# BatteryArchive.org – Insights From a Public Repository for Visualization, Analysis, and Comparison of Battery Data Across Institutions

PRESENTED BY

Valerio De Angelis, Yuliya Preger

2021 ECS Spring

Sandia National Laboratories is a multimission laboratory managed and operated by National Technology & Engineering Solutions of Sandia, LLC, a wholly owned subsidiary of Honeywell International Inc., for the U.S. Department of Energy's National Nuclear Security Administration under contract DE-NA0003525.

# Challenges in comparing battery performance data

Little raw data are publicly available and extracting information from figures is time consuming

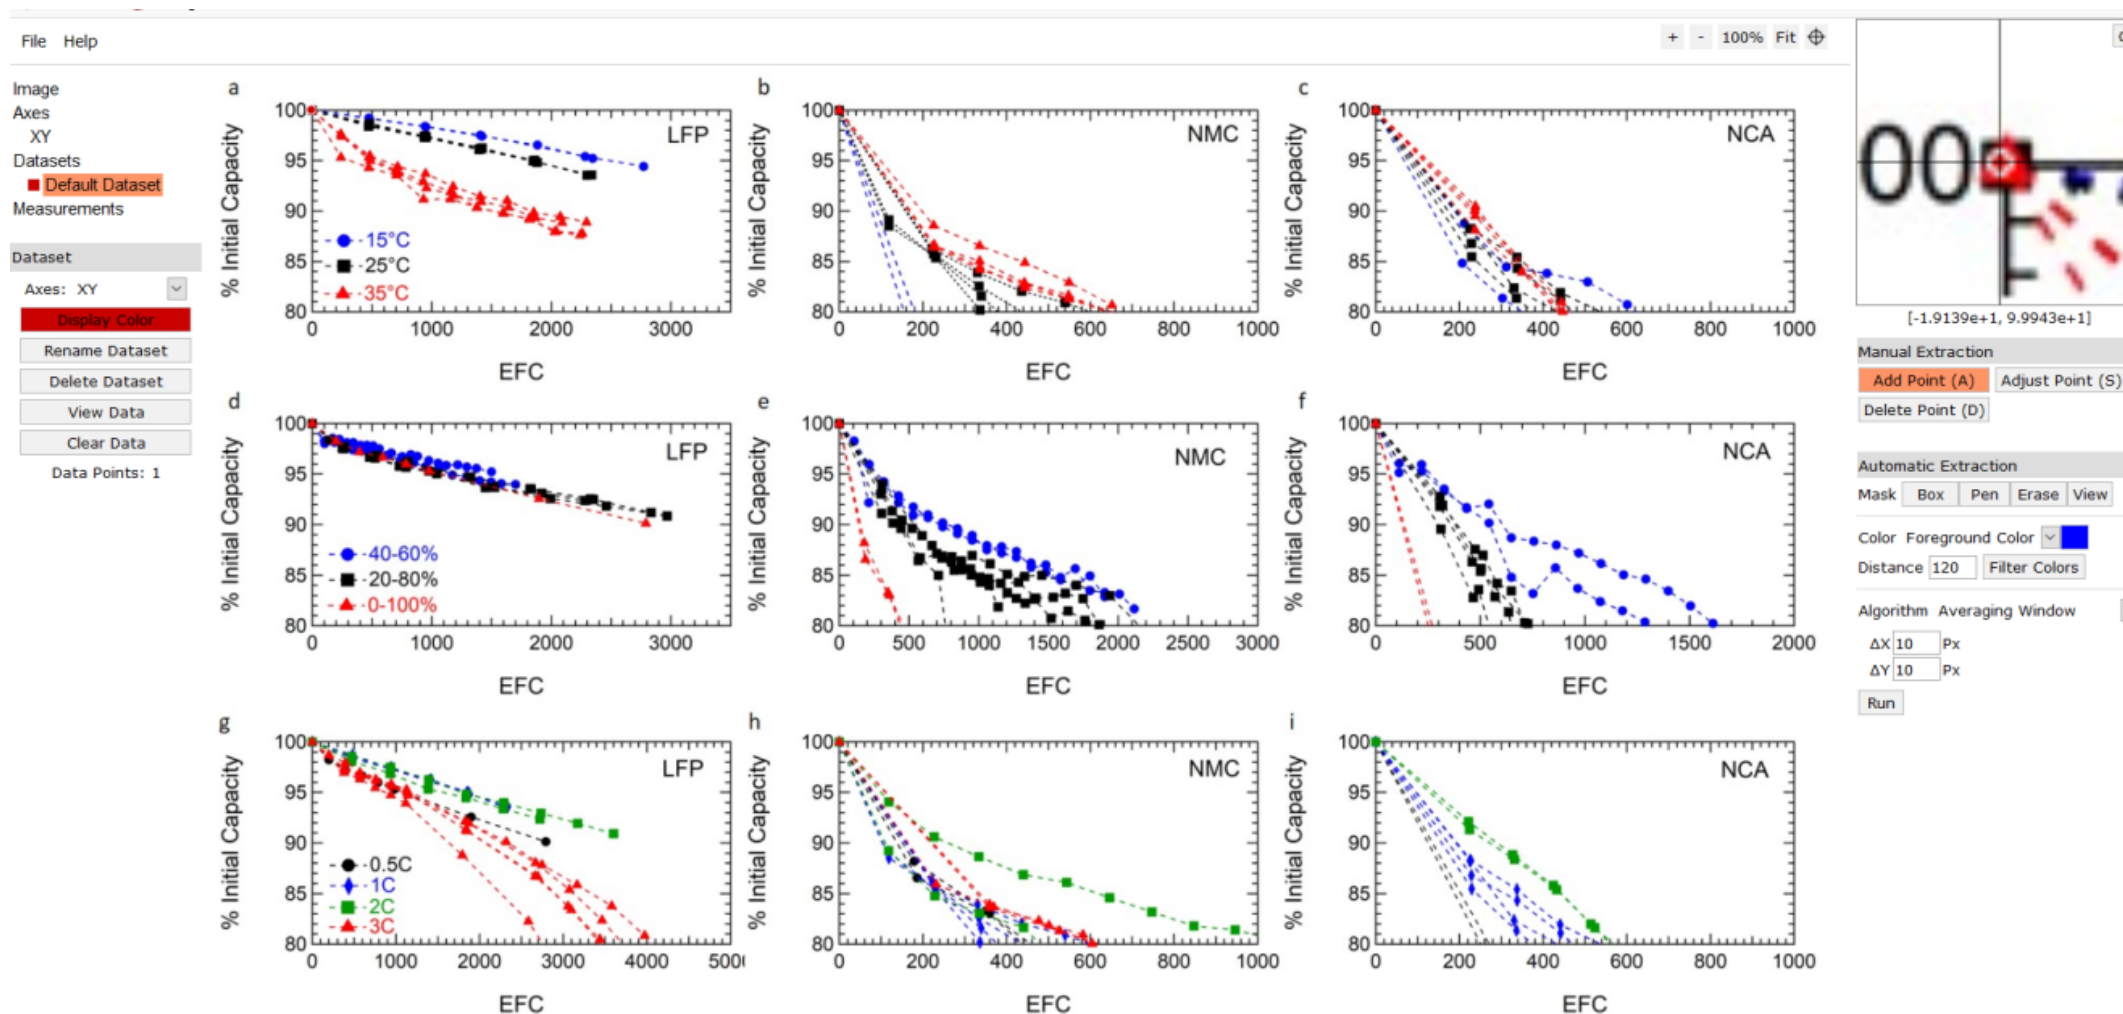

Figure: Preger et al. *J. Electrochem. Soc.* **2020**, *167*, 12; Data extraction: WebPlotDigitizer

# Challenges in comparing battery performance data

Even when raw data are available, they are not standardized

## Matlab

Field	Value

\*columns different for different testers

This makes it difficult to compare results from different studies and do larger-scale analyses

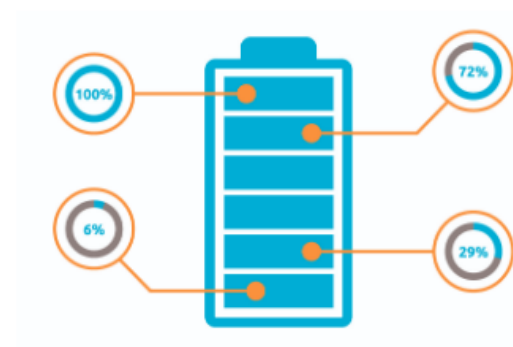

# First multi-institution battery cycling database

## BatteryArchive.org

A repository for easy visualization, analysis, and comparison of battery data across institutions

[View Data](#)

## Features

①

Filter battery data

Date	Capacity	Temperature	Voltage	Power	Discharge Rate
2017-01-01	1000	25.0	3.2	3.2	1.0
2017-01-02	1000	25.0	3.2	3.2	1.0
2017-01-03	1000	25.0	3.2	3.2	1.0
2017-01-04	1000	25.0	3.2	3.2	1.0
2017-01-05	1000	25.0	3.2	3.2	1.0
2017-01-06	1000	25.0	3.2	3.2	1.0
2017-01-07	1000	25.0	3.2	3.2	1.0
2017-01-08	1000	25.0	3.2	3.2	1.0
2017-01-09	1000	25.0	3.2	3.2	1.0
2017-01-10	1000	25.0	3.2	3.2	1.0

Query and filter for specific experimental conditions.

②

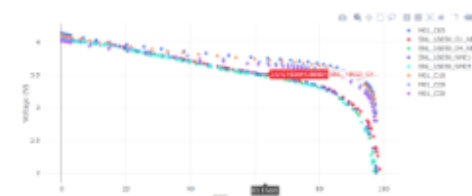

Visualize and compare data

Display battery data, including voltage curves and capacity fade.

③

Compare data with models

Apply performance and degradation models to battery data.

# Site development background

Target: simple enough for casual users to compare battery performance, but still useful for advanced modeling users

## Key Features

- Open access repository of battery data based on open-source software
- Import data from excel, battery testers, online repositories (Google Sheets), and databases
- Display the data in a responsive web interface and allow user download
- Offer modeling and comparison functionality on the web app and through Jupyter Notebook
- Adopt a standard minimum set of metadata, but plan for additional optional metadata
- Complementary to existing archival approaches (e.g. have data in zip folder on your group's website, data.mendeley, etc., but also combine here for comparison/manipulation)

# First multi-institution battery cycling database

Search by metadata related to cell + cycling conditions

**Cell list**

Cathode: LFP x NCA x NMC x

Capacity (Ah): 3.2 x 1.1 x 3 x

Temperature (C): 15 x 25 x 35 x

Min SOC: 0 x 20 x 40 x

Max SOC: 60 x 80 x 100 x

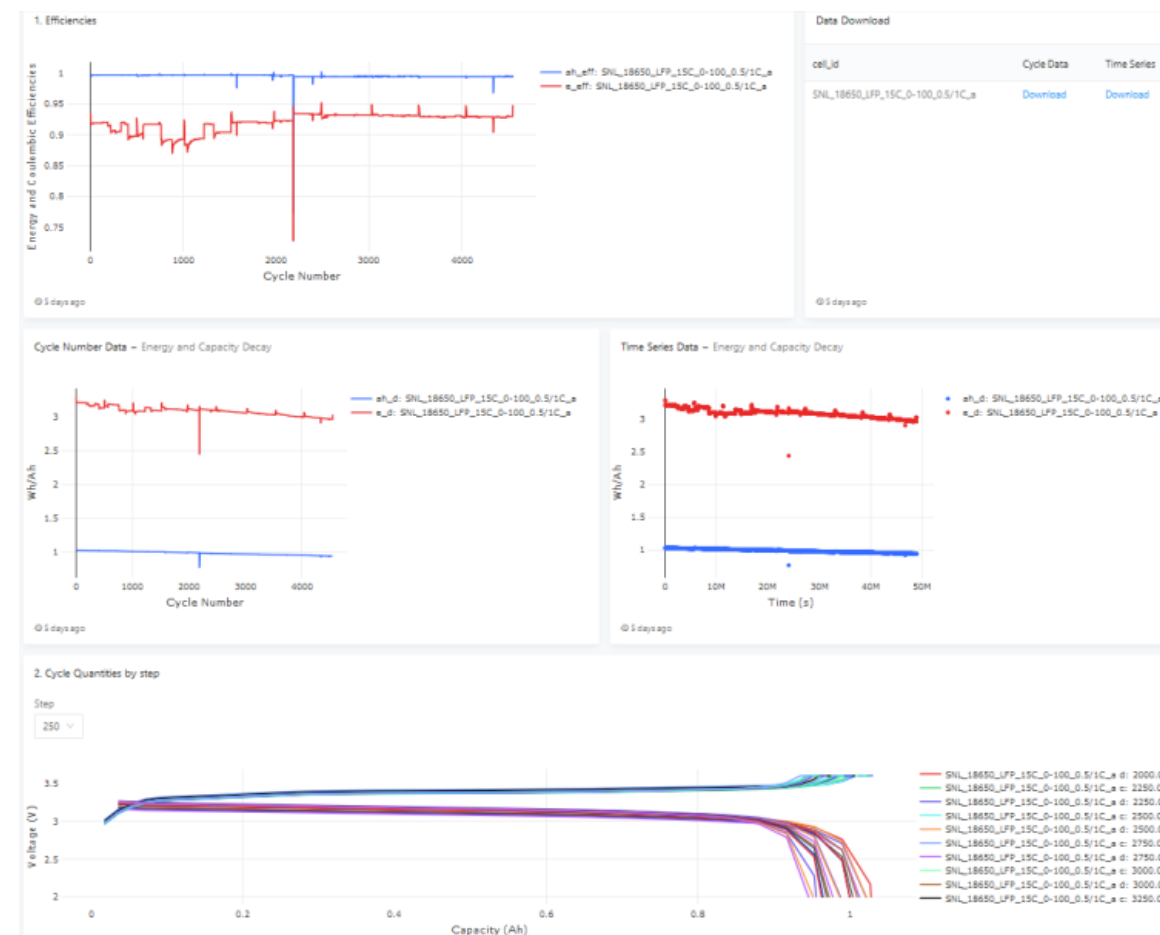

Discharge C Rate: 0.5 x 1 x 2 x +1 more

[Home](#) > Cell List

**Li-ion cell list**

Cell ID	Cycles	Cathode	Capacity (Ah)	Temperature (C)	DOD	MIN SOC	MAX SOC	Discharge C Rate
SNL_18650_G1_LFP5	3,545	LFP	1.10	25.00	100.00	0.00	100.00	1.00
SNL_18650_G1_LFP6	3,636	LFP	1.10	25.00	100.00	0.00	100.00	1.00
SNL_18650_G1_NCA1	654	NCA	3.20	25.00	100.00	0.00	100.00	1.00
SNL_18650_G1_NCA2	522	NCA	3.20	25.00	100.00	0.00	100.00	1.00
SNL_18650_G1_NMC1	521	NMC	3.00	25.00	100.00	0.00	100.00	1.00

Efficiencies, capacity and energy decay, and voltage curves automatically plotted for selected cells

All data translated to same format to enable easy comparison

# Current datasets

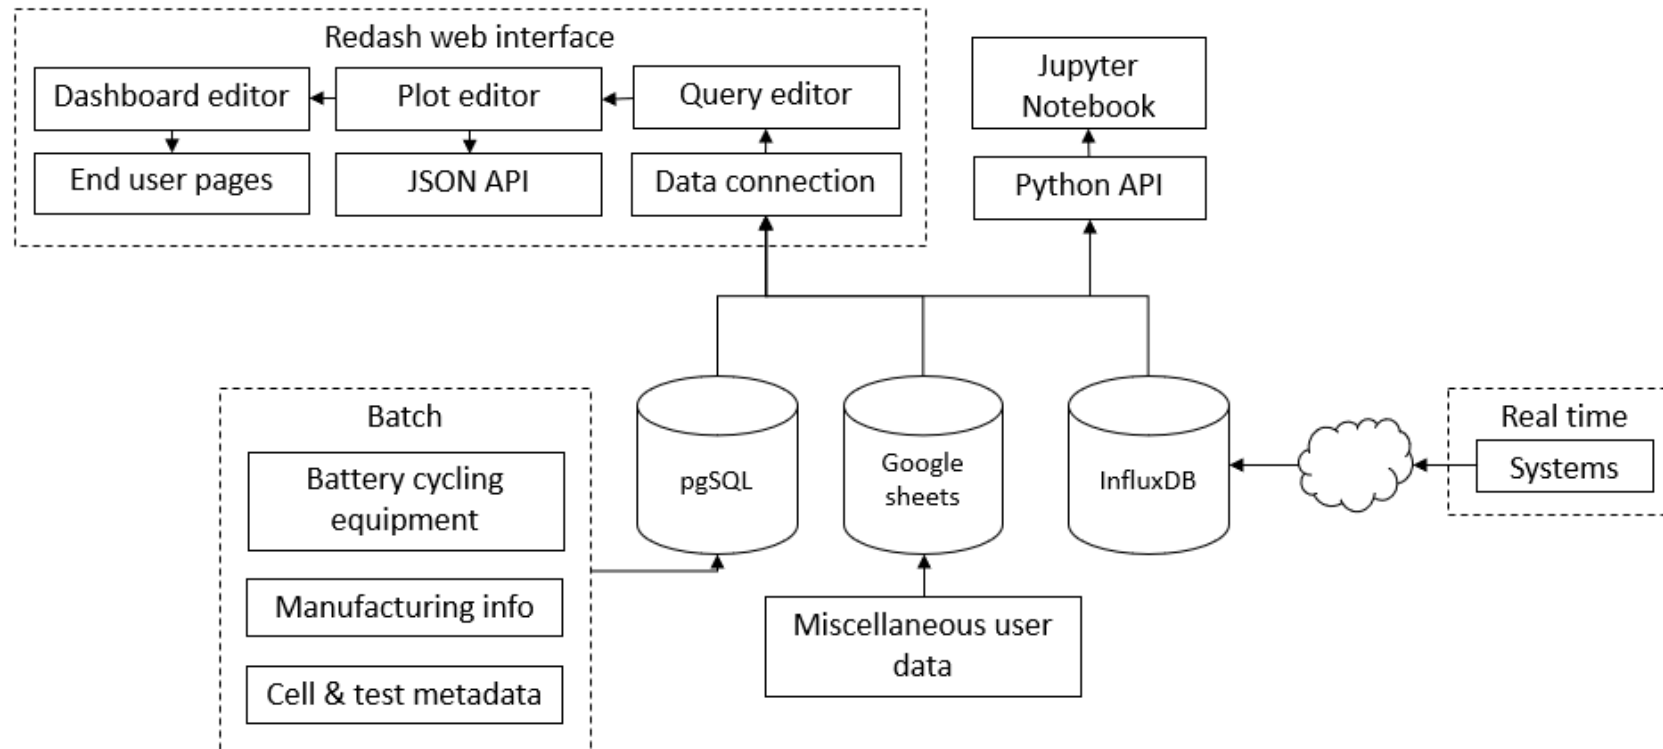

Over 2000 site users, many return visits, from over 40 countries, academia and industry

# Release of open-source platform underpinning Battery Archive

- Public site is based on the Battery Lifecycle Framework (BLC) - an open-source platform that provides tools to visualize, analyze, and share battery data through the technology development cycle
- BLC has four components: (1) data importers, (2) one or more databases, (3) a front-end for querying the data and creating visualizations, (4) an application programming interface to process the data

# 9 Managing data connections and visualizations with Redash

## 1) Create new data source

Progress: Type Selection | Configuration | Done

PostgreSQL

Name:

Host:

Port:

User:

Password:

SSL Mode:

Database Name:

[Previous](#) [Create](#)

## 2) Build data queries

```
1 SELECT
2   key || ':' || r.cell_id as series,
3   r.cycle_index,
4   r.test_time,
5   value
6 FROM (SELECT timeseries_data.cell_id, cycle_index, test_time, json_build_object('V', v, 'C', i) AS line
7 FROM timeseries_data TABLESAMPLE BERNOULLI ({{sample_vc}})
8 where cell_id IN ({{cell_id}}) and
9   cycle_index >= {{min}} and
10  cycle_index <= {{max}}) as r
11 JOIN LATERAL json_each_text(r.line) ON (key ~ '[V,C]')
12 order by r.cell_id, r.test_time, key
13
```

{{ }}

Save\*

Execute

## 3) Build visualizations

Visualization Editor

Visualization Type:

Visualization Name:

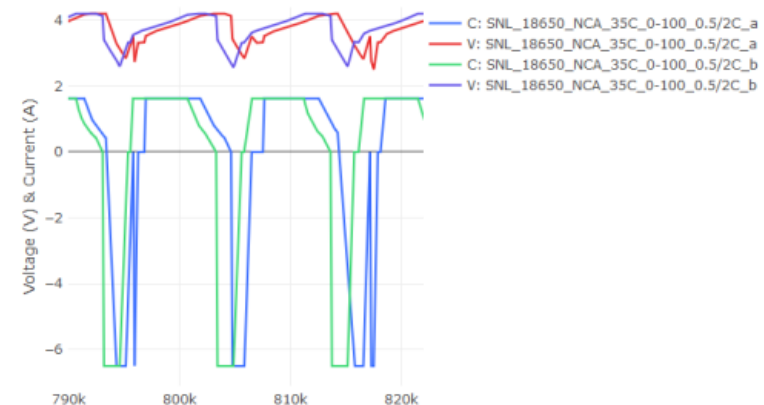

General | X Axis | Y Axis | Series | Colors | Data Labels

Chart Type:

X Column:

Y Columns:

## 4) Manipulate plots

# Linking to Jupyter Notebook for data processing

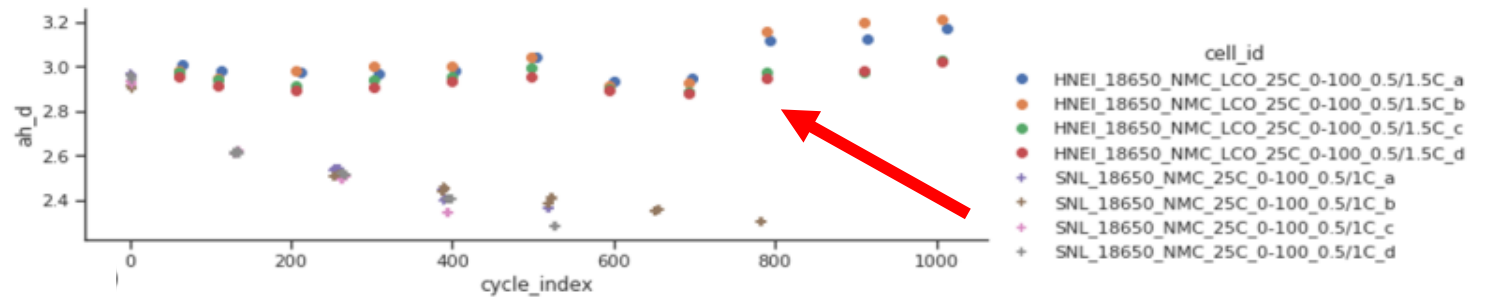

**Case study: pulling out capacity fade based on reference performance tests (RPTs) in different studies**

# Linking to Jupyter Notebook for data processing

**Case study: pulling out capacity fade based on reference performance tests (RPTs) in different studies**

Discharge capacity overestimated in one dataset uploaded 'as is' to Battery Archive

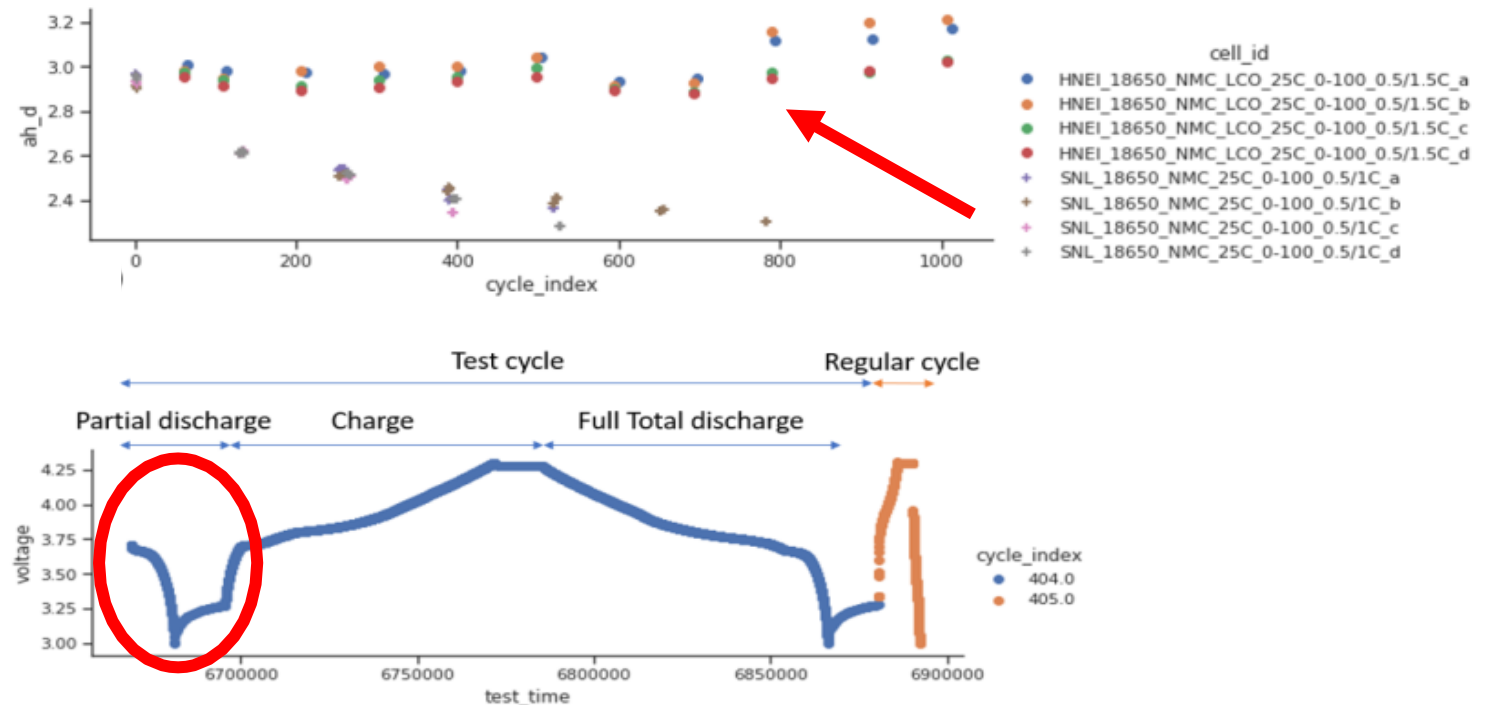

# Linking to Jupyter Notebook for data processing

Case study: pulling out capacity fade based on reference performance tests (RPTs) in different studies

Discharge capacity overestimated in one dataset uploaded 'as is' to Battery Archive

RPT of dataset included a partial discharge

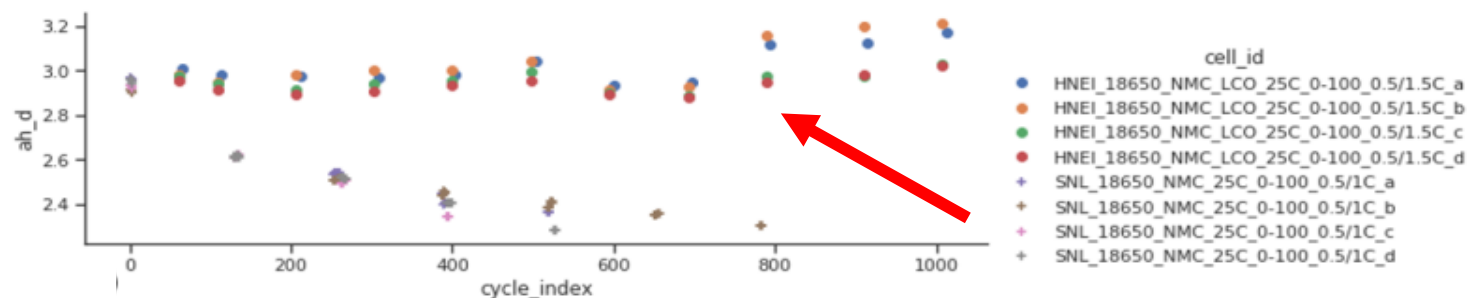

# Linking to Jupyter Notebook for data processing

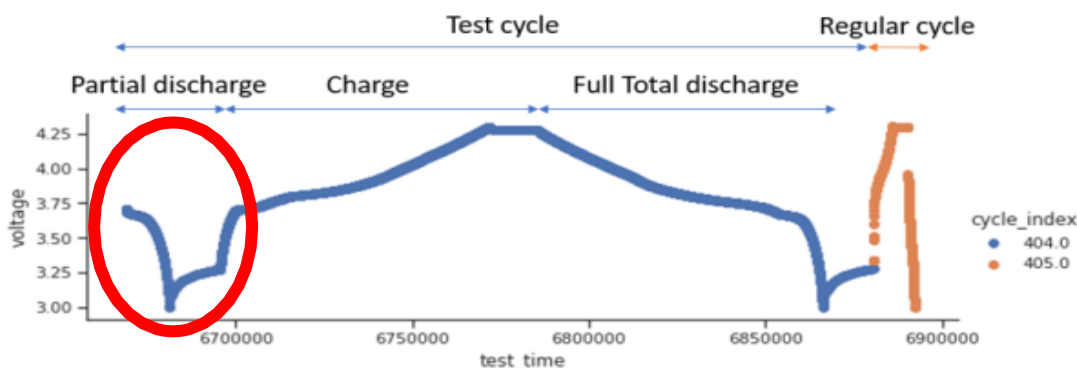

## Case study: pulling out capacity fade based on reference performance tests (RPTs) in different studies

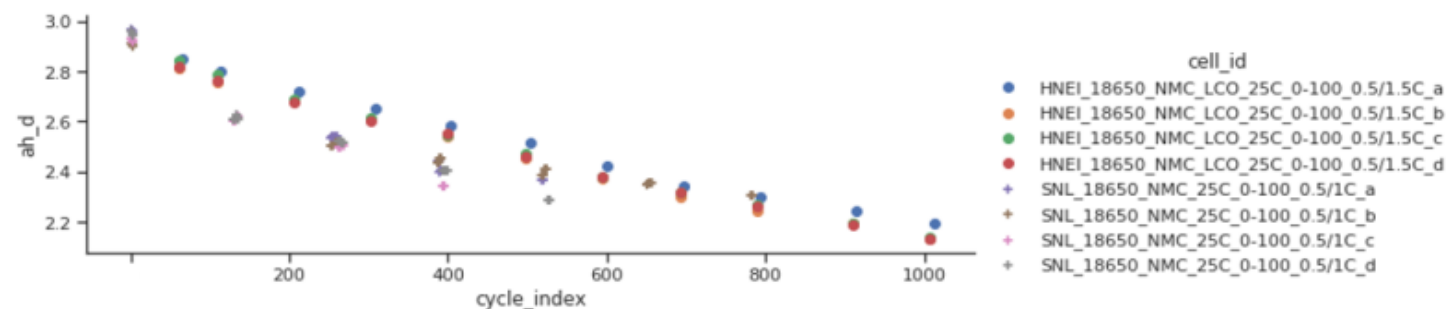

Discharge capacity overestimated in one dataset uploaded 'as is' to Battery Archive

RPT of dataset included a partial discharge in addition to full cycle

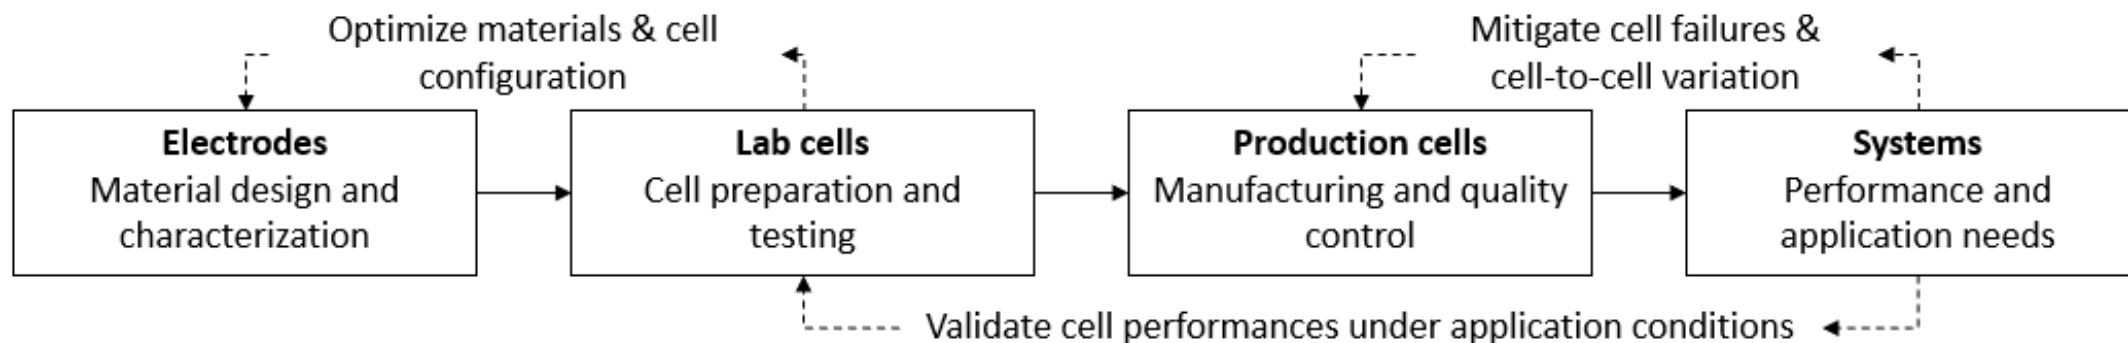

Partial discharge filtered out and correct discharge capacity reported

# Beyond single cell degradation – linking data across a battery's lifecycle

- BLC permits linking of multiple data sources, queries, and dashboards to track data from materials to systems
- Linking data across steps key to accelerating the battery development process

# Linking data from multiple data streams

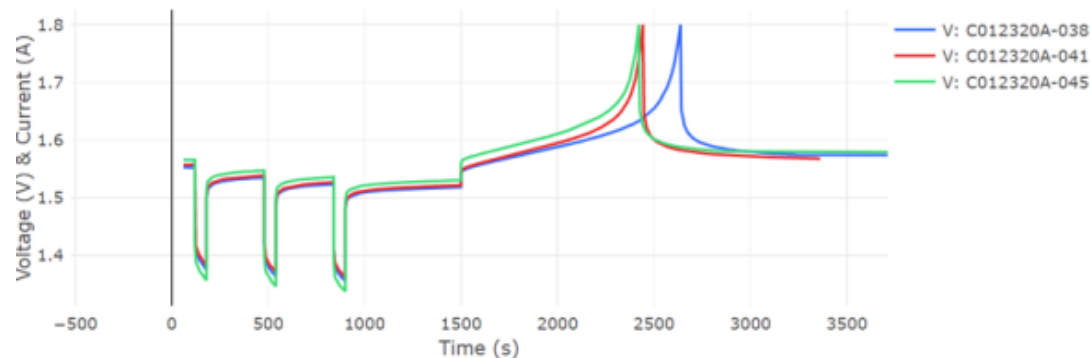

## Case study: linking data from lab cells to fielded systems

1) Manufacturing data for 3 cells imported into pgSQL database from a FileMaker database

cell_id	study	Anode Batch ID	Cathode Batch ID	Anode Weight (kg)	Cathode Weight (kg)
C012320A-038	3-pulse+1-cycle-Battery 1-SBT	A - 011520	C - 110819	0.98	1.80
C012320A-041	3-pulse+1-cycle-Battery 1-SBT	A - 011520	C - 110819	0.98	1.80
C012320A-045	3-pulse+1-cycle-Battery 1-SBT	A - 012120	C - 110819	0.96	1.86

2) Cell-level pulse testing data imported from Arbin testers (MS Access) and a PEC tester (Oracle Database)

Multiple cells voltage

3) InfluxDB data from a fielded system

4. System voltage

# Beyond Battery Archive – linking to BEEP to automate data analysis

- BEEP was developed by TRI, Stanford, and MIT as an open-source software package for **B**attery **E**valuation and **E**arly **P**rediction
  - Includes tools for many battery testers
  - Organizes raw cycling data and featurizes them to serve as input for analytics, including machine learning
    - For example, extract charge, discharge, rest segments from any cycling data
- Linking Battery Archive and BEEP will enable:
  - Importing all the data formats that BEEP supports
  - Visualizing private data and public data from Battery Archive on a single dashboard
  - Developing models using data from multiple sources

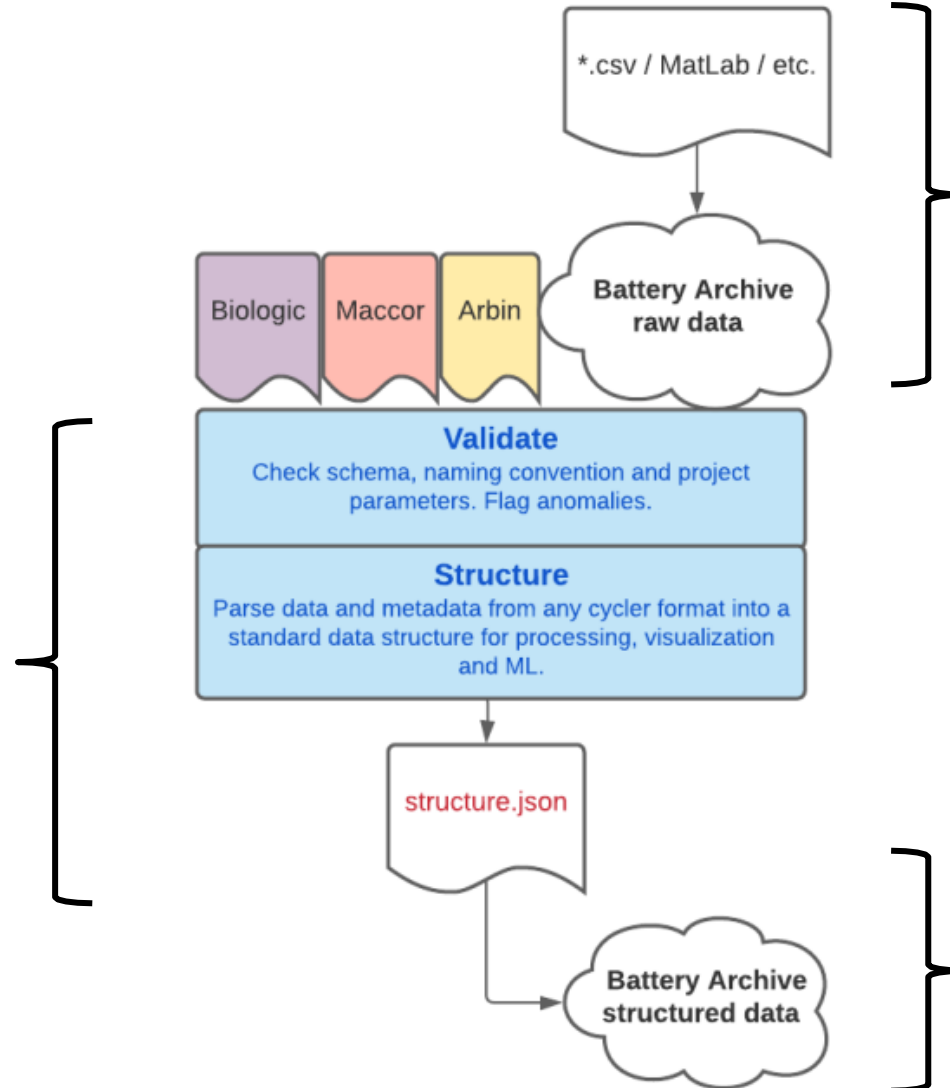

Publication: <https://doi.org/10.1016/j.softx.2020.100506>

Github: <https://github.com/TRI-AMDD/beep>

# Beyond Battery Archive – linking to BEEP to automate data analysis

**BEEP**

Public and private data are treated the same way

The results of processing the data using BEEP can be visualized. For example, only plot charge segments.

# Acknowledgments

Funded by the U.S. Department of Energy, Office of Electricity, Energy Storage program. Dr. Imre Gyuk, Program Director.

Thank you to the CUNY Energy Institute for supporting the site.

Core site development: Valerio De Angelis (SNL)

Early framework testers at CUNY Energy Institute: Sanjoy Banerjee, Jinchao Huang, Andreas Savva, Gautam Yadav

Front end: Sam Roberts-Baca (SNL)

Database: Mark Spoonamore (SNL)

Early site feedback: Matthieu Dubarry (HNEI)

BEEP integration: Patrick Herring
