1975 CENSUS OF HIGH ENERGY PHYSICISTS

This listing of physicists and students associated with the U.S. high energy physics program has been compiled in the Office of the Assistant Director for High Energy Physics of the Division of Physical Research of the U.S. Energy Research and Development Administration. This listing has been obtained by asking the research groups, laboratories, and other agencies involved to update our previous listing. We would like to take this opportunity to thank the many contributors who assisted in submitting information. In addition, we would like to thank the National Science Foundation program office for their assistance in obtaining information on their grantees.

This listing is in two parts. The first part is an alphabetical listing and includes only the name rank, and institution of high energy physicists and graduate students. The second part of the listing is arranged by institution. Within each institution, the faculty (or permanent staff) and the graduate students are presented in separate alphabetical lists. For each person the entry indicates their birthdate, the year and institution of their highest degree, their rank and institutional affiliation with starting dates, up to three items selected from a list of research specialties, and their sources of federal support. For the graduate students, there is indicated an estimated date for their degree. Where appropriate, a person is listed at more than one institution. Except as noted in the listings, the information is intended to indicate the situation as of January 1, 1975.

An effort has been made to process accurately the information received from the field, and various checks to verify the data have been performed. Nevertheless, we anticipate that some errors remain. Significant errors or suggestions may be discussed with Robert M. Woods in the High Energy Physics Program of the Division of Physical Research.
