NATIVE AMERICAN CONFERENCE ON PETROLEUM ENERGY NOVEMBER 16–17, 1996, BARTLESVILLE, OKLAHOMA

1.0 INTRODUCTION

Thirty-three Native American tribal members, council members, and other interested parties gathered in Bartlesville, Oklahoma, to attend the Native American Conference on Petroleum Energy on October 16 and 17, 1996, sponsored by the U.S. Department of Energy and BDM-Oklahoma, Inc. Tribes represented at the workshop included the Cherokee, Chickasaw, Hopi, Jicarilla Apache, Osage, Seminole, and Ute. Representatives of the Bureau of Indian Affairs (BIA), the Bureau of Land Management (BLM), and the Minerals Management Service (MMS) also attended. A list of Attendees is listed in Appendix A.

BDM-Oklahoma developed and organized the native American Conference on Petroleum Energy to help meet the goals of the U.S. Department of Energy's Domestic Gas and Oil Initiative to help Native American Tribes become more self-sufficient in developing and managing petroleum resources.

1.1 PLANNING/PRE-CONFERENCE ACTIVITIES

A flyer describing the conference was developed and mailed to Native American tribal leaders and tribal offices in targeted states (Oklahoma, New Mexico, Arizona, Colorado, Utah, and North Dakota). Flyers were available at the sixth annual native Indian Energy and Minerals Conference in Denver in August. Follow-up telephone calls to tribal offices also were made. Information about the conference was made available on the BPO home page, and a press release was sent to all major cities in the targeted states.

1.2 THE CONFERENCE

The conference provided introductory training in petroleum energy topics to members of Native American Tribes who manage tribal mineral holdings, set policy, or work in the oil and gas

industry. Participants gained a broad perspective in petroleum geology hydrocarbon exploration and technologies that enhance hydrocarbon production.

Presentations by BDM-Oklahoma and BDM Petroleum Technologies technical staff included an overview of petroleum geology focusing on how oil is formed, trapped, and discovered. Geologic tools and technologies employed in the discovery and recovery of petroleum were discussed using field data and examples. An introductory session on production technology included a historical perspective, oil field terminology, information about leasing and owners' rights, and an overview of primary and secondary production methods and new technologies.

On the second day of the conference, a workshop on managing and complying with federal environmental regulations that impact hydrocarbon exploration, drilling, and production operations generated a great deal of interest. The final session on doing business with the U.S. Department of Energy included information on how to identify, evaluate, and respond to contracting or subcontracting opportunities and an introduction to resources on the Internet.

BDM-Oklahoma supported the conference with a tabletop exhibit and several tables of reports of technical work funded by BPO and conducted on Native lands. The technical reports and other materials were well received by participants.

2.0 INTRODUCTION TO PETROLEUM GEOLOGY

The first session of the two-day Native American Conference on Petroleum Energy was conducted as an introduction to petroleum geology in exploration and exploitation operations. Development of oil and gas prospects for drilling were discussed by introducing participants to the process that geologists use to generate and confirm prospects. Exploration prospect development begins with subsurface mapping of formation tops from geological data or electric logs. The prospective area is confirmed with 2D seismic data and detailed with 3D seismic data if economics justify the cost of conducting a 3D seismic survey. Examples of correlated electric logs and seismic profiles were presented by viewgraph to give participants an idea of the types of data that geologist evaluate and map. Potential targets for various areas are either known from geology of hydrocarbon-producing formations in nearby fields or in frontier areas, by projecting surface geology into the subsurface from surface outcrops. Viewgraphs were shown to the participants of schematic diagrams of seismic wave propagation from a surface source to a reflector bed in the subsurface back to surface geophones and recording devices. Photographs of Vibroseis vibrator trucks and recording trucks in the field were shown to familiarize participants with noninvasive methods of acquiring seismic data.

The NIPER reservoir characterization program that includes Patrick Draw field and Bell Creek field, both deposited in a barrier island environment, were discussed. The process for correlating subsurface reservoir cores with surface outcrops for characterization of hydrocarbon reservoirs was presented. The value of integrating reservoir characterization data with structure

and isopach maps, 3D seismic data interpretation, and "4D" seismic data to predict flow pathways of hydrocarbons, development of recovery strategies, and recovery predictions by simulation was presented. The concept of "4D" seismic data collection is defined with the fourth dimension being time. A new 3D seismic survey taken a 3 to 5 years after discovery and start-up of production sometimes allows geologists and engineers to see the movement of hydrocarbons through the reservoir in order to identify potential areas where *bypassed* oil can be recovered by additional drilling or placement of injection wells while the oil is still economically recoverable. During the presentation, time was allowed for questioning and discussion of topics included in the workshop. Viewgraphs were shown of land and offshore drilling rigs during the presentation.

The final portion of the introduction to geology focused on developing a reservoir management program for new and old hydrocarbon reservoirs. It was pointed out to all participants that the sooner in the life of an oil and/or gas field that a reservoir management strategy is developed and periodically revised as new data is collected, the better the potential for higher recovery. All of the data gathered during exploration, drilling, logging, coring, reservoir analysis/reservoir characterization, and production operations are used in development of a reservoir management strategy and update of it. BDM/DOE/NIPER reservoir management projects were briefly discussed in the final portion of the first session. The introduction to geology was well received by participants at the workshop.

3.0 OIL AND GAS PRODUCTION

The second session on the first day of the conference opened with an overview of the oil and gas industry from Colonel Drake's oil discovery in Pennsylvania in 1858 to current day operations. The overview included a history of the petroleum industry and the function of a typical oil company. It was pointed out that the majority, by far, of the wells currently producing in the United States are marginal and stripper wells owned and operated by small independents.

Petroleum industry practices were discussed along with examples. Government regulations, petroleum imports, exploration practices for oil and gas, drilling techniques and methodologies, production methodologies, marketing, recent technology advances, and the future were covered. Drilling rigs, producing wells, and subsurface diagrams were shown and discussed in the context of how do producers find and produce petroleum. It was pointed out that well spacing on regular 5-, 10-, 20-, 40-, 80-, 160-, 320-, or 640-acre units is regulatory spacing rather than spacing for the architecture of the reservoir. Mineral rights, drainage, and severed minerals from the surface were defined and described, as these pertain to non-Native American lands and Native American lands, along with some of the problems that can arise under various conditions. The importance of insurance, bonds, and liability for regulatory control over environmental contamination, blow-out while drilling, injury, abandonment of produced out wells, etc., provided areas for instruction and discussion. Petroleum and the environment were

touched upon as an introduction to increased regulatory control over the petroleum industry. Subsurface well construction of wells for production was described and shown on a viewgraph, along with a brief description that "oil pools" are not really pools but hydrocarbons in the pore space of rocks. The basics of petroleum production were touched upon in this session, along with drilling and production costs to operators and the price of domestically produced oil.

International aspects of the petroleum industry were covered in the later part of this session. U.S. and world production trends, reserves, supply and demand, consumption, and energy resources were the final topics of this session. It was pointed out that with domestic petroleum production declining that imports will continue to increase. Participants in this session were interested in how all of these factors would affect their tribes and/or production on tribal lands in a few years. There was a good response to this session with questioning throughout the session and at the end of the session.

4.0 FEDERAL ENVIRONMENTAL REGULATIONS IMPACTING HYDROCARBON EXPLORATION, DRILLING, AND PRODUCTION OPERATIONS

Federal environmental regulations impacting hydrocarbon exploration, drilling, and production operations were discussed along with examples of violations, penalties and fines for violations, and some economic impacts of implementing environmental regulations. Federal environmental regulations covered in the workshop are the Resource Conservation and Recovery Act (RCRA), Safe Drinking Water Act (SDWA), Clean Water Act (CWA), Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), Superfund Amendments and Reauthorization Act (SARA), Clean Air Act (CAA), Toxic Substances Control Act (TSCA), Oil Pollution Act of 1990 (OPA), Migratory Bird Treaty Act, Endangered Species Act, and Hazardous Materials Transportation Act (HMTA).

Regulations for Native American Tribes with oil and gas production are contained in several Code of Federal Regulations (CFRs) for the various federal agencies administering these regulations. Leasing, drilling, and production operations are regulated by the BIA, MMS, and the BLM. BIA regulations for leasing, drilling, and production operations are on public record in 25 CFR for various Native American Tribes (Utes, Apache, Navajo, Shashone, Arapaho, Osage, etc.). The MMS regulates and distributes royalties for Native American Tribes with oil and/or gas production other than the Osage Tribe. MMS regulations for royalties are of public record in 30 CFR Part 200. The BLM regulates operations and inspection of producing and storage facilities on Native American Tribal lands other than the Osage Tribe. BLM regulations for operations and inspection are of public record in 43 CFR Part 3160. Water contract requirements on Native American Tribal lands are of public record in 25 CFR Part 159. Environmental affairs and inspections are administered by the Environmental Protection Agency (EPA), and the regulations are found in 40 CFR. Some of the participants requested

that these regulations be included in future workshops. These could be easily incorporated into an expanded "on the road" workshop.

It is also suggested that environmental regulations for downstream operations (gas processing plants, refineries, and chemical plants) be included in an expanded environmental workshop. Some of the Native American Tribes are investigating the feasibility of downstream processing and sales from hydrocarbons produced by the Tribe or produced by operators on Tribal lands. Adding a section on downstream environmental regulations will make the workshop of interest to a larger audience. An increase in length of the workshop will allow more time for interaction with participants, more time for questions, and time to cover an expanded curriculum. When this workshop is taken "on the road," part of a second day could be devoted to field investigation to draw on a larger audience.

5.0 HOW TO DO BUSINESS WITH THE U.S. DEPARTMENT OF ENERGY

The fourth session addressed how to do business with the federal government. It dealt with procurements funded directly by the government or via subcontracts with prime contractors. It consisted of three segments. The first segment was a general overview of the federal procurement process, including some of the special provisions and the types of socioeconomic programs which might be of interest to the target audience. The second was a detailed look at a government solicitation and how to prepare and submit proposals in response to the solicitation in order to maximize the potential of winning an award. The third segment was an introduction to the variety of resources available on the World Wide Web for small businesses interested in government procurement opportunities. It included a hands-on demonstration with the use of a laptop computer projected on the overhead screen. Each segment was approximately one hour in length with a 15-minute break between the first and second segments. The participants were encouraged to ask questions at any point in the presentations in order to promote meaningful dialogue and increase the dissemination of useful information.

In addition to the presentations, the participants received a number of handouts for reference materials. Each attendee received a copy of the brochure "Doing Business with BDM-Oklahoma," a listing of regional Small Business Administration offices, and a listing of Internet procurement search sites. In addition, there was a variety of information which was available for viewing at display tables due to limited quantities. This material included the *DOE Guide to Submission of Unsolicited Proposals*, samples of the home pages for procurement at a number of DOE labs, and other topical material. The attendees were able to request additional copies of the "view only" data for forwarding upon availability.

6.0 EVALUATION/FOLLOW-UP

Evaluation forms were passed out to participants following each workshop session. The forms are compiled in Table 6-1. In general, the participants were pleased with the content of the conference and recognized the potential to tailor presentations if the audience were more homogeneous in its technical background or training needs. A follow-up packet with a letter, certificate, list of attendees, and handouts and other requested materials was sent to each conference attendee. Copies of the evaluation sheets filled out by the attendees are in Appendix B, and a summary of these comments for each session is in Appendix C.

7.0 FUTURE PLANS

The training offered at the conference is the first in a series of workshops that will be developed. Through contacts made at the conference, BDM-Oklahoma will work closely with individual tribes, tribal councils, and tribal energy companies to bring training tailored to their particular needs to them. The training team has the capability and the resources to develop introductory modules for nontechnical staff, as well as technical modules that focus on the geological characteristics of the tribes' holdings.

	agree strongly	agree	don't know	disagree	disagree strongly	comments
The speaker communicated the information clearly.		X				
The content of the session was at the appropriate level.			X			I am unsure at what level the material was directed for. Diverse group of people.
The printed handouts were useful.		X				
The audio-visual materials enhanced the presentation.				X		
There was adequate opportunity to ask questions or share ideas.				X		Not a lot of time to discuss and material not generating discussions
The session increased my understanding of the oil and gas industry.		X				
I will be able to use the information presented in this workshop.		X				

What did you like best about this presentation?

General Topics, Chance to meet and talk with people.

How can we make this course better suited to your needs?

Gear it more to specific audience.

Pretty general information, I would've liked to hear more discussion of group issues.

Do you have colleagues who would benefit from this workshop?

Maybe if the workshop was directed towards a specific audience.

The speaker communicated the information clearly.		✓				
The content of the session was at the appropriate level.						Hope for some - I found it to be too simplistic.
The printed handouts were useful.		✓				
The audio-visual materials enhanced the presentation.		✓				
There was adequate opportunity to ask questions or share ideas.						Few questions were asked - I think it is because of audience confusion. Why are we here?
The session increased my understanding of the oil and gas industry.		✓				
I will be able to use the information presented in this workshop.		✓				

What did you like best about this presentation?

How can we make this course better suited to your needs?

Advertising needs to target specific audience. The conference brochure was much too vague.

Do you have colleagues who would benefit from this workshop?

Only if it addresses specific needs i.e., educators vs. land managers vs. tribal leaders.

Other comments: (use reverse side if needed)

Narrow your focus. Is the purpose of the conference to educate laymen, provide discussion opportunities for details, or ~~also~~ promote DOE/BDM programs? I am unsure. There are a lot

The evaluation process is important to determine the extent to which this short course has met your needs. Please fill in the appropriate boxes and add comments as desired.

	agree strongly	agree	don't know	disagree	disagree strongly	comments
The speaker communicated the information clearly.		① X	②			
The content of the session was at the appropriate level.		①		②		
The printed handouts were useful.		① ②				
The audio-visual materials enhanced the presentation.		① ②				
There was adequate opportunity to ask questions or share ideas.		① ②				
The session increased my understanding of the oil and gas industry.		①	②			
I will be able to use the information presented in this workshop.		①		② X		

What did you like best about this presentation?

- ① Very good
- ② Good Speaker - content was not applicable to me.

How can we make this course better suited to your needs?

- ① More Examples
- ② More practical Examples

Do you have colleagues who would benefit from this workshop?

Speaker 1 was good. Content was good. Added Emphasis could have been on logging (Simplified), Testing, etc. But basically was good.

Other comments: (use reverse side if needed)

Speaker 2 was a good Speaker but the content was not useful to us. Examples may have been more helpful. It did not keep my attention.

What did you like best about this presentation?

Speaker did a good job in presenting material

How can we make this course better suited to your needs?

u Bigger + ~~For~~ louder T.V.

Do you have colleagues who would benefit from this workshop?

Yes

Other comments: (use reverse side if needed)

10/16/96 PM

**Native American Conference on Petroleum Energy
Evaluation Form
Oil and Gas Production**

The evaluation process is important to determine the extent to which this short course has met your needs. Please fill in the appropriate boxes and add comments as desired.

	agree strongly	agree	don't know	disagree	disagree strongly	comments
The speaker communicated the information clearly.	✓					
The content of the session was at the appropriate level.		✓				
The printed handouts were useful.	NONE		—			
The audio-visual materials enhanced the presentation.	✓					
There was adequate opportunity to ask questions or share ideas.		✓				
The session increased my understanding of the oil and gas industry.		✓				
I will be able to use the information presented in this workshop.	✓					

What did you like best about this presentation?

Speaker well versed on his subject matter

How can we make this course better suited to your needs?
Overall presentation well paced and efficient in this format

Do you have colleagues who would benefit from this workshop?

Yes

Other comments: (use reverse side if needed)

May have too much detail regarding specific production operations. i.e. P/E chab for Dtg AFE.
Also: for the group present today - offshore way have limited application

Well Done!

What did you like best about this presentation?

Speaker knows his subject. Had a balanced presentation.

How can we make this course better suited to your needs?

No

Do you have colleagues who would benefit from this workshop?

Yes

Other comments: (use reverse side if needed)

The continued imposition of increasingly stringent sometimes onerous regulations upon the oil industry requires constant awareness. The speaker helped making this point abundantly clear.

The evaluation process is important to determine the extent to which this short course has met your needs. Please fill in the appropriate boxes and add comments as desired.

	agree strongly	agree	don't know	disagree	disagree strongly	comments
The speaker communicated the information clearly.	✓					
The content of the session was at the appropriate level.	✓					
The printed handouts were useful.	✓					Best summary dx I've seen so far
The audio-visual materials enhanced the presentation.	✓					
There was adequate opportunity to ask questions or share ideas.	✓					
The session increased my understanding of the oil and gas industry.	✓					
I will be able to use the information presented in this workshop.	✓					

What did you like best about this presentation?

Good comprehensive review.

How can we make this course better suited to your needs?

Take an operator step-by-step through the process of compliance in drilling and producing on a lease

Do you have colleagues who would benefit from this workshop?

Yes.

APPENDIX C

INTRODUCTION TO PETROLEUM GEOLOGY

Comments

What did you like about this presentation?

- Information
- Good simplification of complex subject
- General topics, chance to meet and talk with people.
- Good development of baseline knowledge/thanks for providing handouts of overhead materials.
- It was at an understandable level without being too technical for a layman.
- Liked the basics.
- Level of information, not basic.
- Speakers did a good job keeping the information on a level to where we could understand.
- Good coverage in short time of a complex—broad spectrum.
- Overview in Petroleum Geology.
- Preparation was very good.
- The content of the discussions; reduced complex information to understandable level.
- Slides which accompanied lecture.
- 1st speaker—very good; 2nd speaker—good, content was not applicable to me.
- Slide presentations.
- A lot of new information on Reservoir Management.
- The pace of discussion, handouts, and content.

How can we make this course better suited to your needs?

- Need more workshops
- Include a specific case set of maps—isopach, etc.
- Be more case specific and reduce complexity.
- Gear it more to specific audience/pretty general information. I would've liked to hear more discussion of group issues.
- Sometimes used scientific/geologic terminology—it might help to simplify some of your terms.
- Refine some of the jargon.
- Advertising needs to target specific audience. The conference brochure was much too vague.
- Films about the subject matter would help.
- I'll be equipped to make evaluation after gaining perspective of entire program being presented.
- Don't know.
- Address nonreservoir production, e.g., fractures.
- 1st speaker—more examples; 2nd speaker—more practical examples.
- Shorten the presentation—brief and concise.
- More depth.
- Haven't decided yet.

Do you have colleagues who would benefit from this workshop?

- Yes (11)
- Maybe, if the workshop was directed towards a specific audience.
- No (2)
- Only if it addresses specific needs, i.e., educators vs. land managers vs. tribal leaders.

- Yes, entry lawyers/landmen
- Speaker 1 was good. Content was good. Added emphasis could have been on logging (simplified), testing, etc. But basically was good.
- Maybe (2)
- Yes
- Not at this time, but possibly in the future.

Other Comments:

- Excellent presentation
- Too complex and above understanding for a fundamental level seminar.
- I am unsure at what level the material was directed for/ diverse group of people.
- Not a lot of time to discuss, and material not generating discussions.
- Narrow your focus. Is the purpose of the conference to educate laymen, provide discussion opportunities for details, or promote DOE/BDM programs? I am unsure. There are a lot of industry reps. here—why?
- Two days is an excellent length for these courses. 1/4-1/2 day for each subject.
- Reservoir management has major company overtones—this Native American audience would be more in to monitoring possibly.
- Speaker 2 was a good speaker, but the content was not useful to us. *Examples may have been more helpful. It did NOT keep my attention.*

OIL AND GAS PRODUCTION

Comments

What did you like about this presentation?

- Entire session was very good.
- Scope of topics
- He was very knowledgeable.
- Knowledge of instructor.
- Visual presentation.
- Everything, the film.
- Amount of overheads and slides used.
- Speaker did a good job in presenting material.
- Speaker well versed on his subject matter/overall presentation well paced and efficient time frame.
- Personal stories of work experience.
- Slides very thorough.
- Best one—useful information.
- The whole presentation.
- Again, level was appropriate/a good beginning overview.
- The beginning to the end presentation of an oil well very informative and interesting.
- Herb's deliverance style and overheads.
- It was easy to understand.
- The information was very understandable.
- Knowledge of presenter.

How can we make this course better suited to your needs?

- Provide better introduction and transition between speakers—prepare us for what's coming.
- The material on offshore operations didn't seem relevant to Tribal interests, I suggest that you drop it.
- Follow along handouts.
- Have handouts to follow the lecture.
- A bigger and louder TV.
- Focus and direct the material towards a specific audience instead of broad base.
- Need more handouts on how production takes place.
- Overhead handouts for taking notes during presentation would help.
- It's pretty good just as it is.
- More emphasis on onshore production and less on offshore.

Do you have colleagues who would benefit from this workshop?

- Yes (13)
- In a more directed, focused fashion.
- Not at this time.

Other Comments:

- Very good presentation/would like some handouts in the future
- Speaker needs to be aware of body position relative to overhead projection—most of the time he was blocking the visuals/too much information for the given time/some were very good, others were too busy and complicated for the time allowed/speaker was too focused on overheads, didn't entertain guests.
- This session explained all the thing and I "wondered" about.

- May have too much detail regarding specific production and drilling operations, i.e., pie charts for daily AFE [authorization for expenditure]. Also, for the group present today—offshore may have limited application.
- A ton of information that was run through quick/I am unsure at what level the session was directed.
- This presentation “was on target.”
- This presentation was very helpful in the field.
- Video presentation was not loud enough.

ENVIRONMENTAL MANAGEMENT

Comments

What did you like about this presentation?

- Speaker knows his subject; had a balanced presentation
- Speaker spoke very clear, and presented his material well.
- Handouts and speaker. The written material and presenter's knowledge and sense of humor.
- The whole presentation.
- Very good, informative
- The insight gained on issues solely concerning my work.
- Excellent communication skills.
- Organized—
- Presentation conducted at level where everyone can understand.
- Material understandable and presented in a good manner.
- Handout very good.
- Good comprehensive review.
- Material and information.
- Good use of humor to enhance presentation/good handouts accompanying overheads.
- Very thorough and concise.

How can we make this course better suited to your needs?

- No—
- Maybe show a film for a change of pace.
- Appropriate
- Keep getting information for the present.
- Keep it updated and present at every session.
- Leave as is, maybe put it on the road.
- More tailored towards specific case studies and individual components of E&P waste/Environmental management rather than a look at regulations.
- Possibly add one more day or bring to tribe when requested.
- More case studies, documentation.
- Take an operator step-by-step through the process of compliance in drilling and producing a lease.
- Touch on CFR on BLM F.O.G.M.A. Regulation pertaining to different tribes.

Do you have colleagues who would benefit from this workshop?

- Yes (13)
- Possibly
- Everyone
- Yes, BIA-Osage field personnel
- No (2)

Other Comments:

- Well Done!!
- The continued imposition of increasingly stringent sometimes onerous regulations upon the oil industry requires constant awareness. The speaker helped make this point abundantly clear.
- Didn't hear enough—to fill up an evaluation form.
- All information is useful to the oil and gas company.
- Best presentation on Environmental I've heard—Good Job!

- Enjoyed presentation, would recommend to anyone associated with oil and gas.
- Breakdown of costs/operations components of Environmental Management —industry-wide or case by case.
- This is an area where my staff and I have very limited knowledge and need more training and also keep up to date on changes. Hope you can do presentations of this kind in the Southwest. I would like to suggest that your conferences should be scheduled in other months except October. This is the time of the year that government employees have no money for training, travel, etc.
- Very good topic of discussion, and very good presentation.

DOING BUSINESS WITH THE U.S. DEPARTMENT OF ENERGY

Comments

What did you like about this presentation?

- All.
- Presentation was very helpful.
- Content w/papers and A/V aids.

How can we make this course better suited to your needs?

- I don't know at this time.
- More handouts on the subjects.
- Update and get ready to "take on the road."

Do you have colleagues who would benefit from this workshop?

- Yes (2)
- No

Other Comments:

- Never know if you can increase understanding of government procurement.
- Web sites.
- Helpful to all business.
- Very well presented.

NATIVE AMERICAN CONFERENCE ON PETROLEUM ENERGY

Overall Comments

How did you hear about this conference?

- Rhonda Lindsey at the BIA Conference in Denver. (2)
- Brochure received in the mail. (7)

What were your objectives in attending this workshop?

- Looking for interfacing with Indian lands for providing environmental services in the O and G industry.
- To learn more about the basic petroleum geology and how oil is formed.
- To learn about doing business w/DOE
- Get information about oil and gas.
- To see what would be useful in my job.
- Learn more about the petroleum industry.
- Doing business with government.
- To learn guidelines and procedures for obtaining financial assistance and to meet w/DOE BDM personnel.

Would you recommend this training to your colleagues?

- Yes (7)
- Yes, 1st day.
- This program is very helpful

If we were to offer other topics or more advanced topics, what would interest you?

- Other DOE programs.
- Gas well operation, pumping, and field operations, safety
- Oil and gas field production
- Negotiations, field trip
- more—

Other Comments:

- Very well presented—we will be interested in having you come to our reservation—when it “goes on the road.”
- I think the overall workshop was very helpful for anyone that is in the oil and gas field.
