This paper describes objective technical results and analysis. Any subjective views or opinions that might be expressed in the paper do not necessarily represent the views of the U.S. Department of Energy or the United States Government.

# Battery Energy Storage Technologies

Sandia National Laboratories

ESIG Fall 2020 Workshop, November 12, 2020

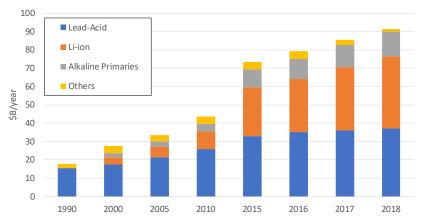

Sandia National Laboratories is a multimission laboratory managed and operated by National Technology & Engineering Solutions of Sandia, LLC, a wholly owned subsidiary of Honeywell International Inc., for the U.S. Department of Energy's National Nuclear Security Admistration under contract E-NA0003525.

# Battery Energy Storage Technologies

Mature lechnologies					
	Manufacturing and Cost Metrics	Key Challenges for Energy Storage, R&D needs			
Lead Acid Batteries	350 GWh/yr \$100/kWh (traditional) \$300/kWh (advanced)	Deep discharge cycle life Advanced lead acid expensive			
Lithium Ion Batteries (LIB) (family of chemistries, LCO, NCA, NMC, LFP)	400 GWh/yr and growing Pack level price: ~\$150/kWh	Increasing energy density Deep discharge cycle life Improving safety			

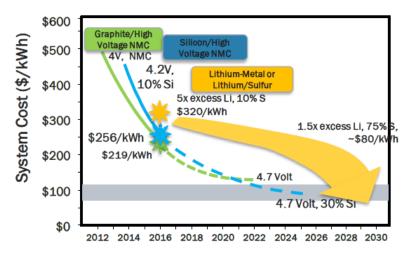

## **Emerging Technologies**

Linerging recimologies						
NaS and NaNiCl <sub>2</sub>	No economies of scale	High temperature chemistry. Safety, High cost				
Flow Batteries (Vanadium, ZnBr, Acqeous organic)	Not fully mature VFB ~ \$300/kWh (System)	Increasing energy density New electrolytes Manufacturing scale				
Alkaline chemistries (Zn-MnO2,)	Lowest cost starting materials, potential for cells <\$50/kWh	Full rechargeability, improving Zn utilization Manufacturing scale				
Li chemistries (Li-S, Li-air) Na-ion batteries Solid state batteries (Li, Na) Zn-air						

- Lead-Acid: 350 GWh production capacity, \$38B/yr
- Li-ion: over 300 GWh and growing capacity, \$40B/yr
- Zn-MnO<sub>2</sub> Primary cells: \$13B/yr

#### Cell Architecture

- Cell format
  - · Cylindrical, Prismatic
  - Bipolar
  - Flow Cell

#### Cell Chemistry

- Aqueous
- Non-aqueous

#### Thermal management

- Heating
- Cooling

#### Safety

- Abuse resistance
- Flammability
- Toxicity
- Containment

#### Plant Models

Modularized

#### Power vs. Energy

- High-power, short-duration discharge
- High-energy, long-duration discharge
- Fast Charging

#### Modularity and Scalability

- kW to MW (Power Scaling)
- kWh to MWh (Energy Scaling)
- Module stacking and Containerization

### Cycle Life

- Electrical
- Thermal

#### Operational Aspects

- Round-trip efficiency
- Auxiliary power consumption
- O&M Costs

Integration costs are significant Big savings in systems and integration..

# 2019 Energy Storage System Pricing Survey

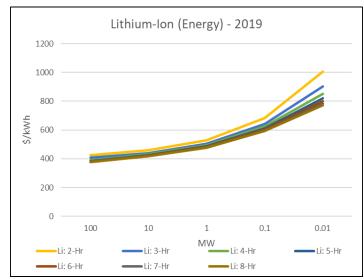

2010 Fraggy Chayers Driving								
2019 Energy Storage Pricing								
	Size (MW)							
	100	10	1	0.1	0.01			
\$/kW								
PHS	1676.9							
CAES	1506.2							
FW SD		984.0	1190.0	1500.0				
\$/kW (1 Hr)								
Li (Power)	504.2	545.6	629.1					
\$/kW (4 Hr)								
LAES	451.0	511.5						
GES	903.0							
FW LD		677.8	766.0	855.3	975.0			
Li (Energy)	392.0	430.6	493.4	623.0	850.3			
Zn	271.4	289.7	336.8	398.7				
Pb			352.0	425.5	588.4			
PbC			557.2	620.0	768.2			
\$/kW (6 Hr)								
Na	376.3	389.6	428.7					
FB ZnBr	450.9	464.9	478.8	510.6				
\$/kW (8 Hr)								
FB V	309.7	372.2	439.0	620.2				
FB Fe	362.7	381.7	404.7	438.4

# Battery Energy Storage Systems - Gaps?

Technology - Need further improvements in cost and performance

- Lower cost, longer duration energy storage is a major gap
- Technologies that can scale from microgrids to large transmission applications
- Further improvements in safety and reliability

Energy storage is new for the electric utility industry

- Markets and Operations Business Models and Operational Tools
- Analytics Economics and Planning tools
- Appropriate Regulatory Policy Business Models, Asset Classification

Industry needs cycles of learning - manufacturing scale through deployments

- Project finance bankable, warrantees, Performance guarantees, risk management
- Standardization- equipment, permitting, construction processes
