

Exceptional service in the national interest

Salt Club: Salt Knowledge Archive

2014 Update

NEA Salt Club Meeting

Paris. 18 March, 2014

Kristopher L. Kuhlman

Sandia National Laboratories, Albuquerque New Mexico

Sandia National Laboratories is a multi-program laboratory managed and operated by Sandia Corporation, a wholly owned subsidiary of Lockheed Martin Corporation, for the U.S. Department of Energy's National Nuclear Security Administration under contract DE-AC04-94AL85000. This research is funded by WIPP programs administered by the Office of Environmental Management (EM) of the U.S Department of Energy.

Salt Knowledge Archive

- Extensive reports/studies/papers on salt (50+ years)
- Knowledge archive will contain references to documents on radioactive waste disposal in salt formations
- References include digital copies of documents
- Documents also include metadata:
 - A unique document identifier
 - Document type
 - Document abstract/summary
 - Citation/reference
 - Ranking from a list of keywords
 - Text field for additional short description or notes

SITED: Salt Report Database

- Online (password-protected) digital report archive
 - Sandia-hosted secure server (<https://sited.sandia.gov/sited>)
- Based on open-source bibliographic database “refbase”
 - Standard open-source technology (PHP + MySQL)

SITED: Salt Report Database

- Developed by SNL for US DOE Office of Nuclear Energy (2012)
- Database initially populated with pdf copies of reports from:
 - WIPP Project Records Center (WIPP reports)
 - Sandia Technical Library database query (WIPP reports)
 - Oak Ridge National Laboratory library (Salt Vault reports)
 - US Geological Survey library (general salt geology reports)
 - US DOE “OSTI Bridge” online database (all DOE-funded reports)
 - European Union online bookshop database (Asse reports)
- Continually adding to database
 - Scanning old reports
 - Adding new reports

SITED as Salt Knowledge Archive?

- SITED hosted by OECD NEA? (Oct-Nov 2013)
 - Must be Oracle database / SITED is MySQL
 - Database migration easy
 - PHP debugging more difficult and unknown
 - Based on open-source application (refbase)
 - No commercial support for updates
 - 3rd party security audit required to approve for servers
 - Questions about future maintenance / security fixes
 - Who will do the work?
 - If NEA, who will pay for it?
- SITED at SNL
 - Upgraded hardware / A “working solution” for now
- SITED on some other Salt club partner’s webserver?

Thank You.
