Section 1.0

INTRODUCTION

1.1 Program Summary

The United States Department of Energy (DOE) awarded a contract to Memphis Light, Gas and Water Division (MLGW) which requires MLGW to perform process analysis, design, procurement, construction, testing, operation, and evaluation of a plant which will demonstrate the feasibility of converting high sulfur bituminous coal to industrial fuel gas with a heating value of 300 ± 30 Btu per standard cubic foot (SCF). The demonstration plant is to be based on the U-Gas process, with its product gas to be used in commercial applications in Memphis, Tennessee.

In order to perform this work, MLGW has established an industrial team, which includes:

MLGW - Memphis Light, Gas and Water Division, Memphis, Tenn.
The prime contractor and distributor of the industrial fuel gas.

FWEC - Foster Wheeler Energy Corporation, Livingston, N.J.
The engineer-construction manager.

IGT - Institute of Gas Technology, Chicago, Illinois.
The process developer.

DRC - Delta Refining Company, Memphis, Tenn.
To provide operating experience.

The contract specifies that the work is to be conducted in three phases. Phase I costs are financed entirely by DOE. Costs for Phases II and III will be shared equally by DOE and MLGW. The Phases are:

Phase I - Program Development and Conceptual Design
Phase II - Demonstration Plant Final Design, Procurement and Construction
Phase III - Demonstration Plant Operation

Under Task III of Phase I a Mechanical Design and Cost Estimate for the Demonstration Plant was completed. The output of this Task, in addition to the cost estimate, is comprised of the following items:

a. Drawings/Flowsheets
b. Equipment List
c. Procurement Requisitions
d. Instrumentation Data
e. Plot Plans
f. Building Sketches

This report, entitled "Demonstration Plant Mechanical Design", is intended to provide all engineering information necessary for the preliminary design of the plant. This report, which should be used in conjunction with the Task II report "Demonstration Plant Process Design" includes information on all plant units shown on Table 1.

This Task III report is provided in twelve volumes as shown on Page i.

This is Volume II, Air Separation Plant. Combined with the other volumes comprising the Demonstration Plant Mechanical Design Report and the Process Design (Task II) Report, the material meets the requirements for deliverables No. 17, 19, 21 and 24; as specified within Appendix A - Statement of Work.

Note: Section numbers shown on Drawings are the last two digits of the area number, followed by a zero (e.g. Section 310 is Air Separation Unit). Area numbers have been established for Cost Control Purposes in Phase II.

1.2 Plant Summary

The Industrial Fuel Gas Demonstration Plant produces a nominal 50 billion BTU/Day of product gas, which is equivalent in energy output to approximately a 10,000 barrel/day oil refinery. The product gas has a heating value of 300 ± 30 BTU/SCF. 45 billion BTU/Day of this gas is available as send-out gas to IFG customers. The remaining 5 billion BTU/Day of this gas is further processed to pipeline quality (950 BTU/SCF) and deposited in the Memphis natural gas distribution system to generate BTU credit. The BTU credit can be withdrawn and used to satisfy IFG customer demand when the U-Gas production facility is totally or partially down for maintenance. By the use of the credit generation system the demand of IFG customers can thus be assured.

Drawing 2202-1-50-00104 is the plant block flow diagram showing the process sequence and process related support facilities of this demonstration plant. Each process unit as well as each process related support facility is described briefly in the following summary.

Section 310, Air Separation Plant
Compresses intake air and separates it into oxygen and nitrogen. The oxygen is compressed and sent to the gasifiers. A small portion of the nitrogen is returned for plant use. Liquid oxygen and nitrogen can also be produced to keep their respective storage tanks filled in order to provide the necessary reserve for an outage of the air separation plant.

Section 320, Coal/Coke Treating and Feed
Coal is crushed from 2" x 0" to 1/4" x 0" and dried to 2.5% moisture in a dryer mill. The dried, sized coal is stored in a coal silo. Sized coke received by the plant is also dried by a separate dryer and stored in a coke silo. Coal or coke is conveyed to the gasifier feeding systems from either the coal or coke silo. Dual conveying systems are provided to fill the gasifier feeding systems with one serving as a spare. Each gasifier has its own feeding system. The gasifier feeding system is a multi-feed hopper system, each consisting of a receiving hopper, two lock hoppers and two injection hoppers. Each injection hopper feeds into three pneumatic injection lines which transports coal or coke into the gasifier.

Section 330, Coal Gasification
Contains the coal gasifiers where steam and oxygen react with the coal in a fluidized bed at about 1875°F and 75 psig to produce hot, raw gas (CO, CO_2 and H_2). Within the reaction zone of the fluidized bed is an ash-agglomerating zone. The ash agglomerates drop into a water quench. Fines carried over with the hot, raw gas are returned to the gasifier through external cyclones.

Section 340, Gas Cooling and Scrubbing
Cools the gas from 1875°F to 450°F. For purposes of heat recovery, the gas passes in sequence through a high pressure steam generator, high pressure steam superheater, another high pressure steam generator, and a boiler feedwater preheater. After heat recovery the raw gas is quenched to saturation and passes through scrubbers. In the scrubbers particulate matter is removed by scrubbing with water. Sections 330 and 340 are four parallel trains and the balance of the plant is one train. Sour water from the knock-out drum, containing dissolved NH_3 and H_2S passes through a sour water stripper in Section 370; the overhead from the stripper goes to sulfur recovery. The water effluent goes to waste water treatment. The slurry water from the scrubber goes through a slurry water stripper. The slurry water after being stripped is clarified and filtered. The filter cake is sent to the steam generator for use as fuel. The filtrate water effluent is sent to waste water treatment.

Section 350, Gas Compression
Scrubbed gas is cooled, compressed to sufficiently high pressure and cooled again to go through gas treating and deliver the gas at 150 psig to the industrial fuel gas distribution header.

Section 360, Gas Treating
Receives the cooled gas from gas compression in Section 350. It then passes to a Selexol unit where H_2S and COS are removed to meet the product gas sulfur specification, and enough CO_2 is removed to obtain a constant heating value product gas. The product gas is then sent to Section 470 where it will be odorized and metered before being discharged to the industrial fuel gas distribution system.

Section 370, Sour Water Stripping
Receives sour water from Sections 340, 350 and 360. The major portions of ammonia and hydrogen sulfide are removed by means of steam stripping.

Section 380, Sulfur Recovery
Receives sour gas from Section 370 and acid gas from Section 360. It converts the sulfur compound in three catalytic stages of a Claus type sulfur recovery unit to achieve 96% sulfur recovery. Sulfur goes through condensers, seal pit and rundown pit, and storage tank before being loaded into tank trucks.

Section 390, Tail Gas Treating
Receives the tail gas from Section 380. It then goes to a Beavon unit package where remaining sulfur is converted to H_2S, and then removed in a Stretford Unit. The tail gas is reheated to achieve satisfactory buoyancy and discharged to the atmosphere.

Section 220, Credit Generation
Treats from 10% to 30% of the product gas from Section 360 to produce pipeline quality gas which will be deposited into the Memphis pipeline gas distribution system to generate a reserve of credit. This reserve which can be withdrawn during U-gas plant outage. Pipeline gas withdrawn from the Memphis pipeline gas distribution system will be adjusted to the U-gas heating value prior to its distribution to the U-gas customers.

Section 410, Coal/Coke Handling
Receives the incoming washed coal (2" x 0") from barges and transports it to a 14 day live coal storage pile. From there coal is transported to Section 320.

Section 420, Ash Treatment
Receives the agglomerated quenched ash slurry from the gasifiers (Section 330) and conveys it hydraulically to the dewatering bins. The dewatered ash is then discharged into trucks for disposal to the ash pile. The water from the dewatering bins is collected in the clarifier where clean water overflows into a sump tank while the underflow is pumped back to the dewatering bins. The clean water is then recycled to the gasifiers. A startup pump is provided for initial transport of slurry to the dewatering bins when the gasifier pressure is too low for conveying.

The non-process sections to support the process and to provide utilities to the process include the following functions:

Section 430, Utility Area which includes:
Steam Generation
Raw Water Storage
BFW Treatment

Section 440, Waste Water Treatment

Section 450, Cooling Tower

Section 460, Flare

Section 470, General Facilities which include:
Long Term Coal Storage for 90 days
Long Term Ash & Solid Waste Storage
Interconnecting Piping
Roads and Fences
Firewater System
Power, Lighting, and Communication
Sewers
Odorization and Metering Station

Drawing No. 2203-1-01-4701 is the Key Plot Plan for the Demonstration Plant. The site, which comprises approximately 134 acres, is located next to the T. H. Allen Steam Generating Station in Shelby County, Tennessee.

An in-depth discussion of the site selection and description can be found in the following separate documents:

a. "Site Evaluation and Selection Report" February 1979.

b. Environmental Analysis Report August 1979.

All sections of the plant are shown on the Key Plot Plan.

Section 2.0

UNIT DESCRIPTION - AIR SEPARATION

Air is compressed to approximately 85 psig and cooled to 100°F by means of Air Compressors (C-3101A/B) and Air Compressor Aftercooler (E-3102). Condensate from K.O. Drums D-3101A/B, D-3102, and D-3103A/B is routed to the cooling tower as make-up water. Compressed air from the Aftercooler K.O. Drum is fed to Air Separation Package (A-3101), and to the Credit Generation System (Section 220).

The Air Separation Package, consisting of heat exchangers and cryogenic distillation columns, produces gaseous oxygen (98 vol. %) as the primary product. Gaseous nitrogen (bone dry, 10 ppm O_2), liquid oxygen and liquid nitrogen are also produced in limited quantities.

The product oxygen leaving the Air Separation Package at a temperature of 94°F and a pressure of 2.7 psig is compressed to a pressure of 105 psig by the Oxygen Compressor (C-3102) for delivery to Coal Gasification (Section 330).

Product gaseous bone-dry nitrogen reports to the Plant Nitrogen Compressors (C-3103A/B) and to Gas Treating (Section 360) where it is employed as a stripping medium in the CO_2 Stripper (T-3604).

Liquid nitrogen, which will be produced continually, is stored in Liquid Nitrogen Storage Tank (TK-3101) for subsequent vaporization by either the Liquid Nitrogen Vaporization Package (A3102) or the Instrument Nitrogen Vaporization Package (A-3103). The Liquid Nitrogen Vaporization Package will provide gaseous nitrogen for start-up and shutdown of the plant.

When the Air Separation Package operates at less than its design capacity for gaseous oxygen production, it is capable of producing liquid oxygen for storing in the Liquid Oxygen Storage Tank (TK-3102). Gaseous oxygen, generated by vaporizing liquid oxygen in the Oxygen Vaporization Package (A-3104) will be used as an emergency back-up source of oxygen feed gas. The 1000 tons of storage capacity specified for liquid oxygen allows over 13 hours of back-up at full capacity (3 gasifiers).

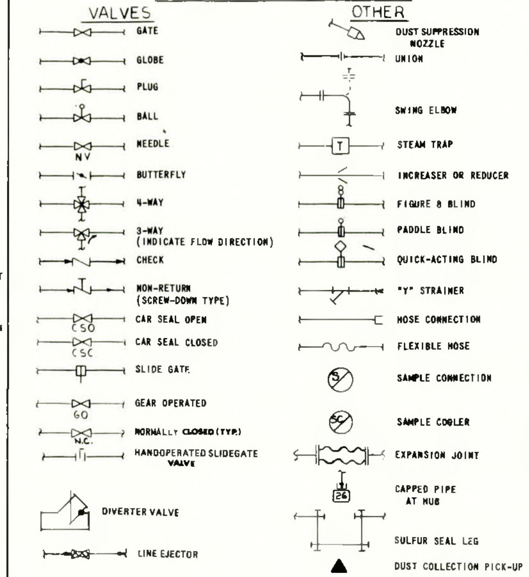
NOTES:

a. ALL SIZES IN INCHES.
b. BLOCK AND BYPASS VALVES AND MANIFOLDS SHALL NOT BE LARGER THAN MAIN LINE SIZE.
c. INCREASE BYPASS VALVE BODY SIZE ONE SIZE WHERE CONTROL VALVE BODY IS BUTTERFLY DESIGN (ONLY WHEN GLOBE VALVES ARE USED AS BYPASS).
d. ON FLASHING SERVICE OR WHERE THE CONTROL VALVE OUTLET LINE SIZE IS GREATER THAN THE CONTROL VALVE INLET LINE SIZE, THE OUTLET PIPING FROM BOTH THE CONTROL VALVE AND BYPASS VALVE, AND THE DOWNSTREAM BLOCK VALVE ITSELF, SHALL BE NO SMALLER THAN ONE SIZE LESS THAN OUTLET LINE SIZE.

GENERAL PIPING SYMBOLS



GENERAL NOTES

1. ENGINEERING FLOW DIAGRAMS (EFD'S) DO NOT SHOW HIGH POINT VENTS, LOW POINT DRAINS, LOW POINT TRAPS, INSTRUMENT BLOCK VALVES ETC. REQUIREMENTS FOR THESE APPEAR IN THE JOB SPECIFICATIONS. ONLY PROCESS RELATED VENTS, DRAINS, TRAPS, ETC. ARE SHOWN.
2. DRAIN, VENT AND SAMPLE CONNECTIONS SHALL BE 3/4" UNLESS OTHERWISE NOTED.
3. CHANGES IN LINE SPEC AND/OR INSULATION SHALL BE INDICATED BY A PERPENDICULAR BREAKLINE WITH THE SPEC. NOTED ON EACH SIDE.
   (SEE EXAMPLES BELOW)
4. UNLESS OTHERWISE NOTED ALL VESSEL CONNECTIONS TO PIPING SHALL BE LINE SIZE AND SHALL MATCH THE PIPE SPEC.
5. ELECTRICAL SYMBOLS ARE NOT SHOWN ON THIS DWG.
   SEE JOB SPEC-2200-73B20.1 TO 73B20.4
6. CONTROL VALVES SHALL BE FLANGED WITH FACE TO FACE DIMENSIONS PER I.S.A.R.P 4,1 WHEREVER PRACTICABLE.

MATERIALS OF CONSTRUCTION NOTES

1. CORROSION DESIGN LIFE BASIS:
   20 YEAR LIFE FOR VESSELS, DRUMS, PUMP CASING, PIPING, EXCHANGER SHELLS AND CHANNELS, AIR FAN HEADER.
   10 YEAR LIFE FOR EXCHANGER TUBING, PUMP INTERNALS, HEATER TUBES AND REMOVABLE INTERNALS.
2. NOMINAL CORROSION ALLOWANCE
   1/8" ON VESSELS, DRUMS AND AIRFAN HEADERS CONSTRUCTED OF CS THRU SCR.
   1/8" ON EXCHANGER SHELLS, CHANNELS, AND PUMP CASING CONSTRUCTED OF C.S. THRU SCR.
   0.05" ON EQUIPMENT CONSTRUCTED OF ALLOY GREATER THAN SCR.
   0.05" ON CARBON STEEL THRU 8C PIPING.
   0.05" ON PIPING CONSTRUCTED OF ALLOY GREATER THAN 9CR.
   CLADDING SHALL BE 3/64" MINIMUM OR WELDED AS PER ITEM "B" ON EXCHANGERS EXCEPT AS NOTED.
   SUBSTITUTE CLADDING MATERIAL SHALL NOT BE ALLOWED WITHOUT APPROVAL OF TECHNICAL SERVICES.
3. ALL WELD PROCEDURES SHALL BE SUBMITTED TO FWEC FOR APPROVAL IMMEDIATELY AFTER PURCHASE OF EQUIPMENT.
4. MATERIAL SELECTION BASIS:
   - PAST PLANT EXPERIENCE AND CORROSION RACK INFORMATION
   - FOR HYDROGEN RESISTANCE, NELSON CURVES API REPORT JUNE, 1977 WITH A 25% SAFETY FACTOR.
   - FOR H2S RESISTANCE, A.S. COOPER AND J.W. GRIMM JAN.1971 NACE J.R. McCOY COMMISSION 1976.
   - FOR SULFUR RESISTANCE, H.F. McCONOMY API REPORT 1965.
5. FULLY KILLED CARBON STEEL TO BE USED FOR EQUIPMENT AND PIPING EXPOSED TO WET H2S HARDNESS OF WELDS AND HAZ NOT TO EXCEED 200 HB
6. CARBON STEEL EQUIPMENT EXPOSED TO WET H2S TO BE STRESS RELIEVED IF MINIMUM SPECIFICATION TENSILE STRENGTH IS GREATER THAN 90,000.
7. COPPER OR COPPER BEARING ALLOYS ARE NOT PERMITTED FOR AMMONIA OR AMINE SERVICE (i.e. MONEL, ADMIRALTY ETC.) NO ALUMINUM, INCONEL, GALVANIZED STEEL.
8. COPPER ALLOY HEAT EXCHANGER TUBING SHALL BE ANNEALED.
9. DMM - CRINKLED WIRE MESH
   S - SULFUR CONTENT
   S.R. - STRESS RELIEVED
10. TOXIC SERVICE
    CATEGORY M - THE CUSTOMER SHALL DESIGNATE THOSE LINES WHICH ARE CATEGORY M PER ANSI B31-3 CHAPTER VII. (A TOXIC FLUID SERVICE EXISTS WHERE EXPOSURE TO SMALL QUANTITIES OF THE FLUID CAN PRODUCE SERIOUS HARM TO PERSONS ON BREATHING OR BODILY CONTACT).
    FOR CATEGORY M SERVICE THE REQUIREMENTS OF ANSI B31-3 CHAPTER VII SHALL APPLY
11. ALL ACID GAS LINES SHALL BE PURGED WITH INERT GAS AFTER SHUT DOWN.

LEGEND

- MATERIAL BALANCE STREAM NUMBER
- TEMPERATURE °F
- PRESSURE PSIG (UNLESS OTHERWISE INDICATED)

THIS DRAWING IS CONSISTENT WITH THE TASK II PROCESS DESIGN REPORT SUBMITTED IN AUGUST 1978. CHANGES MAY HAVE OCCURRED IN SOME DETAILS BETWEEN THE MATERIALS OF CONSTRUCTION DRAWING AND ISSUE B OF THE ENGINEERING FLOW DIAGRAM INCLUDED AS THE BASIS OF THIS REPORT. ALTHOUGH THIS DRAWING IS SUFFICIENT FOR THE PURPOSE OF IDENTIFYING MATERIALS OF CONSTRUCTION IT CORRESPONDS WITH OTHER DATA AT AN EARLIER STAGE OF ENGINEERING. FOR THIS REASON, THIS DRAWING HAS NOT BEEN REVISED.

NOTES

1. LINES ARE DESIGNED FOR OPERATING TEMPERATURE AND PRESSURE UNLESS DESIGN CONDITIONS INDICATE OTHERWISE.
2. INSULATION THICKNESS IS BASED ON OPERATING TEMPERATURE UNLESS OTHERWISE NOTED.
3. PIPE WALL THICKNESS SHALL BE SHOWN ONLY WHEN IT IS NECESSARY TO CALCULATE PER PIPE SPEC.
4. PWHT MEANS POST WELD HEAT TREATMENT REQUIRED. SEE JOB SPECIFICATION -59A3.
5. FOR UTILITY HEADER NOMENCLATURE AND PIPING SERVICE DESIGNATIONS SEE STANDARD SYMBOLS AND DETAILS FLOW DIAGRAM LATEST REVISION.

CODE REQUIREMENTS ASME SECT VIII DIV.1 & JOB SPEC. 2200-21A1 TEMA CLASS R

REMARKS: (1) NOZZLE & SUPPORT LOCATION TO BE AS NOTED ON F.W. STD. 21B11.1

(2) FOR GENERAL NOTES REFER TO REQ'N. 2200-1200 A WHICH IS AN INTEGRAL PART OF THIS REQ'N

(3) ONE ADDITIONAL DUPLICATE ITEM REQUIRED TAG E-3107 B

REQUISITION

FOSTER WHEELER ENERGY CORPORATION

CLIENT Memphis Light, Gas & Water Div	CONTRACT NO. 15-2200	REQUISITION NO.			DATE
SITE Memphis, Tennessee	ITEM NO. C-3101 A/B	2231-1321 A			6-1-79
MATERIAL Air Compressors		C1	11 Oct. 79	C4	
OR		C2		C5	
SERVICE		C3		C6	

I. SCOPE OF SUPPLY

Vendor shall furnish two (2) centrifugal or axial type air compressors, each with driver, lube oil console and accessory equipment in accordance with this requisition and applicable standards and specifications reference below.

Item	Driver Type
C-3101 A	Brushless synchronous motor with speed increasing gear.
C-3101 B	Non-condensing type multi-stage, multi-valve steam turbine.

Vendors scope of supply shall include the following items for each unit:

Compressor with driver (as specified)
Console type lube oil system
Fabricated steel baseplate(s)
Local panel
Instrumentation

Air intercooler(s), moisture separators, interconnecting air piping and anti-surge control systems will be furnished by others.

II. APPLICABLE STANDARDS AND SPECIFICATIONS

2200-32A1	Centrifugal Compressors
2200-38A3	Special Purpose Steam Turbines
2200-38A4	Special Purpose Gears
2200-38A5	Synchronous Motors
2200-38A7	Medium Voltage Induction Motors
2200-39A2	Lube & Seal Oil Systems
2200-1300A	General Notes Requisition

III. DESCRIPTION OF SERVICE

The air compressors and drives will be installed in an air separation plant operating in continuous, un-interrupted service. The equipment will be installed outdoors, unprotected from the weather, on a mezzanine type foundation.

FORM NO. 135-901

CHANGE NO. 1	DATE 11 Oct. 79	REQUISITION NO. 2231-1321 A

IV. ALTERNATE COMPRESSOR DESIGNS

The air compressors may be either integrally geared centrifugal or axial type or a combination axial-centrifugal design as recommended by the vendor for minimum power consumption.

Justification of incremental capital cost shall be evaluated on the basis of the following power costs:

Electric Power	- $.02/KWH
900 PSIG Steam	- $.50/1000 lbs (Includes $3.00/1000 lbs credit for 125 PSIG exhaust steam)
Plant Payout Period	- 20 years at 330 operating days per year

V. VENDOR DATA REQUIREMENTS

A. Model and type of compressor and driver units.

B. Performance data as noted by (*) on page 3.

C. Typical outline dimensions and weights.

D. Price estimate based on shipment in 1981.

Rev. (1) NO CHANGE ON THIS PAGE

REQUISITION

FOSTER WHEELER ENERGY CORPORATION

CLIENT Memphis Light Gas & Water Div. CONTRACT NO. 15-2200	REQUISITION NO.			DATE
SITE Memphis, Tennessee ITEM NO. C-3102	2231-1321 B			6-12-79
MATERIAL Oxygen Compressor	C1	11 Oct. 79	C4	
OR	C2		C5	
SERVICE	C3		C6	

I. SCOPE OF SUPPLY

Vendor shall furnish one (1) horizontally split casing, multi-stage centrifugal type oxygen compressor, with synchronous motor driver and accessory equipment in accordance with this requisition and applicable standards and specifications referenced below.

Vendors scope of supply shall include following items:

(1)
Compressor
Steam Turbine
Fabricated Steel Baseplate
Console Type Lube Oil System
Local Panel
Instrumentation

Oxygen intercoolers, interconnecting oxygen piping and anti-surge control system will be furnished by others. Vendor may offer, however, compressor designs incorporating integral interstage coolers in which case the coolers (and piping if any) would be in his scope of supply.

II. APPLICABLE STANDARDS & SPECIFICATIONS

(1)

2200-32A1	Centrifugal Compressors
2200-38A3	Special Purpose Steam Turbines
2200-38A7	Medium Voltage Induction Motors
2200-39A2	Lube & Seal Oil Systems
2200-39A5	Clean Specification - Oxygen Compressors and Accessory Equipment.
2200-1300A	General Notes Requisition

III. DESCRIPTION OF SERVICE

The oxygen compressor unit will be installed in an air separation plant operating in continuous un-interrupted service. The equipment will be installed outdoors, unprotected from the weather, on a mezzanine type of foundation.

FORM NO. 135-901

CHANGE NO. 1	DATE 11 Oct, 79	REQUISITION NO. 2231-1321 B

IV. SPECIAL REQUIREMENTS

All parts of the compressor, auxiliary piping, intercoolers and interconnecting oxygen piping which are in contact with the product oxygen shall be cleaned, degreased and protected for shipment in accordance with FW Specification 2200-39A5.

V. ALTERNATE COMPRESSOR DESIGNS

The compressor may be either integrally cooled, single casing type or an externally cooled multi-casing design as recommended by the vendor for minimum power consumption.

Justification of incremental capital cost shall be evaluated on the basis of the following power costs:

Electric Power	- $.02/KWH
Plant Payout Period	- 20 years at 330 operating days per year

VI. VENDOR DATA REQUIREMENTS

A. Model and type of compressor and driver units.

B. Performance data as noted by (*) on page 3.

C. Typical outline dimensions and weights.

D. Price estimate based on shipment in 1981.

FOSTER WHEELER

CLIENT Memphis Light, Gas & Water Div.	CONTRACT NO. 15-2200	REQUISITION NO.			DATE
SITE Memphis, Tennessee	ITEM NO. C-3103 A/B	2231-1321-C			6/14/79
MATERIAL Plant Nitrogen Package		C1		C4	
OR		C2		C5	
SERVICE		C3		C6	

I. SCOPE OF SUPPLY

Two (2) integrally geared, multi-stage centrifugal nitrogen compressors, each complete with baseplate, motor driver, shaft driven lube oil pump, lube oil system with cooler, auxiliary standby oil pump, aftercooler with condensate separator having an automatic drain trap, intercoolers, manifolding of all water piping, full selective automatic control system, associated shutdown and alarm system and extra set of terminals for wiring out of the panel.

The compressor console panels will be located on the baseplate for each compressor and the minimum panel functions will be as follows:

1. Pressure control systems
2. Shutdown system
3. Alarm system and lights
4. Mfg. std. vibration monitoring and shutdown system
5. Low oil pressure trip switch and indicator light
6. High oil temperature, alarm switch and indicator light
7. High air temperature alarm for intercoolers
8. Main motor running indicator light
9. Auxiliary lube pump running indicator light
10. Compressor surge indicator light
11. High discharge air temperature indicator light

II. APPLICABLE STANDARDS AND SPECIFICATIONS

2200-1300A	General Notes for Mechanical Equipment
2200-38A6	Low Voltage NEMA Frame TEFC and XP Induction Motors
2200-39A3	Vendor Supplied Piping

REQUISITION

FOSTER WHEELER ENERGY CORPORATION

CLIENT MEMPHIS LIGHT, GAS & WATER	CONTRACT NO. 15-2203	REQUISITION NO.			DATE
SITE MEMPHIS, TENN.	ITEM NO. A-3101	2231-1919A			6/8/79
MATERIAL AIR SEPARATION PLANT		C1	6/29/79	C4	
OR		C2	7/30/79	C5	
SERVICE		C3		C6	

I. GENERAL

A. Vendor shall design and furnish a complete Air Separation Plant to supply gaseous oxygen of 98% purity for the production of industrial fuel gas from coal. The plant will also supply (1) liquid oxygen to make up to storage from which it is vaporized to provide an alternate source of gaseous oxygen, (2) gaseous nitrogen for plant use and (3) liquid nitrogen to make up storage from which it is vaporized to provide instrument nitrogen, dilution gas for credit generation and backup for gaseous nitrogen.

B. Equipment shall be shop-assembled to the maximum extent possible without causing difficulties in transportation to the jobsite.

C. The scope of supply will not include the air, oxygen and nitrogen compressors. The battery limits of the plant will, therefore, terminate at the discharge of the air compressor downstream of the aftercoolers and compressor controls and at the suctions of the oxygen and nitrogen compressors. Refer to FWEC Process Flow Diagrams 2202-1-50-31101 and 31102 (enclosed).

D. All piping, instrumentation and electricals required within the Air Separation Plant Battery Limits to complete a fully operational installation shall be furnished by the vendor.

E. The Waste Nitrogen Silencer, Item SL-3101, plus all other required vent silencers shall be furnished by vendor.

F. The installation will be outdoors.

G. All equipment and/or material and their installation shall be in accordance with all local, state and federal codes, laws, rules and regulations applicable thereto. Any conflict between PURCHASER'S drawings, specifications, standards, etc., and applicable codes, etc., shall immediately be brought to the attention of PURCHASER.

II. PROCESS SPECIFICATIONS

A. The battery limit pressures relative to the compressors and directly at the Air Separation Plant have been assumed as follows and are to be confirmed by the vendor:

STREAM	TEMP. F.	PRESSURE, psia
1. Air into Air Separation Package	100	100
2. Oxygen Gas out of Air Separation Package	94	15.5

BY	P.O. NO.	SUPPLIER

STREAM	TEMP. F	PRESSURE, psia
3. Waste Nitrogen Gas out of Air Separation Package	94	15.5
4. Bone Dry Nitrogen Gas out of Air Separation Package	94	15.5
5. Liquid Oxygen (98%) out of Air Separation Package	-291	50
6. Liquid Nitrogen (10 ppm O_2) out of Air Separation Package	-315	50

B. Process Requirements

(2) 1. For each of the following cases, the plant must be capable of simultaneous production of the product quantities shown at the conditions respectively indicated:

a. Base Case (3 Gasifiers - 100% Plant Capacity)

	Rate	Purity	Pressure	Temp.
Gaseous O_2	1733 ST/D (100% O_2)	98% by vol.	15.5 psia	94 F
Gaseous N_2	600 ST/D	10 ppm O_2 Max. bone dry	15.5 psia (1)	94 F
Liquid N_2	200 ST/D(2)	10 ppm O_2 Max.	50 psig	-315 F

(1) Vendor is to state if nitrogen is readily available at some higher pressure.

(2) Liquid N_2 rate is a nominal value which may be adjusted, with FWEC approval, by the vendor.

b. ALTERNATE 1 (4 Gasifiers - 100% Plant Capacity)

	Rate	Purity	Pressure	Temp.
Gaseous O_2	1916 ST/D (100% O_2)	98% by vol.	15.5 psia	94 F
Gaseous N_2	600 ST/D	10 ppm O_2 Max. bone dry	15.5 psia (1)	94 F
Liquid N_2	200 ST/D(2)	10 ppm O_2 Max.	50 psia	-315 F

11-B-1 PROCESS REQUIREMENTS (cont'd.)

c. ALTERNATE 2 (4 Gasifiers - 100% Plant Capacity/99.5% O_2)

	Rate	Purity	Pressure	Temp.
Gaseous O_2	1916 ST/D (100% O_2)	99.5% by vol.	15.5 psia	94 F
Gaseous N_2	600 ST/D	10 ppm O_2 Max. bone dry	15.5 psia(1)	94 F
Liquid N_2	200 ST/D	10 ppm O_2 Max.	50 psia	-315 F

d. ALTERNATE 3 (LIQ. O_2 Production at Reduced Capacity)

	Rate	Purity	Pressure	Temp.
Gaseous O_2	By vendor	98% by vol.	15.5 psia	94 F
Gaseous N_2	600 ST/D	10 ppm O_2 Max. bone dry	15.5 psia(1)	94 F
Liquid N_2	200 ST/D(2)	100 ppm O_2Max.	50 psia	-315 F
Liquid O_2	100 ST/D	98% by vol.	50 psia	-291 F

e. ALTERNATE 4 (3 Gasifiers - 100% Plant Capacity/Max. Liq. O_2)

	Rate	Purity	Pressure	Temp.
Gaseous O_2	1733 ST/D (100% O_2)	98% by vol.	15.5 psia	94 F
Gaseous N_2	600 ST/D	10 ppm O_2 bone dry	15.5 psia	94 F
Liquid N_2	200 ST/D Max.	10 ppm O_2 Max.	50 psia	-315 F
Liquid O_2	Max. by Vendor	98% by vol.	50 psia	-291 F

f. ALTERNATE 5 (3 Gasifiers - 100% Plant Capacity/Max. Liq. N_2)

	Rate	Purity	Pressure	Temp.
Gaseous O_2	1733 ST/D (100% O_2)	98% by vol.	15.5 psia	94 F
Gaseous N_2	600 ST/D	10 ppm O_2 bone dry	15.5 psia	94 F
Liquid N_2	Max. by Vendor	10 ppm O_2 Max.	50 psia	-315 F

2. The air separation package shall be supplied by 2 air compressors each sized for 50% of the design air requirements as specified by the air separation package vendor. The air separation package must be capable of producing specification quality product streams, for all cases, with only one air compressor on line.

3. The required number of trains is one.

4. A material and utility balance (including export power) need only be provided for the base case.

5. Vendor must specify design requirements of air compressors including design flow rate and delivery pressure at battery limits of the air separation package.

III. AVAILABLE UTILITIES

A. Instrument Air: 80 psig @ ambient temperature

B. Steam: 85 psig saturated

C. Electric Power: 120 V, 1 ϕ, 60HZ
460 V, 3 ϕ, 60HZ
4000 V, 3 ϕ, 60HZ

IV. METEOROLOGICAL DATA

A. Design Ambient Air Conditions

1. Temperature: Summer - 100 F (DB), 80 F (WB)
Winter - 17 F

2. Relative Humidity: 50% (Summer)

3. Barometic Pressure: 14.5 psia

4. Prevailing Wind Direction: Summer - South (10mph)
Winter - North (10mph)

B. Seismic Zone: Zone 3, per ANSI A58.1

C. Design Wind Loads: Per ANSI A58.1

V. MECHANICAL SPECIFICATIONS

A. Materials of construction and corrosion allowances shall be as recommended by vendor in order to achieve a 20 year life for major equipment and a 10 year life for replaceable internals. (e.g. tower trays, exhcangers bundles, etc.)

B. The pertinent FWEC Job Specifications for the design of this equipment are as follows:

Spec. No.	Title
2200-01A1	Basic Engineering Data
-10A1	Welded Unfired Pressure Vessels
-11A1	Tower Trays & Other Internals
-21A1	Tubular Exchangers
-70A1	Electrical Standard
-83A1	Painting
-50A1	Piping
-88C1	Welding Requirements for Equipment and Piping
-46A1	Structural Steel
-95A2	Noise Control - Equipment
-97A1	Preparation of Material for Shipment
-1900A	General Notes Requisition for Miscellaneous Equipment

C. Mechanical Design Conditions

	Rate	Purity	Pressure	Temp.
Gaseous O_2	1916 ST/D (100% O_2)	99.5%	15.5 psia	94F
Gaseous N_2	600 ST/D	10 ppm O_2 Max bone dry	15.5 psia	94F
Liquid N_2	200 ST/D	10 ppm O_2 Max	50 psia	-315F
Liquid O_2	100 ST/D	98% by Vol.	50 psia	-291F

VI. EQUIPMENT SPECIFICATIONS

A. Vessels and Exchangers

Vendor shall supply overall dimensions for all vessels and exchangers being furnished by him. These items shall be designed, fabricated and stamped in accordance with the latest edition of the ASME Boiler and Pressure Vessel Code. Exchangers shall, in addition, be designed per TEMA requirements.

B. Rotating Equipment

Vendor is to state manufacturer, size and type of every item of equipment being furnished as part of his scope of supply, including weight information and utility consumption.

C. Civil

1. The vendor is required to supply all structural steel needed for the erection of the Air Separation Plant, including handrails, ladders and stairways.

2. Vendor shall furnish a layout and elevation drawing showing all equipment, major structural members, platforming, ladders, etc., necessary for assembly, operation and maintenance of the Air Separation Plant.

3. Foundations and anchor bolts will be by others.

D. Piping

1. Vendor shall furnish all piping between and within the components he supplies, including all process, instrumentation and utility valves.

2. Utility piping to vendor's equipment will be by others.

E. Instruments

1. All local instrumentation and controls necessary for safe and proper operation of the Air Separation Plant shall be furnished by vendor.

2. Electronic control instruments, recorders, indicators, annunciators, etc. with associated signal processing auxillaries for the air plant will be located in the control console in the main control room. This equipment will be furnished by others as part of an overall plant distributed control system.

All field transmitters will be furnished by the air plant vendor and subject to type approval by FWEC. Output from transmitters to the control room shall be 4-20 MADC from certified intrinsically safe devices. All outputs to the field from the control room shall be 4-20 MADC for connection to certified intrinsically safe devices furnished by the air plant vendor.

Air plant vendor will furnish full P. & I.D. drawings indicating vendor approved and recommended control system scheme for the air plant. FWEC will make comments where required and incorporate vendor's scheme in the plant distributed control system.

Local control loop items with no connection required to the control room will be 3-15 psig, pneumatic type and furnished by the air plant vendor.

3. Safety and relief valves shall be of a type approved by ASME for this service.

4. All important alarm and shutdown functions will be monitored by a visual alarm system located on the main control panel.

5. All instruments, control valves, etc., being furnished by the vendor shall be of manufacture and type suitable to Purchaser. Vendor shall furnish with his proposal a general scope of instruments and controls complete with manufacturer's names.

F. Electricals

1. All electrical apparatus supplied by vendor shall conform to NEC and NEMA codes.

2. All equipment and materials must be suitable for installation in an outdoor electrically unclassified area subject to a corrosive atmosphere.

3. Vendor shall, as far as possible, completely wire all the various components of the equipment being furnished. That wiring which is to be continued by Purchaser or connected into Purchaser's system shall terminate in junction boxes having suitable terminal strips.

4. Vendor shall furnish a wiring diagram which clearly indicates that position of the wiring and electrical items being furnished by him and that portion by Purchaser. All terminal points are to be adequately identified.

G. Insulation

All insulation for piping and equipment within the Air Separation Plant, necessary for its efficient operation, shall be furnished and installed by vendor.

H. Painting

Painting shall be according to Job Spec. 2200-83A1.

VII. GENERAL REQUIREMENTS OF VENDOR'S QUOTATION

Vendor shall furnish the following information with his proposal:

A. Material balance indicating quantities, temperatures and pressures of all process streams and all entering and leaving streams.

B. Expected utility consumptions and available expander-generator power output.

C. An engineering flow diagram showing all equipment, piping, instruments, etc.

D. A proposed Plot Plan and Elevation drawing per Section V-C-2 of this requisition.

E. A complete description of the Materials of Construction for all items being supplied.

F. Estimated field manhours required for erection of all vendor-supplied equipment, including testing, insulation and painting.

G. Estimated total installed weight and foundation dimensions. Vendor shall furnish foundation loadings and describe any special foundation design requirements.

H. A description of the extent of shop assembly of all items supplied.

I. An estimate for complete materials within the Air Separation Plant including all engineering services required for (1) specification procurement and manufacture of equipment, (2) design associated with the installation and interconnection of equipment at the jobsite and (3) plant commissioning, start-up and operator training.

J. A proposed schedule for delivery of drawings and equipment and for field erection of the plant.

K. In addition to the above, vendor shall comply with the requirements of General Notes Requisition 2200-1900A.

VIII. START-UP AND PERFORMANCE GUARANTEE

Vendor shall be responsible for providing start-up services for his equipment and shall guarantee that the unit fulfills FWEC process requirements.

REQUISITION

FOSTER WHEELER ENERGY CORPORATION

CLIENT Memphis Light, Gas & Water	CONTRACT NO. 15-2203	REQUISITION NO.			DATE
SITE Memphis, Tennessee	ITEM NO. A-3102, A-3103	2231-1919 B			6/12/79
MATERIAL Liquid Nitrogen Vaporization	TK-3101	C1	7/23/79	C4	
OR Packages		C2		C5	
SERVICE		C3		C6	

I. GENERAL

(1) A. Vendor shall design and furnish the following liquid nitrogen storage and vaporization systems to supply gaseous nitrogen. The systems will act as backup to a Main Air Separation Plant and will thus provide intermittent service.

1. Liquid Nitrogen Storage Tank - Item TK-3101
2. Instrument Nitrogen Vaporization Package - Item A-3103
3. Liquid Nitrogen Vaporization Package - Item A-3102

(1) B. Vaporization equipment shall be shop-assembled to the maximum extent possible without causing difficulties in transportation to the jobsite. The storage tank shall be field erected by Vendor.

C. All piping, instrumentation and electricals required for a fully operational installation shall be supplied by vendor.

D. The installation will be outdoors.

E. All equipment and/or material and their installation shall be in accordance with all local, state and federal codes, laws, rules and regulations applicable thereto. Any conflict between Purchaser's drawings, specifications, standards, etc., and applicable codes, etc., shall immediately be brought to the attention of Purchaser.

II. PROCESS SPECIFICATIONS

A. Liquid Nitrogen Storage Tank, TK-3101

1. Capacity: 12,000 tons of liquid nitrogen, bone dry, with 10 vppm of O_2.

2. Evaporation losses: Not to exceed 0.32% of storage capacity per day.

B. Instrument Nitrogen Vaporization Package, A-3103
(To include a liquid nitrogen delivery pump)

1. Delivery rate: 600 SCFM of gaseous N_2
2. Delivery pressure: 100 psig
3. Delivery temperature: 80°F
4. Vaporizer fuel: Natural gas

BY RB	P.O. NO.	SUPPLIER

C. Liquid Nitrogen Vaporization Package, A-3102
(To include three liquid nitrogen delivery pumps)

1.	Delivery rate:	6000 tons per day
2.	Delivery pressure:	225 psig
3.	Delivery temperature:	80°F
4.	Vaporizer fuel:	Natural gas
5.	Pump capacity:	4000 tons liquid N_2 per day for each of three pumps

III. AVAILABLE UTILITIES

A.	Instrument Air:	80 psig @ ambient temp.
B.	Steam:	85 psig saturated
C.	Electric Power:	120V, 1Ø, 60 Hz 460V, 3Ø, 60 Hz
D.	Natural Gas:	≈1000 Btu/ft^3

IV. METEOROLOGICAL DATA

A. Design Ambient Air Conditions

1.	Temperatures:	Summer 100°F (DB) 80°F (WB) Winter 17°F
2.	Relative Humidity:	50% (summer)
3.	Barometric Pressure:	14.5 psia
4.	Prevailing Wind Conditions:	Summer - South @ 10 mph Winter - North @ 10 mph

(1) B. Seismic Conditions: Per ANSI A58.1 - Seismic Zone 3

(1) C. Wind Loadings: Per Southern Building Code, 1976
See Job Spec. 2200-01A1 for details.

V. MECHANICAL SPECIFICATIONS

A. Materials of construction and corrosion allowances shall be as recommended by vendor in order to achieve a 20 year life for major equipment and a 10 year life for easily replaceable internals.

B. The applicable FWEC Job Specifications for the design of this equipment are as follows:

	Spec. No.	Title
	2200-01A1	Basic Engineering Data
	-10A1	Welded Unfired Pressure Vessels
	-11A1	Tower Trays & Other Internals
(1)	-50A1	Piping
	-21A1	Tubular Exchangers
	-70A1	Electrical Standard
	-83A1	Painting
(1)	-46A1	Structural Steel
	-88C1	Welding Requirements for Equipment and Piping
(1)	-97A1	Preparation of Material for Shipment
	-1900A	General Notes Requisition for Miscellaneous Equipment

In addition, these FWEC Engineering Standards apply:

(1) 95A2 - Noise Control - Equipment

VI. EQUIPMENT SPECIFICATIONS

A. Vessels and Exchangers

1. Vendor shall supply overall dimensions for a vessels and exchangers being furnished by him. These items shall be designed, fabricated and stamped in accordance with the latest edition of the ASME Boiler and Pressure Vessel Code. Exchangers shall, in addition, be designed per TEMA requirements.

(1) 2. TK-3101 shall have a pressure build-up coil to maintain a vapor pressure of 0.8 psig in the tank. Provision shall be made to fill the tank from the top in addition to the normal bottom fill. The tank shall be capable of supplying nitrogen to service during filling.

B. Rotating Equipment

Vendor is to state manufacturer, size and type of every item of equipment being furnished under his scope of supply, including weight information and utility consumption.

C. Civil

1. The vendor shall supply all structural steel needed for the erection of these packages, including handrails, ladders, and stairways.

2. Vendor shall furnish a layout and elevation drawing showing all equipment, major structural members, platforming, ladders, etc., necessary for proper assembly, operation and maintenance of the units.

(1) 3. Foundation and concrete work will be by others, but vendor shall furnish loading information and describe only special requirements of foundation design for this equipment.

D. Piping

1. Vendor shall furnish all piping between and within the components he supplies, including all process, instrumentation and utility valves.

2. Utility piping to vendor's equipment will be by others.

E. Instruments

(1) 1. All local instrumentation and controls necessary for safe and proper operation of these packages shall be furnished by vendor

(1) 2. Electronic control instruments, recorders, indicators, annunciators, etc., with associated signal processing auxillaries for the vaporizer packages will be located in the control console in the main control room. This equipment will be furnished by others as part of an overall plant distributed control system.

All field transmitters will be furnished by the vaporizer vendor and subject to type approval by FWEC. Output from transmitters to the control room shall be 4-20 MADC from certified intrinsically safe devices. All outputs to the field from the control room shall be 4-20 MADC for connection to certified intrinsically safe devices furnished by the vendor.

Vendor will furnish full P. & I.D. drawings indicating vendor approved and recommended control system scheme for the vaporizer packages. FWEC will make comments where required and incorporate vendor's scheme in the plant distributed control system.

Local control loop items with no connection required to the control room will be 3-15 psig, pneumatic type and furnished by the vendor.

3. Safety and relief valves shall be of a type approved by ASME for this service.

4. All important alarm and shutdown functions will be monitored by a visual alarm system located on the main control panel.

5. All instruments, control valves, etc., being furnished by the vendor shall be of manufacture and type suitable to Purchaser. Vendor shall furnish with his proposal a general scope of instruments and controls complete with manufacturer's names.

F. Electrical

1. All electrical apparatus supplied by vendor shall conform to NEC and NEMA codes.

2. All equipment and materials must be suitable for installation in an outdoor electrically unclassified area subject to a corrosive atmosphere.

3. Vendor shall, as far as possible, completely wire all the various components of the equipment being furnished. That wiring which is to be continued by Purchaser or connected into Purchaser's system shall terminate in junction boxes having suitable terminal strips.

4. Vendor shall furnish a wiring diagram which clearly indicates that position of the wiring and electrical items being furnished by him and that portion by Purchaser. All terminal points are to be adequately identified.

G. Insulation

All insulation for piping and equipment in these systems necessary for their efficient operation shall be furnished and/or installed by vendor.

H. Painting

Painting shall be according to Job Spec. 2200-83A1.

VII. GENERAL REQUIREMENTS OF VENDOR'S QUOTATION

Vendor shall furnish the following information with his proposal:

A. Material balance indicating quantities, temperatures, and pressures of all process streams and all entering and leaving streams.

B. Expected utility consumptions.

C. An engineering flow diagram showing all equipment, piping, instruments, etc.

D. A proposed Plot Plan and Elevation drawing per Section VI-C-2 of this Requisition.

E. A complete description of the Materials of Construction for all items being supplied.

F. Estimated field manhours required for erection of all vendor-supplied equipment, including testing, insulation and painting.

G. Estimated total installed weight and foundation dimensions. Vendor shall completely describe any special concrete work needed for this installation and to be provided by others.

H. A description of the extent of shop assembly of all items supplied.

I. An estimate for complete materials for all equipment described herein, including all engineering services required for (1) specification, procurement and manufacture of equipment, (2) design associated with the installation and interconnection of equipment at the jobsite, (3) plant start-up and (4) acceptance testing.

(1)

J. A proposed schedule for delivery of drawings and equipment and for field erection of the units.

K. In addition to the above, vendor shall comply with the requirements of General Notes Requisition 2200-1900A.

REQUISITION

FOSTER WHEELER ENERGY CORPORATION

CLIENT Memphis Light, Gas & Water CONTRACT NO. 15-2203		REQUISITION NO.			DATE
SITE Memphis, Tenn. ITEM NO. A-3104		2231-1919D			6/11/79
MATERIAL Liquid Oxygen Vaporization Package TK-3102	C1	7/25/79	C4		
OR	C2		C5		
SERVICE	C3		C6		

I. GENERAL

(1) A. Vendor shall design and furnish one Liquid Oxygen Storage and Vaporization System to supply gaseous oxygen. The system will act as a backup to a main air separation plant and will thuss see intermittent service.

(1) B. Vaporization equipment shall be shop-assembled to the maximum extent possible without causing difficulties in transportation to the jobsite. The storage tank shall be field erected by the vendor

C. All piping, instrumentation and electricals required for a fully operational installation shall be supplied by vendor.

D. The installation will be outdoors.

E. All equipment and/or material and their installation shall be in accordance with all local, state, and federal codes, laws, rules and regulations applicable thereto. Any conflict between Purchaser's drawings, specifications, standards, etc., and applicable codes, etc., shall immediately be brought to the attention of Purchaser.

II. SCOPE OF SUPPLY

Vendor shall supply the following equipment.

A. Liquid oxygen storage tank (Item TK-3102)

B. Liquid oxygen vaporization system (Item A-3104) including a liquid oxygen delivery pump.

III. PROCESS SPECIFICATIONS

A. Liquid Oxygen Storage Tank (TK-3102)

1. Capacity: 1000 tons of liquid oxygen of 98 volume % purity (2% N_2)

2. Evaporation Losses: not to exceed 0.2% of storage capacity per day.

B. Liquid Oxygen Vaporization Package (A-3104)

Package must be capable of delivering gaseous oxygen as follows:

Delivery Rate:	1916 tons per day
Delivery Pressure:	105 psig
Delivery Temperature:	220F

FORM NO. 135-901

BY R.B.	P.O. NO.	SUPPLIER

IV. AVAILABLE UTILITIES

A.	Instrument air:	80 psig @ ambient temp.
B.	Steam :	85 psig saturated
C.	Electric Power:	120V 1Ø, 60 HZ 460V 3Ø, 60 HZ
D.	Natural Gas :	1000 Btu/ft^3

V. METEOROLOGICAL DATA

A. Design Ambient Air Conditions

1.	Temperatures:	Summer 100F (DB) 80F (WB) Winter 17F
2.	Relative Humidity:	50% (summer)
3.	Barometric Pressure:	14.5 psia
4.	Prevailing Wind Conditions:	Summer - South @ 10 mph Winter - North @ 10 mph

(1) B. Seismic Conditions: per ANSI A58.1 - Seismic Zone 3

(1) C. Wind Loadings: per Southern Building Code, 1976 (See Job Spec. 2200-01A1 for details)

VI. MECHANICAL SPECIFICATIONS

A. Materials of construction and corrosion allowances shall be as recommended by vendor in order to achieve a 20 year life for major equipment and a 10 year life for easily replaceable internals.

B. The applicable FWEC Job Specifications for the design of this equipment are as follows:

Spec. No.	Title
2200-01A1	Basic Engineering Data
-10A1	Welded Unfired Pressure Vessels
-11A1	Tower Trays & Other Internals
(1) -50A1	Piping
-21A1	Tubular Exchangers
-70A1	Electrical Standard
-83A1	Painting
(1) -46A1	Structural Steel
-88C1	Welding Requirements for Equipment and Piping
(1) -97A1	Preparation of Material for Shipment

VI - B. MECHANICAL SPECIFICATIONS (Cont'd)

Spec. No.	Title
2200-1900A	General Notes Requisition for Miscellaneous Equipment

In addition these FWEC Engineering Standards apply:

(1) 95A2 - Noise Control - Equipment

VII. EQUIPMENT SPECIFICATIONS

A. Vessels and Exchangers

1. Vendor shall supply overall dimensions for vessels and exchangers being furnished by him. These items shall be designed, fabricated and stamped in accordance with the latest edition of the ASME Boiler and Pressure Vessel Code. Exchangers shall, in addition, be designed per TEMA requirements.

2. TK-3102 shall have a pressure build up coil to maintain a vapor pressure of 0.8 psig in the tank. Provision shall be made to fill the tank from the top in addition to the normal bottom fill. The tank shall be capable of supplying oxygen to service during filling.

B. Rotating Equipment

Vendor is to state manufacturer, size and type of every item of equipment being furnished under this scope of supply, including weight information and utility consumption.

C. Civil

1. The vendor shall supply all structural steel neeeded for the erection of this package including handrails, ladders, and stairways.

2. Vendor shall furnish a layout and elevation drawing showing all equipment, major structural members, platforming, ladders, etc., necessary for proper assembly, operation and maintenance of this unit.

(1) 3. Foundation and concrete work will be by others, but vendor shall furnish loading information and describe any special requirements of foundation design for this equipment.

D. Piping

1. Vendor shall furnish all piping between and within the components he supplies, including all process, instrumentation and utility valves.

2. Utility piping to vendor's equipment will be by others.

VII. EQUIPMENT SPECIFICATIONS (Cont'd.)

E. Instruments

(1) 1. All local instrumentation and controls necessary for safe and proper operation of this package shall be furnished by vendor.

(1) 2. Electronic control instruments, recorders, indicators, annunciators, etc. with associated signal processing auxillaries for the vaporizer will be located in the control console in the main control room. This equipment will be furnished by others as part of an overall plant distributed control system.

All field transmitters will be furnished by the vendor and subject to type approval by FWEC. Output from transmitters to the control room shall be 4-20 MADC from certified intrinsically safe devices. All outputs to the field from the control room shall be 4-20 MADC for connection to certified intrinsically safe devices furnished by the vendor.

Vendor will furnish full P. & I.D. drawings indicating vendor approved and recommended control system scheme for the vaporizer. FWEC will make comments where required and incorporate vendor's scheme in the plant distributed control system.

Local control loop items with no connection required to the control room will be 3-15 psig, pneumatic type and furnished by the vendor.

3. Safety and relief valves shall be of a type approved by ASME for this service.

4. All important alarm and shutdown functions will be monitored by a visual alarm system located on the main control panel.

5. All instruments, control valves, etc., being furnished by the vendor shall be of manufacture and type available to Purchaser. Vendor shall furnish with his proposal a general scope of instruments and controls complete with manufacturer's names.

F. Electrical

1. All electrical apparatus supplied by vendor shall conform to NEC and NEMA codes.

2. All equipment and materials must be suitable for installation in an outdoor, electrically unclassified area subject to a corrosive atmosphere.

3. Vendor shall, as far as possible, completely wire all the various components of the equipment being furnished. That wiring which is to be continued by Purchaser or connected into Purchaser's system shall terminate in junction boxes having suitable terminal strips.

4. Vendor shall furnish a wiring diagram which clearly indicates that portion of the wiring and electrical items being furnished by him and that portion by Purchaser. All terminal points are to be adequately identified.

G. Insulation

All insulation for piping and equipment in the Liquid Oxygen Vaporization Package necessary for its efficient operation, shall be furnished and/or installed by vendor.

H. Painting

Painting shall be according to Job Spec. 2200-83A1.

VIII. GENERAL REQUIREMENTS OF VENDOR'S QUOTATION

Vendor shall furnish the following information with his proposal:

A. Material balance indicating quantities, temperatures and pressures of all process streams and all entering and leaving streams.

B. Expected utility consumptions.

C. An engineering flow diagram showing all equipment, piping, instruments, etc.

D. A proposed Plot Plan and Elevation drawing per Section V-C-2 of this Requisition.

E. A complete description of the Materials of Construction for all items being supplied.

F. Estimated field manhours required for erection of all vendor - supplied equipment, including testing, insulation and painting.

G. Estimated total installed weight and foundation dimensions. Vendor shall completely describe any special concrete work needed for this installation and to be installed by others.

H. A description of the extent of shop assembly of all items supplied.

I. An estimate for complete materials for the Liquid Oxygen Vaporization Package, including all engineering services required for (1) specification, procurement and manufacture of equipment, (2) design associated with the installation and interconnection of equipment at the jobsite, (3) plant start-up and (4) acceptance testing. (1)

J. A proposed schedule for delivery of drawings and equipment and for field erection of the equipment.

K. In addition to the above, vendor shall comply with the requirements of General Notes Requisition 2200-1900A.

REQUISITION

FOSTER WHEELER ENERGY CORPORATION

CLIENT MLGW/DOE	CONTRACT NO.	REQUISITION NO.			DATE
SITE Memphis, Tennessee	ITEM NO. F-3101 A/B	2231-1397 A			6/1/79
MATERIAL Air Filter		C1		C4	
OR		C2		C5	
SERVICE		C3		C6	

I. SCOPE OF SUPPLY

Vendor shall furnish a total of two (2) air filters and accessories in accordance with this requisition. The vendors scope of supply shall consist of the following items:

A. Inlet filter plenum package consisting of three stage filtration, prefiltration is to be by louvered dust separation and is to be self cleaning type, second stage is to be disposable, adhesive-impregnated glass-fiber air filter, final stage shall be high efficiency cartridge filter.

B. The filter plenum enclosure shall include two (2) blow-in-doors with limit switch.

C. Prefilter shall be provided with TEFC motor(s) to drive secondary air fans (230/460/3/60).

D. High filter differential pressure switch.

E. Inlet silencer for 85 dba at 3 feet.

II. DESIGN DATA

A. Gas Handled - Air
B. Temperature - 95°F summer, 20°F winter
C. Pressure - 14.5 psia
D. Flow Rate - 92,500 ICFM (Wet)*
E. Relative Humidity - 50%
F. Maximum Allowable ΔP - 0.2 psi

III. VENDOR DATA REQUIREMENTS

A. Model and type of filter and silencer.

B. Pressure drop across filter and silencer.

C. Typical outline dimensions and weights.

D. Price estimate based on shipment in 1981.

* Final required flow rate to be confirmed later.

LISTING OF PROCESS FLUID TYPES

Type Fluid	Fluid Definition or Property
1	Water and water solution having a freezing point of approximately 32°F.
2	Water which could accumulate in lead lines due to gravity separation (not because of steam out operations).
3	Corrosion liquids.
4	Liquids whose pour points are above the design or lowest average ambient temperature.
5	Liquids which may change in chemical composition due to a decrease in temperature from operating to design or lowest average ambient temperature.
6	Liquids which could vaporize at an operating pressure and at ambient temperature conditions.
7	Liquids which contain solids.
8	Steam
9	Corrosive vapors and gases.
10	Air, vapors and gases containing solids.
11	Wet Gas.
12	Dowtherm "A" Vapor.
13	Dowtherm "A" Liquid.
14	No Protection Required.*

*(For fluids such as dry gas, hydrocarbon gas, etc.)
