Title: (U) FLAG Overset Mesh Demo

Author(s): Vaughn, Nathaniel Joseph
Kenamond, Mark Andrew
Buechler, Miles Allen
Shashkov, Mikhail Jurievich

Intended for: Correspondence with AWE colleague.

Issued: 2022-02-11

Los Alamos National Laboratory, an affirmative action/equal opportunity employer, is operated by Triad National Security, LLC for the National Nuclear Security Administration of U.S. Department of Energy under contract 89233218CNA000001. By approving this article, the publisher recognizes that the U.S. Government retains nonexclusive, royalty-free license to publish or reproduce the published form of this contribution, or to allow others to do so, for U.S. Government purposes. Los Alamos National Laboratory requests that the publisher identify this article as work performed under the auspices of the U.S. Department of Energy. Los Alamos National Laboratory strongly supports academic freedom and a researcher's right to publish; as an institution, however, the Laboratory does not endorse the viewpoint of a publication or guarantee its technical correctness.

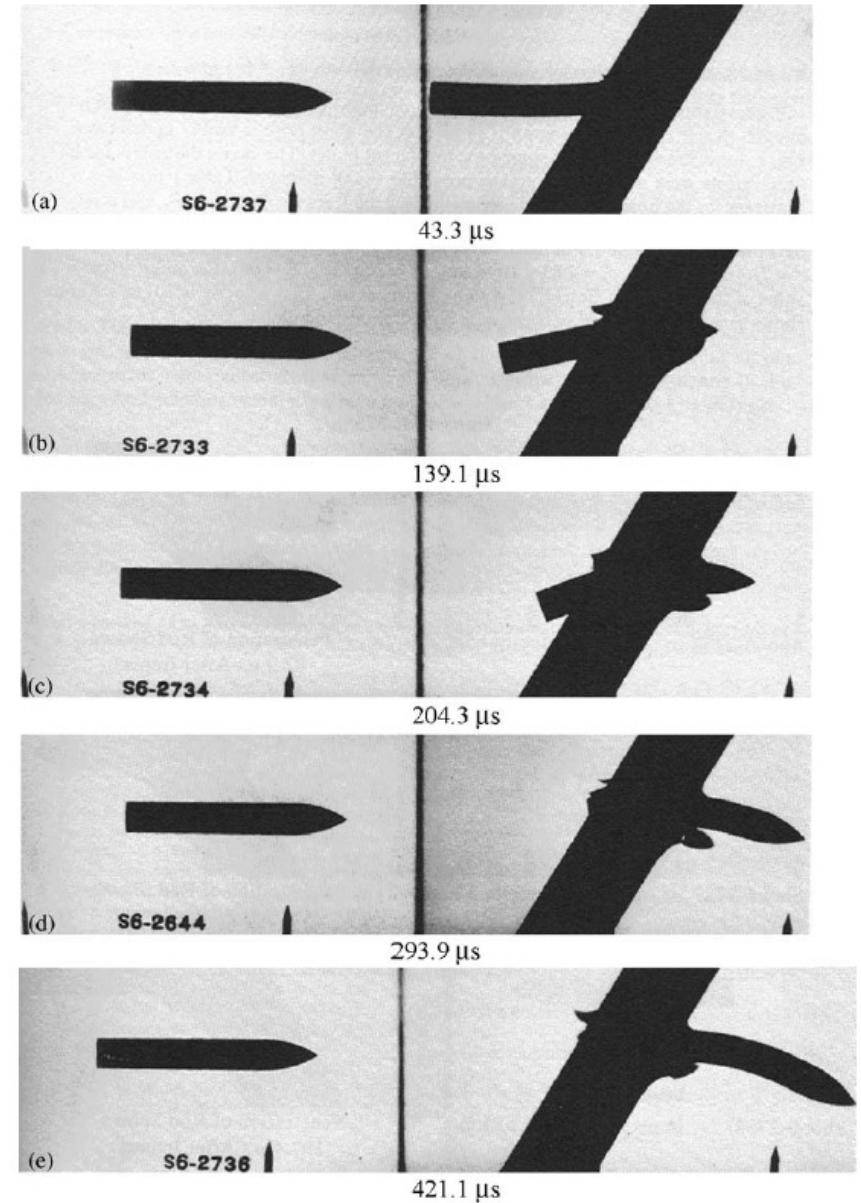

(U) FLAG Overset Mesh Demo

N. Vaughn, M. Kenamond, M. Shashkov, M. Buechler

Experimental Setup

- 4340 steel ogival nose projectile (8.89 cm long)
- 6061-T651 aluminum target (2.63 cm thick)
- 30° oblique impact
- 400 m/s impact velocity

A.J. Piekutowski, M.J. Forrestal, K.L. Poormon, T.L. Warren,
Perforation of aluminum plates with ogive-nose steel rods at normal
and oblique impacts, *International Journal of Impact Engineering*,
Volume 18, Issues 7–8, 1996

FLAG Simulation Setup

Penetrator

- Conformal mesh, 3-fold symmetry
- Time zero relaxation, then pure Lagrangian

Target

- Rectilinear mesh
- Extended front and back with void (white)
- AMR – refinement at target material boundary
- Pure Eulerian (Lagrangian + remap)

FLAG Simulation Comparison
