SWMUs, and seven AOCs. The NMED issued a Notice of Public Comment Period and Intent to Approve a Class 3 Permit Modification of the RCRA Permit for Sandia National Laboratories for these 26 sites on December 10, 2007. The NMED public review and comment period ended on February 8, 2008. The SWMUs and AOCs included in this permit modification request are listed below.

SWMUs – 4, 5, 46, 49, 52, 68, 91, 101, 116, 138, 140, 147, 149, 150, 154, 161, 196, 233, 234

AOCs – 1090, 1094, 1095, 1114, 1115, 1116, and 1117.

2.2.2 Permit Modification Request Submitted in January 2008

- Five sites were submitted for the final regulatory determination of CAC in a permit modification request in January 2008. This permit modification included all remaining SNL ER sites with the exception of the three active sites (SWMUs 83, 84, and 240), three Groundwater Investigation sites (Tijeras Arroyo, Technical Area V, and Burn Site), and the MWL (SWMU 76). Final reporting of the Corrective Measure Implementation for the MWL is pending. The MWL is addressed separately in section 2.1 of this Section of this ER Quarterly Report. The four SWMUs and one AOC included in the January 2008 permit modification request are listed below.

SWMUs – 8, 28-2, 58, and 105

AOC – 1101

2.3 Site-Wide Hydrogeologic Characterization

2.3.1 TA-3/5 Groundwater

- Groundwater sampling was completed in November and December 2009. Results of perchlorate analysis are discussed in Section III of this ER Quarterly Report, and other analytical results will be discussed in the Calendar Year 2009 Groundwater Protection

Program (GWPP) Annual Groundwater Monitoring Report (anticipated delivery to NMED in the summer of 2010).

- In August 2009, DOE/Sandia received a second Notice of Deficiency (NOD) from the NMED on the Technical Area V Corrective Measures Evaluation (CME) Report (submitted July 2005). A response to the second NOD was submitted in November 2009, and a third NOD was received in December 2009. DOE/Sandia will submit a response to the third NOD in February 2010.

2.3.2 Burn Site Groundwater (BSG)

- No groundwater sampling was performed during this reporting period.
- On April 30 2009, DOE/Sandia received a letter from NMED entitled “Perchlorate Contamination in Groundwater,” requiring, among other items, characterization of the nature and extent of perchlorate contamination at or near the Burn Site. A work plan to fulfill NMED’s characterization requirements was submitted to NMED in November 2009.

2.3.3 Tijeras Arroyo Groundwater (TAG)

- Groundwater sampling was completed in October and November 2009. Results of perchlorate analysis are discussed in Section III of this ER Quarterly Report, and other analytical results will be discussed in the Calendar Year 2009 GWPP Annual Groundwater Monitoring Report (anticipated delivery to NMED in the summer of 2010).
- On August 12, 2009, DOE/Sandia received a second NOD from the NMED on the TAG Continuing Investigation Report (submitted in November 2005). A response from DOE/Sandia was delivered in January 2010.

2.3.4 Mixed Waste Landfill Groundwater (MWL)

- Groundwater sampling was performed in October 2009. Results from these MWL sampling events will be discussed in the upcoming MWL Annual Groundwater Monitoring Report for Calendar Year 2009 (anticipated delivery to NMED in the spring of 2010).
- Groundwater sampling was performed in January 2010. Groundwater samples were collected from MWL groundwater monitoring wells MWL-BW2, MWL-MW7, MWL-MW8, and MWL-9. Results will be presented in the MWL Annual Groundwater Monitoring Report for Calendar Year 2010 (anticipated delivery to NMED in the spring of 2011).

2.3.5 Chemical Waste Landfill Groundwater (CWL)

- CWL semi-annual groundwater monitoring activities were performed in October 2009. Analytical results associated with the October 2009 sampling were not completed in time to be included in the December 2009 ER Quarterly Report and are summarized in Section II of this ER Quarterly Report.

2.3.5.1 Groundwater Documents Submitted to the NMED Pending Regulatory Review and Approval

- Technical Area V Groundwater Corrective Measure Evaluation (CME) Work Plan, submitted April 2004.
- CME Report for Tijeras Arroyo Groundwater, submitted August 2005.
- Burn Site Groundwater (BSG) Interim Measures Work Plan, submitted May 2005.
- BSG Current Conceptual Model of Groundwater Flow and Contaminant Transport, submitted April 2008.
- BSG CME Work Plan, submitted April 2008.
- BSG Characterization Work Plan, November 2009.

2.4 Corrective Action Management Unit (CAMU)

CAMU Post-closure Care operations consist of vadose-zone monitoring, leachate removal, and post-closure inspections, as required in the permit. Activities for this reporting period include the following:

- Weekly pumping of leachate from the leachate collection and removal system.
- Weekly inspection of the less-than-90-day area.
- Quarterly inspection of the site (December 2009), including containment cell cover, storm water diversion structures, security fences, gates, signs, and benchmarks:
 - Approximately 10 four-wing saltbush plants were identified growing on the cover. These plants can develop extensive root systems that could damage the high-density polyethylene cover. They were removed on, January 8, 2010.
- Quarterly monitoring of the Vadose Zone Monitoring System (VZMS) was conducted in December 2009. Results will be posted in the annual CAMU report.
- Waste management associated with the leachate collection was conducted (see below).
- Composite leachate sampling for waste characterization was conducted on November 24, 2009.

2.4.1 CAMU Waste Management Activities

- Waste stored on site at the beginning of this period:
 - 60 gallons of leachate.
 - 2 lbs PPE.
- Waste generated on-site during the period:
 - 163 gallons of leachate.
 - 0 gallons of rinsate.
 - 5 lbs PPE, paper wipes, plastic drum pump.
- Waste removed from site by the Hazardous Waste Management Facility:
 - 100 gallons of leachate on December 12, 2009.
 - 0 gallons of rinsate.
 - 5 lbs PPE, paper wipes, plastic drum pump on December 12, 2009.
- Waste remaining on site at the end of this period:
 - 123 gallons of leachate.
 - 2 lbs PPE.

2.4.1.1 CAMU Regulatory Activities

- There were no regulatory activities during this quarter.

2.5 Solid Waste Management Unit: Long Term Environmental Stewardship (LTES) Site 1, Cable Debris Site

- Activities during this reporting period include preparation of responses to “Notice of Disapproval: Investigation Report and Proposal for LTES Site 1 –Cable Debris Site” dated September 21, 2009. The Responses will be submitted to NMED in February 2010.

2.5.1 LTES Documents Submitted to NMED Pending Regulatory Review and Approval

- Investigation Report and Proposal for Corrective Action Complete for LTES Site 1/Cable Debris Site, delivered to NMED in March 2009.

Environmental Restoration Project Consolidated Quarterly Report

Section II

Chemical Waste Landfill Quarterly Closure Progress Report

March 2010

United States Department of Energy
Sandia Site Office

Sandia is a multiprogram laboratory managed and operated by Sandia Corporation, a wholly-owned subsidiary of Lockheed Martin Corporation, for the United States Department of Energy's National Nuclear Security Administration under contract DE-AC04-94AL85000

SECTION II. CHEMICAL WASTE LANDFILL QUARTERLY PROGRESS REPORT

This Sandia National Laboratories/New Mexico (SNL/NM) Chemical Waste Landfill (CWL) Quarterly Closure Progress Report has been prepared pursuant to the CWL Final Closure Plan and Post-closure Permit Application (Closure Plan) (SNL/NM December 1992). This section documents activities at the CWL for the reporting period of November 2009 through January 2010. No sampling event occurred at the CWL during this reporting period. Because the analytical results associated with the October 2009 semi-annual groundwater sampling event were not received in time to be included in the December 2009 Environmental Restoration (ER) Consolidated Quarterly Report, they are presented in this quarterly progress report.

1.0 Introduction

All voluntary corrective measures (VCMs) activities for the CWL have been completed. The CWL Landfill Excavation (LE) VCM Final Report was submitted to the NMED in April 2003 (SNL/NM April 2003) and approved by the NMED in December 2003 (Moats December 2003). The Site Operational Boundary Closure Addendum to the LE VCM Final Report was submitted to the NMED in August 2005 (SNL/NM August 2005) and approved by the NMED on October 25, 2005 (Bearzi October 2005). With the submittal of the Waste Management Addendum to the LE VCM Final Report in the February 22, 2006 CWL Quarterly Closure Progress Report (SNL/NM February 2006), as Appendix B, all LE VCM regulatory deliverables have been submitted. With the completion of the VCMs, technical meetings will be held on an as-needed basis. The public will continue to be informed of significant events through the Environmental Restoration (ER) Project public meeting process.

Installation of the cover as an interim measure was requested in April 2004 (Wagner April 2004) and approved with conditions in September 2004 (Kieling September 2004); the cover was completed in September 2005 in accordance with the conditions of approval. All field activities have been completed at the CWL, with the exception of installation of new groundwater monitoring wells CWL-BW5 and CWL-MW9 through MW11 and decommissioning of groundwater monitoring wells CWL-BW4A, CWL-MW4, MW5U/L, and MW6U/L. Long-term monitoring under the NMED-approved CWL Post-Closure Care Permit (NMED October 2009) will commence after NMED approval of final closure.

2.0 Status of Closure

The Final Toxic Substances Control Act (TSCA) Closure Report documents the completion of all closure activities specified in the “Risk-Based Approval Request, 40 CFR 761.61(c) Risk-Based Method for Management of PCB [Polychlorinated Biphenyl] Materials” (SNL/NM October 2001), approved by the U.S. Environmental Protection Agency (EPA) in June 2002 (Cooke June 2002). The Final TSCA Closure Report was submitted to the EPA and NMED on November 2, 2006 (SNL/NM November 2006).

Upcoming CWL Closure Plan reporting activities include revising and submitting the Final Resource Conservation and Recovery Act (RCRA) Closure Report, to be submitted after NMED

approval of the Corrective Measures Study (CMS) Report has been received. The Final RCRA Closure Report will document both the backfilling of the former CWL and installation of the cover.

On May 21, 2007, the NMED issued, for public comment, the draft post-closure care permit for the CWL. Also included in the public notices were the CMS Report and the Closure Plan amendment (changes to Chapter 12 revising the closure process). On July 19, 2007, DOE and Sandia responded in opposition to the issuance of the CWL post-closure care permit as drafted and offered a number of comments, the most important of which were related to groundwater and vadose zone monitoring. In addition, DOE and Sandia requested that a public hearing be scheduled to address these outstanding issues.

The post-closure care permit negotiations that included a CWL Closure Plan amendment addressing the replacement of four groundwater monitoring wells, the CWL Post-Closure Care Permit, and the CWL Final Remedy were completed on October 15, 2009 and documented in the settlement agreement and Final Order In the Matter of Application for a Post-Closure Care Hazardous Waste Permit for the Chemical Waste Landfill, Sandia National Laboratories No. NM5890110518 (Final Order) (NMED October 2009). NMED issued a “Notice of Approval Final Remedy and Closure Plan Amendment Chemical Waste Landfill” on October 16, 2009.

For this reporting period Sandia proceeded with the planning and contracting activities associated with the installation of the four new groundwater monitoring wells (CWL-BW5 and CWL-MW9 through MW11) and decommissioning of groundwater monitoring wells CWL-BW4A, CWL-MW4, MW5U/L, and MW6U/L according to the approved Closure Plan Amendment.

3.0 Water Monitoring Assessment

CWL semi-annual groundwater monitoring activities were performed in October 2009. Analytical results associated with this groundwater sampling event are presented in Appendix A of this Section of the Environmental Restoration (ER) Consolidated Quarterly Report.

No soil-gas sampling was performed at the CWL during this reporting period. Soil-gas sampling is not required under the Closure Plan but is expected to be a requirement for post-closure care (Kieling, December 2003).

4.0 Projected Activities for the Upcoming Quarter

Activities associated with the replacement of four groundwater monitoring wells at the CWL according to the approved Closure Plan Amendment will continue during the next quarter. Activities will include coordinating with NMED to verify the locations for the new wells in the field, completion of contracting for drilling services, and completion of related field plans. The anticipated start of drilling field work is late March or early April 2010. After installation of the four groundwater monitoring wells, Sandia and DOE will prepare and submit the CWL Final RCRA Closure Report.

1.0 Introduction

This report was prepared pursuant to Sections 1.2.1.6 and 1.3 of the *Chemical Waste Landfill [CWL] Final Closure Plan and Postclosure Permit Application* (CWL Closure Plan) (SNL/NM December 1992). In compliance with a recent request by the New Mexico Environment Department (NMED) dated January 2009, this and all future quarterly reports will graphically present groundwater data for CWL contaminants of concern (COC) detected above minimum detection limits along with corresponding measured groundwater elevations (Bearzi January 2009). These graphs will be in addition to the tabular form of results. The activities associated with the groundwater monitoring task are summarized as follows.

Sandia Corporation (Sandia) performed Fiscal Year 2010 (FY10) semi-annual groundwater sampling at the CWL, Sandia National Laboratories/New Mexico (SNL/NM) (Figure A-1) from October 12 to 23, 2009. CWL groundwater sampling is required by the interim status standards of the Resource Conservation and Recovery Act contained in Title 40 of the Code of Federal Regulations (CFR), Part 265, Subpart F, and the State of New Mexico Hazardous Waste Management Regulations. This groundwater sampling event was conducted in conformance with procedures outlined in the *Sampling and Analysis Plan for Groundwater Assessment Monitoring at the Chemical Waste Landfill*, Appendix G, Revision 4 of the CWL Closure Plan (Appendix G of the CWL Closure Plan) (SNL/NM December 1992).

In March 1998, the NMED approved eliminating chlorinated dioxins, furans, and pesticides from the Appendix IX list of constituents for CWL groundwater monitoring (Dinwiddie March 1998). In May 2000, the NMED approved the following changes to Appendix G of the CWL Closure Plan (Bearzi May 2000):

- Biannual frequency (every other year) for agreed upon Appendix IX constituents including volatile organic compounds (VOC), semi-volatile organic compounds (SVOC), chlorinated herbicides, polychlorinated biphenyls (PCB), total cyanide, sulfides, dissolved chromium, and total metals plus iron.
- Semi-annual frequency (twice a year) for Appendix IX VOC and Appendix IX metals.

This report describes groundwater sampling activities and presents analytical results from the first FY10 semi-annual groundwater assessment monitoring period. In October 2009, groundwater samples were collected from monitoring wells (MW) (CWL-MW2BL, CWL-MW4,

CWL-MW5L, CWL-MW5U, CWL-MW6L, and CWL-MW6U) (Figure A-2). These samples were analyzed for the required 40 CFR 264 (Appendix IX) constituents: VOCs, SVOCs, chlorinated herbicides, PCBs, total cyanide, sulfides, dissolved chromium, and total metals plus iron. The NMED Department of Energy (DOE) Oversight Bureau (OB) participated in the October 2009 sampling event and received split samples from four CWL monitoring wells (CWL-MW2BL, CWL-MW4, CWL-MW5L, and CWL-MW6L). The split samples were sent to a different laboratory for analysis of various Appendix IX constituents as determined by the NMED DOE OB. Additional samples for total uranium and PCB congeners were requested by the NMED DOE OB at the four CWL wells. To ensure a consistent level of quality assurance for these analyses, SNL/NM also collected samples for total uranium and PCB congeners at these four CWL monitoring wells. These additional analyses are not required by Appendix G of the CWL Closure Plan (SNL/NM December 1992). The NMED DOE OB split sampling results are presented in a separate report and are not included in this report.

During October 2009, groundwater samples were not collected from background monitoring (BW) wells CWL-BW3 and CWL-BW4A, and monitoring wells CWL-MW1A, CWL-MW2BU, and CWL-MW3A. CWL-BW3, CWL-BW4A, and CWL-MW2BU could not be sampled due to insufficient volume of groundwater within the well screen interval. These three wells were purged to dryness prior to obtaining water quality measurements and appropriate representative sample volume. CWL-MW1A and CWL-MW3A were not sampled because these wells are dry and were partially filled with sediment during the Vapor Extraction (VE) Voluntary Corrective Measure (VCM) while being used as VE wells, and cannot be restored for the purpose of compliance groundwater monitoring.

Three of the monitoring wells (CWL-MW2B, CWL-MW5, and CWL-MW6) are multi-completion wells with two separate polyvinyl chloride casing and screen intervals. One is screened across the water table, and the other is screened at an interval approximately 30 feet below the water table. The wells screened across the water table are designated as CWL-MW2BU, CWL-MW5U, and CWL-MW6U to indicate the upper ("U") screened well completions. The wells screened below the first water-bearing zone are designated CWL-MW2BL, CWL-MW5L, and CWL-MW6L to indicate the lower ("L") screened well completions. Further discussion of the completion of these wells is presented in the CWL Groundwater Assessment Report (SNL/NM October 1995). The following sections provide descriptions of the field methods used and a discussion of the analytical and quality control (QC) results.

2.0 Field Methods and Measurements

The semi-annual groundwater sampling field measurements were collected in conformance with Appendix G of the CWL Closure Plan (SNL/NM December 1992). Groundwater monitoring was performed according to Appendix G of the Closure Plan and updated SNL/NM Environmental Restoration Project field operating procedures (FOP) (SNL/NM November 1995, September 1996, and February 1997).

2.1 Groundwater Elevation Determinations

Groundwater elevations at the CWL wells were determined using a Solinst® water level indicator prior to purging activities. Measurements were taken in accordance with FOP 95-02, *A Technical Procedure for the Measurement of Static Water Levels* (SNL/NM November 1995) until three replicate measurements agreed to within 0.05 foot of each other. The portion of the well sounder in contact with the groundwater was decontaminated between measurements at different wells (SNL/NM February 1997). During October 2009, SNL/NM verified that monitoring wells CWL-MW1A and CWL-MW3A are dry. Table A-1 summarizes the depth-to-water measurements for all CWL wells, and Attachment A provides complete field measurement information. Plots A-1 to A-9, graphically display water level measurements obtained from CWL monitoring wells between October 2004 and October 2009.

2.2 Well Evacuation

A Bennett Company groundwater sampling system was used to collect groundwater samples from all wells, except small-diameter wells (less than 2 inches). Because CWL-MW5L and CWL-MW6L are small-diameter wells (less than 2 inches), dedicated sampling systems manufactured by QED Environmental Systems, Inc. are used to collect samples. Prior to sample collection, each monitoring well was purged to remove stagnant well casing water. More than one day was required to complete purging and sampling at CWL-MW5U and CWL-MW6U, due to the slow recharge rate of the monitoring wells. Monitoring wells purged to dryness were allowed to recover before sampling to ensure the most representative groundwater sample possible given the low yield of these wells. CWL-MW2BL and CWL-MW4 were purged a minimum of three well-bore volumes prior to sampling. CWL-MW5L and CWL-MW6L were purged a minimum of two tubing water volumes prior to sampling.

Collection of field analytical measurements and groundwater samples was performed in accordance with procedures described in FOP 94-48, *Sampling Groundwater Monitoring Wells* (SNL/NM September 1996), consistent with the requirements of Appendix G of the CWL Closure Plan (SNL/NM December 1992). Groundwater temperature, specific conductance (SC), and potential of hydrogen (pH) were measured using a YSITM Model 620 Water Quality Meter. Turbidity was measured with a HachTM Model 2100P portable turbidity meter. Groundwater stability is considered acceptable when measurements are within 5 nephelometric turbidity units, 0.2 pH units, and 0.2 degrees Celsius, and SC is within 1 percent or 10 micromhos per centimeter (whichever is greater). Monitoring wells CWL-MW2BL, CWL-MW4, CWL-MW5L, and CWL-MW6L were purged until three stable measurements of turbidity, temperature, SC, and pH were obtained. All purged water was placed into 55-gallon containers and stored at the Building 9925 waste accumulation area pending the results of the analyses. Table A-2 summarizes average pumping rates, pumping duration, and well discharge volumes for each well sampled. Table A-3 summarizes temperature, pH, SC, and turbidity measurements. Field Measurement Logs in Attachment A document well purging and water quality measurements.

2.3 Groundwater Sample Collection

All groundwater samples were collected directly from the sample discharge tube into laboratory-prepared sample containers. Chemical preservatives for samples intended for chemical analyses were added to the sample containers at the laboratory prior to shipment to SNL/NM.

Table A-4 presents the sample number assigned to each sample. Table A-5 summarizes the analyses performed, analytical methods, sample containers, preservatives, and holding time requirements. Section 3.0 of this report summarizes the analytical results. Analysis Request/Chain-of-Custody documentation for all samples submitted for analyses are presented in Attachment B and filed in the SNL/NM Customer Funded Records Center.

2.4 Pump Decontamination

A Bennett Company groundwater sampling system was used to collect groundwater samples from all wells, except for CWL-MW5L and CWL-MW6L. The sampling pump and tubing bundle were decontaminated prior to installation in monitoring wells according to procedures described in FOP 94-26, *General Equipment Decontamination* (SNL/NM February 1997). Two equipment blank (EB) or rinsate samples were collected to verify the effectiveness of the

equipment decontamination process. These samples were collected and analyzed prior to sampling CWL-MW2BL and CWL-MW5U, and results are discussed in section 4.1.1 of this report.

3.0 Analytical Results

Groundwater samples collected for analysis of VOCs, SVOCs, chlorinated herbicides, PCBs, total cyanide, sulfides, dissolved chromium, and metals were submitted to General Engineering Laboratories, Inc. in Charleston, South Carolina. Samples for PCB Congeners were submitted to Cape Fear Analytical located in Wilmington, North Carolina. Tables A-6 to A-11 summarize the chemical parameters, laboratory method detection limits (MDL), and U.S. Environmental Protection Agency (EPA) maximum contaminant levels (MCL) for drinking water supplies. Tables A-12 to A-14 summarize all analytes detected in samples collected from CWL groundwater monitoring wells during the first FY10 semi-annual sampling event. All chemical analytical results are compared to EPA MCLs for drinking water supplies. Analytical reports, including the results of the analyses, analytical methods, quantitation limits, dates of analysis, and results of QC analyses, are filed in the SNL/NM Customer Funded Records Center.

No VOCs, SVOCs, chlorinated herbicides, PCBs, or PCB congeners were detected at concentrations exceeding the associated MCL. No VOCs were detected in any sample except for acetone, chloroform, toluene, and trichloroethene (TCE). Acetone and chloroform were detected below the laboratory practical quantitation limits (PQL) in CWL-MW5L at concentrations of 3.68 micrograms per liter ($\mu\text{g/L}$) and 0.449 $\mu\text{g/L}$, respectively. Toluene was detected below the MCL of 1,000 $\mu\text{g/L}$ in the samples from CWL-MW5U (sample and duplicate sample) at concentrations 1.06 $\mu\text{g/L}$ and 1.12 $\mu\text{g/L}$. TCE was detected below the MCL of 5.0 $\mu\text{g/L}$ in the groundwater samples from CWL-MW5L, CWL-MW5U, CWL-MW5U duplicate sample, CWL-MW6L, and CWL-MW6U at concentrations of 0.945 $\mu\text{g/L}$, 0.910 $\mu\text{g/L}$, 0.930 $\mu\text{g/L}$, 0.270 $\mu\text{g/L}$, and 0.305 $\mu\text{g/L}$, respectively. TCE in all samples were detected below the laboratory PQL. No SVOCs were detected above associated laboratory MDLs, except bis(2-Ethylhexyl) phthalate. This compound was detected below the MCL of 6.0 $\mu\text{g/L}$ in CWL-MW6L at 2.46 $\mu\text{g/L}$, and in CWL-MW6U at 2.05 $\mu\text{g/L}$. Chlorinated herbicides or PCB were not detected above associated laboratory MDLs in any groundwater sample. Additional samples were collected for PCB congeners at CWL-MW2BL, CWL-MW4, CWL-MW5L, and CWL-MW6L to duplicate the analyses performed by the NMED DOE OB. No PCB congeners were detected above laboratory PQLs from groundwater samples collected at these four CWL

monitoring wells. Table A-12 summarizes the detected VOCs, SVOCs, chlorinated herbicides, PCBs, and PCB congeners. Plots A-10 to A-13 display TCE results.

No total metal parameters were detected above established regulatory limits in any groundwater sample. Chromium was detected below the MCL of 0.10 milligrams per liter (mg/L) in CWL-MW4 at a concentration of 0.0131 mg/L. Nickel was detected above the laboratory MDL in all environmental groundwater samples. Detected nickel concentrations ranged from 0.00147 mg/L at CWL-MW6L to 0.456 mg/L at CWL-MW4. There is not an established MCL for nickel. In general, chromium and nickel results from CWL-MW4 groundwater sample correlate to increased field turbidity measurements. CWL-MW4 is also constructed with a stainless steel well screen. Additional samples were collected for total uranium at CWL-MW2BL, CWL-MW4, CWL-MW5L, and CWL-MW6L to duplicate the analyses performed by the NMED DOE OB. Uranium was reported below the MCL of 0.03 mg/L, at concentrations ranging from 0.0131 mg/L at CWL-MW4 to 0.0163 mg/L at CWL-MW2BL. Table A-13 summarizes the total metal concentrations for all groundwater samples collected during the first FY10 semi-annual sampling event at the CWL. Plots A-14 to A-20 display detected chromium and nickel results.

Table A-14 presents dissolved chromium, total cyanide, and sulfide results from all groundwater samples collected during the first FY10 semi-annual sampling event. No parameters were detected above EPA MCLs from any CWL groundwater sample.

4.0 Quality Control

Field and laboratory QC samples were prepared to determine the accuracy of the methods used and to detect inadvertent sample contamination that may have occurred during the sampling and analysis process. The following sections discuss each sample type.

4.1 Field QC Samples

Field QC samples included EB, environmental duplicate, field blank (FB), and trip blank (TB) samples. The field QC samples were submitted for analysis along with the groundwater samples in accordance with QC procedures specified in Appendix G of the CWL Closure Plan (SNL/NM December 1992).

4.1.1 EB Samples

Two EB or rinsate samples were collected to verify the effectiveness of the equipment decontamination process. These samples were collected and analyzed prior to sampling CWL-MW2BL and CWL-MW5U. Table A-15 summarizes detected parameters from both EB samples. The EB samples were analyzed for all parameters. Detected analytes included 2-butanone, bromodichloromethane, chloroform, dibromochloromethane, bis (2-Ethylhexyl) phthalate, and copper. If any parameters were detected in associated environmental samples at concentrations less than five times the EB result, then the environmental sample was qualified as not detected during data validation. Chloroform was qualified as not detected in CWL-MW2BL groundwater samples. Copper was qualified as not detected in CWL-MW2BL and CWL-MW5U samples.

4.1.2 Duplicate Environmental Samples

Two duplicate environmental samples were collected and analyzed for all parameters in order to determine the overall reproducibility of the sampling and analysis process. The duplicate sample was collected at CWL-MW2BL and CWL-MW5U immediately after the original environmental samples in order to reduce variability caused by time and/or sampling mechanics.

Relative percent difference (RPD) calculations between duplicate samples were performed for all analytes. Table A-16 summarizes the results of the duplicate sample analyses and calculated RPD values. The results show that sampling and analysis precision was in conformance with Appendix G of the CWL Closure Plan requirements for all measured parameters.

4.1.3 Field Blank Samples

Two FB samples were collected for VOCs to assess whether contamination of the samples resulted from ambient field conditions. The FB samples were prepared by pouring deionized water into sample containers at the CWL-MW2BL and CWL-MW5U sample collection point to simulate the transfer of environmental samples from the sampling system to the sample container. No VOCs were detected above laboratory MDLs in either FB sample, except acetone, bromodichloromethane, chloroform, and dibromochloromethane. No corrective action was necessary for acetone, bromodichloromethane, and dibromochloromethane, since these compounds were not detected in the associated environmental samples. Chloroform was

qualified as not detected in CWL-MW2BL samples during data validation since this compound was detected at concentrations less than five times the blank concentration.

4.1.4 Trip Blanks

TB samples are submitted whenever samples are collected for VOC analysis to assess whether contamination of the samples has occurred during shipment and storage. TB samples consist of laboratory reagent grade water with hydrochloric acid preservative contained in 40-milliliter VOC vials prepared by the analytical laboratory, which accompany the empty sample containers supplied by the laboratory. TBs were brought to the field and accompanied each VOC sample shipment. A total of eight TBs were submitted with the samples discussed in this report. No VOCs were detected above laboratory MDLs in any TB sample.

4.2 Laboratory QC

Internal laboratory QC analyses performed included method blank, laboratory control sample, matrix spike, matrix spike duplicate, and surrogate spike analyses. All laboratory data were reviewed and qualified in accordance with AOP [Administrative Operating Procedure] 00-03, Revision 2, *Data Validation Procedure for Chemical and Radiochemical Data* (SNL/NM July 2007). Although some analytical results were qualified as not detected or as estimated values during the data validation process, no significant data quality problems were noted for any CWL groundwater sample. Data validation reports associated with the first FY10 semi-annual groundwater sampling event are provided in Attachment C.

4.3 Variances and Nonconformances

Variances and nonconformances from requirements in Appendix G of the CWL Closure Plan (SNL/NM December 1992) are identified as follows:

- CWL-MW1A and CWL-MW3A are no longer sampled, since 1998 these wells do not contain water. The wells partially filled with sediment during the VE VCM and have not recovered. SNL/NM personnel lowered a water level meter to verify that these wells are dry.
- No samples were collected from CWL-BW3, CWL-BW4A, or CWL-MW2BU. In October 2009, these wells did not produce enough water to collect a representative sample. NMED was notified by SNL/NM personnel.

- CWL-MW5U and CWL-MW6U were purged to dryness, allowed to recover, and then sampled to collect the most representative groundwater sample possible given the low yield of these wells.
- CWL-MW5L and CWL-MW6L were sampled using dedicated sampling systems manufactured by QED Environmental Systems, Inc.
- COCs detected above minimum detection limits, and water levels are presented in graphical form as requested by NMED (Bearzi January 2009).
- The NMED DOE OB was on-site and collected sample splits for VOCs, SVOCs, total metals, dissolved chromium, and total cyanide at monitoring wells CWL-MW2BL, CWL-MW4, CWL-MW5L, and CWL-MW6L. The NMED DOE OB also collected additional samples for total uranium and PCB congeners at these four locations. Results from NMED DOE OB samples are not included in this report.

5.0 *Summary*

In October 2009, samples were collected from CWL monitoring wells (CWL-MW2BL, CWL-MW4, CWL-MW5L, CWL-MW5U, CWL-MW6L, and CWL-MW6U) and were analyzed for 40 CFR 264 (Appendix IX) VOCs, SVOCs, chlorinated herbicides, PCBs, total metals plus iron, total cyanide, sulfides, and dissolved chromium analyses. Additional samples were collected for total uranium and PCB congeners at selected well locations to duplicate NMED DOE OB analyses. No analytes were detected at concentrations exceeding the associated EPA MCLs from any CWL groundwater samples.

Dissolved Chromium	6020	Nalgene; 250 mL; HNO ₃ , 4°C	180 days
Polychlorinated Biphenyls Congeners	1668A	Amber Glass; 4 x 1L; 4°C	1 year

^aU.S. Environmental Protection Agency, November 1986. "Test Methods for Evaluating Solid, Physical/Chemical Methods," 3rd ed., (and updates), SW-846, Office of Solid Waste and Emergency Response, U.S. Environmental Protection Agency, Washington, D.C.

U.S. Environmental Protection Agency, August 2003. "Method 1668, Revision A, Chlorinated Biphenyl Congeners in Water, Soil, Sediment, Biosolids, and Tissue by HRGC/HRMS." EPA-821-R-07-004, (and updates), Office of Science and Technology Engineering and Analysis Division, U.S. Environmental Protection Agency, Washington, D.C.

^bHolding time for mercury is 28 days; all other metals are 180 days.

NaOH = Sodium Hydroxide.

HCl = Hydrochloric acid.

HNO₃ = Nitric acid.

L = Liter(s).

mL = Milliliter(s).

°C = Degrees Celsius.

^aU.S. Environmental Protection Agency, August 2003. "Method 1668, Revision A, Chlorinated Biphenyl Congeners in Water, Soil, Sediment, Biosolids, and Tissue by HRGC/HRMS," EPA-821-R-07-004, (and updates), Office of Science and Technology Engineering and Analysis Division, U.S. Environmental Protection Agency, Washington, D.C.

EPA = Environmental Protection Agency.

MCL = Maximum contaminant levels (established by the U.S. EPA Primary Drinking Water Regulations in 40 CFR 141.11(b), subsequent amendments, or the New Mexico Environmental Improvement Board in the *New Mexico Register*, Title 20, Chapter 7, Part 1).

NE = Not established.

pg/L = Picogram(s) per liter.

PQL = Practical quantitation limit. The lowest concentration of analytes in a sample that can be reliably determined within specified limits of precision and accuracy by that indicated method under routine laboratory operating conditions.

Results for CWL-MW4 are included for table completeness, as no compounds were detected above laboratory practical quantitation limits.

If result detected below laboratory practical quantitation limit, then practical quantitation limit is indicated in parenthesis.

ARCOC= Analysis Request and Chain of Custody.

GEL = General Engineering Laboratories.

J = The associated value is an estimated quantity and/or detected below the practical quantitation limit.

J- = The associated numerical value is an estimated quantity with a suspected negative bias.

L = Lower well completion zone.

MCL = Maximum contamination levels (established by the U.S. EPA Primary Drinking Water Regulations in 40 CFR 141.11(b), subsequent amendments or the New Mexico Environmental Improvement Board in the New Mexico Register, Title 20, Chapter 7, Part 1).

MW = Monitoring well.

ND = The analyte was analyzed for but was not detected or qualified as not detected during data validation. The associated numerical value is the sample quantitation limit.

U = Upper well completion zone.

UJ = The analyte was analyzed for but was not detected. The associated value is an estimate and may be inaccurate or imprecise.

$\mu\text{g/L}$ = Milligram(s) per liter.

Total Cyanide	9010A	0.2	ND (0.00166)	ND (0.00166)	ND (0.00166) UJ
Sulfides	9034	NE	ND (0.835)	ND (0.835)	ND (0.835)

If result detected below laboratory practical quantitation limit, then practical quantitation limit is indicated in parenthesis.

ARCOC= Analysis Request and Chain of Custody.

BW = Background well.

GEL = General Engineering Laboratories.

L = Lower well completion zone.

MCL = Maximum contamination levels (established by the U.S. EPA Primary Drinking Water Regulations in 40 CFR 141.11(b), subsequent amendments or the New Mexico Environmental Improvement Board in the New Mexico Register, Title 20, Chapter 7, Part 1).

mg/L = Milligrams per liter.

MW = Monitoring well.

ND = The analyte was analyzed for but was not detected. The associated numerical value is the sample quantitation limit.

NE = Not established.

U = Upper well completion zone.

UJ = The analyte was analyzed for but was not detected. The associated value is an estimate and may be inaccurate or imprecise.

Copper (in mg/L)	6020	NE	0.000829 (0.001) J	0.00111	

If result detected below laboratory practical quantitation limit, then practical quantitation limit is indicated in parenthesis.

ARCOC = Analysis Request and Chain of Custody.

GEL = General Engineering Laboratories.

J = The associated value is an estimated quantity and/or detected below the practical quantitation limit.

J- = The associated numerical value is an estimated quantity with a suspected negative bias.

L = Lower well completion zone.

MCL = Maximum contamination levels (established by the U.S. EPA Primary Drinking Water Regulations in 40 CFR 141.11(b), subsequent amendments or the New Mexico Environmental Improvement Board in the New Mexico Register, Title 20, Chapter 7, Part 1).

mg/L = Milligrams per liter.

MW = Monitoring well.

ND = The analyte was analyzed for but was not detected. The associated numerical value is the sample quantitation limit.

U = Upper well completion zone.

µg/L = Microgram(s) per liter.

Table A-16
Summary of Environmental and Duplicate Analyses
Sandia National Laboratories/New Mexico
Chemical Waste Landfill
Semi-annual Assessment, August 2009 - January 2010

Zinc	0.037	0.0371	< 1

L = Lower well completion zone.
 J = The associated value is qualified as an estimated quantity and/or detected below the practical quantitation limit.
 J- = The associated numerical value is an estimated quantity with a suspected negative bias.
 mg/L = Milligram(s) per liter.
 MW = Monitoring well.
 µg/L = Microgram(s) per liter.
 NC = Not calculated for estimated or non-detected values.
 ND = The analyte was analyzed for but was not detected. The associated numerical value is the sample quantitation limit.
 NJ- = Presumptive evidence of the presence of the material at an estimated quantity with a suspected negative bias.
 RPD = Relative percent difference is calculated with the following equation and rounded to nearest whole number:

$$RPD = \frac{|R_1 - R_2|}{[(R_1 + R_2)/2]} \times 100$$

where: R_1 = analysis result.
 R_2 = duplicate analysis result.

U = Upper well completion zone.

Sample Findings Summary

Page 2/2

Site: CWL GWM

AR/COC: 612444, 612445, 612446, 612447, 612448

Data Type: Organic, Metals, Gen Chem

Memorandum

Date: November 23, 2009
To: File
From: Kevin Lambert
Subject: GC/MS Organic Data Review and Validation – SNL
Site: CWL GWM
AR/COC: 612444, 612445, 612446, 612447, and 612448
SDG: 239035
Laboratory: GEL
Project/Task: 125778.10.11.01
Analysis: VOCs

See the attached Data Validation Worksheets for supporting documentation on the data review and validation. Data are evaluated using SNL/NM SMO AOP 00-03 Rev 2.

Summary

Twelve samples were prepared and analyzed with accepted procedures using method EPA 8260B (VOCs). All compounds were successfully analyzed. Problems were identified with the data package that result in the qualification of data.

1. The initial calibration response factor (RF) for acetonitrile, acrolein, isobutyl alcohol, and propionitrile were <0.05 but ≥ 0.01 . All associated sample results were non-detects and will be **qualified “UJ, I4.”**
2. The calibration verification percent difference for acetone was $>40\%$ but $\leq 60\%$ with negative bias. The acetone results for samples 239035-035 and -037 were detects and will be **qualified “J-,C3.”** All other associated sample results were non-detects and will be **qualified “UJ,C3.”**
3. The calibration verification percent differences for 2-butanone, acrolein, isobutyl alcohol, and propionitrile were $>20\%$ but $\leq 40\%$ with negative bias. The 2-butanone result for sample -046 was a detect and will be **qualified “J-,C3.”** It should be noted that all associated acrolein, isobutyl alcohol, and propionitrile results have already been qualified due to poor initial calibration RFs and, thus, will not be further qualified. However, the appropriate reason code will be included to indicate the poor calibration verification percent differences. All other associated sample results were non-detects and will not be qualified.

4. Chloroform was detected in the equipment blank (EB) associated with samples -019, -027, and -035 at a concentration > the practical quantitation limit (PQL). The associated sample results were non-detects <5X the EB concentration and < the PQL and will be qualified “1.0U,B2” at the value of the PQL.

Data are acceptable and reported QC measures appear to be adequate. The following sections discuss the data review and validation.

Holding Times

The samples were extracted and analyzed within the prescribed holding times and properly preserved.

Instrument Tune

All instrument tune requirements were met.

Calibration

The initial calibration and continuing calibration data met QC acceptance criteria except as noted above in the summary section and as follows.

The calibration verification percent differences for acetonitrile and dichlorodifluoromethane were >20% with a positive bias (see VOC Organic Worksheet). The associated sample results were non-detects and will not be qualified for the calibration infraction.

The calibration verification percent differences for 2-chloro-1,3-butadiene, 2-hexanone, and acrylonitrile were >20% but ≤40% with negative bias (see VOC Organic Worksheet). All associated sample results were non-detects, and no other calibration infractions occurred for these analytes. Therefore, the associated sample results will not be qualified.

Blanks

No target analytes were detected in the blanks except as noted above in the summary section and as follows.

Chloroform and acetone were detected in the field blank (FB) associated with samples -019 and -027 at concentrations > the method detection limits (MDLs) but < the PQLs. However, it should be noted that the chloroform result for the FB has already been qualified non-detect due to EB contamination and, thus, does not affect the field sample results. The associated acetone results were non-detects and will not be qualified.

Bromodichloromethane was detected in the FB associated with samples -019 and -027 at a concentration > the PQL. The associated sample results were non-detects and will not be qualified.

Surrogates

All surrogate recoveries met QC acceptance criteria.

Internal Standards

All internal standards met QC acceptance criteria.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The MS/MSD analyses met QC acceptance criteria.

Laboratory Control Sample (LCS)

All LCS recoveries met QC acceptance criteria.

Detection Limits/Dilutions

All detection limits were properly reported. The samples were not diluted.

Tentatively Identified Compounds (TICs)

TIC reports were not required.

Other QC

Trip blanks, EB, FB, and field duplicate pair were submitted on the AR/COC(s). There are no “required” review criteria for field duplicate analyses comparability; no data will be qualified as a result. It should be noted that the EB on AR/COC# 612448 is associated with samples in another SNL SDG on AR/COC# 612449.

No other specific issues that affect data quality were identified.

Memorandum

Date: November 24, 2009
To: File
From: Kevin Lambert
Subject: GC/MS Organic Data Review and Validation – SNL
Site: CWL GWM
AR/COC: 612444, 612445, 612446, 612447, and 612448
SDG: 239035
Laboratory: GEL
Project/Task: 125778.10.11.01
Analysis: SVOCs

See the attached Data Validation Worksheets for supporting documentation on the data review and validation. Data are evaluated using SNL/NM SMO AOP 00-03 Rev 2.

Summary

Six samples were prepared and analyzed with accepted procedures using method EPA 8270C (SVOCs). All compounds were successfully analyzed. Problems were identified with the data package that result in the qualification of data.

1. The initial calibration response factor (RF) for 4-nitroquinoline-1-oxide was <0.05 but ≥ 0.01 . All associated sample results were non-detects and will be **qualified “UJ, 14.”**
2. The matrix spike/matrix spike duplicate (MS/MSD) relative percent difference (RPD) for 4-nitrophenol was not within the laboratory acceptance limit. All associated sample results were non-detects and will be **qualified “UJ, MS5.”**

Data are acceptable and reported QC measures appear to be adequate. The following sections discuss the data review and validation.

Holding Times

The samples were extracted and analyzed within the prescribed holding times and properly preserved.

Instrument Tune

All instrument tune requirements were met.

Calibration

The initial calibration and continuing calibration data met QC acceptance criteria except as noted above in the summary section and as follows.

The initial calibration intercepts for benzidine and dinoseb were positive and >3X the method detection limits (MDLs). All associated sample results were non-detects and will not be qualified.

The calibration verification percent differences for 1,2,4,5-tetrachlorobenzene, 1,3,5-trinitrobenzene, 1,4-dioxane, 2-acetylaminofluorene, 4-aminobiphenyl, 4-nitroquinoline-1-oxide, ethyl methanesulfonate, ethyl methacrylate, hexachloropropene, methyl methacrylate, pentachloroethane, and safrole were >20% with a positive bias (see SVOC Organic Worksheet). All associated sample results were non-detects and will not be qualified for the calibration infraction.

The calibration verification percent differences for benzo(ghi)perylene and indeno(1,2,3-cd)pyrene were >20% but <40% with negative bias (see SVOC Organic Worksheet). All associated sample results were non-detects, and no other calibration infractions occurred for these analytes. Therefore, the associated sample results will not be qualified.

Blanks

No target analytes were detected in the blanks except as follows.

Bis(2-ethylhexyl)phthalate was detected in the equipment blank (EB) associated with samples 239035-020 and -028 at a concentration > the MDL but < the practical quantitation limit (PQL). The associated sample results were non-detects and will not be qualified.

Surrogates

All surrogate recoveries met QC acceptance criteria.

Internal Standards

All internal standards met QC acceptance criteria.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The MS/MSD analyses met QC acceptance criteria except as noted above in the summary section.

Laboratory Control Sample (LCS)

All LCS recoveries met QC acceptance criteria.

Detection Limits/Dilutions

All detection limits were properly reported. The samples were not diluted.

Tentatively Identified Compounds (TICs)

TIC reports were not required.

Other QC

EB and a field duplicate pair were submitted on the AR/COC(s). There are no “required” review criteria for field duplicate analyses comparability; no data will be qualified as a result. It should be noted that the EB on AR/COC# 612448 is associated with samples in another SNL SDG on AR/COC# 612449.

No other specific issues that affect data quality were identified.

Memorandum

Date: November 25, 2009

From: Kevin Lambert
Subject: GC Organic Data Review and Validation – SNL
Site: CWL GWM
AR/COC: 612444, 612445, 612446, 612447, and 612448
SDG: 239035
Laboratory: GEL
Project/Task: 125778.10.11.01
Analysis: Herbicides

See the attached Data Validation Worksheets for supporting documentation on the data review and validation. Data are evaluated using SNL/NM SMO AOP 00-03 Rev 2.

Summary

Six samples were prepared and analyzed with accepted procedures using method EPA 8151A (Herbicides). All compounds were successfully analyzed. No problems were identified with the data package that result in the qualification of data.

Data are acceptable and reported QC measures appear to be adequate. The following sections discuss the data review and validation.

Holding Times and Preservation

The samples were extracted and analyzed within the prescribed holding time and properly preserved.

Calibration

The initial calibration and continuing calibration data met QC acceptance criteria except as follows.

The calibration verification percent difference for 2,4,5-T was >15% with a positive bias on one column. The associated sample results were non-detects and will not be qualified for the calibration infraction.

Blanks

No target analytes were detected in the blanks.

Surrogates

All surrogate recoveries met QC acceptance criteria.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The MS/MSD analyses met QC acceptance criteria except as follows.

The MS and MSD recoveries for 2,4-D were > the upper QC acceptance limit. The associated sample results were non-detects and will not be qualified.

Laboratory Control Sample (LCS)

All LCS recoveries met QC acceptance criteria.

Target Compound Identification/Confirmation

All continuing calibration verification compounds were within the established retention time windows. All sample results were non-detects. Therefore, confirmation analyses were not required.

Detection Limits/Dilutions

All detection limits were properly reported. The samples were not diluted.

Other QC

EB and field duplicate pair were submitted on the AR/COC(s). There are no “required” review criteria for field duplicate analyses comparability; no data will be qualified as a result. It should be noted that the EB on AR/COC# 612448 is associated with samples in another SNL SDG on AR/COC# 612449.

No other specific issues that affect data quality were identified.

From: Kevin Lambert

Subject: Inorganic Data Review and Validation – SNL
Site: CWL GWM
AR/COC: 612444, 612445, 612446, 612447, and 612448
SDG: 239035
Laboratory: GEL
Project/Task: 125778.10.11.01
Analysis: General Chemistry

See the attached Data Validation Worksheets for supporting documentation on the data review and validation. This validation was performed according to SNL/NM ER Project AOP 00-03 Rev 2.

Summary

Six samples were prepared and analyzed with accepted procedures using methods EPA 9012A (total cyanide). Six samples were prepared and analyzed with accepted procedures using methods EPA 9034 (total sulfide). Data were reported for all required analytes. Problems were identified with the data package that result in the qualification of data.

1. Total Cyanide:

Total cyanide was detected in the calibration blanks at a negative concentration with an absolute value \geq the method detection limit (MDL) but $<$ the practical quantitation limit (PQL). The associated sample results were non-detects and will be qualified “UJ,B4.”

Data are acceptable and reported QC measures appear to be adequate. The following sections discuss the data review and validation.

Holding Times and Preservation

The samples were analyzed within the prescribed holding times and properly preserved.

Calibration

All initial and continuing calibration met QC acceptance criteria.

Blanks

No target analytes were detected in the blanks except as noted above in the summary section.

Laboratory Control Sample (LCS)

All LCS recoveries met QC acceptance criteria.

Matrix Spike (MS)

All MS recoveries met QC acceptance criteria.

Laboratory Replicate

The replicates met all QC acceptance criteria.

Detection Limits/Dilutions

All detection limits were properly reported. No samples were diluted.

Other QC

EB and field duplicate pair were submitted on the AR/COC(s). There are no “required” review criteria for field duplicate analyses comparability; no data will be qualified as a result. It should be noted that the EB on AR/COC# 612448 is associated with samples in another SNL SDG on AR/COC# 612449.

No other specific issues that affect data quality were identified.

Memorandum

Date: November 27, 2009
To: File
From: Kevin Lambert
Subject: Inorganic Data Review and Validation – SNL
Site: CWL GWM
AR/COC: 612444, 612445, 612446, 612447, and 612448
SDG: 239035
Laboratory: GEL
Project/Task: 125778.10.11.01
Analysis: Metals

See the attached Data Validation Worksheets for supporting documentation on the data review and validation. This validation was performed according to SNL/NM ER Project AOP 00-03 Rev 2.

Summary

Twelve samples were prepared and analyzed with approved procedures using methods EPA 6020 (ICP-MS metals) and EPA 7470A (CVAA mercury). Data were reported for all required analytes. Problems were identified with the data package that result in the qualification of data.

1. ICP-MS metals:

As was detected in the method blank (MB) at a concentration \geq the method detection limit (MDL) but $<$ the practical quantitation limit (PQL). The As result for sample 239035-012 was a detect $<5X$ the MB result and will be **qualified “0.0078U,B”** at 5X the MB value. The other associated sample results were non-detects and will not be qualified.

Tl was detected in the calibration blanks at a concentration \geq the MDL but $<$ the PQL. The Tl result for sample -021 was a detect $<5X$ the highest calibration blank result and will be **qualified “0.0032U,B3”** at 5X the highest calibration blank value. The other associated sample results were non-detects and will not be qualified.

Cu was detected in the equipment blank (EB) associated with samples -021 and -029 at a concentration \geq the MDL but $<$ the PQL. The associated sample results were detects $<5X$ the EB result and will be **qualified “0.0041U,B2”** at 5X the EB value.

Data are acceptable and reported QC measures appear to be adequate. The following sections discuss the data review and validation.

Holding Times and Preservation

The samples were analyzed within the prescribed holding times and properly preserved.

Calibration

All initial and continuing calibration QC acceptance criteria were met.

Reporting Limit Verification

All CRA/CRI recoveries met QC acceptance criteria.

Blanks

No target analytes were detected in the blanks except as noted above in the summary section and as follows.

Sb and U were detected in one or more of the blanks at concentrations \geq the MDL but $<$ the PQL. All associated sample results were either non-detects or $>5X$ the highest blank value and will not be qualified.

As was detected in the EB associated with samples -021 and -029 at a concentration \geq the MDL but $<$ the PQL. However, it should be noted that the As result for the EB has already been qualified non-detect due to MB contamination and, thus, does not affect the field sample results.

Matrix Spike (MS)

All MS recoveries met QC acceptance criteria.

Laboratory Replicate

The replicate analyses met all QC acceptance criteria.

Laboratory Control Sample (LCS)

All LCS recoveries met QC acceptance criteria.

Detection Limits/Dilutions

All detection limits were properly reported. No samples were diluted.

ICP Interference Check Sample (ICS A and AB)

The results of the ICS A and AB analyses were not evaluated because the concentrations of Al, Ca, Fe, and Mg in the samples were $<$ those in the ICS solutions. No sample data will be qualified as a result.

ICP Serial Dilution

The serial dilution analyses met all QC acceptance criteria.

Other QC

EB and field duplicate pair were submitted on the AR/COC(s). There are no “required” review criteria for field duplicate analyses comparability; no data will be qualified as a result. It should be noted that the EB on AR/COC# 612448 is associated with samples in another SNL SDG on AR/COC# 612449.

No other specific issues that affect data quality were identified.

From: Kevin Lambert
Subject: GC/MS Organic Data Review and Validation – SNL
Site: CWL GWM
AR/COC: 612449, 612450, and 612451
SDG: 239274
Laboratory: GEL
Project/Task: 125778.10.11.01
Analysis: VOCs

See the attached Data Validation Worksheets for supporting documentation on the data review and validation. Data are evaluated using SNL/NM SMO AOP 00-03 Rev 2.

Summary

Eight samples were prepared and analyzed with accepted procedures using method EPA 8260B (VOCs). All compounds were successfully analyzed. Problems were identified with the data package that result in the qualification of data.

1. The initial calibration response factors (RFs) for acetonitrile, acrolein, isobutyl alcohol, and propionitrile were <0.05 but ≥ 0.01 . All associated sample results were non-detects and will be **qualified “UJ, I4.”**
2. The continuing calibration verification percent differences for acetonitrile and chloromethane were $>20\%$ but $\leq 40\%$ with negative bias. It should be noted that all associated acetonitrile results have already been qualified due to a poor initial calibration RF and, thus, will not be further qualified. However, the appropriate reason code will be included to indicate the poor calibration verification percent difference. The chloromethane result for sample 239274-001 was a detect and will be **qualified “J-,C3.”** All other associated chloromethane results were non-detects, and no other calibration infractions occurred for this analyte. Therefore, the associated sample results will not be qualified.
3. In the equipment blank (EB) associated with samples -001, -009, and -017, bromodichloromethane and dibromochloromethane were detected at concentrations $>$ the method detection limits (MDLs) but \leq the practical quantitation limit (PQLs) and chloroform was detected at a concentration $>$ the PQL. The bromodichloromethane and

dibromochloromethane results for sample -017 were detected $<5X$ the EB concentrations but $>$ the PQLs and will be qualified respectively “1.3U,B2” and “1.5U,B2” at the reported values. The chloroform result for sample -017 was a detect $<5X$ the EB concentration and \leq the PQL and will be qualified “1.0U,B2” at the value of the PQL. All other associated sample results were non-detects and will not be qualified.

4. The matrix spike duplicate percent recoveries for dibromochloromethane, 1,1,1,2-tetrachloroethane, 1,1,2-trichloroethane, 1,2-dibromoethane, 4-methyl-2-pentanone, chlorobenzene, and tetrachloroethylene were $<$ the lower acceptance limits but $\geq 10\%$. All associated sample results were non-detects or qualified non-detects and will be qualified “UJ,MS3.”

Data are acceptable and reported QC measures appear to be adequate. The following sections discuss the data review and validation.

Holding Times

The samples were extracted and analyzed within the prescribed holding times and properly preserved.

Instrument Tune

All instrument tune requirements were met.

Calibration

The initial calibration and continuing calibration data met QC acceptance criteria except as noted above in the summary section and as follows.

The calibration verification percent difference for vinyl acetate was $>20\%$ with a positive bias (see VOC Organic Worksheet). The associated sample results were non-detects and will not be qualified for the calibration infraction.

The calibration verification percent differences for 2-butanone, acetone, and 2-hexanone were $>20\%$ but $\leq 40\%$ with negative bias (see VOC Organic Worksheet). All associated sample results were non-detects, and no other calibration infractions occurred for these analytes. Therefore, the associated sample results will not be qualified.

Blanks

No target analytes were detected in the blanks except as noted above in the summary section and as follows.

2-butanone was detected in the EB associated with samples -001, -009, and -017 at a concentration $>$ the MDL but \leq the PQL. The associated sample results were non-detects and will not be qualified.

Bromodichloromethane, dibromochloromethane, and chloroform were detected in the field blank (FB) associated with samples -001 and -009. However, it should be noted that the associated

sample results for the FB have already been qualified non-detect due to EB contamination and, thus, do not affect the field sample results.

Surrogates

All surrogate recoveries met QC acceptance criteria.

Internal Standards

All internal standards met QC acceptance criteria.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The MS/MSD analyses met QC acceptance criteria except as noted above in the summary section.

Laboratory Control Sample (LCS)

All LCS recoveries met QC acceptance criteria.

Detection Limits/Dilutions

All detection limits were properly reported. The samples were not diluted.

Tentatively Identified Compounds (TICs)

TIC reports were not required.

Other QC

Trip blanks, FB, and field duplicate pair were submitted on the AR/COC(s). There are no “required” review criteria for field duplicate analyses comparability; no data will be qualified as a result. It should be noted that the EB associated with the samples on AR/COC# 612449 is from another SNL SDG on AR/COC# 612448.

No other specific issues that affect data quality were identified.

Memorandum

Date: December 8, 2009
To: File
From: Kevin Lambert
Subject: GC/MS Organic Data Review and Validation – SNL
Site: CWL GWM
AR/COC: 612449, 612450, and 612451
SDG: 239274
Laboratory: GEL
Project/Task: 125778.10.11.01
Analysis: SVOCs

See the attached Data Validation Worksheets for supporting documentation on the data review and validation. Data are evaluated using SNL/NM SMO AOP 00-03 Rev 2.

Summary

Four samples were prepared and analyzed with accepted procedures using method EPA 8270C (SVOCs). All compounds were successfully analyzed. Problems were identified with the data package that result in the qualification of data.

1. The initial calibration response factor (RF) for 4-nitroquinoline-1-oxide was <0.05 but ≥ 0.01 . All associated sample results were non-detects and will be **qualified “UJ, I4.”**
2. The LCS percent recovery for benzidine was <10% and the MS percent recovery for benzidine was < the lower acceptance limit but $\geq 10\%$. It should be noted that benzidine is subject to oxidative loss during solvent extraction and this may have attributed to the poor LCS and MS recoveries (see laboratory case narrative). The MSD percent recovery met QC acceptance criteria. The associated sample results were non-detects and will be **qualified “UJ,L3,MS3”** based on professional judgment.
3. The matrix spike/matrix spike duplicate (MS/MSD) relative percent difference (RPD) for pyridine was not within the laboratory acceptance limit. All associated sample results were non-detects and will be **qualified “UJ,MS5.”**

Data are acceptable and reported QC measures appear to be adequate. The following sections discuss the data review and validation.

Holding Times

The samples were extracted and analyzed within the prescribed holding times and properly preserved.

Instrument Tune

All instrument tune requirements were met.

Calibration

The initial calibration and continuing calibration data met QC acceptance criteria except as noted above in the summary section and as follows.

The calibration verification percent differences for 1,2,4,5-tetrachlorobenzene and hexachloropropene were >20% with a positive bias (see SVOC Organic Worksheet). All associated sample results were non-detects and will not be qualified for the calibration infraction.

Blanks

No target analytes were detected in the blanks.

Surrogates

All surrogate recoveries met QC acceptance criteria.

Internal Standards

All internal standards met QC acceptance criteria.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The MS/MSD analyses met QC acceptance criteria except as noted above in the summary section and as follows.

The MS and/or MSD percent recoveries for acetophenone, butylbenzylphthalate, and bis(2-ethylhexyl)phthalate were > the upper acceptance limits. All associated sample results were non-detects and will not be qualified.

Laboratory Control Sample (LCS)

All LCS recoveries met QC acceptance criteria except as noted above in the summary section and as follows.

The LCS percent recoveries for acetophenone, butylbenzylphthalate, and 3,3-dichlorobenzidine were > the upper acceptance limits. All associated sample results were non-detects and will not be qualified

Detection Limits/Dilutions

All detection limits were properly reported. The samples were not diluted.

Tentatively Identified Compounds (TICs)

TIC reports were not required.

Other QC

A field duplicate pair was submitted on the AR/COC(s). There are no "required" review criteria for field duplicate analyses comparability; no data will be qualified as a result. It should be noted that the EB associated with the samples on AR/COC# 612449 is from another SNL SDG on AR/COC# 612448.

No other specific issues that affect data quality were identified.

Analysis: Herbicides

See the attached Data Validation Worksheets for supporting documentation on the data review and validation. Data are evaluated using SNL/NM SMO AOP 00-03 Rev 2.

Summary

Four samples were prepared and analyzed with accepted procedures using method EPA 8151A (Herbicides). All compounds were successfully analyzed. No problems were identified with the data package that result in the qualification of data.

Data are acceptable and reported QC measures appear to be adequate. The following sections discuss the data review and validation.

Holding Times and Preservation

The samples were extracted and analyzed within the prescribed holding time and properly preserved.

Calibration

The initial calibration and continuing calibration data met QC acceptance criteria.

Blanks

No target analytes were detected in the blanks.

Surrogates

All surrogate recoveries met QC acceptance criteria.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The MS/MSD analyses met QC acceptance criteria.

Laboratory Control Sample (LCS)

All LCS recoveries met QC acceptance criteria.

Target Compound Identification/Confirmation

All continuing calibration verification compounds were within the established retention time windows. All sample results were non-detects. Therefore, confirmation analyses were not required.

Detection Limits/Dilutions

All detection limits were properly reported. The samples were not diluted.

Other QC

A field duplicate pair was submitted on the AR/COC(s). There are no “required” review criteria for field duplicate analyses comparability; no data will be qualified as a result. It should be noted that the EB associated with the samples on AR/COC# 612449 is from another SNL SDG on AR/COC# 612448.

No other specific issues that affect data quality were identified.

Site: CWL GWM
AR/COC: 612449, 612450, and 612451
SDG: 239274
Laboratory: GEL
Project/Task: 125778.10.11.01
Analysis: General Chemistry

See the attached Data Validation Worksheets for supporting documentation on the data review and validation. This validation was performed according to SNL/NM ER Project AOP 00-03 Rev 2.

Summary

Four samples were prepared and analyzed with accepted procedures using methods EPA 9012A (total cyanide). Four samples were prepared and analyzed with accepted procedures using methods EPA 9034 (total sulfide). Data were reported for all required analytes. Problems were identified with the data package that result in the qualification of data.

1. Total Cyanide:

Total cyanide was detected in the calibration blanks associated with sample 239274-033 at a negative concentration with an absolute value \geq the method detection limit (MDL) but $<$ the practical quantitation limit (PQL). The associated sample result was a non-detect and will be **qualified “UJ,B4.”**

Data are acceptable and reported QC measures appear to be adequate. The following sections discuss the data review and validation.

Holding Times and Preservation

The samples were analyzed within the prescribed holding times and properly preserved.

Calibration

All initial and continuing calibration met QC acceptance criteria.

Blanks

No target analytes were detected in the blanks except as noted above in the summary section.

Laboratory Control Sample (LCS)

All LCS recoveries met QC acceptance criteria.

Matrix Spike (MS)

All MS recoveries met QC acceptance criteria.

Laboratory Replicate

The replicates met all QC acceptance criteria.

Detection Limits/Dilutions

All detection limits were properly reported. No samples were diluted.

Other QC

A field duplicate pair was submitted on the AR/COC(s). There are no “required” review criteria for field duplicate analyses comparability; no data will be qualified as a result. It should be noted that the EB associated with the samples on AR/COC# 612449 is from another SNL SDG on AR/COC# 612448.

No other specific issues that affect data quality were identified.

Memorandum

Date: December 1, 2009
To: File
From: Kevin Lambert
Subject: Inorganic Data Review and Validation – SNL
Site: CWL GWM
AR/COC: 612449, 612450, and 612451
SDG: 239274
Laboratory: GEL
Project/Task: 125778.10.11.01
Analysis: Metals

See the attached Data Validation Worksheets for supporting documentation on the data review and validation. This validation was performed according to SNL/NM ER Project AOP 00-03 Rev 2.

Summary

Eight samples were prepared and analyzed with approved procedures using methods EPA 6020 (ICP-MS metals) and EPA 7470A (CVAA mercury). Data were reported for all required analytes. Problems were identified with the data package that result in the qualification of data.

1. ICP-MS metals:

As was detected in the method blank (MB) at a concentration \geq the method detection limit (MDL) but $<$ the practical quantitation limit (PQL). The associated sample results were detect <5X the MB result and will be **qualified “0.019U,B”** at 5X the MB value.

Sb was detected in the MB and calibration blanks at concentrations \geq the MDL but $<$ the PQL. The Sb results for samples 239274-003 and -011 were detect <5X the MB result and <5X the highest calibration blank result and will be **qualified “0.011U,B,B3”** at 5X the highest blank value (calibration blank). The other associated sample results were non-detects and will not be qualified.

Cu was detected in the equipment blank (EB) associated with samples -003 and -011 at a concentration \geq the PQL. The associated sample results were detect <5X the EB result and will be **qualified “0.0056UJ,B2”** at 5X the EB value.

Se was detected in the calibration blanks at a negative concentration with an absolute value \geq the MDL but $<$ the PQL. The associated sample results were non-detects $<5X$ the MDL and will be qualified "NJ-B4."

Data are acceptable and reported QC measures appear to be adequate. The following sections discuss the data review and validation.

Holding Times and Preservation

The samples were analyzed within the prescribed holding times and properly preserved.

Calibration

All initial and continuing calibration QC acceptance criteria were met.

Reporting Limit Verification

All CRA/CRI recoveries met QC acceptance criteria.

Blanks

No target analytes were detected in the blanks except as noted above in the summary section and as follows.

Sn and U were detected in one or more of the blanks at concentrations \geq the MDL but $<$ the PQL. All associated sample results were either non-detects or $>5X$ the highest blank value and will not be qualified.

Fe was detected in the calibration blanks at a negative concentration with an absolute value \geq the MDL but $<$ the PQL. The associated sample results were non-detects $>5X$ the MDL and will not be qualified.

Matrix Spike (MS)

All MS recoveries met QC acceptance criteria.

Laboratory Replicate

The replicate analyses met all QC acceptance criteria.

Laboratory Control Sample (LCS)

All LCS recoveries met QC acceptance criteria.

Detection Limits/Dilutions

All detection limits were properly reported. No samples were diluted.

ICP Interference Check Sample (ICS A and AB)

The results of the ICS A and AB analyses were not evaluated because the concentrations of Al, Ca, Fe, and Mg in the samples were < those in the ICS solutions. No sample data will be qualified as a result.

ICP Serial Dilution

The serial dilution analyses met all QC acceptance criteria.

Other QC

A field duplicate pair was submitted on the AR/COC(s). There are no “required” review criteria for field duplicate analyses comparability; no data will be qualified as a result. It should be noted that the EB associated with the samples on AR/COC# 612449 is from another SNL SDG on AR/COC# 612448.

No other specific issues that affect data quality were identified.

SDG: CFA ID # 1104
Laboratory: Cape Fear Analytical, LLC (CFA)
Project/Task: 125778.10.11.01
Analysis: Chlorinated Biphenyl Congeners (PCBs)

See the attached Data Validation Worksheets for supporting documentation on the data review and validation. Data are evaluated using SNL/NM SMO AOP 00-03 Rev 2.

Summary

Six samples were prepared and analyzed with accepted procedures using method EPA 1668A (Chlorinated Biphenyl Congeners by High Resolution Gas Chromatography / High Resolution Mass Spectrometry [HRGC/HRMS]). All compounds were successfully analyzed. Problems were identified with the data package that resulted in the qualification of data.

1. The samples were not preserved during collection nor were they preserved by the laboratory prior to analysis. The associated sample results were non-detects and will be qualified “UJ, TP2”.

The remaining data are acceptable and reported QC measures appear to be adequate. The following sections discuss the data review and validation.

Holding Times/Preservation

The samples were analyzed within the prescribed holding time but were not properly preserved as noted above in the summary section.

Instrument Tune

All requirements were met for the instrument performance analysis associated with the samples.

Calibration

The initial calibration and continuing calibration data met QC acceptance criteria.

Blanks

No target analytes were detected in the method blank or equipment blank.

Labeled compounds

All labeled compound acceptance criteria were met.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

The MS/MSD met QC acceptance criteria.

Laboratory Control Sample (LCS)/Ongoing Precision and Accuracy

All ongoing precision and accuracy acceptance criteria were met.

Target Compound Identification

The ion abundance ratio and RRTs were met for the samples except as follows.

The RRTs for PCB-110/115 for all samples and the MB; PCB-156/157 for sample CWL-MW2BL; PCB-193/180 for sample CWL-EB1; and PCB-78 and PCB-193/180 for the MB failed to meet laboratory acceptance criteria. The associated results were non-detects and, thus, no sample results will be qualified for these compounds. The RRTs for PCB-110/115 for the LCSD and MS/MSD failed to meet laboratory acceptance criteria but were reported as “t” qualified detects based on the analysts professional judgment and, thus no sample results will be qualified.

Detection Limits/Dilutions

CFA reports all results >1ng/ml (20pg/L) as detects. This is reflected on the Form 1s as the practical quantitation limit (PQL).

The samples were not diluted.

Other QC

No other specific issues that affect data quality were identified.

Environmental Restoration Project Consolidated Quarterly Report

Section III

Perchlorate Screening Quarterly Monitoring Report Fourth Quarter of Calendar Year 2009 (October, November, and December 2009)

March 2010

United States Department of Energy
Sandia Site Office

Sandia is a multiprogram laboratory managed and operated by Sandia Corporation, a wholly-owned subsidiary of Lockheed Martin Corporation, for the United States Department of Energy's National Nuclear Security Administration under contract DE-AC04-94AL85000

Section III:

Perchlorate Screening Quarterly Monitoring Report Fourth Quarter of Calendar Year 2009 (October, November, and December 2009)

Executive Summary

Section IV.B of the Compliance Order on Consent (the Order), between the New Mexico Environment Department (NMED), the U.S. Department of Energy (DOE), and Sandia Corporation (Sandia) for Sandia National Laboratories/New Mexico (SNL/NM), effective on April 29, 2004, stipulates that a select group of groundwater monitoring wells be sampled for perchlorate at SNL/NM (NMED April 2004). This report summarizes the perchlorate monitoring completed during the fourth quarter of Calendar Year 2009 (CY2009) (October, November, and December 2009) in response to the requirements of the Order. During the fourth quarter of CY2009, groundwater samples were collected from LWDS-MW1, TA1-W-06, TA1-W-08, TA2-W-01, and TA2-W-27.

LWDS-MW1 is in the Technical Area V (TA-V) Groundwater Investigation study area and was sampled for the third time for perchlorate based on requirements stipulated in an April 2009 letter from the NMED (NMED April 2009). TA1-W-06, TA1-W-08, TA2-W-01, and TA2-W-27 are in the Tijeras Arroyo Groundwater (TAG) Investigation study area and were sampled for the second time for perchlorate based on NMED requirements (NMED April 2009). All samples were submitted to General Engineering Laboratories (GEL) for perchlorate analysis using U.S. Environmental Protection Agency (EPA) Method 314.0 (EPA November 1999). No perchlorate was detected in the environmental samples from LWDS-MW1, TA1-W-06, TA1-W-08, TA2-W-01, or TA2-W-27 at a method detection limit of 4 micrograms per liter ($\mu\text{g}/\text{L}$). The April 30, 2009 NMED letter also required that monitoring well TA1-W-03 be sampled for perchlorate. However, a groundwater sample could not be collected from TAG monitoring well TA1-W-03 due excessive turbidity from fine grained sediments in the well. TA1-W-03 is scheduled to be redeveloped in February 2010 and will be sampled immediately after redevelopment. The laboratory analytical results for this sample will be reported in the next consolidated quarterly report.

1.0 Introduction

Section IV.B of the Compliance Order on Consent (the Order), between the New Mexico Environment Department (NMED), the U.S. Department of Energy (DOE), and Sandia Corporation (Sandia) for Sandia National Laboratories/New Mexico (SNL/NM), effective on April 29, 2004, stipulates that a select group of groundwater monitoring wells be sampled for perchlorate at SNL/NM (NMED April 2004). This report summarizes the perchlorate screening monitoring completed during the fourth quarter of Calendar Year 2009 (CY2009) (October, November, and December 2009) in response to the requirements of the Order. The outline of this report is based on the required elements of a “Periodic Monitoring Report” described in Section X.D. of the Order (NMED April 2004).

In November 2005, DOE/Sandia submitted a letter report on the status of perchlorate screening in groundwater at SNL/NM monitoring wells (SNL/NM November 2005). The purpose of that letter report was to summarize previous correspondence and sampling results, and to outline proposed future work to comply with NMED requirements for perchlorate screening in groundwater. Per the letter report, quarterly reports will be submitted for wells actively in the perchlorate-screening monitoring-well network. Based on NMED response (NMED January 2006), DOE/Sandia will submit each quarterly report within 90 days following the quarter that the data represent. In November 2008, DOE/Sandia received approval from NMED to proceed to semiannual reporting (NMED November 2008), and then upon further consideration NMED once more required quarterly reporting (NMED April 2009). This did not alter the previously negotiated frequency for CYN-MW6, an existing Burn Site Groundwater study area well that has been under the sampling and reporting requirements of the Order since the well was installed, which will remain at semiannual sampling and reporting.

This report is the sixteenth to be submitted since the November 2005 letter report; the previous reports were submitted Fourth Quarter of Calendar Year 2005 through the Third Quarter of Calendar Year 2009 (SNL/NM February 2006, SNL/NM June 2006, SNL/NM September 2006, SNL/NM December 2006, SNL/NM March 2007, SNL/NM June 2007, SNL/NM September 2007, SNL/NM December 2007, SNL/NM March 2008, SNL/NM June 2008, SNL/NM September 2008, SNL/NM December 2008, SNL/NM June 2009, SNL/NM September 2009, and SNL/NM December 2009).

TA-V well LWDS-MW1 (Figure 1) has been sampled three consecutive quarters; and TAG wells TA1-W-06, TA1-W-08, TA2-W-01, and TA2-W-27 (Figure 1) have been sampled two consecutive quarters. The Order requires that new wells be sampled for perchlorate for a minimum of four quarters (NMED April 2004). Reporting will continue as long as a groundwater monitoring well remains in the perchlorate-screening monitoring well network unless negotiated otherwise with NMED. The April 30, 2009 NMED letter, required that monitoring well TA1-W-03 be sampled for perchlorate. However, a groundwater sample could not be collected from TAG monitoring well TA1-W-03 due to unstable turbidity measurements. Two attempts were made to sample this well on July 16th and 24th, 2009. A total of 88 gallons was purged and turbidity measurements ranged from 5.30 Nephelometric Turbidity Units (NTU) to >1000 NTU. SNL/NM personnel have completed a borehole camera survey of this monitoring well, and have found the well casing to be in good physical condition. TA1-W-03 is scheduled to be redeveloped in the first quarter of CY2010 to remove the silt and clay material that produced the turbid water. This well will be sampled immediately after redevelopment and the laboratory analytical results for this sample will be reported in the next consolidated quarterly report.

Figure 1. Sandia National Laboratories, New Mexico Current Perchlorate-Screening Monitoring-Well Network (October, November, and December 2009)

2.0 Scope of Activities

This report provides perchlorate screening results from the fourth quarter of CY2009 (October, November, and December 2009) for the wells currently active in the perchlorate screening program as shown on Figure 1 and listed in Table 1. Per the requirements of Table XI-1 of the Order, a well with four consecutive quarters of non-detect results at the screening level/method detection limit (MDL) of 4 micrograms per liter ($\mu\text{g}/\text{L}$) is removed from the requirement of continued monitoring for perchlorate. Data from numerous wells identified in the Order have satisfied this requirement and, therefore, these wells have been removed from the perchlorate screening program. Data for these wells were provided in previous reports, and are not discussed in this current report. Wells discussed in previous perchlorate screening reports include: CYN-MW1D, CYN-MW5, CYN-MW7, CYN-MW8, MRN-2, MRN-3D, MWL-BW1, MWL-BW2, MWL-MW1, MWL-MW7, MWL-MW8, MWL-MW9, NWTA3-MW2, and SWTA3-MW4.

Table 1
Current Perchlorate-Screening Monitoring-Well Network
Fourth Quarter of CY2009
(October, November, and December 2009)

Well	Date Sampled	Number of Consecutive Sampling Events ^a	Remaining Number of Sampling Events ^b	Sampling Method
LWDS-MW1	08-DEC-2009	3	1	Bennett TM Pump
TA1-W-03	Not Sampled ^c	0	4	--
TA1-W-06	28-OCT-2009	2	2	Bennett TM Pump
TA1-W-08	29-OCT-2009	2	2	Bennett TM Pump
TA2-W-01	30-OCT-2009	2	2	Bennett TM Pump
TA2-W-27	02-NOV-2009	2	2	Bennett TM Pump

Notes

- ^a Includes this sampling event.
- ^b Per the requirements of Table XI-1 of the Order (NMED April 2004) a well will be removed from the perchlorate-screening monitoring-well network after four quarters unless perchlorate is detected above the screening level/MDL of 4 $\mu\text{g}/\text{L}$. If perchlorate is detected above the screening level/MDL in a specific well, monitoring will continue at that well at a frequency negotiated with the NMED.
- ^c Initial sampling of this well is pending redevelopment (see discussion in Section 1).

DOE/Sandia performed groundwater sampling at five wells on the dates listed in Table 1. These five wells were specifically required by NMED's April 2009 letter (NMED April 2009). Groundwater sampling activities were conducted in conformance with procedures outlined in the investigation-specific sampling and analysis plans (SAP) entitled:

- ◆ “Tijeras Arroyo Groundwater Investigation, Mini-SAP for FY10, 1st Quarter Sampling, October/November 2009” (SNL/NM October 2009a), and
- ◆ “TA-V Groundwater Monitoring Mini-SAP for First Quarter, Fiscal Year 2010” (SNL/NM October 2009b).

As described in the Mini-SAPs, groundwater sampling was performed in conformance with current Sandia Environmental Management, Long Term Environmental Stewardship (LTES) Project field operating procedures (FOPs). A portable BennettTM groundwater sampling system was used to collect the groundwater samples. The sampling pump and tubing bundle were decontaminated prior to installation into monitoring wells in accordance with procedures described in FOP 05-03, “LTES Groundwater Sampling Equipment Decontamination” (SNL/NM August 2007a). Wells TA1-W-06, TA1-W-08, TA2-W-01, and TA2-W-27 were purged a minimum of one saturated screen volume before sampling in conformance with FOP 05-01, “LTES Groundwater Monitoring Well Sampling and Field Analytical Measurements” (SNL/NM August 2007b). Well LWDS-MW1 is a low-yield monitoring well, and was purged dry and allowed to recover before sampling to ensure the most representative groundwater sample possible.

Field water-quality measurements for turbidity, potential of hydrogen (pH), temperature, specific conductance (SC), oxidation-reduction potential (ORP), and dissolved oxygen (DO) were obtained from the well prior to collecting groundwater samples. Groundwater temperature, SC, ORP, DO, and pH were measured with a YSITM Model 620 Water Quality Meter. Turbidity was measured with a HACHTM Model 2100P turbidity meter. Purging continued until four stable measurements for turbidity, pH, temperature, and SC were obtained. Groundwater stability was considered acceptable when measurements were within 10 percent or less than 5 nephelometric turbidity units for turbidity, 0.1 pH units, 1.0 degree Celsius, and SC within 5 percent. Field Measurement Logs documenting details of well purging and water quality measurements were submitted to the Sandia Customer-Funded Records Center.

The groundwater samples were submitted to General Engineering Laboratories (GEL) for chemical analysis for perchlorate using U.S. Environmental Protection Agency (EPA) Method 314.0 (EPA November 1999). The sample identification, Analysis Request/Chain-of-Custody (ARCO) form number, and the sample shipment date are provided in Table 2. The analytical report from GEL, including certificates of analyses (COA) (Appendix A), analytical methods, MDLs, practical quantitation limits (PQLs), dates of analyses, results of quality control (QC) analyses, and data validation findings (Appendix B) have been submitted to the Sandia Customer-Funded Records Center.

Table 2
Sample Details for the Fourth Quarter of CY2009 Perchlorate Sampling

Well	Sample Identification	ARCOC Number	Associated Groundwater Investigation
LWDS-MW1	087970-020 087971-020	612496	TA-V
TA1-W-03	Not Sampled ^a	--	--
TA1-W-06	087872-020	612463	TAG
TA1-W-08	087873-020	612464	TAG
TA2-W-01	087875-020 087876-020	612466	TAG
TA2-W-27	087877-020	612467	TAG

Notes

^a Initial sampling of this well is pending redevelopment (see discussion in Section 1).

ARCOC = Analysis request and chain of custody.

TAG = Tijeras Arroyo Groundwater.

TA-V = Technical Area V.

3.0 Regulatory Criteria

In a given monitoring well, four consecutive non-detects (NDs) using the screening level/MDL of 4 µg/L are considered by the NMED to be evidence of the absence of perchlorate, such that additional monitoring for perchlorate in that well is not required. If perchlorate is detected using the screening level/MDL of 4 µg/L in a specific well, monitoring will continue at that well at a frequency negotiated with the NMED. The Order (NMED April 2004) also requires that for detections equal to or greater than 4 µg/L, the DOE/Sandia will evaluate the nature and extent of perchlorate contamination, based on a screening level/MDL of 4 µg/L, and requires that the results of this evaluation be incorporated into a Corrective Measures Evaluation (CME). Section VII.C of the Order clarifies that the CME process will be initiated where there was a release to the environment and where corrective measures are necessary to protect human health or the environment.

In April 2009, DOE/Sandia received a letter from the NMED requiring DOE/Sandia to characterize the nature and extent of the perchlorate contamination in soils and groundwater in the Burn Site Groundwater study area (NMED April 2009). A characterization work plan has been prepared and submitted to the NMED (SNL/NM November 2009). The NMED has also

requested that DOE/Sandia monitor perchlorate concentrations for a minimum of four quarters at several Tijeras Arroyo Groundwater and Technical Area-V monitoring wells, including TA1-W-03, TA1-W-06, TA1-W-08, TA2-W-01, TA2-W-27, and LWDS-MW1 (NMED April 2009).

4.0 Monitoring Results

Table 3 summarizes current and historical perchlorate results for wells currently in the perchlorate monitoring network. The analytical laboratory COA for the fourth quarter of CY2009 perchlorate data is included as Appendix A. Consistent with historical analytical results, perchlorate was not detected above the screening level in LWDS-MW1, TA1-W-06, TA1-W-08, TA2-W-01, or TA2-W-27.

Table 4 summarizes field water quality measurements collected immediately before the analytical sample was collected. Field water quality measurements include turbidity, pH, temperature, SC, ORP, and DO.

The analytical data were reviewed and qualified in accordance with AOP 00-03 Revision 2, “Data Validation Procedure for Chemical and Radiochemical Data” (SNL/NM July 2007). Although validation qualifiers were assigned to several of the analytical results, no problems were identified with the analytical data that resulted in the qualification of the data as unusable. The data are acceptable and reported quality control measures are adequate. The data validation sample findings summary sheets for the perchlorate data are included as Appendix B.

There was one variance from requirements set forth by NMED (NMED April 2009): no groundwater sample was collected from monitoring well TA1-W-03 due to unstable turbidity measurements during previous a sampling event. No other variances or nonconformances in field activities or field conditions from requirements in the groundwater monitoring mini-SAPs (SNL/NM October 2009a and October 2009b) were identified during the fourth quarter of CY2009 sampling activities.

5.0 Summary and Conclusions

Based on the analytical data presented in Table 3 and in previous reports, the following statements can be made:

- No perchlorate was detected in the environmental sample from groundwater monitoring wells LWDS-MW1, TA1-W-06, TA1-W-08, TA2-W-01, or TA2-W-27 at a screening level/MDL of 4 µg/L.
- Since June 2004 (the start of sampling required by the Order), perchlorate has only been detected above the screening level/MDL (4 µg/L) in one of the wells (CYN-MW6) in the perchlorate-screening monitoring-well network.

Notes

^a**Result**

ND = not detected (at method detection limit).

µg/L = micrograms per liter.

^b**MDL**

Method detection limit. The minimum concentration that can be measured and reported with 99% confidence that the analyte is greater than zero, analyte is matrix specific.

^c**PQL**

Practical quantitation limit. The lowest concentration of analytes in a sample that can be reliably determined within specified limits of precision and accuracy by the indicated method under routine laboratory operating conditions.

^d**MCL**

Maximum contaminant level. Established by the U.S. Environmental Protection Agency Primary Water Regulations [40 CFR 141.11(b)], and subsequent amendments or the New Mexico Environmental Improvement Board in Title 20, Chapter 7, Part 1 of the New Mexico Administrative Code (20MAC 7.1).

NE = Not established.

Table 3 (concluded)
Summary of Perchlorate Screening Analytical Results for the
Current Monitoring-Well Network, as of Fourth Quarter CY2009.

Notes (continued)

***Lab Qualifier**

H = Analytical holding time was exceeded.

U = Analyte is absent or below the method detection limit.

'Validation Qualifier

If cell is blank, then all quality control samples meet acceptance criteria with respect to submitted samples and no qualifier was assigned.

UJ = Analyte is absent or below the method detection limit and the associated quantitation limits (MDL and PQL) may be inaccurate or imprecise because the analysis was performed outside method specific hold time requirements.

^gAnalytical Method

EPA 314.0: U.S. Environmental Protection Agency, November 1999, "Perchlorate in Drinking Water Using Ion Chromatography," EPA 815/R-00-014 (EPA November 1999).

DOE/Sandia will continue semiannual monitoring of perchlorate in CYN-MW6 and quarterly monitoring of perchlorate in LWDS-MW1, TA1-W-06, TA1-W-08, TA2-W-01, and TA2-W-27. Well TA1-W-03 will be redeveloped to remove the silt and clay material and then be added to the perchlorate screening well network to be sampled a minimum of four consecutive quarters.

Based on recent requirements (NMED April 2009), DOE/Sandia has prepared and submitted a work plan that describes efforts to characterize the nature and extent of the perchlorate contamination in soils and groundwater in the Burn Site Groundwater study area. Upon NMED approval the activities described in the work plan will be implemented.

Memorandum

DATE: December 4, 2009
TO: File
FROM: David Schwent
SUBJECT: General Chemistry Data Review and Validation - SNL
Site: TAG GWM
AR/COC: 612463 and 612464
SDG: 239954
Laboratory: GEL
Project/Task No: 125778.10.11.01

See the attached Data Validation Worksheets for supporting documentation on the data review and validation. This validation was performed according to SNL/NM ER Project AOP 00-03 Rev 2.

Summary

The samples were prepared and analyzed with accepted procedures using method EPA 314.0 (perchlorate). No problems were identified with the data package that result in the qualification of data.

Data are acceptable. QC measures appear to be adequate. The following sections discuss the data review and validation.

Holding Times/Preservation

All samples were analyzed within the prescribed holding times and properly preserved.

Calibration

All initial and continuing calibration QC acceptance criteria were met.

Blanks

No target analytes were detected in the blanks.

Laboratory Control Sample (LCS)

All LCS QC acceptance criteria were met.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

All MS (PS) QC acceptance criteria were met. No MSD (PSD) analysis was performed. The replicate analysis was used as a measure of laboratory precision. No sample data will be qualified as a result. It should be noted that the MS analysis was performed on a SNL sample of similar matrix from another SDG. No sample data will be qualified as a result.

Replicates

All replicate QC acceptance criteria were met.

Detection Limits/Dilutions

All detection limits were properly reported. No samples required dilution.

Other QC

All Analyses: No equipment blanks (EBs), field blanks (FBs), or field duplicates (FDs) were submitted on the AR/COCs.

No other specific issues were identified that affect data quality.

Memorandum

Date: December 15, 2009
To: File
From: Kevin Lambert
Subject: Inorganic Data Review and Validation – SNL
Site: TAG GWM
AR/COC: 612465, 612466, 612467, 612468, 612469, 612470,
612471, and 612472
SDG: 240248
Laboratory: GEL
Project/Task: 125778.10.11.01
Analysis: General Chemistry

See the attached Data Validation Worksheets for supporting documentation on the data review and validation. This validation was performed according to SNL/NM ER Project AOP 00-03 Rev 2.

Summary

Four samples were prepared and analyzed with accepted procedures using methods EPA 314.0 (perchlorate). One sample was prepared and analyzed with accepted procedures using methods EPA 9056 (Br, Cl, Fl, and SO₄ by Ion Chromatography) and EPA 2320B (alkalinity). Six samples were prepared and analyzed with accepted procedures using methods EPA 353.2 (nitrate/nitrite by Cd reduction). Data were reported for all required analytes. Problems were identified with the data package that result in the qualification of data.

1. Ion Chromatography:

Sulfate was detected in the method blank (MB) at a concentration \geq the method detection limit (MDL) but $<$ the practical quantitation limit (PQL). The associated sample result was a detect $<5X$ the MB result and will be **qualified “1.9U,B”** at 5X the MB value.

2. Alkalinity:

Total alkalinity was detected in the MB at a concentration \geq the PQL. The associated sample result was a detect and will be **qualified “7.5UJ,B”** at 5X the MB value.

3. Nitrate/Nitrite:

Sample 240248-009 was diluted 5X for nitrate/nitrite and the relative dilution factor between the field sample and the QC sample was >5 . The associated sample result was a detect and will be **qualified “J,MS1,RP1”** due to lack of matrix-specific accuracy and precision data.

Data are acceptable and reported QC measures appear to be adequate. The following sections discuss the data review and validation.

Holding Times and Preservation

The samples were analyzed within the prescribed holding times and properly preserved.

Calibration

All initial and continuing calibration met QC acceptance criteria.

Blanks

No target analytes were detected in the blanks except as noted above in the summary section and as follows.

Nitrate/Nitrite:

Nitrate/nitrite was detected in the MB at a concentration \geq the MDL but $<$ the PQL. The associated sample results were detected $>5X$ the MB result and will not be qualified.

Nitrate/nitrite was detected in the equipment blank (EB) associated with samples -016 and -018 at a concentration \geq the MDL but $<$ the PQL. The associated sample results were detected $>5X$ the EB result and will not be qualified.

Ion Chromatography:

Chloride was detected in the EB at a concentration \geq the MDL but $<$ the PQL and sulfate was detected in the EB at a concentration \geq the PQL. However, it should be noted that no associated field samples were submitted on the AR/COC(s) and, thus, no sample data will be qualified.

Alkalinity:

Alkalinity was detected in the EB at a concentration \geq the PQL. However, it should be noted that no associated field samples were submitted on the AR/COC(s) and, thus, no sample data will be qualified.

Laboratory Control Sample (LCS)

All LCS recoveries met QC acceptance criteria.

Matrix Spike (MS)

All MS recoveries met QC acceptance criteria.

Laboratory Replicate

The replicates met all QC acceptance criteria.

Detection Limits/Dilutions

All detection limits were properly reported. Sample -014 was diluted 10X, samples -016 and -018 were diluted 25X, and samples -021 and -006 were diluted 50X for nitrate/nitrite due to high concentrations for this analysis. Sample -009 was diluted 5X for nitrate/nitrite due to matrix interference. It should be noted that except for sample -009 the relative dilution factors between the samples and associated QC samples were <5. No sample data will be qualified as a result.

Other QC

EBs and field duplicate pair were submitted on the AR/COC(s). There are no “required” review criteria for field duplicate analyses comparability; no data will be qualified as a result.

No other specific issues that affect data quality were identified.

Memorandum

DATE: January 12, 2010
TO: File
FROM: David Schwent
SUBJECT: General Chemistry Data Review and Validation - SNL
Site: TAV GWM
AR/COC: 612494, 612495, and 612496
SDG: 242454
Laboratory: GEL
Project/Task No: 125778.10.11.01

See the attached Data Validation Worksheets for supporting documentation on the data review and validation. This validation was performed according to SNL/NM ER Project AOP 00-03 Rev 2.

Summary

The samples were prepared and analyzed with accepted procedures using EPA 314.0 (perchlorate) and EPA353.2 (nitrate/nitrite by Cd reduction). No problems were identified with the data package that result in the qualification of data.

Data are acceptable. QC measures appear to be adequate. The following sections discuss the data review and validation.

Holding Times/Preservation

All Analyses: All samples were analyzed within the prescribed holding times and properly preserved.

Calibration

All Analyses: All initial and continuing calibration QC acceptance criteria were met.

Blanks

All Analyses: No target analytes were detected in the blanks.

Laboratory Control Sample (LCS)

All Analyses: All LCS QC acceptance criteria were met.

Matrix Spike/Matrix Spike Duplicate (MS/MSD)

All Analyses: All MS (PS) QC acceptance criteria were met. No MSD (PSD) analyses were performed. The replicate analyses were used as measures of laboratory precision. No sample data will be qualified as a result.

Replicates

All Analyses: All replicate QC acceptance criteria were met.

Detection Limits/Dilutions

Perchlorate Analysis: All detection limits were properly reported. No samples required dilution.

Nitrate/nitrite Analysis: All detection limits were properly reported. Samples 242454-002, -010, and -013 were diluted 25X for nitrate/nitrite due to high concentration of the target analyte and sample -006 was diluted 5X due to matrix inference. All associated batch QC samples were analyzed at dilution factors that resulted in relative dilution factors to the samples that were $\leq 5X$. No sample data will be qualified as a result.

Other QC

All Analyses: No field blanks (FBs) were submitted on the AR/COCs. All relative percent differences (RPDs) of the field duplicates (FDs) (samples -013 and -014) were $<20\%$. No QC acceptance criteria for the evaluation of FDs are currently in place.

No other specific issues were identified that affect data quality.
