Environmental Justice (EJ) and Social Justice (SJ) for Carbon Capture and Storage (CCS) Systems

Challenge: Lack of information and insight available to better understand the viability of a CCS project's implementation based off existing EJ and SJ challenges, as well as overall community attitudes toward CCS

40% of the overall benefits of certain federal investments—including investments in **clean energy** and **energy efficiency**; clean transit; affordable and sustainable housing; training and workforce development; the remediation and reduction of legacy pollution; and the development of clean water infrastructure—must flow to **disadvantaged communities** (**Justice40 Initiative (EO 14008, Section 223)**)

Value:

- Provide decision and policy makers EJ-SJ insights on CCS feasibility
- Benefit techno-economic, environmental, and social analyses driving commercial, regulatory, and research supporting the CCS economy

Objective:

- Identify EJ-SJ factors and resources for supporting assessments and calculating metrics
- Build a nationwide EJ-SJ database to support CCS implementation planning
- Develop an intuitive, interactive dashboard to provide data-driven insights into EJ-SJ opportunities for CCS activities

Ultimate Product:

- CCS-EJ-SJ database available for download on NETL's Energy Data Exchange (EDX) DisCO₂ver
- Interactive dashboard designed to support intuitive interaction with CCS-EJ-SJ data to support CCS project efficiency and improve understanding of EJ and SJ factors and how the factors may support or impact commercial, regulatory, and research applications

EJ and SJ for CCS Systems

- CCS-EJ-SJ database showing data organization within major themes
- Available as file geodatabase from EDX

Data Aggregated from Various Authoritative Sources

Category	Datasets	Sources
Environmental Justice	28	ACS, CDC, EPA, FEMA, NLCD, U.S. Census
Social Justice	38	ACS, CDC, CEQ, EPA, HIFLD, HUD, NASA, U.S. Census
Energy Justice	27	ACS, DOE, EIA, Enverus, EPA, GCCSI, IBRD, NOAA, U.S. Census
Economic Justice	11	ACS, BEA, IWG, NETL, U.S. Census
Clean Energy	9	EIA, HIFLD, NAICS, NREL, ORNL
Ecosystem Assets	12	AMCC, EDA, EPA, DOE, MFG USA, NIST, NSF
Infrastructure	18	EIA, BTS, CEC, FAA, FCC, FRA, HIFLD, MSI, MSHA, NETL, U.S. Census, USDOT, USGS
	148 datasets	

EJ and SJ for CCS Systems

Community Attitude Toward CCS

Purpose

This analysis aims to capture sentiment toward topics in CCS using text data extracted from news articles, community forums, and social platforms.

1. Spatial Patterns

- How does sentiment toward CCS vary by geography, and what regional differences can be identified?

2. Word Association

- What topics, terms, and phrases are primary drivers of sentiment scores, and how do they influence public perception?

3. Public Concerns and Support

- What are the main concerns and areas of support among communities regarding CCS projects?

4. Media Influence

- How does media coverage affect sentiment and public discourse on CCS?

5. Future Trends

- What emerging trends can be identified in public sentiment toward CCS?

- NETL
SmartSearch

Community Attitude Toward CCS

Workflow

- Key factor is defining input parameters with geographic information search
- Processing of data leading to sentiment analysis. Focus is on Vader and Transformers
- Geospatial output for analysis

CCS-EJ-SJ Interactive Web Application

Welcome/Informational Screen

- CCS-EJ-SJ web application is being built using the developer's version of ESRI's Experience Builder
- Goal is to provide the stakeholder a central place for authoritative data
- Users/stakeholders can interact with data and print a custom report

CCS-EJ-SJ Interactive Web Application

Main Application

CCS-EJ-SJ Interactive Web Application

Layers: Associated Tools

Get from Map Layers:

Click on the icon (circled) to access tools via Map Layers: Zooming, Transparency, Layer Details, Filter Data, Generate Statistics, View Attribute Data in Attribute Table, Export Data (as JSON, CSV, GeoJSON; geospatial files planned for Ver. 2)

Get from Attribute Table:

Click on the icon (circled) to access tools via the Attribute Table: Filter Data, Generate Statistics, Zooming, Pan to Data in the Map, Export Data (as JSON, CSV, GeoJSON; geospatial files (upcoming)

Tools: The Toolbar

More tools are planned for Version 2.

-  Choose your own base (background) map.
-  Bookmark your areas of interest and return to them (in a viewing session).
-  Query layers (in development).
-  Spatially select layers (in development).
-  Draw and Measure Tool. Place a point, draw lines, draw polygons. Turn on measure to get a point location, length of a line, square miles within a polygon

-  Analysis Tool. (Further development. This tool will be incorporated into other tools.)
-  Standard Print Tool. In version 2, this will be replaced with a customized print and report tool.
-  Sharing Tool. Share the map via social media or email.
-  Informational Tool. General information on the map application itself. This tool is in development.

CCS-EJ-SJ Interactive Web Application

Tool Example: The Draw and Measure Tool

The Draw and Measure Tool for a point with "Show location measurement" turned on.

Active Tool

The Draw and Measure Tool for a polygon with "Show location measurement" turned on for both area measurement and perimeter measurement.

CCS-EJ-SJ Interactive Web Application

Tool Example: The Add Data Tool

Example of using an exterior web service (REST). Below, an "All Mining" layer is added from the West Virginia Geological and Economic Survey. https://atlas.wvgs.wvnet.edu/arcgis/rest/services/Coal_Web_Mercator/All_Mining_WM/FeatureServer

You can also add your own:
Shapefiles, CSV, KML, GeoJSON, GPX.

Manuscript

Draft manuscript-
community sentiment
analysis models, model
outputs and results.

Integrate data and dashboard
into EDX DisCO₂ver Platform for
user access.

Acknowledgments

This work was performed in support of the U.S. Department of Energy's (DOE) Office of Fossil Energy and Carbon Management's (FECM) Geo-Analysis and Monitoring Team and was developed jointly through the U.S. DOE FECM's EDX4CCS Field Work Proposal Project, in part, from the Bipartisan Infrastructure Law.

This research was supported in part by an appointment to the U.S. Department of Energy (DOE) Postgraduate Research Program at the National Energy Technology Laboratory (NETL) administered by the Oak Ridge Institute for Science and Education (ORISE).
