

RapTOR

Rapid Threat Organism Recognition System

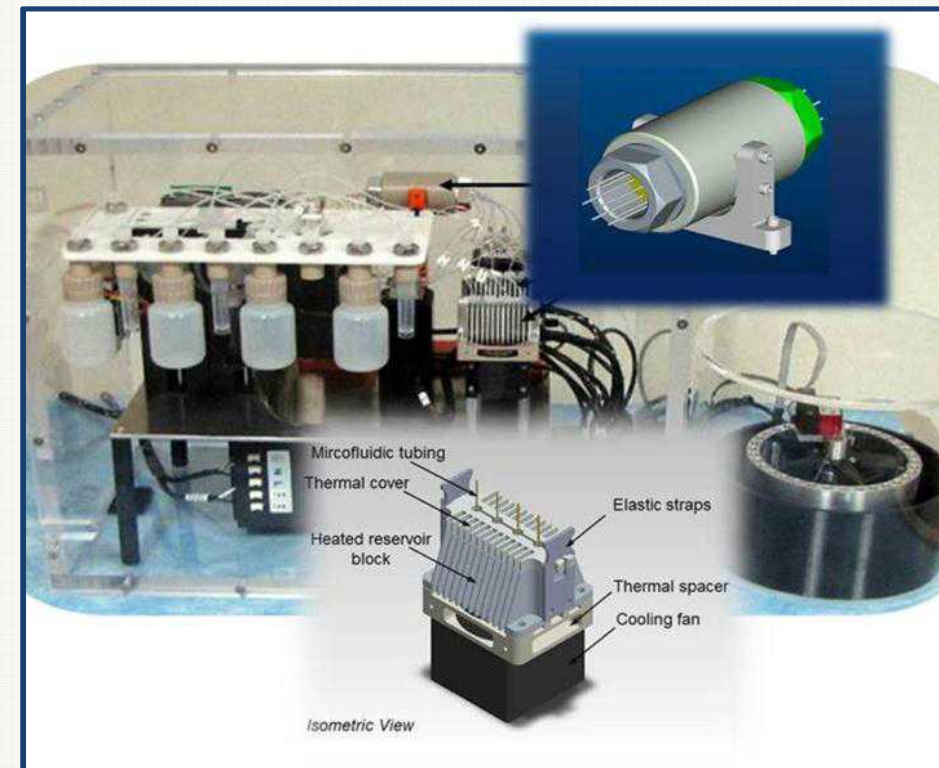

RapTOR rapidly prepares nucleic acids for sequencing for efficient pathogen analysis.

Three Innovative Components

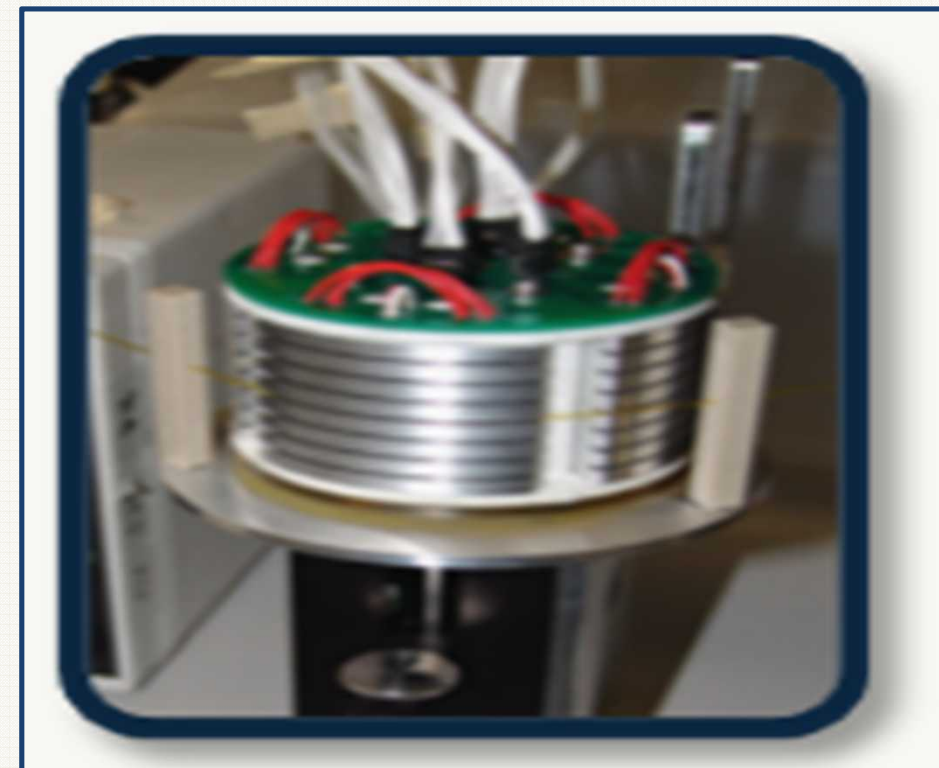

DMF Hub

Automates and integrates microfluidic devices into systems

Multi-HAC

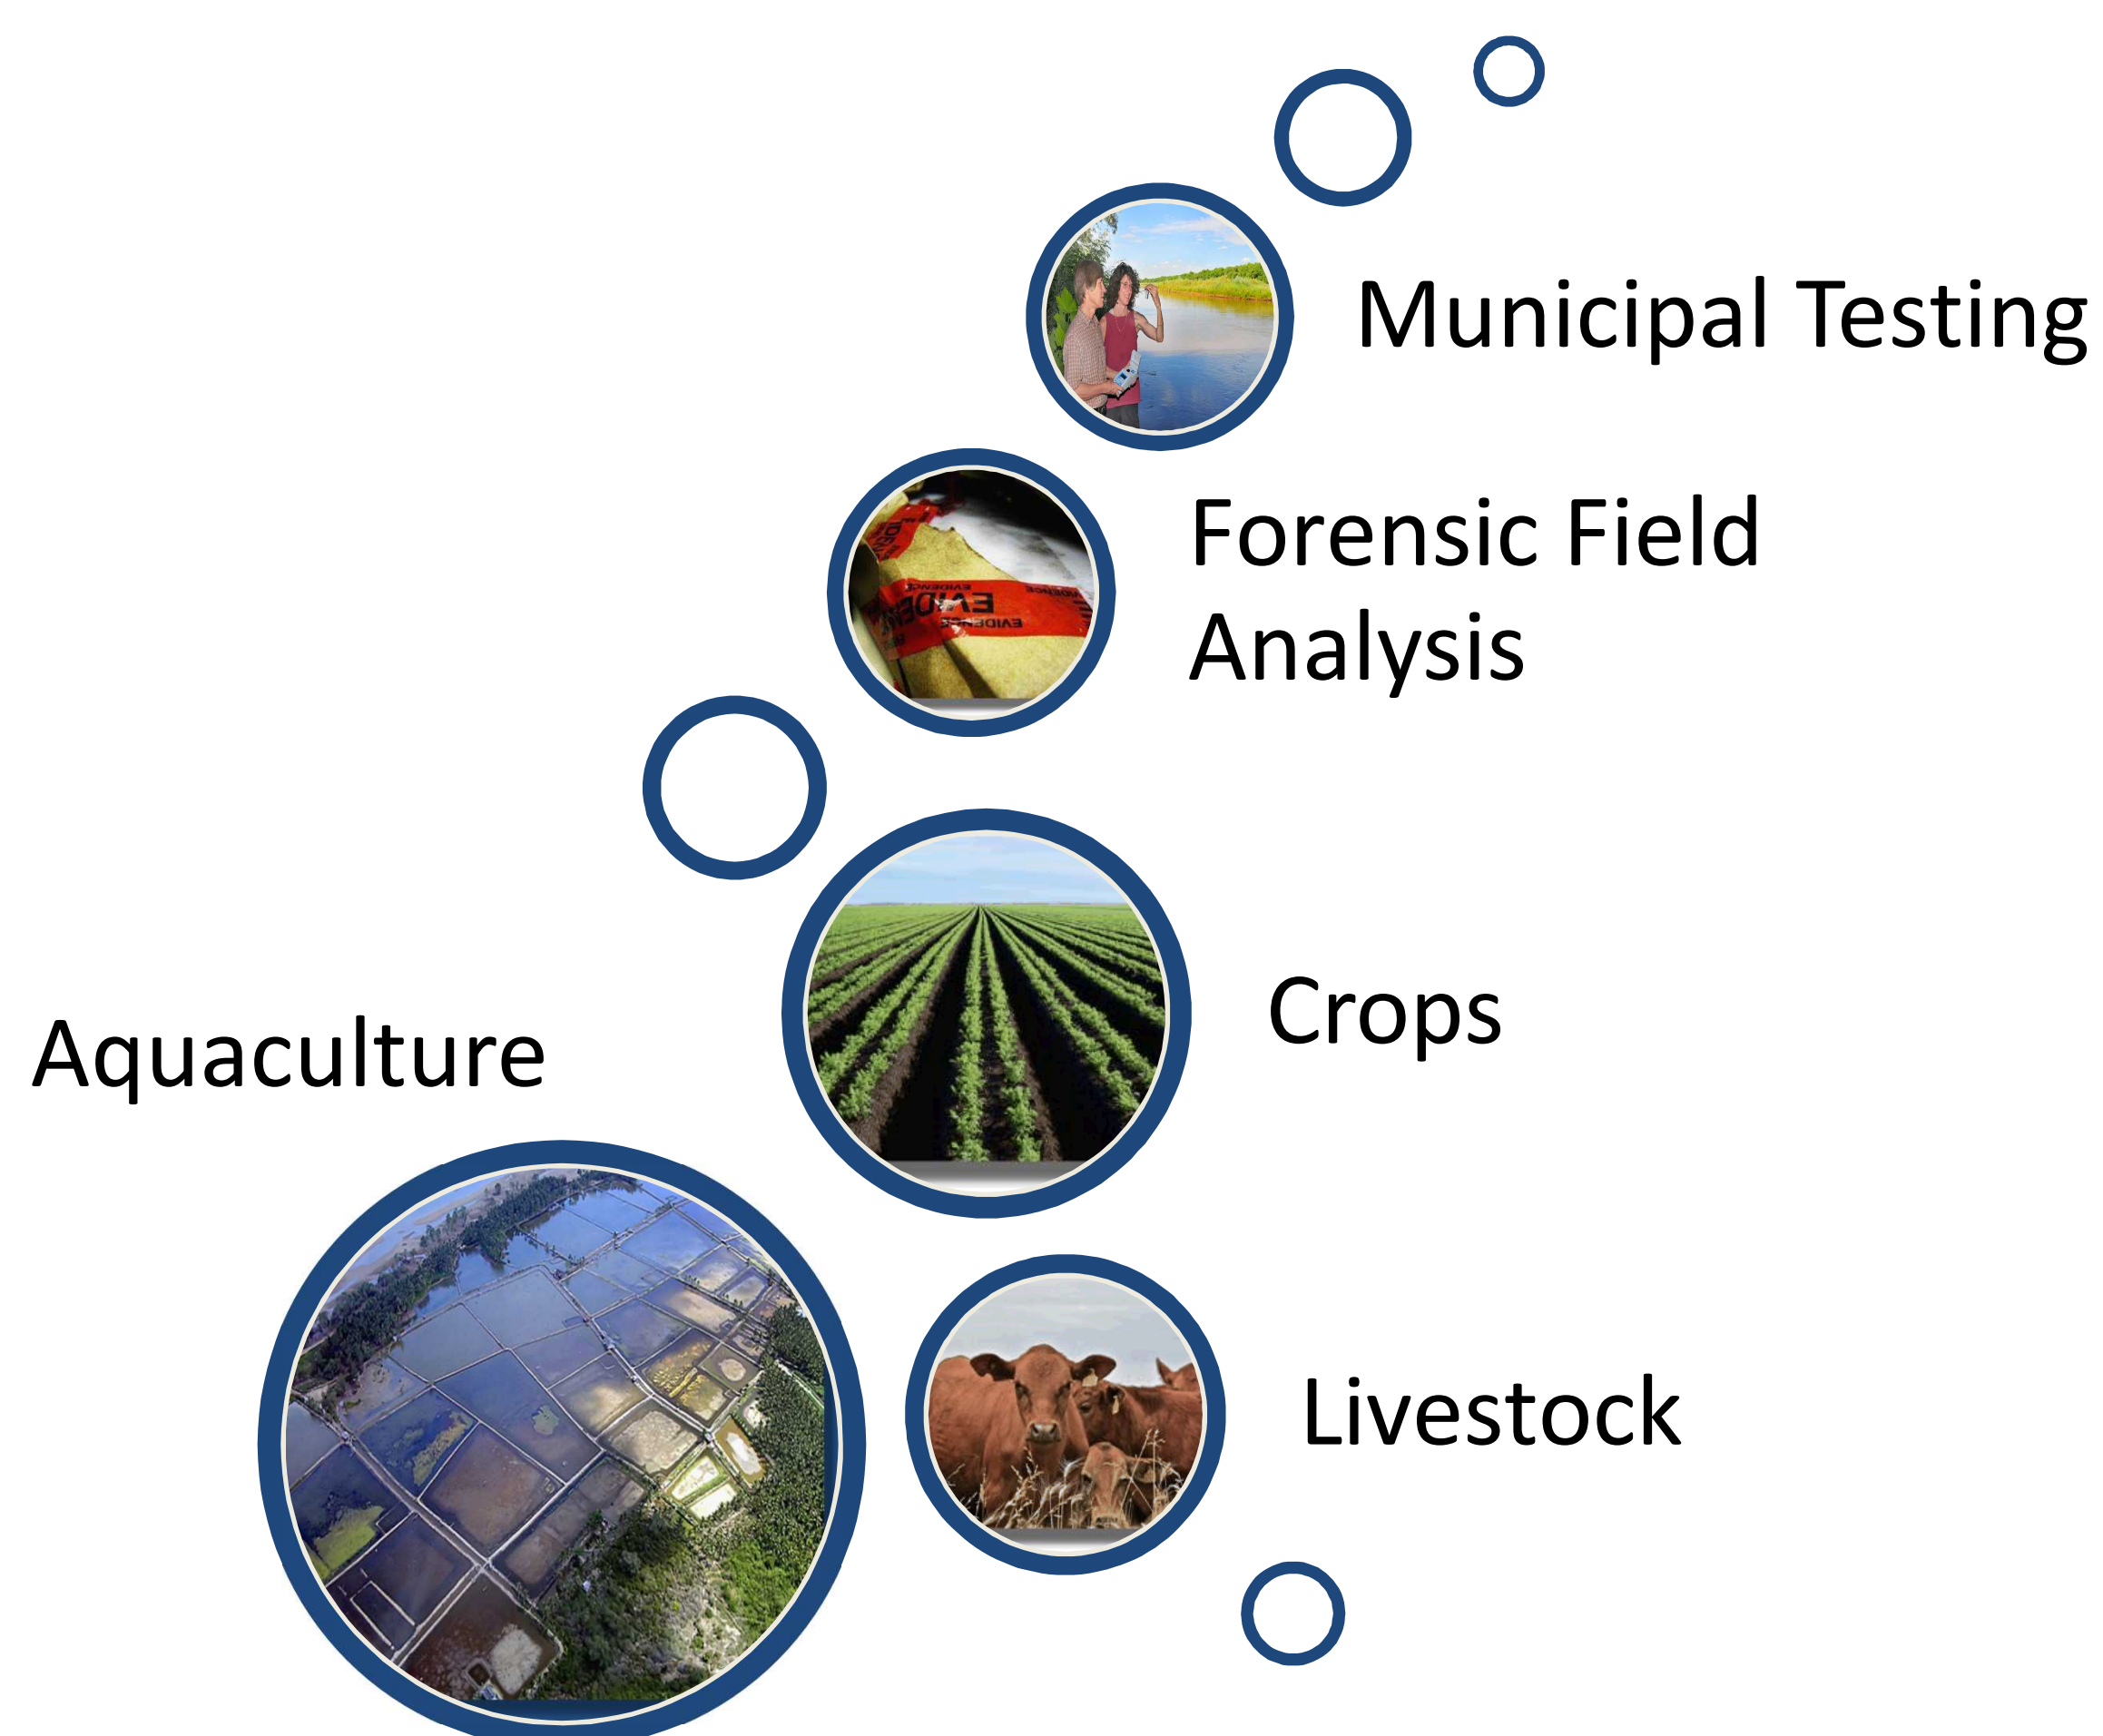

Non-destructively purifies genetic material for sequencing

Rotary Zone PCR

Provides rapid, fieldable PCR thermocycling for small-throughput assays

Sandia seeks partners for further development of system components for a wide range of end-user applications.

A Multitude of Applications

Exceptional service in the national interest
