*The Southwest Regional Partnership (SWP) for Carbon Sequestration*

**The SWP Annual Workshop**  
Albuquerque, NM  
July 26 - 27, 2007

# Progress of the Integrated Assessment

## Timeline

2004

- Completed a Test Case Model

2005

- Completed the String-of-Pearls Beta 1.0 model algorithms

2006

- **Where we are:**

2007

- Refining Regional Totals
  - » CO<sub>2</sub>, Cost, Sequestration Volume potential
- Developing a complimentary website to access Sandia's SWP work
- **NatCarb**: The Carbon Capture working group is looking to document the CO<sub>2</sub> sources data/calculation methodologies & assumptions (much like the sinks working group)

2008

\*  
\*  
\*

- » Determine Who can/will do the work, resources to meet the NETL requests
- » The Carbon Capture working group teleconferences may integrate more with the GIS working group teleconferences

- **Thinking about:**

- Including a financial payback model for CCS technology in the model
- A cost optimization module capability to find the least cost solution for a Carbon-constrained future

String of Pearls

The Integrated Assessment Cost and Source-Sink Model

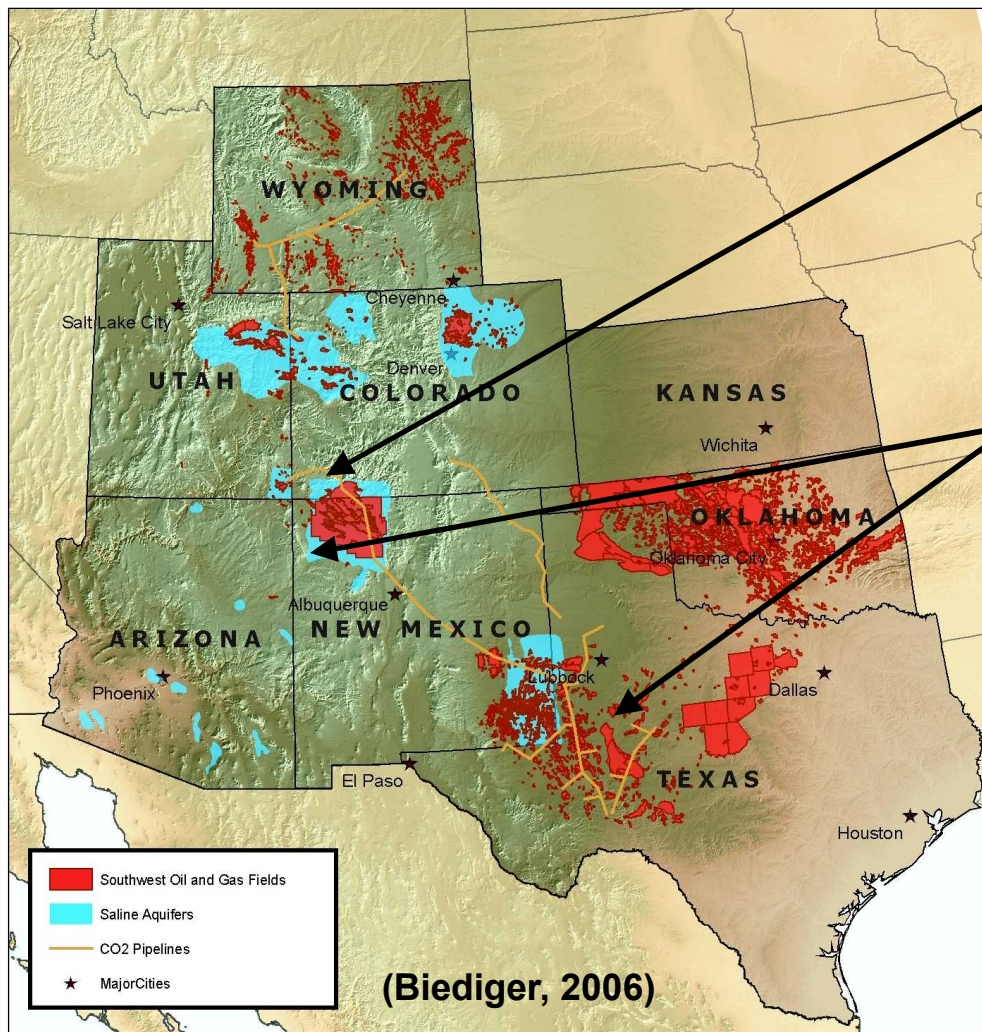

This research describes the 'String of Pearls' analytical model used by the Southwest Regional Partnership on Carbon Sequestration to assess potentially hundreds of carbon dioxide (CO<sub>2</sub>) source and geological sink combinations in the Southwestern United States. The model can help decision makers (e.g., policy analysts and interested companies) determine where a power plant (or other CO<sub>2</sub> source) could be built given a set of planning decisions based on current power plant locations, sink availability, and existing pipeline infrastructure right-of-ways.

The working results indicate that the cost of capturing carbon dioxide is by far the majority of a project's overall capital cost. The analysis also develops overarching regional CO<sub>2</sub> sequestration totals and relative costs, and sink lifetimes across an initial fifty-year time horizon. The region may support anywhere from several decades to several thousand years' worth of sink capacity.

# The Southwest Regional Partnership on Carbon Sequestration (SWP)

- **One of seven** regional partnerships throughout the U.S.
- Evaluating **available technologies** to capture and to reduce CO<sub>2</sub> emissions
- **Source to Sink** matching (Power plants to Geological Formations)
- String of Pearls Model **'Tells the Story'** for the SW Partnership
  - Technology
  - Economics
  - Scale of the Issues

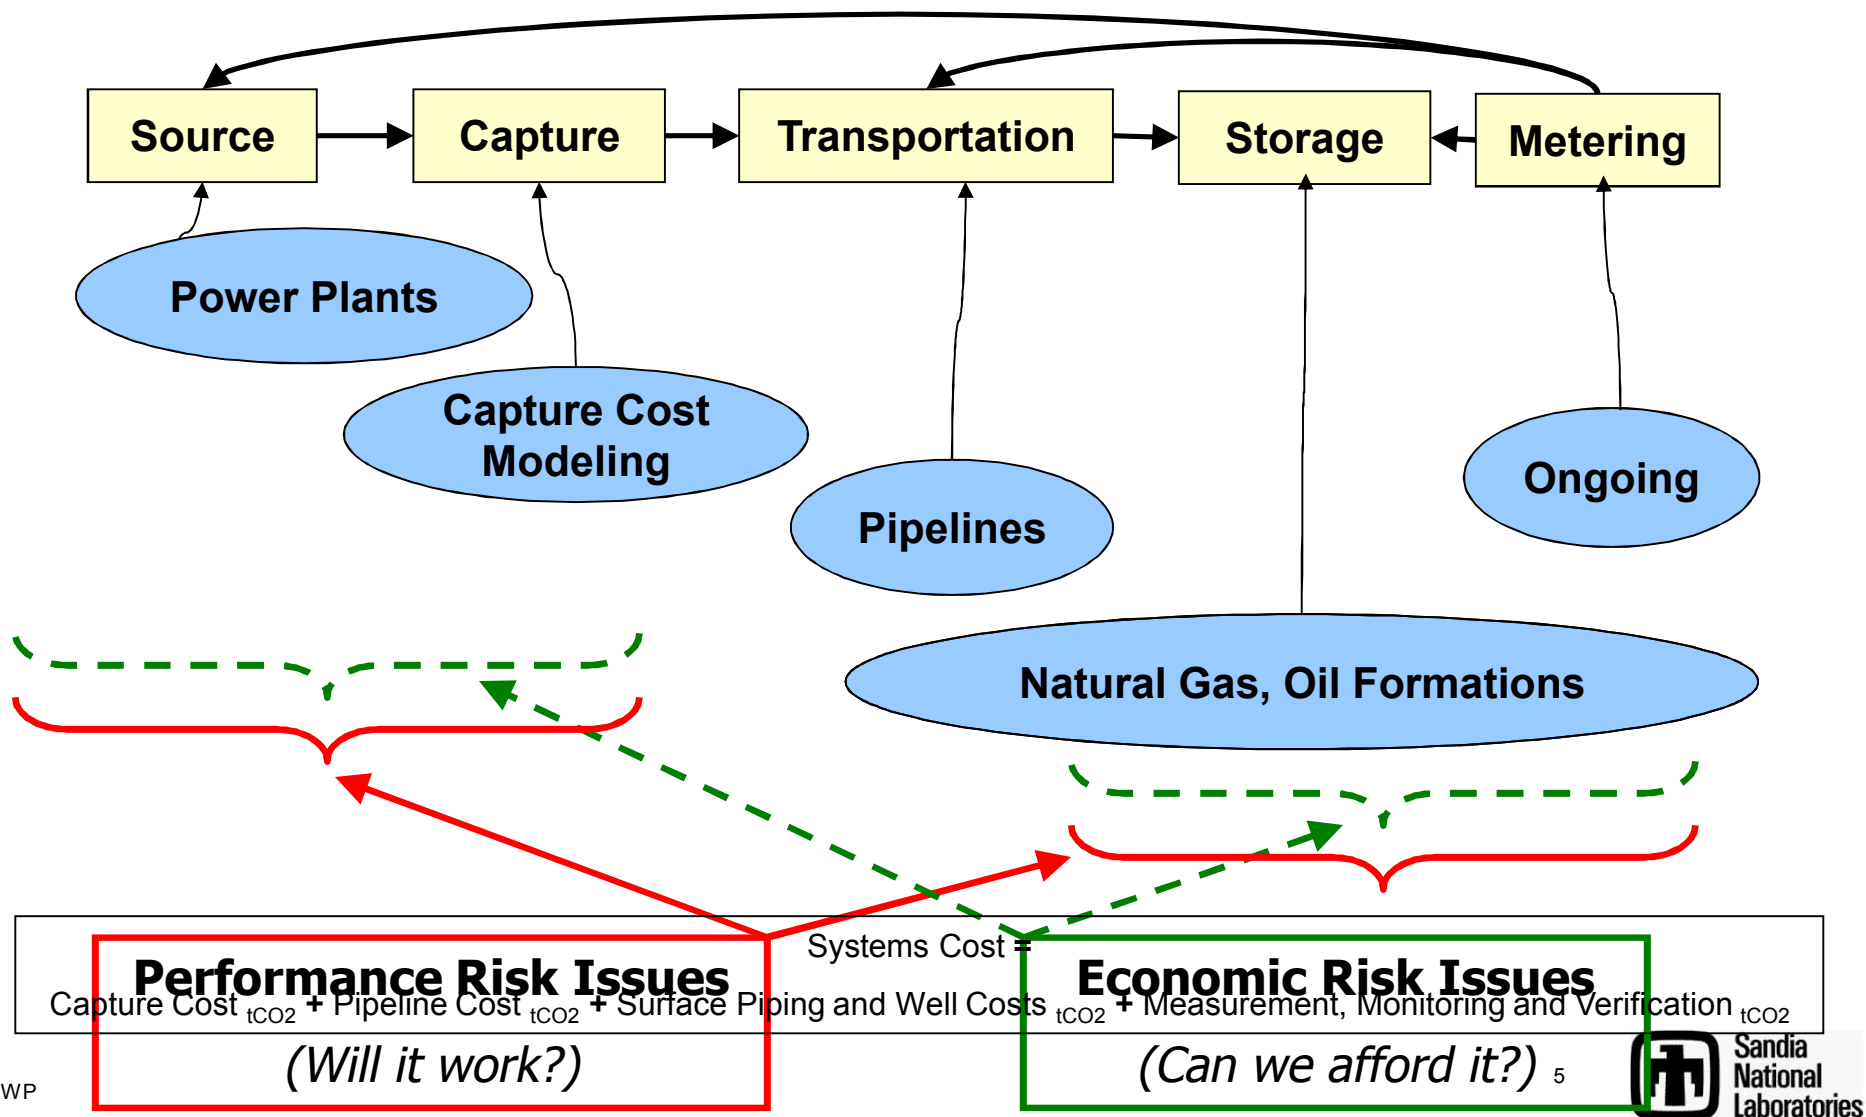

CO<sub>2</sub> pipelines in NM, TX, CO, WY, UT

Potential Sequestration:

- Oil Fields
- Natural Gas Fields
- Saline Formations

# Working Framework for the Carbon Sequestration Modeling

# The String of Pearls Model's Working Interface

Select the Specific Power Plant in the SW U.S.

Stacked systems costs

Years of Useful Sink Fill Time

Users can Adjust the:

- % of CO<sub>2</sub> captured
- costs to capture CO<sub>2</sub>
- pipeline cost
- Well costs
- Baseline MMV cost.

# A Model Scenario, Selecting only Oil and Gas formations & those $\geq 500$ million metric tonnes

# Future Modeling Efforts

---

- **Focus on test cases, & plant / CO<sub>2</sub> Source characteristics**
  - Keeping the information flowing is key to the model's development
- **Coordinating with other Regional Partnerships**
  - Tell a more 'seamless story' for Carbon Capture and Sequestration
  - Looking to standardize the capture cost metrics (NETL working group)
- **Looking to include more CO<sub>2</sub> sources**
  - The Capture Working Group (other partnerships, GIS working group, etc.)
  - Assistance/development efforts with other sources where possible (e.g., ethanol plants, cement facilities, etc.)
- **Ongoing iterative Partnership feedback**
  - » Workshops, Conferences
  - » One-on-one (interested groups), other methods

# An Update on The Integrated Assessment

*Thank You*

Sandia is a multiprogram laboratory operated by Sandia Corporation, a Lockheed Martin Company, for the United States Department of Energy's National Nuclear Security Administration under contract DE-AC04-94AL85000.
