RT Gas Generators
DEF This gasifier has a continuous automatic gravity coal feeding system, a revolving grate, and an elevated ash pit. The gas-making chamber is completely water-jacketed. The inner wall is made of one-inch thick steel plate and requires no brick lining. Waste heat in the water jacket generates the required steam.

NTU PROCESS
DA April 1975
RT Oil Shales
RT Retorting
DEF Air is admitted at top of retort, supporting combustion which moves downward through oil shale bed. When fire front reaches bottom, operation is halted; spent shale is dumped. A batch process, it is not suitable for retorting on commercial basis.

RT Thermodynamics
DEF An ideal thermodynamic cycle consisting of heat addition at constant pressure, isentropic expansion, heat rejection at constant pressure, and isentropic compression; used as an ideal standard for the performance of heat-engine and heat-pump installations operating with a condensable vapor as the working fluid, such as a steam power plant. TEXACO GASIFICATION PROCESS
DA May 1977
BT1 Coal Gasification
BT2 Gasification
BT3 Thermochemical Processes
DEF Coal, or any carbonaceous fuel, and oxygen are reacted in carbon monoxide and hydrogen at temperatures of 1200-2200°F and pressures of 300-4500 p.s.i. Steam may be used optionally. Hydrogen and carbon monoxide are recycled to the reactor to optimize methane yield. The high-BTU offgas is suitable for upgrading to pipeline quality.

TOSCO PROCESS
DA January 1975
RT Oil Shales
DEF Crushed raw shale preheated to approx. 400°F is transported to a pyrolysis drum and mixed with ceramic balls preheated to approx. 1100°. When shale reaches a temperature of approx. 900°F, conversion of the kerogen to hydrocarbon vapors is substantially complete. Pyrolysis vapors are then condensed, fractionated and piped to upgrading facility for refining.

TWISTOR THEORY [01]
(Quantized points of space-time.)
DA August 1975
UF *Penrose Twistor Theory*
RT Gravitation
RT Quantum Mechanics
RT Space-Time
DEF The points of space-time are composite objects which may have structure in terms of more fundamental entities, called the twistors. Rest mass should also be considered a derived property of matter. Thus the underlying objects (i.e. twistors) are closely related to massless particles.

UNION OIL PROCESS

RT Oil Shales
DEF A shale retorting process of the direct-heated type, using air injected into a moving bed of coarsely crushed shale to support combustion to supply process heat. The retort features a rock pump shale feeding device that pushes oil shale upward into an inverted-cone-shaped vessel that is open to the atmosphere at the top. Spent shale overflows at the top, where air enters the bed of shale and supports combustion. The flow of air, combustion product gases and pyrolysis product vapors is downward, countercurrent to the upward flow of shale solids.

DEF This gasifier is used for the gasification of various types of coal by partial combustion with air or oxygen at atmospheric pressure. The gasifier shell is brick-lined and is equipped with a Chapman drum feeder and agitator assembly. Supported under the shell, riding on three sets of rollers and guided by rollers, is the Koller-type revolving grate and ash pan.
