**Title:** Development and Deployment of a Ground Robotic Platform for Radiological Contamination Detection

**Author(s):** Steinfeld, Bryan Christopher

**Intended for:** Technical talk for Florida International University students/Staff

**Issued:** 2024-04-12

Los Alamos National Laboratory, an affirmative action/equal opportunity employer, is operated by Triad National Security, LLC for the National Nuclear Security Administration of U.S. Department of Energy under contract 89233218CNA000001. By approving this article, the publisher recognizes that the U.S. Government retains nonexclusive, royalty-free license to publish or reproduce the published form of this contribution, or to allow others to do so, for U.S. Government purposes. Los Alamos National Laboratory requests that the publisher identify this article as work performed under the auspices of the U.S. Department of Energy. Los Alamos National Laboratory strongly supports academic freedom and a researcher's right to publish; as an institution, however, the Laboratory does not endorse the viewpoint of a publication or guarantee its technical correctness.

# Development and Deployment of a Ground Robotic Platform for Radiological Contamination Detection

Bryan Steinfeld, Los Alamos National Laboratory

April 16, 2024

**Project Sponsored by  
DOE – Environmental Management Technology  
Development Office  
EM-TDO**

**Primary Goals**

- Deliver verifiable **MARSSIM** data and maps to meet client requirements using available OTS technologies
- NuHorizon Technologies provides custom integration of proven technologies

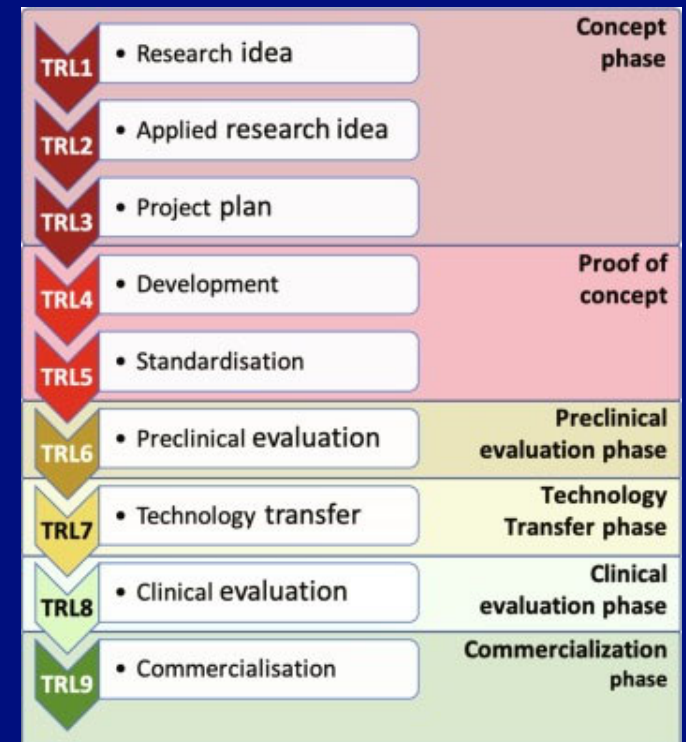

# Project Overview

- iGART System Developed by Nu Horizon Technologies
  - DHS funded the original platform through SBIR
  - Modifications performed as part of current project to target EM-LA application
- LANL/EM-LA identified as candidate site given existing site operation
  - Phase 2 Work Plan for Potrillo and Fence Canyons Aggregate Area
- Demonstration of system performance at existing EM remediation site
  - Performed September 25-29, 2023

# Problem Statement

- Challenges inherent with moving technology through TRL 5-7
  - Stakeholders
    - Central Technology Development Office
    - EM Site Management
    - Contractors/Subcontractors responsible for execution of work
- Access restrictions for operational areas
  - Safety/Security
  - Work/Project Schedules

# MARSSIM Mapping

- Multi-Agency Radiation Survey and Site Investigation Manual
- Framework defining overall guidance for characterizing surface contamination
  - Does not address sub-surface contamination
- Primary use: final status survey for site release
- Will help site operators get to the final goal of releasing sites
- **Flexible procedure** regarding the number and location of measurements/samples over defined area
  - Dependent upon Data Quality Optimization (DQO) process to establish viability of contamination mapping

# Site Background

- Part of Potrillo and Fence Canyons Aggregate Area Phase II Cleanup plan for EM-LA/N3B
  - Multi-year cleanup plan executed by N3B
  - Surface Firing Site 1946 – 1981
  - Natural Uranium, DU, Beryllium, and other metals as hazards

# Project Approach

- Adapting robotic detection platform originally developed by Nu Horizon Technologies with DHS (iGART<sup>1</sup>)
  - Previously demonstrated at SRNL
  - Capable of performing gross radiation activity measurements in addition to isotopic discrimination
- Partnered with EM-LA field office and N3B<sup>2</sup> to define specifications and requirements and candidate site for deployment
  - E-F Firing site located at TA-15 in LANL
  - Part of active Potrillo and Fence Canyon Aggregate Areas Phase 2 work plan

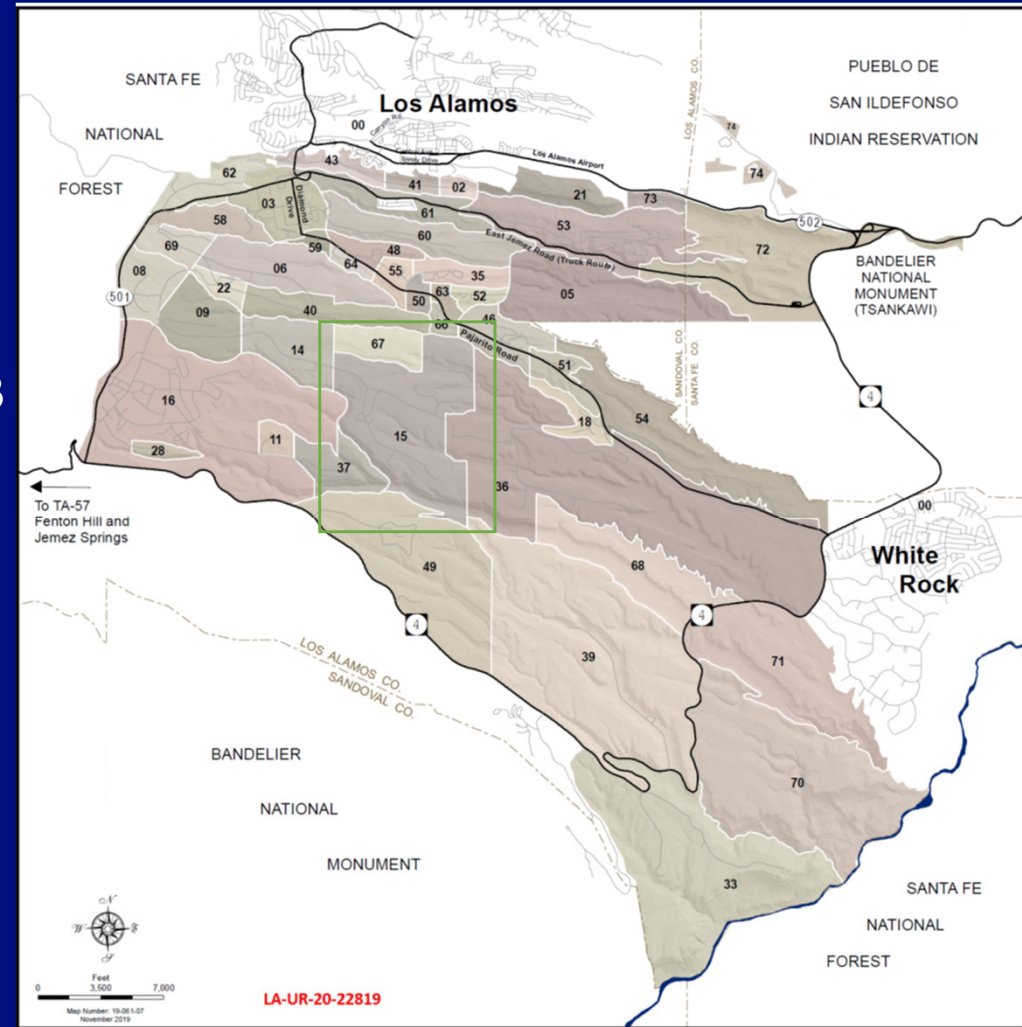

iGART system located at LANL  
E-F Firing Site

1. Integrated Ground-Based Agent for Radiological Tracking
2. Newport News Nuclear BWXT

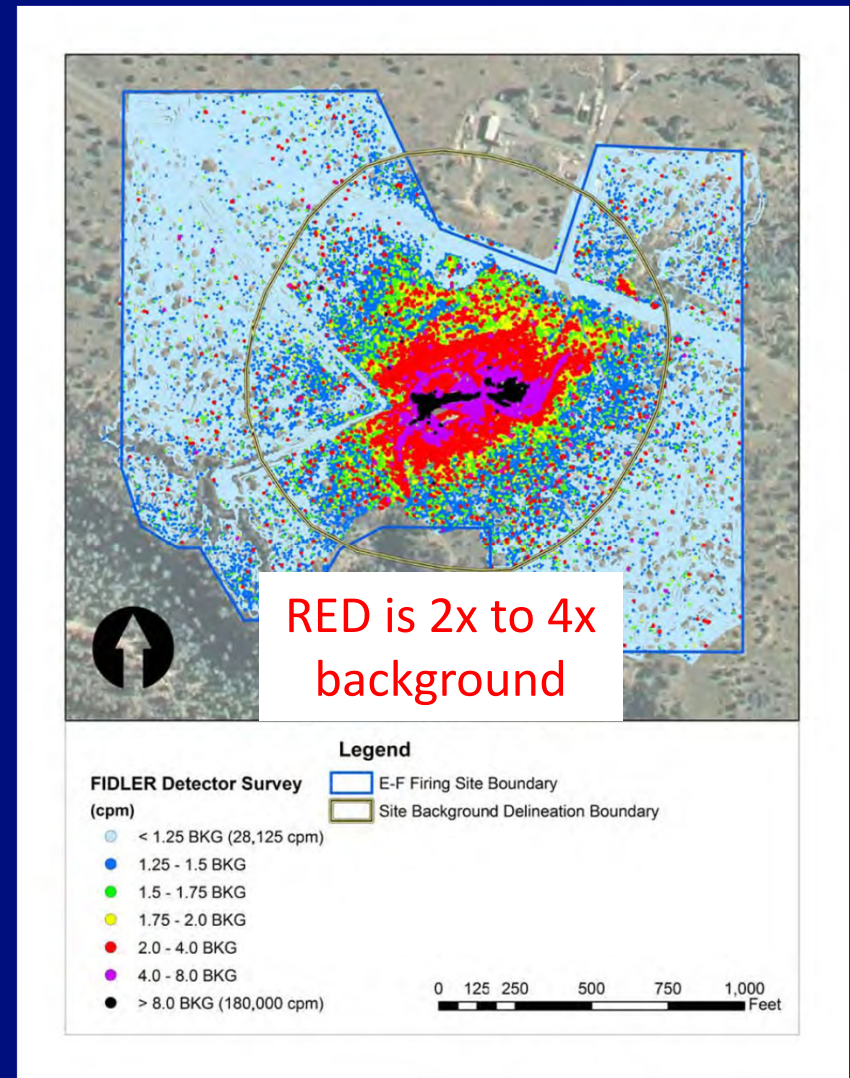

# Site Background

- Part of Potrillo and Fence Canyons Aggregate Area Phase II Cleanup plan for EM-LA/N3B
  - Multi-year cleanup plan executed by N3B
  - 42 Solid Waste Management Units (SWMU)
  - 27 SWMUs identified for cleanup based on 2010 investigation
- Tech Area-15 (R-Site) used from the mid-1940s for explosives experiments
  - Natural Uranium, DU, Beryllium, and other metals as hazards
  - Approximately 1200 acres in total

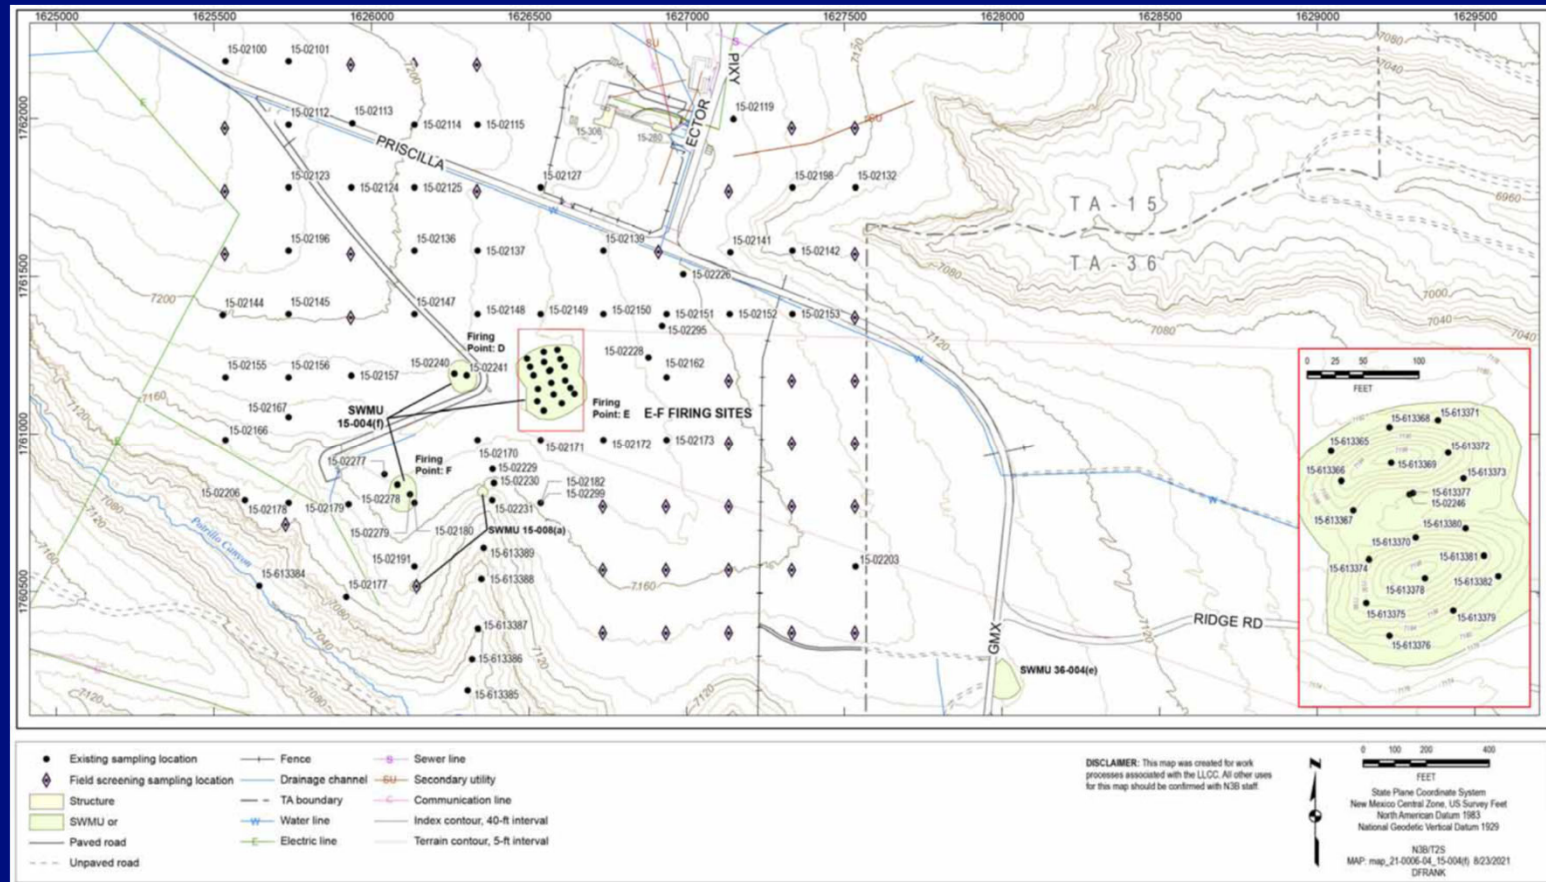

# Prior Survey Data

- Collected in 2010 via FIDLER walkover
  - Entire site surveyed relative to background radiation
  - Large amounts of DU and isotopic uranium
- Surveys conducted in March
  - Not shown here, in broad agreement with this data

# E-F Firing Site Historical Survey Grid

# Igart Robotic Mapping Platform

- Integrated Ground based Agent for Radiological Tracking
- 94 cm tall
- Max speed 0.75 m/s
- >5km range
- Software run in Docker containers

# Custom Hardware

- Specialized microcontrollers for sensor integration
- Custom Li-ion battery ecosystem
- Rugged base station

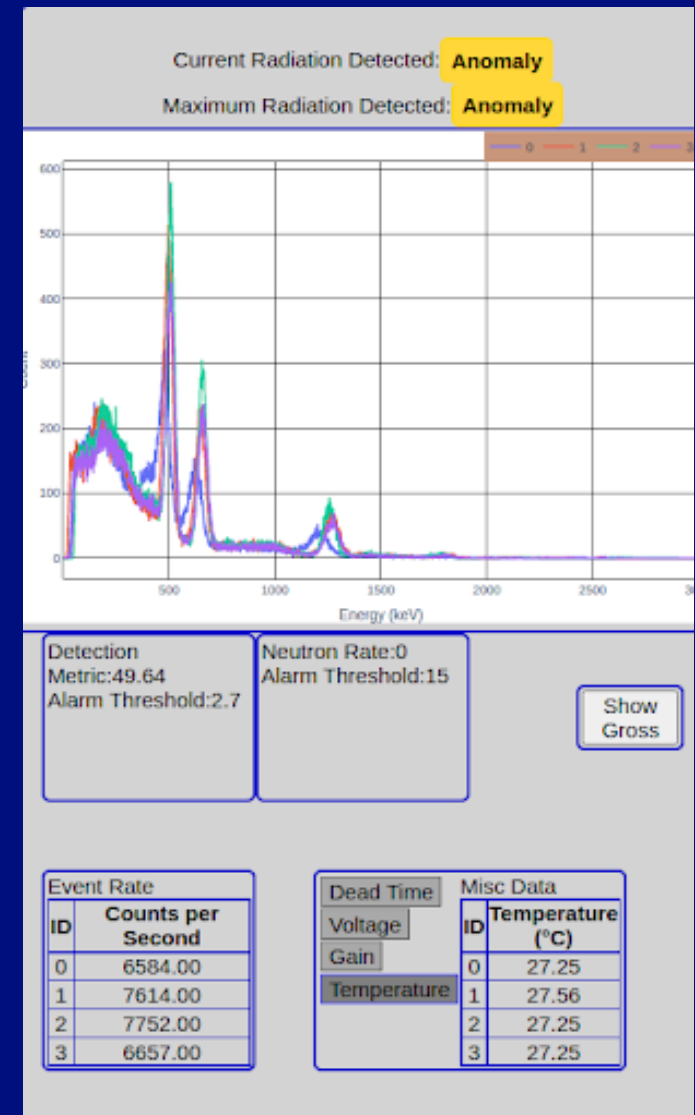

# Integrated Gamma Detectors

- Four NaI(Tl):  
anomaly detection  
directionality
- SrI2(Eu):  
identification
- Downward facing  
for ground mapping

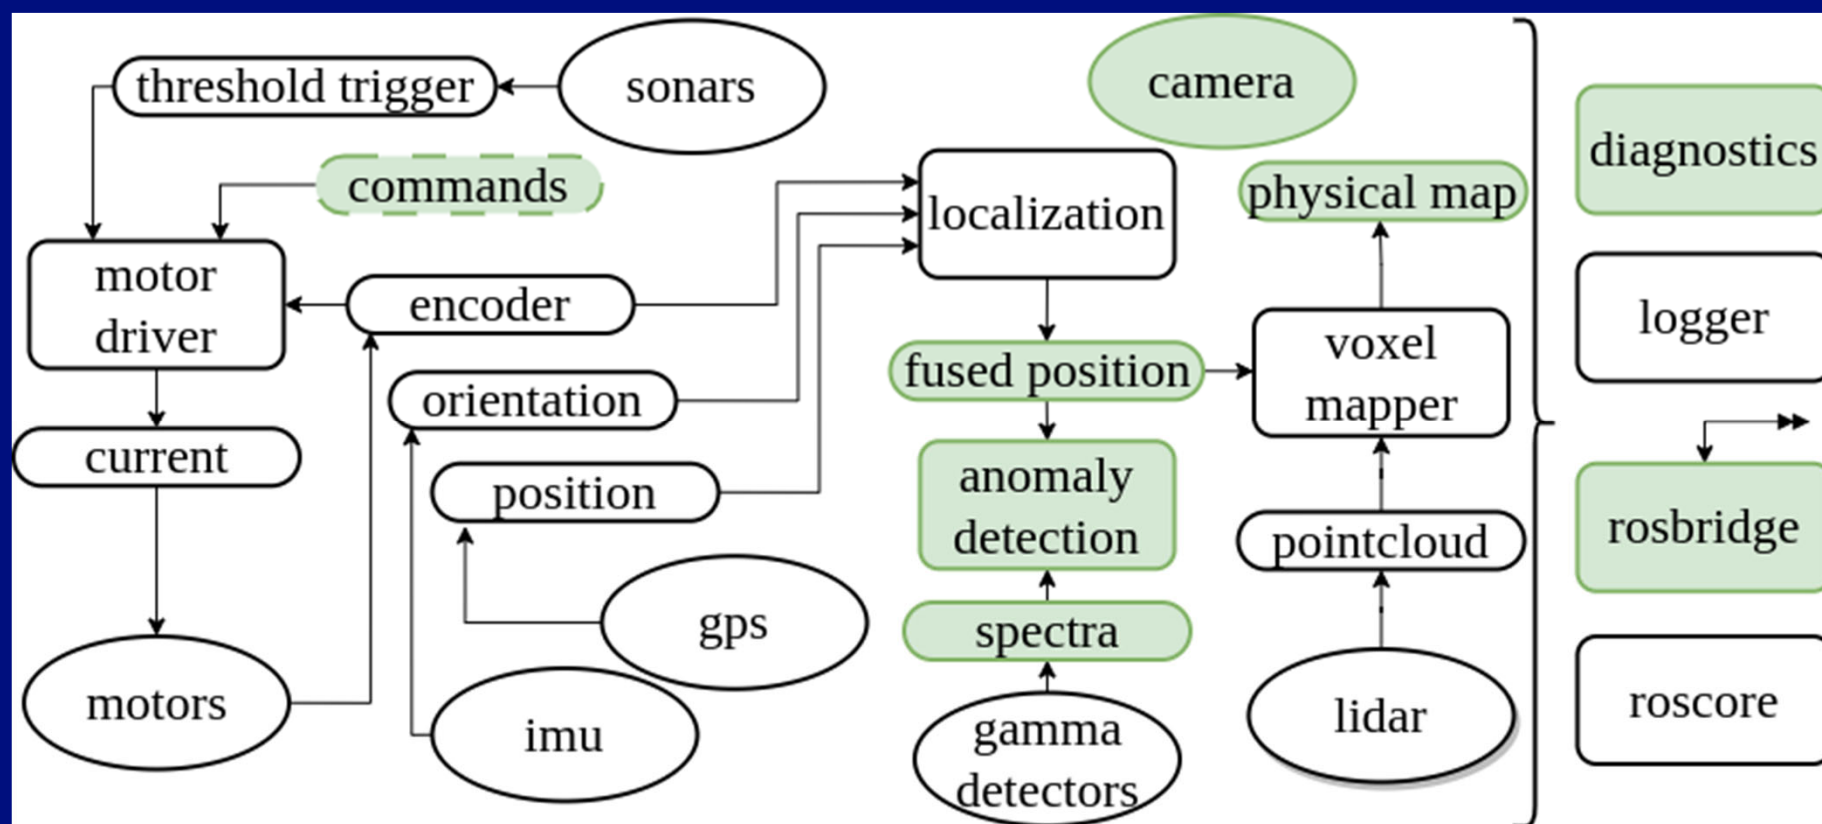

# Detailed Radiation Detection

- Alarm metric (same as non-detailed)
- Full energy spectra
- Current gamma metric and alarm threshold
- Current neutron count rate and alarm threshold
- Toggle to display net or gross spectra in section B
  - Use net spectra for visual identification
- Latest gamma detector count rate
- Additional gamma detector metrics

# On-board Software w/ Robotic Operating System (ROS2)

# Environmental Awareness

- Simultaneous localization and mapping (SLAM)
  - Fuse sensors for real-time pose
  - Combine with lidar for obstacle map

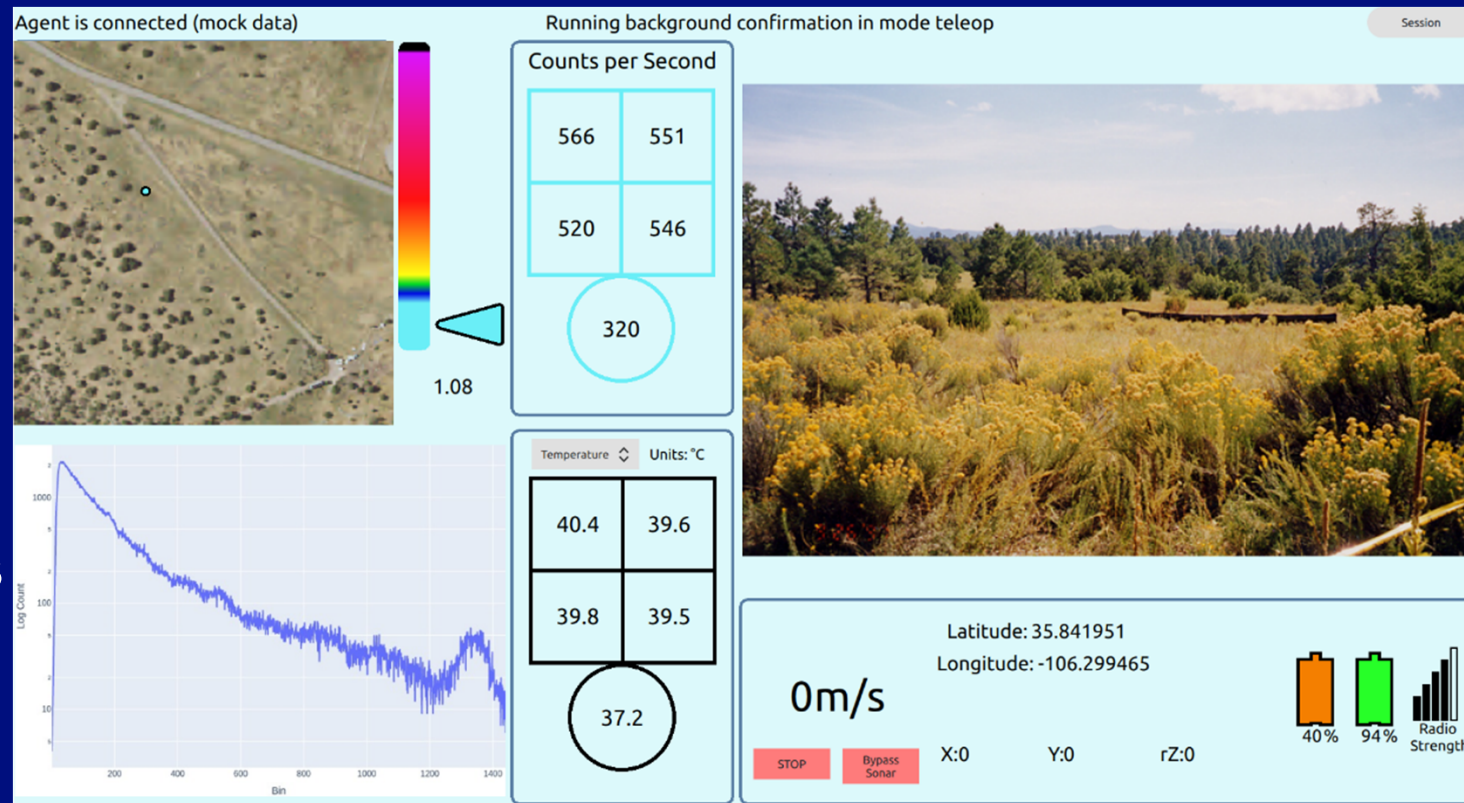

# Comprehensive Data Acquisition

- System logs robotic and radiological telemetry
  - Real-time analysis for fault monitoring
  - Post-processing for survey understanding

# Custom Interface for Remote User

- Live video stream
- Robotic telemetry
- Radiation metrics
- Heatmap
- Adjustable settings

# Demonstration Images (Pavement)

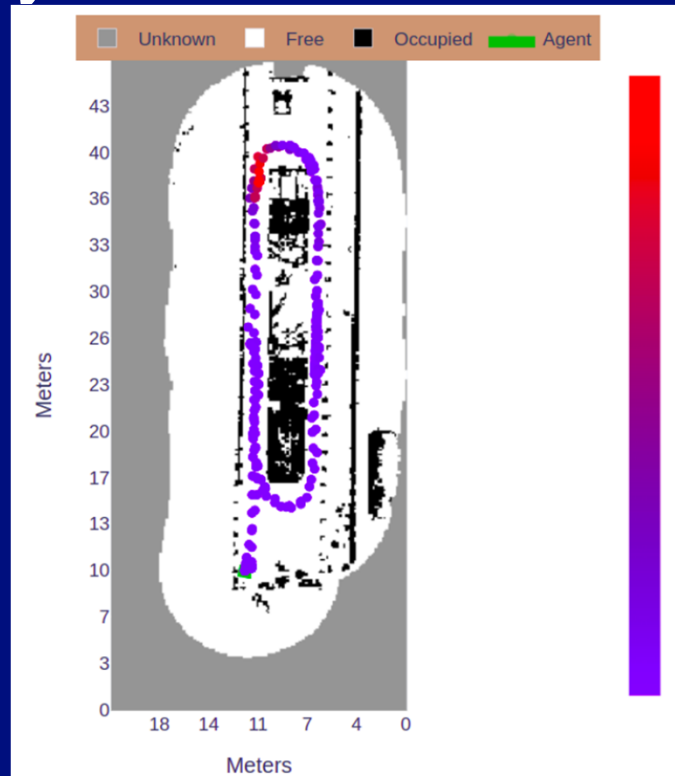

iGart system collecting background (stationary)

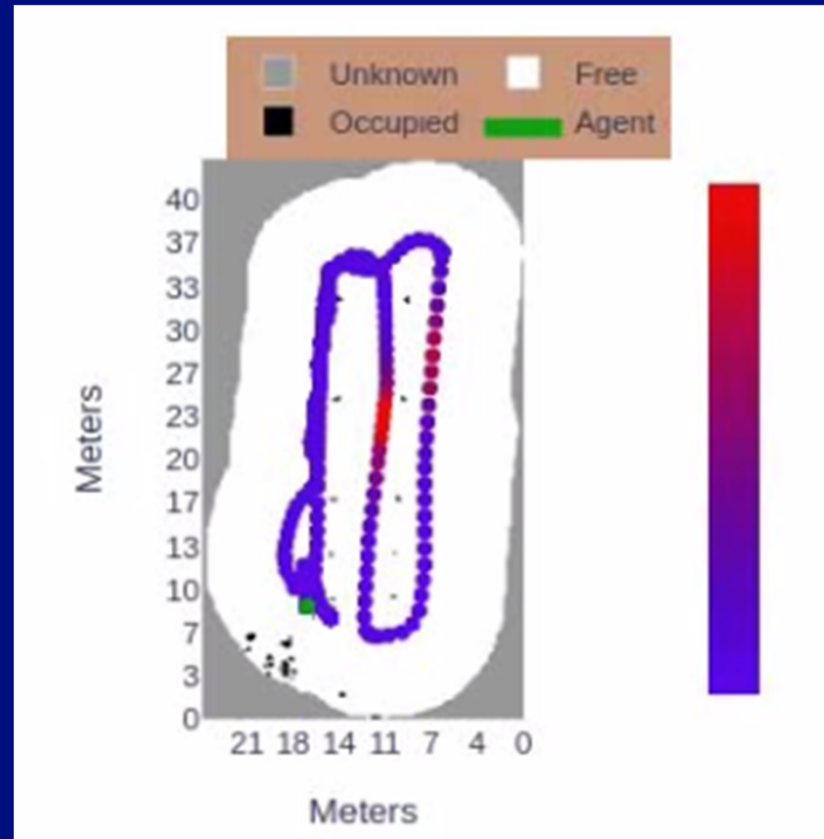

## Demonstration Images (Terrain)

# Early Results

Source inside tractor-trailer

Source underneath traffic cone

# Approximate Sampling Locations at E-F site (Sept. 2023)

Initial survey area  
in green

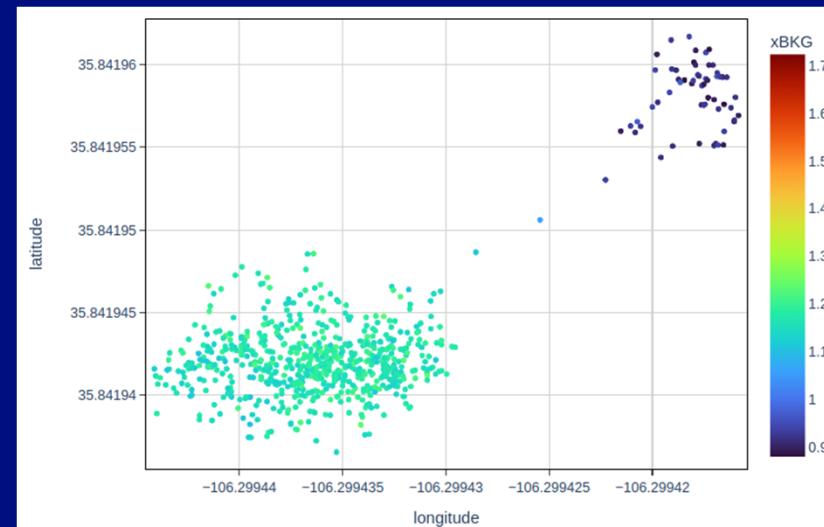

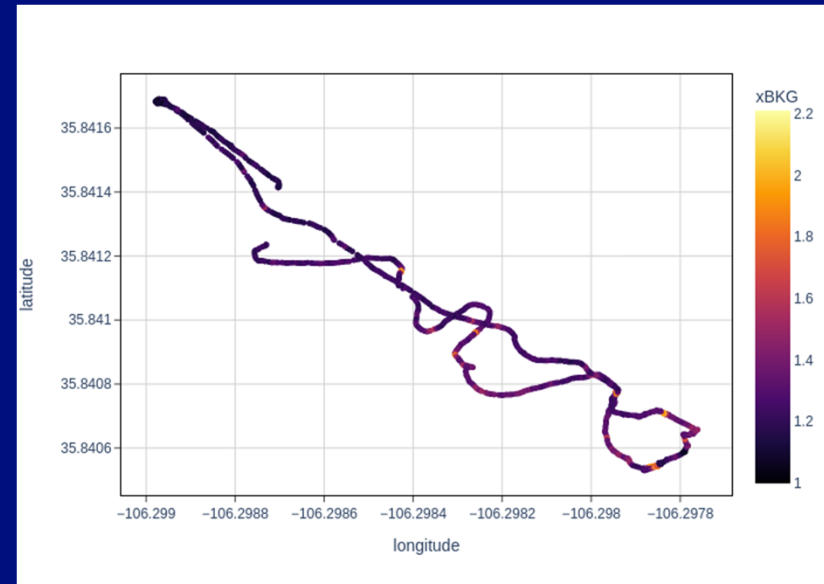

Follow-on survey  
area

RED is 2x to 4x  
background

# Contamination Survey Data

- Top: low resolution heat map of hot spot identification of during survey
  - Image shows multiple data points approximated over path to ID hot spots in robot path
  - xBKG represents measured rad activity relative to background as a percentage
  - Detector path ID'd areas up to ~2x background
- Bottom: high resolution data for robot measurements in localized area
  - Graph shows transition from uncontaminated area to higher background readings in contamination

# Survey Heat Map w/ Terrain

# Photos from Deployment

# Upcoming Work

- Further refinement of system design
  - Incorporation of additional autonomy/automation
    - MARSSIM Map Generation
  - Alternate material sensors
    - XRF
    - Heavy metals relevant to site remediation
  - Improved robotic system mobility options
- Additional simultaneous deployment with upcoming walkover survey
  - Like-for-like data comparison
