

THE FUTURE OF SANDIA'S INFORMATION ENVIRONMENT

Improved agility, mobility and productivity for Sandia's front-line worker

Mobility-Enabled Workforce Location-independent computing

- Gain true location independence through the Sandia cloud, with access to your information from anywhere, using any device.
- Work with your original documents at any time, without worrying about duplicating and versioning files.
- Work from home or on travel as easily as from your physical computer.
- Access your cloud-based information from any device (smart-phone, tablet, laptop, or desktop computer); your information is automatically formatted for the screen size and resolution.

The Sandia Cloud Virtual computers & applications, web-based data

- Create new virtual desktop computers on-the-fly and within minutes; and access your virtual desktops from any type of device.
- Create a copy of your virtual desktop on your laptop and use it offline.
- Seamlessly move among computing "clouds" depending on your specific tasks and the security level needed for your information.
- Store your data virtually, with your storage allotment changing dynamically according to your data storage needs.
- "Rent" the license for and install commercial software when you need it, and relinquish the license when you're done.
- Use cloud-based software (such as Office applications) without ever having to install them on your local computer.

Smart Information Environment Personalized data storage, search & access

- Store your information in the cloud; access and use it transparently and seamlessly.
- Find exactly the information you are looking for – wherever it resides – with improved search functionality; popular information is available at your fingertips.
- Archive your information online — the system automatically categorizes and handles records, and automated workflows simplify tasks such as review and approval.
- Manage your information with your My Site (a personal SharePoint site collection), which also gives you a social networking personal information page connected to the Sandia Directory.

Collaboration & Communication Connected colleagues

- Store and manage team and project information online using SharePoint, and securely access that information at any time and from any location.
- Collaborate in real-time – without meeting rooms – through desktop videoconferencing, web conferencing, and online meeting technology such as Live Meeting.
- Know at a glance the availability of your Sandia colleagues through "presence awareness" in Office and SharePoint products.
- Read your voicemail and listen to your email no matter where you are; your communications will follow you!
