

Final Technical Report for DE SC0023505

The \$10,000 award was for support of the 2022 Molybdenum and Tungsten Enzymes conference, which was held in Indianapolis, IN, October 16-20, 2022. There were a total of 46 speakers from twelve countries, of whom 12 were women and 12 were first-time attendees to the meeting. Registration was set at \$1,400, including accommodation, and the total attendance was 120. The award from the Department of Energy, made to the University of California, Riverside, was transferred *in toto* to the conference organizers at Indiana University/Purdue University Indianapolis (IUPUI) upon invoice. Thanks to the award, registration fees were reduced for the approximately 30 graduate students and post-docs in attendance by \$350.

The meeting was extremely well-received and at the business meeting that Wednesday afternoon it was agreed that the next meetings would be in 2025 (to be held in Long Beach, CA and hosted by Russ Hille, University of California, Riverside) and 2027 (to be held in York, UK, hosted by Frank Sargent, Newcastle University). Both meetings would be held in conjunction with the International Conference on Bioinorganic Chemistry (ICBIC) meetings in those years.

There were no publications or other products arising from the meeting itself.
