ABSTRACT

This report covers the year 1972, and lists approximately 10,000 articles of interest to mass spectroscopists. This two-volume report consists of three sections. Vol. I contains a Bibliography section and an Author Index section. Vol. II contains a Key Word Out of Context Index (KWOC Index) section. The Bibliography section lists the authors, the title and the publication data for each article. The Author Index lists the authors' names and the reference numbers of their articles. The KWOC Index lists the key words, the reference numbers of the articles in which the key word appears and the first 100 characters of the title.

INTRODUCTION

The literature covered in this report is for the year 1972, or earlier, as assembled during the year from three sources which are discussed in detail later. There are approximately 10,000 articles of interest to mass spectroscopists in this report. They were checked for previous citation in earlier bibliographies[1-9] in the series.*

The Selective Dissemination of Information (SDI)[10] computer system was employed to survey the titles of approximately 300,000 scientific articles. These articles were on computer tapes supplied by Pandex of CCM Information Sciences.[11] Pandex tapes list the articles from approximately 2300 journals. The tapes also include about 6,000 book titles and 35,000 government technical reports each year. These tapes are computer-scanned for the articles of interest using a profile of keywords and authors' names. The procedure was explained in a paper presented at the 14th Annual Conference on Mass Spectrometry and Allied Topics at Dallas, Texas in May 1966. A more extensive explanation is given in an IS report[12] by J. Jordan.

Articles received from the Scientific Documentation Centre, Ltd. (SDC),[13] as part of its Current Awareness Service on "Mass Spectrometry", were included in this report if they were not previously located by the SDI system. Journals and other abstracting services are manually-scanned by SDC and articles of interest are printed on cards for mailing to the subscribing

members. The SDC articles included in this report were on cards received from SDC during the year 1972. We wish to thank Dr. P. S. Davison, Director, Scientific Documentation Centre, Ltd., for his permission to use this source of information.

"Nuclear Science Abstracts", published by the United States Atomic Energy Commission's Division of Technical Information, are scanned manually for articles of interest. The articles of interest not found in the previous two sources were included in this report.

The articles located from the three sources were separated into 94 categories on the basis of the information contained in their titles or in their abstracts, when available. SDC also includes coded information about the contents of the articles on their cards and this is sometimes used to determine the category into which an article is placed. This system of classifying articles is not wholly unambiguous but it does result in a general breakdown of the list. In order to make locating particular articles of interest possible, we rely upon the key word index to circumvent unavoidable misclassification. To locate articles by the same author in different categories we rely upon the author index.

This report is composed of three sections. The first section is a Bibliography Listing, the second is an alphabetical Author Index and the third is a Key Word Out of Context Index (KWOC Index). An explanation of each section follows and an example of each is shown at the end of the introduction.

Bibliography

The Bibliography Listing is divided into categories with each category assigned a specific numerical designation. The categories and their numerical designations are listed in Table I. The articles within each category are sequenced by number according to the alphabetical order of their first author.

Each entry in the Bibliography Listing contains four parts. The first gives the reference number of the article and includes the category designation, the year, and the sequence number of the article. The second part of the listing gives the authors who are associated with the article. The third part gives the title of the article as it appeared on the source card and the fourth part gives the bibliographical citation for the article.

Author Index

The Author Index lists the authors cited in the Bibliography. To the right of each author's name is the reference number or numbers of the article(s) with which he is associated.

The surname of the authors on the Pandex tapes are shortened to eight characters, therefore surnames may not be complete. Pandex does not include apostrophes in names but does include hyphens. Pandex also does not include any more than two initials of an author.

The number of authors listed by the various sources varies and thus controls the authors listed for each article. The cards received from SDC usually contain only one or two author's names. In some cases, the author listed by SDC is not the first one found on the publication. The Pandex tapes list only the

first three authors associated with an article. No attempt is made to refer to the articles from these two sources for the express purpose of checking for other authors but if some question arises about the spelling or wording of the title and the publication is checked, additional authors may be added to the citations. The articles found in "Nuclear Science Abstracts" usually contain all the authors and are used with all possible entries to insure as complete as possible author credit.

KWOC Index

The KWOC Index is an alphabetical listing of key words except for those purposely put on a stop list. Associated with each key word are two elements of information. To the right of the key word appear the first 100 characters of the title of the article which contains the key word. To the left of the key word appears the reference number of the article, providing the key for access in the Bibliography. An example indicating how to use each section and how the three sections are connected is given in Fig. 1.

ACKNOWLEDGEMENTS

The authors wish to thank all of the personnel of the Physical and Inorganic Chemistry Group VII of the Ames Laboratory of ERDA and the personnel of the Iowa State University Computer Center for their help and criticisms. We wish to commend the key punchers Gloria Curran, Darlene Hall, Dorothy Alcott, and Kay Zeiser for their conscientious work.

202 72 065 GASES COLLISION TRANSFER OF VIBRATIONAL ENERGY FROM HIGHLY EXCITED POLYATOMICS. TRANSITION PROBABILITIES
202 72 068 GASES FORMATION OF METASTABLE HELIUM ATOMS BY ELECTRON CAPTURE DURING THE PASSAGE OF FAST HE(+) IONS
202 72 C75 GASES COLLISIONAL REACTIONS OF 40 TO 140 KEV CH(N)(+) IONS ON DIFFERENT GASES
202 72 086 GASES PRECISE MEASUREMENTS OF TOTAL CROSS SECTIONS FOR THE SCATTERING OF POTASSIUM ATOMS BY RARE GASES.
202 72 C91 GASES MEASUREMENTS OF TOTAL CROSS SECTIONS FOR THE SCATTERING OF POTASSIUM ATOMS BY RARE GASES. 3
202 72 118 GASES DEEXCITATION OF FAST HE, NE, AND AR METASTABLE ATOMS IN VARIOUS GASES
202 72 131 GASES LABORATORY STUDIES OF ATOMIC COLLISION PROCESSES IN ATMOSPHERIC GASES
202 72 156 GASES 1. ANGULAR AND ENERGY DISTRIBUTION OF ELECTRONS PRODUCED BY 200 TO 500 KEV PROTONS IN GASES. II.
230 72 045 GASES IMPROVED PROCESS FOR PREPARING HEAVY WATER BY ISOTOPIC EXCHANGE (MONOTHERMIC TYPE) BETWEEN AMMONIUM
240 72 C04 GASES DIFFUSION OF GASES IN SOLIDS: TRITIUM DIFFUSION IN AUSTENITIC STAINLESS STEEL AND ZIRCALOY-2 AND
240 72 007 GASES DIFFUSION OF SEVERAL GASES IN VITREOUS BORON TRIOXIDE
240 72 010 GASES DIFFUSION AND PRECIPITATION OF INERT GASES IN METALS
