

The Third DOE Grassroots Cybersecurity Community Town Hall Meeting

When: October 22–24, 2008

Where: American Geophysical Union
Washington, DC

Join us as a member of the grassroots community to shape and focus future Department of Energy research in cybersecurity.

During the past 12 months, the DOE cybersecurity community has built momentum for a visionary, science-based cybersecurity program. Community members have gathered at two previous town hall meetings this year to discuss and refine our cybersecurity R&D strategy. Together, we are creating a comprehensive road map that will achieve our community's cybersecurity research priorities—spanning the scale from chip to Internet.

We invite you to attend the third and last town hall meeting for 2008. Don't miss this rare opportunity to meet with your fellow grassroots cybersecurity community members; participate in the creative process; and shape the final report, which will be delivered to DOE on Dec. 1, 2008.

Thank you for your commitment to this important undertaking!
