DISTRIBUTION OF THIS DOCUMENT IS UNLIMITED

This Supplement is available from the National Technical Information Service (NTIS), Springfield, Virginia 22161, for $4.00. For copies mailed to addresses outside the United States, add $2.50 per copy for handling and postage.

INTRODUCTION

This issue of *Energy: A Continuing Bibliography with Indexes* (NASA SP-7043(07)) lists 540 reports, journal articles, and other documents announced between July 1, 1975 and September 30, 1975 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA)*. The first issue of this continuing bibliography was published in May 1974 and succeeding issues are published quarterly.

The coverage includes regional, national and international energy systems; research and development on fuels and other sources of energy; energy conversion, transport, transmission, distribution and storage, with special emphasis on use of hydrogen and of solar energy. Also included are methods of locating or using new energy resources. Of special interest is energy for heating, lighting, for powering aircraft, surface vehicles, or other machinery.

Each entry in the bibliography consists of a standard bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged in two major sections, *IAA Entries* and *STAR Entries* in that order. The citation, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* or *STAR* including the original accession numbers from the respective announcement journals. This procedure, which saves time and money accounts for the slight variation in citation appearances.

Five indexes—subject, personal author, corporate source, contract number, and report number—are included. The indexes are of the cumulating type throughout the year, with the fourth quarterly publication containing abstracts for the fourth quarter and index references for the four quarterly publications.

AVAILABILITY OF CITED PUBLICATIONS

IAA ENTRIES (A75-10000 Series)

All publications abstracted in this Section are available from the Technical Information Service, American Institute of Aeronautics and Astronautics, Inc. (AIAA), as follows: Paper copies are available at $5.00 per document up to a maximum of 20 pages. The charge for each additional page is 25 cents. Microfiche[1] are available at the rate of $1.50 per microfiche for documents identified by the "#" symbol following the accession number. A number of publications, because of their special characteristics, are available only for reference in the AIAA Technical Information Service Library. Minimum airmail postage to foreign countries is $1.00. Please refer to the accession number, e.g. (A75-10259), when requesting publications.

STAR ENTRIES (N75-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS. Sold by the National Technical Information Service to U.S. customers at the price shown in the citation following the letters HC (hard, paper, or facsimile copy). Customers outside the U.S. should add $2.50 per copy for handling and postage charges to the price shown. (Prices shown in earlier *STAR* volumes, 1962-1975, have been superseded but may be calculated from the number of pages shown in the citation.

Microfiche[1] are available at a standard price of $2.25 (plus $1.50 for non-U.S. customers) regardless of age for those accessions followed by a "#" symbol. Accession numbers followed by a "+" sign are not available as microfiche because of size or reproducibility.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Unit.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the "*" symbol), use the N accession number.

NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number.

Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other report number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, at the standard $2.25 price, for those documents identified by a "#" symbol.)

(1) A microfiche is a transparent sheet of film, 105mm by 148mm in size containing as many as 60 to 98 pages of information reduced to micro images (Not to exceed 26: 1 reduction).

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Documents Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

Avail: ERDA Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Energy Research and Development Administration reports, usually in microfiche form, are listed in *Nuclear Science Abstracts*. Services available from the ERDA and its depositories are described in a booklet, *Science Information Available from the Energy Research and Development Administration* (TID-4550), which may be obtained without charge from the ERDA Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) at $10.00 each and microfilm at $4.00 each regardless of the length of the manuscript. Handling and shipping charges are additional. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this Introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: ZLDI. Sold by the Zentralstelle für Luftfahrtdokumentation und -Information, Munich, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: U.S. Patent Office. Sold by Commissioner of Patents, U.S. Patent Office, at the standard price of 50 cents each, postage free.

Other availabilities: If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line.

GENERAL AVAILABILITY

All publications abstracted in this bibliography are available to the public through the sources as indicated in the *STAR Entries* and *IAA Entries* sections. It is suggested that the bibliography user contact his own library or other local libraries prior to ordering any publication inasmuch as many of the documents have been widely distributed by the issuing agencies, especially NASA. A listing of public collections of NASA documents is included on the inside back cover.

SUBSCRIPTION AVAILABILITY

This publication is available on subscription from the National Technical Information Service (NTIS). The annual subscription rate for the quarterly supplement is $15.00. All questions relating to subscriptions should be referred to the NTIS.

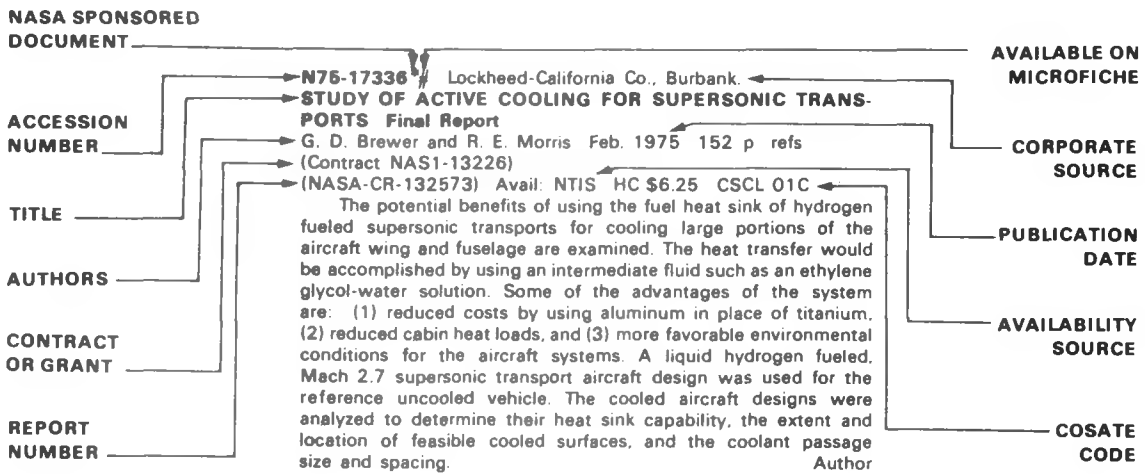
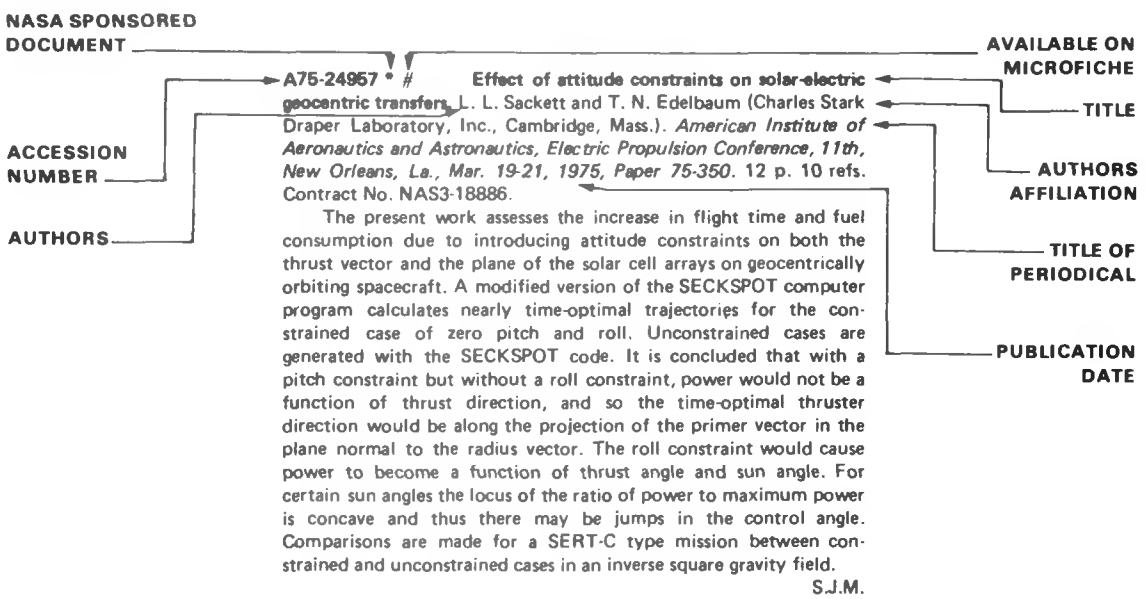
TYPICAL CITATION AND ABSTRACT FROM *STAR*



TYPICAL CITATION AND ABSTRACT FROM *IAA*



A Listing of Energy Bibliographies Contained in This Publication:

1. NSF-RANN energy abstracts. A monthly abstract journal of energy research N75-24532 p0146

2. Mineral resources and the environment. Appendix to section 4: Report of panel on demand for fuel and mineral resources N75-26490 p0153

3. Hydrogen-future fuel–A bibliography (with emphasis on cryogenic technology) N75-26509 p0155

4. Energy: An annotated bibliography N75-27557 p0159

5. Energy: An annotated bibliography N75-27558 p0159

ENERGY

A Continuing Bibliography (Issue 7)

DECEMBER 1975

IAA ENTRIES

A75-29471 **Solar ponds for space heating.** A. Rabl and C. E. Nielsen (Ohio State University, Columbus, Ohio). *Solar Energy*, vol. 17, Apr. 1975, p. 1-12. 19 refs.

The absorption of solar radiation by the artificially salinized water in solar heat-storage ponds is considered, and equations are derived for the resulting temperature range of the pond during year-round operation. It is concluded that solar ponds can supply adequate heating, even in regions near the arctic circle. In midlatitudes the pond should be roughly comparable in surface area and volume to the space desired to be heated. Cost estimates based on present technology and construction methods indicate competition with conventional heating. S.J.M.

A75-29472 **Design and construction of a residential solar heating and cooling system.** D. S. Ward and G. O. G. Lof (Colorado State University, Fort Collins, Colo.). *(International Solar Energy Society, U.S. Section Meeting, Colorado State University, Fort Collins, Colo., Aug. 21-23, 1974.) Solar Energy*, vol. 17, Apr. 1975, p. 13-20.

The first integrated system providing heating and cooling to a building by use of solar energy has been designed and installed in a residential-type building at Colorado State University. Solar heated liquid supplies heat to air circulating in the building and to a lithium bromide absorption air conditioner. Service hot water is also provided. Approximately two-thirds of the heating and cooling loads are expected to be met by solar energy, the balance by natural gas. The paper contains details of design and principles of operation. A breakdown of actual costs of the equipment and its installation is also provided. (Author)

A75-29473 **Modeling of the CSU heating/cooling system.** R. L. Oonk, W. A. Beckman, and J. A. Duffie (Wisconsin, University, Madison, Wis.). *(International Solar Energy Society, U.S. Section Meeting, Colorado State University, Fort Collins, Colo., Aug. 21-23, 1974.) Solar Energy*, vol. 17, Apr. 1975, p. 21-28. 5 refs. NSF Grant No. GI-40457.

This paper represents a thermal simulation of the Colorado State University solar house. A computer model of the solar energy system was developed and computer runs were made using one year of meteorological data to determine the important design features. The system consists of a flat plate solar collector, main storage tank, service hot water storage tank, auxiliary heater, absorption air conditioner with cooling tower and heat exchangers between the collector and storage, storage and service hot water tank and storage and residence. This system very closely models the CSU house in operating mode one. The results are in the form of monthly integrated values for the pertinent energy quantities. In addition, results are presented which show the effect on the system performance of the collector tilt, collector area and number of covers. (Author)

A75-29474 **A method of simulation of solar processes and its application.** S. A. Klein, T. L. Freeman, D. M. Beekman, W. A. Beckman, J. A. Duffie (Wisconsin, University, Madison, Wis.), and P. I. Cooper (Wisconsin, University, Madison, Wis.; Commonwealth Scientific and Industrial Research Organization, Div. of Mechanical Engineering, Melbourne, Australia). *(International Solar Energy Society, U.S. Section Meeting, Colorado State University, Fort Collins, Colo., Aug. 21-23, 1974.) Solar Energy*, vol. 17, Apr. 1975, p. 29-37. NSF Grant No. GI-34029.

A computer program designated TRNSYS (transient system simulation) has been developed to facilitate simulation of the interconnection and information transfer between solar energy system modules and to solve for the response of these coupled mathematical module models to time-dependent forcing functions (i.e. meteorological data). The design process thus becomes analogous to specifying an experimental system. The use of the program is illustrated by a comparison of methods of operating a solar heating system. S.J.M.

A75-29476 **Parametric performance and cost models for solar concentrators.** W. S. Duff, G. F. Lameiro, and G. O. G. Löf (Colorado State University, Fort Collins, Colo.). *Solar Energy*, vol. 17, Apr. 1975, p. 47-58. 9 refs. NSF Grant No. GI-37815.

A one-stage optimization scheme for sensitivity-analysis selection of one subsystem of a solar power plant is described. The method has general applicability to other solar concentrator heating systems. An extensive table of the performance of various parameters is included. It is noteworthy that cost optimization is accomplished within absorber shape categories. S.J.M.

A75-29477 * **Hydrogen production from solar energy.** M. M. Eisenstadt (New Mexico, University, Albuquerque, N. Mex.) and K. E. Cox. *Solar Energy*, vol. 17, Apr. 1975, p. 59-65. 31 refs. Grant No. NGT-44-005-114.

Three alternatives for hydrogen production from solar energy have been analyzed on both efficiency and economic grounds. The analysis shows that the alternative using solar energy followed by thermochemical decomposition of water to produce hydrogen is the optimum one. The other schemes considered were the direct conversion of solar energy to electricity by silicon cells and water electrolysis, and the use of solar energy to power a vapor cycle followed by electrical generation and electrolysis. The capital cost of hydrogen via the thermochemical alternative was estimated at $575/kW of hydrogen output or $3.15/million Btu. Although this cost appears high when compared with hydrogen from other primary energy sources or from fossil fuel, environmental and social costs which favor solar energy may prove this scheme feasible in the future. (Author)

A75-29478 **Performance of a solar battery using quasi-cylindrical array of plane mirrors as a concentrator.** S. Deb (Jadavpur University, Calcutta, India) and H. Saha (Jadavpur University, Calcutta; Kalyani, University, Nadia, India). *Solar Energy*, vol. 17, Apr. 1975, p. 67-73. 16 refs.

A75-29480 **Calculation of flat-plate collector loss coefficients.** S. A. Klein (Wisconsin, University, Madison, Wis.). *(International Solar Energy Society, U.S. Section Meeting, Colorado State University, Fort Collins, Colo., Aug. 21-23, 1974.) Solar Energy*, vol. 17, Apr. 1975, p. 79, 80. 7 refs. NSF Grant No. GI-34029.

A means of calculating U-L, the collector overall energy loss coefficient, is described which relates U-L to the sum of three energy

loss rates: Q-R, the instantaneous rate of energy transferred to the transparent cover above the absorber plate by the processes of radiation and convection; Q-B, the instantaneous rate of energy conducted through the insulation below the plate; and Q-E, the instantaneous rate of energy lost from the plate due to edge effects. The first of these factors is the most important; equations for determining values of it are presented. S.J.M.

A75-29800 # **Interaction between the fuel-energy complex and the environment (Vzaimodeistvie toplivno-energeticheskogo kompleksa s okruzhaiushchei sredoi).** M. A. Styrikovich. *Akademiia Nauk SSSR, Vestnik,* Feb. 1975, p. 13-23. In Russian.

It is shown that atmospheric heating due to the steadily increasing energy consumption (which presently is a mere 0.02% of the radiation balance of the earth) will not produce any noticeable climatic changes, nor will it constitute any major hazard to the earth's population. In any case, it is negligible as compared to the problem of atmospheric pollution which has become of major concern to humanity. The principal sources of atmospheric pollution are examined, along with the factors responsible for the pollution of rivers, lakes, and oceans. Particular attention is given to measures that must be taken to prevent pollution due to off-shore drilling. V.P.

A75-30368 **A new concept for solar energy thermal conversion.** J. J. Cuomo, J. F. Ziegler, and J. M. Woodall (IBM Corp., Yorktown Heights, N.Y.). *Applied Physics Letters,* vol. 26, May 15, 1975, p. 557-559. 8 refs.

A material has been developed which allows a new approach to be taken to the conversion of solar energy to heat. It consists of a dense array of metal whiskers grown with spacings of a few wavelengths of visible light. The material selected has low emissivity and achieves significant optical absorption by trapping the light by a geometric maze effect. We have demonstrated that absorption of normal incidence light is greater than 98% from 0.5 to 40-micron wavelengths, and hemispherical emissivity at 550 C can be made less than 0.26. Since surfaces can be made of a single refractory element, such as W, high-temperature solar conversion (550 C) should be maintained with good surface stability. (Author)

A75-30375 # **Energy: A plan for action.** E. Teller (California, University, Berkeley, Calif.). New York, Commission on Critical Choices for Americans, 1975. 80 p. $2.00.

Action is outlined that will be necessary to achieve the implementation of a national conservation ethic, the introduction of avaliable energy-saving devices, the removal of barriers to increased energy production, and the establishment of better cooperation among energy-consuming nations. Targets for the year 1985, predictions of our position in the year 2000, and appendices on action recommendations, U.S. energy demand and supply, production, sources, R & D, and manpower are contained in the report. S.J.M.

A75-30487 # **Optimization of parameters of permeable thermoelectric generators (Optimizatsiia parametrov pronitsaemykh termoelektricheskikh generatorov).** G. K. Kotyrlo and Iu. N. Lobunets (Akademiia Nauk Ukrainskoi SSR, Institut Tekhnicheskoi Teplofiziki, Kiev, Ukrainian SSR). *Teplofizika i Teplotekhnika,* no. 28, 1974, p. 98-102. In Russian.

An analysis is made of the operating conditions of thermoelectric generators made of metallic materials. The dimensions of the thermoelements are optimized for maximum power or maximum efficiency. The heat-exchange conditions and the temperature variation of the thermal resistance of the material are taken into account. A.T.S.

A75-30750 **Power generation and efficiency in GaAs traveling-wave amplifiers.** F. Giannini and A. Salsano (Roma, Università, Rome, Italy). *IEEE Transactions on Microwave Theory and Techniques,* vol. MTT-23, May 1975, p. 449-452. 8 refs. Research supported by the Consiglio Nazionale delle Ricerche.

The effect of the dielectric loading in a bidimensional GaAs traveling-wave amplifier (TWA) is investigated, with respect to the EM power generated by the structure and the efficiency of the dc to RF conversion. The validity of some usual approximations and assumptions is studied and a parameter, i.e., the power gain x efficiency product, is proposed as a useful tool for comparing the possible performances of TWA's. (Author)

A75-30891 **Utilization of wind energy (Utilisation de l'énergie éolienne).** G. Massart (Centre National d'Exploitation des Océans, Brest, France). *L'Onde Electrique,* vol. 55, Apr. 1975, p. 225-230. 11 refs. In French.

Meteorological and technological factors involved in the efficient use of wind energy are reviewed, and a brief survey is made of past attempts to exploit this energy on a large scale. Calculation of wind energy, choice of energy utilization site, efficiency, and projects in progress are considered. It is stressed that wind energy can provide a source of power comparable to solar light energy if used effectively. S.J.M.

A75-30892 **Low-power turbines using organic vapor (Les turbines à vapeur organique de faible puissance).** L. Bronicki (ORMAT Turbines, Ltd., Yavne, Israel). *L'Onde Electrique,* vol. 55, Apr. 1975, p. 231-236. 5 refs. In French.

The present work describes experimental results obtained with a prototype organic vapor turbo generator. A discussion of the possible applications of this type of unit is also presented. Since 1965, efforts have been concentrated on applying the technology to telecommunications. Liquefied gases such as propane and butane are most often used in the devices. S.J.M.

A75-30949 **Fluctuations of electric power in MHD channels.** R. V. Ganefel'd and V. B. Red'kin (Akademiia Nauk Ukrainskoi SSR, Institut Elektrodinamiki, Kiev, Ukrainian SSR). *(Teplofizika Vysokikh Temperatur,* vol. 12, July-Aug. 1974, p. 908-910.) *High Temperature,* vol. 12, no. 4, Mar. 1975, p. 798-800. 6 refs. Translation.

A probabilistic method is described for determining the level of pulsations of specific electric power in MHD ducts as a function of pulsations of the thermodynamic parameters of the plasma flow. A plasma flow with given velocity and temperature is considered, where these parameters are regarded as steady ergodic Gaussian processes given by density distributions. The problem is studied in the framework of a zero-dimensional MHD-duct model, and only incompressible flow of the plasma is considered. An expression is derived for the pulsation level in a Faraday generator with partitioned electrodes. Some numerical results are shown. It is apparent that intense fluctuations of power occur even for rather weak temperature and velocity pulsations. P.T.H.

A75-31195 **Energy's hazy future.** G. D. Friedlander. *IEEE Spectrum,* vol. 12, May 1975, p. 32-40.

A summary of forecasts of U.S. electric generating capacity and electric energy use is presented. A consensus for 1985 is discussed along with an outlook for 2000. Attention is given to questions concerning power generation and storage for the period from 1975 to 2000, prospects regarding depletable and renewable energy sources, problems of power transmission, and the characteristics of future distribution systems. It is pointed out that steam, gas, and water turbines will continue their dominance in the field of power generation over the next 25 years. G.R.

A75-31267 **Solar energy for earth: An AIAA assessment.** Edited by H. J. Killian (Aerospace Corp., El Segundo, Calif.), G. L. Dugger (Johns Hopkins University, Silver Spring, Md.), and J. Grey (American Institute of Aeronautics and Astronautics, Inc., New

York, N.Y.). New York, American Institute of Aeronautics and Astronautics, Inc., 1975. 118 p. Members, $7.00; nonmembers, $9.50.

Direct and indirect solar energy and its potential for replacement of fossil fuels are investigated. Terrestrial insolation, solar heating and cooling, solar-thermal electric power, photovoltaic power, geosynchronous satellite solar power, wind power, ocean thermal energy conversion, and fuel production (biomass energy) are the principal topics covered.

S.J.M.

A75-31269 # **Solar heating and cooling.** J. R. Williams (Georgia Institute of Technology, Atlanta, Ga.) and C. S. Chen (U.S. Energy Research and Development Administration, Washington, D.C.). In: Solar energy for earth: An AIAA assessment. New York, American Institute of Aeronautics and Astronautics, Inc., 1975, p. 18-31.

Results of several studies on the technical, economic, social, environmental, and institutional factors implied by the application of solar energy to the heating and cooling of buildings are presented. Important conclusions include high estimates of fossil fuel price growth, good feasibility for proposed solar heating and cooling systems, and heating more cost-effective than cooling first. S.J.M.

A75-31270 # **Solar-thermal electric power.** R. L. Gervais (McDonnell Douglas Astronautics Co., Huntington Beach, Calif.) and P. B. Bos (Aerospace Corp., El Segundo, Calif.). In: Solar energy for earth: An AIAA assessment. New York, American Institute of Aeronautics and Astronautics, Inc., 1975, p. 32-45.

Technological designs and economic criteria accompanying them are reviewed for solar energy thermal collection and conversion to electrical energy (and secondarily to heating and cooling). Collection systems can be either centralized or distributed; the former of these could provide 100 MWe per sq km of collection area and working fluid in the 5000-F range, while the latter would furnish fluid at a relatively low temperature (500 K). The central-receiver concept is concluded to be the most economically feasible, with a busbar-level cost of $15/kWh. Paraboloid solar concentrators for distributed systems require only one-fifth the area that flat-plate concentrators demand, but they do not function on cloudy days and they are expensive to manufacture. Different heliostat designs (mirror pivoting methods) are discussed, with the ganged approach receiving emphasis. S.J.M.

A75-31271 # **Photovoltaic power.** M. Wolf (Pennsylvania, University, Philadelphia, Pa.). In: Solar energy for earth: An AIAA assessment. New York, American Institute of Aeronautics and Astronautics, Inc., 1975, p. 46-58. 25 refs.

Numerous photovoltaic system concepts and their status of development and application, requirements on such systems for widespread terrestrial application, problems remaining to be solved, and a general background survey of photovoltaic technology are presented. It is concluded that the cost area is the most difficult problem, but that commercial feasibility could be established in 10 years with adequate government support. S.J.M.

A75-31272 # **Geosynchronous satellite solar power.** J. R. Williams (Georgia Institute of Technology, Atlanta, Ga.). In: Solar energy for earth: An AIAA assessment. New York, American Institute of Aeronautics and Astronautics, Inc., 1975, p. 59-71. 49 refs.

Concepts and overview, photovoltaic arrays, solar thermal conversion, power transmission, space transportation, assembly and servicing in orbit, and safety and environmental effects are discussed as they relate to geosynchronous satellite solar power. This energy source poses advantages of increased available power density and time access (24 hr/day) over terrestrial sources; its environmental effects would be limited; a fully reusable earth-to-orbit space transportation system would have to be developed for it; and implementation of the program would probably not occur until the next century. S.J.M.

A75-31273 * # **Wind power.** J. M. Savino (NASA, Lewis Research Center, Cleveland, Ohio). In: Solar energy for earth: An AIAA assessment. New York, American Institute of Aeronautics and Astronautics, Inc., 1975, p. 72-81. 22 refs.

A historical background on windmill use, the nature of wind, wind conversion system technology and requirements, the economics of wind power and comparisons with alternative systems, data needs, technology development needs, and an implementation plan for wind energy are presented. Considerable progress took place during the 1950's. Most of the modern windmills feature a wind turbine electricity generator located directly at the top of their rotor towers. S.J.M.

A75-31274 # **Ocean thermal energy conversion.** G. L. Dugger (Johns Hopkins University, Silver Spring, Md.). In: Solar energy for earth: An AIAA assessment. New York, American Institute of Aeronautics and Astronautics, Inc., 1975, p. 82-97. 32 refs.

The principal technology, economic parameters, environmental-social-political impact, interfacing and market capture potential, data and technology needs, and an implementation plan for ocean thermal energy conversion are considered. Some of the features of the conceptual designs formulated thus far are: (1) a floating platform that supports the plant, with an analogous configuration to stable platforms for deep-hole drilling; (2) submerged evaporators, condensers, and pumps; and (3) propane as a working fluid, due to its noncorrosive nature and high working pressure (these properties permit efficient, low-cost single stage turbines and generators). S.J.M.

A75-31275 # **Fuel production /biomass energy/.** A. L. Johnson, Jr. (Aerospace Corp., El Segundo, Calif.). In: Solar energy for earth: An AIAA assessment. New York, American Institute of Aeronautics and Astronautics, Inc., 1975, p. 98-110. 22 refs.

A thorough review of various aspects of biomass fuel production is presented. Fundamentals, integrated agricultural waste management, material recovery, biomass fuel plantations, technology development needs, an economic assessment and projections, environmental impact, a comparison with alternate approaches, interfacing with conventional systems, data needs, a technology assessment and projections, and a recommended implementation plan are discussed. Principal advantages of biomass energy technology are its simplicity and low cost. S.J.M.

A75-31448 **Energy, environment and building.** P. Steadman (Cambridge University, Cambridge, England). Cambridge, Cambridge University Press (Cambridge Urban and Architectural Studies. Volume 2), 1975. 296 p. 837 refs. $5.95.

Energy conservation measures in buildings are considered, taking into account questions of space heating and cooling, fuel efficiency and fuel cost, electric heating, insulation, the thermal mass, earth roofs, the reduction of glazed areas, window shutters, ventilation, heat exchangers, storage radiators, heat of fusion materials, and heat pumps. The use of solar energy is discussed along with aspects of solar space heating, the characteristics of wind power, the utilization of small scale water power, and approaches for obtaining and utilizing methane gas. A description is given of some autonomous, energy-conserving, and ecological buildings and projects. G.R.

A75-31512 # **Pilot solar air-conditioning plant and results of its use (Opytno-promyshlennaia solnechnaia konditsioniruiushchaia ustanovka i rezul'taty ee ispytaniia).** A. Kakabaev, A. Khandurdyeev, O. Klyshchaeva, and N. Kurbanov (Akademiia Nauk Turkmenskoi SSR, Fiziko-Tekhnicheskii Institut, Ashkhabad, Turkmen SSR). *Akademiia Nauk Turkmenskoi SSR, Izvestiia, Seriia Fiziko-Tekhnicheskikh, Khimicheskikh i Geologicheskikh Nauk*, no. 4, 1974, p. 40-46. In Russian.

A description is given of a solar air-conditioning system which has been tested on a three-story apartment house in Turkmen SSR. The system uses a 180-sq-m regenerator on the sloping roof. The experiments showed that on hot days with low humidity, a temperature of 23-25 C could be established in all the apartments. On days when the temperature was 28-33 C, the temperature varied in the range 19-22 C. A.T.S.

A75-31513 # **Theoretical determination of the temperature in a solar water heater /steady state/ (Teoreticheskoe opredelenie temperatury v solnechnom vodonagrevatele /statsionarnyi rezhim/).** R. Bairamov, K. Toiliev, and M. Khodzhiev (Akademiia Nauk Turkmenskoi SSR, Fiziko-Tekhnicheskii Institut, Ashkhabad, Turkmen SSR). *Akademiia Nauk Turkmenskoi SSR, Izvestiia, Seriia Fiziko-Tekhnicheskikh, Khimicheskikh i Geologicheskikh Nauk*, no. 4, 1974, p. 47-54. 7 refs. In Russian.

Analytic equations are obtained for determining the outlet temperature of water in a 'hot box'-type solar water heater as a function of the intensity of solar radiation, temperature of the surrounding medium, wind velocity, and discharge rate of the water. Factors taken into account include heat exchange with the surrounding medium and heat loss through the sides and bottom of the boiler. A more precise expression is obtained when changes in the temperature of the water flowing inside the boiler are taken into account. F.G.M.

A75-31515 # **Theoretical research on the operation of a solar water heater and comparison with experimental data (Raschetnye issledovaniia raboty solnechnogo vodonagrevatel'ia i ikh sravnenie s eksperimental'nymi dannymi).** R. In Russian.

A75-31588 # **Solar production of electrical energy (Production solaire de l'énergie électrique).** M. Touchais. In: Meteorological and earth-resources satellites - Special technologies - International Collaboration; International Symposium on Space, 14th, Rome, Italy, March 18-20, 1974, Proceedings. Rome, Rassegna Internazionale Elettronica Nucleare ed Aerospaziale, 1974, p. 255, 257-264. In French.

Present misconceptions and exaggerations concerning the use of solar energy, as well as possible means of capturing it and converting it to electrical form, are examined. It is emphasized that yield is not essential in energy captors, but rather in energy converters. The solar concentrator of the future will most likely be a large angular hemiparaboloid, and it will furnish electricity by thermal means. S.J.M.

A75-31698 **Solar energy and architecture.** J. K. Page. *Royal Institution of Great Britain, Proceedings*, vol. 47, 1974, p. 303-348. 12 refs.

Questions of solar energy availability are investigated, taking into account the influence of the atmosphere, the geometry of solar architecture, and approaches for predicting the energy falling on building surfaces. The radiative properties of building materials are discussed along with methods for combining the various thermal properties of buildings sensibly to make more effective use of solar energy. A description is given of four selected examples of solar architecture. G.R.

A75-32097 # **Minimum cost solar thermal electric power systems - A dynamic programming based approach.** W. S. Duff (Colorado State University, Fort Collins, Colo.). *Operations Research Society of America and Institute of Management Sciences, National Meeting, Chicago, Ill., Apr. 30-May 2, 1975, Paper.* 32 p. 9 refs. NSF Grant No. GI-37815.

A dynamic programming methodology is presented for deriving minimum-cost solar thermal electric power systems (STEPS). There are two basic STEPS concepts: (1) distributed systems and (2) tower-heliostat systems. Two types of distributed system are examined: those using steam as the medium of heat transport from a concentrator subsystem to an absorber-heat exchanger subsystem, and those using flat-plate collectors which function also as heat exchangers. The cost of the minimum-cost STEPS plant is found to be about 3.5 cents per kilowatt hour, including plant operation and maintenance. S.J.M.

A75-32212 # **Approximate analysis of the steady temperature field of a parallelepiped with a local energy source (Priblizhennyi analiz statsionarnogo temperaturnogo polia parallelepipeda s lokal'nym istochnikom energii).** G. N. Dul'nev and E. I. Ermolina (Leningradskii Institut Tochnoi Mekhaniki i Optiki, Leningrad, USSR). *Inzhenerno-Fizicheskii Zhurnal*, vol. 28, Apr. 1975, p. 685-693. 5 refs. In Russian.

A75-32324 **'Time is energy' /Henson and Stringfellow Memorial Lecture/.** J. T. Stamper (Hawker Siddeley Aviation, Ltd., Kingston-upon-Thames, Surrey, England). *Aeronautical Journal*, vol. 79, Apr. 1975, p. 169-178.

Various means of reducing total journey time, particularly by the use of VTOL aircraft and by the elimination of end-time delays, are considered. If end-time delays could be reduced, cruise speed could be lowered, with a concomitant decrease in energy consumption. From another point of view, it is stressed that time saved is energy spent: lower CTOL cruise speeds would result in a substantial increase in energy efficiency at only a small journey time penalty. S.J.M.

A75-32617 # **Laser thermonuclear fusion (Lazernyi termoiadernyi sintez).** Iu. V. Afanas'ev, E. G. Gamalii, O. N. Krokhin, and V. B. Rozanov. *Akademiia Nauk SSSR, Vestnik*, Dec. 1974, p. 20-27. In Russian.

The present work discusses some of the physical problems associated with the use of lasers to initiate thermonuclear fusion in a controlled way. The scheme whereby laser radiation strikes a spherical fuel target from all sides, compressing and heating it to the point where fusion takes place, is considered. Some characteristic parameters and diagnostic techniques concerning this scheme are discussed. P.T.H.

A75-32824 **Dependence of the basic parameters of Al/x/Ga/1-x/As-GaAs solar converters on temperature and optical intensity.** E. B. Vinogradova, M. B. Kagan, N. S. Koroleva, T. L. Liubashevskaia, and T. A. Nuller. *(Zhurnal Tekhnicheskoi Fiziki*, vol. 44, Oct. 1974, p. 2229-2234.) *Soviet Physics - Technical Physics*, vol. 19, Apr. 1975, p. 1378-1381. 7 refs. Translation.

We have investigated the basic parameters of p-Al/x/Ga/1-x/As-n-GaAs solar converters over wide ranges of temperatures and optical intensity. The low inverse saturation currents, the high constant collection coefficients over the entire spectrum, and the specific features of the electrical characteristics result in a high temperature stability of the power output and certain features over a wide range of temperatures and optical intensity. (Author)

A75-32851 # **Design charts for hot liquid energy storage systems utilizing forced circulation.** R. A. Pate and W. F. Phillips (Utah State University of Agriculture and Applied Science, Logan, Utah). *American Institute of Aeronautics and Astronautics, Thermophysics Conference, 10th, Denver, Colo., May 27-29, 1975, Paper 75-742*. 6 p.

Dimensionless design charts are developed which may be used for designing and predicting the performance of an energy storage system that could have application to solar energy utilization. The charts are obtained from a combined theoretical and experimental study of a hot liquid energy storage system, which utilizes forced circulation to transport the liquid between the heat exchanger and the storage tank. The results are presented in the form of dimensionless plots, which are sufficiently general to aid in the dimensional design of similar thermal energy storage systems. Close agreement was obtained between the theoretical model and the experimental results. Though the work was done with solar energy utilization in mind, the results are in no way limited to that. Sufficient generality is maintained to assure applicability of the results in designing similar systems for other uses as well. (Author)

A75-32852 # **Storage of summertime waste heat from electric generating plants for use in wintertime.** F. O. Smetana (North Carolina State University, Raleigh, N.C.). *American Institute of Aeronautics and Astronautics, Thermophysics Converence, 10th, Denver, Colo., May 27-29, 1975, Paper 75-743*. 7 p.

As an anternative to the construction of large cooling towers at plants generating electric power, it is suggested that one may wish to consider storing the waste heat produced during the summer until it can be used beneficially the following winter. Keeping tender crops from freezing is one of the most effective ways of using this heat because lower-temperature heat sources will suffice for this purpose than are necessary for space heating human habitations, for example. A 3600 MW plant rejects sufficient heat in 90 days to heat an agricultural area of 2.06 million square meters all winter if sufficient barriers are erected to inhibit horizontal air motion. This heat can be stored in 124 million cubic meters of water. Insulation, construction, and costs of such a tank are treated. (Author)

A75-32860 # **Trapezoidal grooves as moderately concentrating solar energy collectors.** J. R. Howell and R. B. Bannerot (Houston, University Houston, Tex.). *American Institute of Aeronautics and Astronautics, Thermophysics Conference, 10th, Denver, Colo., May 27-29, 1975, Paper 75-738*. 8 p. 5 refs. NSF Grant No. GI-41003.

The behavior of solar collector geometries designed to provide moderate concentration of solar flux is examined experimentally. The moderate concentration is achieved by using East-West oriented trapezoidal grooves with highly reflective sidewalls and a highly absorbant base plate. It is found, as predicted from previous analysis, that significant increases in collector efficiency are possible at the temperature required for supplying absorption air-conditioning systems. The experimental results verify the analysis. Concentration ratios from the measurements compare well with analytical predictions. Sidewall materials tested include back-surfaced glass and plexiglas mirrors and aluminum foil. Foil measurements are less consistent with predictions due to surface nonuniformities. (Author)

A75-32861 # **Numerical modeling of flat plate solar collectors.** P. R. Smith and M. H. Cobble (New Mexico State University, Las Cruces, N. Mex.). *American Institute of Aeronautics and Astronautics, Thermophysics Conference, 10th, Denver, Colo., May 27-29, 1975, Paper 75-739*. 8 p. Research supported by the Board of Educational Finance of New Mexico.

Three types of flat plate solar collectors were analyzed numerically and the results compared to experiment. The solar collectors studied were (1) a double glazed flat plate collector, (2) a thermal trap collector, and (3) a water-trickle collector. The analysis of all three collectors was on a time dependent basis and considered the thermal inertia of the water storage tank which the collectors supplied. The incident solar radiation, and the ambient atmospheric temperature were taken to be known functions of time. The numerically calculated performance proved to closely approximate the actual performance of the double glazed and the thermal trap collectors. The numerical model of the water-trickle collector predicted a much better performance than was actually obtained experimentally, apparently because condensate on the cover plate degrades transmission more than expected. (Author)

A75-32862 * # **Outdoor flat-plate collector performance prediction from solar simulator test data.** F. F. Simon and E. H. Buyco (NASA, Lewis Research Center, Cleveland, Ohio). *American Institute of Aeronautics and Astronautics, Thermophysics Conference, 10th, Denver, Colo., May 27-29, 1975, Paper 75-741*. 12 p. 12 refs.

This paper describes how collector performance obtained from test data with a simulator can be modified for real-life conditions. The approach taken is to correct the performance data obtained with the simulator for the variable conditions of ambient temperature, wind, incident angle, flow rate, etc., that are encountered in outdoor conditions. Modification of simulator data is accomplished by combining experiment with theory. The technique is demonstrated by application to a spectrally selective and a nonselective type of collector. This kind of modified simulator collector performance data should be valuable in solar systems analyses and for collector performance ranking based on all-day calculated conditions. (Author)

A75-32868 # **Designing heat pipe heat sinks.** C. C. Roberts, Jr. (Bell Telephone Laboratories, Inc., Naperville, Ill.). *American Institute of Aeronautics and Astronautics, Thermophysics Conference, 10th, Denver, Colo., May 27-29, 1975, Paper 75-724*. 12 p. 11 refs.

At high heat densities solid metal heat sinks using natural air convection cooling may not provide adequate protection against thermally induced damage to electronic components. Changing the coolant or the use of forced convection are among the many alternatives the thermal designer must choose to guarantee adequate thermal performance. Heat pipes can increase the efficiency of solid metal heat sink designs using natural air convection. Various heat pipe heat sink concepts are discussed along with performance data and manufacturing techniques. One heat pipe design reduced a transistor junction temperature by 22 C at 39 watts when compared to a solid metal heat sink of the same dimension. (Author)

A75-32870 * # **The International Heat Pipe Experiment.** R. McIntosh, S. Ollendorf (NASA, Goddard Space Flight Center, Greenbelt, Md.), and W. Harwell (Grumman Aerospace Corp., Bethpage, N.Y.). *American Institute of Aeronautics and Astronautics, Thermophysics Conference, 10th, Denver, Colo., May 27-29, 1975, Paper 75-726*. 12 p.

On October 4, 1974 the International Heat Pipe Experiment was launched aboard a Black Brant Sounding Rocket from White Sands, New Mexico. The flight provided six minutes of near zero gravity during which a total of ten separate heat pipe experiments were performed. The fifteen heat pipes which were tested represent some of the latest American and European technology. This flight provided the first reported zero gravity data on cryogenic and flat plate vapor chamber heat pipes. Additionally, valuable design and engineering data was obtained on several other heat pipe configurations. This paper will discuss the payload and four of the individual experiments. (Author)

A75-32872 * # **Cryogenic heat pipe experiment - Flight performance onboard a sounding rocket.** W. Harwell, J. Quadrini

(Grumman Aerospace Corp., Bethpage, N.Y.), A. Sherman, and R. McIntosh (NASA, Goddard Space Flight Center, Greenbelt, Md.). *American Institute of Aeronautics and Astronautics, Thermophysics Conference, 10th, Denver, Colo., May 27-29, 1975, Paper 75-729*. 12 p. 6 refs.

Flight data from a 15.8 mm OD, 760 mm long, axial-groove, methane cryogenic heat pipe verified successful priming and operation during six min of zero-g time. The nominal power applied to the evaporator was 60-w for the first 60 sec of zero-g time, 14 w for the next 270 sec, and 25 w for the last 20 sec of flight. The heat pipe condenser was mounted into an aluminum heat sink which was cooled to 103 K at launch and increased in temperature to 128 K by the end of the flight. Ground test data obtained for the flight heat pipe, together with theoretical predictions, indicate a zero-g heat transport capability of 3500 to 4000 w-cm in the 100-125 K temperature range. (Author)

A75-32913 # **Investigation of bubble formation in arteries of gas-controlled heat pipes.** A. Abhat, M. Groll, and M. Hage (Stuttgart, Universität, Stuttgart, West Germany). *American Institute of Aeronautics and Astronautics, Thermophysics Conference, 10th, Denver, Colo., May 27-29, 1975, Paper 75-655*. 12 p. 12 refs. European Space Research and Technology Centre Contract No. 2198/74AK.

Gas desorption and vapor-gas bubble nucleation are examined as the main causes for gas generation in arteries of operating variable conductance heat pipes. The conditions under which these phenomena may occur are stated. Criteria for bubble growth within the artery of an operating VCHP are presented and the effect of arterial bubbles on the maximum transport capability of the heat pipe is studied. In addition, experiments are carried out with ammonia-argon and acetone-argon heat pipes provided with an initially well-primed artery to study the temporal reduction in the maximum capability of the heat pipes following gas addition. The observed deterioration in performance is attributed to nucleation of vapor-gas bubbles within the artery during VCHP operation. (Author)

A75-32914 * # **Transverse header heat pipe.** F. Edelstein (Grumman Aerospace Corp., Bethpage, N.Y.). *American Institute of Aeronautics and Astronautics, Thermophysics Conference, 10th, Denver, Colo., May 27-29, 1975, Paper 75-656*. 8 p. 9 refs. Contract No. NAS8-27793.

A novel variable-conductance heat-pipe approach has been developed that delivers high-capacity loads, while eliminating the problem of artery gas blockage present in conventional designs. The unit, known as a transverse header, uses ammonia as the working fluid and nitrogen as the control gas. Its overall cylindrical shape is 5.1 cm in diameter by 0.61 m long. Under test with a fluid heat source, the maximum load achieved as a VCHP was 3,600W. As with conventional gas-loaded pipes, good temperature control was also obtained. An application of this device as a VCHP header for a heat-pipe radiator is described. (Author)

A75-32915 * # **Arterial gas occlusions in operating heat pipes.** E. W. Saaski (Sigma Research, Inc., Richland, Wash.). *American Institute of Aeronautics and Astronautics, Thermophysics Conference, 10th, Denver, Colo., May 27-29, 1975, Paper 75-657*. 7 p. 5 refs. Contract No. NAS2-7596.

The effect of noncondensable gases on high performance arterial heat pipes has been investigated both analytically and experimentally. Models have been generated which characterize the dissolution of gases in condensate and the diffusional loss of dissolved gases from condensate in arterial flow. These processes, and others, have been used to postulate stability criteria for arterial heat pipes. Experimental observations of gas occlusions were made using a stainless steel heat pipe equipped with viewing ports, and the working fluids methanol and ammonia with the gas additives helium, argon, and xenon. Observations were related to gas transport models. (Author)

A75-32916 # **A flexible cryogenic heat pipe.** E. W. Saaski (Sigma Research, Inc., Richland, Wash.) and J. P. Wright (Rockwell International Corp., Downey, Calif.). *American Institute of Aeronautics and Astronautics, Thermophysics Conference, 10th, Denver, Colo., May 27-29, 1975, Paper 75-658*. 5 p.

A 20-watt flexible heat pipe designed for operation at 100 K is described. Problem areas unique to cryogenic flexible heat pipes are defined and possible solutions to these design problems are discussed. Thermal test data is presented for operation with methane at 100 K and R-21 at 293 K. Bending force as a function of internal pressure is measured up to 1100 psig. (Author)

A75-32917 * # **Measurements of the performance of an electrohydrodynamic heat pipe.** R. I. Loehrke (Colorado State University, Fort Collins, Colo.) and R. J. Debs (NASA, Ames Research Center, Moffett Field, Calif.). *American Institute of Aeronautics and Astronautics, Thermophysics Conference, 10th, Denver, Colo., May 27-29, 1975, Paper 75-659*. 6 p.

The performance of an electrohydrodynamic heat pipe formed by enclosing three straight axial electrodes with a 1.27 cm O.D. internally threaded stainless steel tube was measured with Freon-11 as working fluid. The condenser and evaporator conductances at low power were comparable to those measured in a conventional capillary driven heat pipe using similar working fluids. The evaporator conductance improved at high power probably due to the onset of nucleate boiling. The maximum heat throughput for this pipe was substantially higher than that of a conventional pipe. (Author)

A75-32918 # **Compatibility and reliability of heat pipe materials.** A. Basiulis and R. C. Prager (Hughes Aircraft Co., Electron Dynamics Div., Torrance, Calif.). *American Institute of Aeronautics and Astronautics, Thermophysics Conference, 10th, Denver, Colo., May 27-29, 1975, Paper 75-660*. 9 p. 14 refs.

To predict the longlife capabilities of heat pipes, a life test program was begun eight years ago to evaluate potential heat pipe fluids. Fluids tested range from those suitable in cryogenic applications to those of use in high temperature heat pipes. Stainless steel proved to be acceptable for longterm use with all common low temperature fluids except water, which requires copper or monel. Failures were usually caused by material incompatibility or improper cleaning and processing, although breakdown of some high molecular weight organic fluids under heat pipe operating conditions was encountered. (Author)

A75-32919 * # **Capillary flow through heat-pipe wicks.** J. E. Eninger (TRW Systems Group, Redondo Beach, Calif.). *American Institute of Aeronautics and Astronautics, Thermophysics Conference, 10th, Denver, Colo., May 27-29, 1975, Paper 75-661*. 11 p. 6 refs. Contracts No. NAS2-8310; No. N00019-72-C-0340.

Theoretical expressions are obtained for the capillary-pressure limit and permeability of a fibrous wick in terms of the porosity and fiber diameter. Hysteresis in capillary pressure is included through the introduction of an empirical hysteresis constant. A partial-saturation model based on the statistical distribution of local porosity requires an additional empirical constant, the standard deviation. The theory is compared to results of a beta-ray absorption experiment that measured the liquid content of a partially saturated wick and to results of permeability measurements on partially and fully saturated wicks. A simple wick-weighing experiment is described that yields values for the empirical hysteresis constant and the standard deviation. Theoretical results are used to design an optimum wick. (Author)

A75-33118 **Energy sources for ocean technology (Energiequellen für die Meerestechnik).** W. Fischer (Brown, Boveri et Cie. AG, Heidelberg, West Germany). *VDI-Z*, vol. 117, no. 9, May 1975, p. 415-421. 56 refs. In German.

Means of evaluating the properties of an energy source for use in a specific sea application are discussed. In particular, the utilization of these evaluation methods in the design of unmanned ocean

stations and manned underwater stations is examined. It is proposed that the costs and masses (quantities) associated with the energy content of an energy source can serve as yardsticks for its applicability to a particular field of use. The costs determined include maintenance as well as facility construction; low maintenance is emphasized in ocean implementation. S.J.M.

A75-33271 # **Heat pipe thermal control set point shift.** H. B. McKee (McDonnell Douglas Astronautics Co., St. Louis, Mo.). *Journal of Spacecraft and Rockets,* vol. 12, Mar. 1975, p. 191, 192. 6 refs.

An approximate technique is described for making rapid estimates of heat-pipe set-point drift behavior when the end-point conditions are known. Experimental data obtained for an ammonia-helium variable-conductance heat pipe are in good agreement with the calculations performed with the approximate methods. A.T.S.

A75-33758 # **Glass solar heat collector development.** R. B. Gillette, C. Deminet, and W. D. Beverly (Boeing Co., Engineering and Construction Div., Seattle, Wash.). *American Institute of Aeronautics and Astronautics, Thermophysics Conference, 10th, Denver, Colo., May 27-29, 1975, Paper 75-740.* 12 p. 9 refs. NSF-supported research.

Results are presented from a design study on a glass solar heat collector. In this design, sunlight passes through one or more glass cover plates and is absorbed in a blackened fluid which flows through a labyrinth of liquid passageways. Calculated thermal performance data are given for a prototype collector. Transmittance data on blackened fluids before and after ultra-violet radiation are also given. The primary reasons for pursuing development of a glass collector are that it promises low cost when mass produced and eliminates the need for large quantities of strategic materials such as aluminum and copper. (Author)

A75-33970 **Optimal solar energy collector system.** M. Kovarik (Commonwealth Scientific and Industrial Research Organization, Div. of Mechanical Engineering, Highett, Victoria, Australia). *Solar Energy,* vol. 17, May 1975, p. 91-95. 8 refs.

The problem of designing solar-energy collectors for the delivery of heat at minimum cost is analyzed in two different forms. In the first of these, a set of collectors is assumed to be available, each element having different properties uniformly distributed over its area; an optimal design is achieved by a suitable combination of a subset of such collectors. In the second form the collector is designed with a nonuniform, continuously varying insulation thickness. The principle of each solution is stated as a theorem. An example of the continuous solution for a flat plate collector is evaluated in an appendix. (Author)

A75-33971 **On the optimum tilt of a solar collector.** J. Kern and I. Harris (Witwatersrand, University, Johannesburg, Republic of South Africa). *Solar Energy,* vol. 17, May 1975, p. 97-102. 12 refs.

In the literature different values are found for the best tilt of a solar collector, but these are usually given as a function of latitude only. In this investigation the problem is formulated more rigidly and the optimum tilt is obtained as a function of latitude, weather data, and character of the energy demand. The resulting minimum collector area is only moderately sensitive to small deviations from the best angle. For inexpensive collector construction one can therefore replace the previous rules by one single recommendation, where the best angle is always equal to the latitude. However, large-scale installations or direct conversion of solar into electrical energy require a more accurate determination of the minimum collector area for a given objective function. A general method for doing this is devised and illustrated. (Author)

A75-33972 * **Solar stills for agricultural purposes.** M. K. Selcuk (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, Calif.) and V. V. Tran. *Solar Energy,* vol. 17, May 1975, p. 103-109. 17 refs. Research supported by the Turkish National Research Council; Grant No. NATO-508. TNRC Project MAG-247.

Basic concepts of using desalinated water for agricultural purposes are outlined. A mathematical model describing heat and mass transfer in a system combining a solar still with a greenhouse, its solution, and test results of a small-scale unit built at the Middle East Technical University, Ankara, Turkey, are discussed. The unit was employed to demonstrate the technical feasibility of the system. Further development and modifications are necessary for larger-scale operations. The basis of an optimization study which is underway at the Brace Research Institute of McGill University in Montreal, Canada, aimed at finding the best combination of design and operation parameters is also presented. (Author)

A75-33973 **Field performance and operation of a flat-glass solar heat collector.** P. G. Patil (PPG Industries Glass Research Center, Pittsburgh, Pa.). *(International Solar Energy Society, Meeting, Fort Collins, Colo., Aug. 1974.) Solar Energy,* vol. 17, May 1975, p. 111-117. 9 refs.

A75-33974 **Analysis of gas dissociation solar thermal power system.** T. A. Chubb (U.S. Navy, E. O. Hulburt Center for Space Research, Washington, D.C.). *(International Solar Energy Society, Meeting, Fort Collins, Colo., Aug. 1974.) Solar Energy,* vol. 17, May 1975, p. 129-136. 22 refs.

Energy collected at high temperatures in a set of scattered solar furnaces can be delivered to a central facility at intermediate temperature by using a polyatomic gas in a closed cycle circulation system. For example, gaseous SO3 dissociates at 800 to 1000 C to form SO2 + O2 with absorption of heat; the products recombine in the presence of a catalyst at 500 to 600 C liberating the heat of recombination. A system using SO3 for energy transfer and scaled for production of a continuous 100 MW of electrical power with 3 days of cloudy-weather storage is outlined. Alternate working fluids CH4 + H2O, COCl2 and NF3 are compared. Selected design options, potential problem areas, and possibilities of utilizing the collected heat for chemical processing are discussed. (Author)

A75-33975 **Underground storage of heat in solar heating systems.** J. Shelton (Williams College, Williamstown, Mass.). *Solar Energy,* vol. 17, May 1975, p. 137-143. 11 refs.

The thermal interaction between underground heat storage and the surrounding ground is studied. The storage medium may be water in a tank, rocks, the ground itself, etc. For the case of hemispherical geometry, analytic steady-state solutions and numerical solutions to select time-dependent situations are presented and discussed. The quasisteady-state average daily net heat loss into the surrounding ground from uninsulated underground heat-storage facilities is estimated to be only a few per cent of the heat-storage capacity for typical home-size units in low-conductivity ground in the absence of ground-water flow. The economics of added insulation under these circumstances appears to be critically site and system specific. The time required for the average heat-loss rate of a new system to approach the steady-state value is on the order of a year. The ground surrounding a typical heat-storage facility contributes very little to the system's storage capacity either on a daily or a seasonal time scale. (Author)

A75-34175 **Temperature effects in Schottky-barrier silicon solar cells.** S. M. Vernon and W. A. Anderson (Rutgers University, New Brunswick, N.J.). *Applied Physics Letters,* vol. 26, June 15, 1975, p. 707-709. 13 refs. Research supported by Exxon Enterprises and Rutgers University.

Experimental results are reported concerning temperature effects from 25 to 125 C on Schottky-barrier solar cells which were fabricated using a semitransparent Cu/Cr barrier metal layer on p-type silicon. The open-circuit voltage decreased by 2.3 mV/deg C and the fill factor by 0.11%/deg C, while the short-circuit current increased slightly with increased temperature. These results are

consistent with previous work on p-n junction silicon solar cells. The diode quality factor n was shown to decrease with increased temperature, as predicted by field emission theory. The room-temperature photovoltaic output of cell 96 remained at 0.54 V, 25.4 mA/sq cm, and 8.5-10.6% efficiency using 80-100-mW/sq cm sunlight illumination after repeated temperature cycling. A75-34314 # **Investigation of the electrical and temperature characteristics of a silicon photoelectric converter under natural conditions (Issledovanie elektricheskikh i temperaturnykh kharakteristik kremnievogo fotoelektricheskogo preobrazovatelia v naturnykh usloviiakh).** M. Ia. Bakirov and N. P. Aliev (Akademiia Nauk Azerbaidzhanskoi SSR, Institut Fiziki, Baku, Azerbaidzhan SSR). *Geliotekhnika,* no. 1, 1975, p. 9-11. In Russian.

A75-34315 # **Method of calibrating a solar power plant with a paraboloidal mirror (Sposob tarirovki gelioustanovki s paraboloidal'nym zerkalom).** V. V. Bystrov, V. I. Zhuk, and Iu. I. Machuev. *Geliotekhnika,* no. 1, 1975, p. 26-31. In Russian.

In the alternative method proposed, a molybdenum rod with a thermocouple mounted at the irradiated end is used as the calorimeter. The specific heat flux absorbed by the calorimeter is determined from the changes in the temperature of the irradiated external surface of the calorimeter. Knowing the absorption coefficient of the solar-spectrum rays and the solar radiation intensity (determined with an actinometer), it is then possible to calculate both the density of the heat flux concentrated on the calorimeter and the degree of concentration of the solar energy reflected by the mirror. V.P.

A75-34317 # **Determination of some thermophysical characteristics of a solar-type pebble accumulator (Opredelenie nekotorykh teplofizicheskikh kharakteristik galechnogo akkumuliatora solnechnogo tepla).** G. Ia. Umarov, R. R. Avezov, S. O. Khatamov, and M. Sharipova (Akademiia Nauk Uzbekskoi SSR, Fiziko-Tekhnicheskii Institut, Tashkent, Uzbek SSR). *Geliotekhnika,* no. 1, 1975, p. 38-41. 7 refs. In Russian.

The present work proposes a method for complex utilization of a solar power plant in pasture regions where underground springs are the only water source. The plant operates alternately in furnishing power to well pumps and in replenishing its storage cells. Algorithms for optimal control of the plant are given. P.T.H.

A75-34321 # **Solar heating and cooling of buildings using heat pumps /Brief survey/ (Teplonasosno-solnechnoe otoplenie i okhlazhdenie pomeshchenii /Kratkii obzor/).** O. L. Shvaleva, R. A. Zakhidov, and R. R. Avezov (Akademiia Nauk Uzbekskoi SSR, Fiziko-Tekhnicheskii Institut, Tashkent, Uzbek SSR). *Geliotekhnika,* no. 1, 1975, p. 72-79. 31 refs. In Russian.

The present work discusses the use of heat pumps of different types for alternate heating of rooms and water during winter and cooling during summer. The main characteristics of some commercial, industrial, and scientific heat pumps available are summarized. The use of heat pumps in conjunction with hot-box type solar power plants is discussed briefly. P.T.H.

A75-34531 **Evaluation of central solar tower power plant.** C. R. Easton, R. W. Hallet, Jr., S. Gronich, and R. L. Gervais (McDonnell Douglas Astronautics Co., Huntington Beach, Calif.). In: International Conference on Systems, Man, and Cybernetics, Dallas, Tex., October 2-4, 1974, Proceedings. New York, Institute of Electrical and Electronics Engineers, Inc., 1974, p. 77-82. NSF-supported research.

A baseline design for heliostat, receiver, tower, and energy transport subsystems for a solar tower power plant has been defined down to the major component level. Preliminary manufacturing plans have been prepared for component fabrication, assembly, and installation. Capital costs have been estimated for the baseline design. The major cost element, other than the power plant, is the heliostat and its supportive equipment. The complete collector system is estimated to cost between $3 and $4/square foot ($30 to $40/square meter) installed. This corresponds to a levelized, fixed charge cost for generating energy of 15 to 20 mills/kwh electric exclusive of operation, maintenance, and plant parasitic load costs, which is competitive with current oil prices and may become competitive with coal at prices projected to the midpoint of operation of the solar power plant. (Author)

A75-34532 **A commentary on solar energy.** F. E. Rom (Solar Energy Products Co., Avon Lake, Ohio). In: International Conference on Systems, Man, and Cybernetics, Dallas, Tex., October 2-4, 1974, Proceedings. New York, Institute of Electrical and Electronics Engineers, Inc., 1974, p. 83-87. 9 refs.

A brief overview of solar energy is presented emphasizing the economic potential and opportunity for individual invention in this field. The optimistic review claims that a billion-dollar-per-year sales volume could be generated in the solar power industry within 5-10 years. It contends that teams of super-skilled personnel operating in large high-technology facilities backed by government funding would not be required. S.J.M.

A75-34533 **Economic and technical aspects of wind generation systems.** R. Ramakumar, W. L. Hughes, and H. J. Allison (Oklahoma State University, Stillwater, Okla.). In: International Conference on Systems, Man, and Cybernetics, Dallas, Tex., October 2-4, 1974, Proceedings. New York, Institute of Electrical and Electronics Engineers, Inc., 1974, p. 88-92. 15 refs. NSF Grant No. GI-39457.

Wind energy systems have the potential to provide a viable alternative to fossil fuels to satisfy the ever-increasing energy appetite of the world. A simplified economic analysis of wind energy systems of the type being developed at Oklahoma State University is presented and the calculated generation costs in mills per kWh are compared with those of conventional fuel-burning systems for different fuel costs, load factors and interest rates. The results show that certain aspects of wind energy conversion can, at present, generate energy at costs competitive with conventional systems and that more favorable conditions can be expected in the future as fossil fuels become scarce and fuel costs go up further as predicted. (Author)

A75-34607 # **Recuperator development trends for future high temperature gas turbines.** C. F. McDonald. *American Society of Mechanical Engineers, Gas Turbine Conference and Products Show, Houston, Tex., Mar. 2-6, 1975, Paper 75-GT-50.* 24 p. 21 refs. Members, $1.00; nonmembers, $3.00.

The current energy crisis and substantial increases in the costs of liquid and gaseous fuels, combined with reduced pollutant emission requirements, make the higher efficiency recuperative gas turbine cycle economically attractive for industrial and vehicular application. For future low cost, high temperature, small gas turbines, with improved cycle efficiencies, it is postulated that the complete hot section of the engine (combustor, ducts, turbine nozzle and rotor) will be all ceramic and may include a ceramic heat exchanger. Few of the answers are available today in the areas of ceramic recuperator performance, cost and structural integrity and concentrated development efforts are required to demonstrate the viability of a fixed boundary ceramic gas turbine heat exchanger. This paper briefly outlines possible design and development trends in the areas of exchanger configuration, surface geometry and materials, and it includes specific sizes and economic aspects of ceramic recuperators for future advanced low SFC gas turbines. (Author)

A75-34620 # **Component design considerations for gas turbine HTGR power plant.** C. F. McDonald, R. G. Adams, F. R. Bell, and P. Fortescue (General Atomic Co., San Diego, Calif.). *American Society of Mechanical Engineers, Gas Turbine Conference and Products Show, Houston, Tex., Mar. 2-6, 1975, Paper 75-GT-67.* 18

p. 7 refs. Members, $1.00; nonmembers, $3.00.

The gas turbine high-temperature gas-cooled reactor (HTGR) power plant combines the existing design HTGR core with a closed-cycle helium gas turbine power conversion system directly in the reactor primary circuit. The high density helium working fluid results in a very compact power conversion system. While the geometrics of the helium turbomachinery, heat exchangers, and internal gas flow paths differ from air breathing gas turbines because of the nature of the working fluid and the high degree of pressurization, many of the aerodynamic, heat transfer and dynamic analytical procedures used in the design are identical to conventional open-cycle industrial gas turbine practice. This paper outlines some of the preliminary design considerations for the rotating machinery, heat exchangers, and other major primary system components for an integrated type of plant embodying multiple gas turbine loops. The high potential for further improvement in plant efficiency and capacity, for both advanced dry-cooled and waste heat power cycle versions of the direct-cycle nuclear gas turbine, is also discussed. (Author)

A75-34850 **Fuels, minerals, and human survival.** C. B. Reed. Ann Arbor, Mich., Ann Arbor Science Publishers, Inc., 1975. 206 p. 28 refs. $12.50.

The design and the operation of a nuclear power plant is discussed along with questions of waste disposal, aspects of safety and pollution, breeder reactors, and considerations regarding the growth of electric power consumption. Alternate energy systems are examined, taking into account power from fusion, sun-power systems, interim sources of power, and the significance of the coal resources. Problems of conservation and depletion are also considered. G.R.

A75-34928 **Wind energy utilization prospects.** R. Ramakumar, W. L. Hughes, and H. J. Allison (Oklahoma State University, Stillwater, Okla.). In: Institute of Environmental Sciences, Annual Technical Meeting, 21st, Anaheim, Calif., April 14-16, 1975, Proceedings. Volume 1. Mount Prospect, Ill., Institute of Environmental Sciences, 1975, p. 138-142. 14 refs. NSF Grant No. GI-39457.

The chief technical, economic, and environmental aspects of wind energy utilization are considered. One approach being studied is to allow the aeroturbine RPM to vary with wind velocity and employ variable-speed, constant-frequency generating systems to obtain constant-frequency power to be pumped into existing utility mains. Study of generation costs for wind energy systems indicates that wind energy has the potential to be competitive at present as a supplemental energy source. Wind energy systems appear to be environmentally benign, though more research is needed on the impact of large scale wind energy utilization. P.T.H.

A75-34931 **Solar air conditioning systems using Rankine power cycles - Design and test results of prototype three ton unit.** R. E. Barber (Barber-Nichols Engineering Co., Denver, Colo.). In: Institute of Environmental Sciences, Annual Technical Meeting, 21st, Anaheim, Calif., April 14-16, 1975, Proceedings. Volume 1. Mount Prospect, Ill., Institute of Environmental Sciences, 1975, p. 170-179. Research supported by Honeywell, Inc.

Design, operation, and performance of a solar Rankine cycle air conditioning system are reported. The system consists of a Rankine power cycle operating on Refrigerant 113 and a vapor compressor cooling system operating on Refrigerant 12. Test data showed a Rankine cycle efficiency of 9% and an air conditioning COP of 7.4, giving an overall COP of 0.5. It is predicted that the Rankine cycle system would greatly outperform an absorption system when coupled with a concentrating solar collector. P.T.H.

A75-34932 **Modeling of solar absorption air conditioning.** R. L. San Martin and W. A. Couch (New Mexico State University, Las Cruces, N. Mex.). In: Institute of Environmental Sciences, Annual Technical Meeting, 21st, Anaheim, Calif., April 14-16, 1975, Proceedings. Volume 1. Mount Prospect, Ill., Institute of Environmental Sciences, 1975, p. 186-189. 15 refs.

The object of this paper is to study the performance and optimization of absorption air conditioning systems utilizing low temperature heat sources presently obtainable using flat-plate solar collectors. Computer simulation is performed on both simple and modified absorption systems utilizing second law thermodynamic cycle analysis on three absorber-refrigerant pairs: lithium bromide-water, water-ammonia, sodium thiocyanate-ammonia. Sink temperatures were varied in accordance with temperatures which can be achieved using both air heat exchanges and cooling towers. The absorber-refrigerant pairs were compared using results of the thermodynamic cycle analysis and their own inherent properties. Parameters necessary to solar energy utilization were emphasized in comparison of the pairs. Absorption cycle efficiencies were studied using each of the refrigerant pairs with changes in sources and sink temperatures. (Author)

A75-34933 **Heating buildings with solar energy.** E. A. Farber, C. A. Morrison, H. A. Ingley, and F. J. Tarud (Florida, University, Gainesville, Fla.). In: Institute of Environmental Sciences, Annual Technical Meeting, 21st, Anaheim, Calif., April 14-16, 1975, Proceedings. Volume 1. Mount Prospect, Ill., Institute of Environmental Sciences, 1975, p. 190-193.

A general description of a solar heating system used for room heating, cooking, water heating, drying clothes, and electrical consumption for cooling and heating, is given. A degree day analysis for Gainesville, Florida, indicated that the solar heating system would consume 126 kWh of electricity during the winter months, giving a 92% reduction of energy consumption when compared to a heat pump, or a savings of 295 dollars annually. P.T.H.

A75-34934 **Solar characteristics of new absorptive coatings used on solar collectors.** E. A. Farber, C. A. Morrison, J. T. Pytlinski, H. A. Ingley (Florida, University, Gainesville, Fla.), and H. A. Clark (Dow Corning Corp., Midland, Mich.). In: Institute of Environmental Sciences, Annual Technical Meeting, 21st, Anaheim, Calif., April 14-16, 1975, Proceedings. Volume 1. Mount Prospect, Ill., Institute of Environmental Sciences, 1975, p. 194-197.

The characteristics of various absorptive coatings in the presence of clear sky radiation are discussed. The performance of the coatings is evaluated relative to their physical parameters such as: pigment binder ratio, coating, thickness, type of binder and type of pigment, as well as pigment size. Binders based on resin and alcohol/water and pigments of several particles sizes were used. Commercially available black iron oxide having particle sizes from a few microns to about 149 microns were selected as the pigment to be evaluted. The absorptivity of the black iron oxide coatings is compared with the absorptivity of a coating which uses black carbon as pigment. (Author)

A75-34935 **Methodology of research of flat-plate solar collector absorptive coatings.** E. A. Farber, C. A. Morrison, J. T. Pytlinski, and H. A. Ingley (Florida, University, Gainesville, Fla.). In: Institute of Environmental Sciences, Annual Technical Meeting, 21st, Anaheim, Calif., April 14-16, 1975, Proceedings. Volume 1. Mount Prospect, Ill., Institute of Environmental Sciences, 1975, p. 198-201. 5 refs.

Several new types of coatings were developed and tested in the Solar Energy Laboratory of the University of Florida. The procedure for the preparation of the coatings using black iron oxide or carbon black as pigment and various Dow Corning resins as binders is presented in detail. Testing procedures under clear-sky solar radiation and using simulated radiation in laboratory conditions are described. The measurement methods, apparatus used to collect data and the Coating Performance Factor determination are also presented. The information furnished will provide a background information which should be helpful when organizing and integrating coating processing and testing facilities into a solar energy research activities. (Author)

A75-34936 **The University of Florida solar powered intermittent ammonia/water absorption air conditioner.** E. A. Farber, C. A. Morrison, H. A. Ingley, and E. Suarez (Florida, University, Gainesville, Fla.). In: Institute of Environmental Sciences, Annual Technical Meeting, 21st, Anaheim, Calif., April 14-16, 1975, Proceedings. Volume 1. Mount Prospect, Ill., Institute of Environmental Sciences, 1975, p. 202-205. 9 refs.

A75-34937 **An ecologic solar heated and cooled home.** B. Anderson and D. Coonley. In: Institute of Environmental Sciences, Annual Technical Meeting, 21st, Anaheim, Calif., April 14-16, 1975, Proceedings. Volume 1. Mount Prospect, Ill., Institute of Environmental Sciences, 1975, p. 206-210.

A solar heated and cooled house is described that incorporates principles of ecology and energy conservation. The house uses heat from flat plate, vertical wall solar collectors and wood heaters. Cooling is provided by natural ventilation from the shaded side of the house. The cool air flows through the spaces inside the house and out through the floor level air inlet of the solar collector, and is drawn out through a vent in the top of the solar collector using natural air convection. P.T.H.

A75-35096 **DFVLR activities in the area of energy research (DFVLR-Aktivitäten auf dem Gebiet der Energieforschung).** U. Sprengel (Deutsche Forschung- und Versuchsanstalt für Luft- und Raumfahrt, Abteilung Programmvorbereitung, Porz-Wahn, West Germany). *DFVLR-Nachrichten,* June 1975, p. 640-643. In German.

The activities considered are related to investigations concerning the long-term replacement of conventional fuels, the more efficient use of conventional fuels, the reduction of harmful effects of energy-transforming processes on the environment, and the enhancement of the economy and safety of mobile and stationary fluid kinetic machines. Attention is also given to the optimization of independent mobile and stationary power supply systems, the direct utilization of solar radiation, the utilization of wind energy, and the improvement of isolation and climatic technology in the case of buildings. G.R.

A75-35438 **Helium survey, a possible technique for locating geothermal reservoirs.** A. A. Roberts, I. Friedman, T. J. Donovan, and E. H. Denton (U.S. Geological Survey, Denver, Colo.). *Geophysical Research Letters,* vol. 2, June 1975, p. 209, 210.

Measurements were made of the helium concentration in the soil gases surrounding the Indian Hot Springs, Idaho Springs, Colorado. The helium concentration was shown to vary in a regular manner from the background level of 5.2 ppm to a high of more than 100 ppm near a warm (26 C) water seep, and more than 1000 ppm near a hot (40 C) water seep. Such an association of helium in the soil gas with these hot waters near the earth's surface suggests the possible utility of helium surveys in locating hidden geothermal reservoirs. (Author)

A75-35451 **Remote sensing applied to energy-related problems; Proceedings of the Symposium-Course, Miami, Fla., December 2-4, 1974.** Symposium sponsored by the University of Miami. Edited by T. N. Veziroglu (Miami, University, Coral Gables, Fla.). Coral Gables, Fla., University of Miami, 1974. 415 p. $35.

Papers are presented which report on progress in the development of remote sensing techniques as they relate to the search for and exploitation of energy resources. Some of the topics covered include spacecraft monitoring of the marine environment with microwave sensors, radar applications to weather analysis and forecasting and to precipitation climatology, laser measurement of sea salinity, temperature and turbidity in depth; remote sensing for western coal and oil shale development planning and environmental analysis; exploration for nuclear and fossil fuels by remote sensing techniques; satellite detection of air pollutants, and the satellite solar power station option. P.T.H.

A75-35458 # **Remote sensing for Western coal and oil shale development planning and environmental analysis.** H. D. Parker (Western Scientific Services, Inc., Fort Collins, Colo.). In: Remote sensing applied to energy-related problems; Proceedings of the Symposium-Course, Miami, Fla., December 2-4, 1974. Coral Gables, Fla., University of Miami, 1974, p. S4-3 to S4-25.

There are two broad categories of application for remote sensing technology in the development of fossil fuel resources in the Western U.S. The first includes pre-construction site evaluations, land use and usability mapping, and environmental baseline data acquisition. The second category involves long-term environmental monitoring. The geographic magnitude of these developments, particularly when multiple mines or processing plants are considered on a regional scale, precludes the use of conventional ground-based analysis techniques. The time frame in which these resources must be developed also limits the utility of conventional methods. This paper will discuss both categories of remote sensing applications and the overall role that remote sensing can play in furthering the national goal of major dependency on internal sources of energy. (Author)

A75-35461 # **Determining potential solar power sites in western hemisphere ocean and land areas based upon satellite observations of cloud cover.** H. W. Hiser and H. V. Senn (Miami, University, Coral Gables, Fla.). In: Remote sensing applied to energy-related problems; Proceedings of the Symposium-Course, Miami, Fla., December 2-4, 1974. Coral Gables, Fla., University of Miami, 1974, p. A-3 to A-16. 16 refs.

A75-35464 # **Multispectral data systems for energy related problems.** C. L. Wilson and R. H. Rogers (Bendix Corp., Ann Arbor, Mich.). In: Remote sensing applied to energy-related problems; Proceedings of the Symposium-Course, Miami, Fla., December 2-4, 1974. Coral Gables, Fla., University of Miami, 1974, p. A-35 to A-68. 7 refs.

A multispectral data system consists of data collection, data processing, data analysis and interpretation, and information dissemination (application) subsystems. The ERTS MSS and the data processing facility at Goddard Space Flight Center are examples of the first two subsystems respectively. The characteristics of airborne and satellite digital multispectral scanner data will be described, as will the digital data processing and analysis techniques which have been developed to automatically analyze and interpret the data. Techniques for output product generation and information dissemination will be illustrated using strip mine monitoring and environmental impact assessment for power plant siting and transmission line routing as examples. The problems associated with the development of semiautomated performance of the cited applications will be discussed, as will current status of the development programs. (Author)

A75-35465 # **The satellite solar power station option.** P. E. Glaser (Arthur D. Little, Inc., Cambridge, Mass.). In: Remote sensing applied to energy-related problems; Proceedings of the Symposium-Course, Miami, Fla., December 2-4, 1974. Coral Gables, Fla., University of Miami, 1974, p. A-69 to A-98. 19 refs.

The possibilities for using satellite solar power stations for large-scale power generation on earth, converting solar energy into microwave energy, transmitting it to the earth's surface, and transforming it into electricity have recently been explored. The current state of technology and the necessary developments for accomplishing the four functions - i.e., collection of solar energy, conversion to and transmission of microwaves and rectification to dc on the ground - are reviewed. The requirements for flight control, earth to orbit transportation and orbital assembly are discussed. Considerations are given to cost projections, resource use and economics. Environmental issues, including impact of waste heat release, water injection into the upper atmosphere by space vapor

exhaust, and location of antenna sites are listed. Biological effects and radio frequency interference are explored. The time frame for accomplishing the operational system is outlined. (Author)

A75-35920 **Plasma heating methods (Les méthodes de chauffage d'un plasma).** T. Consoli. *Entropie,* vol. 11, no. 61, 1975, p. 41-54. 94 refs. In French.

The problem of heating a toroidally confined plasma to thermonuclear reactor ignition temperatures is stated, and several proposed solutions to it are described. The necessity for an extra heating source is demonstrated. Heating techniques reviewed comprise adiabatic magnetic compression, heating by rapid neutron beams, heating by electromagnetic waves, heating by magnetic pumping during transit time, and heating at the inferior hybrid frequency. Two experimental setups are described: PETULA, a classical Tokamak, and WEGA, a Stellarator (a toroidal device with helical coils). S.J.M.

A75-36013 # **Temperature dependence of the spectral characteristics of quick-response silicon photocells (Temperaturnaia zavisimost' spektral'noi kharakteristiki maloinertsionnykh kremnievykh fotoelementov).** L. K. Buzanova, A. Ia. Gliberman, N. M. Gracheva, T. M. Golovner, and A. P. Landsman (Vsesoiuznyi Nauchno-Issledovatel'skii Institut Istochnikov Toka, Moscow, USSR). *Geliotekhnika,* no. 2, 1975, p. 8-13. 7 refs. In Russian.

The spectral characteristics of p-Si photocells with a resistivity of 200 Ohm-cm were studied at temperatures ranging from -100 to +80 C. The influence of deep-seated impurity centers in the space charge region and of the mode of photocell operation on the spectral characteristics and on the temperature coefficient of the photocurrent is demonstrated. V.P.

A75-36015 # **Investigation of photoelectric converter operation under conditions of strong illumination (Issledovanie raboty fotopreobrazovatelei v usloviiakh sil'nogo osveshcheniia).** A. M. Vasil'ev, V. M. Evdokimov, A. P. Landsman, and A. F. Milovanov (Vsesoiuznyi Nauchno-Issledovatel'skii Institut Istochnikov Toka; Moskovskii Energeticheskii Institut, Moscow, USSR). *Geliotekhnika,* no. 2, 1975, p. 18-24. 6 refs. In Russian.

The parameters of illuminated photoelectric converters are studied experimentally. It is shown that the observed dependence of carrier lifetime on the illumination intensity leads to a more pronounced dependence of the photocurrent and the photo-emf. Illumination-induced changes of the p-n junction boundary conditions lead at superhigh intensities to saturation of the photo-emf. V.P.

A75-36017 # **Determination of the surface shapes of film-type solar energy concentrators with seams (Opredelenie formy poverkhnostei plenochnykh kontsentratorov solnechnoi energii so shvami).** Iu. A. Solodiannikov, V. I. Vorotnikov, and A. M. Gafurov (Akademiia Nauk Uzbekskoi SSR, Fiziko-Tekhnicheskii Institut, Tashkent, Uzbek SSR). *Geliotekhnika,* no. 2, 1975, p. 43-49. 9 refs. In Russian.

Large-area solar energy concentrators are prepared by joining a number of film surfaces. The mechanical and optical properties of the concentrators change with the increase in film thickness at the joints. This makes it necessary to study the surface configurations of concentrators with joints of various type and to determine their influence on the concentrator characteristics. Analytical solutions are obtained to the linear problems of determining the deformed shape of a circular specular reflecting membrane with a diametral seam, and the deflections of a tread under a running load that represents the reaction of the thread on a loaded membrane. V.P.

A75-36018 # **Study of the influence of container design and the thermal inertness of solar water heaters on their efficiency (Issledovanie vliianiia konstruktsii kotla i teplovoi inertsionnosti geliovodonagrevatelei na ikh effektivnost').** R. R. Avezov and F. Soatov (Akademiia Nauk Uzbekskoi SSR, Fiziko-Tekhnicheskii Institut, Tashkent, Uzbek SSR). *Geliotekhnika,* no. 2, 1975, p. 69-72. In Russian.

The analysis is carried out for metallic and sand-type solar water heaters and for two specific positions of the sun. The geometrical dimensions and the mechanical and heat-engineering indexes are tabulated. The analysis shows that, all other conditions being equal, the efficiency of metallic water heaters is greater by a factor of 2.2. V.P.

A75-36173 **Survey on power fluid for thermal power from low temperature and small temperature difference heat source.** S. Koyama and T. Nakahara. *Mitsubishi Juko Giho,* vol. 12, no. 2, 1975, p. 220-227. 10 refs. In Japanese, with abstract in English.

The characteristics of various working fluids for thermal energy turbines are analyzed and compared in order to select the most efficient fluid among them. Parameters surveyed include energy transfer capacity, heat transfer availability, size of heat exchanger, volume flow rate of fluid at turbine inlet, cycle efficiency, system pressure and leakage losses, and mean diameter, blade length and boss ratio of turbine. It is concluded that R114 and propane are the best working fluids under the conditions studied. S.J.M.

A75-36233 **Effect of inhomogeneity of conductivity on end effect in a sectional MHD generator.** V. N. Zatelepin and S. A. Medin (Akademiia Nauk SSSR, Nauchno-Issledovatel'skii Institut Vysokikh Temperatur, Moscow, USSR). *(Teplofizika Vysokikh Temperatur,* vol. 12, Sept.-Oct. 1974, p. 1071-1077.) *High Temperature,* vol. 12, no. 5, May 1975, p. 937-942. Translation.

The electrical characteristics of an MHD generator with semi-infinite sectional electrodes are analyzed, assuming that the magnetic field decays exponentially beyond the electrodes. The inhomogeneity of the conductivity across the MHD channel is taken into consideration. The potential distribution in the end region of the channel is determined analytically. V.P.

A75-36260 # **Investigation of the optimal MHD-generator characteristics for combinational open-cycle MHD power generators (Issledovanie optimal'nykh kharakteristik MGD-generatora dlia kombinirovannykh MGDES otkrytogo tsikla).** B. Ia. Shumiatskii, V. I. Kovbasiuk, G. M. Koriagina, and P. P. Ivanov (Akademiia Nauk SSSR, Nauchno-Issledovatel'skii Institut Vysokikh Temperatur, Moscow, USSR). *Teplofizika Vysokikh Temperatur,* vol. 13, Mar.-Apr. 1975, p. 407-412. 9 refs. In Russian.

A method for obtaining optimal MHD-channel flows is developed, using an improved quasi-one-dimensional flow model. The optimality criterion is formulated by analyzing a MHD power generator. V.P.

A75-36274 **Efficient CuInSe2/CdS solar cells.** J. L. Shay, S. Wagner (Bell Telephone Laboratories, Inc., Holmdel, N.J.), and H. M. Kasper (Bell Telephone Laboratories, Inc., Murray Hill, N.J.). *Applied Physics Letters,* vol. 27, July 15, 1975, p. 89, 90. 12 refs.

Fabrication of and results obtained with a newly optimized CuInSe2/CdS heterojunction solar cell are described. A power conversion efficiency of 12% was observed on a clear day in New Jersey (92 mW/sq cm). Solar efficiency in devices less than 1 sq cm in active area was limited by a low open-circuit voltage, correlated with microcracks in the CuInSe2 substrate. An antireflection coating was applied by evaporation of SiO that increased the quantum efficiency of this cell from 0.80 to 0.90 at 6328 A. The lattices of the two semiconductors match well. S.J.M.

A75-36275 * **A 15% efficient antireflection-coated metal-oxide-semiconductor solar cell.** R. J. Stirn and Y. C. M. Yeh (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, Calif.). *Applied Physics Letters,* vol. 27, July 15, 1975, p. 95-98. 11 refs. Contract No. NAS7-100.

A new effect is being developed which significantly improves the conversion efficiency of antireflection-coated metal-oxide-semiconductor (AMOS) solar cells. The effect, a marked increase in the open-circuit voltage, is produced by the addition of an oxide layer to the semiconductor. Cells using gold on n-type gallium arsenide have been made with efficiencies up to 15% in terrestrial sunlight. All processing steps are amenable to the use of low-cost polycrystalline films of GaAs in place of the single crystals now used. (Author)

A75-36295 **Electronbeam heating for fusion.** J. Benford (Physics International Co., San Leandro, Calif.). *Laser Focus,* vol. 11, July 1975, p. 45-48. 8 refs.

It is pointed out that for the early demonstration of the feasibility of controlled nuclear fusion utilizing electron or laser beams a suitable approach might be based on the employment of a linear configuration which contains a magnetically confined plasma. Plasma-heating processes are considered along with energy-absorption mechanisms, approaches for reducing energy losses, the definition of reactor dimensions, and fusion-feasibility experiments. G.R.

A75-36305 **Power collection reduction by mirror surface nonflatness and tracking error for a central receiver solar power system.** R. H. McFee (McDonnell Douglas Astronautics Co., Huntington Beach, Calif.). *Applied Optics,* vol. 14, July 1975, p. 1493-1502.

The effects of random waviness, curvature, and tracking error of plane-mirror heliostats in a rectangular array around a central-receiver solar power system are determined by subdividing each mirror into 484 elements, assuming the slope of each element to be representative of the surface slope average at its location, and summing the contributions of all elements and then of all mirrors in the array. Total received power and flux density distribution are computed for a given sun location and set of array parameter values. Effects of shading and blocking by adjacent mirrors are included in the calculation. Alt-azimuth mounting of the heliostats is assumed. Representative curves for two receiver diameters and two sun locations indicate a power loss of 20% for random waviness, curvature, and tracking error of 0.1 deg rms, 0.002 per m, and 0.5 deg, 3 sigma, respectively, for an 18.2-m diam receiver and 0.3 deg rms, 0.005 per m, and greater than 1 deg, respectively, for a 30.4-m diam receiver. (Author)

A75-36306 **Solar energy - The physics of the greenhouse effect.** M. Young. *Applied Optics,* vol. 14, July 1975, p. 1503-1508. 25 refs.

For practical reasons, it is likely that low-temperature solar collectors have a more immediate future than high-temperature or photovoltaic generation of electricity. This paper discusses the physics of bare and covered flat-plate collectors. The greenhouse effect is the result of reducing convection to the point that radiation trapping becomes important. Nevertheless, at collector temperatures within 20-30 C of ambient, convection from the collector surface is so important that a special absorber with low IR emissivity may be no more efficient than a good, black absorber. At higher temperatures, selective absorbers are desirable. In the low temperature range, collection efficiency can be kept well over 80%, but falls rapidly with increasing collector temperature. This suggests that solar power may see early application in conjunction with heat pumps for heating and air conditioning. (Author)

A75-36307 **Stationary concentrating reflector cum tracking absorber solar energy collector - Optical design characteristics.** W. G. Steward and F. Kreith (Colorado, University, Boulder, Colo.). *Applied Optics,* vol. 14, July 1975, p. 1509-1512. 9 refs.

This article presents an analysis of the optical design characteristics of a stationary reflecting/tracking absorber solar energy collector. This type of collector consists of a segment of a spherical mirror placed in a stationary position facing the sun, but having a linear absorber that can track the image of the sun by a simple pivoting motion about the center of curvature of the reflector. The optical characteristics of this system and the axial variation of its concentration ratio are developed to provide information for the engineering design and sizing of this type of solar energy collector system. (Author)

A75-36357 **Investigations of the factors affecting the performance of a rotating heat pipe.** T. C. Daniels and F. K. Al-Jumaily (Swansea, University College, Swansea, Wales). *International Journal of Heat and Mass Transfer,* vol. 18, July-Aug. 1975, p. 961-973. 23 refs.

The rotating heat pipe is a device which utilizes a two-phase heat-transfer cycle. Rotation about the longitudinal axis generates a centrifugal force field and a component of this acting along the tapered wall pumps the condensate back to the evaporator. A theoretical Nusselt type analysis is proposed for the condensate film taking into account the drag effects of contra-flowing vapor. A performance prediction relates rates of heat transfer, rotational speeds, temperature differences across condensate films, fluid properties and heat pipe geometry. Experimental investigation tests the analysis with good agreement for the two Arcton 113 and 21 fluids but no agreement with water. An explanation for this is proposed. (Author)

A75-36362 **The conversion efficiency of ideal Shockley p-n junction photovoltaic converters in concentrated sunlight.** F. Sterzer (RCA Laboratories, Princeton, N.J.). *RCA Review,* vol. 36, June 1975, p. 316-323. 9 refs.

A75-36363 **Silicon solar cells for highly concentrated sunlight.** R. H. Dean, L. S. Napoli, and S. G. Liu (RCA Laboratories, Princeton, N.J.). *RCA Review,* vol. 36, June 1975, p. 324-335. 7 refs.

Silicon solar cells yield 8% overall conversion efficiency at 800-1600 X peak concentration. Electrical sheet resistance and thermal and high-injection-level effects are not serious problems with proper cell design. (Author)

A75-36415 # **Problems of direct conversion of thermal and nuclear energy to electric energy (Problemi na priakoto prevr'shchane na toplinnata i iadrenata energiia v elektricheska).** E. M. Shelkov. *B'lgarska Akademiia na Naukite, Spisanie,* vol. 20, no. 5, 1975, p. 28-38. In Bulgarian.

A75-36500 **Modeling and computer simulation of a microwave-to-dc energy conversion element.** J. J. Nahas (Notre Dame, University, Notre Dame, Ind.). In: Microwaves in service to man; International Microwave Symposium, Palo Alto, Calif., May 12-14, 1975, Digest of Technical Papers. New York, Institute of Electrical and Electronics Engineers, Inc., 1975, p. 194-196. 9 refs.

A distributed modeling technique that includes skin-effect losses in transmission lines has been used to model a microwave-to-dc energy conversion element consisting of a dipole antenna, a low-pass filter, a Schottky barrier diode, and a dc filter. Computer simulation has demonstrated 70% conversion efficiency for the element and has shown that there is a resonance effect in the Schottky barrier diode that tends to generate strong higher harmonics. Most of the energy loss comes in the diode rectifier, as expected. S.J.M.

A75-36539 # **French activity in electric propulsion.** J. Mutin (Centre National d'Etudes Spatiales, Paris, France). In: European Electric Propulsion Conference, 3rd, Hinterzarten, West Germany, October 14-18, 1974, Proceedings. Cologne, Deutsche Gesellschaft für Luft- und Raumfahrt, 1974, p. 18-21.

French activities in the development of cesium bombardment and contact technologies are described. The present survey shows that attitude control is more critical in electric propulsion than in chemical propulsion. In addition, a three-axis stabilized body with sun-oriented solar arrays is considered as an example of a com-

munications satellite. It is concluded that thrust vectoring is necessary to achieving sufficient mass savings; that thruster characteristics must remain constant from one thrust to the next; and that thruster selection must be made on the system stabilization level.
S.J.M.

A75-36719 **Alternative fuels for aviation.** E. M. Goodger (Cranfield Institute of Technology, Cranfield, Beds., England). *Aeronautical Journal,* vol. 79, May 1975, p. 212-224. 17 refs.

Overall characteristics of alternative fuels, proposed to meet the desired technological improvements are discussed, together with the feasibility of using these possible replacements for petroleum products in the aviation industry. Low and high density fuels, hydride fuels, carbon containing fuels, vaporising and/or endothermically reacting fuels, hydrocarbon fuels, aromatic mixtures, liquid methane, liquid hydrogen, nitrogen hydrides, alcohols, nuclear fuels, and various mixtures are analyzed for their performance, levels of volumetric and combined gravimetric energy densities, handling safety, pollution, thermal stability and capacity, and availability.
M.G.

A75-36720 **Evaluation of the overall fuel mass penalty of an aircraft system.** R. Le Claire (Hawker Siddeley Aivation, Ltd., Kingston-on-Thames, Surrey, England). *Aeronautical Journal,* vol. 79, May 1975, p. 225-228.

A method for evaluating the fuel mass penalty incurred in flight after fitment of a system to an aircraft is discussed. The relative importance of the parameters involved in the method are shown, in particular, the relationship between fuel penalty due to system basic mass and that due to system drag. It is concluded that fuel penalty associated with drag is significantly more critical than that due to weight, therefore any drag reduction (without an increase in basic system mass) would result in substantial fuel savings and possibly increased payload.

A75-36809 **Remote sensing applied to mine subsidence - Experience in Pennsylvania and the Midwest.** T. V. Leshendok, R. V. Amato, and O. R. Russell (Earth Satellite Corp., Washington, D.C.). In: American Society of Photogrammetry, Annual Meeting, 41st, Washington, D.C., March 9-14, 1975, Proceedings. Falls Church, Va., American Society of Photogrammetry, 1975, p. 298-307.

Results of investigations are presented concerning the analysis of small- and large-scale color, color infrared, and black-and-white aerial photographs, as well as ERTS-1, side looking airborne radar, and multispectral imagery in order to detect mine subsidence and to correlate geological features with subsidence occurrence. Three types of surface expressions of mine subsidence are recognized: regional or areal subsidence; small, discrete subsidences called photoholes; and linear subsidence. It is shown that analysis of aerial remote sensing data makes it possible to identify surface subsidence features in hardly detectable areas, to determine linear geological features related to past or future subsidence occurrence, to establish relationships between subsidence and underground mine patterns, and to identify subsidence-prone areas for regional and local planning.
S.D.

A75-36811 **Net radiation and other energy-related maps from remotely sensed imagery.** R. W. Pease and D. A. Nichols (California, University, Riverside, Calif.). In: American Society of Photogrammetry, Annual Meeting, 41st, Washington, D.C., March 9-14, 1975, Proceedings. Falls Church, Va., American Society of Photogrammetry, 1975, p. 322-333. 5 refs.

Synoptic maps showing the spatial distributions of energy-related phenomena over the terrestrial surface have not been feasible with previous traditional instruments and observation techniques. The advent of calibrated multispectral optical scanners, however, has made possible the rapid measurement of surface energy emittance and reflectance. Data acquired in a few minutes with scanners in airborne platforms can be translated into maps showing such things as urban heat islands, surface albedos, energy absorbed by the surface, and net radiation. An experiment using the ERIM M-7 scanner and Baltimore as a test-site city has yielded successfully isarithmic maps of these phenomena as they existed during an imaging overflight. Methods for acquiring calibrated data from a scanner and the creation of maps from image transparencies are described and evaluated.

A75-37005 # **A non-polluting powerplant for large airships.** F. Morse (Boston University, Boston, Mass.). *American Institute of Aeronautics and Astronautics, Lighter Than Air Technology Conference, Snowmass, Colo., July 15-17, 1975, Paper 75-927.* 7 p. 7 refs.

A report is presented describing the features of an aircraft propulsion system which is characterized principally by (1) use of a Rankine cycle to transform chemical energy into shaft work and (2) use of liquid hydrogen as the energy source. Such a system would produce a nearly pollution-free exhaust and would have additional benefits of low sound level and marked improvement in specific fuel consumption over existing types. However, owing to relatively high specific weights, extensive condenser surfaces and the low volumetric heating value of hydrogen, the system as described would be exclusively applicable to large, lighter-than-air craft.
(Author)

A75-37008 # **The Shell natural gas airship, and other L.T.A. activities by Aerospace Developments.** J. E. R. Wood (Aerospace Developments, London, England). *American Institute of Aeronautics and Astronautics, Lighter Than Air Technology Conference, Snowmass, Colo., July 15-17, 1975, Paper 75-932.* 5 p.

Feasibility of transporting natural gas by means of lighter than air craft and the design of a large monocoque airship are studied. Neither the nonrigid, semirigid nor the Zeppelin type rigid craft are suitable for this application. Traditional methods of construction of airships are also not suitable, but tests have shown the adhesive bonding assembly techniques to be structurally advantageous, especially the honeycomb sandwich technique. The basic pre-assembly requirements for the 'unitary panel' which forms the basis of the hull structure of the airship are presented. The gas separator and the transverse membranes are discussed, in addition to the main propulsion system, control systems, and the mode of operation. An 8 million cu.ft. ship is predicted to fly by 1979 and the 'fleet size' craft of 100 million cu.ft. by 1984.

A75-37154 **Controlling the response of thermoelements that generate electricity.** V. P. Babin and E. K. Iordanishvili. *(Geliotekhnika,* no. 5, 1974, p. 3-8.) *Applied Solar Energy,* vol. 10, no. 5-6, 1974, p. 1-5. Translation.

Conditions permitting the reduction of time lag without decreasing geometrical dimensions in solar collectors are formulated and substantiated. For the two thermoelement models considered (plate model and half-space model), it is shown that virtually identical thermal flux densities are required for accelerated attainment of regime. The half-space model does not necessitate the creation of thermoelements of minimum height; moreover, there is no need to remove waste heat from the cold side over the time interval that this model and its associated mathematical expressions remain valid.
S.J.M.

A75-37155 **Optimization of the operating conditions of a combined generator-cooler thermoelement.** V. P. Babin and E. K. Iodanishvili. *(Geliotekhnika,* no. 5, 1974, p. 9-12.) *Applied Solar Energy,* vol. 10, no. 5-6, 1974, p. 6-9. 6 refs. Translation.

The problem of combining Seebeck-effect thermal electric generator and Peltier-effect thermal cooling elements into one unit that directly converts heat into 'cold' is treated. A single-value condition is considered such that this combined thermoelement operates at maximum efficiency, and a simple analytical expression

for this condition is given, along with a formula that directly yields the necessary ratio of generator and cooler resistances. S.J.M.

A75-37157 Energy distribution in the concentration field of a two-mirror device with a paraboloidal back reflector. D. A. Kirgizbaev and R. A. Zakhidov (Akademiia Nauk Uzbekskoi SSR, Fiziko-Tekhnicheskii Institut, Tashkent, Uzbek SSR). *(Geliotekhnika,* no. 5, 1974, p. 20-24.) *Applied Solar Energy,* vol. 10, no. 5-6, 1974, p. 16-19. Translation.

The effective disposition of the heating plane in the region of convergence of twice-reflected rays (Z-max - Z-min) in a two-mirror device with a paraboloidal back reflector is ascertained, and the energy distribution over the heating spot is determined. It is found that the use of the paraboloidal back reflector degrades the characteristics of a two-mirror system by a factor of several times as compared to a hyperboloidal back reflector. The maximum energy density with the paraboloidal reflector, however, remains high enough for high-temperature processes and experiments to be conducted. S.J.M.

A75-37159 Generation of electric power at high reliability levels using a group of solar power plants in an energy system. B. V. Tarnizhevskii and A. N. Smirnova (Vsesoiuznyi Nauchno-Issledovatel'skii Institut Istochnikov Toka, Moscow, USSR). *(Geliotekhnika,* no. 5, 1974, p. 36-43.) *Applied Solar Energy,* vol. 10, no. 5-6, 1974, p. 29-34. Translation.

The possibility of equilibrating and stabilizing generated capacity and power through parallel operation of a group of solar power plants in an energy system is estimated. Such a system is shown to be much more reliable than individual power plants, which are subject to greater total variations in incident light. I.e., the radiation intensity that can be realized at a high reliability level (99%) is 4-5 times higher with an integrated system than with individual installations. Mathematical analyses are presented to support this claim. S.J.M.

A75-37160 Principles of a composite study involving combined use of solar and wind energy. R. B. Salieva (Tashkentskii Elektrotekhnicheskii Institut Sviazi, Tashkent, Uzbek SSR). *(Geliotekhnika,* no. 5, 1974, p. 48-52.) *Applied Solar Energy,* vol. 10, no. 5-6, 1974, p. 35-38. Translation.

A theoretical comparison of the productivity of wind and solar power installations, as determined from variations in wind speed and solar radiation intensity, is given. The productivities are represented as regular stochastic processes. The complementary nature of the annual chronological variation patterns of wind and solar energy fluxes suggests combined use of these sources. S.J.M.

A75-37161 Generalizations of composite studies involving combined use of wind and solar energy. R. B. Salieva (Tashkentskii Elektrotekhnicheskii Institut Sviazi, Tashkent, Uzbek SSR). *(Geliotekhnika,* no. 5, 1974, p. 53-58.) *Applied Solar Energy,* vol. 10, no. 5-6, 1974, p. 39-42. Translation.

Sample calculations were made using the composite method for the situation of water supply to pastures and electrical power supply to radio relay stations; results of these calculations are presented. Wind and solar installations were assumed to operate simultaneously and to have a common electrical accumulator; this accumulator supplies power when neither of the installations is functioning. The advantages of combined utilization of wind and solar energy are demonstrated, particularly in the case of relatively small-scale consumers spread out over an extensive, transportationally rigorous terrain. S.J.M.

A75-37162 Full-scale tests of 'photovolt' high-voltage photocells at high light flux levels. U. A. Arifov, M. Gaibnazarov, B. N. Dzhalilov, A. I. Kulagin, A. P. Landsman, and D. S. Strebkov (Akademiia Nauk Uzbekskoi SSR, Institut Elektroniki, Tashkent Uzbek SSR; Vsesoiuznyi Nauchno-Issledovatel'skii Institut Istochnikov Toka, Moscow, USSR). *(Geliotekhnika,* no. 6, 1974, p. 3-9.) *Applied Solar Energy,* vol. 10, no. 5-6, 1974, p. 49-54. 7 refs. Translation.

High-voltage silicon photoelectric converters of the 'fotovol't' type are applicable for large-scale power generation. Experiments were performed to determine the power characteristics of such photoelements using focusing devices to concentrate the solar radiation fluxes on them. The optimal operating regimes of the photocells was studied in order to develop proposals for the construction of an electric power plant. Two types of focusing devices were used to concentrate the light on the photoelement: a faceted device consisting of 40 plane reflectors, which increased the light flux by a factor of 40, and a parabolic reflector, which increased the flux by a factor of 200. The experiments allowed a determination of the realistic feasibility of using reflectors to increase the specific power of solar batteries. A.T.S.

A75-37163 Photoelectric energy converter temperature sensor. L. L. Silin and A. Kh. Cherkasski (Vsesoiuznyi Nauchno-Issledovatel'skii Institut Istochnikov Toka, Moscow, USSR). *(Geliotekhnika,* no. 6, 1974, p. 13-15.) *Applied Solar Energy,* vol. 10, no. 5-6, 1974, p. 58-60. 5 refs. Translation.

The resistive temperature sensors usually used on photoelectric cells are not transparent to visible light and, therefore, cannot be used on the illuminated side of the cells. A description is given of a thermoresistive sensor developed to minimize the masking effect. Such sensors have performed reliably for two years of continuous use. A.T.S.

A75-37164 Dynamic calculation of semiconductor photoconverter series resistance. A. S. Lisin (Vsesoiuznyi Nauchno-Issledovatel'skii Institut Istochnikov Toka, Moscow, USSR). *(Geliotekhnika,* no. 6, 1974, p. 16-23.) *Applied Solar Energy,* vol. 10, no. 5-6, 1974, p. 61-67. Translation.

A dynamic method is proposed for calculating the series resistance of a semiconductor photoelectric cell. The method allows one to express the series resistance in terms of the dynamic resistance of the p-n junction and the rear contact. The analysis is made for the most widespread type of photocell, with a continuous rear contact and a front contact in the form of a band around the perimeter of the doped layer. The dependences of the series resistance on the dynamic resistance are graphed for various values of the spreading resistance of the doped layer; the dynamic resistance of the rear region, including the base and the rear contact; and the dimensions of the photocell. It is shown that the series resistance can increase by more than a factor of 3 in going from no-load to short-circuit conditions. A.T.S.

A75-37165 Photoelectric generator testing in the Azerbaidzhan SSR mountains. N. V. Pul'manov, M. Ia. Bakirov, N. P. Aliev, and V. N. Potapov (Akademiia Nauk Azerbaidzhanskoi SSR, Fizicheskii Institut, Baku, Azerbaidzhan SSR). *(Geliotekhnika,* no. 6, 1974, p. 27-30.) *Applied Solar Energy,* vol. 10, no. 5-6, 1974, p. 70-72. 5 refs. Translation.

Results are presented from a one-year test of photoelectric generator under natural conditions in a mountainous region of the Azerbaidzhan SSR. The experiment was conducted to determine the feasibility of using such generators as autonomous power sources for cathodic protection of support towers for high-voltage electric-transmission lines in remote areas. The current-voltage load characteristics and the daily and seasonal variation in the power output of the device are discussed. A.T.S.

A75-37166 Fabricating paraboloidal high-temperature solar concentrators from mollified sectors. G. Ia. Umarov, A. K. Alimov, A. Abduazizov, and M. Usmanov (Akademiia Nauk Uzbekskoi SSR, Fiziko-Tekhnicheskii Institut, Tashkent, Uzbek SSR). *(Geliotekhnika,* no. 6, 1974, p. 31-36.) *Applied Solar Energy,* vol. 10, no. 5-6, 1974, p. 73-77. 12 refs. Translation.

Solar-energy concentrators in the form of paraboloidal mirrors 1.5 and 2.0 m in diameter were produced by assembling glass sectors which had been formed from flat plates by heat and vacuum treatment. The costs of the reflecting element and the framework were calculated. It was found that the cost increases with the number of sectors: a 1.5-m concentrator having 12 sectors would cost about 34 rubles, while one with 8 sectors would cost 27 rubles. A.T.S.

A75-37240 * # **Summary of NASA-Lewis Research Center solar heating and cooling and wind energy programs.** R. W. Vernon (NASA, Lewis Research Center, Cleveland, Ohio). *University of Alabama, Southeastern Conference on Application of Solar Energy, Huntsville, Ala., Mar. 24-26, 1975, Paper.* 23 p. 12 refs.

NASA is planning to construct and operate a solar heating and cooling system in conjunction with a new office building being constructed at Langley Research Center. The technology support for this project will be provided by a solar energy program underway at NASA's Lewis Research Center. The solar program at Lewis includes: testing of solar collectors with a solar simulator, outdoor testing of collectors, property measurements of selective and nonselective coatings for solar collectors, and a solar model-systems test loop. NASA-Lewis has been assisting the National Science Foundation and now the Energy Research and Development Administration in planning and executing a national wind energy program. The areas of the wind energy program that are being conducted by Lewis include: design and operation of a 100 kW experimental wind generator, industry-designed and user-operated wind generators in the range of 50 to 3000 kW, and supporting research and technology for large wind energy systems. An overview of these activities is provided. (Author)

A75-37243 * # **Porous matrix structures for alkaline electrolyte fuel cells.** R. W. Vine and S. T. Narsavage (United Technologies Corp., South Windsor, Conn.). *Electrochemical Society, Meeting, 147th, Toronto, Canada, May 11-16, 1975, Paper.* 9 p. Contract No. NAS3-15339.

A number of advancements have been realized by a continuing research program to develop higher chemically stable porous matrix structures with high bubble pressure (crossover resistance) for use as separators in potassium hydroxide electrolyte fuel cells. More uniform, higher-bubble-pressure asbestos matrices were produced by reconstituting Johns-Manville asbestos paper; Fybex potassium titanate which was found compatible with 42% KOH at 250 F for up to 3000 hr; good agreement was found between bubble pressures predicted by an analytical study and those measured with filtered structures; Teflon-bonded Fybex matrices with bubble pressures greater than 30 psi were obtained by filtering a water slurry of the mixture directly onto fuel cell electrodes; and PBI fibers have satisfactory compatibility with 42% KOH at 250 F. S.J.M.

A75-37331 **Optical interfaces in solar energy utilization.** A. B. Meinel (Arizona, University; Helio Associates, Inc., Tucson, Ariz.). In: Effective systems integration and optical design; Proceedings of the Seminar, San Diego, Calif., August 21-23, 1974. Palos Verdes Estates, Calif., Society of Photo-Optical Instrumentation Engineers, 1975, p. 12-16. NSF Grant No. GI-41895.

Potential approaches for utilizing solar energy are examined. It is concluded that it would be difficult to obtain consumer acceptance for systems providing solar heating and cooling for homes. However, solar electrical power via community or central power stations meets the requirement of minimum perturbation of the current socio-economic system. It is thought that economically feasible solar power systems could be developed within a decade of intensive work. The chief problems are related to the optical interface between the incoming sunlight and the using system. G.R.

A75-37396 * # **The effect of sunshine testing on terrestrial solar cell system components.** A. F. Forestieri and E. Anagnostou (NASA, Lewis Research Center, Cleveland, Ohio). *Institute of Electrical and Electronics Engineers, Photovoltaic Specialists Conference, 11th, Phoenix, Ariz., May 6-8, 1975, Paper.* 7 p.

Samples of FEP-encapsulated silicon solar cells and various potential encapsulation or cover materials were subjected to both accelerated and real-time testing. The durability of the samples was determined by measuring changes in solar cell output or optical transmission as a function of exposure. The tests revealed some problem areas in the structural integrity of the materials, e.g., delamination and cracking in FEP. These problems were probably related to defects in fabrication. FEP and Aclar had the least transmission loss after accelerated exposure equivalents of 5 and 3 years, respectively. S.J.M.

A75-37397 * # **V-grooved silicon solar cells.** C. R. Baraona and H. W. Brandhorst (NASA, Lewis Research Center, Cleveland, Ohio). *Institute of Electrical and Electronics Engineers, Photovoltaic Specialists Conference, 11th, Phoenix, Ariz., May 6-8, 1975, Paper.* 9 p.

Silicon solar cells with macroscopic V-shaped grooves and microscopically texturized surfaces have been made by preferential etching techniques. Various conditions for potassium hydroxide and hydrazine hydrate etching were investigated. Optical reflection losses from these surface were reduced. The reduced reflection occurred at all wavelengths and resulted in improved short circuit current and spectral response. Improved collection efficiency is also expected from this structure due to generation of carriers closer to the cell junction. Microscopic point measurements of collected current using a scanning electron microscope showed that current collected at the peaks of the texturized surface were only 80% of those collected in the valleys. (Author)

A75-37400 * # **The high intensity solar cell - Key to low cost photovoltaic power.** B. L. Sater (NASA, Lewis Research Center, Cleveland, Ohio) and C. Goradia (Cleveland State University, Cleveland, Ohio). *Institute of Electrical and Electronics Engineers, Photovoltaic Specialists Conference, 11th, Phoenix, Ariz., May 6-8, 1975, Paper.* 11 p. 15 refs.

This paper discusses the problems associated with conventional solar cells at high intensities and presents the design considerations and performance characteristics of the 'high intensity' (HI) solar cell which appears to eliminate the major problems. Test data obtained at greater than 250 AM1 suns gave a peak output power density of 2 W per sq cm at an efficiency exceeding 6% with an unoptimized cell operating at over 100 C. It appears that operation at 1000 AM1 suns at efficiencies greater than 10% is possible. At 1000 AM1 suns and 10% efficiency, the HI cell manufacturing cost is estimated to be $0.25/watt, with multi-megawatt annual production capability already existing within the industrial sector. A high intensity solar system was also analyzed to determine its cost effectiveness and to assess the benefits of further improving HI cell efficiency. (Author)

A study to determine the influence of fabrication processes and bulk material properties on the behavior of back surface field (BSF) cells is reported. It is concluded that a photovoltage is generated at the p(+), p back junction of the cell. The concept of majority carrier collection is proposed as a possible mechanism for this generation. Advantages accruing to the advent of BSF cells are outlined. S.J.M.

A75-37403 * # **Effects of high doping levels on silicon solar cell performance.** M. P. Godlewski, H. W. Brandhorst, Jr., and C. R. Baraona (NASA, Lewis Research Center, Cleveland, Ohio). *Institute of Electrical and Electronics Engineers, Photovoltaic Specialists Conference, 11th, Phoenix, Ariz., May 6-8, 1975, Paper.* 7 p. 19 refs.

Open-circuit voltages measured in silicon solar cells made from 0.01 ohm-cm material are 150 mV lower than voltages calculated from simple diffusion theory and cannot be explained by poor diffusion lengths or surface leakage currents. An analytical study was

made to determine whether high doping effects, which increase the intrinsic carrier concentration, could account for the low observed voltages and to determine the limits on voltage and efficiency imposed by high doping effects. The results indicate that the observed variation of voltage with base resistivity is predicted by these effects. A maximum efficiency of 19% (AMO) and a voltage of 0.7 volts were calculated for 0.1 ohm-cm cells assuming an optimum diffused layer impurity profile. (Author)

A75-37404 * # **Effect of impurity doping concentration on solar cell output.** P. A. Iles and S. I. Soclof (Optical Coating Laboratory, Inc., Santa Rosa, Calif.). *Institute of Electrical and Electronics Engineers, Photovoltaic Specialists Conference, 11th, Phoenix, Ariz., May 6-8, 1975, Paper.* 15 p. 18 refs. Contract No. NAS3-17360.

Experimental measurements were made of solar cell and related photovoltaic parameters for silicon with high concentrations of dopant impurities. The cell output peaked for doping levels around 10 to the 17th power per cu cm. Independent measurements of diffusion length and open circuit voltage at high doping levels showed severe reductions at concentrations above 10 to the 18th power per cu cm. Theoretical reasons are given to explain these reductions. Indication is given of the problems requiring solution before increased cell output can be achieved at high doping levels. (Author)

A75-37656 **Multimegawatt fuel cell power system.** L. M. Handley (United Aircraft Corp., Power Utility Div., South Windsor, Conn.) and D. R. Warnock (USAF, Aero Propulsion Laboratory, Wright-Patterson AFB, Ohio). In: NAECON '75; Proceedings of the National Aerospace and Electronics Conference, Dayton, Ohio, June 10-12, 1975. New York, Institute of Electrical and Electronics Engineers, Inc., 1975, p. 289-294. Contract No. F33615-72-C-1371.

A high power density H2/O2 fuel cell system is described. The system is modular and consists of two major subsystems: a power plant subsystem where energy conversion takes place and a supply subsystem for reactants and cooling water. Each power plant occupies 4.0 cu ft, weighs 295 lbs, and produces 575 kW. The cooling water supply is low-pressure (30 psia), and the reactant supply (at 3000 psia) provides a pressure source to force cooling water from the water tank into the power plant cooling system. Power required will determine the size and weight of the power plant subsystem, while operating time will determine the size and weight of the supply subsystem. The system is designed for short (30 sec to 2- or 3- min), high-power aerospace applications. A useful life of hundreds of missions is predicted for the equipment. S.J.M.

A75-37657 **MHD energy conversion for high power electrical needs.** E. C. Thoms, P. D. Lindquist, D. W. Swallom, and J. F. Holt (USAF, Aero Propulsion Laboratory, Wright-Patterson AFB, Ohio). In: NAECON '75; Proceedings of the National Aerospace and Electronics Conference, Dayton, Ohio, June 10-12, 1975. New York, Institute of Electrical and Electronics Engineers, Inc., 1975, p. 295-300. 23 refs. DARPA-supported research.

A lightweight, liquid-fuel MHD generator is under development. This prototype machine will produce 10 megawatts electrical output. Tests on a 2-MW model yielded a specific power-to-mass flow rate of 0.62 MW per kg per sec. Because the volume/surface ratio of the generator is roughly proportional to the power output level, the 10-MW unit should considerably exceed that figure. In-house development substantiates this expectation. An in-house power converter is used to increase the MHD output level to the order of tens of kilovolts. Lightweight magnet development, lightweight MHD channel development, and demonstration of MHD converter circuitry capable of lightweight packaging prove the engineering feasibility of airborne MHD power sources. A portable MHD unit has been developed in the USSR for electrically probing the earth's crust. (Author)

A75-37686 **Development of the KIVA-I MHD open cycle generator.** J. K. Lytle and R. V. Shanklin (Systems Research Laboratories, Inc., Dayton, Ohio). In: NAECON '75; Proceedings of the National Aerospace and Electronics Conference, Dayton, Ohio, June 10-12, 1975. New York, Institute of Electrical and Electronics Engineers, Inc., 1975, p. 499-506. 8 refs. USAF-supported research.

The results of the development of the KIVA-I MHD open cycle power generator system is described. The work involved the construction of a water-cooled diagonal-conducting wall generator which permits system operation in excess of 1 minute at a maximum power level of 200 kW. A high-voltage dc-to-dc converter was successfully driven by the generator for short test durations resulting in a 38 kV converter output. In addition, computer modeling of the combustor and channel performance resulted in modifications to these components which reduced generator losses and improved the overall performance of the system. To further improve the operation of the KIVA-I MHD generators, high-energy colloidal fuels are being developed. Increases in power output of 50 percent are anticipated when powdered metals, such as aluminum and magnesium, are suspended in a JP-4 or toluene fuel emulsion. The projected increase is a result of a higher flame temperature and non-equilibrium interaction between the gas and liquid-oxide phases of the products of combustion. (Author)

A75-37836 **Optimization of fusion power density in the two-energy-component tokamak reactor.** D. L. Jassby (Princeton University, Princeton, N.J.). *Nuclear Fusion,* vol. 15, June 1975, p. 453-464. 21 refs. Contract No. AT(11-1)-3073.

Optimal plasma conditions are determined for maximizing fusion power density in the two-energy-component (TCT) tokamak, in order to optimize the total neutron flux for a device of given size. The minimum value of fusion power multiplication (Q) required for economic operation as a fissile breeder is discussed. The ideal maximum fusion power density increases monotonically with decreasing electron temperature, but if a beam power multiplication of about 1 is desired, the preferred range of operation for electron temperature is 5 to 8 keV. Here, the optimal value for electron density times confinement time is 8 times 10 to the 12th sec per cu cm, while the corresponding beam pressure is 0.8 to 0.9 times the bulk-plasma pressure. Attaining the largest Q values demands the retention of all D-T alphas, while maximizing fusion power density entails ejection of alphas from the plasma. P.T.H.

A75-37846 **Energy and Resources - A plan is outlined according to which solar and wind energy would supply Denmark's needs by the year 2050.** B. Sorensen (Copenhagen, University, Copenhagen, Denmark). *Science,* vol. 189, July 25, 1975, p.255-260. 17 refs.

A wind-solar energy plan is proposed for Denmark. The suggested annual average energy consumption of 19 gigawatts by the year 2050 corresponds to solar energy collecting panels (in use only 50% of the time) with an area of about 180 sq km and a windmill-swept area of about 150 sq km. These regions constitute less than 1% of the total land area. Such a plan is concluded to be more desirable than the initially lower-cost alternative of intensive extraction of low-grade fossil fuel deposits. S.J.M.

A75-37849 **Ocean thermal gradient hydraulic power plant.** E. J. Beck (U.S. Navy, Naval Construction Battalion Center, Port Hueneme, Calif.). *Science,* vol. 189, July 25, 1975, p. 293, 294.

Solar energy stored in the oceans may be used to generate power by exploiting thermal gradients. A proposed open-cycle system uses low-pressure steam to elevate water, which is then run through a hydraulic turbine to generate power. The device is analogous to an air lift pump. (Author)

A75-37850 **Foam solar sea power plant.** C. Zener and J. Fetkovich (Carnegie-Mellon University, Pittsburgh, Pa.). *Science,* vol. 189, July 25, 1975, p. 294, 295. NSF Grants No. GI-39114; No. AER-73-07863A02.

In the accompanying report Beck suggests a new type of open-cycle system for obtaining power from the ocean's thermal gradient. A modification of this open-cycle plant which will ensure a high efficiency, and also a low capital cost per unit power output, is described here. (Author)

A75-38474 * # **Laser energy conversion.** K. W. Billman (NASA, Ames Research Center, Physical Gasdynamics and Lasers Branch, Moffett Field, Calif.). *Astronautics and Aeronautics,* vol. 13, July-Aug. 1975, p. 56-65. 25 refs.

Laser radiation could possibly provide a feasible approach for the transmission of energy between stations and vehicles in space and on earth. The transmitted energy could be used for the operational requirements of the receiving space station, lunar base, or spacecraft. In addition, laser energy could also be employed to provide power for the propulsion of vehicles in space. The present status of development regarding the various technological areas involved in an implementation of these objectives is examined, taking into account the possibility of further advances needed to satisfy the technical requirements. Attention is given to laser-induced chemistry for converting the radiation energy into chemical energy. Other subjects considered are related to photovoltaics, optical diodes, thermoelectronics, laser rockets, and photon engines. G.R.

A75-38568 **Theoretical study of the energy output of two magnetohydrodynamic generators (Etude théorique des rendements énergétiques de deux générateurs magnétohydrodynamiques).** J. Vergnes (Domaine Universitaire du Chaudron, Saint-Denis, Réunion, France). *Académie des Sciences (Paris), Comptes Rendus, Série B - Sciences Physiques,* vol. 280, no. 23, June 16, 1975, p. 707-709. In French.

The current work presents a comparative study of the yield of two alternating current generators consisting of rectangular conduits which contain an electroconductive viscous fluid and are subjected to a uniform magnetic induction field. The study assumes that the conduits are closed by a fixed resistance R. The fluid is caused to move by either one oscillating surface of the conduit (dissymmetric system), or by two surfaces (symmetric case). S.J.M.

A75-38644 **Satellites for energy transmission to earth - Technical and socioeconomic studies (Satelliten zur irdischen Energie-Übertragung - Technische und sozio-ökonomische Untersuchungen).** K. A. Ehricke. *(Hermann-Oberth-Gesellschaft, Raumfahrtkongress, 23rd, Salzburg, Austria, June 25-29, 1974.) Astronautik,* vol. 12, no. 2, 1975, p. 19-25. In German.

An overview of three new technologies that will improve the present energy situation is presented: (1) the production of electricity with nonfossil energy sources, chiefly nuclear, solar and geothermal ones; (2) the transmission of energy via microwaves; and (3) space technology, particularly economic space transportation means. A comparison of the electrical energy available per year from different sources is given with the expected conversion efficiencies for each source, and the subject of solar power conversion and transmission by means of satellites is discussed. Several characteristic quantities for a typical satellite energy relay station are tabulated, a cost analysis of this energy source is carried out, and a plan for the global distribution of satellite stations is put forward. S.J.M.

A75-38648 # **Laboratory semiautomatic infrared device for determining the composition of petroleum products in sewage (Laboratornyi poluavtomaticheskii infrakrasnyi pribor dlia opredeleniia soderzhaniia nefteproduktov v stochnoi vode).** V. M. Osipov, V. V. Luchinskii, and A. S. Egorov (Spetsial'noe Konstruktorskoe Biuro po Avtomatizatsii Neftepererabotki i Neftekhimii, Leningrad, USSR). *Khimiia i Tekhnologiia Topliv i Masel,* no. 6, 1975, p. 59, 60. 7 refs. In Russian.

The design of a laboratory infrared analyzer that will determine the total content of petroleum products in sewage of technological installations and refineries is described. The principle of the operation is an extractive-photometric process. The contaminants being analyzed are extracted from the sewage sample with the aid of carbon tetrachloride. The resultant extract is photometrized using infrared light at a wavelength of 3417 micron that corresponds to the absorption of CH2-groups. The electron-optical measurement system and the main technical characteristics of the device are examined. M.G.

FUNDAMENTAL ASPECTS OF SYSTEMS FOR THE THERMOCHEMICAL PRODUCTION OF HYDROGEN FROM WATER
M. G. Bowman Oct. 1974 11 p refs Presented at 1st Natl. Topical Meeting on Nucl. Process Heat Appl., Los Alamos, New Mexico, 1 Oct. 1974
(Contract W-7405-eng-36)
(LA-UR-74-1459; Conf-741032-2) Avail: NTIS HC $3.25

The thermochemical production of hydrogen by direct use of primary heat is a strong motivation for research to develop optimized processes. Maximum efficiency will be realized only if the thermochemical cycle is optimized for the temperature of the heat source. This implies that each heat source will require a different process. In order to conduct a systematic program of selecting useful processes from the very large number potentially available, it will be advantageous to delineate the thermodynamic, kinetic, engineering and economic criteria required for an optimum process and then conduct a vigorous theoretical and experimental program to identify cycles that approximate these criteria. This paper demonstrates one method of applying thermodynamic criteria in the synthesis of thermochemical processes for water splitting. Author (NSA)

LIQUID PLUGGING IN IN SITU COAL GASIFICATION PROCESSES
D. W. Gregg 25 Oct. 1974 7 p refs
(Contract W-7405-eng-48)
(UCRL-51686) Avail: NTIS HC $3.25

The presence of liquids can severely alter the spacial propagation characteristics of the flame front in an in situ coal gasification process. In a cocurrent burn, the liquids, water, and coal tars will be baked or pyrolyzed out of the coal in the hot zone near the flame front and will condense on cooler coal further downstream from the flame front. In the region where condensation is taking place, the liquids can plug the formation and thus alter or stop the gas flow pattern necessary for maintaining a spacially controlled flame front. Liquid plugging effects and their relationship to the permeability and the absolute crack sizes in the formation are discussed in a semiquantitative manner. The calculations presented are a rough guide to the requirements for preparing the coal seam with hydraulic or explosive fracturing, when such fracturing is needed.

PRODUCTION OF OIL FROM FRACTURED RESERVOIRS BY WATER DISPLACEMENT Ph.D. Thesis
Jon Kleppe 1974 70 p
Avail: Univ. Microfilms Order No. 75-2869

The flow behavior of fractured oil reservoirs produced by water displacement was studied. A two-dimensional numerical model capable of simulating flow of water and oil in the matrix blocks as well as in the fractures was developed. The validity of the model was checked against data from a laboratory experiment involving a matrix-fracture system. Good agreement was observed between the laboratory and simulation results. By means of numerical simulation the effects of production rate and fracture flow capacity on the production history and ultimate oil recovery of a fractured system were evaluated. It is demonstrated that for a given fracture flow capacity, the producing water-oil ratio is a unique function of oil remaining in place and present producing rate. A reservoir can be produced at a high rate until the water-oil ratio becomes too high to handle. Reducing the rate causes the water-oil ratio to decrease to the value it would have had if all the oil had been produced at this lower rate. Dissert. Abstr.

THREE-DIMENSIONAL SUBSURFACE DELINEATION VIA A NOVEL METHOD FOR DETERMINING THE SUBSURFACE ELECTRICAL PROFILE
R. J. Lytle, R. M. Bevensee, and D. L. Lager 18 Oct. 1974 17 p refs
(Contract W-7405-eng-48)
(UCRL-51685) Avail: NTIS HC $3.25

The combination of a standard experimental procedure (four-probe electrical resistivity), a novel analytical technique (probabilistic potential theory), and a powerful inversion algorithm (optimization /generalized linear inverse) is proposed as a method for determining the subsurface electrical profile. It is proposed that the feasibility of the procedure be tested by analysis of field experiments in conjunction with scale-model laboratory experiments to validate the algorithms for general structure. The procedure should have great practical value in a wide variety of applications: hydrology, location and definition of the shape and extent of underground resources (e.g., geothermal reservoirs, ore bodies, or deposits of coal, sand, or gravel), faultline definition, and monitoring of changes in subsurface conditions (e.g., as in earthquake studies, in situ coal gasification, and burn-front studies of oil-shale gasification). DEVELOPMENT OF A SOLUBLE REACTANTS AND

PRODUCTS SECONDARY BATTERY Ph.D. Thesis
Edward Jean Lahoda 1974 122 p
Avail: Univ Microfilms Order No. 75-4100

A theoretical and experimental study on the development of a secondary battery using soluble reactants and products was performed. A method for evaluating the theoretical performance of this type of secondary battery according to the specifications of energy and power to mass, volume, and cost ratios was developed and applied to ten prospective redox reactions. The four best combinations in the specifications studied were the Fe-Cr, Fe-Sn, Sn-Cr, and Fe-Ti systems. The properties of the half-cell separator (an anion membrane) are considered important. An experimental method for evaluating commercially available anion membranes according to the diffusion rate of multivalent cations through them was developed. Six different membranes were tested. The one with the lowest diffusion rate of the cations was the AMV anion membrane. It was found that a high anion transference number of high perm-selectivity was also a good indicator as to the suitability of the membrane for this type of secondary battery. Dissert. Abstr.

ECONOMIC-ENVIRONMENTAL POWER DISPATCH Ph.D. Thesis
Jacob Zahavi 1974 380 p
Avail: Univ. Microfilms Order No. 75-2795

A dispatch procedure for power generation systems which meet the demand for power while taking into account both cost and emission considerations is developed. The control problem is formulated as a bicriterion optimization problem with two conflicting objective functions: operating costs and the combined pollution. A tradeoff curve, representing all alternative dispatch policies, is obtained for any demand level. The tradeoff curve is defined as the set of all efficient points between cost and pollution, and is computed in a parametric form by minimizing a penalty function. The economic interpretations of the tradeoff curve are discussed. An air pollution diffusion model is applied to points on the tradeoff curve to evaluate the alternative dispatch policies. Several measures, based on exposure to pollution, which serve as a first approximation to air pollution damage, are evaluated. The utility function is described by a quasi-concave function whose maximum point is found among points on the tradeoff curve. An interactive search method is devised, in order to find the dispatch policy that maximizes the utility function. The models are applied to a realistic power system. The computations are carried out for various demand levels and various weather conditions, and the comparative analysis of the results is discussed. Dissert. Abstr.

Wind power is discussed as a source of energy, past, present and future. A brief summary of the history and development of windmills is presented. Tables of average wind velocity are included for different zones in the U.S.S.R. compiled from meteorological stations over a period of years. It is shown that the development of highly efficient wind power theory and engineering has led to the development of highly efficient wind-driven motors which use up to 42% of wind energy. The agricultural uses of wind-driven motors are also discussed. The matching of piston and centrifugal use of millstones with wind-driven motors are included. The use of free and unlimited wind energy is concluded to be efficient, particularly in agricultural and rural areas. Author

METHYL ALCOHOL PRODUCTION BY IN SITU COAL GASIFICATION
A. Pasternak 27 Aug. 1974 23 p refs
(Contract W-7405-eng-48)
(UCID-51600) Avail: NTIS HC $3.25

The need to use the large coal deposits of the U.S. as the raw material source for crude oil is discussed. Methyl alcohol can be produced from coal and used as a transportation fuel in internal combustion engines. The production route involves gasification of coal to carbon monoxide and hydrogen (synthesis gas) and high pressure catalytic conversion of these gases to methyl alcohol. In situ gasification of coal may be a less expensive way to produce synthesis gas than mining coal and gasifying it in surface plants. In situ gasification may also have less environmental impact and may be capable of using deep coal

seams that cannot be mined economically. A process for in situ gasification leading to methyl alcohol production is described, and the thermodynamics and costs of the process are outlined. Capital requirements are estimated to be $354 million for annual production of methyl alcohol with a fuel value of 81 trillion Btu's. The selling price is estimated to be $1.04 per million Btu's (5.9 cents per gallon). Author (NSA)

DIRECT CONVERSION OF PLASMA ENERGY TO ELECTRICITY FOR MIRROR FUSION REACTORS
R. W. Moir, W. L. Barr, and G. A. Carlson 24 Sep. 1974 17 p refs Presented at the 5th Conf. on Plasma Phys. and Controlled Nucl. Fusion Res., Tokyo, 11 Nov. 1974 Sponsored by ERDA
(UCRL-76051) Avail: NTIS HC $3.25

Direct conversion of plasma and ion beam energy to electricity for mirror fusion reactors is described. Selective leakage, magnetic expansion, electron separation, deceleration, and collection of ions are discussed. An experiment testing all processes except selective leakage gave an overall efficiency of 86.5 + or - 1.5% for a 22-stage collector. Computer calculations of these same processes gave an efficiency of 88.6 + or - 1.5%, agree. Experiments on a two-stage collector gave 65% efficiency compared to 69% calculated efficiency. One- two-, and 22-stage converters were studied under reactor-like conditions with a large computer simulation code that accounts for space charge, secondary electrons, and finite, realistic electrode shapes. Laboratory tests of mono-energetic beam direct conversion gave 96% efficiency for a 2-keV low power dc beam and 70% for a dc 20 keV, 1-kW beam. Author (NSA)

TECHNICAL EVALUATION SERVICES, CLEAN LIQUID AND/OR SOLID FUELS FROM COAL Technical Progress Report, Oct. 1972 - Aug. 1974
Nov. 1974 13 p
(Contract DI-14-32-0001-1234)
(PB-237216/7; POCR-82-INT-4) Avail: NTIS HC $3.25 CSCL 07A

A preliminary design and capital cost estimate report was prepared describing a coal conversion demonstration plant capable of producing 25,000 bbl/day of clean boiler fuels. Also completed was a preliminary process design and economic evaluation for a Fischer-Tropsch process plant to process 3,500 TPD of coal. Work is in the later stage of completion for a preliminary design and economic analysis of a conceptual nominal 25,000-TPD commercial COED-based pyrolysis plant with char gasification and electrical power generation. Reviews of process design, mechanical design, and construction progress are nearly completed for the SRC pilot plant located at Tacoma, Washington. GRA

NON-HAZARDOUS PRIMARY LITHIUM-ORGANIC ELECTROLYTE BATTERY BA-5590 ( )/U Final Report, Jul. 1973 - Sep. 1974
Thomas Watson Oct. 1974 32 p
(Contract DAAB07-73-C-0282)
(AD-A003312; ECOM-0282-73-F) Avail: NTIS CSCL 10/3

The subject concerns the development and fabrication of Battery No. BA-5590( )/U in accordance with the performance/safety requirements as defined in the Technical Guidelines for Non-Hazardous Primary Lithium-Organic Electrolyte Batteries dated 29 March 1973. The primary concern has been the fabrication of the subject batteries in conference with these guidelines and most important, the development of effective safety mechanisms to insure non-hazardous operation under all conditions of storage, use and operation. Basic considerations for such safety mechanisms were system reliability, effectiveness, economics and adaptability to eventual automated production. The electrolyte consists of 70% sulfur dioxide by weight. The remaining 30% contains lithium bromide and the organic solvents. GRA

CYLINDRICAL ERBIUM OXIDE RADIATOR STRUCTURES FOR THERMOPHOTOVOLTAIC GENERATORS Research and Development Technical Report
Guido E. Guazzoni and Emil Kittl Aug. 1974 33 p refs
(DA Proj. 1S7-62704-AH-94)
(AD-A001525; ECOM-4249) Avail: NTIS CSCL 10/2

Results of an experimental investigation are reported which cover the fabrication and evaluation of slip-casted and hot pressed erbium oxide cylinders and silicon carbide structures coated with erbium oxide. Suitable erbium oxide cylindrical structures will be used as radiating mantles in thermophotovoltaic converter systems. The pure erbium oxide cylindrical mantles were found to be deficient in thermal shock resistance which resulted in cracking of the mantles and extremely low thermal cycle life. The erbium oxide coated silicon carbide structures provided satisfactory thermal cycling capability up to 1500C but their spectral emission showed a large content of background radiation which manifested itself in an increased amount of undesirable interband emission. Higher optical density of the erbium oxide coating, to provide reduction of unwanted background radiation, is necessary to make these structures of practical use. GRA

DEPENDENCE OF COAL LIQUEFACTION BEHAVIOR ON COAL CHARACTERISTICS Interim Report, Jan. 1973 - Jun. 1974
Jan. 1975 45 p refs
(Contract DI-14-01-0001-390)
(PB-238522/7; OCR-61-INT-9) Avail: NTIS HC $3.75 CSCL 10A

Liquefaction behavior of coal samples was studied. The samples had widely differing sulfur contents (up to 6%) but the oils produced had sulfur contents less than 0.5% in almost all cases. In addition, the results strongly indicated that in a number of cases the mineral constituents of coals, usually considered as unwanted impurities, may actually have a beneficial effect as additional catalysts for the liquefaction process. ENERGY STATISTICS. A SUPPLEMENT TO THE SUMMARY OF NATIONAL TRANSPORTATION STATISTICS Final Report, 1961 - 1973
William F. Gay Aug. 1974 140 p
(PB-236767/8; DOT-TSC-OST-74-12) Avail: NTIS HC $5.75 CSCL 21D

A compendium is presented of selected time-series data describing the transportation, production, processing, and consumption of energy. The report is divided into three main sections. The first, entitled Energy Transport, contains such items as the revenues and expenses of oil pipeline companies, number and capacities of U.S. tank ships, and the total crude oil transported in the U.S. by method of transportation. The second section, entitled Reserves, Production, and Refining, reveals the growth over time of the U.S. oil and natural gas reserves, refinery capacity, and yields. Trends in the demand for fuel and power are displayed in the third section, entitled Energy Consumption. Throughout this part, the transportation sector is emphasized. Included are the gasoline and oil costs of automobiles of different sizes, the consumption of petroleum by type of product, the electrical energy consumed by the local transit industry, and other important statistics describing the supply and demand for energy. NUCLEAR REACTOR PROCESS HEAT CAPABILITIES, POTENTIAL, AND ECONOMICS
D. B. Trauger and L. L. Bennett 1974 4 p Presented at the 1st Natl. Topical Meeting on Nuclear Process Heat Appl., Los Alamos, New Mexico, 1 Oct. 1974 Sponsored by ERDA
(Conf-741032-1) Avail: NTIS HC $3.25

A present-day limitation of nuclear power plants is that they are all steam producers, whereas many industries need high-temperature process heat in addition to steam. Achievement of high temperature capabilities would allow the gas-cooled reactors to supply process heat as well as industrial steam requirements. The cost of steam from nuclear reactors for industrial uses was evaluated. Nuclear energy costs were compared with coal or refined-coal fuels at a U.S. Gulf Coast location. These studies indicate that, in large sizes, the LWR and HTGR can provide process steam at lower cost than coal-based plants. While the CNSG is smaller than conventional LWRs, and therefore a more appropriate size for many industrial applications, the unit energy cost is significantly higher than from larger nuclear plants (due to economies of scale) or from a variety of coal fuel cycles.

ADVANCED CONCEPTS IN FUSION-FISSION HYBRID REACTORS
J. A. Maniscalco and L. L. Wood 26 Jul. 1974 40 p refs Presented at Am. Nucl. Soc. Natl. Meeting, Washington, D. C., 27 Oct. - 1 Nov. 1974 Submitted for publication Sponsored by ERDA
(UCRL-75835; Conf-741086-6) Avail: NTIS HC $3.75

Fusion-fission hybrid reactors are viewed as sub-critical nuclear fission reactors driven and controlled by an internal high energy neutron source the fusion reactor. Such hybrids combine naturally the neutron richness of fusion power sources with the power richness of fission sources, thereby eliminating the intrinsic power poverty and neutron deficiency of these respective sections. Also eliminated in uncontrived fashions are the somewhat marginal specific tritium breeding rates of relistic fusion power reactor designs, the low specific fissile material breeding rates of conventional fast breeder fission reactors, the criticality control problems of fast breeder reactors, the demands of both fast breeder and light water reactors for both mined uranium and separative work capacity, and possible cost and technology complexity problems of fusion power reactor designs.

RESULTS OF WORK ON THERMOEMISSION CONVERSION
D. Karetnikov 20 May 1974 5 p Transl. into ENGLISH from Russian paper presented at an Intern. Meeting on Thermionics, Vienna, 1972
(AD-A002655; FSTC-HT-23-147-74) Avail: NTIS CSCL 10/2

The paper reports that tests of the TOPAZ-3 thermionic reactor, similar in design to its 2 predecessors, began in 1972. By 1 March 1973, it had operated about 3000 hours at 5-7 kV, and efficiency was 30% higher than that of the first reactors. At the same time, tests of 1- and 5-element generating channels were conducted, with a 5-element channel operating for over 3000 hours at 1.7 W/sq cm. A single element with tungsten-rhenium emitter and niobium collector operated 2670 hours with initial power density of 7 W/sq cm dropping to nearly 3.5 W/sq cm by the end of the test. Unexpectedly great reduction in neutral component concentration was found in theoretical-experimental study of nonstationary cesium plasma. A triode thermionic converter, as a high-temperature thyratron, using a cesium-barium mixture at low pressure can close the circuit at up to 100 V, cathode temperature 1600C, current density up to 20 A/sq cm and voltage drop of not over 5 V.

IMPACT OF FUTURE USE OF ELECTRIC CARS IN THE LOS ANGELES REGION. VOLUME 1: EXECUTIVE SUMMARY AND TECHNICAL REPORT Final Report
W. F. Hamilton Oct. 1974 117 p refs 3 Vol.
(Contract EPA-68-01-2103)
(PB-238877/5; EPA-460/3-74-020-A-Vol-1) Avail: NTIS HC $5.25 HC also available from NTIS $24.00/set of 3 reports as PB-238876-SET CSCL 13F

Impacts of the use of electric cars in the Los Angeles region in 1980-2000 were projected for four-passenger subcompact electric cars using lead-acid and advanced batteries, with urban driving ranges of about 55 to 140 miles, respectively. Data from Los Angeles travel surveys shows that such cars could replace 17-74 percent of future Los Angeles autos with little sacrifice of urban driving. Adequate raw materials and night-time recharging power should be available for such use in the Los Angeles Region. The electric subcompacts would appear to be 20-60% more expensive overall than conventional subcompacts until battery development significantly reduces battery depreciation costs. This volume makes an overall review. GRA

Potential improvements in automobile fuel consumption based on innovative design and components. Standard and compact-size reference vehicles were selected, and a study of how power is used was conducted. Obvious technological innovations that would save on fuel consumption were identified and evaluated, and then screened against program constraints. Operation of reference vehicles equipped with innovative components or redesigned was computer simulated to predict fuel usage and performance. Techniques to measure fuel economy performance were also developed, and a statistical evaluation of published driving modes was performed.

A DIRECT VOLTAGE CONVERTER WITHOUT TRANSFORMER
T. Kuzmiszkina and A. Matusewicz Washington NASA [1975] 16 p Transl. into ENGLISH from Przeglad Telekomunikacyjny (Poland), V. 46, no. 1, 1973 p 23-28
(Contract NASw-2481)
(NASA-TT-F-16174) Avail: NTIS HC $3.25 CSCL 09C

The operating principle is described for a direct voltage converter without a transformer, and an analysis, together with an example of a circuit is presented. The converter can be applied to supply electronic devices operating at low and high power consumption. The converter has a high power efficiency. Because the converter operates without a transformer, it can be designed using IC technology. Author

CONVERSION OF ELECTRICAL ENERGY INTO LASER RADIATION ENERGY IN HIGH PRESSURE MIXTURES OF MOLECULAR GASES [KONWERSJA ENERGII ELEKTRYCZNEJ W ENERGIE PROMIENIOWANIA LASEROWEGO W WYSOKOCISNIENIOWEJ MIESZANINIE GAZOW MOLEKULARNYCH]
Wojciech W. Byszewski 1974 181 p refs In POLISH
Avail: Issuing Activity

The physical processes taking place in the plasma of a carbon dioxide laser and their influence on electrical energy conversion were investigated. Other topics discussed include kinetics of electron collisions, variations in energy transport coefficients during electron-molecule collisions, differential equations (which describe changes in molecular density, electron density, and radiation intensity), the dependence of energy characteristics on gas pressure and electron energy, and numerical modelling of electron beam controlled high pressure discharge.

STIRLING CYCLE ENGINE AND REFRIGERATION SYSTEMS Patent Application
Walter H. Higa, inventor (to NASA) (JPL) Filed 5 May 1975 23 p
(Contract NAS7-100)
(NASA-Case-NPO-13613-1; US-Patent-Appl-SN-574208) Avail: NTIS HC $3.25 CSCL 13I

A Stirling cycle heat engine is described in which displacer motion is controlled as a function of the working fluid pressure

and a substantially constant pressure. The heat engine includes an auxiliary chamber at the constant pressure, and an end surface of a displacer piston is disposed in the auxiliary chamber. During the compression portion of the engine cycle when the fluid pressure rises above the constant pressure, the displacer forces the working fluid to pass from the cold chamber to the hot chamber of the engine. During the expansion portion of the engine cycle the heated working fluid in the hot chamber does work by pushing down on the engine's drive piston. As the working fluid pressure drops below the constant pressure, the displacer forces most of the working fluid in the hot chamber to pass through the regenerator to the cold chamber. The engine is easily combinable with a refrigeration section to provide a refrigeration system in which the engine's single drive piston serves both the engine and the refrigeration section. NASA

This text book sets forth basic information about oil centers and modern methods of constructing steel and concrete tanks for storing petroleum and petroleum products. Problems in designing steel and concrete oil tank members for strength and durability are also discussed. Information is given about the design and construction of gas storage tanks. A separate chapter is devoted to the latest methods of building storage tanks. A detailed description is given on erecting reinforced concrete oil storage tanks as well as underground gas storage tanks. The final chapter covers the machinery which must be used with steel or reinforced concrete storage tanks GRA

OIL DISPLACEMENT BY DIFFERENT SURFACTANT AND POLYMER WATERFLOOD SYSTEMS Ph.D. Thesis
Adel El-Sayed Ali El-Messidi 1974 178 p
Avail: Univ. Microfilms Order No. 75-11244

Rheological studies for four different fluid systems of oil recovery by waterflooding were conducted. The fluid systems are: conventional waterflooding, polymer waterflooding, polymer-surfactant waterflooding, and surfactant waterflooding. The cone and plate viscometer was used for such purpose for most of the investigated solutions, and the obtained data fit the power law equation. A Cannon Ubbelohde Capillary Viscometer was also used for the viscosity measurements for different solutions used in the oil displacement experiemtns. A Du Nouy tensiometer was also used to investigate the property of surface and interfacial tension of the different solutions. It was clear that the surfactants always had a great influence on these properties when added to either brine or polymer-brine solutions. A study of the oil displacement mechanism was also conducted using Berea sandstone core samples. Dissert. Abstr.

POTASSIUM TOPPING CYCLES FOR STATIONARY POWER Final Report
R. J. Rossbach Washington NASA Mar. 1975 130 p refs (Contract NAS3-17354)
(NASA-CR-2518; GESP-741) Avail: NTIS HC $5.75 CSCL 10A

A design study was made of the potassium topping cycle powerplant for central station use. Initially, powerplant performance and economics were studied parametrically by using an existing steam plant as the bottom part of the cycle. Two distinct powerplants were identified which had good thermodynamic and economic performance. Conceptual designs were made of these two powerplants in the 1200 MWe size, and capital and operating costs were estimated for these powerplants. A technical evaluation of these plants was made including conservation of fuel resources, environmental impact, technology status, and degree of development risk. It is concluded that the potassium topping cycle could have a significant impact on national goals such as air and water pollution control and conservation of natural resources because of its higher energy conversion efficiency. BRIEF EXAMINATION OF THE STATUS OF NUCLEAR POWER IN THE REPUBLIC, USING 1974 COSTS
Aug. 1974 17 p refs
(PEL-237E; ISBN-0869605186) Avail: ERDA Depository Libraries HC $4.00

Nuclear power was introduced to the South African grid in the form of a light-water reactor (LWR) resulting in lower system-averaged costs to the end of the century. An installed nuclear capacity of 12,250 MWe is predicted by the year 2000. The economic date for reliable full-power operation for the first plant is computed to be 1983, with the second following a year later, and a third in 1987. Predictions of the installed nuclear capacity are sensitive to future fuel costs, but insensitive to future interest rates. Emphasis is placed on middle-term planning for the foreseeable future. Nuclear power is competitive only if the price of coal escalates at a rate of 4 per cent per annum and nuclear fuel costs remain as predicted. The introduction of nuclear power results in a significant saving in the amount of coal used for power generation at the expense of only a 1 per cent depletion of our low-cost uranium reserves.

RETROFITTING EXISTING HOUSING FOR ENERGY CONSERVATION: AN ECONOMIC ANALYSIS Final Report
Stephen R. Peterson Dec. 1974 78 p refs Prepared in cooperation with Federal Energy Administration, Washington, D. C.
(COM-75-50049/6; NBS-BSS-64) Avail: NTIS MF $2.25; SOD HC as C13.29/2:64 CSCL 13M

The study examines the economic aspects of energy conservation techniques suitable for retrofitting into existing housing, including insulation, storm windows and doors, and weather stripping. The objective is to determine a combination of techniques which will maximize net dollar savings in life-cycle operating costs for heating and cooling operations in existing homes, subject to specific climate conditions, fuel costs, and retrofitting costs. Microeconomic marginal analysis indicates that such a combination must be balanced so that the ratio of savings to cost is equal at the margin for each technique. GRA

AT-SEA TESTING OF A HIGH SEAS OIL RECOVERY SYSTEM Final Report, 30 Jul. - 18 Aug. 1973
Thomas N. Blockwick, Robert L. Beach, Frank A. March, and

Louis S. Brown Jul. 1974 124 p refs
(Contract DOT-CG-32781-A)
(AD-A006938; USCG-D-57-75) Avail: NTIS HC $5.25 CSCL 13/2

This report summarizes the at-sea tests of the 2000 gpm Ocean Systems, Inc., Weir-Basin Oil Recovery System (ORS) conducted at Port Hueneme, California, and at Point Conception, California. These tests were conducted without oil, with the purpose being to qualify the ORS with respect to strength, stability, operational function, ease of handling, compatibility with the Coast Guard lightweight oil containment barrier, and compatibility with Coast Guard buoy tenders. The tests showed that the 2000 gpm ORS was compatible with the barrier in both of the deployment configurations tested. Conformance to waves was very good, indicating that a high probability of obtaining high oil recovery efficiencies (percent oil in the recovered stream) could be expected. Launch and recovery from a buoy tender were successful, although a shorter length for the ORS was indicated to be desirable. Design modifications to minimize fabric wear and to increase the structural adequacy in certain areas are recommended. GRA

STRATIGRAPHY, SEDIMENTOLOGY AND OIL AND GAS GEOLOGY OF THE LOWER CRETACEOUS IN CENTRAL ALBERTA Ph.D. Thesis
Peter C. Badgley 1952 293 p
Avail: Univ. Microfilms Order No. 75-6717

A regional stratigraphic and sedimentological analysis of the Lower Cretaceous series in central Alberta, embracing a region in which a number of important oil and gas discoveries were made, is presented. Structure contour, isopach and isolith maps, and stratigraphic and structural cross-sections were constructed based on subsurface core, sample, and electric logs data. The Lower Cretaceous series was subdivided over a large area, and a comprehensive nomenclature scheme is recommended. The significance and lateral persistence of each subdivision is established, and correlations recommended. Significant facies changes were determined for the various formations. Petrographic methods were applied to the analysis of the Lower Cretaceous formations and a comparison of methods as well as a statement of results was possible. Several structural trends significant to the location of oil and gas fields were determined. Rapid up regional dip porous sandstone pinch outs, found in the Joseph Lake region, are considered to be the most favorable areas for light crude production. Dissert. Abstr.

PROTECTING THE US PETROLEUM MARKET AGAINST FUTURE DENIALS OF IMPORTS Interim Report
Horst Mendershausen and Richard Nehring Oct. 1974 108 p
(Contract DAHC15-73-C-0181)
(AD-A006643; R-1603-ARPA) Avail: NTIS CSCL 05/3

The report considers precautionary policies to counter the threat of future disruptions in the supply of U.S. oil imports. Such disruptions are highly possible, since the conditions that produced the Arab embargo of 1973-74 have not been eliminated. The authors review the recent oil embargo and U.S. responses to it, examine the history of U.S. petroleum imports, and weigh the outlook for future imports by source and relative vulnerability. GRA

THE ROLE FOR FEDERAL R AND D ON ALTERNATIVE AUTOMOTIVE POWER SYSTEMS Interim Report, 1 Jun. - 31 Oct. 1974
John B. Heywood, Henry D. Jacoby, Lawrence H. Linden, Patricia D. Mooney, *and* Joe M. Rife Nov. 1974 175 p *refs*
(Grant NSF EN-44166)
(PB-238771/0; MIT-EL-74-013) Avail: NTIS HC $6.25 CSCL 21G

The question: Is it appropriate for the Federal Government to support R and D on alternative automotive power systems is examined. Potential alternatives to the internal combustion engine (ICE) include the stratified charge, Wankel, diesel, Rankine cycle, Stirling cycle, gas turbine, electric and hybrid systems. These engines may offer advantages over the ICE but considerable development would be required, and Federal support has been proposed. The five sections of the report are: a description of the central issue and a set of underlying issues, a review of the relevant technology, an exploration of the role for Federal R and D in overall Federal policy concerning the automobile, an analysis of present programs in industry and government, and conclusions. Appendices review the history of Federal programs and describe the content of present industry and government programs. GRA

EVALUATION OF THE ENERGY PERFECTION OF THE DIFFERENT FORMS OF TRANSPORT
A. A. Borin 18 Feb. 1975 29 p refs Transl. into ENGLISH from Uch. Zap. Tsentr. Aerogidrodinamicheskii Inst. (USSR), v. 2, no. 6, 1971 p 140-145
(AD-A006562; FTD-MT-24-0455-75) Avail: NTIS CSCL 20/11

Direct comparative evaluation of power engineering of transport vehicles is discussed which is based on different methods of lift formation and thrust. It is shown that the criteria of transport vehicles are divided into four categories characterized by different dependence of energy criterion on the motion speed. Other topics discussed include flow rates, hydrofoils, lift devices, air intakes, and cost analysis. M.J.S.

THE ROLE OF COMPUTERS IN FUTURE PROPULSION CONTROLS
Charles E. Bentz *In* AGARD Power Plant Controls for Aero-Gas Turbine Eng. Mar. 1975 9 p refs

The role of computers in future propulsion controls is reviewed from two different viewpoints - the integrated avionics approach and the dedicated propulsion system approach. The discussion presented suggests that a dedicated computer for the propulsion system control will provide a more optimum solution in the future in terms of cost, complexity, and reliability. An integrated avionic systems approach that also includes the propulsion system control poses many new problems in the areas of system management and hardware development that may overshadow any of the immediate benefits of using a central processor.

ELECTRIC POWER FOR SPACE SATELLITES
Charles M. MacKenzie 4 Apr. 1974 32 p Presented at the Solar Energy Lecture 4, Washington, D. C., Mar. - May 1974; sponsored by IEEE, Washington Acad. of Sci., and Washington Soc. of Eng.
(NASA-TM-X-66808) Avail: NTIS HC $3.75 CSCL 21C

The development of electric power systems for satellites is discussed as an evolutionary process requiring the integration of power generation, power storage, and power control and distribution. The growth of space electric power systems is traced. The capabilities and limitations of the various elements (i.e. silicon solar cells) are discussed together with their impact on future technological growth. Author

FEASIBILITY STUDY OF A SATELLITE SOLAR POWER STATION Final Report
Peter E. Glaser, Owen E. Maynard (Raytheon Co., Sudbury, Mass.), John J. R. Mackovciak (Grumman Aerospace Corp., Bethpage, Mass.), and Eugene I. Ralph (Spectrolab, Inc., Sylmar, Calif.)
Washington NASA Feb. 1974 199 p refs
(Contract NAS3-16804)
(NASA-CR-2357; ADL-C-74830) Avail: NTIS HC $7.00 CSCL 10B

A feasibility study of a satellite solar power station (SSPS) was conducted to: (1) explore how an SSPS could be flown and controlled in orbit; (2) determine the techniques needed to avoid radio frequency interference (RFI); and (3) determine the key environmental, technological, and economic issues involved. Structural and dynamic analyses of the SSPS structure were performed, and deflections and internal member loads were determined. Desirable material characteristics were assessed and technology developments identified. Flight control performance of the SSPS baseline design was evaluated and parametric sizing studies were performed. The study of RFI avoidance techniques covered (1) optimization of the microwave transmission system, (2) device design and expected RFI; and (3) SSPS RFI effects. The identification of key issues involved (1) microwave generation, transmissions, and rectification and solar energy conversion; (2) environmental-ecological impact and biological effects; and (3) economic issues, i.e., costs and benefits associated with the SSPS. The feasibility of the SSPS based on the parameters of the study was established. Author

THE OXIDATION OF ETHYLENE IN AUTOMOTIVE ENGINE EXHAUST GAS; AN EXPERIMENTAL INVESTIGATION Ph.D. Thesis
Richard William Deller 1974 185 p
Avail: Univ. Microfilms Order No. 75-11763

The removal of the hydrocarbon emissions from automotive engine exhaust gas was effected by a thermal reactor. The removal of ethylene from exhaust gas under simulated thermal reactor conditions is studied. The exhaust gas is of variable composition and the composition of the reacting mixtures is quench sampled and analyzed by chemical and instrumental means. Results show that the ethylene removal rate was dependent not only on the oxygen concentration and the temperature but that it was also influenced by the nitric oxide concentration. The concentration of the active radicals, which is available to attack ethylene, is controlled by nitric oxide through a complex inhibition and reintroduction mechanism. Dissert. Abstr.

THE DIRECT PRODUCTION OF HYDROCARBONS FROM COAL-STEAM SYSTEMS Final Report, Nov. 1968 - Nov. 1973
Jan. 1975 87 p refs
(Contract DI-14-01-0001-1196)
(PB-239356/9; OCR-80-f) Avail: NTIS MF $2.25; SOD HC $4.65 as C.I163.10:80 CSCL 07A

Experiments were carried out on the use of a multiple catalyst system consisting of potassium carbonate and a commercial nickel methanation catalyst for the direct production of methane from coal-steam reactions. This system combines the effects of these catalysts to produce in a single-step conversion a product gas consisting primarily of methane and carbon dioxide with a CO2-free heating value as high as 850 Btu per SCF. Two of the apparent problems inherent with such a system were catalyst recovery and the loss of catalyst activity over prolonged periods of time at the conversion temperatures in the presence of the various reactants produced from the coal gasification. ERTS-C (LANDSAT 3) CRYOGENIC HEAT PIPE EXPERIMENT DEFINITION Final Report

P. J. Brennan and E. J. Kroliczek Mar. 1975 87 p refs (Contract NAS5-20968)
(NASA-CR-143797; BK005-1009) Avail: NTIS HC $4.75 CSCL 13A

A flight experiment designed to demonstrate current cryogenic heat pipe technology was defined and evaluated. The experiment package developed is specifically configured for flight aboard an ERTS type spacecraft. Two types of heat pipes were included as part of the experiment package: a transporter heat pipe and a thermal diode heat pipe. Each was tested in various operating modes. Performance data obtained from the experiment are applicable to the design of cryogenic systems for detector cooling, including applications where periodic high cooler temperatures are experienced as a result of cyclic energy inputs. LOW-TEMPERATURE EVOLUTION OF HYDROCARBON GASES FROM COAL M.S. Thesis
Ann G. Kim Nov. 1974 28 p refs
(PB-238322/2; BM-RI-7965) Avail: NTIS HC $3.75 CSCL 08D

Hydrocarbon gases, are by-products of coal formation. An experiment was performed to determine if observable changes in the gases from coal could be produced at temperatures below 200C in relatively short periods of time. The experiment involved heating coal samples from six coalbeds at constant temperatures and analyzing evolved gases. The composition of the gases at three temperatures was compared. At 35C, over 99 percent of the gas is methane; at 125 and 150, methane constitutes approximately half of the hydrocarbon gas. Iso-butane and pentane are the predominant higher hydrocarbon at temperatures between 100 and 150C. GRA

ELECTRIC POWER GENERATION UTILIZING A HEAT PIPE TURBINE-GENERATOR Ph.D. Thesis
Urho Sulonantti Haapala 1975 168 p
Avail: Univ. Microfilms Order No. 75-10625

The generation of electrical power utilizing a turbine-generator unit situated within the adiabatic section of a heat pipe is investigated. The analytical model is established to ascertain the interacting constraints upon the electrical power output due to fluid physical properties, total axial thermal energy transport, gravitational effects, and geometrical parameters of the heat pipe and turbine-generator unit. The analysis for the wickless heat pipe includes the effects of the rate of change of momentum, frictional losses at the liquid-vapor interface, viscous drag of the liquid at the pipe wall, variations of the rate of mass transport across the liquid-vapor interface with liquid film thickness, and the axial pressure gradients of the vapor It is shown that optimum power output occurs at the maximization of the product of the mass flux and the available pressure gradient across the adiabatic section. The design analysis of a terrestrial power generation station utilizing solar energy or the oceanic-atmospheric temperature gradient occurring in the arctic or antarctic regions is presented. Dissert. Abstr.

SPACE SATELLITE POWER SYSTEM
Peter E. Glaser 28 Mar. 1974 24 p Presented at the Solar Energy Lecture 3, Washington, D. C., Mar.-May 1974; sponsored by IEEE, Washington Acad. of Sci., and Washington Soc. of Eng. Sponsored by NASA
(NASA-CR-142799) Avail: NTIS HC $3.25 CSCL 10A

The concept of a satellite solar power station was studied. It is shown that it offers the potential to meet a significant portion of future energy needs, is pollution free, and is sparing of irreplaceable earth resources. Solar energy is converted by photovoltaic solar cell arrays to dc energy which in turn is converted into microwave energy in a large active phased array. The microwave energy is beamed to earth with little attenuation and is converted back to dc energy on the earth. Economic factors are considered. Author

PRODUCTION OF GASEOUS FUEL BY PYROLYSIS OF MUNICIPAL SOLID WASTE Final Report
T. H. Crane, H. N. Ringer, and D. W Bridges 20 Mar. 1975 65 p
(Contract NAS9-14305)
(NASA-CR-141791) Avail: NTIS HC $4.25 CSCL 10A

Pilot plant tests were conducted on a simulated solid waste which was a mixture of shredded newspaper, wood waste, polyethylene plastics, crushed glass, steel turnings, and water Tests were conducted at 1400 F in a lead-bath pyrolyser. Cold feed was deaerated by compression and was dropped onto a moving hearth of molten lead before being transported to a sealed storage container About 80 percent of the feed's organic content was converted to gaseous products which contain over 90 percent of the potential waste energy; 12 percent was converted to water; and 8 percent remained as partially pyrolyzed char and tars. Nearly half of the carbon in the feed is converted to benzene, toluene and medium-quality fuel gas, a potential credit of over $25 per ton of solid waste. The system was shown to require minimal preprocessing and less sorting then other methods. Author

THE DEVELOPMENT OF A SOLAR RESIDENTIAL HEATING AND COOLING SYSTEM
4 Apr. 1975 53 p
(NASA-CR-142728; M-TU-75-3) Avail NTIS HC $4.25 CSCL 10A

The MSFC solar heating and cooling facility was assembled to demonstrate the engineering feasibility of utilizing solar energy for heating and cooling buildings, to provide an engineering evaluation of the total system and the key subsystems, and to investigate areas of possible improvement in design and efficiency. The basic solar heating and cooling system utilizes a flat plate solar energy collector, a large water tank for thermal energy storage, heat exchangers for space heating, and an absorption cycle air conditioner for space cooling. A complete description of all systems is given. Development activities for this test system included assembly, checkout, operation, modification, and data analysis, all of which are discussed. Selected data analyses for the first 15 weeks of testing are included, findings associated with energy storage and the energy storage system are outlined, and conclusions resulting from test findings are provided. An evaluation of the data for summer operation indicates that the current system is capable of supplying an average of 50 percent of the thermal energy required to drive the air conditioner Preliminary evaluation of data collected for operation in the heating mode during the winter indicates that nearly 100 percent of the thermal energy required for heating can be supplied by the system Author

COST COMPETITIVENESS OF A SOLAR CELL ARRAY POWER SOURCE FOR ATS-6 EDUCATIONAL TV TERMINAL
R. M. Masters Apr. 1975 9 p refs
(NASA-TM-X-71720; E-8327) Avail: NTIS HC $3.25 CSCL 10B

A cost comparison is made between a terrestrial solar cell array power system and a variety of other power sources for the ATS-6 Satellite Instructional Television Experiment (SITE) TV terminals in India. The solar array system was sized for a typical Indian location, Lahore. Based on present capital and fuel costs, the solar cell array power system is a close competitor to the least expensive alternate power system. A feasibility demonstration of a terrestrial solar cell array system powering an ATS-6 receiver terminal at Cleveland, Ohio is described Author

N75-24111*# National Aeronautics and Space Administration. Lewis Research Center, Cleveland, Ohio.
OUTDOOR FLAT-PLATE COLLECTOR PERFORMANCE PREDICTION FROM SOLAR SIMULATOR TEST DATA
Frederick F. Simon and Edgar H. Buyco 29 May 1975 17 p refs Presented at 10th Thermal Phys. Conf., Denver, 27-29 May 1975; sponsored by AIAA
(NASA-TM-X-71707; E-8320) Avail: NTIS HC $3.25 CSCL 10B

Solar collector performance data obtained from tests with a simulator was modified for real-life conditions. The data obtained with the simulator was corrected for the variable conditions of ambient temperature, wind, incident angle, flow rate, etc., that are encountered outdoors. Modification of simulator data

was accomplished by combining experiment with theory. The technique was demonstrated by application to a spectrally selective and a nonselective type of collector. This kind of modified simulator collector performance data should be valuable in solar systems analysis and for collector performance ranking based on all-day calculated conditions. Author

THE ECONOMICS OF ENERGY AND NATURAL RESOURCE PRICING
Washington GPO Mar. 1975 797 p refs Compilation of Reports and Hearings of the Ad Hoc Comm. on the Domestic and International Monetary Effect of Energy and other Natural Resource Pricing of Comm. on Banking, Currency, and Housing, 94th Congr., 1st Sess., Mar. 1975
(GPO-48-071) Avail: Comm. on Banking and Currency

The economic impact of the drastic increase in energy prices is assessed along with the problems which may occur with similar price increases in other natural resources. The historical development of the international petroleum market was surveyed, and the problems of adjusting to the petroleum shortages of 1973-1974 are analyzed. The issue of energy security for the United States in the light of current and projected policies of the Organization of Petroleum Exporting Countries were examined. This includes a series of recommendations to enhance American energy security, taking cognizance of the various costs attached to alternative policies. The effects were investigated of the long run upward trend in energy prices on the domestic economy with particular reference to structural shifts in production consumption, and the distribution of income. International monetary problems and the particular difficulties facing less-developed countries are discussed along with the balance-of-payments problems confronting the United States and its major trading partners. The United States future resource needs and policies are discussed M.J.S.

V-GROOVED SILICON SOLAR CELLS
Cosmo R. Baraona and Henry W. Brandhorst [1975] 10 p refs Presented at 11th Photovoltaic Specialists Conf., Phoenix, Ariz., 6-8 May 1975; sponsored by IEEE
(NASA-TM-X-71715; E-8336) Avail: NTIS HC $3.25 CSCL 10B

Silicon solar cells with macroscopic V-shaped grooves and microscopically texturized surfaces were made by preferential etching techniques. Various conditions for potassium hydroxide and hydrazine hydrate etching were investigated. Optical reflection losses from these surface were reduced. The reduced reflection occurred at all wavelengths and resulted in improved short circuit current and spectral response. Improved collection efficiency is also expected from this structure due to generation of carriers closer to the cell junction. Microscopic point measurements of collected current using a scanning electron microscope showed that current collected at the peaks of the texturized surface were only 80 percent of those collected in the valleys. STUDY OF THE APPLICATION OF HTGR TO A PETROLEUM REFINERY PETROCHEMICAL COMPLEX
Truman D. Anderson and Irving Spiewak 1975 11 p refs Presented at the BNES Intern. Conf. on the HTGR Process Appl., London, Eng., 26/28 Nov. 1974
(Conf-741144-1) Avail: NTIS HC $3.25

The high-temperature gas-cooled reactor (HTGR) is discussed as a source of industrial energy for applications in petroleum refining and petrochemical plants. Applications are limited to joint uses of a nuclear power station due to the mismatch in size between nuclear plants and industrial plants and the need for multiple nuclear units to provide reliability. It is suggested that the electric utilities generate electricity for the grid and thermal energy for local industries, thus HTGR would have significant economic advantages over alternative fossil energy systems. AN INTERDISCIPLINARY ENGINEERING APPROACH TO A FACILITY DESIGN STUDY WITH EMPHASIS ON ENERGY CONSERVATION. VOLUME 2: MAIN REPORT TEXT Facility Systems Integration Design Study
Robert J. Garlow, John F. Gilg, Charles A. Jackson, Jay N. Magill, and Robert S. Najaka Nov. 1974 275 p refs
(AD-A006804; GCE/MC/74-1-Vol-2) Avail: NTIS CSCL 15/5

A discussion of the method used in the interdisciplinary engineering approach to the study is discussed in Chapter II. Chapter III covers the design of the structural components of the facility with a detailed discussion of the loads used in the design and other factors which weighed upon the selection of the components. Chapter IV discusses the determination of loads used in the design of mechanical systems, a comparison of various heating and air conditioning systems, the design of the heating and cooling systems, and the design of an energy recovery system. Chapter V presents a detailed analysis of the A/E electrical design, along with the design of a lighting system and the coordination of circuit protection devices. Chapter VI summarizes the results of the civil, electrical and mechanical designs, and Chapter VII presents conclusions drawn from the study and recommendations for future application of the techniques used in the study. PHOTOCHEMICAL CONVERSION OF SOLAR ENERGY Quarterly Report, 1 Jul. - 30 Sep. 1974
Norman N. Lichtin 31 Oct. 1974 37 p refs
(Grant NSF AER-72-03579)
(PB-238533/4; NSF/RA/N-74-138;
NAS/RANN/SE/AER-72-03597/A03) Avail. NTIS HC $3.75 CSCL 07E

Photogalvanic cell chemistry research results are discussed. High conversion efficiencies were obtained using the trifluoromethane-sulfonate anion (TFMS(-)) than with chloride. Conversion efficiency of the SNO2/Pt cell illuminated perpendicular to the electrode surfaces increased with increase of solution depth up to .05mm. Using values of the Kosower solvent parameter, Z, logarithms of specific rates of disproportionation of semithionine (TH2(+)) in a wide variety of organic solvents show the same positive linear dependence on Z. The effects of a number of variables on the (second order) kinetics of oxidation of leucothionine (TH3(+)) by Fe(III) were determined. A number of coordination complexes of iron with formal reduction potentials varying over a factor of about 3 were prepared. GRA

WHERE THE BOILERS ARE: A SURVEY OF ELECTRIC UTILITY BOILERS WITH POTENTIAL CAPACITY FOR BURNING SOLID WASTE AS FUEL Final Report
Barry G. Tunnah, Adel Hakki, and Roger J. Leonard 1974 337 p refs
(Contract EPA-68-01-1132)
(PB-239392/4; EPA-SW-530-88c) Avail: NTIS HC $9.50 CSCL 10B

The use of prepared solid waste as a supplementary fuel is investigated as a method for recovering energy from commercial and residential solid wastes. Survey results intended to help local decision-makers in assessing the availability of electric utility boilers with potential for using prepared solid waste as supplementary fuel are presented. Details are given for investor-owned and municipally-owned plants on the following items: (1) boiler characteristics; (2) energy requirements for electricity generation; (3) potential energy available from combustion of solid waste derived from specified areas around each plant; (4) typical transportation distances from the centers of waste generation to the plants, and (5) the potential waste-burning capacity per day of each boiler if solid waste replaced 10 percent of its fossil fuel. AN APPROACH TO THE POWER SHORTAGE PROBLEM: OPTIMAL ALLOCATION OF EXISTING EXCESS RESERVES THROUGH INTERREGIONAL TRANSMISSION
Michael A. Moses 1 Aug. 1974 55 p
(Grant NSF GI-29729)

(PB-238578/9; NSF/RANN/SE/GI-29729/TR/73/2; NSF/RA/N-73-090) Avail: NTIS HC $4.25 CSCL 10A

A coordinated national grid system should lessen or eliminate the energy shortage. This idea relies on the presence of 'staggered peak loads' as the time zones from the East Coast to the West are transversed. When the New York City area experiences its peak demands between 12-2 P. M., the Los Angeles area is approximately three hours away from their peak. If L.A. could transfer electrical power to the east, the frequency of brown - or black-outs could be substantially decreased. This model attempts to work within the confines of existing capacity limits, and without decreasing demands. Efficient allocation and routes of distribution of electrical energy given the existing system capabilities are discussed. GRA

N75-24152# National Center for Energy Management and Power, Philadelphia, Pa.
THE RESIDENTIAL USER AND THE ELECTRICAL LOAD FACTOR
Kenneth A. Fegley Jul. 1973 40 p refs
(Grant NSF GI-29729)
(PB-238535/9; NSF/RANN/SE/GI-29729/TR/73/1) Avail: NTIS HC $3.75 CSCL 10A

The electrical load factor (the ratio of the average load to the peak load) has an important influence on the cost of delivering electrical energy to customers. The electrical use pattern for the average residential customer yields a low load factor for the individual residential customer and holds the total electric utility company load factor at a relatively low value. The relative importance of the residential customer in influencing the total load factor of the electric utility company is not likely to decrease in the future. There are a number of possible means for improving the residential load factor and so reap the very large savings that accompany a high total load factor for the electric utility company. GRA

SOLAR ENERGY FOR PROCESS STEAM GENERATION
Jerry P. Davis 25 Nov. 1974 40 p ref Sponsored by NSF, Washington, D.C.
(PB-238109/3; TE-5392-34-75) Avail: NTIS HC $3.75 CSCL 13A

The performance and economic possibilities of process steam generation by the coupling of low temperature solar collectors (120-240F) producing low pressure saturated or wet steam to a fuel-driven diesel/compressor which compresses the steam to the desired final conditions (320F, 60 psig) are discussed. The system concept is analogous to a heat pump, which extracts low temperature ambient heat, and raises its temperature to a useful level via mechanical work. An economic evaluation of annual fuel savings, at $1.50/10 to the 6th power Btu fuel cost, to incremental investment required for $2/sq ft solar collectors or $4/sq ft solar collectors yielded 14 percent and 8 percent respectively. GLASS-Si HETEROJUNCTION SOLAR CELLS Quarterly Report, 1 Aug. - 30 Sep. 1974
Richard L. Anderson, Gordon Kent, and Steven Lai Oct. 1974 32 p
(PB-239282/7; NSF/RANN/SE/AER7417631/PR/74/3; NSF/RA/N-74-141; QR-3) Avail: NTIS HC $3.75 CSCL 10B

The feasibility of fabricating low-cost solar cells suitable for terrestial application is investigated. These cells consist of glass-silicon heterojunctions. Specific goals include the preparation and characterization of glass-monocrystalline Si and glass polycrystalline Si heterojunctions, and modeling of these devices. Heterojunction solar cells comprised of p-type semiconducting glass on n-type Si and n-type semiconducting glass on p-type Si are investigated The glass acts as an integral part of the heterojunction, but is transparent to solar radiation, thus permitting the radiation to penetrate to the junction transition region. It also acts as a low resistance contact and as an antireflection coating. Although efforts at making p-glass/p Si cells have been unsuccessful to date, n-glass/n Si cells have been fabricated. These have short circuit currents of 40 ma/sq cm, open circuit voltages of 0.3 volts, and conversion efficiencies (AMI) of 5 percent. GRA

MARINE POLLUTION MONITORING (PETROLEUM): PROCEEDINGS OF A SYMPOSIUM AND WORKSHOP HELD AT THE NATIONAL BUREAU OF STANDARDS
R. C. Junghans Dec. 1974 293 p refs Conf. held in Gaithersburg, Md., 13-17 May 1974 Sponsored in part by World Meteorological Organization, Geneva
(COM-75-50071/0; NBS-SP-409) Avail: NTIS MF $2.25; SOD HC as C13.10:409 CSCL 13B

Pertinent scientific, environmental, and regulatory aspects of petroleum hydrocarbon measurements are discussed along with specific scientific developments and recommendations. Specific recommendations for the initiation of a coordinated project for marine pollution monitoring are given. The following major areas are discussed: sampling methods and techniques; oil slicks, tar balls, and particulates; standards and intercomparison criteria; oil in marine organisms and sediments; and analytical methods and biological assessment. PETROLEUM DEGRADATION IN LOW TEMPERATURE MARINE AND ESTUARINE ENVIRONMENTS Annual Report, 1 May - 31 Dec. 1974
Richard W. Traxler and Anthony M. Cundell Mar. 1975 30 p refs
(Contract N00014-68-A-0215-0013; NR Proj. 133-076)
(AD-A007588; AR-2) Avail: NTIS CSCL 06/13

Enrichment of hydrocarbon and fuel oil utilizing bacteria was shown following an oil spill in Narragansett Bay and chemical analyses of sediments from the spill site confirmed the role of biodegradation. Biodegradation did occur during the winter months at a rate of 1-1.8 micrograms of hydrocarbon per gram of sediment per day. Laboratory culture and BOD methods showed degradation rates higher than the measured in situ rates but demonstrated the presence of psychrophilic hydrocarbon metabolizing microbial populations in the natural environment during the winter. Laboroatory Q10 values at 10 and 20C for psychrotolerant isolates were less than 2.0. Filamentous fungi were isolated which metabolized petroleum hydrocarbons with the formation of inclusions peculiar to hydrocarbon grown cultures. GRA

EVALUATION OF POWER FACILITIES; A REVIEWER'S HANDBOOK Final Report
Apr. 1974 392 p refs Prepared in cooperation with Curran Associates, Inc.
(PB-239221/5) Avail: NTIS HC $10.25 CSCL 10B

The handbook identifies and discusses the positive and negative impacts of power facilities on regional and local areas. The emphasis is on assisting planners in developing the local perspective of evaluation and to prepare them for an active participatory role in decision-making. In order that the comprehensive aspects of power facilities be fully explored, breadth rather than depth is emphasized. It thus serves as a primer addressed to planners, citizens and public agencies with the intent of imparting an objective and unbiased understanding of the major issues involved in the planning, design, licensing, construction, operation, and regulation of generation and transmission facilities. It further analyzes and summarizes the mass of regulatory legislation. GRA

ENERGY EXCHANGE AT THE SURFACE OF THE WESTERN NORTH ATLANTIC OCEAN
Andrew F. Bunker Jan. 1975 111 p refs
(Contract N00014-74-C-0262; NR Proj. 083-004)
(AD-A007296; WHOI-75-3) Avail: NTIS CSCL 04/2

To supplement hydrographic studies of changes in the heat content of water masses, the energy fluxes through the ocean's surface has been estimated. These estimates have been computed from several million surface marine observations utilizing bulk aerodynamic exchange equations. The dependence of the transfer coefficients on wind speed and stability of the air was determined from the literature and used with the ship's data in the equations. The fluxes also have been computed following Budyko's method to serve as a check and comparison. The computations yield the monthly and annual fluxes of latent heat, sensible heat, momentum, and radiational exchange as well as averages of meteorological and oceanographical parameters. Monthly and annual charts of the net heat loss or gain by the ocean have been constructed for 150 acres which extend from the east coast to 30W and from 20N to 50N. Charts of the latent heat, sensible heat, and radiational fluxes also are presented. Time series of the fluxes in different areas have been drafted. Several features revealed by the charts are analyzed and discussed GRA

NATIONAL ENERGY FLOW ACCOUNTS
J. Just, B. Borko, and J. Morris Sep. 1974 206 p refs
(Contract NSF GI-14024)
(PB-239275/1; MTR-6753; NSF/RA/N-74-189) Avail: NTIS HC $7.25 CSCL 05B

A comprehensive, integrated framework for structuring energy data of many types was developed. This set of National energy accounts is designed to be integrated with the National economic accounts and other major data bases. This report outlines the overall concept of four major interlocking accounts dealing with energy flow, energy technology, energy resources and other data. The energy flow account consists of seven subaccounts on energy sources, energy uses, interindustry energy flows, energy prices, energy transportation, energy distribution, and energy supply and demand time profiles. The structure of these accounts is fixed but the level of detail is flexible so that data could be utilized in different degrees of aggregation. GRA

PRELIMINARY STUDY OF ADVANCED TURBOPROPS FOR LOW ENERGY CONSUMPTION
G. Kraft and W. Strack May 1975 48 p refs
(NASA-TM-X-71740; E-8371) Avail: NTIS HC $3.75 CSCL 21E

The fuel savings potential of advanced turboprops (operational about 1985) was calculated and compared with that of an advanced turbofan for use in an advanced subsonic transport. At the design point, altitude 10.67 km and Mach 0.80, turbine-inlet temperature was fixed at 1590 K while overall pressure ratio was varied from 25 to 50. The regenerative turboprop had a pressure ratio of only 10 and an 85 percent effective rotary heat exchanger. Variable camber propellers were used with an efficiency of 85 percent. The study indicated a fuel savings of

33 percent, a takeoff gross weight reduction of 15 percent, and a direct operating cost reduction of 18 percent was possible when turboprops were used instead of the reference turbofan at a range of 10 200 km. These reductions were 28, 11, and 14 percent, respectively, at a range of 5500 km. Increasing overall pressure ratio from 25 to 50 saved little fuel and slightly increased takeoff gross weight. HYDROCARBON POWER FUEL FROM THE GASOLINE BOILING RANGE
G. W. Eckert, H. V. Hess, and E. C. Knowles Washington NASA Jun. 1975 26 p Transl. into ENGLISH from German patent no. 1144971 (US Appl., 11 Oct., 23 Dec. 1957, 7 Mar., 10 Mar., 14 Apr., 19 Jun., 27 Jun. 1958)
(Contract NASw-2483)
(NASA-TT-F-16399) Avail: NTIS HC $3.75 CSCL 21D

Blends of catalytically cracked and reformed gasolines are discussed which have high octane numbers due to their high aromatic and olefinic content. The addition of a lead organic compound does not give as great an increase to the octane numbers for such a gasoline as for one which has high percentages of saturated paraffins. When a gasoline blend containing at least 10% aromatic and olefinic hydrocarbons is treated with 0.1-5.0 volume percent of saturated monocarboxylic acid, the Et4Pb-type compound markedly increases the octane number. The antiknock performance and characteristics of these gasolines are discussed in detail. Author

PREPARATION OF GAS TURBINE ENGINE FUEL FROM SYNTHETIC CRUDE OIL DERIVED FROM COAL Final Report
F. S. Eisen 6 Feb. 1975 74 p refs
(Contract N00014-74-C-0568)
(AD-A007923) Avail: NTIS CSCL 07/1

A 232 gallon gas turbine fuel sample containing 23 vol.% aromatics (20-25 vol.% specification target) was prepared from synthetic crude oil (syncrude) derived from Western Kentucky coal. The seven fuel specifications designated as most important were all met with the exception of smoke point. The following major processing steps were used to prepare the sample: Initial distillations (atmospheric distillation of the syncrude to remove light hydrocarbons and water, and vacuum distillation to remove the material boiling above about 500F); Hydrogenation of the resulting kerosene fraction to produce a 20-25 vol.% aromatics product; Final atmospheric distillation to remove light ends and produce a 140 to 155F flash point product. DEPLOYABLE HEAT PIPE RADIATOR Final Report
F. Edelstein Apr. 1975 115 p refs
(Contract NAS8-29905)
(NASA-CR-143863; DHPR-75-13) Avail: NTIS HC $5.25 CSCL 20M

A 1.2- by 1.8-m variable conductance heat pipe radiator was designed, built, and tested. The radiator has deployment capability and can passively control Freon-21 fluid loop temperatures under varying loads and environments. It consists of six grooved variable conductance heat pipes attached to a 0.032-in. aluminum panel. Heat is supplied to the radiator via a fluid header or a single-fluid flexible heat pipe header. The heat pipe header is an artery design that has a flexible section capable of bending up to 90 degrees. Radiator loads as high as 850 watts were successfully tested. Over a load variation of 200 watts, the outlet temperature of the Freon-21 fluid varied by 7 F. An alternate control system was also investigated which used a variable conductance heat pipe header attached to the heat pipe radiator panel. Author

EVALUATION OF THE SUITABILITY OF SKYLAB DATA FOR

THE PURPOSE OF PETROLEUM EXPLORATION Quarterly Report, Jan. - Mar. 1975
Robert J. Collins, Principal Investigator, Gerald Petzel, and John R. Everett (Earth Satellite Corp., Washington, D. C.) Mar. 1975 20 p refs EREP
(Contract NAS9-13297)
(E75-10257; NASA-CR-142632) Avail: NTIS HC $3.25 CSCL 08G

The author has identified the following significant results. Comparisons of the various photographic bands of Skylab imagery indicate that, overall, standard color (particularly S190B) is the most valuable for geological purposes. Detailed examination of all bands indicates that as with ERTS imagery each band contains useful information that is unique to it. The results of geological interpretations based on ERTS and Skylab imagery are strikingly similar. It appears that more information can be extracted from a single Skylab overpass than a single ERTS overpass, but that with repeated passes the lower resolution ERTS imagery may yield information comparable to that contained in S190B imagery. Comparison of Skylab photography to high altitude aircraft photography suggests that there are distinct advantages to using Skylab imagery for regional geologic interpretations. This is primarily because of the synoptic view provided by the space acquired imagery allows and encourages integration of regional geologic features.

PULSED NUCLEAR MAGNETIC RESONANCE STUDIES OF OIL SHALES--ESTIMATION OF POTENTIAL OIL YIELDS Report of Investigations, 1974
F. P. Miknis, A. W. Decora, and G. L. Cook Nov. 1974 53 p refs
(PB-240023/2; BM-RI-7984) Avail. NTIS HC $4.25 CSCL 07D

It is shown that broad-line nuclear magnetic resonance (NMR) techniques have potential applications for rapid evaluation of oil-shale deposits. The basis for the pulsed NMR oil-shale assay method lies in the assumption that the free induction decay (FID) amplitude following a 90 degree pulse is proportional to the potential oil yield. This assumption was tested on two groups of oil-shale samples, numbering 141 and 263 samples, from two different oil-shale cores. For both groups of samples a small number were selected as calibration samples. Free induction decay amplitude measurements were made. GRA

ENERGY RECOVERY FROM SOLID WASTE. VOLUME 2: TECHNICAL REPORT Final Report, 1974
C. J. Huang and Charles Dalton Washington NASA Apr. 1975 245 p refs
(Grant NGT-44-005-114)
(NASA-CR-2526; S-443-Vol-2) Avail: NTIS HC $7.50 CSCL 10A

A systems analysis of energy recovery from solid waste demonstrates the feasibility of several current processes for converting solid waste to an energy form. The social, legal, environmental, and political factors are considered in depth with recommendations made in regard to new legislation and policy. Biodegradation and thermal decomposition are the two areas of disposal that are considered with emphasis on thermal decomposition. A technical and economic evaluation of a number of available and developing energy-recovery processes is given. Based on present technical capabilities, use of prepared solid waste as a fuel supplemental to coal seems to be the most economic process by which to recover energy from solid waste. Markets are considered in detail with suggestions given for improving market conditions and for developing market stability. A decision procedure is given to aid a community in deciding on its options in dealing with solid waste, and a new pyrolysis process is suggested. An application of the methods of this study are applied to Houston, Texas. Author

STUDY OF FUEL CELL POWERPLANT WITH HEAT RECOVERY Final Report, 15 Aug. 1974 - 15 Feb. 1975
J. M. King, A. P. Grasso, and J. V. Clausi 24 Apr. 1975

112 p refs
(Contract NAS9-14220)
(NASA-CR-141854; FCR-0021) Avail: NTIS HC $5.25 CSCL 10C

It was shown that heat can be recovered from fuel cell power plants by replacing the air-cooled heat exchangers in present designs with units which transfer the heat to the integrated utility system. Energy availability for a 40-kW power plant was studied and showed that the total usable energy at rated power represents 84 percent of the fuel lower heating value. The effects of design variables on heat availability proved to be small. Design requirements were established for the heat recovery heat exchangers, including measurement of the characteristics of two candidate fuel cell coolants after exposure to fuel cell operating conditions. A heat exchanger test program was defined to assess fouling and other characteristics of fuel cell heat exchangers needed to confirm heat exchanger designs for heat recovery.

Robert J. Garlow, John F. Gilg, Charles A. Jackson, Jay N. Magill, and Robert S. Najaka Nov. 1974 33 p
(AD-A006803; GCE/MC/74-1-Vol-1) Avail: NTIS CSCL 15/5

An interdisciplinary engineering design study is made for a depot maintenance facility. The initial costs, performance, and energy and operating costs of various structural, electrical, and mechanical systems were investigated with the goal of attaining maximum conservation of energy. Where applicable, the impact of each of these subsystems on energy and operating costs for the integrated facility is evaluated to obtain data on which to base the final equipment and system selections. The following systems have been selected for the project facility to provide optimum energy conservation: (1) Spot cooling using an evaporative process for industrial applications, (2) a variable-volume air conditioning system for remaining building cooling requirements, (3) a cooling tower to supply process cooling water at 85F, and (4) a heat recovery system to reclaim excess heat energy.

INTERIM STANDARD FOR SOLAR COLLECTORS, FIRST DRAFT Semiannual Progress Report, 1 Jan. - 30 Jun. 1974

Noam Lior Jul. 1974 36 p

(Grant NSF GI-29729)

(PB-239757/8; NSF/RANN/SE/GI-29729D/PR-74-2; NSF/RA/N-74-152(2)) Avail: NTIS HC $3.75 CSCL 10B

This document is a first draft of a proposed standard which is to establish (1) methods for testing and evaluating solar collectors for water and space heating; and (2) a basis for their certification. It will provide manufacturers, distributors, installers, contractors and purchasers with a common understanding of these products. Considered are such subjects as: (1) scope and classification; (2) requirements; (3) inspection and test procedures; and (4) history of project. GRA

SOLAR ENERGY SCHOOL HEATING AUGMENTATION EXPERIMENT. DESIGN, CONSTRUCTION AND CONSTRUCTION AND INITIAL OPERATION Report, 16 Jan.-15 May 1974

4 Dec. 1974 84 p

(Grant NSF C-868)

(PB-239397/3; ITC-090974; NSF/RA/N-74-019) Avail: NTIS HC $4.75 CSCL 13A

The Fauquier High School Proof-Of-Concept experiment is described, a solar heating system, designed and built under the joint sponsorship of the National Science Foundation and InterTechnology Corporation. The system consists of a 2540 square foot collector array on a collector building 126 ft. by 26 ft., with a net absorber area of 2,415 square feet, two 5,500 gallon concrete, insulated storage tanks, a control room/pump house and an automatic control system. The solar heating system was designed to provide 100% of the heat required for five, modular construction classrooms GRA

DEVELOPMENT OF AN ELECTRICAL GENERATOR AND ELECTROLYSIS CELL FOR A WIND ENERGY CONVERSION SYSTEM Progress Report

William Hughes, H. J. Allison, and R. G. Ramakumar 15 Oct. 1974 127 p refs

(Grant NSF GI-39547)

(PB-239272/8; NSF/RANN/SE/GI-39457/PR-74-3; NSF/RA/N-74-142) Avail: NTIS HC $5.75 CSCL 10B

Described is research whose purpose is threefold: (1) to develop and build a working generator system in the 10 to 20 kilowatt range (suitable for use with a windmill); (2) to develop and build a working high pressure moderate temperature electrolysis storage system, in the three kilowatt range: and (3) to construct, debug, and gain significant operational experience on a windmill farm. Included are reports on the following topics: Economical and technical aspects of wind generation systems, solar and wind energy systems for large scale power generation, of large scale utilization of solar and wind energy, and operation of parallel bridge rectifier systems with capacitors at bridge-inputs. TECHNICAL AND ECONOMIC FEASIBILITY OF THE OCEAN THERMAL DIFFERENCES PROCESS AS A SOLAR-DRIVEN ENERGY PROCESS Quarterly Progress Report, 1 Jan. - 31 Mar. 1974

William Heronemus 30 Apr. 1974 50 p refs Prepared in cooperation with United Aircraft Corp., East Hartford, Conn.

(Grant NSF GI-34979)

(PB-239374/2; NSF/RA/N-74-160; QPR-1) Avail: NTIS HC $3.75 CSCL 10B

One total system configuration for a 400 mWe ocean thermal power plant has been conceptualized. Enough work has been accomplished to show that the concept could be replicated in a broad swath in the Gulf Stream along the U.S. southeast coast. Subsystems have been reduced to diagrams and major components have been sized. A complete math model of the total heat engine cycle has been created and parametric studies are now possible with reasonable computer time expenditures. GRA

OCEAN THERMAL DIFFERENCE POWER PLANT TURBINE DESIGN

L. L. Ambs and J. Marshall Nov. 1973 34 p refs

(Grant NSF GI-34979)

(PB-239371/8; NSF/RANN/SE/GI-34979/TR-13-17; NSF/RA/N-73-119) Avail: NTIS HC $3.75 CSCL 10B

Thermodynamic and fluid dynamic criteria are considered for an ocean thermal difference power plant turbine. The influence of the working fluid on the turbine design is discussed. Results of the study show that the actual size of the turbine used for any of the working fluids depends upon the site conditions and the heat exchanger design. Of the ten working fluids investigated, ammonia is found to be the preferred fluid. Propane requires a larger and slower unit of less power than ammonia but is also acceptable. GRA

HEAT EXCHANGERS FOR SEA SOLAR POWER PLANTS

J. Hilbert Anderson Sep. 1973 48 p refs

(Grant NSF GI-34979)

(PB-239369/2; NSF/RANN/SE/GI-34979/TR-73/15; NSF/RA/N-73-137) Avail: NTIS HC $3.75 CSCL 10B

The following aspects of heat exchangers for solar sea power plants are considered: (1) exchanger requirements (heat flow, temperature difference, multiple circuits, boiling heat transfer, condensing heat transfer, water side heat transfer, marine fouling, corrosion, debris and leaks); (2) heat exchanger materials; (3) heat exchanger design; and (4) heat exchanger performance and cost. It is that costs of heat exchangers should not be a barrier to successful economics for solar sea power. GRA

CONSERVATION AND BETTER UTILIZATION OF ELECTRIC POWER BY MEANS OF THERMAL ENERGY STORAGE AND SOLAR HEATING. SOLAR COLLECTOR PERFORMANCE STUDIES

Noam Lior and Alan P. Saunders Aug. 1974 126 p refs

(Grant NSF GI-27976)

(PB-239355/1; NSF/RANN/SE/GI-279976/TR-73-1; NSF/RA/N-74-188) Avail: NTIS HC $5.75 CSCL 10B

Comparative evaluation of 24 types of flat-plate solar collector configurations was performed. In addition to insolation collection tests, separate experiments were conducted to determine heat losses. The experimental facilities utilized are described. The various collector configurations were designed with a view to improving the absorption of solar energy and to reducing the heat losses from the collector window. The collectors, as well as the major materials used in their construction, were experimentally evaluated. GRA

US ENERGY AND FUEL DEMAND TO 1985, A COMPOSITE PROJECTION BY USER WITHIN PETROLEUM ADMINISTRATION FOR DEFENSE (PAD) DISTRICTS Final Report
Michael Rieber and Ronald Halcrow May 1974 173 p refs
(Grant NSF GI-35821)
(PB-239343/7; UIUC-CAC-DN-74-108R; NSF/RA/N-74-167) Avail: NTIS HC $6.25 CSCL 10A

Demand projections are presented for the years 1975, 1980 and 1985. These are subdivided by Petroleum Administration Defense (PAD) district, major consuming group within each district and the specific fuel. Fuel projections are presented on both a BTU and a commercial unit basis. Projections are a composite of several recent studies including those of the National Petroleum Council, Federal Power Commission, Bureau of Mines and National Economic Research Associates, Inc. Analyses of and comparisons among these studies are presented along with methodology for the present projection. GRA

ENERGY CONSERVATION: A CASE STUDY FOR A LARGE MANUFACTURING PLANT Final Report
Lewis A. Felton and Leon R. Blicksman May 1974 111 p refs
(PB-239302/3; MIT-EL-74-010) Avail: NTIS HC $5.25 CSCL 10A

The methods of formulating, implementing, and evaluating a conservation program in a commercial building or light industrial plant are examined and the results of one case study are presented. In commercial and light industrial applications, most energy is consumed to maintain proper environmental conditions; light levels, heat levels, and fresh air levels. This report presents a method that can be used by many commercial and light industrial concerns to establish a conservation program. Guidelines are presented that can be used to examine environmental conditions and determine ways they must be changed. A system of program analysis is also presented. GRA

ECONOMIC SYSTEM ANALYSIS OF COAL PRECONVERSION TECHNOLOGY Interim Report, Aug. 1973 - Jun. 1974
Jan. 1975 388 p refs Prepared in cooperation with Bonner and Moore Associates Inc., Houston, Texas
(Contract DI-14-32-0001-1520)
(PB-239383/3; OCR-99-INT-1) Avail: NTIS HC $10.25; SOD HC as I63.10:99/INT-1 CSCL 08I

A comprehensive economic system analysis of coal preconversion technology to identify and define the physical, technical, social, economic, legal and environmental problems of producing 75,000 tons per day of coal from surface mines in the United States is described. Progress is reported in the collection of data on the geology of coal resources, mining equipment, processing equipment, socioeconomic and physioeconomic factors, and financial statistics. In addition, efforts are outlined for the development of a mathematical model to simulate mining operations and project the cost of various alternative cases. GRA

SHALE RETORTING IN A 150-TON BATCH-TYPE PILOT PLANT
A. E. Harak Dec. 1974 37 p refs
(PB-240263/4; BM-RI-7995) Avail: NTIS HC $3.75 CSCL 07A

To determine the retorting characteristics of a column of mine-run, ungraded oil shale ranging in size from fines to 5-ton pieces, a 150-ton retort was designed and constructed. Mine-run shale assaying about 25 gallons of oil per ton, was used as the test shale. The results of 10 runs of these are reported. In one run, the average particle size of the shale was substantially increased to determine its effect on oil yield. Oil recoveries ranged from a low of 39.3 to a high of 5.8 volume-percent of Fischer assay. GRA

FUEL USE IN THE US ELECTRICAL UTILITY INDUSTRY, 1971 - 1990 Ph.D. Thesis
W. Noel Gillatt 1974 183 p
Avail: Univ. Microfilms Order No. 75-10810

Factors influencing the supply of and demand for electricity are discussed in terms of the decisions facing an individual electrical utility. A quantitative model is developed and utilized to simulate the decisions taken by an electrical utility to use primary fuels over time. Emphasis is given to environmental legislation and how it affects the different primary fuels in the electrical utility market. The model is premised on the assumption that the basic objective of the regulated utility is to minimize the present value of foreseeable costs while servicing the anticipated electrical load demanded. By varying the parameters representing fuel prices, technological factors, and public policy regression analysis is used to obtain response functions giving fuel use for the horizon years as a function of these parameters. Specific cases examined include coal-oil intercompetition for the year 1980 and coal-nuclear position in the 1990 electrical utility market. Dissert. Abstr.

DEVELOPMENT OF FLAT-PLATE SOLAR COLLECTORS FOR THE HEATING AND COOLING OF BUILDINGS Final Report
J. W. Ramsey, J. T. Borzoni, and T. H. Holland Jun. 1975 209 p refs
(Contract NAS3-17862)
(NASA-CR-134804; HONEYWELL-2852-40057) Avail: NTIS HC $7.25 CSCL 10A

The relevant design parameters in the fabrication of a solar collector for heating liquids were examined. The objective was to design, fabricate, and test a low-cost, flat-plate solar collector with high collection efficiency, high durability, and requiring little maintenance. Computer-aided math models of the heat transfer processes in the collector assisted in the design. The preferred physical design parameters were determined from a heat transfer standpoint and the absorber panel configuration, the surface treatment of the absorber panel, the type and thickness of insulation, and the number, spacing and material of the covers were defined. Variations of this configuration were identified, prototypes built, and performance tests performed using a solar simulator. Simulated operation of the baseline collector configuration was combined with insolation data for a number of locations and compared with a predicted load to determine the degree of solar utilization. A multiple task research and development program was performed to improve the weight, life, and performance characteristics of hydrogen-oxygen alkaline fuel cells for advanced power systems. Gradual wetting of the anode structure and subsequent long-term performance loss was determined to be caused by deposition of a silicon-containing material on the anode. This deposit was attributed to degradation of the asbestos matrix, and attention was therefore placed on development of a substitute matrix of potassium titanate. An 80 percent gold 20 percent platinum catalyst cathode was developed which has the same performance and stability as the standard 90 percent gold - 10 percent platinum cathode but at half the loading. A hybrid polysulfone/epoxy-glass fiber frame was developed which combines the resistance to the cell environment of pure polysulfone with the fabricating ease of epoxy-glass fiber laminate. These cell components were evaluated in various configurations of full-size cells. The ways in which the baseline engineering model system would be modified to accommodate the requirements of the space tug application are identified. Author

SUMMARY OF NASA LEWIS RESEARCH CENTER SOLAR HEATING AND COOLING AND WIND ENERGY PROGRAMS
Richard W. Vernon 1975 23 p refs Presented at the Southeastern Conf. on Appl. of Solar Energy, Huntsville, Ala., 24-26 Mar. 1975; sponsored by Ala. Univ.
(NASA-TM-X-71745; E-8383) Avail: NTIS HC $3.25 CSCL 10A

Plans for the construction and operation of a solar heating and cooling system in conjunction with an office building being constructed at Langley Research Center, are discussed. Supporting research and technology includes: testing of solar collectors with a solar simulator, outdoor testing of collectors, property measurements of selective and nonselective coatings for solar collectors, and a solar model-systems test loop. The areas of a wind energy program that are being conducted include: design and operation of a 100-kW experimental wind generator, industry-designed and user-operated wind generators in the range of 50 to 3000 kW, and supporting research and technology for large wind energy systems. An overview of these activities is provided. Author

MATERIALS AND THE NEW DIMENSIONS OF CONFLICT, REVISED VERSION
Alwyn H. King and John R. Cameron 15 Dec. 1974 30 p refs Revised
(AD-A004263; MIRM-74-10-Rev) Avail: NTIS CSCL 05/4

The implications of domestic shortages of critical materials, in terms of possible U.S. vulnerability to future military, political, or economic coercion, are discussed. Political and economic developments in a supplier nation which can create the environment for economic coercion are outlined, as are measures which the United States and other user nations can undertake to prevent or mitigate such coercion, i.e., development of domestic resources, development of substitute materials, encouragement of user-supplier interdependency, and maintenance of an adequate stockpile of critical materials. POTENTIAL STRUCTURAL MATERIAL PROBLEMS IN A HYDROGEN ENERGY SYSTEM
Hugh R. Gray, Howard G. Nelson, Robert E. Johnson, Bryan McPherson, Frank S. Howard, and James H. Swisher (Sandia Labs., Livermore, Calif.) Jun. 1975 29 p refs
(NASA-TM-X-71752; E-8380) Avail: NTIS HC $3.75 CSCL 10A

Potential structural material problems that may be encountered in the three components of a hydrogen energy system - production, transmission/storage, and utilization - were identified. Hydrogen embrittlement, corrosion, oxidation, and erosion may occur during the production of hydrogen. Hydrogen embrittlement is of major concern during both transmission and utilization of hydrogen. Specific materials research and development programs necessary to support a hydrogen energy system are described.

RESIDENTIAL ENERGY CONSUMPTION AND SMALL SCALE OPTIONS OF ENERGY SYSTEMS FOR SPACE HEATING Interim Report
D. C. Chan Nov. 1974 64 p refs
(Grant NSF CG-00007)
(PB-239941/8; MTR-2951) Avail: NTIS HC $4.25 CSCL 13A

The recent oil crisis has drawn attention to New England's extreme dependence upon oil as a source of energy and, in

particular, for space heating. In this study some alternatives to conventional fossil fueled space heating systems are evaluated in terms of total annual costs to the consumer and fuel demand. It is concluded that a solar collector system back-up by conventionally fueled systems will be economically competitive if mass production is successful in reducing the manufacturing costs of solar panels. MHD POWER GENERATION (VIKING SERIES) WITH HYDROCARBON FUELS, PART 3 Final Report, Apr. 1971 - Oct. 1974
R. Kessler, O. K. Sonjou, J. Teno, L. Lontai, and D. Meader Nov. 1974 282 p refs
(Contract F33615-71-C-1456; AF Proj. 3145)
(AD-A004216; AFAPL-TR-74-47-Pt-3) Avail. NTIS CSCL 10/2

A two-part program is described, which had as its objective the development of compact high performance MHD generators to meet the need for burst-power portable power supplies for a variety of military and industrial applications. The first part of the program, referred to as VIKING I, was an experimental program performed using a high performance MHD generator operating on toluene and oxygen for bursts of about two seconds duration. This generator produced a maximum power of 1.42 MW, and a maximum specific power output (electrical output per unit mass flow) of 0.62 MW/kg/sec. The second part of the program was the design of a compact MHD generator (VIKING II), of 10 MW power output and 2000 kg dry weight. The design was carried to the point of having completed the basic designs and fabrication plans of all major components and subsystems, and their interfaces. GRA

SOLAR HEATING AND COOLING EXPERIMENT FOR A SCHOOL IN ATLANTA Design Report, Jun. - Sep. 1974
Dec. 1974 268 p refs Prepared in cooperation with Georgia Inst. of Technol., Atlanta
(Contract NSF C-908)
(PB-240611/4; NSF/RA/N-74-122) Avail: NTIS HC $8.50 CSCL 13A

The first large scale integrated system providing heating and cooling for a building utilizing solar energy was designed for the George A Towns Elementary School in Atlanta, Georgia. Solar cooling is provided through the use of a hot water fired lithium bromide absorption chiller to satisfy building cooling loads. Hot water for heating and cooling is provided by a 10,000 sq. ft. solar collector array using reflective surfaces to obtain some concentration during summer months. Approximately 60% of the heating and cooling loads are expected to be met by solar energy, the balance by natural gas. The report contains details of design and principles of operation. GRA

RESEARCH AND DEVELOPMENT OF LOW COST PROCESSES FOR INTEGRATED SOLAR ARRAYS Semiannual Progress Report, 15 Apr. - 30 Jun. 1974
V. Kapur, A. G. MacDiarmid, G. T. Noel, D. P. Pope, and M. Wolf Jul. 1974 106 p refs
(Grant NSF GI-29729)
(PB-239760/2; NSF/RANN/SE/GI-29729X/PR-74-2; NSF/RA/N-74-152(5); SAPR-1) Avail: NTIS HC $5.25 CSCL 10B

Potential processes for the production of low cost solar-grade silicon are reviewed and evaluated from a thermodynamic point of view. Preliminary experimental studies of a silicon purification process using the SiF4/SiF2 silicon transport reaction yielded a transport rate of 10 milligrams of silicon per liter of SiF4 at a flow rate of 20 liters per hour. Processes for the formation of thin large area crystalline silicon sheets are reviewed and assessed; hot rolling, growth from a binary melt, thermal cycle annealing, and zone melting are identified as processes requiring further study. An effort to develop a methodology for the comparative rating of candidate processes is discussed. GRA

CONSERVATION AND BETTER UTILIZATION OF ELECTRIC POWER BY MEANS OF THERMAL ENERGY STORAGE AND SOLAR HEATING, EXECUTIVE SUMMARY Final Summary Report
Manfred Altman and Hsuan Yeh 31 Jul. 1973 31 p refs
(Grant NSF GI-27976)
(PB-239394/0; NSF/RANN/SE/GI-27976/PR-73-5; NSF/RA/N-73-005-A) Avail: NTIS HC $3.75 CSCL 10B

The technical and economic aspects of solar heating, off-peak air conditioning, and thermal energy storage were investigated. A solar heating system, which incorporates a conventional heating as a back-up, was designed. Twenty-four collector configurations were considered, and samples of the better ones were tested in the laboratory and under actual out-door insolation conditions. Two off-peak air conditioning systems were designed, and system prototypes were built and tested. Theoretical and experimental work was performed on latent heat energy storage materials and economic and marketing considerations for solar and off-peak space conditioning were explored. GRA

THE IMPACT OF ENERGY DEVELOPMENT ON WATER RESOURCES IN ARID LANDS. LITERATURE REVIEW AND ANNOTATED BIBLIOGRAPHY
Charles Bowden Jan. 1975 288 p refs
(Contract DI-14-31-0001-4258)
(PB-240008/3; Resource-IP-6; OWRT-W-180(4258)(1)) Avail: NTIS HC $8.75 CSCL 13B

Water is basic to energy conversion systems, natural and man-made. Consequences of energy extraction and conversion in arid lands where water is scarce are explored. The historical past is utilized as a record for casting modern development plans into perspective; the worldwide growth in energy consumption rates is considered as the motive force behind many current energy projects in arid lands. Energy sources (coal, oil, gas, oil shale, solar energy, alternative energy sources, fission, fusion, and geothermal) are reviewed in terms of their consequences on the air, land, water, and inhabitants of such regions. Two rivers, the Colorado and the Missouri, provide small-scale models of the rewards and hazards of heavily exploiting water-short

areas. In both instances, energy development plans, as now proposed, will seriously deplete the water supply, alter the quality of the water, land, and air, and increase the human population. GRA

MASS SPECTROMETRIC ANALYSIS OF PRODUCT WATER FROM COAL GASIFICATION Technical Progress Report, 1973
C. E. Schmidt, A. G. Sharkey, Jr., and R. A. Friedel Dec. 1974 11 p refs
(PB-240835/9; BM-TPR-86) Avail: NTIS HC $3.25 CSCL 07D

Condensate waters from the Bureau of Mines SYNTHANE process for coal gasification were investigated by mass spectrometric methods to determine the organic contaminants. Waters from the gasification of six coals were extracted with methylene chloride, yielding 0.6 to 2.4 weight-percent extractable material. Using high resolution mass spectrometry, combined gas chromatography-mass spectrometry, and low-voltage mass spectrometry, 60 to 80 percent of the extract was found to be phenolic. About 20 organic contaminants were identified and are present in the condensate waters from each coal gasified. The relative distribution of contaminants in the condensate water was nearly the same for the six coals gasified under various conditions. GRA

WASTE HEAT DISPOSAL FROM NUCLEAR POWER PLANTS
Ralph M. Rotty Sep. 1974 33 p refs
(COM-75-10407/5; NOAA-TM-ERL-ARL-47; NOAA-75032102) Avail: NTIS HC $3.75 CSCL 18E

The global consumption of energy has been growing exponentially at a rate of 5.4 percent per year. In accord with the second law of thermodynamics, all electrical power generation cycles must reject heat, and as larger and larger amounts of electricity are needed, larger amounts of heat must be rejected. The quantity of reject heat is rapidly approaching a level at which its impact on the atmosphere cannot be neglected. Possible intensification of convective activity and associated concentration of vorticity may be caused by concentrating large amounts of heat rejection in small areas. The type of cooling employed at a given power generation site has a major effect on the heat flux per unit of area. Once-through cooling is recommended. GRA

THE INFLUENCE OF THE PETROLOGY OF THE KARAGANDIN COALS ON THEIR METHANE CONTENTS
M. A. Ermekov, G. N. Krikunov, and E. Sh. Ortenberg [1974] 8 p refs Transl. into ENGLISH from Khim. Tverd. Topl. (Moscow), no. 3, 1973 p 119-123
(BLL-RTS-9309) Avail: British Library Lending Div., Boston Spa, Engl.: £1.60; 3 BLL photocopy coupons

The results of an investigation of the influence of the petrological composition on the methane sorption capacity of coals of the Karagandin field are presented with the object of obtaining reliable initial data for forecasting the methane output of mines. On the basis of investigations, an empirical relationship of the methane content to the microcomponents of the fusinite group is developed and the meaning of this relationship is explained. Author

DETERMINE UTILITY OF ERTS-1 TO DETECT AND MONITOR AREA STRIP MINING AND RECLAMATION Final Report, Aug. 1972 - Feb. 1975
Robert H. Rogers, Principal Investigator and Wayne A. Pettyjohn (Ohio State Univ.) Feb 1975 62 p refs Original contains color illustrations. Original contains imagery. Original photography may be purchased from the EROS Data Center, 10th and Dakota Avenue, Sioux Falls, S. D. 57198 ERTS
(Contract NAS5-21762)
(E75-10327; NASA-CR-143064; BSR-4179) Avail: NTIS HC $4.25 CSCL 08I

The author has identified the following significant results. Computer techniques were applied to process ERTS tapes acquired over coal mining operations in southeastern Ohio on 21 August 1972 and 3 September 1973. ERTS products obtained included geometrically correct map overlays showing stripped earth, partially reclaimed earth, water, and natural vegetation. Computer-generated tables listing the area covered by each land-water category in square kilometers and acres were produced. By comparing these mapping products, the study demonstrates the capability of ERTS to monitor changes in the extent of stripping, success of reclamation, and the secondary effects of mining on the environment.

THE DETECTION OF GEOTHERMAL AREAS FROM SKYLAB THERMAL DATA Final Report
Barry S. Siegal (NAS-NRC), Anne B. Kahle, Alexander F. H. Goetz, Alan R. Gillespie, Michael J. Abrams, and Howard A. Pohn (Geol. Survey) 15 Jun. 1975 34 p refs
(Contract NAS7-100)
(NASA-CR-143133; JPL-TM-33-728) Avail: NTIS HC $3.75 CSCL 08G

Skylab-4 X-5 thermal data of the geysers area was analyzed to determine the feasibility of using midday Skylab images to detect geothermal areas. The hottest ground areas indicated on the Skylab image corresponded to south-facing barren or sparsely vegetated slopes. A geothermal area approximately 15 by 30 m coincided with one of the hottest areas indicated by Skylab. This area could not be unambiguously distinguished from the other areas which are believed to be hotter than their surroundings as a result of their topography, and micrometeorological conditions. A simple modification of a previous thermal model was performed and the predicted temperatures for the hottest slopes using representative values was in general agreement with the observed data. It is concluded that data from a single midday Skylab pass cannot be used to locate geothermal areas. Author

ANIMAL WASTE CONVERSION SYSTEMS BASED ON THERMAL DISCHARGE
L. Boersma, E. W. R. Barlow, J. R. Miner, and H. K. Phinney Sep. 1974 58 p refs Sponsored by Dept. of Interior
(PB-240113; W75-05453) Avail: NTIS CSCL 02C

An animal waste management scheme was developed on the premise that one solution to the problems of pollution and the consumption of nonrenewable resources is the development of integrated production systems with recycled sources. The feasibility of using waste heat from steam electric plants to sustain a food-producing complex which recycles nutrients is analyzed. Specifically, it is proposed to use microorganisms to convert animal waste into a high-protein animal feed and a methane-rich fuel gas. Waste heat from steam electric plants is used as a low-cost source of energy for maintaining stable, elevated temperatures in anaerobic digestion and single cell protein production units. Author

USE OF THERMALLY ENRICHED WATER FOR GROWING FIELD CROPS IN MINNESOTA
E. R. Allred and J. R. Gilley 1974 22 p refs Presented at the Natl. Environ. Conf. Soc. of Civil Engr., Kansas City, Mo., 21-25 Oct. 1974 Sponsored by Dept. of Interior
(PB-240112; W75-05440) Avail: NTIS CSCL 02C

The use of waste heat energy for the growing of agricultural crops near Elk River, Minnesota was evaluated. The base heat transmissibility characteristics of soil was determined and crop frost protection benefits as the result of the soil warming process were examined. Soil warming was shown to be necessary for extension of the growing season for field crops in Minnesota. An irrigation system used alone proved ineffective in soil warming. Artificial warming of a field soil by utilization of waste heat energy failed to provide significant protection for potatoes against frosts at temperatures below 28 F. It was possible to advance the maturity date for early potatoes varieties grown in heated soil between two and three weeks, as compared to potatoes grown in unheated field soils. Only small quantities of waste heat energy were utilized by a field soil in Minnesota during July and August. Author

DETERMINATION OF CARBONATE MINERALS OF GREEN RIVER FORMATION OIL SHALES, PICEANCE CREEK BASIN, COLORADO
N. B. Young, J. W. Smith, and W. A. Robb Jan. 1975 46 p refs
(PB-240669/2; BM-RI-8008) Avail: NTIS HC $3.75 CSCL 08G

Quantification of carbonate minerals is important for the characterization of oil shale, particularly because of their thermal activity in production of oil from shale. The carbonate minerals found in this oil shale are nahcolite (NaHC O3), dawsonite (NaAl(OH)2CO3), Dolomite (mg(1-x)fe(x))Ca(CO3)2), calcite (CaCO3), and ferroan (Mg(1-x)Fe(x))CO3). While carbonate minerals can be removed by acid extraction from the balance of the oil shale, direct determination of carbonate minerals is complicated by the occurrence of the same cations in more than one mineral. A method for assigning the acid-soluble cations to the individual carbonate minerals was developed from two assumptions based on oil shale geochemistry. GRA

CHEMICALLY ACTIVE FLUID-BED PROCESS FOR SULPHUR REMOVAL DURING GASIFICATION OF HEAVY FUEL OIL, PHASE 2 Report for Jul. 1972 - May 1974
J. W. T Craig, G. L. Johnes, Z. Kowszun, G. Moss, and J. H. Taylor Nov. 1974 598 p refs
(Contract EPA-68-02-0300)
(PB-240632/0; EPA-650/2-74-109) Avail: NTIS HC $13.25 CSCL 07A

The chemically active fluid bed process for desulfurizing gasification of heavy fuel oil in a bed of hot lime was studied. The first continuous pilot plant test with U.S. Limestone BCR 1691 experienced local stone sintering and severe production of sticky dust during startup. Batch tests confirmed that BCR 1691 produced more dust than the purer Denbighshire or U.S. BCR 1359 stones. With BCR 1691, 10 times more dust was produced during kerosene combustion at 870C than during gasification/Regeneration. The continuous pilot plant was modified to improve operability under dusty conditions. GRA

CYCLE STUDY OF A MERCURY-COLLOIDAL ELECTRO-FLUID DYNAMIC POWER GENERATOR M.S. Thesis. Interim Report, 18 Apr. - 17 Jul. 1972
Beatriz Urquidi Oct. 1974 70 p refs
(Contracts F33615-72-C-1258; F33615-69-C-114, AF Proj. 7116)
(AD-A004814; ARL-74-0127; pr-3) Avail: NTIS CSCL 10/2

The author presents a study of an Electro-Fluid-Dynamic power system using mercury as the working vapor and hydrogen as the fill gas. Viscous coupling between mercury vapor and hydrogen is assumed. A detailed study of the various components, and related efficiencies, of the system is made and expressions for their dependence on various system parameters are derived. The overall system efficiency is optimized and analytical expressions for the optimum values of the operating parameters are given. A sensitivity analysis is made to determine the effect, on the efficiency of changes in several system parameters. Numerical calculations are carried out using a simple computer program. The results of the calculations are shown in graphical and tabular form. As an illustration, a 12.5 KW output power generator is considered and the main design characteristics are presented. GRA

SOLAR POND Patent Application
Charles G. Miller (JPL) and James B. Stephens, inventors (to NASA) (JPL) Filed 27 Jun 1975 18 p
(Contract NAS7-100)
(NASA-Case-NPO-13581-1; US-Patent-Appl-SN-590975) Avail: NTIS HC $3.25 CSCL 10A

Solar ponds were designed for the purpose of collecting low-temperature thermal energy on a large scale. The shallow pools include a number of narrow, elongated, grouped trenches with heat-absorbing black liners, and containing either a brine solution or plain water, depending on the means used to remove the thermal energy from the pond. The heat-absorbing liquid is kept separate from the thermal energy removing fluid by means such as transparent fluid or solid. NASA

MECHANICAL THERMAL MOTOR Patent Application
Leopold A. Hein and William N. Myers, inventors (to NASA) Filed 30 Jun. 1975 21 p
(NASA-Case-MFS-23062-1; US-Patent-Appl-SN-591569) Avail: NTIS HC $3.25 CSCL 10A

A mechanical thermal motor was designed for converting thermal energy, such as solar energy, into mechanical motion for driving a pump. The thermal motor uses heated fluid produced by solar energy coming directly from the sun or through other fluid heaters. The motor includes a stationary core supported on a base structure. A cylindrical disc plate is carried adjacent a lower portion of the inner core and extends radially. An inner concentric cylinder encircles the inner core and is fixed by a number of radially extending spokes. An outer concentric cylinder encircles the inner concentric cylinder, and a spiral tube is coiled in the space between the two cylinders. The reciprocating motion of the spiral tube as it expands and contracts on the outer concentric cylinder is used as the input drive to a pump. NASA

FLUID MANIFOLD DESIGN FOR A SOLAR ENERGY STORAGE TANK
W. R. Humphries, H. C. Hewitt (Tennessee Technological Univ.), and E. I. Griggs (Tennessee Technological Univ.) Jun. 1975 21 p
(NASA-TM-X-64940) HC $3.25 CSCL 10B

A design technique for a fluid manifold for use in a solar energy storage tank is given. This analytical treatment generalizes the fluid equations pertinent to manifold design, giving manifold pressures, velocities, and orifice pressure differentials in terms of appropriate fluid and manifold geometry parameters. Experimental results used to corroborate analytical predictions are presented. These data indicate that variations in discharge coefficients due to variations in orifices can cause deviations between analytical predictions and actual performance values. Author

CARBON ISOTOPES IN OIL-GAS GEOLOGY
E. M. Galimov Washington NASA Jun. 1975 409 p refs Transl. into ENGLISH of the book "Izotopy Ugleroda v Neftegazovoy Geologii" Moscow, Nedra Press, 1973 p 1-384 (Contract NASw-2481)
(NASA-TT-F-682) Avail: NTIS HC $10.50 CSCL 08G

Analysis of variations in the natural abundances of the carbon isotopes C12 and C13 in petroleum, gases, bitumens, and other materials is treated. A theoretical-calculation division gives data on the thermodynamic isotope effects of organic compounds, and presents a theory of biogenic isotope equilibria and intramolecular isotope nonuniformity of bio-organic compounds. Laboratory studies of processes simulating natural fractionation of carbon isotopes are emphasized; included are data on the isotopic composition of individual hydrocarbons. Possible pathways of their formation were examined, and a general model of the petroleum-forming process is proposed. Within the bounds of a specific region, genetical types of petroleum are found, and their areal and profile distributions were determined. Author

BIO-CONVERSION OF WATER HYACINTHS INTO METHANE GAS, PART 1
B. C. Wolverton, R. C. McDonald, and J. Gordon Jul. 1974 13 p refs
(NASA-TM-X-72725) Avail: NTIS HC $3.25 CSCL 10A

Bio-gas and methane production from the microbial anaerobic decomposition of water hyacinths (Eichhornia crassipes) (Mart) Solms was investigated. These experiments demonstrated the ability of water hyacinths to produce an average of 13.9 ml of methane gas per gram of wet plant weight. This study revealed that sample preparation had no significant effect on bio-gas and/or methane production. Pollution of water hyacinths by two toxic heavy materials, nickel and cadmium, increased the rate of methane production from 51.8 ml/day for non-contaminated plants incubated at 36 C to 81.0 ml/day for Ni-Cd contaminated plants incubated at the same temperature. The methane content of bio-gas evolved from the anaerobic decomposition of Ni-Cd contaminated plants was 91.1 percent as compared to 69.2 percent methane content of bio-gas collected from the fermentation of non-contaminated plants. AN AGRO-POWER-WASTE WATER COMPLEX FOR LAND DISPOSAL OF WASTE HEAT AND WASTE WATER
David R. DeWalle Jun. 1974 208 p refs
(Grant NSF GI-35100)
(PB-239675/2; NSF/RA/E-74-016) Avail: NTIS HC $7.25 CSCL 13B

An agro-power-waste water complex was evaluated as a system in which waste heat from power generation was dissipated by recycling hot water through a pipe network buried in agricultural land. Concurrently, municipal waste water was renovated by sprinkler irrigation on the land and served to maintain a high soil moisture content and soil thermal conductivity. A 0.23 acre field prototype of the agro-power-waste water complex was constructed and measurements were obtained of soil temperature, soil thermal conductivity, heat dissipation, degree of waste water renovation and soil surface temperature used in a system analysis. A nuclear fuel penalty concept was used in comparing this system with conventional heat dissipation systems. GRA

CONVERSION OF CELLULOSIC WASTES TO OIL Report of Investigations 1971 - 1973
H. R. Appell, Y. C. Fu, E. G. Illig, F. W. Steffgen, and R. D. Miller Feb. 1975 34 p refs
(PB-240839/1; BM-RI-8013) Avail: NTIS HC $3.75 CSCL 13B

The Bureau of Mines studied the conversion of a variety of cellulosic wastes (sawdust, bovine manure, sewage sludge, urban refuse (free of metal and ceramics)) to heavy oils. The reactions took place in the presence of synthesis gas and water or carbon monoxide and water under conditions of elevated temperatures and pressures. Waste conversions above 90 percent, often near 99 percent, with oil yields in the range of 40 to 60 percent, were obtained in the temperature range of 250 to 425C and pressure range of 1,500 to 4,000 psig. Cobalt molybdate on alumina catalyst, used with sodium carbonate, gave a product of lower viscosity and lower oxygen content than when using sodium carbonate as the sole catalyst. GRA

LONG TERM POWER SYSTEM DYNAMICS. VOLUME 1: SUMMARY AND TECHNICAL REPORT Final Report
Jun. 1974 233 p refs Sponsored by Electric Power Res. Inst. 2 Vol.
(PB-240799/7; EPRI-907-0-Vol-1) Avail: NTIS HC $7.50 CSCL 09C

The goal of the project was to analyze longterm (up to 20 min.) dynamic behavior leading to power system 'split-up' and to develop digital simulation techniques to model this behavior. Eighteen disturbances leading to the break-up of a power system into two or more subsystems are documented in the final report. Analysis of these disturbances led to a modeling approach, which combined an aggregate model of system frequency for the long-term dynamic behavior with a detailed model for analysis of high-speed transients. The computation expense for this initial digital computer program was less than 10 percent of the expense for a conventional transient stability program, and it is anticipated that further reduction in computation cost can be achieved. GRA

(Contract EPA-68-01-0461)
(PB-240776/5; EPA-460/3-73-001) Avail: NTIS HC $8.50 CSCL 21G

The porous plate combustor was evaluated for use in the gas turbine or Rankine cycle advanced automobile engines to control exhaust emissions. Analytical results concerning the gas turbine engine include the burner area requirements for the various operating conditions of the baseline engine as well as exhaust emission predictions. The design concept of an air-cooled, variable area combustor for this engine is presented. Operational and emissions data on several experimental combustors are presented along with the fabrication development leading to these combustors. Finally the demonstration results for a full-scale fuel-air mixture system are presented. GRA

EVALUATION OF POLLUTION CONTROL IN FOSSIL FUEL CONVERSION PROCESSES. LIQUEFACTION, SECTION 1: COED PROCESS Final Report
C. D. Kalfadelis and E. M. Magee Jan. 1975 12 p refs
(PB-240371/5; GRU-7DJ-75; EPA-650/2-74-009) Avail: NTIS HC $4.25 CSCL 07A

The COED coal conversion process was reviewed in terms of its effect on the environment. Estimates of solid, liquid, and gaseous effluents are included as well as the thermal efficiency of the process. Process modifications are proposed and new technology needs, aimed at lessening adverse environmental impact, are indicated. Author

US AND SOVIET MHD TECHNOLOGY: A COMPARATIVE OVERVIEW
G. Rudins Jan. 1974 112 p refs
(Contract DAHC15-73-C-0181; ARPA Order 189-1)
(AD-A004614/R-1404-ARPA) Avail: NTIS CSCL 10/2

The present Report, in successive sections, briefly reviews MHD technology, traces the evolution of the MHD programs in the United States and U.S.S.R. and their respective development

approaches, and compares major U.S. and U.S.S.R. MHD facilities and national program objectives. GRA

THE PROBLEM OF PEAK LOAD PRICING SUBJECT TO RATE OF RETURN CONSTRAINT

David L. McNicol Mar. 1974 49 p refs

(Grant NSF GI-29729)

(PB-239765; NSF/RA/N-74-152(10)) Avail: NTIS HC $3.75 CSCL 05C

It is shown that Wellisz's and Bailey's analyses of peak pricing subject to regulatory constraint imply the absence of overcapitalization. The error in their analyses is identified and it is established that it is optimal to use more than the cost minimizing quantity of capital, and if inputs are continuously variable, the optimal output exceeds the monopoly output in each period but only peak period output exceeds the monopoly level for a fixed coefficient technology. It is then shown that the type of price discrimination permitted affects the profitability of peak load pricing. Author

INCREASED FUEL ECONOMY IN TRANSPORTATION SYSTEMS BY USE OF ENERGY MANAGEMENT. VOLUME 1: GENERAL RESULTS AND DISCUSSION Final Report

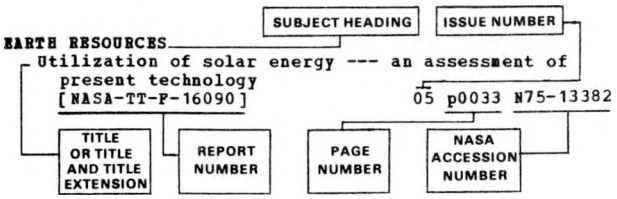
N. H. Beachley and A. A. Frank Dec. 1974 174 p refs

(Contract DOT-OS-30112)

(PB-240220/4; DOT-TST-75-2) Avail: NTIS HC $6.25 CSCL 21D

Computer simulation programs were developed, based on experimental data as well as theory, to simulate the performance of current motor vehicles over all types of driving cycles. The simulation includes the effect of the dynamic interactions among the powerplant and drivetrain components, and is quite sophisticated so as to accurately predict the performance changes produced by a wide range of vehicle modifications. Two versions were developed--a real-time hybrid computer simulation and an all-digital batch program. Simulation of vehicles with continuously variable transmissions as a replacement for the current automatic transmission shows that a considerable improvement in fuel mileage over present-day automobiles is possible. GRA

Typical Subject Index Listing



The subject heading is a key to the subject content of the document. The title or title and title extension provides the user with a brief description of the subject matter. The report number helps to indicate the type of document cited (e.g., NASA report, translation, NASA contractor report). The issue page and accession numbers are located beneath and to the right of the title e.g., 05 p0033 N75-13382. Under any subject heading the accession numbers are arranged in sequence with the *IAA* accession numbers appearing first.

AQUIFERS
Steady state free convection in an unconfined geothermal reservoir
05 p0009 A75-11069
ARCHITECTURE
Space and energy conservation housing prototype unit development
[NASA-CR-143201] 07 p0160 N75-27567
ARCTIC REGIONS
A heat pump powered by natural thermal gradients
05 p0006 A75-10550
Improving the oil storage system of western Siberia
[AD-A002717] 06 p0092 N75-19705
Submarine tanker concepts and problems
[COM-75-10009/9] 07 p0132 N75-22264
ARID LANDS
Solar powered pump
[NASA-CASE-NPO-13567-1] 07 p0133 N75-22746
The impact of energy development on water resources in arid lands. Literature review and annotated bibliography
[PB-240008/3] 07 p0157 N75-26550
ARRAYS
Summary of results of solar power arrays for the concentration of energy study
[PB-238003/8] 06 p0089 N75-18756
ASYMMETRY
Design analysis of asymmetric solar receivers
[SAND-74-0124] 06 p0076 N75-16586
ATLANTIC OCEAN
Energy exchange at the surface of the western North Atlantic Ocean
[AD-A007296] 07 p0146 N75-24285
Atlantic outer continental shelf energy resources: An economic analysis
[COM-75-10330/9] 07 p0152 N75-26484
ATMOSPHERIC COMPOSITION
Changes in the global energy balance --- atmospheric composition and the effect of air pollution
[PB-238075/6] 06 p0106 N75-20936
ATMOSPHERIC DIFFUSION
Meteorological factors and dispersion of pollutants in the atmosphere - A preliminary study about a large power plant
06 p0045 A75-21150
ATMOSPHERIC HEATING
Interaction between the fuel-energy complex and the environment
07 p0110 A75-29800
ATS 6
Cost competitiveness of a solar cell array power source for ATS-6 educational TV terminal
[NASA-TM-X-71720] 07 p0140 N75-24110
ATTITUDE CONTROL
French activity in electric propulsion
07 p0120 A75-36539
AUTOCLAVING
Development of a process for producing an ashless, low-sulfur fuel from coal. Volume 2: Laboratory studies. Part 1: Autoclave experiments
[PB-236305/9] 05 p0040 N75-15169
AUTOMATIC CONTROL
Fundamentals of automatic control of space nuclear power plants --- Russian book
06 p0048 A75-23229
AUTOMATIC TEST EQUIPMENT
Laboratory semiautomatic infrared device for determining the composition of petroleum products in sewage
07 p0125 A75-38648
AUTOMOBILE ENGINES
Feasibility demonstration of a road vehicle fueled with hydrogen-enriched gasoline
05 p0008 A75-10574
Liquid hydrogen as an automotive fuel
06 p0048 A75-23238
Methanol as fuel for vehicle engines
06 p0050 A75-23506
Methane gas engines for commercial vehicles and busses
06 p0050 A75-23507
The Stirling engine for vehicle propulsion
06 p0050 A75-23509
State of the art and prospects for electric vehicles
[BLL-OA-TRANS-1250-(6196.3)] 06 p0074 N75-16712
Inspection and maintenance of light-duty gasoline powered motor vehicles: A guide for implementation --- emissions inspection program
[PB-236587/2] 06 p0090 N75-18784
A study of technological improvements in automotive fuel consumption. Volume 1: Executive summary
[PB-238693/6] 07 p0132 N75-22481
A study of technological improvements in automobile fuel consumption. Volume 2: Comprehensive discussion
[PB-238694/4] 07 p0132 N75-22482
A study of technological improvements in automobile fuel consumption. Volume 3A: Appendixes 1 - 111
[PB-238695/1] 07 p0133 N75-22483
A study of technological improvements in automobile fuel consumption. Volume 3B: Appendixes 4 - 7
[PB-238696/9] 07 p0133 N75-22484

The role for Federal R and D on alternative automotive power systems
[PB-238771/0] C7 p0137 N75-23391
The oxidation of ethylene in automotive engine exhaust gas; an experimental investigation
C7 p0138 N75-23719
Aerodynamic design of a free power turbine for a 75 KW gas turbine automotive engine
[NASA-TM-X-71714] C7 p0140 N75-24106
Air pollution: Conference on Low Pollution Power Systems Development
[PB-240564/5] C7 p0162 N75-27618
Development of low emission porous plate combustor for automotive gas turbine and Rankine cycle engines --- air pollution control
[PB-240776/5] C7 p0162 N75-27619
Increased fuel economy in transportation systems by use of energy management. Volume 1: General results and discussion
[PB-240220/4] C7 p0163 N75-27970

AUTOMOBILE FUELS
Some LNG vehicle developments --- for automotive conversion systems and fueling stations
C6 p0048 A75-23236
Feasibility study of alternative fuels for automotive transportation. Volume 1: Executive summary
[PB-235581/6] C5 p0041 N75-15187
Feasibility study of alternative fuels for automotive transportation. Volume 2: Technical section
[PB-235582/4] C5 p0041 N75-15188
Feasibility study of alternative fuels and automotive transportation. Volume 3: Appendices
[PB-235583/2] C5 p0041 N75-15189
Development of high specific energy batteries for electric vehicles
[ANL-8058] C6 p0076 N75-16990
Environmental aspects of methanol as vehicular fuel: Health and environmental effects
[UCRL-76076] C6 p0095 N75-19867
Synthetic fuels for ground transportation with special emphasis on hydrogen
[NASA-TM-X-72652] C6 p0103 N75-20868

AUTOMOBILES
Energy carriers in space conditioning and automotive applications - A comparison of hydrogen, methane, methanol and electricity
C5 p0005 A75-10540
Energy efficiency of current intercity passenger transportation modes
[AIAA PAPER 75-314] C6 p0047 A75-22513
Time factors in slowing down the rate of growth of demand for primary energy in the United States
C6 p0059 A75-27780
Iron titanium hydride as a source of hydrogen fuel for stationary and automotive applications
[BNL-18651] C5 p0030 N75-12441
Transportation vehicle energy intensities. A joint DOT/NASA reference paper --- energy consumption of air and ground vehicles
[NASA-TM-X-62404] C5 p0035 N75-13690
Analytical description of the modern steam automobile
[NASA-TM-X-72199] C5 p0035 N75-14134
Caltech seminar series on energy consumption in private transportation
[PB-235348/0] C5 p0040 N75-15179
Caltech seminar series on energy consumption in private transportation: Administrative summary
[PB-235349/8] C5 p0041 N75-15184
High energy battery program at Argonne National Laboratory
[ANL-8064] C6 p0076 N75-16984
Development of lithium/sulfur cells for application to electric automobiles
[CONF-740805-7] C6 p0094 N75-19829
Impact of future use of electric cars in the Los Angeles region. Volume 1: Executive summary and technical report
[PB-238877/5] C7 p0131 N75-22199
Impact of future use of electric cars in the Los Angeles region. Volume 2: Task reports on electric car characterization and baseline projections
[PB-238878/3] C7 p0131 N75-22200
Impact of future use of electric cars in the Los Angeles region. Volume 3: Task reports on impact and usage analysis
[PB-238879/1] C7 p0131 N75-22201
Technological improvements to automobile fuel consumption. Volume 1: Executive summary
[PB-238677/9] C7 p0132 N75-22478
Technological improvements to automobile fuel consumption. Volume 2A: Sections 1 through 23
[PB-238678/7] C7 p0132 N75-22479
Technological improvements to automobile fuel consumption. Volume 2B: Sections 24 and 25 and appendixes A through I
[PB-238679/5] C7 p0132 N75-22480
Nickel-zinc batteries for hybrid vehicle operation
[PB-239710/7] C7 p0156 N75-26514

AUXILIARY POWER SOURCES
Progress in development of auxiliary MHD power plant components at Avco Everett Research Laboratory, Inc
[ASME PAPER 74-WA/ENER-6] C5 p0016 A75-16838
An engine project engineer's view of advanced secondary power systems
[SAE PAPER 740884] C5 p0019 A75-16925
F-15 secondary power systems
[SAE PAPER 740885] C6 p0048 A75-22948

AXIAL FLOW PUMPS
Solar sea power --- axial flow pumps
[PB-236997/3] C6 p0082 N75-17821

AXIAL FLOW TURBINES
Aerodynamic design of a free power turbine for a 75 KW gas turbine automotive engine
[NASA-TM-X-71714] C7 p0140 N75-24106
Ocean thermal difference power plant turbine design
[PB-239371/8] C7 p0150 N75-25318

B

BEDROCK
Theory of heat extraction from fractured hot dry rock
C6 p0057 A75-26544

BEDS (PROCESS ENGINEERING)
Gasification of solid wastes in fixed beds
[ASME PAPER 74-WA/PWR-10] C5 p0018 A75-16882

BENARD CELLS
Natural convection in enclosed spaces - A review of application to solar energy collection
[ASME PAPER 74-WA/HT-12] C5 p0017 A75-16860

BETA PARTICLES
Advanced betavoltaic power sources
C5 p0007 A75-10563

BIBLIOGRAPHIES
Coal processing: Gasification, liquefaction, desulfurization: A bibliography, 1930 - 1974
[TID-3349] C5 p0023 N75-10578
NSF-Rann energy abstracts: A monthly abstract journal of energy research
[ORNL-EIS-74-52-VOL-2-NO-1] C5 p0024 N75-10592
Hydrogen future fuel: A literature survey issued quarterly, issue no. 6 --- bibliographies
C5 p0027 N75-11110
NSF-RANN energy abstracts. A monthly abstract journal of energy research, volume 2, no. 4
[ORNL-EIS-74-52-VOL-2-4] C5 p0029 N75-11469
The gasification of coal: A bibliography
[PB-234294/7] C5 p0034 N75-13400
Coal petrography and petrology. A bibliography 1964 - 1973
[PB-236351/3] C6 p0072 N75-16123
Development of a process for producing an ashless low sulfur fuel from coal. Volume 4. Product studies. Part 2. Annotated bibliography on mineral fiber production from coal minerals
[PB-237763/8] C6 p0095 N75-19839
Solar energy: A bibliography
[TID-3351] C6 p0103 N75-20871
NSF-RANN energy abstracts. A monthly abstract journal of energy research
[ORNL-EIS-74-52-VOL-2-NO-6] C7 p0146 N75-24532
Mineral resources and the environment. Appendix to section 4: Report of panel on demand for fuel and mineral resources
[PB-239583/8] C7 p0153 N75-26490
Hydrogen-future fuel-A bibliography (with emphasis on cryogenic technology)
[CONF-75-10289/7] C7 p0155 N75-26509
Energy: An annotated bibliography
[NASA-TM-X-66766] C7 p0159 N75-27557

Energy: An annotated bibliography
[NASA-TM-X-72433] C7 p0159 N75-27558
BINARY MIXTURES
Operational, maintenance, and environmental problems associated with a fossil fuel-fired potassium steam binary vapor cycle
[ORNL-NSF-EP-30] C6 p0090 N75-18769
BIOCHEMICAL FUEL CELLS
The introduction of the principles of biological energy supply in future technical systems
C6 p0050 A75-23511
BOILERS
Theoretical determination of the temperature in a solar water heater /steady state/
C7 p0112 A75-31513
Solar thermal subsystem specification study
[PB-238005/3] C6 p0083 N75-17829
Survey of gas and oil burners for use with NSF/RANN-ORNL potassium boiler
[ORNL-NSF-EP-45] C6 p0087 N75-18728
Where the boilers are: A survey of electric utility boilers with potential capacity for burning solid waste as fuel
[PB-239392/4] C7 p0143 N75-24135
Conference proceedings, Steam Power Plant Workshop
[PB-239514/3] C7 p0144 N75-24148
Solar energy for process steam generation
[PB-238109/3] C7 p0145 N75-24154
BOROSILICATE GLASS
Glass-Si heterojunction solar cells
[PB-239282/7] C7 p0145 N75-24156
BOUNDARY VALUE PROBLEMS
Effect of inhomogeneity of conductivity on end effect in a sectional MHD generator
C7 p0119 A75-36233
BREEDER REACTORS
Optimization of fusion power density in the two-energy-component tokamak reactor
C7 p0124 A75-37836
Clinch River Breeder Reactor: A combined power and fuel source
[CONF-740609-4] C5 p0038 N75-14593
BRINES
Materials screening program for the LLL geothermal project
[UCRL-75353] C6 p0082 N75-17815
BUBBLES
Investigation of bubble formation in arteries of gas-controlled heat pipes
[AIAA PAPER 75-655] C7 p0114 A75-32913
BUILDINGS
Solar heating and cooling of buildings
C6 p0059 A75-27783
Cooling by solar heat --- heating and cooling system for buildings
[AIAA PAPER 75-609] C6 p0062 A75-28590
Solar heating and cooling
C7 p0111 A75-31269
Energy, environment and building --- Book
C7 p0111 A75-31448
Solar energy and architecture
C7 p0112 A75-31698
Heating buildings with solar energy
C7 p0117 A75-34933
Retrofitting existing housing for energy conservation: An economic analysis
[COM-75-50049/6] C7 p0135 N75-22914
Energy conservation: A case study for a large manufacturing plant
[PB-239302/3] C7 p0151 N75-25323
Development of flat-plate solar collectors for the heating and cooling of buildings
[NASA-CR-134804] C7 p0154 N75-26495
Residential energy consumption and small scale options of energy systems for space heating
[PB-239941/8] C7 p0154 N75-26501
BURNERS
Oxides of nitrogen control techniques for appliance conversion to hydrogen fuel
C5 p0006 A75-10541
Design installation and operation of a 25 ton-a-day coal gasification process development unit for the agglomerating burner-gasification
[PB-237625/9] C6 p0087 N75-18734
Development of low emission porous plate combustor for automotive gas turbine and Rankine cycle engines --- air pollution control
[PB-240776/5] C7 p0162 N75-27619

C

CADMIUM COMPOUNDS
Research on cadmium stannate selective optical films for solar energy applications
[PB-236208/5] C6 p0071 N75-16117
CADMIUM SELENIDES
Efficient CuInSe2/CdS solar cells
C7 p0119 A75-36274
CADMIUM SULFIDES
CdS-Cu2S cells - An outlook for terrestrial applications
C6 p0052 A75-24223
Progress in the development of cadmium sulphide terrestrial solar batteries
C6 p0052 A75-24224
Further progress in the technology of silk screened CdS solar cells
C6 p0052 A75-24225
Development of very low cost solar cells for terrestrial power generation
C6 p0052 A75-24226
Direct solar energy conversion for large scale terrestrial use
[PB-236193/9] C6 p0071 N75-16115
Environmental aspects of cadmium sulfide usage in solar energy conversion. Part 1: Toxicological and environmental health considerations, a bibliography
[PB-238285/1] C6 p0105 N75-20884
CALIFORNIA
Electricity conservation measures in the commercial sector: The Los Angeles experience
[R-1592-FEA] C5 p0034 N75-13388
California energy workshop: Developing a plan of action to meet the energy crisis in California --- oil recovery, nuclear electric power generation, and offshore energy sources
[PB-237045/0] C6 p0082 N75-17822
Meeting California's energy requirements, 1975 - 2000
C7 p0149 N75-25297
CALORIMETERS
Method of calibrating a solar power plant with a paraboloidal mirror
C7 p0116 A75-34315
CANADA
A review of the status of MHD power generation technology including suggestions for a Canadian MHD research program
[UTIAS-39] C5 p0035 N75-13641
Conservation in Alberta, 1973
C7 p0158 N75-27532
CAPILLARY FLOW
An investigation of heat-pipe wick characteristics
C5 p0012 A75-12914
Capillary flow through heat-pipe wicks
[AIAA PAPER 75-661] C7 p0114 A75-32919
CARBON DIOXIDE
Mineral resources and the environment. Appendix to section 3: Report of panel on the implications of mineral production for health and the environment
[PB-239582/0] C7 p0153 N75-26489
CARBON DIOXIDE LASERS
Interferometric tuning of a 15-atm CO2 laser
C6 p0058 A75-27518
Conversion of electrical energy into laser radiation energy in high pressure mixtures of molecular gases
C7 p0133 N75-22722
CARBON 12
Carbon isotopes in oil-gas geology
[NASA-TT-F-682] C7 p0160 N75-27563
CARBON 13
Carbon isotopes in oil-gas geology
[NASA-TT-F-682] C7 p0160 N75-27563
CARBONATES
Determination of carbonate minerals of Green River formation oil shales, Piceance Creek Basin, Colorado
[PB-240669/2] C7 p0159 N75-27554
CARDIOVASCULAR SYSTEM
Development and evaluation of a Stirling-Cycle energy conversion system
[PB-239086/2] C7 p0136 N75-22918

CARNOT CYCLE
A heat pump powered by natural thermal gradients
C5 p0006 A75-10550
A generalization of the Carnot theorem - The theorem of useful power
C6 p0057 A75-26448

CARRIER INJECTION
Silicon solar cells for highly concentrated sunlight
C7 p0120 A75-36363

CATALYSIS
Proceedings of the Workshop on Needs for Fundamental Research in Catalysis as Related to the Energy Problem
[PB-236683/9] 06 p0078 N75-17006

CELL ANODES
Predicted energy densities for nickel-hydrogen and silver-hydrogen cells embodying metallic hydrides for hydrogen storage
C5 p0008 A75-10572

CELLULOSE
Conversion of cellulosic wastes to oil
[PB-240839/1] C7 p0161 N75-27572

CEMENTS
Industrial energy study of the hydraulic cement industry
[PB-237142/5] C6 p0087 N75-18730

CERAMICS
Aluminum nitride and silicon nitride for high-temperature vehicular gas turbine engines
C5 p0011 A75-11362
Recuperator development trends for future high temperature gas turbines --- heat exchanger design
[ASME PAPER 75-GT-50] C7 p0116 A75-34607

CESIUM ENGINES
French activity in electric propulsion
C7 p0120 A75-36539

CESIUM PLASMA
MHD energy conversion systems
[AIAA PAPER 74-1071] C5 p0001 A75-10263
Empirical method of designing the current-voltage characteristics for the discharge mode of a thermionic converter
C6 p0057 A75-26332

CHANNEL FLOW
Recent MHD generator testing at Avco Everett Research Laboratory, Inc
[ASME PAPER 74-WA/ENER-7] C5 p0016 A75-16839
Investigation of the optimal MHD-generator characteristics for combinational open-cycle MHD power generators --- using one dimensional channel flow model
C7 p0119 A75-36260

CHARCOAL
Coal processing by electrofluids
[PB-236588/0] C6 p0088 N75-18743

CHEMICAL ANALYSIS
Laboratory semiautomatic infrared device for determining the composition of petroleum products in sewage
C7 p0125 A75-38648
Report to congress on petrochemicals --- analyzing supply/demand in industry
[PB-238064/0] 06 p0097 N75-20478
Coal structure and reactivity
[TID-26637] C6 p0097 N75-20805
Chemistry of organic sulfur compounds contained in petroleums and petroleum products, Volume 7
[TT-70-57759] C7 p0138 N75-23691
The relation of coal characteristics to coal liquefaction behavior
[PB-239261/1] 07 p0151 N75-25327

CHEMICAL COMPOSITION
Waste lubricating oil research. A comparison of bench-test properties of re-refined and virgin lubricating oils --- materials recovery
[PB-238124/2] 06 p0097 N75-20746
Dependence of coal liquefaction behavior on coal characteristics
[PB-238522/7] 07 p0130 N75-21812
The identification of gamma-valerolactone in waste from an oil-shale in situ retort --- determination of chemical composition by mass spectroscopy of effluents from crude oil shales causing water pollution
[PB-240098/4] 07 p0147 N75-24852

CHEMICAL ENERGY
Closed loop chemical systems for energy transmission, conversion and storage
C5 p0005 A75-10538
Energy supply in a closed cycle --- nuclear energy for nonelectrical use
06 p0049 A75-23503
Chemical to electromagnetic energy conversion techniques --- explosive flux compression technology
[AD-783901] 05 p0026 N75-10609

CHEMICAL ENGINEERING
Applications of fusion power technology to the chemical industry
[ENL-18815] 05 p0029 N75-11730
Data base for the industrial energy study of the industrial chemicals group
[PB-237845/3] 06 p0087 N75-18732

CHEMICAL EXPLOSIONS
A practical model law for chemical explosive fracture of oil shale
06 p0078 N75-17023

CHEMICAL FUELS
Prospects and scientific problems of the utilization of methods of direct electric power generation from chemical fuels /fuel cells/
05 p0012 A75-12911
Methanol as fuel for vehicle engines
06 p0050 A75-23506
Utilization of plasma exhaust energy for fuel production
[COO-3028-7] 05 p0028 N75-11465

CHEMICAL REACTIONS
Efficiencies of electrolytic and thermochemical hydrogen production
06 p0045 A75-20300
Recommended research program in geothermal chemistry
[WASH-1344] 06 p0077 N75-16997

CHEMICALS
Industrial energy study of the Industrial chemicals group
[PB-236322/4] 06 p0071 N75-16111

CHROMIUM ALLOYS
Cryogenic properties of Fe-Mn and Fe-Mn-Cr alloys
[LBL-2764] 06 p0066 N75-15781

CITIES
Net radiation and other energy-related maps from remotely sensed imagery
07 p0121 A75-36811

CIVIL AVIATION
Total energy use for commercial aviation in the US
[ORNL-NSF-EP-68] 05 p0023 N75-10039

CLEAN ENERGY
Coal-gas combustion in industrial gas turbines
[AIAA PAPER 74-1114] C5 p0010 A75-11286
Progress in coal gasification
05 p0013 A75-12993
Tidal power and its integration into the electric system
05 p0013 A75-12994
Coal gasification - A review of status and technology
06 p0059 A75-27781
Evaluation of coal conversion processes to provide clean fuels, part 1 --- coal conversion to clean fuels
[PB-234202/0] 05 p0025 N75-10600
Clean power generation from coal
[PB-234188/1] 05 p0035 N75-13401
Conference proceedings: Power Generation-Clean Fuels Today
[PB-237661/4] 06 p0087 N75-18735
Impact of future use of electric cars in the Los Angeles region. Volume 1: Executive summary and technical report
[PB-238877/5] 07 p0131 N75-22199
Assessment of the potential of clean fuels and energy technology
[PB-239970/7] 07 p0162 N75-27583

CLIMATOLOGY
Interaction between the fuel-energy complex and the environment
07 p0110 A75-29800
Changes in the global energy balance --- atmospheric composition and the effect of air pollution
[PB-238075/6] 06 p0106 N75-20936

CLOUD COVER
Determining potential solar power sites in western hemisphere ocean and land areas based upon satellite observations of cloud cover
07 p0118 A75-35461

COAL
Evaluation of coal conversion processes to provide clean fuels, part 1 --- coal conversion to clean fuels
[PB-234202/0] 05 p0025 N75-10600
Evaluation of coal conversion processes to provide clean fuels, part 2
[PB-234203/8] 05 p0025 N75-10604
Degasification of the Mary Lee coalbed near Oak Grove, Jefferson County, Alabama, by vertical borehole in advance of mining
[BM-RI-7968] 05 p0028 N75-11462
Development of a process for producing an ashless, low-sulfur fuel from coal. Volume 2: Laboratory studies. Part 1: Autoclave experiments
[PB-236305/9] 05 p0040 N75-15169
Development of coal fired fluidized-bed boilers
[PB-235899/2] 06 p0065 N75-15668
Development of coal fired fluidized-bed boilers
[PB-235898/4] 06 p0065 N75-15669
Energy conversion from coal utilizing CFU-400 technology
[PB-235817/4] 06 p0068 N75-16093
Pollution-free electrochemical power generation from low grade coal

COAL GASIFICATION
Coal-gas combustion in industrial gas turbines
[AIAA PAPER 74-1114] 05 p0010 A75-11286
Progress in coal gasification
05 p0013 A75-12993
Coal gasification by Atomics International's Rockgas process
[ASME PAPER 74-WA/PWR-11] 05 p0018 A75-16883
The production of gaseous energy carriers from fossil fuels
06 p0049 A75-23502
Hydrogen as energy carrier in industry and household
06 p0049 A75-23505
Application of thermodynamic and material- and energy-balance calculations to gasification processes
06 p0055 A75-24785
Coal gasification - A review of status and technology
06 p0059 A75-27781
Coal processing: Gasification, liquefaction, desulfurization: A bibliography, 1930 - 1974
[TID-3349] 05 p0023 N75-10578
Preliminary evaluation of underground coal gasification at Hanna, Wyoming
[BM-TPR-82] 05 p0025 N75-10599
Char oil energy development
[PB-233263/3] 05 p0025 N75-10603
Process environment effects on heat pipes for fluid-bed gasification of coal
[LA-UR-74-984] 05 p0029 N75-12252
Evaluation of coal-gasification technology. Part 1: Pipeline-W quality gas
[PB-234036/2] 05 p0034 N75-13396
The gasification of coal: A bibliography
[PB-234294/7] 05 p0034 N75-13400
Evaluation of coal-gassification technology. Part 2: Low and intermediate BTU fuel gases
[PB-234042/0] 05 p0036 N75-14273
Application study of a nuclear coal solution gasification process for Oklahoma coal, volume 1
[PB-236156/6] 05 p0037 N75-14279
Revised cost estimate for the LLL in situ coal gasification concept
[UCRL-51578] 05 p0039 N75-15166
Bureau of Mines energy program, 1973 --- discovery and production of oil, gas, and fluid fuels
[PB-234662/3] 05 p0040 N75-15172
Char oil energy development
[PB-234018/0] 05 p0040 N75-15173
A process for cleaning and removal of sulfur compounds from low Btu gases --- coal gasification
[PB-236522/9] 06 p0065 N75-15768
Hydrogen as a fuel --- analysis of problems involved in generation, transportation, and utilization
[AD-767484] 06 p0066 N75-15818
Prospective regional markets for coal conversion plant products projected to 1980 and 1985. Volume 1: Market analysis
[PB-236631/8] 06 p0071 N75-16113
Low Btu gasification high temperature-low temperature H2S removal comparison effect on overall thermal efficiency in a combined cycle power plant
[PB-235780/4] 06 p0072 N75-16125
Prospective regional markets for coal conversion plant products projected to 1980 and 1985. Volume 2: Current and projected demand, supply and price of energy in the United States
[PB-236632/6] 06 p0078 N75-17007

Prospective regional markets for coal conversion plant products projected to 1980 and 1985. Volume 3: Current and projected demand, supply and price of energy in the United States, schedules
[PB-236633/4] 06 p0078 N75-17008
Coal refining
[ORNL-TR-2827] 06 p0086 N75-18724
Design installation and operation of a 25 ton-a-day coal gasification process development unit for the agglomerating burner-gasification
[PB-237625/9] 06 p0087 N75-18734
Study of potential problems and optimum opportunities in retrofitting industrial processes to low and intermediate energy gas from coal
[PB-237116/9] 06 p0088 N75-18739
Low-BTU gasification of coal for electric power generation
[PB-236972/6] 06 p0088 N75-18740
Coal processing by electrofluids
[PB-236588/0] 06 p0088 N75-18743
Advanced coal gasification system for electric power generation
[PB-236971/8] 06 p0089 N75-18747
Fracture-induced permeability: Present situation and prospects for coal
[UCID-16593] 06 p0094 N75-19830
A SASOL type process for gasoline, methanol, SNG, and low-Btu gas from coal
[PB-237670/5] 06 p0095 N75-19838
Evaluation of pollution control in fossil fuel conversion processess. Gasification, section 1: Synthane process
[PB-237113/6] 06 p0095 N75-19879
Evaluation of pollution control in fossil fuel conversion processes: Gasification. Section 1: Lurgi process
[PB-237694/5] 06 p0096 N75-19880
Methodical approach to temperature and pressure measurements for in situ energy-recovery processes
[UCID-16631] 06 p0097 N75-20693
Acoustic array methods for instrumentation of in situ coal gasification
[UCID-16591] 06 p0104 N75-20875
Large diameter 300 PSI gasifier. Preliminary engineering report. Volume 1: Description
[PB-238360/2] 06 p0105 N75-20889
Liquid plugging in in situ coal gasification processes
[UCRL-51686] 07 p0127 N75-21480
Methyl alcohol production by in situ coal gasification
[UCID-5160C] 07 p0128 N75-21797
Technical evaluation services, clean liquid and/or solid fuels from coal
[PB-237216/7] 07 p0129 N75-21803
Low-temperature evolution of hydrocarbon gases from coal
[PB-238322/2] 07 p0139 N75-24074
Hydrogen production from coal
[NASA-CR-142816] 07 p0141 N75-24113
Demonstration plant, clean boiler fuels from coal. Volume 3: Preliminary design/economics analysis
[PB-238529/2] 07 p0142 N75-24127
Technology and use of lignite
[PB-238666/2] 07 p0142 N75-24131
Symposium proceedings: Environmental Aspects of Fuel Conversion Technology
[PB-238304/0] 07 p0145 N75-24179
Mass spectrometric analysis of product water from coal gasification
[PB-240835/9] 07 p0158 N75-27120

COAL LIQUEFACTION

Coal processing: Gasification, liquefaction, desulfurization: A bibliography, 1930 - 1974
[TID-3349] 05 p0023 N75-10578
Evaluation of coal-gassification technology. Part 2: Low and intermediate BTU fuel gases
[PB-234042/0] 05 p0036 N75-14273
Development of a process for producing an ashless, low-sulfur fuel from coal. Volume 2: Laboratory studies. Part 1: Autoclave experiments
[PB-236305/9] 05 p0040 N75-15169
Synthetic oil from coal
[PB-234460/4] 05 p0040 N75-15176
Pressurized fluidized bed combustion
[PB-235591/5] 06 p0065 N75-15772
Prospective regional markets for coal conversion plant products projected to 1980 and 1985. Volume 1: Market analysis
[PB-236631/8] 06 p0071 N75-16113
Use of methanol in transportation --- coal liquefaction methods
[UCID-16528] 06 p0077 N75-16996
Coal refining
[ORNL-TR-2827] 06 p0086 N75-18724
Development of a process for producing an ashless low sulfur fuel from coal. Volume 4. Product studies. Part 2. Annotated bibliography on mineral fiber production from coal minerals
[PB-237763/8] 06 p0095 N75-19839
Development of a process for producing an ashless, low-sulfur fuel from coal. Volume 4. Product studies. Part 3 Products from coal minerals
[PB-237764/6] 06 p0095 N75-19840
Development of a process for producing an ashless, low-sulfur fuel from coal. Volume 4. Product studies. Part 4. Sulfur removal from coal minerals
[PB-237765/3] 06 p0095 N75-19841
Development of a process for producing an ashless, low-sulfur fuel from coal. Volume 4. Product studies. Part 5. Developmental and rate studies in processing of coal minerals
[PB-237766/1] 06 p0095 N75-19842
Dependence of coal liquefaction behavior on coal characteristics
[PB-238522/7] 07 p0130 N75-21812
Solvent refined coal studies
[PB-238532/6] 07 p0134 N75-22697
Low-temperature evolution of hydrocarbon gases from coal
[PB-238322/2] 07 p0139 N75-24074
Demonstration plant, clean boiler fuels from coal. Volume 3: Preliminary design/economics analysis
[PB-238529/2] 07 p0142 N75-24127
Technology and use of lignite
[PB-238666/2] 07 p0142 N75-24131
Symposium proceedings: Environmental Aspects of Fuel Conversion Technology
[PB-238304/0] 07 p0145 N75-24179
Preparation of gas turbine engine fuel from synthetic crude oil derived from coal
[AD-A007923] 07 p0147 N75-24966
The relation of coal characteristics to coal liquefaction behavior
[PB-239261/1] 07 p0151 N75-25327
Evaluation of pollution control in fossil fuel conversion processes. Liquefaction, section 1: COED process
[PB-240371/5] 07 p0162 N75-27626

COAL UTILIZATION

Small coal burning gas turbine for modular integrated utility systems
05 p0006 A75-10546
The MHD power generation system with directly fired coal
05 p0009 A75-10577
The National Coal Conversion Act and the National Crude Oil Refinery Development Act
[GPO-28-964] 05 p0027 N75-10861
Clean power generation from coal
[PB-234188/1] 05 p0035 N75-13401
Energy conversion from coal utilizing CPU-400 technology
[PB-237028/6] 06 p0083 N75-17828
Coal refining
[ORNL-TR-2827] 06 p0086 N75-18724
Sulfer in coals
[TT-70-57216] 07 p0155 N75-26503

COASTAL WATER

Technical and economic feasibility of the ocean thermal differences process as a solar-driven energy process
[PB-236422/2] 06 p0077 N75-17003

COATINGS

Solar selective surfaces made of semiconducting powders
[ASME PAPER 74-WA/HT-13] 05 p0017 A75-16857
Methodology of research of flat-plate solar collector absorptive coatings
07 p0117 A75-34935

COAXIAL FLOW

Energy characteristics of coaxial plasma source
[AD-787419] 06 p0073 N75-16368

COLORADO
Economic impact of the oil shale industry in western Colorado
[GPO-28-608] 05 p0024 N75-10588
Primary data on economic activity and water use in prototype oil shale development areas of Colorado: An initial inquiry
[PB-236039/4] 05 p0037 N75-14277
Determination of carbonate minerals of Green River formation oil shales, Piceance Creek Basin, Colorado
[PB-240669/2] 07 p0159 N75-27554
COMBUSTION
Development of coal fired fluidized-bed boilers
[PB-235898/4] 06 p0065 N75-15669
Energy conversion. 1: Non-propulsive aspects --- fuels and pyrotechnics
[AD-AC00077] 06 p0079 N75-17454
An economic analysis of oil shale operations featuring gas combustion retorting
[PB-237851/1] 06 p0093 N75-19813
COMBUSTION CHAMBERS
Recent MHD generator testing at Avco Everett Research Laboratory, Inc
[ASME PAPER 74-WA/ENER-7] 05 p0016 A75-16839
Possible development of acoustical instability in a system consisting of a combustion chamber and a subsonic MHD generator
06 p0045 A75-19959
Survey of gas and oil burners for use with NSF/RANN-ORNL potassium boiler
[ORNL-NSF-EP-45] 06 p0087 N75-18728
COMBUSTION EFFICIENCY
Feasibility demonstration of a road vehicle fueled with hydrogen-enriched gasoline
05 p0008 A75-10574
Use of low grade solid fuels in gas turbines
[ASME PAPER 74-WA/ENER-5] 05 p0016 A75-16837
Recuperator development trends for future high temperature gas turbines --- heat exchanger design
[ASME PAPER 75-GT-50] 07 p0116 A75-34607
Experience in the first step of the mastery of the U-25 device
06 p0081 N75-17793
COMBUSTION PHYSICS
Combustion dynamics research for 'Project Independence'
[AIAA PAPER 74-1069] 05 p0001 A75-10262
Combustion R&D - Key to our energy future --- pollution reduction using hydrocarbon fuels
05 p0009 A75-10596
Pressurised fluidized bed combustion --- combustion physics, gas turbines
[PB-236498/2] 06 p0065 N75-15769
Impact of future fuels on military aero-engines
06 p0075 N75-16981
Summary report of workshop on Energy Related Basic Combustion Research
[PB-236714/2] 06 p0079 N75-17456
COMBUSTION PRODUCTS
The MHD power generation system with directly fired coal
05 p0009 A75-10577
Calculation of the electrical conductivity of the combustion products of the working medium in an open-cycle MHD generator
07 p0112 A75-31568
Compilation of air pollutant emission factors, second edition, supplement no. 3 --- fuel combustion and consumption
[PB-235736/6] 06 p0073 N75-16152
Impact of future fuels on military aero-engines
06 p0075 N75-16981
COMETS
Solar electric propulsion spacecraft power subsystem for an Encke comet rendezvous mission
05 p0002 A75-10481
COMMERCE
Elimination of duty on methanol imported for certain uses
[H-REPT-93-998] 05 p0026 N75-10857
Technology application at Rockwell International
06 p0078 N75-17189
Commerce today, volume 5, number 10 --- a discussion of international trade, economics, and energy conservation
[COM-74-50944/10] 07 p0152 N75-25775
COMMERCIAL AIRCRAFT
The use of hydrogen in commercial aircraft - An assessment
05 p0006 A75-10542
Next generation transports will emphasize fuel savings
05 p0011 A75-11426
Advanced subsonic transports - A challenge for the 1990's
[AIAA PAPER 75-304] 06 p0049 A75-23251
Fuel conservation capability and effort by commercial air carriers
[NASA-CR-137624] 05 p0039 N75-15157
COMMERCIAL ENERGY
Hydrogen as energy carrier in industry and household
06 p0049 A75-23505
Methane gas engines for commercial vehicles and busses
06 p0050 A75-23507
Will superconducting magnetic energy storage be used on electric utility systems
06 p0056 A75-25832
Energy use in the commercial and industrial sectors of the US economy, 1963
[PB-235467/6] 06 p0070 N75-16104
COMMUNICATION SATELLITES
A design parameter for assessing wicking capabilities of heat pipes
[AIAA PAPER 74-1266] 05 p0010 A75-11107
Latest developments of the circular solar array --- with deployment structure for central antenna communication satellite
06 p0053 A75-24246
Development of a flexible, fold-out solar array --- power to weight ratio for communication satellites
06 p0053 A75-24252
Economic radioisotope thermoelectric generator study program
[IESD-3112-1] 05 p0036 N75-14269
Economic radioisotope thermoelectric generator study program: Appendices.
[IESD-3112-2] 05 p0036 N75-14270
SENSE 2: Space applications of nuclear power. Volume 1: Commercial communications satellite
[AEC-SNS-3063-3-VOL-1] 06 p0065 N75-15742
COMMUNICATIONS TECHNOLOGY SATELLITE
Design and qualification of the CTS solar cell blanket --- onboard Canadian Communications Technology Satellite
06 p0053 A75-24248
COMPATIBILITY
Strontium fluoride research in heat source and compatibility tests --- waste utilization
[BNWL-1845-2] 07 p0152 N75-25695
COMPONENT RELIABILITY
The effect of sunshine testing on terrestrial solar cell system components
07 p0123 A75-37396
The effect of sunshine testing on terrestrial solar cell system components
[NASA-TM-X-71722] 07 p0140 N75-24109
COMPOSITE MATERIALS
Metals and composites in superflywheel energy storage systems
06 p0047 A75-22523
Study of the costs and benefits of composite materials in advanced turbofan engines
[NASA-CR-134696] 06 p0073 N75-16637
Flywheel energy systems
[SAND-74-0113] 07 p0129 N75-21802
COMPOSITION (PROPERTY)
The influence of the petrology of the Karagandin coals on their methane contents
[BLL-RTS-9309] 07 p0158 N75-27511
COMPRESSED AIR
Energy storage undergound --- hydroelectric pumped-storage and combustion turbine facilities
05 p0013 A75-12989
Pumped air storage for electric power generation
05 p0013 A75-12990
COMPRESSED GAS
Prospects for using dynamic thermocompression converter in solar power plants
05 p0020 A75-17076
COMPRESSION LOADS
Mechanical properties of oil shale from Anvil Point under conditions of uniaxial compression
[SAND-74-0035] 06 p0092 N75-19390

COMPRESSION TESTS
Mechanical properties of oil shale from Anvil Point under conditions of uniaxial compression
[SAND-74-0035] 06 p0092 N75-19390
COMPRESSOR EFFICIENCY
A compressor designed for the energy research and development agency automotive gas turbine program
[NASA-TM-X-71719] 07 p0141 N75-24116
COMPUTER PROGRAMS
The Energy Systems Optimization Computer Program /ESOP/ developed for Modular Integrated Utility Systems /MIUS/ analysis
05 p0006 A75-10551
Effect of attitude constraints on solar-electric geocentric transfers
[AIAA PAPER 75-350] 06 p0055 A75-24957
Comparison of computer programs used for modeling solar heating and air conditioning systems for buildings
[LBL-3066] 06 p0079 N75-17279
Path to self-sufficiency directions and constraints, appendices --- a computer program that calculates energy resource requirements
[PB-239100/1] 07 p0145 N75-24155
COMPUTER TECHNIQUES
The role of computers in future propulsion controls
07 p0137 N75-23582
COMPUTERIZED DESIGN
A planning methodology for the analysis and design of wind-power systems
05 p0004 A75-10517
Solar augmented home heating heat pump system
05 p0004 A75-10524
Design study of the energy characteristics of thermionic electric power generating components and assemblies
06 p0064 A75-28893
COMPUTERIZED SIMULATION
A wind energy conversion system based on the tracked-vehicle airfoil concept
05 p0004 A75-10518
Coal-gas combustion in industrial gas turbines
[AIAA PAPER 74-1114] 05 p0010 A75-11286
Dynamic simulation for performance analysis of solar heated and cooled buildings
[ASME PAPER 74-WA/SOL-8] 05 p0019 A75-16891
Simulation of a solar heating and cooling system --- for houses
06 p0048 A75-23018
SIMSHAC - A simulation program for solar heating and cooling of buildings
06 p0061 A75-28093
Urban waste energy resources
[AIAA PAPER 75-632] 06 p0062 A75-28598
Modeling of the CSU heating/cooling system --- Colorado State University solar house computer simulation
07 p0109 A75-29473
A method of simulation of solar processes and its application --- energy collection processes
07 p0109 A75-29474
Numerical modeling of flat plate solar collectors
[AIAA PAPER 75-739] 07 p0113 A75-32861
Modeling and computer simulation of a microwave-to-dc energy conversion element
07 p0120 A75-36500
The design and development of an interactive energy model
[PB-236144/2] 06 p0070 N75-16110
Electronic model of the U-25 device
06 p0081 N75-17794
Profitability analysis of producing crude oil by waterflooding using a simulation technique
[PB-237843/8] 06 p0088 N75-18738
Using systems methods for analysing integrated energy supply, summary
[BLL-CE-TRANS-6473-(9022.09)] 07 p0153 N75-26491
Increased fuel economy in transportation systems by use of energy management. Volume 1: General results and discussion
[PB-240220/4] 07 p0163 N75-27970
COMSAT PROGRAM
The COMSAT non-reflective silicon solar cell - A second generation improved cell
06 p0053 A75-24245
CONDENSERS (LIQUIFIERS)
Transverse header heat pipe
[AIAA PAPER 75-656] 07 p0114 A75-32914
CONDUCTING FLUIDS
Theoretical study of the energy output of two magnetohydrodynamic generators
07 p0125 A75-38568
Studies on improvement of the characteristics of MHD power generating channel --- conducting fluids
[REPT-749] 07 p0148 N75-25293
CONDUCTION
Solar energy absorber
[NASA-CASE-MFS-22743-1] 05 p0024 N75-10585
CONDUCTIVE HEAT TRANSFER
Solar radiation heat transfer to high temperature heat carriers
[ASME PAPER 74-WA/HT-14] 05 p0017 A75-16861
Utilization of tubular thermoelectric modules in solar generators
05 p0020 A75-17067
Heat pipe thermal control set point shift
07 p0115 A75-33271
CONFERENCES
Intersociety Energy Conversion Engineering Conference, 9th, San Francisco, Calif., August 26-30, 1974, Proceedings
05 p0001 A75-10476
Energy development; Proceedings of the Energy Sources Conference, Anaheim, Calif., July 14-19, 1974
05 p0012 A75-12986
Nonconventional energy systems; Meeting, Duesseldorf, West Germany, June 20, 21, 1974, Reports
06 p0049 A75-23501
Photovoltaic power generation; Proceedings of the International Conference, Hamburg, West Germany, September 25-27, 1974
06 p0051 A75-24213
Corrosion problems in energy conversion and generation; Proceedings of the Symposium, New York, N.Y., October 15-17, 1974
06 p0054 A75-24376
Energy Delta: Supply vs. demand; Proceedings of the Energy Symposium, San Francisco, Calif., February 25-27, 1974
06 p0059 A75-27778
Remote sensing applied to energy-related problems; Proceedings of the Symposium-Course, Miami, Fla., December 2-4, 1974
07 p0118 A75-35451
Basic research needs for tertiary oil recovery: Proceedings of a National Science Foundation Workshop
[PB-236726/6] 06 p0066 N75-16072
Proceedings of the Solar Heating and Cooling for Buildings Workshop. Part 2: Panel sessions, March 23
[PB-235483/5] 06 p0069 N75-16095
Proceedings of the Workshop on Bio-Solar Conversion
[PB-236142/6] 06 p0069 N75-16096
Photovoltaic conversion of solar energy for Terrestrial Applications. Volume 1: Working group and panel reports
[PB-236163/2] 06 p0072 N75-16121
The 1974 AGARD Annual Meeting: The energy problem: Impacts on military research and development
06 p0075 N75-16977
Proceedings of the first 1974 Technology Transfer Conference
[NASA-CR-142119] 06 p0078 N75-17188
Utilizing fuel more efficiently in reheating and heat treatment furnaces
[BLL-M-21957-(5828.4F)] 06 p0080 N75-17467
Workshop in Gas-Phase Molecular Interactions and the Nation's Energy Problem
[PB-236712/6] 06 p0086 N75-18718
Proceedings of the Conference on Research for the Development of Geothermal Energy Resources
[NASA-CR-142556] 06 p0098 N75-20831
Electric power for space satellites
[NASA-TM-X-66808] 07 p0137 N75-23678
Technology and use of lignite
[PB-238666/2] 07 p0142 N75-24131
Proceedings of 5th annual symposium: Energy Research and Development --- solar energy, windpower utilization, thermonuclear power generation
[AD-A007799] 07 p0144 N75-24142
Proceedings of the Solar Thermal Conversion Workshop
[PB-239277/7] 07 p0145 N75-24157

Marine pollution monitoring (petroleum): Proceedings of a Symposium and Workshop held at the National Bureau of Standards
[COM-75-50071/0] 07 p0146 N75-24183
CONGRESSIONAL REPORTS
Limit lead in gasoline
[GPO-29-660] 05 p0023 N75-10259
Research, development, and the energy crisis
[GPO-27-032] 05 p0023 N75-10580
Independent truckers and the energy crisis
[GPO-31-412] 05 p0023 N75-10581
Economic impact of the oil shale industry in western Colorado

World oil developments and US oil import policies
[GPO-22-893] 07 p0148 N75-25294
Solar Energy Research, Development, and Demonstration Act of 1974
[GPO-39-827] 07 p0149 N75-25299
Energy policy and resource management
[GPO-33-634] 07 p0149 N75-25300
Energy legislation --- energy conservation and resources management
[GPO-33-571] 07 p0149 N75-25301
Current energy shortages oversight series: Oil brokers, part 7
[GPO-32-607] 07 p0161 N75-27576
CONSERVATION
Caltech seminar series on energy consumption in private transportation
[PB-235348/0] 05 p0040 N75-15179
Mineral resources and the environment. Appendix to section 1: Report of panel on materials conservation through technology
[PB-239580/4] 07 p0153 N75-26487
CONSTRUCTION
Erecting gas storage facilities and oil centers
[AD-A006559] 07 p0134 N75-22783
CONSTRUCTION MATERIALS
Metals and composites in superflywheel energy storage systems
06 p0047 A75-22523
CONTINENTAL SHELVES
Offshore investigation: Producible shut-in leases as of January 1974, phase 2 --- an estimation of natural gas reserves in offshore wells
05 p0027 N75-11458
Development of oil and gas on the Continental Shelf
[GPO-31-891] 06 p0075 N75-16973
OCS oil and gas: An environmental assessment, volume 3 --- effect of natural phenomena on OCS gas and oil development
06 p0083 N75-17836
OCS oil and gas: An environmental assessment, Volume 1
06 p0083 N75-17837
OCS oil and gas: An environmental assessment, Volume 2
06 p0084 N75-17838
OCS oil and gas: An environmental assessment, volume 4
06 p0084 N75-17839
OCS oil and gas: An environmental assessment, volume 5
06 p0084 N75-17840
Relationships between bidding and hydrocarbon production of the Federal Outer Continental Shelf (through 1970) --- offshore energy sources
[PB-238188/7] 07 p0127 N75-21788
Atlantic outer continental shelf energy resources: An economic analysis
[COM-75-10330/9] 07 p0152 N75-26484
CONTOURS
Statistical estimation of wildcat well outcome probabilities by visual analysis of structure contour maps of Stafford County, Kansas
06 p0092 N75-19778
CONTROLLED FUSION
Fusion reactors as future energy sources
05 p0011 A75-11735
Fusion power research - Where do we stand
05 p0013 A75-12995
Fusion power - Prospects and impact
05 p0021 A75-18080
An electron beam initiated fusion neutron generator
06 p0045 A75-19657
Laser compression of matter - Optical power and energy requirements
06 p0046 A75-22352
Laser thermonuclear fusion
07 p0112 A75-32617
Electronbeam heating for fusion
07 p0120 A75-36295
New approaches to CTR: General relativistic power plants
[UCRL-75443] 06 p0073 N75-16362
Man-made sun. Thermonuclear engineering developments
[BLL-M-23333-(5828.4F)] 06 p0091 N75-19014

Synthetic fuels from fusion reactors
[BNL-19351] 06 p0106 N75-21098
CONVECTIVE FLOW
A hot liquid energy storage system utilizing natural circulation
[ASME PAPER 74-WA/HT-16] 05 p0017 A75-16862
The nature of the sunspot phenomenon. III - Energy consumption and energy transport. IV - The intrinsic instability of the magnetic configuration
06 p0064 A75-29137
CONVECTIVE HEAT TRANSFER
Natural convection in enclosed spaces - A review of application to solar energy collection
[ASME PAPER 74-WA/HT-12] 05 p0017 A75-16860
CONVERGENCE
Convergence and speed of calculations for thermoelectric heat pump
05 p0020 A75-17084
COOK INLET (AK)
Natural gas fields, Cook Inlet Basin, Alaska
[PB-235767/1] 06 p0066 N75-16071
COOLING
An intercell heat pipe for fuel cell and battery cooling
[AD-762888] 05 p0027 N75-11226
COOLING SYSTEMS
Solar energy storage within the absorption cycle
[ASME PAPER 74-WA/HT-18] 05 p0017 A75-16864
Selection and evaluation of the University of Florida's solar powered absorption air conditioning system
[ASME PAPER 74-WA/SOL-6] 05 p0019 A75-16889
Assessment of Rankine cycle for potential application to solar-powered cooling of buildings
[ASME PAPER 74-WA/SOL-7] 05 p0019 A75-16890
Dynamic simulation for performance analysis of solar heated and cooled buildings
[ASME PAPER 74-WA/SOL-8] 05 p0019 A75-16891
Solar collector performance evaluated outdoors at NASA-Lewis Research Center
06 p0058 A75-27531
Solar heating and cooling of buildings
06 p0059 A75-27783
A high-speed superconducting generator
06 p0060 A75-27960
SIMSHAC - A simulation program for solar heating and cooling of buildings
06 p0061 A75-28093
Cooling by solar heat --- heating and cooling system for buildings
[AIAA PAPER 75-609] 06 p0062 A75-28590
Design and construction of a residential solar heating and cooling system
07 p0109 A75-29472
Solar heating and cooling
07 p0111 A75-31269
Pilot solar air-conditioning plant and results of its use
07 p0111 A75-31512
Solar energy and architecture
07 p0112 A75-31698
Solar heating and cooling of buildings using heat pumps /Brief survey/
07 p0116 A75-34321
Modeling of solar absorption air conditioning
07 p0117 A75-34932
Optimization of the operating conditions of a combined generator-cooler thermoelement
07 p0121 A75-37155
Summary of NASA-Lewis Research Center solar heating and cooling and wind energy programs
07 p0123 A75-37240
Solar energy program plan for heating and cooling buildings
[WASH-1337-5-DRAFT] 06 p0077 N75-16993
Heat pumps in large buildings --- a refrigerating unit for heating and cooling
[OA-TRANS-939] 06 p0078 N75-17184
Study of active cooling for supersonic transports
[NASA-CR-132573] 06 p0079 N75-17336
Design and construction of a residential solar heating and cooling system
[PB-237042/7] 06 p0082 N75-17823
Use of solar energy in buildings in New York state
[PB-236974/2] 06 p0083 N75-17825
Assessment of the Rankine cycle for potential application to solar powered cooling of buildings
[PB-238069/9] 06 p0089 N75-18755
The development of a solar residential heating and cooling system
[NASA-CR-142728] 07 p0140 N75-24107
COPPER SELENIDES
Efficient CuInSe2/CdS solar cells
07 p0119 A75-36274
COPPER SULFIDES
CdS-Cu2S cells - An outlook for terrestrial applications
06 p0052 A75-24223
Progress in the development of cadmium sulphide terrestrial solar batteries
06 p0052 A75-24224
CORROSION
Corrosion problems in energy conversion and generation; Proceedings of the Symposium, New York, N.Y., October 15-17, 1974
06 p0054 A75-24376
CORROSION PREVENTION
Concerning the use of a nitrogen-potassium gaseous mixture for protection of MHD-generator electrodes by suction
07 p0112 A75-31569
CORROSION RESISTANCE
Materials screening program for the LLL geothermal project
[UCRL-75353] 06 p0082 N75-17815
CORROSION TESTS
Corrosion studies of materials for auxiliary equipment in MHD power plants
06 p0055 A75-24384
COST ANALYSIS
Hydrogen cycle peak-shaving for electric utilities
05 p0005 A75-10535
The economics of nuclear power
06 p0047 A75-22734
Simulation of a solar heating and cooling system --- for houses
06 p0048 A75-23018
Parametric performance and cost models for solar concentrators
07 p0109 A75-29476
Fabricating paraboloidal high-temperature solar concentrators from mollified sectors
07 p0122 A75-37166
Heat pipe manufacturing study
[NASA-CR-139140] 05 p0023 N75-10347
Effect of gas turbine efficiency and fuel cost on cost of producing electric power
[PB-234159/2] 05 p0034 N75-13397
Prototype oil shale leasing program
[GPO-28-686] 05 p0039 N75-15160
Study of the costs and benefits of composite materials in advanced turbofan engines
[NASA-CR-134696] 06 p0073 N75-16637
Evaluation of thermal methods for recovery of viscous oils in Missouri and Kansas
[PB-237831/3] 06 p0090 N75-18762
Investment and operating costs of binary cycle geothermal power plants
06 p0101 N75-20855
Synthetic Liquid Fuel Research and Development Act of 1974 --- energy conservation and cost analyses
[GPO-44-818] 06 p0103 N75-20867
United States transportation fuel economics (1975 - 1995)
[NASA-TM-X-3197] 06 p0107 N75-21154
Relationships between bidding and hydrocarbon production of the Federal Outer Continental Shelf (through 1970) --- offshore energy sources
[PB-238188/7] 07 p0127 N75-21788
COST EFFECTIVENESS
Cost effective designing for the economic RTG --- radioisotope thermoelectric generators
05 p0003 A75-10507
Energy storage undergound --- hydroelectric pumped-storage and combustion turbine facilities
05 p0013 A75-12989
Progress in coal gasification
05 p0013 A75-12993
Effectiveness of using semiconductor heat pumps under the conditions of the Turkmen SSR
05 p0020 A75-17083
Material considerations involved in solar energy conversion
06 p0047 A75-22522
The use of solar cells in the lighthouse service
06 p0054 A75-24255

Lighter than air - A look at the past, a look at the possibilities
06 p0056 A75-25995
Thermoelectric generators --- using semiconductor thermocouples
06 p0058 A75-27718
Derivation of a total satellite energy system --- solar power station for terrestrial consumption
[AIAA PAPER 75-640] 06 p0064 A75-29118
Solar heating and cooling
07 p0111 A75-31269
Optimal solar energy collector system
07 p0115 A75-33970
Wind energy utilization prospects
07 p0117 A75-34928
The high intensity solar cell - Key to low cost photovoltaic power
07 p0123 A75-37400
Prospects for magnetohydrodynamic electric power plants in power engineering
06 p0081 N75-17791
Economic and energy conservation relationship relevant to state of New York building design and contract awards
[PE-237006/2] 06 p0082 N75-17824
A SASOL type process for gasoline, methanol, SNG, and low-Btu gas from coal
[PE-237670/5] 06 p0095 N75-19838
Economic-environmental power dispatch
07 p0128 N75-21791
Brief examination of the status of nuclear power in the republic, using 1974 costs
[PEL-237E] 07 p0135 N75-22909
The high intensity solar cell: Key to low cost photovoltaic power
[NASA-TM-X-71718] 07 p0140 N75-24108
Utilization analysis of energy systems
[PE-239291/8] 07 p0144 N75-24144

COST ESTIMATES
A planning methodology for the analysis and design of wind-power systems
05 p0004 A75-10517
The use of hydrogen as an energy carrier
05 p0015 A75-15795
An econometric analysis of fuel selection for power generation
06 p0055 A75-24751
Evaluation of central solar tower power plant
07 p0116 A75-34531
Solar thermal electric power systems
[PE-235475/1] 05 p0038 N75-14283
Cost and size estimates for an electrochemical bulk energy storage concept
[NASA-TM-X-3192] 05 p0039 N75-15161
Revised cost estimate for the LLL in situ coal gasification concept
[UCRL-51578] 05 p0039 N75-15166
A generalized analysis of the performance of a variety of drive systems for high Reynolds number, transonic wind tunnels
[RAE-TR-73134] 06 p0073 N75-16572
Review of the prospects for laser induced thermonuclear fusion
[AECL-4840] 06 p0106 N75-21099
The potential for developing Alaskan coals for clean export fuels, phase 1
[PB-238539/1] 07 p0127 N75-21786
Preliminary investigation into regulatory powers and policies on electric utility peak load pricing
[PB-239761/0] 07 p0151 N75-25324

COST INCENTIVES
Technology utilization - Incentives and solar energy
06 p0048 A75-22913

COST REDUCTION
Next generation transports will emphasize fuel savings
05 p0011 A75-11426
Performance of heat pumps using cold-side energy storage and unconventional heat sources
[ASME PAPER 74-WA/HT-17] 05 p0017 A75-16863
High-speed silicon processing for low cost solar cells - A comparative analysis
06 p0052 A75-24222
Process development for low cost integrated solar arrays
06 p0054 A75-24259
RTG electrical power for spacecraft --- Radioisotope Thermoelectric Generators
06 p0057 A75-26067
GaAs concentrator solar cell
06 p0058 A75-27520
Minimum cost solar thermal electric power systems - A dynamic programming based approach
07 p0112 A75-32097

COSTS
World oil developments and US oil import policies
[GPO-22-893] 07 p0148 N75-25294

CRITICAL PRESSURE
Capillary flow through heat-pipe wicks
[AIAA PAPER 75-661] 07 p0114 A75-32919

CROP GROWTH
The oceanic biomass energy plantation --- seaweed harvesting for food and fuel
[AIAA PAPER 75-635] 06 p0063 A75-28599
Fuel production /biomass energy/ --- by fuel plantation development
07 p0111 A75-31275
Use of thermally enriched water for growing field crops in Minnesota
[PB-240112] 07 p0159 N75-27549

CRUDE OIL
Laser induced luminescence signatures of refined and virgin crude petroleum - Their composition and remote sensing implications
06 p0050 A75-23790
Laboratory semiautomatic infrared device for determining the composition of petroleum products in sewage
07 p0125 A75-38648
National Crude Oil Refinery Development Act, part 2
[GPO-35-578] 05 p0027 N75-10860
The National Coal Conversion Act and the National Crude Oil Refinery Development Act
[GPO-28-964] 05 p0027 N75-10861
Prospects for utilization of underwater houses and chambers in development of marine oil deposits
05 p0029 N75-11606
Oil for the free world in the 1970's --- demand and supply
[AD-779352] 05 p0031 N75-12448
Oversight: Mandatory petroleum allocation programs, part 1
[GPO-30-060] 05 p0039 N75-15158
Oversight: Mandatory petroleum allocation programs, part 2
[GPO-31-519] 05 p0039 N75-15159
Bureau of Mines energy program, 1973 --- discovery and production of oil, gas, and fluid fuels
[PB-234682/3] 05 p0040 N75-15172
Market performance and competition in the petroleum industry, part 1
[GPO-28-503] 06 p0066 N75-16077
Oversight: Mandatory petroleum allocation programs
[GPO-31-027] 06 p0081 N75-17806
Intermediate-term energy programs to protect against crude-petroleum import interruptions: Feasible alternatives, program costs, and operational methods of funding
[PB-237209/2] 06 p0083 N75-17826
Petroleum in Alabama --- including exploration, production, and economics
[PB-237353/8] 06 p0085 N75-18442
Effects of changing the proportions of automotive distillate and gasoline produced by petroleum refining
[PB-236900/7] 06 p0085 N75-18443
Profitability analysis of producing crude oil by waterflooding using a simulation technique
[PB-237843/8] 06 p0088 N75-18738
The effect of Alaskan crude oil and selected hydrocarbon compounds on embryonic development of the Pacific oyster, Crassostrea gigas
06 p0090 N75-18764
Field surveillance and enforcement guide for petroleum refineries
[PB-236669/8] 06 p0090 N75-18786
Mechanical properties of oil shale from Anvil Point under conditions of uniaxial compression
[SAND-74-0035] 06 p0092 N75-19390
Improving the oil storage system of western Siberia
[AD-A002717] 06 p0092 N75-19705
An economic analysis of oil shale operations featuring gas combustion retorting
[PB-237851/1] 06 p0093 N75-19813
In situ oil shale conversion and recovery
[SLA-74-0162] 06 p0093 N75-19825

Report to congress on petrochemicals --- analyzing supply/demand in industry
[PB-238064/6] 06 p0057 N75-20478
Benthal decomposition of adsorbed octadecane --- impact of oil pollution, deoxygenation of waterways
06 p0106 N75-20891
Economic impact on the free world of the oil crisis, October 1973 - March 1974
[AD-A003136] 06 p0107 N75-21156
Industrial energy study of the petroleum refining industry
[PB-238671/2] 07 p0130 N75-21818
Erecting gas storage facilities and oil centers
[AD-A006559] 07 p0134 N75-22783
Protecting the US petroleum market against future denials of imports
[AD-A006643] 07 p0137 N75-23387
Chemistry of organic sulfur compounds contained in petroleums and petroleum products, Volume 7
[TT-70-57759] 07 p0138 N75-23691
Energy imports and the US balance of payments
[GPO-28-965] 07 p0141 N75-24114
Energy and foreign policy
[GPO-22-562] 07 p0142 N75-24125
Petroleum degradation in low temperature marine and estuarine environments
[AD-A007588] 07 p0146 N75-24191
The identification of gamma-valerolactone in waste from an oil-shale in situ retort --- determination of chemical composition by mass spectroscopy of effluents from crude oil shales causing water pollution
[PB-240098/4] 07 p0147 N75-24852
Mineral resources and the environment. Appendix to section 2: Report of panel on estimation of mineral reserves and resources
[PB-239581/2] 07 p0153 N75-26488
Mineral resources and the environment. Appendix to section 4: Report of panel on demand for fuel and mineral resources
[PB-239583/8] 07 p0153 N75-26490
Materials and the new dimensions of conflict, revised version
[AD-A004263] 07 p0154 N75-26499
A short handbook on fuels --- and lubricants
[AD-A004358] 07 p0158 N75-27170
Carbon isotopes in oil-gas geology
[NASA-TT-F-682] 07 p0160 N75-27563
A simulation model of the development of petroleum refining capacity --- using recursive linear programming
[AD-A003723] 07 p0161 N75-27569
Current energy shortages oversight series: Oil brokers, part 7
[GPO-32-607] 07 p0161 N75-27576

CRYOGENIC EQUIPMENT
A high-speed superconducting generator
06 p0060 A75-27960
Main problems met in the study of cryogenic generators
06 p0061 A75-27962
Cryogenic heat pipe experiment - Flight performance onboard a sounding rocket
[AIAA PAPER 75-729] 07 p0113 A75-32872
A flexible cryogenic heat pipe
[AIAA PAPER 75-658] 07 p0114 A75-32916
Energy and cryoengineering
[LA-UR-74-741] 06 p0082 N75-17814
ERTS-C (Landsat 3) cryogenic heat pipe experiment definition
[NASA-CR-143797] 07 p0138 N75-23882

CRYOGENIC FLUID STORAGE
The use of hydrogen as an energy carrier
05 p0015 A75-15795
Liquid hydrogen --- liquefaction, storage, transportation, applications
06 p0046 A75-22043
Survey of hydrogen compatibility problems in energy storage and energy transmission applications
[SAND-74-8219] 06 p0087 N75-18726

CRYOGENICS
Some LNG vehicle developments --- for automotive conversion systems and fueling stations
06 p0048 A75-23236
The application of aerospace technology in the cryogenics field
06 p0048 A75-23239
Cryogenics safety in a hydrogen fuel society
06 p0061 A75-27973
Cryogenic properties of Fe-Mn and Fe-Mn-Cr alloys
[LBL-2764] 06 p0066 N75-15781
Hydrogen-future fuel-A bibliography (with emphasis on cryogenic technology)
[CCM-75-10289/7] 07 p0155 N75-26509

CRYSTAL GROWTH
High-speed silicon processing for low cost solar cells - A comparative analysis
06 p0052 A75-24222
Epitaxial silicon solar cell
06 p0056 A75-25086
Solar energy concentrator system for crystal growth and zone refining in space
[NASA-CR-120623] 06 p0086 N75-18719

CURIUM 244
A modular heat source for curium-244 and plutonium-238
05 p0002 A75-10497
A 10% efficient economic RTG design --- radioisotope thermoelectric generator
05 p0003 A75-10506

CZOCHRALSKI METHOD
High-speed silicon processing for low cost solar cells - A comparative analysis
06 p0052 A75-24222

D

DATA ACQUISITION
National energy flow accounts
[PB-239275/1] 07 p0146 N75-24539

DATA COLLECTION PLATFORMS
Remote platform power conserving system
[NASA-CASE-GSC-11182-1] 05 p0032 N75-13007

DATA CORRELATION
Natural environment design criteria for the Solar Electric Propulsion Stage (SEPS)
[NASA-TM-X-64929] 07 p0138 N75-23682

DATA PROCESSING
Data base for the industrial energy study of the industrial chemicals group
[PB-237845/3] 06 p0087 N75-18732
Energy R/D Data Workshop
[PB-237493/2] 07 p0130 N75-21811

DATA SYSTEMS
Multispectral data systems for energy related problems --- strip mining and power plant site monitoring
07 p0118 A75-35464

DECISION MAKING
The solution of information-deficiency problems of electroenergy technology --- optimal decision making
06 p0062 A75-28508
Energy utilization by households and technology assessment as a way to increase its effectiveness --- management methods and family decision making
06 p0097 N75-20829
The energy crisis and decision making in the family
[PB-238783/5] 06 p0106 N75-21028
Economic-environmental power dispatch
07 p0128 N75-21791

DECOMPOSITION
The generation of hydrogen by the thermal decomposition of water
05 p0005 A75-10532
Benthal decomposition of adsorbed octadecane --- impact of oil pollution, deoxygenation of waterways
06 p0106 N75-20891

DEGASSING
Degasification of the Mary Lee coalbed near Oak Grove, Jefferson County, Alabama, by vertical borehole in advance of mining
[BM-RI-7968] 05 p0028 N75-11462

DEGRADATION
Petroleum degradation in low temperature marine and estuarine environments
[AD-A007588] 07 p0146 N75-24191

DEHYDRATED FOOD
Research on the application of solar energy to the food drying industry
[PB-238073/1] 06 p0105 N75-20888

DEICING
Snow and ice removal from pavements using stored earth energy --- via heat pipes
[PB-240623/9] 07 p0162 N75-27581

DEMAND (ECONOMICS)
Oil for the free world in the 1970's --- demand and supply
[AD-779352] 05 p0031 N75-12448
Interfuel substitution in the consumption of energy in the United States. Part 1: Residential and commercial sector
[PB-234536/1] 05 p0040 N75-15178
A study of the demand for gasoline
[PB-235254/0] 06 p0070 N75-16105
Fuel and energy data: United States by states and regions, 1972
[PB-236581/5] 06 p0077 N75-17004
Electric power rights: One approach to rationing
[PB-238537/5] 07 p0143 N75-24138
The residential user and the electrical load factor
[PB-238535/9] 07 p0145 N75-24152
US energy and fuel demand to 1985, a composite projection by user within Petroleum Administration for Defense (PAD) districts
[PB-239343/7] 07 p0151 N75-25322
Mineral resources and the environment. Appendix to section 4: Report of panel on demand for fuel and mineral resources
[PB-239583/8] 07 p0153 N75-26490
The study of priorities in the electrical energy allocation problem
[PB-239762/8] 07 p0156 N75-26516
An analysis of the potential for shifting electric power demand within daily load requirement
[PB-239764/4] 07 p0156 N75-26517
The prospects of energy demand scheduling
[PB-239763/6] 07 p0156 N75-26518
DENMARK
Exploiting wind power for the production of electricity --- windmill utilization in Denmark
[NASA-TT-F-16058] 05 p0033 N75-13385
Coordinated extension of power plants in the 1980's. A statement submitted to the Ministry of Commerce, Shipping, and Industry by the Energy Committee of the Power Plants
[NP-20023] 06 p0067 N75-16088
DEOXYGENATION
Benthal decomposition of adsorbed octadecane --- impact of oil pollution, deoxygenation of waterways
06 p0106 N75-20891
DEPOSITS
Coal in Alabama
[PB-236583/1] 06 p0088 N75-18736
DESALINIZATION
Solar stills for agricultural purposes
07 p0115 A75-33972
DESERTS
Some generalizations of sample water-supply calculations for solar-powered pumping plants
05 p0020 A75-17077
DESIGN ANALYSIS
Dynamic simulation for performance analysis of solar heated and cooled buildings
[ASME PAPER 74-WA/SOL-8] 05 p0019 A75-16891
An engine project engineer's view of advanced secondary power systems
[SAE PAPER 740884] 05 p0019 A75-16925
Some generalizations of sample water-supply calculations for solar-powered pumping plants
05 p0020 A75-17077
Progress in heat pipe and porous heat exchanger technology
06 p0045 A75-20686
Foreseeable thermal, mechanical, and materials engineering problems of fusion reactor power plants
[SMRT PAPER A2/1] 06 p0046 A75-21713
Design and qualification of the CTS solar cell blanket --- onboard Canadian Communications Technology Satellite
06 p0053 A75-24248
Solar cell modules for lightweight solar arrays --- onboard communication satellites
06 p0057 A75-26068
Design study of the energy characteristics of thermionic electric power generating components and assemblies
06 p0064 A75-28893
A method of simulation of solar processes and its application --- energy collection processes
07 p0109 A75-29474
Parametric performance and cost models for solar concentrators
07 p0109 A75-29476
Designing heat pipe heat sinks
[AIAA PAPER 75-724] 07 p0113 A75-32668
Glass solar heat collector development
[AIAA PAPER 75-740] 07 p0115 A75-33758
Stationary concentrating reflector cum tracking absorber solar energy collector - Optical design characteristics
07 p0120 A75-36307
Economic radioisotope thermoelectric generator study program
[IESD-3112-1] 05 p0036 N75-14269
Test report SEPS solar array root section model
[NASA-CR-120606] 06 p0067 N75-16085
Nickel-cadmium cells
[NASA-CR-143715] 07 p0128 N75-21792
Potassium topping cycles for stationary power --- conceptual analysis
[NASA-CR-2518] 07 p0135 N75-22906
DESULFURIZING
Coal processing: Gasification, liquefaction, desulfurization: A bibliography, 1930 - 1974
[TID-3349] 05 p0023 N75-10578
Evaluation of coal conversion processes to provide clean fuels, part 1 --- coal conversion to clean fuels
[PB-234202/0] 05 p0025 N75-10600
Char oil energy development
[PB-233263/3] 05 p0025 N75-10603
Evaluation of coal conversion processes to provide clean fuels, part 2
[PB-234203/8] 05 p0025 N75-10604
A process for cleaning and removal of sulfur compounds from low Btu gases --- coal gasification
[PB-236522/9] 06 p0065 N75-15768
Low Btu gasification high temperature-low temperature H2S removal comparison effect on overall thermal efficiency in a combined cycle power plant
[PB-235780/4] 06 p0072 N75-16125
Development of a process for producing an ashless, low-sulfur fuel from coal. Volume 4. Product studies. Part 3 Products from coal minerals
[PB-237764/6] 06 p0095 N75-19840
Development of a process for producing an ashless, low-sulfur fuel from coal. Volume 4. Product studies. Part 4. Sulfur removal from coal minerals
[PB-237765/3] 06 p0095 N75-19841
Development of a process for producing an ashless, low-sulfur fuel from coal. Volume 4. Product studies. Part 5. Developmental and rate studies in processing of coal minerals
[PB-237766/1] 06 p0095 N75-19842
Coal combustion and desulfurization in a rotating fluidized bed reactor
[BNL-19308] 07 p0129 N75-21799
Chemically active fluid-bed process for sulphur removal during gasification of heavy fuel oil, phase 2
[PB-240632/0] 07 p0159 N75-27556
DICHLORIDES
Engineering and cost study of air pollution control for the petrochemical industry, volume 3: Ethylene dichloride manufacture by oxychlorination
[PB-240492] 07 p0162 N75-27612
DIESEL ENGINES
Project Clean Air 1972, LNG conversion of GM-71 series diesel engine --- considering automobile exhaust gases control
[PB-236585/6] 06 p0090 N75-18783
DIESEL FUELS
Independent truckers and the energy crisis
[GPO-31-412] 05 p0023 N75-10581
Project Clean Air 1972, LNG conversion of GM-71 series diesel engine --- considering automobile exhaust gases control
[PB-236585/6] 06 p0090 N75-18783
DIGITAL SIMULATION
Numerical simulation of direct energy conversion --- from fusion reactions
06 p0045 A75-19660
Long term power system dynamics. Volume 1: Summary and technical report
[PB-240799/7] 07 p0161 N75-27573

Long term power system dynamics. Volume 2: Long-term power system dynamics simulation program
[PB-240800/3] 07 p0161 N75-27574
DIGITAL TECHNIQUES
Oil exploration needs for digital processing of imagery
05 p0001 A75-10437
DIPOLE ANTENNAS
Modeling and computer simulation of a microwave-to-dc energy conversion element
07 p0120 A75-36500
DIRECT CURRENT
Superconductive d.c. generator
06 p0061 A75-27961
Modeling and computer simulation of a microwave-to-dc energy conversion element
07 p0120 A75-36500
DIRECT POWER GENERATORS
Study of channel-type systems for solar-energy radiative heat transport
05 p0010 A75-11196
Numerical simulation of direct energy conversion --- from fusion reactions
06 p0045 A75-19660
A study of channel systems for radiative solar-heat transfer
06 p0049 A75-23408
Solar electric and thermal conversion system in close proximity to the consumer --- solar panels on house roofs
[AIAA PAPER 75-628] 06 p0062 A75-28597
Problems of direct conversion of thermal and nuclear energy to electric energy
07 p0120 A75-36415
DART: A simulation code for a direct energy converter for fusion reactors
[UCRL-51557] 05 p0043 N75-15462
Fuel cells: Direct conversion of electrochemical energy into electricity
[SAND-74-0125] 06 p0103 N75-20869
Direct conversion of plasma energy to electricity for mirror fusion reactors
[UCRL-76051] 07 p0129 N75-21800
A direct voltage converter without transformer
[NASA-TT-F-16174] 07 p0133 N75-22584
Cycle study of a mercury-colloidal electrofluid dynamic power generator
[AD-A004814] 07 p0159 N75-27559
DIURNAL VARIATIONS
Performance of a solar battery using quasi-cylindrical array of plane mirrors as a concentrator
07 p0109 A75-29478
DOCUMENTATION
Economic radioisotope thermoelectric generator study program: Appendices.
[IRSD-3112-2] 05 p0036 N75-14270
DOCUMENTS
NSF-Rann energy abstracts: A monthly abstract journal of energy research
[ORNL-EIS-74-52-VOL-2-NO-1] 05 p0024 N75-10592
DOMESTIC SATELLITE COMMUNICATIONS SYSTEMS
Design and qualification of the CTS solar cell blanket --- onboard Canadian Communications Technology Satellite
06 p0053 A75-24248
DRAG REDUCTION
Evaluation of the overall fuel mass penalty of an aircraft system
07 p0121 A75-36720
DRAINAGE
Methane in the Pittsburgh coalbed, Washington County, Pennsylvania
[PB-237848/7] 06 p0089 N75-18760
DRUGS
Industrial energy study of the drug manufacturing industries for the Federal Energy Administration/US Department of Commerce
[PB-238994/8] 07 p0142 N75-24130
DUCTED FLOW
Fluctuations of electric power in MHD channels
07 p0110 A75-30949
DYNAMIC CHARACTERISTICS
Fundamentals of automatic control of space nuclear power plants --- Russian book
06 p0048 A75-23229
DYNAMIC PROGRAMMING
Minimum cost solar thermal electric power systems - A dynamic programming based approach
07 p0112 A75-32097
DYNAMIC RESPONSE
Dynamic response of solar heat storage systems
[ASME PAPER 74-WA/HT-22] 05 p0018 A75-16867

E

EARTH CRUST
Geothermal energy: A new application of rock mechanics
[LA-UR-74-821] 06 p0068 N75-16089
EARTH MANTLE
Three-dimensional subsurface delineation via a novel method for determining the subsurface electrical profile
[UCRL-51685] 07 p0127 N75-21781
EARTH MOVEMENTS
Measuring ground movement in geothermal areas of Imperial Valley, California
06 p0099 N75-20842
EARTH RESOURCES
U.S. energy resources - Outlook for the future
05 p0014 A75-12999
Solar energy in earth processes --- review
06 p0061 A75-28437
Utilization of solar energy --- an assessment of present technology
[NASA-TT-F-16090] 05 p0033 N75-13382
Energy resources and utilization
06 p0075 N75-16983
Assessment of uranium and thorium resources in the United States and the effect of policy alternatives
[PB-238658/9] 07 p0143 N75-24133
EARTH SURFACE
Prospect for geothermal power
[LA-UR-74-1111] 06 p0086 N75-18723
Relationships of earth fracture systems to productivity of a gas storage reservoir
[PB-237894/1] 06 p0089 N75-18759
ECOLOGY
Environmental impact of a geothermal power plant
06 p0049 A75-23291
An ecologic solar heated and cooled home
07 p0118 A75-34937
ECONOMIC ANALYSIS
Economics analyses of solar energy utilization
05 p0004 A75-10520
The Hydrogen Economy - A utility perspective --- energy technology
05 p0014 A75-12998
International energy problems and environmental policy
05 p0014 A75-13597
Prospects for tapping solar energy on a large scale
05 p0015 A75-14014
Potential for large-scale energy storage in electric utility systems
[ASME PAPER 74-WA/ENER-9] 05 p0016 A75-16840
Economics of a hydrogen storage peaking power plant
[ASME PAPER 74-WA/PWR-6] 05 p0018 A75-16880
Energy systems - Modeling and policy analysis
06 p0055 A75-24750
An econometric analysis of fuel selection for power generation
06 p0055 A75-24751
The future of silicon solar cells for terrestrial use
06 p0058 A75-27717
Urban waste energy resources
[AIAA PAPER 75-632] 06 p0062 A75-28598
Hydrogen production from solar energy
07 p0109 A75-29477
Energy's hazy future --- electric generating capacity scenarios and forecasts
07 p0110 A75-31195
Economic and technical aspects of wind generation systems
07 p0116 A75-34533
The economics of using wind power for electricity supply in the Netherlands and for water supply on Curacao
[NASA-TT-F-15982] 05 p0024 N75-10587

Primary data on economic activity and water use in prototype oil shale development areas of Colorado: An initial inquiry
[PB-236039/4] 05 p0037 N75-14277
Total energy supply and demand, volume 1, chapter 6 --- natural gas, economic analysis
06 p0067 N75-16082
Legal economic, and energy considerations in the use of underground space
[PB-236755/5] 06 p0080 N75-17749
US energy R and D policy: The role of economics
[RFF-WORKING-PAPER-EN-4] 06 p0080 N75-17783
Economic and system aspects of a superconducting magnetic energy storage device and a dc superconducting transmission line
[LA-UR-74-1145] 06 p0091 N75-19080
An economic analysis of oil shale operations featuring gas combustion retorting
[PB-237851/1] 06 p0093 N75-19813
Fuel gas production from solid waste
[PB-238068/1] 06 p0095 N75-19943
Dependence of the United States on essential imported materials, year 2000; volume 1
[AD-A000842] 06 p0096 N75-20157
Dependence of the United States on essential imported materials, year 2000. Volume 2: Appendices
[AD-A000843] 06 p0096 N75-20158
Nuclear reactor process heat capabilities, potential, and economics
[CONF-741032-1] 07 p0131 N75-22112
The economics of energy and natural resource pricing
[GPO-48-071] 07 p0141 N75-24115
Demonstration plant, clean boiler fuels from coal. Volume 3: Preliminary design/economics analysis
[PB-238529/2] 07 p0142 N75-24127
Economic system analysis of coal preconversion technology
[PB-239383/3] 07 p0151 N75-25325
Commerce today, volume 5, number 10 --- a discussion of international trade, economics, and energy conservation
[COM-74-50944/10] 07 p0152 N75-25775
The problem of peak load pricing subject to rate of return constraint
[PB-239765] 07 p0163 N75-27964

ECONOMIC DEVELOPMENT
Advanced subsonic transports - A challenge for the 1990's
[AIAA PAPER 75-304] 06 p0049 A75-23251
Energy: A plan for action --- Book
07 p0110 A75-30375
Interfuel substitution in the consumption of energy in the United States. Part 1: Residential and commercial sector
[PB-234536/1] 05 p0040 N75-15178
The USA: The scientific and technical revolution and trends in foreign policy
[NASA-TT-F-16102] 06 p0096 N75-20160
Regional economics: A subset of simulation of the effects of coal-fired power development in the four corners region
06 p0107 N75-21153

ECONOMIC FACTORS
The economics of nuclear power
06 p0047 A75-22734
A commentary on solar energy
07 p0116 A75-34532
Elimination of duty on methanol imported for certain uses
[H-REPT-93-998] 05 p0026 N75-10857
Economic radioisotope thermoelectric generator program: Program plan
[IESD-3112-3] 05 p0034 N75-13393
Economic radioisotope thermoelectric generator study program
[IESD-3112-1] 05 p0036 N75-14269
Economic radioisotope thermoelectric generator study program: Appendices.
[IESD-3112-2] 05 p0036 N75-14270
Prospective regional markets for coal conversion plant products projected to 1980 and 1985. Volume 2: Current and projected demand, supply and price of energy in the United States
[PB-236632/6] 06 p0078 N75-17007
Prospective regional markets for coal conversion plant products projected to 1980 and 1985. Volume 3: Current and projected demand, supply and price of energy in the United States, schedules
[PB-236633/4] 06 p0078 N75-17008
Economic modeling and energy policy planning --- technology transfer, market research
06 p0079 N75-17210
The effect of recent energy price increases on field crop production costs
[PB-238659/7] 06 p0107 N75-21155
Economic impact on the free world of the oil crisis, October 1973 - March 1974
[AD-A003136] 06 p0107 N75-21156
Impact of future use of electric cars in the Los Angeles region. Volume 1: Executive summary and technical report
[PB-238877/5] 07 p0131 N75-22199
Survey study of the efficiency and economics of hydrogen liquefaction
[NASA-CR-132631] 07 p0133 N75-22486
Insufficient utilization of scientific advances --- sociopolitical and economic management of technological development
07 p0137 N75-23365

ECONOMICS
NSF-RANN energy abstracts. A monthly abstract journal of energy research, volume 2, no. 4
[ORNL-EIS-74-52-VOL-2-4] 05 p0029 N75-11469
Materials and the new dimensions of conflict, revised version
[AD-A004263] 07 p0154 N75-26499

EDUCATION
Effects of energy crisis on education, 1974
[GPO-27-765] 05 p0026 N75-10850

EDUCATIONAL TELEVISION
Cost competitiveness of a solar cell array power source for ATS-6 educational TV terminal
[NASA-TM-X-71720] 07 p0140 N75-24110

EFFICIENCY
Summary of high efficiency silicon solar cell meeting held at NASA-Lewis
[NASA-TM-X-71729] 07 p0138 N75-23681

EFFLUENTS
The identification of gamma-valerolactone in waste from an oil-shale in situ retort --- determination of chemical composition by mass spectroscopy of effluents from crude oil shales causing water pollution
[PB-240098/4] 07 p0147 N75-24652

ELECTRIC BATTERIES
Methanol/air acidic fuel cell system
05 p0008 A75-10566
An intercell heat pipe for fuel cell and battery cooling
[AD-782888] 05 p0027 N75-11226
Lead accumulator batteries in telecommunications
[BLL-TRANS-2943-(9022.81)] 06 p0074 N75-16967
High energy battery program at Argonne National Laboratory
[ANL-8064] 06 p0076 N75-16984
Development of lithium/sulfur cells for application to electric automobiles
[CONF-740805-7] 06 p0094 N75-19829
Impact of future use of electric cars in the Los Angeles region. Volume 1: Executive summary and technical report
[PB-238877/5] 07 p0131 N75-22199
Impact of future use of electric cars in the Los Angeles region. Volume 2: Task reports on electric car characterization and baseline projections
[PB-238878/3] 07 p0131 N75-22200
Impact of future use of electric cars in the Los Angeles region. Volume 3: Task reports on impact and usage analysis
[PB-238879/1] 07 p0131 N75-22201

ELECTRIC COILS
A high-speed superconducting generator
06 p0060 A75-27960

ELECTRIC DISCHARGES
Empirical method of designing the current-voltage characteristics for the discharge mode of a thermionic converter
06 p0057 A75-26332

ELECTRIC ENERGY STORAGE
The impact of advanced batteries on electric power generation
05 p0013 A75-12991
Performance of heat pumps using cold-side energy storage and unconventional heat sources
[ASME PAPER 74-WA/HT-17] 05 p0017 A75-16863
Will superconducting magnetic energy storage be used on electric utility systems
06 p0056 A75-25832
DCTR power supply and energy storage review meeting
[WASH-1310] 05 p0031 N75-12445
Cost and size estimates for an electrochemical bulk energy storage concept
[NASA-TM-X-3192] 05 p0039 N75-15161
ELECTRIC EQUIPMENT TESTS
Performance testing of thermoelectric generators at JPL
05 p0002 A75-10503
SNAP 19 Viking RTG flight configuration and integration testing --- Radioisotope Thermoelectric Generator
05 p0003 A75-10504
Operational testing of the high performance thermoelectric generator /HPG-02/
05 p0003 A75-10505
Superconducting synchronous machine
06 p0061 A75-27967
ELECTRIC GENERATORS
Solar farms utilizing low-pressure closed-cycle gas turbines
05 p0003 A75-10514
Evaluation of central solar tower power plant
05 p0003 A75-10515
A prototype solar powered, Rankine Cycle system providing residential air conditioning and electricity
05 p0004 A75-10523
Report on progress in achieving direct conversion of a major fraction of sonic flow kinetic power into electrical power by electrofluid dynamic /EFD/ processes
05 p0009 A75-10576
Prospects and scientific problems of the utilization of methods of direct electric power generation from chemical fuels /fuel cells/
05 p0012 A75-12911
Utilization of solar energy today
05 p0012 A75-12987
Pumped air storage for electric power generation
05 p0013 A75-12990
The impact of advanced batteries on electric power generation
05 p0013 A75-12991
Tidal power and its integration into the electric system
05 p0013 A75-12994
Windpower - look backward, then move forward confidently --- for electric power generation in rural areas
05 p0014 A75-12997
A comparison of methods for electric power generation from geothermal hot water deposits
[ASME PAPER 74-WA/ENER-10] 05 p0016 A75-16841
Power from ocean waves
[ASME PAPER 74-WA/PWR-5] 05 p0018 A75-16879
Wind energy developments in the 20th century
05 p0020 A75-17503
Material considerations involved in solar energy conversion
06 p0047 A75-22522
A superconducting microwave engine
06 p0056 A75-25831
Fundamental research on the selection of new electrochemical generators of medium power
06 p0060 A75-27827
A high-speed superconducting generator
06 p0060 A75-27960
Superconductive d.c. generator
06 p0061 A75-27961
Main problems met in the study of cryogenic generators
06 p0061 A75-27962
Solar electric and thermal conversion system in close proximity to the consumer --- solar panels on house roofs
[AIAA PAPER 75-628] 06 p0062 A75-28597
Generation of electric power at high reliability levels using a group of solar power plants in an energy system
07 p0122 A75-37159
Standardized wind electric power unit
[AD-783764] 05 p0025 N75-10598
Effective utilization of solar energy to produce clean fuel
[PB-233956/2] 05 p0026 N75-10605
Effect of gas turbine efficiency and fuel cost on cost of producing electric power
[PB-234159/2] 05 p0034 N75-13397
Efficiencies in power generation
[PB-234160/0] 05 p0034 N75-13398
Radioisotope space power generator
[GA-A-12848] 05 p0038 N75-14832
Pollution-free electrochemical power generation from low grade coal
[PB-236162/4] 06 p0070 N75-16109
Energy conversion from coal utilizing CPU-400 technology
[PB-237028/6] 06 p0083 N75-17828
Electric power generation using geothermal brine resources for a proof of concept facility
06 p0101 N75-20857
Results of work on thermoemission conversion
[AD-A002655] 07 p0131 N75-22114
Electric power for space satellites
[NASA-TM-X-66808] 07 p0137 N75-23678
Electric power generation utilizing a heat pipe turbine-generator
07 p0139 N75-24096
Solar energy for process steam generation
[PB-238109/3] 07 p0145 N75-24154
Study on electrofluid dynamic power generation
[AD-A004762] 07 p0155 N75-26507
ELECTRIC MOTORS
Impact of future use of electric cars in the Los Angeles region. Volume 1: Executive summary and technical report
[PB-238877/5] 07 p0131 N75-22199
Impact of future use of electric cars in the Los Angeles region. Volume 2: Task reports on electric car characterization and baseline projections
[PB-238878/3] 07 p0131 N75-22200
Impact of future use of electric cars in the Los Angeles region. Volume 3: Task reports on impact and usage analysis
[PB-238879/1] 07 p0131 N75-22201
ELECTRIC POWER
Space power systems - Retrospect and prospect
[IAF PAPER 74-082] 05 p0014 A75-13714
Energy's hazy future --- electric generating capacity scenarios and forecasts
07 p0110 A75-31195
Effect of impurity doping concentration on solar cell output
07 p0124 A75-37404
Multimegawatt fuel cell power system
07 p0124 A75-37656
Satellites for energy transmission to earth - Technical and socioeconomic studies
07 p0125 A75-38644
Regional economics: A subset of simulation of the effects of coal-fired power development in the four corners region
06 p0107 N75-21153
Impact of future use of electric cars in the Los Angeles region. Volume 1: Executive summary and technical report
[PB-238877/5] 07 p0131 N75-22199
Impact of future use of electric cars in the Los Angeles region. Volume 2: Task reports on electric car characterization and baseline projections
[PB-238878/3] 07 p0131 N75-22200
Conversion of electrical energy into laser radiation energy in high pressure mixtures of molecular gases
07 p0133 N75-22722
ELECTRIC POWER PLANTS
Hydrogen cycle peak-shaving for electric utilities
05 p0005 A75-10535
Hydrogen for the electric utilities - Long range possibilities
05 p0005 A75-10536
Energy storage for utilities via hydrogen systems
05 p0005 A75-10537

Independent energy systems for better efficiency
05 p0006 A75-10549
The FCG-1 fuel cell powerplant for electric utility use
05 p0013 A75-12992
Potential for large-scale energy storage in electric utility systems
[ASME PAPER 74-WA/ENER-9] 05 p0016 A75-16840
Economics of a hydrogen storage peaking power plant
[ASME PAPER 74-WA/PWR-6] 05 p0018 A75-16880
Prospects for using dynamic thermocompression ccnverter in sclar power plants
05 p0020 A75-17076
Meteorological factors and dispersion of pollutants in the atmosphere - A preliminary study about a large power plant
06 p0045 A75-21150
Environmental impact of a geothermal power plant
06 p0049 A75-23291
Considerations regarding a utilization of solar energy --- thermal, electric and wind energy systems
06 p0050 A75-23510
The solution of information-deficiency prcblems of electrcenergy technology --- optimal decision making
06 p0062 A75-28508
Systems aspects cf ocean thermal energy conversion
[AIAA PAPER 75-615] 06 p0062 A75-28593
100 MWe solar power plant design ccnfiguration and performance
[AIAA PAPER 75-623] 06 p0062 A75-28595
A central receiver solar power plant in a hybrid mode cf operatior --- solar/fossil-fueled steam power plant
[AIAA PAPER 75-624] 06 p0062 A75-28596
Solar thermal conversion mission analysis
[AIAA PAPER 75-619] 06 p0064 A75-29117
Parametric performance and cost mcdels fcr solar concentrators
07 p0109 A75-29476
Analysis of gas dissociation solar thermal power system
07 p0115 A75-33974
Complex utilization of a solar power plant
07 p0116 A75-34320
Evaluation of central solar tower power plant
07 p0116 A75-34531
Component design ccnsiderations for gas turbine HTGR power plant --- High-Temperature Gas-cooled Reactor
[ASME PAPER 75-GT-67] 07 p0116 A75-34620
Generation of electric power at high reliability levels using a group of solar power plants in an energy system
07 p0122 A75-37159
Generalizatiens cf composite studies involving combined use of wind and solar energy
07 p0122 A75-37161
Full-scale tests of 'phctovolt' high-voltage photocells at high light flux levels
07 p0122 A75-37162
Ocean thermal gradient hydraulic power plant
07 p0124 A75-37849
Standardized wind electric power unit
[AD-783764] 05 p0025 N75-10598
Solar Sea Power Plants (SSPP): A critical review and survey
[NASA-TM-X-70783] 05 p0028 N75-11459
Energy plantations: Should we grow trees for power plant fuel?
[VP-X-129] 05 p0030 N75-12436
Energy storage for the electric pcwer industry
[LA-UR-74-918] 05 p0031 N75-12447
Clean power generation from coal
[PB-234188/1] 05 p0035 N75-13401
Photovoltaic conversion of solar energy for terrestrial applications. Volume 2: Invited papers
[PB-236164/0] 06 p0072 N75-16122
Low Btu gasificatien high temperature-low temperature H2S removal comparisen effect on overall thermal efficiency in a combined cycle power plant
[PB-235780/4] 06 p0072 N75-16125
Technical and eccnemic feasibility of the ocean thermal differences process as a solar-driven energy process
[PB-236422/2] 06 p0077 N75-17003
First Joint Soviet-American Colloquium on the Problems of MHD Energy Conversion
[JPRS-63794] 06 p0081 N75-17790
Prospects for magnetohydrodynamic electric power plants in power engineering
06 p0081 N75-17791
Some developments of industrial magnetchydrodynamic electric power plants
06 p0081 N75-17792
Experience in the first step of the mastery of the U-25 device
06 p0081 N75-17793
Electronic model of the U-25 device
06 p0081 N75-17794
Solar sea power --- axial flow pumps
[PB-236957/3] 06 p0082 N75-17821
Low-BTU gasification of coal for electric power generatien
[PB-236972/6] 06 p0088 N75-18740
Organic Rankine cycle silent power plant 1.5 kW, 28 volts dc
[AD-A000900] 06 p0088 N75-18745
Advanced coal gasification system for electric power generation
[PB-236971/8] 06 p0089 N75-18747
The generator of the future --- development of the magnetohydrodynamic generators
[AD-A001515] 06 p0089 N75-18754
The bioenvironmental impact of air pcllutien from fossil-fuel power plants
[PB-237720/8] 06 p0090 N75-18782
The collaborative study of EPA methods, 5, 6, and 7 in fossil fuel-fired steam generators
[PB-237695/2] 06 p0091 N75-18788
Electric power generation using gecthermal brine resources for a proof of concept facility
06 p0101 N75-20857
Geothermal steam condensate reinjectien
06 p0102 N75-20863
Utility company views of geothermal development
06 p0102 N75-20864
Problems in electric power production --- and environmental pollution
[ISS-T-73/16] 07 p0128 N75-21793
Energy statistics. A supplement to the summary of National Transportation statistics
[PB-236767/8] 07 p0130 N75-21817
Feasibility study of a 100 megawatt open cycle ocean thermal difference power plant
[PB-238571/4] 07 p0130 N75-21821
Potassium topping cycles for stationary power --- conceptual analysis
[NASA-CR-2518] 07 p0135 N75-22906
Electric power systems analysis research
[PB-239236/3] 07 p0143 N75-24139
Conference proceedings, Steam Power Plant Wcrkshop
[PB-239514/3] 07 p0144 N75-24148
Evaluation of power facilities; A reviewer's handbook --- electric and nuclear power plants
[PB-239221/5] 07 p0146 N75-24198
Study of fuel cell powerplant with heat recovery
[NASA-CR-141854] 07 p0148 N75-25296
Solids emission from power station furnaces --- industrial pollution ccntrol
[BLL-CE-TRANS-6524-(9022.09)] 07 p0157 N75-26528
US and Soviet MHD technology: A Comparative overview
[AD-A004614] 07 p0162 N75-27901

ELECTRIC POWER SUPPLIES

Electrical power generation subsystem for Space Shuttle Orbiter
05 p0002 A75-10477
Technology considerations for Organic Rankine Cycle Electric Power Systems
05 p0002 A75-10484
NASA objectives for improved solar power plants
05 p0002 A75-10485
Solar cell and array standardization for Air Force spacecraft
05 p0002 A75-10486
Performance testing of thermoelectric generators at JPL
05 p0002 A75-10503
SNAP 19 Viking RTG flight configuration and integration testing --- Radioisotope Thermoelectric Generator
05 p0003 A75-10504

Development of a thermal battery for emergency radio power under arctic conditions
05 p0007 A75-10560
Metal hydride fuel cell power source
05 p0008 A75-10564
Milliwatt fuel cell system for sensors
05 p0008 A75-10565
60 watt hydride-air fuel cell system
05 p0008 A75-10567
High energy density sintered plate type sealed nickel cadmium battery cells. I - The positive electrode/plaque relationships
05 p0008 A75-10569
High energy density sintered plate type nickel-cadmium battery cells. II - Electrochemical impregnation methods to produce nickel oxide electrodes
05 p0008 A75-10570
A novel negative-limited sealed nickel-cadmium cell
05 p0008 A75-10571
Electrically rechargeable redox flow cells
05 p0008 A75-10573
Advances in space power generation
[IAF PAPER 74-086] 05 p0015 A75-13718
Effectiveness of using semiconductor heat pumps under the conditions of the Turkmen SSR
05 p0020 A75-17083
Historic development of photovoltaic power generation
06 p0051 A75-24215
The use of solar cells in the lighthouse service
06 p0054 A75-24255
Terrestrial applications of FEP-encapsulated solar cell modules --- power systems using Fluorinated Ethylene Propylene encapsulation
06 p0054 A75-24258
The Mitre solar energy demonstration system
06 p0055 A75-24676
MHD energy conversion for high power electrical needs
07 p0124 A75-37657
The economics of using wind power for electricity supply in the Netherlands and for water supply on Curacao
[NASA-TT-F-15982] 05 p0024 N75-10587
Evaluation of coal conversion processes to provide clean fuels, part 1 --- coal conversion to clean fuels
[PB-234202/0] 05 p0025 N75-10600
Energy and the environment: Electric power

Solar thermal electric power systems
[PB-236368/7] 06 p0071 N75-16118
Development of high specific energy batteries for electric vehicles
[ANL-8058] 06 p0076 N75-16990
Applications of aerospace technology in the electric power industry
06 p0079 N75-17197
Steps into the future. Development of the power industry in the USSR
[BLL-M-23330-(5828.4F)] 06 p0085 N75-18714
Energy storage for utilities via hydrogen systems
[BNL-19266] 06 p0086 N75-18725
Conference proceedings: Power Generation-Clean Fuels Today
[PB-237661/4] 06 p0087 N75-18735
Electric power rights: One approach to rationing
[PB-238537/5] 07 p0143 N75-24138
An approach to the power shortage problem: Optimal allocation of existing excess reserves through interregional transmission
[PB-238578/9] 07 p0144 N75-24151
The residential user and the electrical load factor
[PB-238535/9] 07 p0145 N75-24152
Development of an electrical generator and electrolysis cell for a wind energy conversion system
[PB-239272/8] 07 p0150 N75-25315
Preliminary investigation into regulatory powers and policies on electric utility peak load pricing
[PB-239761/0] 07 p0151 N75-25324

ELECTRIC POWER TRANSMISSION
The Electric Power Research Institute's role in applying superconductivity to future utility systems
06 p0056 A75-25827
Testing of a photoelectric generator in a mountainous region of the Azerbaidzhan SSR
06 p0057 A75-26714
Photoelectric generator testing in the Azerbaidzhan SSR mountains
07 p0122 A75-37165
An approach to the power shortage problem: Optimal allocation of existing excess reserves through interregional transmission
[PB-238578/9] 07 p0144 N75-24151
Long term power system dynamics. Volume 1: Summary and technical report
[PB-240799/7] 07 p0161 N75-27573
Long term power system dynamics. Volume 2: Long-term power system dynamics simulation program
[PB-240800/3] 07 p0161 N75-27574

ELECTRIC PROPULSION
Mission applications of electric propulsion
[AIAA PAPER 74-1085] 05 p0010 A75-11284
Recent advances in components of space power systems
[IAF PAPER 74-083] 05 p0014 A75-13715
French activity in electric propulsion
07 p0120 A75-36539
Power processor design considerations for a solar electric propulsion spacecraft
[NASA-CR-140842] 05 p0029 N75-12064
High energy battery program at Argonne National Laboratory
[ANL-8064] 06 p0076 N75-16984

ELECTRIC PULSES
Chemical to electromagnetic energy conversion techniques --- explosive flux compression technology
[AD-783901] 05 p0026 N75-10609

ELECTRICAL ENGINEERING
State of the art and prospects for electric vehicles
[BLL-CA-TRANS-1250-(6196.3)] 06 p0074 N75-16712
US and Soviet MHD technology: A Comparative overview
[AD-A004614] 07 p0162 N75-27901

ELECTRICAL PROPERTIES
Radiation effects on high efficiency silicon-solar cells
06 p0051 A75-24197
Dependence of the basic parameters of Al/x/Ga/1-x/As-GaAs solar converters on temperature and optical intensity
07 p0112 A75-32824
Investigation of the electrical and temperature characteristics of a silicon photoelectric converter under natural conditions
07 p0116 A75-34314

ELECTRICAL RESISTANCE
Dynamic method for calculating the series resistance of a semiconductor photoelectric converter
06 p0057 A75-26713
Dynamic calculation of semiconductor photoconverter series resistance
07 p0122 A75-37164

ELECTRICITY
Wind power projects of the French electrical authority
[NASA-TT-F-16057] 05 p0033 N75-13384
Exploiting wind power for the production of electricity --- windmill utilization in Denmark
[NASA-TT-F-16058] 05 p0033 N75-13385
Dynamic conversion of solar generated heat to electricity
[NASA-CR-134724] 06 p0066 N75-16079
Fuel cells: Direct conversion of electrochemical energy into electricity
[SAND-74-0125] 06 p0103 N75-20869
Direct conversion of plasma energy to electricity for mirror fusion reactors
[UCRL-76051] 07 p0129 N75-21800
The 1973 fuel and electrical energy requirements of selected mineral industries activities
07 p0134 N75-22899
Solar photothermal power conversion
07 p0139 N75-24100
Fuel use in the US electrical utility industry, 1971 - 1990
07 p0154 N75-26493

Research on solar cell arrays and electric energy
[PB-239338/7] 07 p0155 N75-26504
The study of priorities in the electrical energy allocation problem
[PB-239762/8] 07 p0156 N75-26516
An analysis of the potential for shifting electric power demand within daily load requirement
[PB-239764/4] 07 p0156 N75-26517
The prospects of energy demand scheduling
[PB-239763/6] 07 p0156 N75-26518
Conservation and better utilization of electric power by means of thermal energy storage and solar heating
[PB-239395/7] 07 p0157 N75-26521
Conservation and better utilization of electric power by means of thermal energy storage and solar heating, executive summary
[PB-239394/0] 07 p0157 N75-26522

ELECTRIFICATION
Energy systems analysis and technology assessment program
[BNL-18984] 06 p0094 N75-19831

ELECTROCATALYSTS
Development of advanced fuel cell system, phase 3
[NASA-CR-134818] 07 p0154 N75-26496

ELECTROCHEMICAL CELLS
Development and performance of a miniature, high-voltage thermal battery
05 p0007 A75-10559
High energy density sintered plate type sealed nickel cadmium battery cells. I - The positive electrode/plaque relationships
05 p0008 A75-10569
High energy density sintered plate type nickel-cadmium battery cells. II - Electrochemical impregnation methods to produce nickel oxide electrodes
05 p0008 A75-10570
A novel negative-limited sealed nickel-cadmium cell
05 p0008 A75-10571
Predicted energy densities for nickel-hydrogen and silver-hydrogen cells embodying metallic hydrides for hydrogen storage
05 p0008 A75-10572
Electrically rechargeable redox flow cells
05 p0008 A75-10573
Fundamental research on the selection of new electrochemical generators of medium power
06 p0060 A75-27827
Cost and size estimates for an electrochemical bulk energy storage concept
[NASA-TM-X-3192] 05 p0039 N75-15161
Development of high specific energy batteries for electric vehicles
[ANL-8058] 06 p0076 N75-16990
Electrochemical power sources --- heat and mass transfer in porous media
[AD-A001610] 06 p0094 N75-19836

ELECTROCHEMICAL CORROSION
Corrosion and related problems in high-temperature cells
06 p0055 A75-24377

ELECTROCHEMISTRY
Pollution-free electrochemical power generation from low grade coal
[PB-236162/4] 06 p0070 N75-16109
Development of advanced fuel cell system, phase 3
[NASA-CR-134818] 07 p0154 N75-26496

ELECTROCONDUCTIVITY
Calculation of the electrical conductivity of the combustion products of the working medium in an open-cycle MHD generator
07 p0112 A75-31568
Effect of inhomogeneity of conductivity on end effect in a sectional MHD generator
07 p0119 A75-36233

ELECTRODES
High energy density sintered plate type nickel-cadmium battery cells. II - Electrochemical impregnation methods to produce nickel oxide electrodes
05 p0008 A75-10570
A novel negative-limited sealed nickel-cadmium cell
05 p0008 A75-10571
Electrochemical power sources --- heat and mass transfer in porous media
[AD-A001610] 06 p0094 N75-19836
Sulfur-based lithium-organic electrolyte secondary batteries
[AD-A003309] 06 p0104 N75-20882

ELECTROHYDRODYNAMICS
Measurements of the performance of an electrohydrodynamic heat pipe
[AIAA PAPER 75-659] 07 p0114 A75-32917
Study on electrofluid dynamic power generation
[AD-A004762] 07 p0155 N75-26507
Cycle study of a mercury-colloidal electrofluid dynamic power generator
[AD-A004814] 07 p0159 N75-27559

ELECTROLYSIS
Efficiencies of electrolytic and thermochemical hydrogen production
06 p0045 A75-20300
Production of hydrogen by the electrolysis of water
06 p0046 A75-22044

ELECTROLYTES
Electrolyte for hydrocarbon air fuel cells
[AD-A007220] 07 p0136 N75-22917

ELECTROLYTIC CELLS
Methanol/air acidic fuel cell system
05 p0008 A75-10566
Porous matrix structures for alkaline electrolyte fuel cells
07 p0123 A75-37243
Photochemical conversion of solar energy --- study of iron-thionine photogalvanic cells
[PB-235474/4] 05 p0038 N75-14282
Development of an electrical generator and electrolysis cell for a wind energy conversion system
[PB-239272/8] 07 p0150 N75-25315

ELECTROMAGNETIC ABSORPTION
The COMSAT non-reflective silicon solar cell - A second generation improved cell
06 p0053 A75-24245

ELECTRON BEAMS
An electron beam initiated fusion neutron generator
06 p0045 A75-19657
Electronbeam heating for fusion
07 p0120 A75-36295

ELECTRON IRRADIATION
The effects of irradiation on high-efficiency silicon solar cells
06 p0051 A75-24199
Electron and proton irradiation of high-efficiency silicon solar cells
06 p0053 A75-24233

ELECTRONIC EQUIPMENT
Designing heat pipe heat sinks
[AIAA PAPER 75-724] 07 p0113 A75-32868

ELECTROPLATING
Thin film coatings in solar-thermal power systems
06 p0056 A75-25679

ELECTROSTATIC GENERATORS
Electrostatic voltage generation from flowing water
05 p0009 A75-10580

ENCAPSULATING
Terrestrial applications of FEP-encapsulated solar cell modules --- power systems using Fluorinated Ethylene Propylene encapsulation
06 p0054 A75-24258

ENERGY
NSF-Rann energy abstracts: A monthly abstract journal of energy research
[ORNL-EIS-74-52-VOL-2-NO-1] 05 p0024 N75-10592
Biological conversion of organic refuse to methane
[PB-235468/6] 05 p0041 N75-15183
Energy R/D Data Workshop
[PB-237493/2] 07 p0130 N75-21811

ENERGY ABSORPTION
Selection and evaluation of the University of Florida's solar powered absorption air conditioning system
[ASME PAPER 74-WA/SOL-6] 05 p0019 A75-16889

ENERGY ABSORPTION FILMS
Solar characteristics of new absorptive coatings used on solar collectors
07 p0117 A75-34934

ENERGY BUDGETS
Conservation and efficient use of energy
[H-REPT-93-1634] 05 p0036 N75-14265
A generalised analysis of the performance of a variety of drive systems for high Reynolds number, transonic wind tunnels
[RAE-TR-73134] 06 p0073 N75-16572

ENERGY CONSERVATION

Solar energy and energy conservation in a state-assisted housing for the elderly project
[AIAA PAPER 75-611] 06 p0062 A75-28591

Energy: A plan for action --- Book
07 p0110 A75-30375

An ecologic solar heated and cooled home
07 p0118 A75-34937

Residential energy conservation
[TID-26534] 05 p0031 N75-12442

Remote platform power conserving system
[NASA-CASE-GSC-11182-1] 05 p0032 N75-13007

MEGASTAR: The meaning of growth. An assessment of systems, technologies, and requirements --- methodology for display and analysis of energy production and consumption
[NASA-CR-120338] 05 p0033 N75-13381

Electricity conservation measures in the commercial sector: The Los Angeles experience
[R-1592-FEA] 05 p0034 N75-13388

Conservation and efficient use of energy
[H-REPT-93-1634] 05 p0036 N75-14265

Fuel conservation capability and effort by commercial air carriers
[NASA-CR-137624] 05 p0039 N75-15157

Evaluation of advanced lift concepts and potential fuel conservation for short-haul aircraft
[NASA-CR-2502] 06 p0073 N75-16557

Legal economic, and energy considerations in the use of undergrcund space
[PB-236755/5] 06 p0080 N75-17749

Oversight: Mandatory petroleum allocation programs
[GPO-31-027] 06 p0081 N75-17806

Economic and energy conservation relationship relevant to state of New York building design and contract awards
[PB-237006/2] 06 p0082 N75-17824

Report and recommendations of the Solar Energy Data Workshop
[PB-238066/5] 06 p0089 N75-18757

Synthetic Liquid Fuel Research and Development Act of 1974 --- energy conservation and cost analyses
[GPO-44-818] 06 p0103 N75-20867

Management of power plant waste heat in cold regions
[AD-A003217] 06 p0104 N75-20881

The energy crisis and decision making in the family
[PB-238783/5] 06 p0106 N75-21028

A comparative analysis of the energy consumption for several urban passenger ground transportation systems
[PB-238041/8] 06 p0107 N75-21160

Ainse Engineering Conference --- energy report
[CONF-740814-AESIS] 07 p0129 N75-21801

Industrial energy study of the petroleum refining industry
[PB-238671/2] 07 p0130 N75-21818

Technological improvements to automobile fuel consumption. Volume 2A: Sections 1 through 23
[PB-238678/7] 07 p0132 N75-22479

A study of technological improvements in automotive fuel consumption. Volume 1: Executive summary
[PB-238693/6] 07 p0132 N75-22481

A study of technological improvements in automobile fuel consumption. Volume 2: Comprehensive discussion
[PB-238694/4] 07 p0132 N75-22482

A study of technological improvements in automobile fuel consumption. Volume 3A: Appendixes 1 - 111
[PB-238695/1] 07 p0133 N75-22483

A study of technological improvements in automobile fuel consumption. Volume 3B: Appendixes 4 - 7
[PB-238696/9] 07 p0133 N75-22484

Evaluating integrated utility systems
[PB-238765/2] 07 p0136 N75-22925

An interdisciplinary engineering approach to a facility design study with emphasis on energy conservation. Volume 2: Main report text
[AD-A006804] 07 p0142 N75-24129

Preliminary study of advanced turboprops for low energy consumption
[NASA-TM-X-71740] 07 p0146 N75-24739

Energy legislation --- energy conservation and resources management
[GPO-33-571] 07 p0149 N75-25301

An interdisciplinary engineering approach to a facility design study with emphasis on energy conservation. Volume 1: Executive summary
[AD-A006803] 07 p0149 N75-25304

An interdisciplinary engineering approach to a facility design study with emphasis on energy conservation. Volume 3: Appendices
[AD-A006805] 07 p0149 N75-25305

Energy conservation: A case study for a large manufacturing plant
[PB-239302/3] 07 p0151 N75-25323

Dimensions/NES, volume 59, number 2, February 1975 --- energy conservation, safety management, toxic hazards
[COM-75-50141/02] 07 p0151 N75-25330

Five year program planning document for end use energy conservation, research, development, and demonstration
[PB-240406/9] 07 p0152 N75-25331

Commerce today, volume 5, number 10 --- a discussion of international trade, economics, and energy conservation
[COM-74-50944/10] 07 p0152 N75-25775

Mineral resources and the environment --- energy conservation and energy policy
[PB-239579/6] 07 p0153 N75-26486

Papers and proceedings of two energy crisis seminars --- for urban transportation
[PB-239164/7] 07 p0156 N75-26513

Conservation and better utilization of electric power by means of thermal energy storage and solar heating
[PB-239395/7] 07 p0157 N75-26521

Conservation and better utilization of electric power by means of thermal energy storage and solar heating, executive summary
[PB-239394/0] 07 p0157 N75-26522

An analysis of constraints on increased coal production
[PB-240613/0] 07 p0157 N75-26525

Conservation in Alberta, 1973
07 p0158 N75-27532

Space and energy conservation housing prototype unit development
[NASA-CR-143201] 07 p0160 N75-27567

Project conserve, a pilot project in homeowner energy conservation
[PB-240407/7] 07 p0161 N75-27577

The household energy game
[COM-75-10304/4] 07 p0161 N75-27578

Energy rationing and energy conservation: Foundations for a social policy
[PB-239766] 07 p0162 N75-27579

ENERGY CONSUMPTION

Hydrogen cycle peak-shaving for electric utilities
05 p0005 A75-10535

Energy efficiency of current intercity passenger transportation modes
[AIAA PAPER 75-314] 06 p0047 A75-22513

Air transportation energy consumption - Yesterday, today, and tomorrow
[AIAA PAPER 75-319] 06 p0047 A75-22515

Mode shift strategies in intercity transportation and their effect on energy consumption
[AIAA PAPER 75-315] 06 p0055 A75-25013

'Time is energy' /Henson and Stringfellow Memorial Lecture/ --- VTOL aircraft developments
07 p0112 A75-32324

Total energy use for commercial aviation in the US
[ORNL-NSF-EP-68] 05 p0023 N75-10039

MEGASTAR: The Meaning of Energy Growth: An Assessment of Systems, Technologies, and Requirements
[NASA-CR-120355] 05 p0023 N75-10584

US energy flow charts for 1950, 1960, 1970, 1980, 1985, and 1990
[UCRL-51487] 05 p0024 N75-10593

The approaching energy crisis: A call for action
05 p0030 N75-12432

Energy and the environment in Baden-Wuerttemberg
[KFK-1966-UF] 05 p0030 N75-12439

Residential energy conservation
[TID-26534] 05 p0031 N75-12442

Energy consumption by industries in support of national defense: An energy demand model
[AD-784964] 05 p0031 N75-12449

Total energy supply and demand, volume 1, chapter 6 --- natural gas, economic analysis
06 p0067 N75-16082

Oslo's future power supply
[NE-20121] 06 p0067 N75-16087
NSF-RANN energy abstracts
[ORNL-EIS-74-52-VOL-2-5] 06 p0068 N75-16092
Guidelines to reduce energy consumption through transportation actions
[PB-235983/4] 06 p0068 N75-16094
Industrial energy studies of ground freight transportation, volume 1
[PB-236016/2] 06 p0069 N75-16099
Industrial energy studies of ground freight transportation. Volume 2: Appendices
[PB-236017/0] 06 p0069 N75-16100
Energy use in the commercial and industrial sectors of the US economy, 1963
[PB-235487/6] 06 p0070 N75-16104
Industrial energy study of the Industrial chemicals group
[PB-236322/4] 06 p0071 N75-16111
Fuel and energy data: United States by states and regions, 1972
[PB-236581/5] 06 p0077 N75-17004
Industrial energy study of selected food industries
[PB-237316/5] 06 p0083 N75-17827
Study of industrial uses of energy relative to environmental effects
[PB-237215/9] 06 p0084 N75-17853
Report of the Interagency Working Group on health and environmental effects of energy use
[PB-237937/8] 06 p0084 N75-17858
Documenting helicopter operations from an energy standpoint
[NASA-CR-132578] 06 p0084 N75-18220
Industrial energy study of the hydraulic cement industry
[PB-237142/5] 06 p0087 N75-18730
Fuel and energy consumption in the coal industries
[PB-237151/6] 06 p0088 N75-18744
Intra industry capability to substitute fuels
[PB-237605/1] 06 p0093 N75-19814
Energy utilization by households and technology assessment as a way to increase its effectiveness --- management methods and family decision making
06 p0097 N75-20829
Management of power plant waste heat in cold regions
[AI-A003217] 06 p0104 N75-20881
The energy crisis and decision making in the family
[PB-238783/5] 06 p0106 N75-21028
The effect of recent energy price increases on field crop production costs
[PB-238659/7] 06 p0107 N75-21155
A comparative analysis of the energy consumption for several urban passenger ground transportation systems
[PB-238041/8] 06 p0107 N75-21160
Energy statistics. A supplement to the summary of National Transportation statistics
[PB-236767/8] 07 p0130 N75-21817
Industrial energy study of the petroleum refining industry
[PB-238671/2] 07 p0130 N75-21818
A state energy management plan for North Carolina, phase 1: A quantitive description of the current situation and analysis of the determinants and consequences of future energy use
[PB-238197/8] 07 p0130 N75-21819
A USAF energy projection model
[AI-A006928] 07 p0132 N75-22476
Technological improvements to automobile fuel consumption. Volume 1: Executive summary
[PB-238677/9] 07 p0132 N75-22478
Technological improvements to automobile fuel consumption. Volume 2B: Sections 24 and 25 and appendixes A through I
[PB-238679/5] 07 p0132 N75-22480
A realistic view of US natural gas supply
[PB-238964/1] 07 p0134 N75-22898
Retrofitting existing housing for energy conservation: An economic analysis
[CCM-75-50049/6] 07 p0135 N75-22914
Path to self-sufficiency directions and constraints --- a model of US energy supply system
[PB-239099] 07 p0142 N75-24128
Utilization analysis of energy systems
[PB-239291/8] 07 p0144 N75-24144
The residential user and the electrical load factor
[PB-238535/9] 07 p0145 N75-24152
Preliminary study of advanced turboprops for low energy consumption
[NASA-TM-X-71740] 07 p0146 N75-24739
Meeting California's energy requirements, 1975 - 2000
07 p0149 N75-25297
Residential energy consumption and small scale options of energy systems for space heating
[PB-239941/8] 07 p0154 N75-26501
Digest of energy facts for water resources studies in Minnesota
[PB-239961/6] 07 p0156 N75-26515
The study of priorities in the electrical energy allocation problem
[PB-239762/8] 07 p0156 N75-26516
The problem of peak load pricing subject to rate of return constraint
[PB-239765] 07 p0163 N75-27964

ENERGY CONVERSION

Intersociety Energy Conversion Engineering Conference, 9th, San Francisco, Calif., August 26-30, 1974, Proceedings
05 p0001 A75-10476
Closed loop chemical systems for energy transmission, conversion and storage
05 p0005 A75-10538
Prospects for tapping solar energy on a large scale
05 p0015 A75-14014
Corrosion problems in energy conversion and generation; Proceedings of the Symposium, New York, N.Y., October 15-17, 1974
06 p0054 A75-24376
Temperature sensor for photoelectric energy converters
06 p0057 A75-26712
Geothermal energy --- technology assessment
06 p0060 A75-27826
Low-power turbines using organic vapor
07 p0110 A75-30892
Photoelectric energy converter temperature sensor
07 p0122 A75-37163
Laser energy conversion
07 p0125 A75-38474
Novel materials for power systems. Part 3: Selective emitters for energy conversion

Photovoltaic conversion of solar energy for Terrestrial Applications. Volume 1: Working group and panel reports
[PB-236163/2] 06 p0072 N75-16121
Transportation and the new energy policies: Truck sizes and weights, part 2
[GPO-29-802] 06 p0073 N75-16410
Energy from the earth's depths
[BLL-M-23516-(5828.4F)] 06 p0074 N75-16968
Air conditioning of office buildings with all-electric supply. Part 1: Technical conception
[OA-TRANS-938-PT-1] 06 p0074 N75-16970
Development of oil and gas on the Continental Shelf
[GPO-31-891] 06 p0075 N75-16973
Progress and problems in developing nuclear and other experimental techniques for recovering natural gas in the Rocky Mountain area
[B-164105] 06 p0075 N75-16975
The 1974 AGARD Annual Meeting: The energy problem: Impacts on military research and development
06 p0075 N75-16977
Development and performance of a miniature, high-voltage thermal battery
[SLA-74-5363] 06 p0076 N75-16988
Solar energy program plan for heating and cooling buildings
[WASH-1337-5-DRAFT] 06 p0077 N75-16993
Comparison of the environmental aspects of nuclear and fossil fueled power stations
[CONF-740555-1] 06 p0077 N75-16995
Use of methanol in transportation --- coal liquefaction methods
[UCID-16528] 06 p0077 N75-16996
Proceedings of the Workshop on Needs for Fundamental Research in Catalysis as Related to the Energy Problem
[PB-236683/9] 06 p0078 N75-17006
Prospective regional markets for coal conversion plant products projected to 1980 and 1985. Volume 2: Current and projected demand, supply and price of energy in the United States
[PB-236632/6] 06 p0078 N75-17007
Prospective regional markets for coal conversion plant products projected to 1980 and 1985. Volume 3: Current and projected demand, supply and price of energy in the United States, schedules
[PB-236633/4] 06 p0078 N75-17008
Economic modeling and energy policy planning --- technology transfer, market research
06 p0079 N75-17210
US energy R and D policy: The role of economics
[RFF-WORKING-PAPER-EN-4] 06 p0080 N75-17783
Oversight: Mandatory petroleum allocation programs
[GPO-31-027] 06 p0081 N75-17806
Solar total energy program
[SAND-74-0208] 06 p0081 N75-17810
California energy workshop: Developing a plan of action to meet the energy crisis in California --- oil recovery, nuclear electric power generation, and offshore energy sources
[PB-237045/0] 06 p0082 N75-17822
Design and construction of a residential solar heating and cooling system
[PB-237042/7] 06 p0082 N75-17823

Economic and energy conservation relationship relevant to state of New York building design and contract awards
[PB-237006/2] 06 p0082 N75-17824
Use of solar energy in buildings in New York state
[PB-236974/2] 06 p0083 N75-17825
Intermediate-term energy programs to protect against crude-petroleum import interruptions: Feasible alternatives, program costs, and operational methods of funding
[PB-237209/2] 06 p0083 N75-17826
Industrial energy study of selected food industries
[PB-237316/5] 06 p0083 N75-17827
OCS oil and gas: An environmental assessment, Volume 1
06 p0083 N75-17837
OCS oil and gas: An environmental assessment, Volume 2
06 p0084 N75-17838
Nuclear system that burns its own wastes shows promise
[NASA-NEWS-RELEASE-75-44] 06 p0085 N75-18716
Workshop in Gas-Phase Molecular Interactions and the Nation's Energy Problem
[PB-236712/6] 06 p0086 N75-18718
Status and outlook for energy conversion via fuel cells
[CONF-740462-1] 06 p0087 N75-18729
Natural gas in Alabama
[PB-236582/3] 06 p0088 N75-18737
Assessment of the Rankine cycle for potential application to solar powered cooling of buildings
[PB-238069/9] 06 p0089 N75-18755
Proceedings of the New York State Assembly/AISLE Conference on Energy and the Environment, Volume 1
[PB-237936/0] 06 p0091 N75-18801
An economic analysis of oil shale operations featuring gas combustion retorting
[PB-237851/1] 06 p0093 N75-19813
Intra industry capability to substitute fuels
[PB-237605/1] 06 p0093 N75-19814
In situ oil shale conversion and recovery
[SIA-74-0162] 06 p0093 N75-19825
III-SOHIO solar process heat project
[UCID-16630-74-1] 06 p0093 N75-19827
Nuclear district-heating and nuclear long-distance energy
[JUL-1077] 06 p0093 N75-19828
Energy systems analysis and technology assessment program
[BNL-18984] 06 p0094 N75-19831
Development of a process for producing an ashless low sulfur fuel from coal. Volume 4. Product studies. Part 2. Annotated bibliography on mineral fiber production from coal minerals
[PB-237763/8] 06 p0095 N75-19839
Development of a process for producing an ashless, low-sulfur fuel from coal. Volume 4. Product studies. Part 3 Products from coal minerals
[PB-237764/6] 06 p0095 N75-19840
Development of a process for producing an ashless, low-sulfur fuel from coal. Volume 4. Product studies. Part 4. Sulfur removal from coal minerals
[PB-237765/3] 06 p0095 N75-19841
Development of a process for producing an ashless, low-sulfur fuel from coal. Volume 4. Product studies. Part 5. Developmental and rate studies in processing of coal minerals
[PB-237766/1] 06 p0095 N75-19842
Synthetic Liquid Fuel Research and Development Act of 1974 --- energy conservation and cost analyses
[GPO-44-818] 06 p0103 N75-20867
Synthetic fuels for ground transportation with special emphasis on hydrogen
[NASA-TM-X-72652] 06 p0103 N75-20868
Fuel cells: Direct conversion of electrochemical energy into electricity
[SAND-74-0125] 06 p0103 N75-20869
Comparative performance characteristics of cylindrical parabolic focusing and flat plate solar energy collectors
[CONF-741104-3] 06 p0103 N75-20872
Hydrogen storage and production in utility systems
[BNL-19249] 06 p0103 N75-20873
Energy and fixed nitrogen from agricultural residues
[PNWL-SA-5070] 06 p0103 N75-20874
Acoustic array methods for instrumentation of in situ coal gasification
[UCID-16591] 06 p0104 N75-20875
Metal hydrides as a source of hydrogen fuel
[BNL-14804-R] 06 p0104 N75-20876
Management of power plant waste heat in cold regions
[AD-A003217] 06 p0104 N75-20881
Sulfur-based lithium-organic electrolyte secondary batteries
[AD-A003309] 06 p0104 N75-20882
Technology for the conversion of solar energy to fuel gas
[PB-238103/6] 06 p0104 N75-20883
Environmental aspects of cadmium sulfide usage in solar energy conversion. Part 1: Toxicological and environmental health considerations, a bibliography
[PB-238285/1] 06 p0105 N75-20884
Wind power potential of Alaska. Part 1: Surface wind data from specific coastal sites
[PB-238507/8] 06 p0105 N75-20885
Wisconsin superconductive energy storage project, volume 1
[PB-238082/2] 06 p0105 N75-20887
Research on the application of solar energy to the food drying industry
[PB-238073/1] 06 p0105 N75-20888
Synthetic fuels from fusion reactors
[BNL-19351] 06 p0106 N75-21098
Synopsis of studies on synthetic fuels production by fusion reactors
[BNL-19336] 06 p0106 N75-21104
Plans and status of the NASA-Lewis Research Center wind energy project
[NASA-TM-X-71701] 07 p0128 N75-21795
Wind power installations. Present condition and possible lines of development
[NASA-TT-F-16204] 07 p0128 N75-21796
Energy plantations: Should we grow trees for power plant fuel
[PB-238417/0] 07 p0130 N75-21815
Energy statistics. A supplement to the summary of National Transportation statistics
[PB-236767/8] 07 p0130 N75-21817
A state energy management plan for North Carolina, phase 1: A quantitive description of the current situation and analysis of the determinants and consequences of future energy use
[PB-238197/8] 07 p0130 N75-21819
A review of the Project Independence report submitted to Office of Energy Research and Development, National Science Foundation, 10 January 1975
[PB-238791/8] 07 p0131 N75-21823
A USAF energy projection model
[AD-A006928] 07 p0132 N75-22476
Technological improvements to automobile fuel consumption. Volume 2A: Sections 1 through 23
[PB-238678/7] 07 p0132 N75-22479
A realistic view of US natural gas supply
[PB-238964/1] 07 p0134 N75-22898
Technology assessment of portable energy RDT and P, phase 1
[NASA-CR-137654] 07 p0134 N75-22901
Technology assessment of portable energy RDT and P, phase 1
[NASA-CR-137653] 07 p0134 N75-22902
Solar residential heating and cooling system development test program
[NASA-TM-X-64924] 07 p0135 N75-22903
Potassium topping cycles for stationary power --- conceptual analysis
[NASA-CR-2518] 07 p0135 N75-22906
Brief examination of the status of nuclear power in the republic, using 1974 costs
[PEL-237E] 07 p0135 N75-22909
Solar power system and component research program
[PB-238642/3] 07 p0135 N75-22915
Columnar silicon film solar cells for terrestrial applications
[PB-238534/2] 07 p0135 N75-22916
Technology for the conversion of solar energy to fuel gas
[PB-238545/8] 07 p0136 N75-22919
Evaluating integrated utility systems
[PB-238765/2] 07 p0136 N75-22925
A study of energy systems command, control and communication for energy crisis management
[PB-239290/0] 07 p0136 N75-22927

Protecting the US petroleum market against future denials of imports
[AD-A006643] 07 p0137 N75-23387
Feasibility study of a satellite solar power station
[NASA-CR-2357] 07 p0138 N75-23683
Photovoltaic solar power systems
07 p0139 N75-24098
Space satellite power system --- conversion of solar energy by photovoltaic solar cell arrays
[NASA-CR-142799] 07 p0139 N75-24099
Solar photothermal power conversion
07 p0139 N75-24100
Oceanic and atmospheric energy sources
07 p0139 N75-24101
The national solar energy program
07 p0139 N75-24102
The energy plantation
07 p0139 N75-24103
Solar energy research and development
[GFC-4C-684] 07 p0139 N75-24104
The high intensity solar cell: Key to low cost photovoltaic power
[NASA-TM-X-71718] 07 p0140 N75-24108
The effect of sunshine testing on terrestrial solar cell system components
[NASA-TM-X-71722] 07 p0140 N75-24109
Energy imports and the US balance of payments
[GPO-28-965] 07 p0141 N75-24114
The economics of energy and natural resource pricing
[GPO-48-071] 07 p0141 N75-24115
A compressor designed for the energy research and development agency automotive gas turbine program
[NASA-TM-X-71719] 07 p0141 N75-24116
Standardized solar simulator tests of flat plate solar collectors. 1: Soltex collector with two transparent covers
[NASA-TM-X-71738] 07 p0141 N75-24118
Energy Reorganization Act of 1974 --- the Energy Research and Development Administration and Nuclear Energy Commission
[S-REET-93-1252] 07 p0142 N75-24123
Energy Reorganization Act of 1974
[S-REET-93-980] 07 p0142 N75-24124
Energy and foreign policy
[GPO-22-562] 07 p0142 N75-24125
Study of the application of HTGR to a petroleum refinery petrochemical complex
[CONF-741144-1] 07 p0142 N75-24126
Demonstration plant, clean boiler fuels from coal. Volume 3: Preliminary design/economics analysis
[PB-238529/2] 07 p0142 N75-24127
Path to self-sufficiency directions and constraints --- a model of US energy supply system
[PB-239099] 07 p0142 N75-24128
Technology and use of lignite
[PB-238666/2] 07 p0142 N75-24131
Photochemical conversion of solar energy
[PB-238533/4] 07 p0143 N75-24132
Assessment of uranium and thorium resources in the United States and the effect of policy alternatives
[PB-238658/9] 07 p0143 N75-24133
Where the boilers are: A survey of electric utility boilers with potential capacity for burning solid waste as fuel
[PB-239392/4] 07 p0143 N75-24135
Terrestrial photovoltaic power systems with sunlight concentration
[PB-238506/0] 07 p0143 N75-24136
Chemical vapor deposition research for fabrication of solar energy converters
[PB-238947/6] 07 p0143 N75-24137
Electric power rights: One approach to rationing
[PB-238537/5] 07 p0143 N75-24138
Energy system modeling-interfuel competition
[PB-239292/6] 07 p0143 N75-24140
Proceedings of 5th annual symposium: Energy Research and Development --- solar energy, windpower utilization, thermonuclear power generation
[AD-A007799] 07 p0144 N75-24142
Utilization analysis of energy systems
[PB-239291/8] 07 p0144 N75-24144
A preliminary technology assessment of ocean thermal gradient energy generation
[PB-238646/4] 07 p0144 N75-24147
An approach to the power shortage problem: Optimal allocation of existing excess reserves through interregional transmission
[PB-238578/9] 07 p0144 N75-24151
Solar energy for process steam generation
[PB-238109/3] 07 p0145 N75-24154
Path to self-sufficiency directions and constraints, appendices --- a computer program that calculates energy resource requirements
[PB-239100/1] 07 p0145 N75-24155
Proceedings of the Solar Thermal Conversion Workshop
[PB-239277/7] 07 p0145 N75-24157
NSF-RANN energy abstracts. A monthly abstract journal of energy research
[ORNL-EIS-74-52-VOL-2-NO-6] 07 p0146 N75-24532
Energy recovery from solid waste. Volume 2: Technical report --- pyrolysis and biodegradation
[NASA-CR-2526] 07 p0148 N75-25292
Meeting California's energy requirements, 1975 - 2000
07 p0149 N75-25297
Solar Energy Research, Development, and Demonstration Act of 1974
[GPO-39-827] 07 p0149 N75-25299
Energy policy and resource management
[GPO-33-634] 07 p0149 N75-25300
Energy legislation --- energy conservation and resources management
[GPO-33-571] 07 p0149 N75-25301
Heat exchangers for sea solar power plants
[PB-239369/2] 07 p0150 N75-25319
Various research tasks related to energy information and data activities: Task 4 priorities analysis
[PB-240424/2] 07 p0151 N75-25329
Five year program planning document for end use energy conservation, research, development, and demonstration
[PB-240406/9] 07 p0152 N75-25331
Environmental statement related to the proposed Callaway Plant units 1 and 2. Union Electric Company docket nos. STN 50-483 and STN 50-486
[PB-240193/3] 07 p0152 N75-25349
Atlantic outer continental shelf energy resources: An economic analysis
[COM-75-10330/9] 07 p0152 N75-26484
Mineral resources and the environment --- energy conservation and energy policy
[PB-239579/6] 07 p0153 N75-26486
Using systems methods for analysing integrated energy supply, summary
[BLL-CB-TRANS-6473-(9022.09)] 07 p0153 N75-26491
Fuel use in the US electrical utility industry, 1971 - 1990
07 p0154 N75-26493
Research on solar cell arrays and electric energy
[PB-239338/7] 07 p0155 N75-26504
Solar heating experiment on the Grover Cleveland School, Boston, Massachusetts
[PB-239516/8] 07 p0155 N75-26505
Study on electrofluid dynamic power generation
[AD-A004762] 07 p0155 N75-26507
Design and test report for transportable solar laboratory program
[PB-240609/8] 07 p0156 N75-26512
Digest of energy facts for water resources studies in Minnesota
[PB-239961/6] 07 p0156 N75-26515
The study of priorities in the electrical energy allocation problem
[PB-239762/8] 07 p0156 N75-26516
The prospects of energy demand scheduling
[PB-239763/6] 07 p0156 N75-26518
Research and development of low cost processes for integrated solar arrays
[PB-239760/2] 07 p0156 N75-26519
Conservation and better utilization of electric power by means of thermal energy storage and solar heating
[PB-239395/7] 07 p0157 N75-26521
Conservation and better utilization of electric power by means of thermal energy storage and solar heating, executive summary
[PB-239394/0] 07 p0157 N75-26522
Materials requirements for advanced energy systems: New fuels. Volume 3: Materials research needs in advanced energy systems using new fuels

ENERGY TRANSFER
The nature of the sunspot phenomenon. III - Energy consumption and energy transport. IV - The intrinsic instability of the magnetic configuration
06 p0064 A75-29137
Calculation of flat-plate collector loss coefficients --- of solar radiation
07 p0109 A75-29480
Solar energy absorber
[NASA-CASE-MFS-22743-1] 05 p0024 N75-10585
Methods of energy transfer from a magnetic energy storage system using a transfer capacitor and a superconducting switch
[LA-5631-MS] 05 p0032 N75-13164
Continued development of energy transmission and conversion systems --- applied to operation of mechanical hearts
[PB-236181/4] 05 p0037 N75-14278
Energy recovery from solid waste --- production engineering model
06 p0079 N75-17200
Magnetic Energy Transfer and Storage (METS) program schedules for a Fusion Test Reactor (FTR)
[LA-5748-MS] 06 p0106 N75-21097

ENGINE CONTROL
Powerplant energy management --- transport aircraft engine thrust control
[AIAA PAPER 74-1066] 05 p0001 A75-10259

ENGINE DESIGN
The Harwell thermo-mechanical generator
05 p0009 A75-10579
An engine project engineer's view of advanced secondary power systems
[SAE PAPER 740884] 05 p0019 A75-16925
Stirling engines - Capabilities and prospects
06 p0048 A75-23237
Part load specific fuel consumption of gas turbines
06 p0063 A75-28650
Impact of future fuels on military aero-engines
06 p0075 N75-16981
Preliminary study of advanced turbofans for low energy consumption
[NASA-TM-X-71663] 06 p0084 N75-18241
A study of technological improvements in automobile fuel consumption. Volume 2: Comprehensive discussion
[PB-238694/4] 07 p0132 N75-22482
A study of technological improvements in automobile fuel consumption. Volume 3B: Appendixes 4 - 7
[PB-238696/9] 07 p0133 N75-22484
Turbine design and application, volume 3
[NASA-SP-290-VOL-3] 07 p0147 N75-24741

ENGINE PARTS
Study of the costs and benefits of composite materials in advanced turbofan engines
[NASA-CR-134696] 06 p0073 N75-16637

ENVIRONMENT EFFECTS
Process environment effects on heat pipes for fluid-bed gasification of coal
[LA-UR-74-984] 05 p0029 N75-12252
Energy and the environment: Electric power
05 p0030 N75-12438
Energy and the environment in Baden-Wuerttemberg
[KFK-1966-UF] 05 p0030 N75-12439
Program plan for environmental effects of energy
[PB-235115/3] 05 p0040 N75-15177
Comparison of the environmental aspects of nuclear and fossil fueled power stations
[CONF-740555-1] 06 p0077 N75-16995
OCS oil and gas: An environmental assessment, Volume 1
06 p0083 N75-17837
Pollutional problems and research needs for an oil shale industry
[PB-236608/6] 06 p0084 N75-17848
Environmental aspects of methanol as vehicular fuel: Health and environmental effects
[UCRL-76076] 06 p0095 N75-19867
Environmental aspects of cadmium sulfide usage in solar energy conversion. Part 1: Toxicological and environmental health considerations, a bibliography
[PB-238285/1] 06 p0105 N75-20884
Evaluation of power facilities; A reviewer's handbook --- electric and nuclear power plants
[PB-239221/5] 07 p0146 N75-24198
Mineral resources and the environment --- energy conservation and energy policy
[PB-239579/6] 07 p0153 N75-26486

ENVIRONMENT MANAGEMENT
The solution of information-deficiency problems of electroenergy technology --- optimal decision making
06 p0062 A75-28508

ENVIRONMENT POLLUTION
Environmental impact of a geothermal power plant
06 p0049 A75-23291
Limit lead in gasoline
[GPO-29-660] 05 p0023 N75-10259
Report of the Interagency Working Group on health and environmental effects of energy use
[PB-237937/8] 06 p0084 N75-17858
Problems in electric power production --- and environmental pollution
[ISS-T-73/16] 07 p0128 N75-21793
Symposium proceedings: Environmental Aspects of Fuel Conversion Technology
[PB-238304/0] 07 p0145 N75-24179

ENVIRONMENT PROTECTION
Energy crisis - Fact or fiction
05 p0011 A75-12115
International energy problems and environmental policy
05 p0014 A75-13597
Interaction between the fuel-energy complex and the environment
07 p0110 A75-29600
Impact of motor gasoline lead additive regulations on petroleum refineries and energy resources, 1974-1980, phase 1
[PB-234185/7] 05 p0025 N75-10601
Public works for water and power development and Atomic Energy Commission Appropriation Bill, 1975. Part 6: Tennessee Valley Authority
[GPO-32-403] 05 p0026 N75-10859
The Environmental protection agency industrial technology transfer program
06 p0078 N75-17193
The action of EDF in the prevention of atmospheric pollution --- by expanding nuclear electric power generation
[BLL-CE-TRANS-6500-(9022.09)] 06 p0083 N75-17833
Proceedings of the New York State Assembly/AISIE Conference on Energy and the Environment, Volume 1
[PB-237936/0] 06 p0091 N75-18801
Geothermal reservoir simulation
06 p0101 N75-20852

ENVIRONMENTAL CONTROL
Wind energy utilization prospects
07 p0117 A75-34928
Solar heating and cooling of buildings. Phase 0: Final report. Executive summary
[PB-235426/4] 05 p0042 N75-15195

ENVIRONMENTAL MONITORING
Remote sensing applied to energy-related problems; Proceedings of the Symposium-Course, Miami, Fla., December 2-4, 1974
07 p0118 A75-35451
Remote sensing for Western coal and oil shale development planning and environmental analysis
07 p0118 A75-35458
Multispectral data systems for energy related problems --- strip mining and power plant site monitoring
07 p0118 A75-35464
Remote sensing applied to mine subsidence - Experience in Pennsylvania and the Midwest
07 p0121 A75-36609
Institutional and environmental problems in geothermal resource development
06 p0100 N75-20843

ENVIRONMENTAL QUALITY
Energy and environmental standards --- environmental standards and energy policy
[GPO-37-171] C5 p0030 N75-12431
CCS oil and gas: An environmental assessment, Volume 2
C6 p0084 N75-17838
CCS oil and gas: An environmental assessment, volume 4
C6 p0084 N75-17839
CCS oil and gas: An environmental assessment, volume 5
C6 p0084 N75-17840
Environmental impacts, efficiency, and cost of energy supply and end use, volume 2
[PB-239159] C7 p0149 N75-25306
Mineral resources and the environment. Appendix to section 3: Report of panel on the implications of mineral production for health and the environment
[PB-239582/0] C7 p0153 N75-26489
ENVIRONMENTAL SURVEYS
The bioenvironmental impact of air pollution from fossil-fuel power plants
[PB-237720/8] C6 p0090 N75-18782
Imperial Valley's proposal to develop a guide for geothermal development within its county
C6 p0100 N75-20844
Nuclear energy center site survey: Scope of work
[PB-240453/1] C7 p0152 N75-25348
Environmental statement related to the proposed Callaway Plant units 1 and 2. Union Electric Company docket nos. STN 50-483 and STN 50-486
[PB-240193/3] C7 p0152 N75-25349
The impact of energy development on water resources in arid lands. Literature review and annotated bibliography
[PB-240008/3] C7 p0157 N75-26550
EPITAXY
Epitaxial silicon solar cell
C6 p0056 A75-25086
EQUIPMENT SPECIFICATIONS
Power collection reduction by mirror surface nonflatness and tracking error for a central receiver solar power system
C7 p0120 A75-36305
Design installation and operation of a 25 ton-a-day coal gasification process development unit for the agglomerating burner-gasification
[PB-237625/9] C6 p0087 N75-18734
ERBIUM COMPOUNDS
Cylindrical erbium oxide radiator structures for thermophotovoltaic generators
[AI-AC01525] C7 p0129 N75-21806
ERGODIC PROCESS
Fluctuations of electric power in MHD channels
C7 p0110 A75-30949
ESTIMATES
Methane in the Pittsburgh coalbed, Washington County, Pennsylvania
[PB-237848/7] C6 p0089 N75-18760
Mineral resources and the environment. Appendix to section 2: Report of panel on estimation of mineral reserves and resources
[PB-239581/2] C7 p0153 N75-26488
ESTUARIES
Optimizing pumped storage with tidal power in an estuary
[ASME PAPER 74-WA/PWR-7] C5 p0018 A75-16881
ETCHING
V-grooved silicon solar cells
C7 p0123 A75-37397
ETHYLENE
The oxidation of ethylene in automotive engine exhaust gas; an experimental investigation
C7 p0138 N75-23719
EVAPORATORS
Hot side heat exchanger for an ocean thermal difference power plant
C5 p0004 A75-10527
Transverse header heat pipe
[AIAA PAPER 75-656] C7 p0114 A75-32914
EXCAVATION
The initiatives of the Los Alamos Scientific Laboratory in the transfer of a new excavation technology
C6 p0079 N75-17203
EXHAUST GASES
Utilization of plasma exhaust energy for fuel production
[COO-3028-7] C5 p0028 N75-11465
Project Clean Air 1972, LNG conversion of GM-71 series diesel engine --- considering automobile exhaust gases control
[PB-236585/6] C6 p0090 N75-18783
Inspection and maintenance of light-duty gasoline powered motor vehicles: A guide for implementation --- emissions inspection program
[PB-236587/2] C6 p0090 N75-18784
The oxidation of ethylene in automotive engine exhaust gas; an experimental investigation
C7 p0138 N75-23719
Characterization of sulfur recovery from refinery fuel gas
[PB-239777/6] C7 p0151 N75-25326
Methane emission from U.S. Coal mines in 1973, a survey
[PB-240154/5] C7 p0152 N75-25354
EXPERIMENTAL DESIGN
State of the art and prospects for electric vehicles
[BLL-OA-TRANS-1250-(6196.3)] C6 p0074 N75-16712
EXTERNAL COMBUSTION ENGINES
Stirling engines - Capabilities and prospects
C6 p0048 A75-23237

F

F-15 AIRCRAFT
F-15 secondary power systems
[SAE PAPER 740885] C6 p0048 A75-22948
FABRICATION
Process development for low cost integrated solar arrays
C6 p0054 A75-24259
FABRY-PEROT INTERFEROMETERS
Interferometric tuning of a 15-atm CO2 laser
C6 p0058 A75-27518
FARM CROPS
The effect of recent energy price increases on field crop production costs
[PB-238659/7] C6 p0107 N75-21155
Solar powered pump
[NASA-CASE-NPO-13567-1] C7 p0133 N75-22746
Use of thermally enriched water for growing field crops in Minnesota
[PB-240112] C7 p0159 N75-27549
FAST NUCLEAR REACTORS
Clinch River Breeder Reactor: A combined power and fuel source
[CONF-740609-4] C5 p0038 N75-14593
FEASIBILITY ANALYSIS
Potential for large-scale energy storage in electric utility systems
[ASME PAPER 74-WA/ENER-9] C5 p0016 A75-16840
Power from ocean waves
[ASME PAPER 74-WA/PWR-5] C5 p0018 A75-16879
Lighter than air - A look at the past, a look at the possibilities
C6 p0056 A75-25995
Report of the Wind Power Committee --- a feasibility analysis of the use of wind for a major energy source
[NASA-TT-F-16062] C5 p0039 N75-15154
Solar heating and cooling of buildings. Phase 0. Feasibility and planning study. Volume 3, book 2, appendix c, task 3: Assessment of capture potential. Appendix d, task 4: Social and environmental study
[PB-235434/8] C6 p0070 N75-16108
Pollution-free electrochemical power generation from low grade coal
[PB-236162/4] C6 p0070 N75-16109
Sixty minute thermal battery: A feasibility study
[SLA-73-5888] C6 p0077 N75-16994
Solar thermal power systems based on optical transmission
[PB-237005/4] C6 p0088 N75-18742
Electric power generation using geothermal brine resources for a proof of concept facility
C6 p0101 N75-20857
The potential for developing Alaskan coals for clean export fuels, phase 1
[PB-238539/1] C7 p0127 N75-21786
Feasibility study of a 100 megawatt open cycle ocean thermal difference power plant
[PB-238571/4] C7 p0130 N75-21821

FEDERAL BUDGETS
Public works for water and power development and Atomic Energy Commission Appropriation Bill, 1975. Part 6: Tennessee Valley Authority
[GPO-32-403] 05 p0026 N75-10859
Energy imports and the US balance of payments
[GPO-28-965] 07 p0141 N75-24114
FERMENTATION
Energy problems - Solar energy and manure gas
05 p0020 A75-17024
Biological conversion of organic refuse to methane
[PB-235468/6] 05 p0041 N75-15183
FERTILIZERS
Energy and fixed nitrogen from agricultural residues
[BNWL-SA-5070] 06 p0103 N75-20874
FIGURE OF MERIT
Heat mirrors for solar-energy collection and radiation insulation
05 p0004 A75-10525
FILM CONDENSATION
Investigations of the factors affecting the performance of a rotating heat pipe
07 p0120 A75-36357
FINANCIAL MANAGEMENT
Investment possibility of financial institutions in solar heating
[PB-239756/0] 07 p0155 N75-26511
FINLAND
Technology and community development materials processing, and electrical and nuclear technology --- technical research center of Finland
05 p0031 N75-12695
FISSILE FUELS
Optimization of fusion power density in the two-energy-component tokamak reactor
07 p0124 A75-37836
FISSION
Interesting possibilities of fusion-fission --- for thermonuclear power generation
[BNWL-SA-5069] 06 p0096 N75-20106
FLAMES
Energy conversion. 1: Non-propulsive aspects --- fuels and pyrotechnics
[AD-A000077] 06 p0079 N75-17454
FLAT PLATES
Status of the NASA-Lewis flat-plate collector tests with a solar simulator
06 p0058 A75-27533
Calculation of flat-plate collector loss coefficients --- of solar radiation
07 p0109 A75-29480
Numerical modeling of flat plate solar collectors
[AIAA PAPER 75-739] 07 p0113 A75-32861
Outdoor flat-plate collector performance prediction from solar simulator test data
[AIAA PAPER 75-741] 07 p0113 A75-32862
Field performance and operation of a flat-glass solar heat collector
07 p0115 A75-33973
Methodology of research of flat-plate solar collector absorptive coatings
07 p0117 A75-34935
Power collection reduction by mirror surface nonflatness and tracking error for a central receiver solar power system
07 p0120 A75-36305
The evaluation of surface geometry modification to improve the directional selectivity of solar energy collectors
[PB-238509/4] 07 p0130 N75-21822
Conservation and better utilization of electric power by means of thermal energy storage and solar heating. Solar collector performance studies
[PB-239355/1] 07 p0150 N75-25320
Method of testing for rating solar collectors based on thermal performance --- flat plate collectors
[COM-75-10276/4] 07 p0150 N75-25321
FLEXIBLE BODIES
Investigations and selection of components and materials for flexible solar generator
06 p0050 A75-24182
A flexible cryogenic heat pipe
[AIAA PAPER 75-658] 07 p0114 A75-32916
FLIGHT CHARACTERISTICS
Impact on aerodynamic design
06 p0075 N75-16982
FLIGHT OPTIMIZATION
Certain problems of fuel consumption in air transport
05 p0011 A75-11372
Extended energy management methods for flight performance optimization
[AIAA PAPER 75-30] 05 p0021 A75-18269
FLIGHT TESTS
Cryogenic heat pipe experiment - Flight performance onboard a sounding rocket
[AIAA PAPER 75-729] 07 p0113 A75-32872
FLIGHT TIME
'Time is energy' /Henson and Stringfellow Memorial Lecture/ --- VTOL aircraft developments
07 p0112 A75-32324
FLOW CHARTS
US energy flow charts for 1950, 1960, 1970, 1980, 1985, and 1990
[UCRL-51487] 05 p0024 N75-10593
FLOW STABILITY
Arterial gas occlusions in operating heat pipes
[AIAA PAPER 75-657] 07 p0114 A75-32915
FLUIDIZED BED PROCESSORS
Small coal burning gas turbine for modular integrated utility systems
05 p0006 A75-10546
Use of low grade solid fuels in gas turbines
[ASME PAPER 74-WA/ENER-5] 05 p0016 A75-16837
Development of coal fired fluidized-bed boilers
[PB-235899/2] 06 p0065 N75-15668
Development of coal fired fluidized-bed boilers
[PB-235898/4] 06 p0065 N75-15669
Pressurised fluidized bed combustion --- combustion physics, gas turbines
[PB-236498/2] 06 p0065 N75-15769
Pressurized fluidized bed combustion
[PB-235591/5] 06 p0065 N75-15772
Reduction of atmospheric pollution by the application of fluidized-bed combustion
[PB-235840/6] 06 p0072 N75-16151
Energy conversion from coal utilizing CPU-400 technology
[PB-237028/6] 06 p0083 N75-17828
Coal combustion and desulfurization in a rotating fluidized bed reactor
[BNL-19308] 07 p0129 N75-21799
Chemically active fluid-bed process for sulphur removal during gasification of heavy fuel oil, phase 2
[PB-240632/0] 07 p0159 N75-27556
FLUIDS
Solar energy trap
[NASA-CASE-MFS-22744-1] 05 p0024 N75-10586
FLYWHEELS
Metals and composites in superflywheel energy storage systems
06 p0047 A75-22523
The multirim superflywheel
[AD-A001081] 06 p0085 N75-18594
Flywheel energy systems
[SAND-74-0113] 07 p0129 N75-21802
FOCUSING
New applications for optical components - High energy focusing
05 p0015 A75-16525
FOLDING STRUCTURES
Latest developments of the circular solar array --- with deployment structure for central antenna communication satellite
06 p0053 A75-24246
FOOD
Industrial energy study of selected food industries
[PB-237316/5] 06 p0083 N75-17827
FORECASTING
The design and development of an interactive energy model
[PB-236144/2] 06 p0070 N75-16110
FOREIGN POLICY
Energy and security: Implications for American policy
[AD-785084] 05 p0032 N75-12857
Energy imports and the US balance of payments
[GPO-28-965] 07 p0141 N75-24114
Energy and foreign policy
[GPO-22-562] 07 p0142 N75-24125
FOSSIL FUELS
The production of gaseous energy carriers from fossil fuels
06 p0049 A75-23502

An econometric analysis of fuel selection for power generation
C6 p0055 A75-24751
A central receiver solar power plant in a hybrid mode of operation --- solar/fossil-fueled steam power plant
[AIAA PAPER 75-624] C6 p0062 A75-28596
Remote sensing for Western coal and oil shale development planning and environmental analysis
C7 p0118 A75-35458
Technological and commercial possibilities which result by using a high temperature reactor for the future supply of mineral oil in the FRG
[JUL-1017-RG] C5 p0029 N75-11470
Bureau of Mines research 1973. Summary of significant results in mining, metallurgy, and energy
[PB-234733/4] 05 p0040 N75-15171
Comparison of the environmental aspects of nuclear and fossil fueled power stations
[CONF-740555-1] 06 p0077 N75-16995
Summary report of workshop on Energy Related Basic Combustion Research
[PB-236714/2] 06 p0079 N75-17456
Operational, maintenance, and environmental problems associated with a fossil fuel-fired potassium steam binary vapor cycle
[ORNL-NSF-EP-30] C6 p0090 N75-18769
The bioenvironmental impact of air pollution from fossil-fuel power plants
[PB-237720/8] C6 p0090 N75-18782
The collaborative study of EPA methods, 5, 6, and 7 in fossil fuel-fired steam generators
[PB-237695/2] 06 p0091 N75-18788
Evaluation of pollution control in fossil fuel conversion processes: Gasification. Section 1: Lurgi process
[PB-237694/5] 06 p0096 N75-19880
Technology and use of lignite
[PB-238666/2] 07 p0142 N75-24131
Environmental impacts, efficiency, and cost of energy supply and end use, volume 2
[PB-239159] 07 p0149 N75-25306
Evaluation of pollution control in fossil fuel conversion processes. Liquefaction, section 1: COED process
[PB-240371/5] 07 p0162 N75-27626

FRACTURE MECHANICS
A practical model law for chemical explosive fracture of oil shale
C6 p0078 N75-17023

FRACTURING
Fracture-induced permeability: Present situation and prospects for coal
[UCID-16593] 06 p0094 N75-19830

FRANCE
Wind power projects of the French electrical authority
[NASA-TT-F-16057] C5 p0033 N75-13384

FREE CONVECTION
Steady state free convection in an unconfined geothermal reservoir
05 p0009 A75-11069
Natural convection in enclosed spaces - A review of application to solar energy collection
[ASME PAPER 74-WA/HT-12] 05 p0017 A75-16860

FUEL CAPSULES
Soil burial of radioisotopic fuel capsules
06 p0046 A75-21274

FUEL CELLS
Metal hydride fuel cell power source
05 p0008 A75-10564
Milliwatt fuel cell system for sensors
C5 p0008 A75-10565
Methanol/air acidic fuel cell system
05 p0008 A75-10566
60 watt hydride-air fuel cell system
05 p0008 A75-10567
Prospects and scientific problems of the utilization of methods of direct electric power generation from chemical fuels /fuel cells/
05 p0012 A75-12911
The FCG-1 fuel cell powerplant for electric utility use
05 p0013 A75-12992
Hydrogen fuel cells and motors --- new energy technology
C6 p0046 A75-22042
Corrosion and related problems in high-temperature cells
06 p0055 A75-24377
Porous matrix structures for alkaline electrolyte fuel cells
07 p0123 A75-37243
An intercell heat pipe for fuel cell and battery cooling
[AD-782888] 05 p0027 N75-11226
Evaluation of an ion exchange membrane fuel cell for space power
[AD-786888] C5 p0037 N75-14274
Status and outlook for energy conversion via fuel cells
[CONF-740462-1] 06 p0087 N75-18729
Fuel cells: Direct conversion of electrochemical energy into electricity
[SAND-74-0125] 06 p0103 N75-20869
Electrolyte for hydrocarbon air fuel cells
[AD-A007220] 07 p0136 N75-22917
Study of fuel cell powerplant with heat recovery
[NASA-CR-141854] C7 p0148 N75-25296

FUEL COMBUSTION
Combustion dynamics research for 'Project Independence'
[AIAA PAPER 74-1069] 05 p0001 A75-10262
Combustion R&D - Key to our energy future --- pollution reduction using hydrocarbon fuels
C5 p0009 A75-10596
Coal-gas combustion in industrial gas turbines
[AIAA PAPER 74-1114] 05 p0010 A75-11286
The Stirling engine for vehicle propulsion
06 p0050 A75-23509
Compilation of air pollutant emission factors, second edition, supplement no. 3 --- fuel combustion and consumption
[PB-235736/6] 06 p0073 N75-16152
The oxidation of ethylene in automotive engine exhaust gas; an experimental investigation
07 p0138 N75-23719

FUEL CONSUMPTION
Powerplant energy management --- transport aircraft engine thrust control
[AIAA PAPER 74-1066] 05 p0001 A75-10259
Energy from urban wastes
05 p0006 A75-10548
Certain problems of fuel consumption in air transport
05 p0011 A75-11372
Next generation transports will emphasize fuel savings
05 p0011 A75-11426
Fuel outlook dictating technical transport research
05 p0011 A75-11427
Rating aircraft on energy
05 p0015 A75-14346
Effectiveness of using semiconductor heat pumps under the conditions of the Turkmen SSR
05 p0020 A75-17083
Extended energy management methods for flight performance optimization
[AIAA PAPER 75-30] 05 p0021 A75-18269
Conceptual design of reduced energy transports
[AIAA PAPER 75-303] 06 p0047 A75-22508
Future long-range transports - Prospects for improved fuel efficiency
[AIAA PAPER 75-316] 06 p0047 A75-22514
Air transportation energy consumption - Yesterday, today, and tomorrow
[AIAA PAPER 75-319] 06 p0047 A75-22515
An econometric analysis of fuel selection for power generation
06 p0055 A75-24751
Part load specific fuel consumption of gas turbines
06 p0063 A75-28650
'Time is energy' /Henson and Stringfellow Memorial Lecture/ --- VTOL aircraft developments
07 p0112 A75-32324
Total energy use for commercial aviation in the US
[ORNL-NSF-EP-68] 05 p0023 N75-10039
Transportation vehicle energy intensities. A joint DOT/NASA reference paper --- energy consumption of air and ground vehicles
[NASA-TM-X-62404] C5 p0035 N75-13690
The prospects for gasoline availability: 1974
[GPO-34-969] 05 p0039 N75-15155
Fuel conservation capability and effort by commercial air carriers
[NASA-CR-137624] 05 p0039 N75-15157

Interfuel substitution in the consumption of energy in the United States. Part 1: Residential and commercial sector
[PB-234536/1] 05 p0040 N75-15178
Caltech seminar series on energy consumption in private transportation
[PB-235348/0] 05 p0040 N75-15179
Caltech seminar series on energy consumption in private transportation: Administrative summary
[PB-235349/8] 05 p0041 N75-15184
Engine development program for the APL remotely piloted vehicle
[AD-787507] 06 p0065 N75-15658
Fuel availability and allocation in the United States
[GPO-31-711] 06 p0067 N75-16081
The design and development of an interactive energy model
[PB-236144/2] 06 p0070 N75-16110
Compilation of air pollutant emission factors, second edition, supplement no. 3 --- fuel combustion and consumption
[PB-235736/6] 06 p0073 N75-16152
Evaluation of advanced lift concepts and potential fuel conservation for short-haul aircraft
[NASA-CR-2502] 06 p0073 N75-16557
Future long-range transports: Prospects for improved fuel efficiency
[NASA-TM-X-72659] 06 p0079 N75-17339
Intermediate-term energy programs to protect against crude-petroleum import interruptions: Feasible alternatives, program costs, and operational methods of funding
[PB-237209/2] 06 p0083 N75-17826
Proceedings of the New York State Assembly/AISLE Conference on Energy and the Environment, Volume 1
[PB-237936/0] 06 p0091 N75-18801
Fuel conservation possibilities for terminal area compatible aircraft
[NASA-CR-132606] 06 p0091 N75-19224
Evaluation of advanced lift concepts and fuel conservative short-haul aircraft, volume 1
[NASA-CR-137525] 06 p0096 N75-20291
Evaluation of advanced lift concepts and fuel conservative short-haul aircraft, volume 2
[NASA-CR-137526] 06 p0097 N75-20292
A USAF energy projection model
[AD-A006928] 07 p0132 N75-22476
Technological improvements to automobile fuel consumption. Volume 1: Executive summary
[PB-238677/9] 07 p0132 N75-22478
Technological improvements to automobile fuel consumption. Volume 2A: Sections 1 through 23
[PB-238678/7] 07 p0132 N75-22479
Technological improvements to automobile fuel consumption. Volume 2B: Sections 24 and 25 and appendixes A through I
[PB-238679/5] 07 p0132 N75-22480
A study of technological improvements in automotive fuel consumption. Volume 1: Executive summary
[PB-238693/6] 07 p0132 N75-22481
A study of technological improvements in automobile fuel consumption. Volume 2: Comprehensive discussion
[PB-238694/4] 07 p0132 N75-22482
A study of technological improvements in automobile fuel consumption. Volume 3A: Appendixes 1 - 111
[PB-238695/1] 07 p0133 N75-22483
A study of technological improvements in automobile fuel consumption. Volume 3B: Appendixes 4 - 7
[PB-238696/9] 07 p0133 N75-22484
The 1973 fuel and electrical energy requirements of selected mineral industries activities
07 p0134 N75-22899
Industrial energy study of the drug manufacturing industries for the Federal Energy Administration/US Department of Commerce
[PB-238994/8] 07 p0142 N75-24130
Energy system modeling-interfuel competition
[PB-239292/6] 07 p0143 N75-24140
The impact of energy shortages on the iron and steel industries
[PB-238749/6] 07 p0145 N75-24158
US energy and fuel demand to 1985, a composite projection by user within Petroleum Administration for Defense (PAD) districts
[PB-239343/7] 07 p0151 N75-25322
Fuel use in the US electrical utility industry, 1971 - 1990
07 p0154 N75-26493
Energy rationing and energy conservation: Foundations for a social policy
[PB-239766] 07 p0162 N75-27579
Increased fuel economy in transportation systems by use of energy management. Volume 1: General results and discussion
[PB-240220/4] 07 p0163 N75-27970

FUEL CONTROL
Fuel energy systems - Conversion and transport efficiencies
05 p0007 A75-10554

FUEL OILS
Char oil energy development
[PB-233263/3] 05 p0025 N75-10603
The approaching energy crisis: A call for action
05 p0030 N75-12432
A short handbook on fuels --- and lubricants
[AD-A004358] 07 p0158 N75-27170
Chemically active fluid-bed process for sulphur removal during gasification of heavy fuel oil, phase 2
[PB-240632/0] 07 p0159 N75-27556
Conversion of cellulosic wastes to oil
[PB-240839/1] 07 p0161 N75-27572

FUEL SYSTEMS
Energy carriers in space conditioning and automotive applications - A comparison of hydrogen, methane, methanol and electricity
05 p0005 A75-10540
Oxides of nitrogen control techniques for appliance conversion to hydrogen fuel
05 p0006 A75-10541
Some LNG vehicle developments --- for automotive conversion systems and fueling stations
06 p0048 A75-23236
Evaluation of the overall fuel mass penalty of an aircraft system
07 p0121 A75-36720
Potential structural material problems in a hydrogen energy system
[NASA-TM-X-71752] 07 p0154 N75-26500

FUEL TANKS
Hydrogen as fuel for internal-combustion engines
06 p0050 A75-23508
Erecting gas storage facilities and oil centers
[AD-A006559] 07 p0134 N75-22783

FUELS
An evaluation of discarded tires as a potential source of fuel
05 p0012 A75-12416
Effective utilization of solar energy to produce clean fuel
[PB-233956/2] 05 p0026 N75-10605
Iron titanium hydride as a source of hydrogen fuel for stationary and automotive applications
[BNL-18651] 05 p0030 N75-12441
Energy conversion. 1: Non-propulsive aspects --- fuels and pyrotechnics
[AD-A000077] 06 p0079 N75-17454
Fuel gas production from solid waste
[PB-238068/1] 06 p0095 N75-19843
Technical evaluation services, clean liquid and/or solid fuels from coal
[PB-237216/7] 07 p0129 N75-21803
Hydrogen as a fuel
[AD-A006984] 07 p0132 N75-22477
Where the boilers are: A survey of electric utility boilers with potential capacity for burning solid waste as fuel
[PB-239392/4] 07 p0143 N75-24135
Symposium proceedings: Environmental Aspects of Fuel Conversion Technology
[PB-238304/0] 07 p0145 N75-24179

FULL SCALE TESTS
Full-scale tests of 'photovolt' high-voltage photocells at high light flux levels
07 p0122 A75-37162

FURNACES
Utilizing fuel more efficiently in reheating and heat treatment furnaces
[BLL-M-21957-(5828.4F)] 06 p0080 N75-17467

Survey of gas and oil burners for use with NSF/RANN-ORNL potassium boiler
[ORNL-NSF-EP-45] 06 p0087 N75-18728
Utilisation of waste heat from inductive melting installations
[BIL-CA-TRANS-549-(6196.3)] 07 p0153 N75-26492
Solids emission from power station furnaces --- industrial pollution control
[BIL-CE-TRANS-6524-(9022.09)] 07 p0157 N75-26528

G

GALLIUM ARSENIDES
High-efficiency graded band-gap Al/x/Ga/1-x/As-GaAs solar cell
06 p0058 A75-27519
GaAs concentrator solar cell
06 p0058 A75-27520
Power generation and efficiency in GaAs traveling-wave amplifiers
07 p0110 A75-30750
Dependence of the basic parameters of Al/x/Ga/1-x/As-GaAs solar converters on temperature and optical intensity
07 p0112 A75-32824
GALLIUM PHOSPHIDES
GaP p-n junctions and possibilities for their application in the conversion of solar energy into electric
05 p0011 A75-12198
GAME THEORY
The household energy game
[COM-75-10304/4] 07 p0161 N75-27578
GAS COOLED FAST REACTORS
Study of the application of HTGR to a petroleum refinery petrochemical complex
[CONF-741144-1] 07 p0142 N75-24126
GAS COOLED REACTORS
Nuclear propulsion technology transfer to energy systems
[AIAA PAPER 74-1072] 05 p0001 A75-10264
Nuclear reactor process heat capabilities, potential, and economics
[CONF-741032-1] 07 p0131 N75-22112
GAS DISCHARGES
Energy characteristics of coaxial plasma source
[AD-787419] 06 p0073 N75-16368
GAS DISSOCIATION
Analysis of gas dissociation solar thermal power system
07 p0115 A75-33974
GAS EVOLUTION
Project Rio Blanco data report: Production testing (RE-E-01), November 1973 and January - February 1974
[NVO-148] 06 p0094 N75-19833
GAS FLOW
Report on progress in achieving direct conversion of a major fraction of sonic flow kinetic power into electrical power by electrofluid dynamic /EFD/ processes
05 p0009 A75-10576
Thermal performance characteristics of heat pipes
06 p0046 A75-21465
GAS GENERATORS
Energy problems - Solar energy and manure gas
05 p0020 A75-17024
Efficiencies of electrolytic and thermochemical hydrogen production
06 p0045 A75-20300
Investigation of bubble formation in arteries of gas-controlled heat pipes
[AIAA PAPER 75-655] 07 p0114 A75-32913
Hydrogen as a fuel --- analysis of problems involved in generation, transportation, and utilization
[AD-787484] 06 p0066 N75-15818
A SASOL type process for gasoline, methanol, SNG, and low-Btu gas from coal
[PB-237670/5] 06 p0095 N75-19838
Technology for the conversion of solar energy to fuel gas
[PB-238545/8] 07 p0136 N75-22919
GAS MIXTURES
Concerning the use of a nitrogen-potassium gaseous mixture for protection of MHD-generator electrodes by suction
07 p0112 A75-31569
GAS POCKETS
Natural gas fields, Cook Inlet Basin, Alaska
[PB-235767/1] 06 p0066 N75-16071
GAS PRESSURE
Procedure for preparation for shipment of natural gas storage vessel
[NASA-CR-141455] 05 p0036 N75-14135
GAS TEMPERATURE
Heat pipe thermal control set point shift
07 p0115 A75-33271
GAS TRANSPORT
The Hydrogen Economy - A utility perspective --- energy technology
05 p0014 A75-12998
Energy supply in a closed cycle --- nuclear energy for nonelectrical use
06 p0049 A75-23503
Arterial gas occlusions in operating heat pipes
[AIAA PAPER 75-657] 07 p0114 A75-32915
GAS TURBINE ENGINES
Use of low grade solid fuels in gas turbines
[ASME PAPER 74-WA/ENER-5] 05 p0016 A75-16837
Part load specific fuel consumption of gas turbines
06 p0063 A75-28650
Recuperator development trends for future high temperature gas turbines --- heat exchanger design
[ASME PAPER 75-GT-50] 07 p0116 A75-34607
Component design considerations for gas turbine HTGR power plant --- High-Temperature Gas-cooled Reactor
[ASME PAPER 75-GT-67] 07 p0116 A75-34620
DOT/NASA comparative assessment of Brayton engines for guideway vehicles and busses. Volume 2: Analysis and results
[NASA-SP-354-VOL-2] 07 p0133 N75-22745
The role of computers in future propulsion controls
07 p0137 N75-23582
Aerodynamic design of a free power turbine for a 75 KW gas turbine automotive engine
[NASA-TM-X-71714] 07 p0140 N75-24106
A compressor designed for the energy research and development agency automotive gas turbine program
[NASA-TM-X-71719] 07 p0141 N75-24116
Development of low emission porous plate combustor for automotive gas turbine and Rankine cycle engines --- air pollution control
[PB-240776/5] 07 p0162 N75-27619
GAS TURBINES
Solar farms utilizing low-pressure closed-cycle gas turbines
05 p0003 A75-10514
Small coal burning gas turbine for modular integrated utility systems
05 p0006 A75-10546
Gas turbine engines - A state-of-the-art review
05 p0009 A75-10840
Coal-gas combustion in industrial gas turbines
[AIAA PAPER 74-1114] 05 p0010 A75-11286
Thermodynamic analysis of a solar energy system with a closed-cycle gas-turbine converter
06 p0049 A75-23402
Thermodynamics of multistage air-cooled gas turbine
06 p0050 A75-23817
Low-power turbines using organic vapor
07 p0110 A75-30892
Effect of gas turbine efficiency and fuel cost on cost of producing electric power
[PB-234159/2] 05 p0034 N75-13397
Pressurised fluidized bed combustion --- combustion physics, gas turbines
[PB-236498/2] 06 p0065 N75-15769
Application of superconducting electrical machinery to the propulsion systems of commercial vessels --- gas turbines
[COM-75-10137] 07 p0147 N75-25200
GAS-LIQUID INTERACTIONS
Investigation of bubble formation in arteries of gas-controlled heat pipes
[AIAA PAPER 75-655] 07 p0114 A75-32913
GASEOUS FISSION REACTORS
Physics and potentials of fissioning plasmas for space power and propulsion
[IAF PAPER 74-087] 05 p0015 A75-13719
GASIFICATION
Gasification of solid wastes in fixed beds
[ASME PAPER 74-WA/PWR-10] 05 p0018 A75-16882

Application of thermodynamic and material- and energy-balance calculations to gasification processes
06 p0055 A75-24785
Chemically active fluid-bed process for sulphur removal during gasification of heavy fuel oil, phase 2
[PB-240632/0] 07 p0159 N75-27556

GASOLINE
Feasibility demonstration of a road vehicle fueled with hydrogen-enriched gasoline
05 p0008 A75-10574
Limit lead in gasoline
[GPO-29-660] 05 p0023 N75-10259
Impact of motor gasoline lead additive regulations on petroleum refineries and energy resources, 1974-1980, phase 1
[PB-234185/7] 05 p0025 N75-10601
The prospects for gasoline availability: 1974
[GPO-34-969] 05 p0039 N75-15155
A study of the demand for gasoline
[PB-235254/0] 06 p0070 N75-16105
Effects of changing the proportions of automotive distillate and gasoline produced by petroleum refining
[PB-236900/7] 06 p0085 N75-18443
Hydrocarbon power fuel from the gasoline boiling range --- antiknock additives
[NASA-TT-F-16359] 07 p0147 N75-24957
A short handbook on fuels --- and lubricants
[AD-AC04358] 07 p0158 N75-27170

GEODETIC SURVEYS
Hawaii geothermal project
06 p0099 N75-20840
Leasing of federal geothermal resources
06 p0099 N75-20841
Measuring ground movement in geothermal areas of Imperial Valley, California
06 p0099 N75-20842
Institutional and environmental problems in geothermal resource development
06 p0100 N75-20843

GEOELECTRICITY
Three-dimensional subsurface delineation via a novel method for determining the subsurface electrical profile
[UCRL-51685] 07 p0127 N75-21781

GEOLOGICAL SURVEYS
The geology and geophysics of geothermal energy
06 p0061 A75-28438
Further development of scientific research in the field of geology and of the survey and exploration of petroleum and gas
[JPRS-63414] 05 p0027 N75-11410
Heat flow and geothermal potential of the East Mesa KGRA, Imperial Valley, California
06 p0099 N75-20838
The Lawrence Berkeley Laboratory geothermal program in northern Nevada
06 p0100 N75-20845
Evaluation of the suitability of Skylab data for the purpose of petroleum exploration
[E75-10257] 07 p0147 N75-25237

GEOLOGY
Stratigraphy, sedimentology and oil and gas geology of the Lower Cretaceous in central Alberta
07 p0137 N75-22961

GEOPHYSICS
Geothermics with special reference to application --- Book
05 p0011 A75-11576
The geology and geophysics of geothermal energy
06 p0061 A75-28438

GEOTHERMAL ENERGY CONVERSION
Environmental impact of a geothermal power plant
06 p0049 A75-23291
Solar energy in earth processes --- review
06 p0061 A75-28437
The geology and geophysics of geothermal energy
06 p0061 A75-28438
Ocean thermal energy conversion
07 p0111 A75-31274
Geothermal power station --- using heat pipes
[AI-765948] 05 p0037 N75-14275
Methodical approach to temperature and pressure measurements for in situ energy-recovery processes
[UCID-16631] 06 p0097 N75-20693
Proceedings of the Conference on Research for the Development of Geothermal Energy Resources
[NASA-CR-142556] 06 p0098 N75-20831
The National Geothermal Energy Research Program
06 p0098 N75-20832
The NSF/RANN FY 1975 program for geothermal resources research and technology
06 p0098 N75-20833
Overview of Reclamation's geothermal program in Imperial Valley, California
06 p0098 N75-20835
Progress of the LASL dry hot rock geothermal energy project
06 p0100 N75-20848
Rock melting technology and geothermal drilling
06 p0101 N75-20851
Geothermal reservoir simulation
06 p0101 N75-20852
Investment and operating costs of binary cycle geothermal power plants
06 p0101 N75-20855
Helical rotary screw expander power system
06 p0101 N75-20856
Electric power generation using geothermal brine resources for a proof of concept facility
06 p0101 N75-20857
Phase 0 study for a geothermal superheated water proof of concept facility
06 p0102 N75-20858
Combining total energy and energy industrial center concepts to increase utilization efficiency of geothermal energy
06 p0102 N75-20860
A city invests in its future
06 p0102 N75-20862
Geothermal steam condensate reinjection
06 p0102 N75-20863
Utility company views of geothermal development
06 p0102 N75-20864
Feasibility study of a 100 megawatt open cycle ocean thermal difference power plant
[PB-238571/4] 07 p0130 N75-21821

GEOTHERMAL RESOURCES
The hot deeps of the Red Sea as a potential heat source for thermoelectric power generation
05 p0004 A75-10516
Steady state free convection in an unconfined geothermal reservoir
05 p0009 A75-11069
Geothermics with special reference to application --- Book
05 p0011 A75-11576
A comparison of methods for electric power generation from geothermal hot water deposits
[ASME PAPER 74-WA/ENER-10] 05 p0016 A75-16841
Other primary energy resources --- geothermal, tidal, wind, waterwave and glacier energy utilization
06 p0050 A75-23512
Theory of heat extraction from fractured hot dry rock
06 p0057 A75-26544
Current worldwide utilization and ultimate potential of geothermal energy systems
06 p0060 A75-27787
New technology challenges in exploration, exploitation and environmental impact of geothermal systems
06 p0060 A75-27788
Salt domes, pit craters, and dry steam fields - Heat pipe applications
06 p0060 A75-27789
Geothermal energy --- technology assessment
06 p0060 A75-27826
The geology and geophysics of geothermal energy
06 p0061 A75-28438
Helium survey, a possible technique for locating geothermal reservoirs
07 p0118 A75-35438
Idaho geothermal E and D project report for period 16 December 1973 - 15 March 1974
[ANCR-1155] 06 p0076 N75-16985
Recommended research program in geothermal chemistry
[WASH-1344] 06 p0077 N75-16997
Materials screening program for the LLL geothermal project
[UCRL-75353] 06 p0082 N75-17815
Prospect for geothermal power
[LA-UR-74-1111] 06 p0086 N75-18723

Proceedings of the Conference on Research for the Development of Geothermal Energy Resources
[NASA-CR-142556] 06 p0098 N75-20831
The National Geothermal Energy Research Program
06 p0098 N75-20832

Mission and organization of the DFVLR: Two years of integrated society of German aeronautical and space flight research
[NASA-TT-F-16086] 05 p0035 N75-13882

GLACIERS
Other primary energy resources --- geothermal, tidal, wind, waterwave and glacier energy utilization
06 p0050 A75-23512

GLASS
Glass solar heat collector development
[AIAA PAPER 75-740] 07 p0115 A75-33758

GLASS FIBERS
An investigation of heat-pipe wick characteristics
05 p0012 A75-12914
Development of a process for producing an ashless low sulfur fuel from coal. Volume 4. Product studies. Part 2. Annotated bibliography on mineral fiber production from coal minerals
[PB-237763/8] 06 p0095 N75-19839

GLOBAL AIR POLLUTION
Interaction between the fuel-energy complex and the environment
07 p0110 A75-29800

GOVERNMENT PROCUREMENT
Leasing of federal geothermal resources
06 p0099 N75-20841

GOVERNMENT/INDUSTRY RELATIONS
Energy crisis - Fact or fiction
05 p0011 A75-12115
Energy systems - Modeling and policy analysis
06 p0055 A75-24750
Proceedings of the first 1974 Technology Transfer Conference
[NASA-CR-142119] 06 p0078 N75-17188
The Environmental protection agency industrial technology transfer program
06 p0078 N75-17193
Transfer of space technology to industry
06 p0078 N75-17195
Cooperative efforts by industry and government to develop geothermal resources
06 p0102 N75-20861

GOVERNMENTS
A review of the Project Independence report submitted to Office of Energy Research and Development, National Science Foundation, 10 January 1975
[PB-238791/8] 07 p0131 N75-21823

GREENHOUSE EFFECT
Method for calculating solar radiation for semicylindrical collectors
06 p0057 A75-26718
Solar energy - The physics of the greenhouse effect
07 p0120 A75-36306

GROOVES
Trapezoidal grooves as moderately concentrating solar energy collectors
[AIAA PAPER 75-738] 07 p0113 A75-32860

GROUND STATIONS
Development of very low cost solar cells for terrestrial power generation
06 p0052 A75-24226

GROUND SUPPORT EQUIPMENT
Multi-hundred watt radioisotope thermoelectric generator program, part 1 --- ground support equipment and safety management
[GESP-7107-PT-1] 06 p0092 N75-19354
Multi-hundred watt radioisotope thermoelectric generator program, part 2 --- ground support equipment
[GESP-7107-PT-2] 06 p0092 N75-19355

GULF STREAM
Gulf stream based ocean thermal power plants
[AIAA PAPER 75-603] 06 p0063 A75-28603
Technical and economic feasibility of the ocean thermal differences process as a solar-driven energy process
[PB-236422/2] 06 p0077 N75-17003

H

HABITATS
Prospects for utilization of underwater houses and chambers in development of marine oil deposits
05 p0029 N75-11606
HEART FUNCTION
Continued development of energy transmission and conversion systems --- applied to operation of mechanical hearts
[PB-236181/4] 05 p0037 N75-14278
HEAT BALANCE
Application of thermodynamic and material- and energy-balance calculations to gasification processes
06 p0055 A75-24785
Changes in the global energy balance --- atmospheric composition and the effect of air pollution
[PB-238075/6] 06 p0106 N75-20936
HEAT EXCHANGERS
Hot side heat exchanger for an ocean thermal difference power plant
05 p0004 A75-10527
Closed loop chemical systems for energy transmission, conversion and storage
05 p0005 A75-10538
Thermal energy storage devices suitable for solar heating
05 p0007 A75-10553
A hot liquid energy storage system utilizing natural circulation
[ASME PAPER 74-WA/HT-16] 05 p0017 A75-16862
Progress in heat pipe and porous heat exchanger technology
06 p0045 A75-20686
Ocean thermal energy conversion system evaluation
[AIAA PAPER 75-616] 06 p0064 A75-29115
Recuperator development trends for future high temperature gas turbines --- heat exchanger design
[ASME PAPER 75-GT-50] 07 p0116 A75-34607
Solar sea power
[PB-235469/4] 05 p0038 N75-14284
Evaluation of a fossil fuel fired ceramic regenerative heat exchanger
[PB-236346/3] 06 p0092 N75-19599
Variations in heat exchanger design for ocean thermal difference power plants
[PB-238572/2] 07 p0143 N75-24134
Study of fuel cell powerplant with heat recovery
[NASA-CR-141854] 07 p0148 N75-25296
Technical and economic feasibility of the ocean thermal differences process as a solar-driven energy process
[PB-239374/2] 07 p0150 N75-25317
Heat exchangers for sea solar power plants
[PB-239369/2] 07 p0150 N75-25319
HEAT FLUX
Solar radiation heat transfer to high temperature heat carriers
[ASME PAPER 74-WA/HT-14] 05 p0017 A75-16861
Controlling the response of thermoelements that generate electricity
07 p0121 A75-37154
Waste heat disposal from nuclear power plants
[CCM-75-10407/5] 07 p0158 N75-27324
HEAT GENERATION
Solar energy program plan for heating and cooling buildings
[WASH-1337-5-DRAFT] 06 p0077 N75-16993
HEAT MEASUREMENT
Method of calibrating a solar power plant with a parabolcidal mirror
07 p0116 A75-34315
HEAT PIPES
Nuclear propulsion technology transfer to energy systems
[AIAA PAPER 74-1072] 05 p0001 A75-10264
Operational testing of the high performance thermoelectric generator /HPG-02/
05 p0003 A75-10505
A 10% efficient economic RTG design --- radioisotope thermoelectric generator
05 p0003 A75-10506
A design parameter for assessing wicking capabilities of heat pipes
[AIAA PAPER 74-1266] 05 p0010 A75-11107
Controlled heat pipes
05 p0012 A75-12912
An investigation of heat-pipe wick characteristics
05 p0012 A75-12914
The heat pipe - Its development, and its aerospace applications
05 p0015 A75-15054
Performance of a laser mirror heat pipe
[ASME PAPER 74-WA/HT-61] 05 p0018 A75-16869
Progress in heat pipe and porous heat exchanger technology
06 p0045 A75-20686
Thermal performance characteristics of heat pipes
06 p0046 A75-21465
Material considerations involved in solar energy conversion
06 p0047 A75-22522
Salt domes, pit craters, and dry steam fields - Heat pipe applications
06 p0060 A75-27789
Designing heat pipe heat sinks
[AIAA PAPER 75-724] 07 p0113 A75-32668
The International Heat Pipe Experiment --- ten experiments in zero gravity
[AIAA PAPER 75-726] 07 p0113 A75-32670
Cryogenic heat pipe experiment - Flight performance onboard a sounding rocket
[AIAA PAPER 75-729] 07 p0113 A75-32672
Investigation of bubble formation in arteries of gas-controlled heat pipes
[AIAA PAPER 75-655] 07 p0114 A75-32913
Transverse header heat pipe
[AIAA PAPER 75-656] 07 p0114 A75-32914
Arterial gas occlusions in operating heat pipes
[AIAA PAPER 75-657] 07 p0114 A75-32915
A flexible cryogenic heat pipe
[AIAA PAPER 75-658] 07 p0114 A75-32916
Measurements of the performance of an electrohydrodynamic heat pipe
[AIAA PAPER 75-659] 07 p0114 A75-32917
Compatibility and reliability of heat pipe materials
[AIAA PAPER 75-660] 07 p0114 A75-32918
Capillary flow through heat-pipe wicks
[AIAA PAPER 75-661] 07 p0114 A75-32919
Heat pipe thermal control set point shift
07 p0115 A75-33271
Investigations of the factors affecting the performance of a rotating heat pipe
07 p0120 A75-36357
Heat pipe manufacturing study
[NASA-CR-139140] 05 p0023 N75-10347
An intercell heat pipe for fuel cell and battery cooling
[AD-782888] 05 p0027 N75-11226
Heat Pipe Symposium/Workshop
[PB-236008/9] 05 p0035 N75-14094
Geothermal power station --- using heat pipes
[AD-785948] 05 p0037 N75-14275
Conceptual design of a heat pipe methanator --- conversion of synthesis coal gas to methane
[LA-5596] 06 p0074 N75-16774
Solar collector thermal power system. Volume 2: Development, fabrication, and testing of fifteen foot heat pipes
[AD-A000941] 06 p0091 N75-19340
Ames Heat Pipe Experiment (AHPE) experiment description document --- performance testing in a vacuum environment
[NASA-CR-114413] 07 p0138 N75-23680
ERTS-C (Landsat 3) cryogenic heat pipe experiment definition
[NASA-CR-143797] 07 p0138 N75-23682
Electric power generation utilizing a heat pipe turbine-generator
07 p0139 N75-24096
Solar electric propulsion system thermal analysis --- including heat pipes and multilayer insulation
[NASA-CR-120770] 07 p0147 N75-24842
Deployable heat pipe radiator
[NASA-CR-143863] 07 p0147 N75-25088
Snow and ice removal from pavements using stored earth energy --- via heat pipes
[PB-240623/9] 07 p0162 N75-27581

HEAT PUMPS
Solar augmented home heating heat pump system
C5 p0004 A75-10524
A heat pump powered by natural thermal gradients
05 p0006 A75-10550
Solar thermal absorption heat pump breakeven coefficient of performance
[ASME PAPER 74-WA/ENER-2] 05 p0015 A75-16834
Performance of heat pumps using cold-side energy storage and unconventional heat sources
[ASME PAPER 74-WA/HT-17] C5 p0017 A75-16863
Effectiveness of using semiconductor heat pumps under the conditions of the Turkmen SSR
05 p0020 A75-17083
Convergence and speed of calculations for thermoelectric heat pump
05 p0020 A75-17084
Solar one - The Delaware solar house and results obtained during the first year of operation
06 p0054 A75-24254
Ocean thermal energy conversion system evaluation
[AIAA PAPER 75-616] 06 p0064 A75-29115
Solar heating and cooling of buildings using heat pumps /Brief survey/
07 p0116 A75-34321
Heat pumps in large buildings --- a refrigerating unit for heating and cooling
[CA-TFANS-939] 06 p0078 N75-17184
HEAT RADIATORS
Cylindrical erbium oxide radiator structures for thermophotovoltaic generators
[AD-A001525] 07 p0129 N75-21806
Deployable heat pipe radiator
[NASA-CR-143863] 07 p0147 N75-25088
HEAT SINKS
Designing heat pipe heat sinks
[AIAA PAPER 75-724] 07 p0113 A75-32868
Study of active cooling for supersonic transports
[NASA-CR-132573] 06 p0079 N75-17336
HEAT SOURCES
A modular heat source for curium-244 and plutonium-238
05 p0002 A75-10497
The hot deeps of the Red Sea as a potential heat source for thermoelectric power generation
05 p0004 A75-10516
Potential of Rankine engines to produce power from waste heat streams
05 p0006 A75-10547
Geothermics with special reference to application --- Book
05 p0011 A75-11576
Approximate analysis of the steady temperature field of a parallelepiped with a local energy source
07 p0112 A75-32212
Survey on power fluid for thermal power from low temperature and small temperature difference heat source
07 p0119 A75-36173
Advanced heat source concepts --- module design for space electric power generation
[MIM-2134] 05 p0024 N75-10591
Preliminary results of geothermal desalting operations at the East Mesa test site Imperial Valley, California
06 p0101 N75-20850
Geothermal down well pumping system
06 p0101 N75-20854
Geothermal steam condensate reinjection
06 p0102 N75-20863
Strontium fluoride research in heat source and compatibility tests --- waste utilization
[BNWL-1845-2] 07 p0152 N75-25695
Strontium heat source development programs --- waste utilization
[BNWL-1845-4] 07 p0152 N75-25696
HEAT STORAGE
Performance of heat pumps using cold-side energy storage and unconventional heat sources
[ASME PAPER 74-WA/HT-17] 05 p0017 A75-16863
Solar energy storage within the absorption cycle
[ASME PAPER 74-WA/HT-18] 05 p0017 A75-16864
Sizing of solar energy storage systems using local weather records
[ASME PAPER 74-WA/HT-20] 05 p0017 A75-16865
Dynamic response of solar heat storage systems
[ASME PAPER 74-WA/HT-22] 05 p0018 A75-16867
Solar ponds for space heating --- energy storage by convectionless shallow water
07 p0109 A75-29471
Design charts for hot liquid energy storage systems utilizing forced circulation
[AIAA PAPER 75-742] 07 p0113 A75-32851
Storage of summertime waste heat from electric generating plants for use in wintertime
[AIAA PAPER 75-743] 07 p0113 A75-32852
Underground storage of heat in solar heating systems
07 p0115 A75-33975
Sensible heat storage in liquids --- solar energy applications
[SLL-73-C263] 06 p0074 N75-16773
Latent heat and sensible heat storage for solar heating systems
[PB-236190/5] 06 p0077 N75-17005
Solar thermal conversion program. Central receiver POCE project, subsystem specifications studies
[PB-238002/0] 06 p0087 N75-18733
Conservation and better utilization of electric power by means of thermal energy storage and solar heating. Solar collector performance studies
[PB-239355/1] 07 p0150 N75-25320
Conservation and better utilization of electric power by means of thermal energy storage and solar heating
[PB-239395/7] 07 p0157 N75-26521
Conservation and better utilization of electric power by means of thermal energy storage and solar heating, executive summary
[PB-239394/0] 07 p0157 N75-26522
Solar pond
[NASA-CASE-NPO-13581-1] 07 p0160 N75-27560
Fluid manifold design for a solar energy storage tank
[NASA-TM-X-64940] 07 p0160 N75-27562
HEAT TRANSFER
Controlled heat pipes
05 p0012 A75-12912
The heat pipe - Its development, and its aerospace applications
05 p0015 A75-15054
A generalization of the Carnot theorem - The theorem of useful power
06 p0057 A75-26448
Theory of heat extraction from fractured hot dry rock
06 p0057 A75-26544
Heat Pipe Symposium/Workshop
[PB-236008/9] 05 p0035 N75-14094
Solar thermal conversion program. Central receiver POCE project, subsystem specifications studies
[PB-238002/0] 06 p0087 N75-18733
Heat transfer design and proof tests of a radioisotope thermoelectric generator
[AD-A002218] 06 p0092 N75-19608
Electrochemical power sources --- heat and mass transfer in porous media
[AD-A001610] 06 p0094 N75-19836
Study of fuel cell powerplant with heat recovery
[NASA-CR-141854] 07 p0148 N75-25296
HEAT TRANSFER COEFFICIENTS
Solar radiation heat transfer to high temperature heat carriers
[ASME PAPER 74-WA/HT-14] 05 p0017 A75-16861
Design of a tubular heat collector for a solar power installation with a parabolocylindric concentrator
05 p0020 A75-17069
Convergence and speed of calculations for thermoelectric heat pump
05 p0020 A75-17084
Effect of heat transfer from the lateral surfaces of semiconductor thermocouples on the energy characteristics of a thermoelectric generator
05 p0021 A75-18798
Determination of some thermophysical characteristics of a solar-type pebble accumulator
07 p0116 A75-34317
Investigations of the factors affecting the performance of a rotating heat pipe
07 p0120 A75-36357
Energy exchange at the surface of the western North Atlantic Ocean
[AD-A007296] 07 p0146 N75-24285

HEAT TRANSMISSION
Closed loop chemical systems for energy transmission, conversion and storage
05 p0005 A75-10538
Process environment effects on heat pipes for fluid-bed gasification of coal
[IA-UR-74-984] 05 p0029 N75-12252
Heat Pipe Symposium/Workshop
[PB-236008/9] 05 p0035 N75-14094

HEATING
Residential energy consumption and small scale options of energy systems for space heating
[PB-239941/8] 07 p0154 N75-26501

HEATING EQUIPMENT
Study of channel-type systems for solar-energy radiative heat transport
05 p0010 A75-11196
Dynamic simulation for performance analysis of solar heated and cooled buildings
[ASME PAPER 74-WA/SOL-8] 05 p0019 A75-16891
A study of channel systems for radiative solar-heat transfer
06 p0049 A75-23408
Time factors in slowing down the rate of growth of demand for primary energy in the United States
06 p0059 A75-27780
Cooling by solar heat --- heating and cooling system for buildings
[AIAA PAPER 75-669] 06 p0062 A75-28590
Heating buildings with solar energy
07 p0117 A75-34933
Study of the influence of container design and the thermal inertness of solar water heaters on their efficiency
07 p0119 A75-36018
Summary of NASA-Lewis Research Center solar heating and cooling and wind energy programs
07 p0123 A75-37240

HELICOPTER PERFORMANCE
Documenting helicopter operations from an energy standpoint
[NASA-CR-132578] 06 p0084 N75-18220

HELICOPTERS
Documenting helicopter operations from an energy standpoint
[NASA-CR-132578] 06 p0084 N75-18220

HELIUM
Helium survey, a possible technique for locating geothermal reservoirs
07 p0118 A75-35438

HIGH STRENGTH STEELS
Metals and composites in superflywheel energy storage systems
06 p0047 A75-22523

HIGH TEMPERATURE
Low to high temperature energy conversion system --- using ammonia
[NASA-CASE-NPO-13510-1] 06 p0074 N75-16972

HIGH TEMPERATURE FLUIDS
Design charts for hot liquid energy storage systems utilizing forced circulation
[AIAA PAPER 75-742] 07 p0113 A75-32851

HIGH TEMPERATURE GAS COOLED REACTORS
Component design considerations for gas turbine HTGR power plant --- High-Temperature Gas-cooled Reactor
[ASME PAPER 75-GT-67] 07 p0116 A75-34620

HIGH TEMPERATURE NUCLEAR REACTORS
Thermolysis of water for the generation of hydrogen
06 p0049 A75-23504
Technological and commercial possibilities which result by using a high temperature reactor for the future supply of mineral oil in the FRG
[JUL-1017-RG] 05 p0029 N75-11470

HIGH VOLTAGES
Development and performance of a miniature, high-voltage thermal battery
05 p0007 A75-10559

HONEYCOMB STRUCTURES
The Shell natural gas airship, and other L.T.A. activities by Aerospace Developments
[AIAA PAPER 75-932] 07 p0121 A75-37008

HYBRID PROPULSION
Nickel-zinc batteries for hybrid vehicle operation
[PE-239710/7] 07 p0156 N75-26514

HYDRAULIC EQUIPMENT
Ocean thermal gradient hydraulic power plant
07 p0124 A75-37849

HYDRAZINES
The introduction of the principles of biological energy supply in future technical systems
06 p0050 A75-23511

HYDRIDES
Alternative fuels for aviation
07 p0121 A75-36719
Iron titanium hydride as a source of hydrogen fuel for stationary and automotive applications
[BNL-18651] 05 p0030 N75-12441

HYDROCARBON COMBUSTION
Combustion R&D - Key to our energy future --- pollution reduction using hydrocarbon fuels
05 p0009 A75-10596

HYDROCARBON FUELS
MHD energy conversion systems
[AIAA PAPER 74-1071] 05 p0001 A75-10263
Urban waste energy resources
[AIAA PAPER 75-632] 06 p0062 A75-28598
Alternative fuels for aviation
07 p0121 A75-36719
Exploration for fossil and nuclear fuels from orbital altitudes --- results of ERTS program for oil exploration
[NASA-TM-X-70781] 05 p0027 N75-11413
Evaluation of coal-gassification technology. Part 2: Low and intermediate BTU fuel gases
[PB-234042/0] 05 p0036 N75-14273
Alternative fuels for aviation
06 p0075 N75-16980
Technology for the conversion of solar energy to fuel gas
[PB-238103/6] 06 p0104 N75-20683
Electrolyte for hydrocarbon air fuel cells
[AD-A007220] 07 p0136 N75-22917
Hydrocarbon power fuel from the gasoline boiling range --- antiknock additives
[NASA-TT-F-16399] 07 p0147 N75-24957
MHD power generation (Viking Series) with hydrocarbon fuels, part 3
[AD-A004216] 07 p0155 N75-26502

HYDROCARBON POISONING
The effect of Alaskan crude oil and selected hydrocarbon compounds on embryonic development of the Pacific oyster, Crassostrea gigas
06 p0090 N75-18764

HYDROCARBONS
Relationships between bidding and hydrocarbon production of the Federal Outer Continental Shelf (through 1970) --- offshore energy sources
[PB-238188/7] 07 p0127 N75-21788
The direct production of hydrocarbons from coal-steam systems
[PB-239356/9] 07 p0138 N75-23740
Low-temperature evolution of hydrocarbon gases from coal
[PB-238322/2] 07 p0139 N75-24074
Marine pollution monitoring (petroleum): Proceedings of a Symposium and Workshop held at the National Bureau of Standards
[COM-75-50071/0] 07 p0146 N75-24183

HYDROELECTRIC POWER STATIONS
Energy storage undergound --- hydroelectric pumped-storage and combustion turbine facilities
05 p0013 A75-12989
Solar/hydroelectric combined power systems
06 p0059 A75-27786
Gulf stream based ocean thermal power plants
[AIAA PAPER 75-643] 06 p0063 A75-28603
Solar power system and component research program
[PB-236159/0] 05 p0037 N75-14280

HYDROGEN
Feasibility demonstration of a road vehicle fueled with hydrogen-enriched gasoline
05 p0008 A75-10574
Efficiencies of electrolytic and thermochemical hydrogen production
06 p0045 A75-20300
Metal hydrides as hydrogen storage media
[BNL-18887] 05 p0030 N75-12440
Iron titanium hydride as a source of hydrogen fuel for stationary and automotive applications
[BNL-18651] 05 p0030 N75-12441
Proceedings of the Workshop on Bio-Solar Conversion
[PB-236142/6] 06 p0069 N75-16096
Energy storage for utilities via hydrogen systems
[BNL-19266] 06 p0086 N75-18725
Hydrogen storage and production in utility systems
[BNL-18920] 06 p0097 N75-20580

Hydrogen economy: A utility perspective
[BNL-19267] 06 p0103 N75-20870
Fundamental aspects of systems for the thermochemical production of hydrogen from water
[LA-UR-74-1459] 07 p0127 N75-21391
Hydrogen as a fuel
[AD-AC06984] 07 p0132 N75-22477
On the application of hydrogen as a fuel for automotive vehicles
[ESRO-TT-132] 07 p0135 N75-22910
Hydrogen production from coal
[NASA-CR-142816] 07 p0141 N75-24113

HYDROGEN FUELS
Oxides of nitrogen control techniques for appliance conversion to hydrogen fuel
05 p0006 A75-10541
The use of hydrogen in commercial aircraft - An assessment
05 p0006 A75-10542
60 watt hydride-air fuel cell system
05 p0008 A75-10567
Liquid hydrogen as an automotive fuel
06 p0048 A75-23238
Hydrogen as fuel for internal-combustion engines
06 p0050 A75-23508
Cryogenics safety in a hydrogen fuel society
06 p0061 A75-27973
Hydrogen production from solar energy
07 p0109 A75-29477
Alternative fuels for aviation
07 p0121 A75-36719
A non-polluting powerplant for large airships
[AIAA PAPER 75-927] 07 p0121 A75-37005
Hydrogen as a fuel --- analysis of problems involved in generation, transportation, and utilization
[AD-787484] 06 p0066 N75-15818
Possibilities for lithium borohydride recycle --- using diborane intermediate
[ICP-1054] 06 p0074 N75-16651
Study of active cooling for supersonic transports
[NASA-CR-132573] 06 p0079 N75-17336
Survey of hydrogen compatibility problems in energy storage and energy transmission applications
[SAND-74-8219] 06 p0087 N75-18726
Synthetic fuels for ground transportation with special emphasis on hydrogen
[NASA-TM-X-72652] 06 p0103 N75-20868
Metal hydrides as a source of hydrogen fuel
[BNL-14804-R] 06 p0104 N75-20876
Potential structural material problems in a hydrogen energy system
[NASA-TM-X-71752] 07 p0154 N75-26500
Materials requirements for advanced energy systems: New fuels. Volume 3: Materials research needs in advanced energy systems using new fuels
[AD-AC04550] 07 p0158 N75-27168

HYDROGEN OXYGEN FUEL CELLS
Electrical power generation subsystem for Space Shuttle Orbiter
05 p0002 A75-10477
Development of a theoretical method for predicting the performance of hydrogen-oxygen MHD generators
05 p0009 A75-10578
Multimegawatt fuel cell power system
07 p0124 A75-37656
Development of advanced fuel cell system, phase 2
[NASA-CR-134721] 06 p0067 N75-16084
Development of advanced fuel cell system, phase 3
[NASA-CR-134818] 07 p0154 N75-26496

HYDROGEN SULFIDE
The hydrogen sulfide emissions abatement program at the Geysers Geothermal Power Plant
06 p0102 N75-20859

HYDROGEN-BASED ENERGY
The generation of hydrogen by the thermal decomposition of water
05 p0005 A75-10532
Nuclear energy requirements for hydrogen production from water
05 p0005 A75-10533
Hydrogen cycle peak-shaving for electric utilities
05 p0005 A75-10535
Hydrogen for the electric utilities - Long range possibilities
05 p0005 A75-10536
Energy storage for utilities via hydrogen systems
05 p0005 A75-10537
The Hydrogen Economy - A utility perspective --- energy technology
05 p0014 A75-12998
The use of hydrogen as an energy carrier
05 p0015 A75-15795
Economics of a hydrogen storage peaking power plant
[ASME PAPER 74-WA/PWR-6] 05 p0018 A75-16880
Energy, hydrogen, and pollution --- energy technology
06 p0046 A75-22041
Hydrogen fuel cells and motors --- new energy technology
06 p0046 A75-22042
Liquid hydrogen --- liquefaction, storage, transportation, applications
06 p0046 A75-22043
Production of hydrogen by the electrolysis of water
06 p0046 A75-22044
Energy supply in a closed cycle --- nuclear energy for nonelectrical use
06 p0049 A75-23503
Thermolysis of water for the generation of hydrogen
06 p0049 A75-23504
Hydrogen as energy carrier in industry and household
06 p0049 A75-23505
Hydrogen - A carrier of energy
06 p0060 A75-27791
Hydrogen future fuel: A literature survey issued quarterly, issue no. 6 --- bibliographies
05 p0027 N75-11110
Production of hydrogen from water using nuclear energy. A review --- for hydrogen-based energy
[JAERI-M-5642] 06 p0093 N75-19824
Synthetic fuels for ground transportation with special emphasis on hydrogen
[NASA-TM-X-72652] 06 p0103 N75-20868
Hydrogen storage and production in utility systems
[BNL-19249] 06 p0103 N75-20873
On the application of hydrogen as a fuel for automotive vehicles
[ESRO-TT-132] 07 p0135 N75-22910

HYDROGENATION
Synthetic oil from coal
[PB-234460/4] 05 p0040 N75-15176
The relation of coal characteristics to coal liquefaction behavior
[PB-239261/1] 07 p0151 N75-25327

I

IDAHO
Idaho geothermal R and D project report for period 16 December 1973 - 15 March 1974
[ANCR-1155] 06 p0076 N75-16985

IGNITION TEMPERATURE
Plasma heating methods --- for controlled fusion
07 p0119 A75-35920

ILLINOIS
Proceedings of the 2nd Annual Illinois Energy Conference
[PB-240548/8] 07 p0161 N75-27575

IMAGING TECHNIQUES
Oil exploration needs for digital processing of imagery
05 p0001 A75-10437

IMPERIAL VALLEY (CA)
Overview of Reclamation's geothermal program in Imperial Valley, California
06 p0098 N75-20835

IMPREGNATING
High energy density sintered plate type nickel-cadmium battery cells. II - Electrochemical impregnation methods to produce nickel oxide electrodes
05 p0008 A75-10570

IMPURITIES
Effects of high doping levels on silicon solar cell performance
07 p0123 A75-37403

INCIDENT RADIATION
Method for calculating solar radiation for semicylindrical collectors
06 p0057 A75-26718
Solar incidence factor and other geometric considerations of solar energy collection
[SAND-74-26] 05 p0034 N75-13390

INCINERATORS
Survey of gas and oil burners for use with NSF/RANN-ORNL potassium boiler
[ORNL-NSF-EP-45] 06 p0087 N75-18728
INCLINATION
On the optimum tilt of a solar collector
07 p0115 A75-33971
INCLUSIONS
The relation of coal characteristics to coal liquefaction behavior
[PB-239261/1] 07 p0151 N75-25327
INDEXES (DOCUMENTATION)
Various research tasks related to energy information and data activities. Task 2 national energy indexing schemes: Characterization of problem
[PB-240423/4] 07 p0152 N75-25774
INDIUM COMPOUNDS
Efficient CuInSe2/CdS solar cells
07 p0119 A75-36274
INDUSTRIAL ENERGY
DFVLR activities in the area of energy research
07 p0118 A75-35096
The National Coal Conversion Act and the National Crude Oil Refinery Development Act
[GPO-28-964] 05 p0027 N75-10861
Bureau of Mines research programs on recycling and disposal of mineral, metal, and energy-based wastes
[PB-227476/9] 05 p0042 N75-15203
Energy use in the commercial and industrial sectors of the US economy, 1963
[PB-235487/6] 06 p0070 N75-16104
Energy problems in a global context
06 p0075 N75-16978
Some developments of industrial magnetohydrodynamic electric power plants
06 p0081 N75-17792
Study of industrial uses of energy relative to environmental effects
[PB-237215/9] 06 p0084 N75-17853
Industrial energy study of the hydraulic cement industry
[PB-237142/5] 06 p0087 N75-18730
Data base for the industrial energy study of the industrial chemicals group
[PB-237845/3] 06 p0087 N75-18732
Fuel and energy consumption in the coal industries
[PB-237151/6] 06 p0088 N75-18744
INDUSTRIAL MANAGEMENT
Industrial energy study of selected food industries
[PB-237316/5] 06 p0083 N75-17827
Vulnerability of natural gas systems --- industrial management and operations
[AD-A007583] 07 p0144 N75-24143
Fuel use in the US electrical utility industry, 1971 - 1990
07 p0154 N75-26493
INDUSTRIAL PLANTS
Industrial energy study of the Industrial chemicals group
[PB-236322/4] 06 p0071 N75-16111
Applications of aerospace technology in the electric power industry
06 p0079 N75-17197
Background information for standards of performance: Coal preparation plants. Volume 2: Summary and test data
[PB-237696/0] 06 p0091 N75-18797
Technical evaluation services, clean liquid and/or solid fuels from coal
[PB-237216/7] 07 p0129 N75-21803
Interdisciplinary study of atmospheric processes and constituents of the mid-Atlantic coastal region. Attachment 4: Data set for background investigation of atmospheric constituents for Nansemond River site --- a proposed oil refinery site
[NASA-CR-142821] 07 p0141 N75-24122
Study of the application of HTGR to a petroleum refinery petrochemical complex
[CONF-741144-1] 07 p0142 N75-24126
The impact of energy shortages on the iron and steel industries
[PB-238749/6] 07 p0145 N75-24158
Investigation of characteristics of magnetohydrodynamic generators in industrial power plants
[AD-A008343] 07 p0149 N75-25307
Energy conservation: A case study for a large manufacturing plant
[PB-239302/3] 07 p0151 N75-25323
INDUSTRIAL WASTES
Laboratory semiautomatic infrared device for determining the composition of petroleum products in sewage
07 p0125 A75-38648
Study of industrial uses of energy relative to environmental effects
[PB-237215/9] 06 p0084 N75-17853
INDUSTRIES
Economic impact of the oil shale industry in western Colorado
[GPO-28-608] 05 p0024 N75-10588
Energy consumption by industries in support of national defense: An energy demand model
[AD-784964] 05 p0031 N75-12449
Study of potential problems and optimum opportunities in retrofitting industrial processes to low and intermediate energy gas from coal
[PB-237116/9] 06 p0088 N75-18739
Industrial energy study of the drug manufacturing industries for the Federal Energy Administration/US Department of Commerce
[PB-238994/8] 07 p0142 N75-24130
Engineering and cost study of air pollution control for the petrochemical industry, volume 3: Ethylene dichloride manufacture by oxychlorination
[PB-240492] 07 p0162 N75-27612
INFORMATION DISSEMINATION
The initiatives of the Los Alamos Scientific Laboratory in the transfer of a new excavation technology
06 p0079 N75-17203
INFORMATION MANAGEMENT
The solution of information-deficiency problems of electroenergy technology --- optimal decision making
06 p0062 A75-28508
INFORMATION RETRIEVAL
Energy R/D Data Workshop
[PB-237493/2] 07 p0130 N75-21811
INFORMATION SYSTEMS
The Environmental protection agency industrial technology transfer program
06 p0078 N75-17193
National energy flow accounts
[PB-239275/1] 07 p0146 N75-24539
Various research tasks related to energy information and data activities. Task 2 national energy indexing schemes: Characterization of problem
[PB-240423/4] 07 p0152 N75-25774
INFORMATION THEORY
Various research tasks related to energy information and data activities: Task 4 priorities analysis
[PB-240424/2] 07 p0151 N75-25329
INFRARED RADIATION
Heat mirrors for solar-energy collection and radiation insulation
05 p0004 A75-10525
INFRARED REFLECTION
Transparent heat-mirror films of TiO2/Ag/TiO2 for solar energy collection and radiation insulation
05 p0015 A75-16378
INFRARED SPECTROPHOTOMETERS
Laboratory semiautomatic infrared device for determining the composition of petroleum products in sewage
07 p0125 A75-38648
INTERNAL COMBUSTION ENGINES
Feasibility demonstration of a road vehicle fueled with hydrogen-enriched gasoline
05 p0008 A75-10574
Hydrogen fuel cells and motors --- new energy technology
06 p0046 A75-22042
Liquid hydrogen as an automotive fuel
06 p0048 A75-23238
Methanol as fuel for vehicle engines
06 p0050 A75-23506
Hydrogen as fuel for internal-combustion engines
06 p0050 A75-23508

Engine development program for the API remotely piloted vehicle
[AD-787507] C6 p0065 N75-15658
Hydrogen as a fuel --- analysis of problems involved in generation, transportation, and utilization
[AD-787484] 06 p0066 N75-15818
INTERNATIONAL CCOPERATION
International energy problems and environmental policy
05 p0014 A75-13597
Man-made sun. Thermonuclear engineering development
[BIL-M-23333-(5828.4F)] C6 p0091 N75-19014
The USA: The scientific and technical revolution and trends in foreign policy
[NASA-TT-F-16102] C6 p0096 N75-20160
INTERNATIONAL RELATIONS
The USA: The scientific and technical revolution and trends in foreign policy
[NASA-TT-F-16102 C6 p0096 N75-20160
Economic impact on the free world of the oil crisis, October 1973 - March 1974
[AD-A003136] C6 p0107 N75-21156
INTERNATIONAL TRADE
The approaching energy crisis: A call for action
C5 p0030 N75-12432
Dependence of the United States on essential imported materials, year 2000; volume 1
[AD-A000842] C6 p0096 N75-20157
Dependence of the United States on essential imported materials, year 2000. Volume 2: Appendices
[AD-A000843] 06 p0096 N75-20158
Protecting the US petroleum market against future denials of imports
[AD-A006643] C7 p0137 N75-23387
The economics of energy and natural resource pricing
[GEC-48-071] C7 p0141 N75-24115
Commerce today, volume 5, number 10 --- a discussion of international trade, economics, and energy conservation
[COM-74-50944/10] 07 p0152 N75-25775
Materials and the new dimensions of conflict, revised version
[AD-A004263] C7 p0154 N75-26499
INTERPLANETARY SPACECRAFT
Interplanetary spacecraft design using solar electric propulsion
[AIAA PAPER 74-1084] C5 p0010 A75-11283
INVESTMENTS
Investment possibility of financial institutions in solar heating
[PB-239756/0] C7 p0155 N75-26511
ION BEAMS
Review of direct energy conversion of ion beams: Experimental results and reactor applications
[UCRL-75600] C5 p0028 N75-11466
ION EXCHANGE MEMBRANE ELECTROLYTES
Evaluation of an ion exchange membrane fuel cell for space power
[AD-766888] C5 p0037 N75-14274
IRON
Photochemical conversion of solar energy --- study of iron-thionire photogalvanic cells
[PB-235474/4] 05 p0038 N75-14282
The impact of energy shortages on the iron and steel industries
[PB-238749/6] C7 p0145 N75-24158
IRON ALLOYS
Cryogenic properties of Fe-Mn and Fe-Mn-Cr alloys
[LBL-2764] C6 p0066 N75-15781
IRON COMPOUNDS
Iron titanium hydride as a source of hydrogen fuel for stationary and automotive applications
[BNL-18651] C5 p0030 N75-12441
IRRIGATION
Some aspects of a solar battery system and its use for irrigation in remote sun-rich regions
06 p0054 A75-24256
Solar powered pump
[NASA-CASE-NPO-13567-1] C7 p0133 N75-22746
Use of thermally enriched water for growing field crops in Minnesota
[PB-240112] C7 p0159 N75-27549

J

JAPAN
Japanese/United States Symposium on Solar Energy systems. Volume 1: Summary of proceedings
[NTB-6284-VOL-1] 05 p0036 N75-14264
JET ENGINE FUELS
Future long-range transports: Prospects for improved fuel efficiency
[NASA-TM-X-72659] 06 p0079 N75-17339
Preparation of gas turbine engine fuel from synthetic crude oil derived from coal
[AD-A007923] 07 p0147 N75-24966
JET PROPULSION
On the future of jet propulsion in subsonic transport aviation
06 p0058 A75-27777

K

KANSAS
Statistical estimation of wildcat well outcome probabilities by visual analysis of structure contour maps of Stafford County, Kansas
06 p0092 N75-19778
KINETIC ENERGY
Report on progress in achieving direct conversion of a major fraction of sonic flow kinetic power into electrical power by electrofluid dynamic /EFD/ processes
05 p0009 A75-10576

L

LAND USE
Economic impact of the oil shale industry in western Colorado
[GPO-26-608] 05 p0024 N75-10588
Leasing of federal geothermal resources
06 p0099 N75-20841
Energy plantations: Should we grow trees for power plant fuel
[PB-238417/0] C7 p0130 N75-21815
LANDSAT C
ERTS-C (Landsat 3) cryogenic heat pipe experiment definition
[NASA-CR-143797] 07 p0138 N75-23882
LANDSAT SATELLITES
Exploration for fossil and nuclear fuels from orbital altitudes --- results of ERTS program for oil exploration
[NASA-TM-X-70781] 05 p0027 N75-11413
LASER APPLICATIONS
Laser induced luminescence signatures of refined and virgin crude petroleum - Their composition and remote sensing implications
06 p0050 A75-23790
Lasers investigated for space propulsion
06 p0061 A75-28439
Laser energy conversion
07 p0125 A75-36474
Conversion of electrical energy into laser radiation energy in high pressure mixtures of molecular gases
07 p0133 N75-22722
LASER CAVITIES
Interferometric tuning of a 15-atm CO2 laser
C6 p0058 A75-27518
LASER HEATING
Conceptual design of a series of laser-fusion power plants of 100 to 3000 MW/e/
05 p0007 A75-10562
New applications for optical components - High energy focusing
05 p0015 A75-16525
Performance of a laser mirror heat pipe
[ASME PAPER 74-WA/HT-61] C5 p0018 A75-16869
LASER OUTPUTS
New applications for optical components - High energy focusing
05 p0015 A75-16525
Laser compression of matter - Optical power and energy requirements
06 p0046 A75-22352
LASER PLASMAS
Laser thermonuclear fusion
07 p0112 A75-32617

LASERS
Review of the prospects for laser induced thermonuclear fusion
[AECL-4840] 06 p0106 N75-21099
LAW (JURISPRUDENCE)
Institutional and environmental problems in geothermal resource development
06 p0100 N75-20843
LEAD (METAL)
Impact of motor gasoline lead additive regulations on petroleum refineries and energy resources, 1974-1980, phase 1
[PB-234185/7] 05 p0025 N75-10601
LEAD COMPOUNDS
Limit lead in gasoline
[GPO-29-660] 05 p0023 N75-10259
LIFT AUGMENTATION
Evaluation of advanced lift concepts and fuel conservative short-haul aircraft, volume 1
[NASA-CR-137525] 06 p0096 N75-20291
Evaluation of advanced lift concepts and fuel conservative short-haul aircraft, volume 2
[NASA-CR-137526] 06 p0097 N75-20292
LIFT DEVICES
Evaluation of advanced lift concepts and potential fuel conservation for short-haul aircraft
[NASA-CR-2502] 06 p0073 N75-16557
LIFT DRAG RATIO
Evaluation of the energy perfection of the different forms of transport --- aerodynamic coefficients and lift drag ratio
[AD-A006562] 07 p0137 N75-23392
LIGHT TRANSMISSION
Lasers investigated for space propulsion
06 p0061 A75-28439
Solar thermal power systems based on optical transmission
[PB-237005/4] 06 p0088 N75-18742
LIGHT WATER BREEDER REACTORS
The economics of nuclear power
06 p0047 A75-22734
LIGHTING EQUIPMENT
The use of solar cells in the lighthouse service
06 p0054 A75-24255
LIQUEFACTION
Liquid hydrogen --- liquefaction, storage, transportation, applications
06 p0046 A75-22043
Evaluation of coal conversion processes to provide clean fuels, part 2
[PB-234203/8] 05 p0025 N75-10604
Survey study of the efficiency and economics of hydrogen liquefaction
[NASA-CR-132631] 07 p0133 N75-22486
LIQUEFIED GASES
Some LNG vehicle developments --- for automotive conversion systems and fueling stations
06 p0048 A75-23236
Project Clean Air 1972, LNG conversion of GM-71 series diesel engine --- considering automobile exhaust gases control
[PB-236585/6] 06 p0090 N75-18783
LIQUEFIED NATURAL GAS
Methanol as fuel for vehicle engines
06 p0050 A75-23506
Methane gas engines for commercial vehicles and busses
06 p0050 A75-23507
A survey of LNG technological needs in the USA: 1974 to beyond 2000
05 p0030 N75-12435
On the potentialities of polyphenylene oxide (PPO) as a wet-insulation material for cargo tanks of LNG-carriers
[REPT-194-M] 05 p0035 N75-14002
LIQUID COOLING
Performance of a laser mirror heat pipe
[ASME PAPER 74-WA/HT-61] 05 p0018 A75-16869
LIQUID FLOW
Design charts for hot liquid energy storage systems utilizing forced circulation
[AIAA PAPER 75-742] 07 p0113 A75-32851
LIQUID HYDROGEN
The use of hydrogen in commercial aircraft - An assessment
05 p0006 A75-10542
Liquid hydrogen --- liquefaction, storage, transportation, applications
06 p0046 A75-22043
Liquid hydrogen as an automotive fuel
06 p0048 A75-23238
Cryogenics safety in a hydrogen fuel society
06 p0061 A75-27973
Alternative fuels for aviation
06 p0075 N75-16980
Survey study of the efficiency and economics of hydrogen liquefaction
[NASA-CR-132631] 07 p0133 N75-22486
On the application of hydrogen as a fuel for automotive vehicles
[ESRO-TT-132] 07 p0135 N75-22910
Hydrogen-future fuel-A bibliography (with emphasis on cryogenic technology)
[COM-75-10289/7] 07 p0155 N75-26509
LIQUID METALS
Thermodynamics of liquid metal MHD converters
[AD-A007415] 07 p0144 N75-24141
LITHIUM
Investigation of the technology and performance of lithium doped solar cells --- feasibility study for mass production
06 p0052 A75-24219
Non-hazardous primary lithium-organic electrolyte battery EA-5590 ( )/U
[AD-A003312] 07 p0129 N75-21804
LITHIUM BORATES
Possibilities for lithium borohydride recycle --- using diborane intermediate
[ICP-1054] 06 p0074 N75-16651
LITHIUM HYDRIDES
Possibilities for lithium borohydride recycle --- using diborane intermediate
[ICP-1054] 06 p0074 N75-16651
LITHIUM SULFATES
Development of lithium/sulfur cells for application to electric automobiles
[CONF-740805-7] 06 p0094 N75-19829
LOADS (FORCES)
An analysis of the potential for shifting electric power demand within daily load requirement
[PB-239764/4] 07 p0156 N75-26517
LOW COST
Development of very low cost solar cells for terrestrial power generation
06 p0052 A75-24226
LOW DENSITY RESEARCH
Status and objective of Tokamak systems for fusion research
[WASH-1295] 05 p0035 N75-13644
LOW TEMPERATURE
Survey on power fluid for thermal power from low temperature and small temperature difference heat source
07 p0119 A75-36173
Low to high temperature energy conversion system --- using ammonia
[NASA-CASE-NPO-13510-1] 06 p0074 N75-16972
LOW TEMPERATURE ENVIRONMENTS
Development of a thermal battery for emergency radio power under arctic conditions
05 p0007 A75-10560
LUBRICANTS
A short handbook on fuels --- and lubricants
[AD-A004358] 07 p0158 N75-27170
LUBRICATING OILS
Waste lubricating oil research. A comparison of bench-test properties of re-refined and virgin lubricating oils --- materials recovery
[PB-238124/2] 06 p0097 N75-20746
LUMINOUS INTENSITY
Dependence of the basic parameters of Al/x/Ga/1-x/As-GaAs solar converters on temperature and optical intensity
07 p0112 A75-32824

M

MAGNETIC CIRCUITS
Methods of energy transfer from a magnetic energy storage system using a transfer capacitor and a superconducting switch
[LA-5631-MS] 05 p0032 N75-13164
MAGNETIC STORAGE
Magnetic Energy Transfer and Storage (METS) program schedules for a Fusion Test Reactor (FTR)
[LA-5748-MS] 06 p0106 N75-21097

MAGNETOHYDRODYNAMIC GENERATORS
MHD energy conversion systems
[AIAA PAPER 74-1071] 05 p0001 A75-10263
The MHD power generation system with directly fired coal
05 p0009 A75-10577
Development of a theoretical method for predicting the performance of hydrogen-oxygen MHD generators
05 p0009 A75-10578
Applications of plasma core reactors to terrestrial energy systems
[AIAA PAPER 74-1074] 05 p0010 A75-11281
Progress in development of auxiliary MHD power plant components at Avco Everett Research Laboratory, Inc
[ASME PAPER 74-WA/ENER-6] 05 p0016 A75-16838
Recent MHD generator testing at Avco Everett Research Laboratory, Inc
[ASME PAPER 74-WA/ENER-7] 05 p0016 A75-16839
Possible development of acoustical instability in a system consisting of a combustion chamber and a subsonic MHD generator
06 p0045 A75-19959
Corrosion studies of materials for auxiliary equipment in MHD power plants
06 p0055 A75-24384
Review of central power magnetohydrodynamics
[AIAA PAPER 75-264] 06 p0055 A75-25005
Fluctuations of electric power in MHD channels
07 p0110 A75-30949
Calculation of the electrical conductivity of the combustion products of the working medium in an open-cycle MHD generator
07 p0112 A75-31568
Concerning the use of a nitrogen-potassium gaseous mixture for protection of MHD-generator electrodes by suction
07 p0112 A75-31569
Effect of inhomogeneity of conductivity on end effect in a sectional MHD generator
07 p0119 A75-36233
Investigation of the optimal MHD-generator characteristics for combinational open-cycle MHD power generators --- using one dimensional channel flow model
07 p0119 A75-36260
Problems of direct conversion of thermal and nuclear energy to electric energy
07 p0120 A75-36415
MHD energy conversion for high power electrical needs
07 p0124 A75-37657
Development of the KIVA-I MHD open cycle generator
07 p0124 A75-37686
Theoretical study of the energy output of two magnetohydrodynamic generators
07 p0125 A75-38568
MHD energy conversion
[AD-785419] 05 p0032 N75-12807
A review of the status of MHD power generation technology including suggestions for a Canadian MHD research program
[UTIAS-39] 05 p0035 N75-13641
First Joint Soviet-American Colloquium on the Problems of MHD Energy Conversion
[JPRS-63794] 06 p0081 N75-17790
Prospects for magnetohydrodynamic electric power plants in power engineering
06 p0081 N75-17791
Some developments of industrial magnetohydrodynamic electric power plants
06 p0081 N75-17792
Experience in the first step of the mastery of the U-25 device
06 p0081 N75-17793
Electronic model of the U-25 device
06 p0081 N75-17794
The MHD generator: A step toward the energy supply of tomorrow --- development of magnetohydrodynamic generators
[AD-A000087] 06 p0089 N75-18749
The generator of the future --- development of the magnetohydrodynamic generators
[AD-A001515] 06 p0089 N75-18754
Thermodynamics of liquid metal MHD converters
[AD-A007415] 07 p0144 N75-24141
Studies on improvement of the characteristics of MHD power generating channel --- conducting fluids
[REPT-749] 07 p0148 N75-25293
Investigation of characteristics of magnetohydrodynamic generators in industrial power plants
[AD-A008343] 07 p0149 N75-25307
MHD power generation (Viking Series) with hydrocarbon fuels, part 3
[AD-A004216] 07 p0155 N75-26502
Refractory materials for coal-fueled MHD power generation
[PB-239607/5] 07 p0157 N75-26524
US and Soviet MHD technology: A Comparative overview
[AD-A004614] 07 p0162 N75-27901
MAGNETOHYDRODYNAMICS
MHD energy conversion
[AD-785419] 05 p0032 N75-12807
MAN ENVIRONMENT INTERACTIONS
Interaction between the fuel-energy complex and the environment
07 p0110 A75-29800
MANAGEMENT METHODS
Extended energy management methods for flight performance optimization
[AIAA PAPER 75-30] 05 p0021 A75-18269
Energy utilization by households and technology assessment as a way to increase its effectiveness --- management methods and family decision making
06 p0097 N75-20829
A study of energy systems command, control and communication for energy crisis management
[PB-239290/0] 07 p0136 N75-22927
Insufficient utilization of scientific advances --- sociopolitical and economic management of technological development
07 p0137 N75-23365
MANAGEMENT PLANNING
Project Independence
05 p0029 N75-12428
Imperial Valley's proposal to develop a guide for geothermal development within its county
06 p0100 N75-20844
The Lawrence Berkeley Laboratory geothermal program in northern Nevada
06 p0100 N75-20845
The total flow concept for geothermal energy conversion
06 p0100 N75-20846
San Diego Gas and Electric Company Imperial Valley geothermal activities
06 p0100 N75-20847
Plans and status of the NASA-Lewis Research Center wind energy project
[NASA-TM-X-71701] 07 p0128 N75-21795
A state energy management plan for North Carolina, phase 1: A quantitive description of the current situation and analysis of the determinants and consequences of future energy use
[PB-238197/8] 07 p0130 N75-21819
A USAF energy projection model
[AD-A006928] 07 p0132 N75-22476
An analysis of constraints on increased coal production
[PB-240613/0] 07 p0157 N75-26525
MANAGEMENT SYSTEMS
Evaluating integrated utility systems
[PB-238765/2] 07 p0136 N75-22925
A study of energy systems command, control and communication for energy crisis management
[PB-239290/0] 07 p0136 N75-22927
MANGANESE ALLOYS
Cryogenic properties of Fe-Mn and Fe-Mn-Cr alloys
[LBL-2764] 06 p0066 N75-15781
MANIFOLDS
Fluid manifold design for a solar energy storage tank
[NASA-TM-X-64940] 07 p0160 N75-27562
MANUFACTURING
Heat pipe manufacturing study
[NASA-CR-139140] 05 p0023 N75-10347
Solar kine: Answer to the agricultural energy challenge of our time
06 p0086 N75-18721
A SASOL type process for gasoline, methanol, SNG, and low-Btu gas from coal
[PB-237670/5] 06 p0095 N75-19838
Fundamental aspects of systems for the thermochemical production of hydrogen from water
[LA-UR-74-1459] 07 p0127 N75-21391

MAPPING
Evaluation of the suitability of Skylab data for the purpose of petroleum exploration
[E75-10257] C7 p0147 N75-25237
MAPS
The mine map repcsitory: A source of mine map data
[PE-240136/2] 07 p0148 N75-25288
MARINE BIOLOGY
The effect of Alaskan crude oil and selected hydrocarbcn compcunds on embryonic development of the Pacific oyster, Crassostrea gigas
C6 p0090 N75-18764
MARINE ENVIRONMENTS
Prospects for utilization of underwater houses and chambers in development of marine oil deposits
C5 p0029 N75-11606
MARINE PROPULSION
Application of superconducting electrical machinery to the propulsion systems of commercial vessels --- gas turbines
[CCM-75-10137] C7 p0147 N75-25200
MARINE RESCURCES
Ocean thermal energy conversion system evaluation
[AIAA PAPER 75-616] C6 p0064 A75-29115
Tropical ocean thermal power plants and potential prcducts
[AIAA PAPER 75-617] C6 p0064 A75-29116
MARKET RESEARCH
Technology utilization - Incentives and solar energy
C6 p0048 A75-22913
Prospective regicnal markets for ccal ccnversion plant products projected to 1980 and 1985. Volume 2: Current and projected demand, supply and price of energy in the United States
[PE-236632/6] C6 p0078 N75-17007
Prospective regicnal markets for ccal conversion plant products projected to 1980 and 1985. Volume 3: Current and projected demand, supply and price of energy in the United States, schedules
[PE-236633/4] C6 p0078 N75-17008
Economic modeling and energy policy planning --- technology transfer, market research
C6 p0079 N75-17210
MARKETING
Current energy shortages oversight series: Oil brckers, part 7
[GPO-32-607] C7 p0161 N75-27576
MARTENSITE
Thermodynamic considerations of 'sclid state engines' based on thermoelastic martensitic transformations and the shape memory effect
C6 p0045 A75-19631
MASS
Evaluation of the cverall fuel mass penalty of an aircraft syster
C7 p0121 A75-36720
MASS RATIOS
Power generatien fcr the X4 spacecraft - A step in the development cf a high pcwer/mass ratio, hybrid solar array for applicatiens spacecraft
C6 p0053 A75-24251
MASS SPECTROSCOPY
The identificatien of gamma-valerolactone in waste frcm an oil-shale in situ retort --- determination cf chemical composition by mass spectroscopy of effluents frcm crude cil shales causing water pollutien
[PE-240098/4] C7 p0147 N75-24852
MASS TRANSFER
Controlled heat pipes
C5 p0012 A75-12912
Electrochemical pcwer sources --- heat and mass transfer in porcts media
[AD-A001610] C6 p0094 N75-19836
MATERIAL BALANCE
Applicatien of thermodynamic and material- and energy-balance calculatiens to gasification processes
C6 p0055 A75-24785
MATERIALS
Potential structural material prcblems in a hydrogen energy system
[NASA-TM-X-71752] C7 p0154 N75-26500
MATERIALS HANDLING
Fuel energy systems - Ccnversicn and transport efficiencies
05 p0007 A75-10554
Technology and community development materials processing, and electrical and nuclear technology --- technical research center of Finland
05 p0031 N75-12695
MATERIALS RECOVERY
Synthetic oil frcm coal
[PB-234460/4] 05 p0040 N75-15176
Waste lubricating oil research. A ccmparisen of bench-test properties of re-refined and virgin lubricating oils --- materials recovery
[PB-238124/2] 06 p0097 N75-20746
Characterization of sulfur recovery from refinery fuel gas
[PB-239777/6] 07 p0151 N75-25326
MATERIALS TESTS
The effect of sunshine testing on terrestrial solar cell system components
07 p0123 A75-37396
Radioisotope space power generator
[GA-A-12848] 05 p0038 N75-14832
MATHEMATICAL MODELS
A wind energy conversion system based on the tracked-vehicle airfoil concept
05 p0004 A75-10518
An analytical and experimental investigatien of a laboratory solar pond model
[ASME PAPER 74-WA/SCL-3] 05 p0019 A75-16886
Energy systems - Modeling and policy analysis
06 p0055 A75-24750
Calculation of flat-plate collector loss coefficients --- of solar radiation
07 p0109 A75-29480
Numerical modeling of flat plate solar collectors
[AIAA PAPER 75-739] 07 p0113 A75-32861
MECHANICAL DRIVES
Mechanical thermal motor
[NASA-CASE-MFS-23062-1] 07 p0160 N75-27561
MECHANICAL PROPERTIES
Mechanical properties of oil shale from Anvil Point under conditions of uniaxial compression
[SAND-74-0035] 06 p0092 N75-19390
MEGALOPOLISES
Mode shift strategies in intercity transportation and their effect on energy consumption
[AIAA PAPER 75-315] 06 p0055 A75-25013
MELTING
Coal gasification by Atomics International's Rockgas process
[ASME PAPER 74-WA/PWR-11] 05 p0018 A75-16883
MERCURY (METAL)
Cycle study of a mercury-colloidal electrofluid dynamic power generator
[AD-A004814] 07 p0159 N75-27559
METAL FIBERS
Capillary flow through heat-pipe wicks
[AIAA PAPER 75-661] 07 p0114 A75-32919
METAL FILMS
Transparent heat-mirror films of TiO2/Ag/TiC2 for solar energy collection and radiation insulation
05 p0015 A75-16378
METAL HYDRIDES
Metal hydrides for thermal energy storage
05 p0004 A75-10522
Metal hydride fuel cell pcwer source
05 p0008 A75-10564
60 watt hydride-air fuel cell system
05 p0008 A75-10567
Predicted energy densities fcr nickel-hydrogen and silver-hydrogen cells embodying metallic hydrides for hydrogen storage
05 p0008 A75-10572
Production of hydrogen by the electrolysis cf water
06 p0046 A75-22044
Metal hydrides as hydrogen storage media
[BNL-18887] 05 p0030 N75-12440
Energy storage for utilities via hydrogen systems
[BNL-19266] C6 p0086 N75-18725
Hydrogen economy: A utility perspective
[BNL-19267] 06 p0103 N75-20670
Metal hydrides as a source of hydrogen fuel
[BNL-14804-R] 06 p0104 N75-20676
On the application of hydrogen as a fuel fcr automotive vehicles
[ESRO-TT-132] 07 p0135 N75-22910
METAL OXIDE SEMICONDUCTORS
A 15% efficient antireflection-coated metal-cxide-semiconductor solar cell
07 p0119 A75-36275

METAL SURFACES
Use of flexible reflective surfaces for solar energy concentration
06 p0056 A75-25678
Designing heat pipe heat sinks
[AIAA PAPER 75-724] 07 p0113 A75-32868
METAL-GAS SYSTEMS
Predicted energy densities for nickel-hydrogen and silver-hydrogen cells embodying metallic hydrides for hydrogen storage
05 p0008 A75-10572
METALS
Bureau of Mines research programs on recycling and disposal of mineral, metal, and energy-based wastes
[PB-227476/9] 05 p0042 N75-15203
Problems of the future and potentialities of system engineering --- metallic materials, plastics, traffic and energy supplies
[ESRO-TT-110] 06 p0107 N75-21218
METEOROLOGICAL PARAMETERS
Metecrological factors and dispersion of pollutants in the atmosphere - A preliminary study about a large power plant
06 p0045 A75-21150
METHANE
Two-stage methane production from solid wastes
[ASME PAPER 74-WA/ENER-11] 05 p0017 A75-16842
Methane gas engines for commercial vehicles and busses
06 p0050 A75-23507
Urban waste energy resources
[AIAA PAPER 75-632] 06 p0062 A75-28598
Methane in the Pittsburgh coalbed, Washington County, Pennsylvania
[PB-237848/7] 06 p0089 N75-18760
Fuel gas production from solid waste
[PB-238068/1] 06 p0095 N75-19843
Environmental aspects of methanol as vehicular fuel: Health and environmental effects
[UCRL-76076] 06 p0095 N75-19867
Technology for the conversion of solar energy to fuel gas
[PB-238103/6] 06 p0104 N75-20883
Technology for the conversion of solar energy to fuel gas
[PB-238545/8] 07 p0136 N75-22919
Methane emission from U.S. Coal mines in 1973, a survey
[PB-240154/5] 07 p0152 N75-25354
The influence of the petrology of the Karagandin coals on their methane contents
[BIL-RTS-9309] 07 p0158 N75-27511
METHYL ALCOHOLS
Methanol as fuel for vehicle engines
06 p0050 A75-23506
Elimination of duty on methanol imported for certain uses
[H-REPT-93-998] 05 p0026 N75-10857
Use of methanol in transportation --- coal liquefaction methods
[UCID-16528] 06 p0077 N75-16996
Methanol from forestry, municipal, and agricultural organic residues
[BNWL-SA-5053] 06 p0085 N75-18702
Methyl alcohol production by in situ coal gasification
[UCID-5160C] 07 p0128 N75-21797
MICROMETEOROLOGY
Meteorological factors and dispersion of pollutants in the atmosphere - A preliminary study about a large power plant
06 p0045 A75-21150
MICROPOROSITY
An investigation of heat-pipe wick characteristics
05 p0012 A75-12914
MICROWAVE TRANSMISSION
The satellite solar power station - An option for energy production on earth
[AIAA PAPER 75-637] 06 p0063 A75-28600
The adaptation of free space power transmission technology to the SSPS concept --- Satellite Solar Power Stations
[AIAA PAPER 75-642] 06 p0063 A75-28602
Modeling and computer simulation of a microwave-to-dc energy conversion element
07 p0120 A75-36500
MICROWAVES
A superconducting microwave engine
06 p0056 A75-25631
MILITARY AIR FACILITIES
A USAF energy projection model
[AD-A006928] 07 p0132 N75-22476
An interdisciplinary engineering approach to a facility design study with emphasis on energy conservation. Volume 2: Main report text
[AD-A006804] 07 p0142 N75-24129
An interdisciplinary engineering approach to a facility design study with emphasis on energy conservation. Volume 1: Executive summary
[AD-A006803] 07 p0149 N75-25304
An interdisciplinary engineering approach to a facility design study with emphasis on energy conservation. Volume 3: Appendices
[AD-A006805] 07 p0149 N75-25305
MILITARY AIRCRAFT
Energy-related research and development in the United States Air Force
06 p0075 N75-16979
MILITARY SPACECRAFT
Solar cell and array standardization for Air Force spacecraft
05 p0002 A75-10486
MILITARY TECHNOLOGY
The 1974 AGARD Annual Meeting: The energy problem: Impacts on military research and development
06 p0075 N75-16977
MILITARY VEHICLES
Energy-related research and development in the United States Air Force
06 p0075 N75-16979
MINERAL DEPOSITS
Bureau of Mines research 1973. Summary of significant results in mining, metallurgy, and energy
[PB-234733/4] 05 p0040 N75-15171
Assessment of uranium and thorium resources in the United States and the effect of policy alternatives
[PB-238658/9] 07 p0143 N75-24133
Mineral resources and the environment --- energy conservation and energy policy
[PB-239579/6] 07 p0153 N75-26486
Mineral resources and the environment. Appendix to section 1: Report of panel on materials conservation through technology
[PB-239580/4] 07 p0153 N75-26487
Mineral resources and the environment. Appendix to section 2: Report of panel on estimation of mineral reserves and resources
[PB-239581/2] 07 p0153 N75-26488
MINERAL EXPLORATION
Remote sensing applied to energy-related problems; Proceedings of the Symposium-Course, Miami, Fla., December 2-4, 1974
07 p0118 A75-35451
Remote sensing for Western coal and oil shale development planning and environmental analysis
07 p0118 A75-35458
Assessment of uranium and thorium resources in the United States and the effect of policy alternatives
[PB-238658/9] 07 p0143 N75-24133
MINERAL OILS
Technological and commercial possibilities which result by using a high temperature reactor for the future supply of mineral oil in the FRG
[JUL-1017-RG] 05 p0029 N75-11470
MINERALS
The 1973 fuel and electrical energy requirements of selected mineral industries activities
07 p0134 N75-22899
MINES (EXCAVATIONS)
Degasification of the Mary Lee coalbed near Oak Grove, Jefferson County, Alabama, by vertical borehole in advance of mining
[BM-RI-7968] 05 p0028 N75-11462
Design optimization in underground coal systems
[PB-239075/5] 07 p0145 N75-24153
The mine map repository: A source of mine map data
[PB-240136/2] 07 p0148 N75-25288
Methane emission from U.S. Coal mines in 1973, a survey
[PB-240154/5] 07 p0152 N75-25354

MINIATURIZATION
Development and performance of a miniature, high-voltage thermal battery
05 p0007 A75-10559
MINIMAX TECHNIQUE
The solution of information-deficiency problems of electroenergy technology --- optimal decision making
06 p0062 A75-28508
MINING
Remote sensing applied to mine subsidence - Experience in Pennsylvania and the Midwest
07 p0121 A75-36809
Bureau of Mines research 1973. Summary of significant results in mining, metallurgy, and energy
[PB-234733/4] 05 p0040 N75-15171
Fuel and energy consumption in the coal industries
[PB-237151/6] 06 p0088 N75-18744
Regional economics: A subset of simulation of the effects of coal-fired power development in the four corners region
06 p0107 N75-21153
The potential for developing Alaskan coals for clean export fuels, phase 1
[PB-238539/1] 07 p0127 N75-21786
Economic system analysis of coal preconversion technology
[PB-239383/3] 07 p0151 N75-25325
MIRRORS
Performance of a laser mirror heat pipe
[ASME PAPER 74-WA/HT-61] 05 p0018 A75-16869
Use of flexible reflective surfaces for solar energy concentration
06 p0056 A75-25678
Energy distribution in the concentration field of a two-mirror device with a paraboloidal back reflector
07 p0122 A75-37157
MISSION PLANNING
Mission applications of electric propulsion
[AIAA PAPER 74-1085] 05 p0010 A75-11284
MODULES
Advanced heat source concepts --- module design for space electric power generation
[MIM-2134] 05 p0024 N75-10591
MOLECULAR GASES
Conversion of electrical energy into laser radiation energy in high pressure mixtures of molecular gases
07 p0133 N75-22722
MOLECULAR INTERACTIONS
Workshop in Gas-Phase Molecular Interactions and the Nation's Energy Problem
[PB-236712/6] 06 p0086 N75-18718
MOTORS
Mechanical thermal motor
[NASA-CASE-MFS-23062-1] 07 p0160 N75-27561
MULTILAYER INSULATION
Solar electric propulsion system thermal analysis --- including heat pipes and multilayer insulation
[NASA-CR-120770] 07 p0147 N75-24842
MULTISPECTRAL BAND SCANNERS
Multispectral data systems for energy related problems --- strip mining and power plant site monitoring
07 p0118 A75-35464
Net radiation and other energy-related maps from remotely sensed imagery
07 p0121 A75-36811
MULTISPECTRAL PHOTOGRAPHY
Relationships of earth fracture systems to productivity of a gas storage reservoir
[PB-237894/1] 06 p0089 N75-18759

N

NASA PROGRAMS
NASA objectives for improved solar power plants
05 p0002 A75-10485
Mission applications of electric propulsion
[AIAA PAPER 74-1085] 05 p0010 A75-11284
The application of aerospace technology in the cryogenics field
06 p0048 A75-23239
Summary of NASA-Lewis Research Center solar heating and cooling and wind energy programs
07 p0123 A75-37240
Proceedings of the first 1974 Technology Transfer Conference
[NASA-CR-142119] 06 p0078 N75-17188
Transfer of space technology to industry
06 p0078 N75-17195
NATURAL GAS
Some LNG vehicle developments --- for automotive conversion systems and fueling stations
06 p0048 A75-23236
The Shell natural gas airship, and other L.T.A. activities by Aerospace Developments
[AIAA PAPER 75-932] 07 p0121 A75-37008
Further development of scientific research in the field of geology and of the survey and exploration of petroleum and gas
[JPRS-63414] 05 p0027 N75-11410
Offshore investigation: Producible shut-in leases, January 1974, phase 1 --- potentially productive oil and gas wells
05 p0027 N75-11457
Offshore investigation: Producible shut-in leases as of January 1974, phase 2 --- an estimation of natural gas reserves in offshore wells
05 p0027 N75-11458
Evaluation of coal-gasification technology. Part 1: Pipeline-W quality gas
[PB-234036/2] 05 p0034 N75-13396
Procedure for preparation for shipment of natural gas storage vessel
[NASA-CR-141455] 05 p0036 N75-14135
Natural gas fields, Cook Inlet Basin, Alaska
[PB-235767/1] 06 p0066 N75-16071
Total energy supply and demand, volume 1, chapter 6 --- natural gas, economic analysis
06 p0067 N75-16082
Radiological surveillance program for the project Gasbuggy production test, 15 May - 6 November 1973
[NERC-LV-539-30] 06 p0073 N75-16337
Progress and problems in developing nuclear and other experimental techniques for recovering natural gas in the Rocky Mountain area
[B-164105] 06 p0075 N75-16975
Utilizing fuel more efficiently in reheating and heat treatment furnaces
[BLL-M-21957-(5828.4F)] 06 p0080 N75-17467
Experience in the first step of the mastery of the U-25 device
06 p0081 N75-17793
OCS oil and gas: An environmental assessment, volume 3 --- effect of natural phenomena on OCS gas and oil development
06 p0083 N75-17836
OCS oil and gas: An environmental assessment, Volume 1
06 p0083 N75-17837
OCS oil and gas: An environmental assessment, Volume 2
06 p0084 N75-17838
OCS oil and gas: An environmental assessment, volume 4
06 p0084 N75-17839
OCS oil and gas: An environmental assessment, volume 5
06 p0084 N75-17840
Natural gas in Alabama
[PB-236582/3] 06 p0088 N75-18737
Relationships of earth fracture systems to productivity of a gas storage reservoir
[PB-237894/1] 06 p0089 N75-18759
A realistic view of US natural gas supply
[PB-238964/1] 07 p0134 N75-22898
Stratigraphy, sedimentology and oil and gas geology of the Lower Cretaceous in central Alberta
07 p0137 N75-22961
Vulnerability of natural gas systems --- industrial management and operations
[AD-A007583] 07 p0144 N75-24143
Atlantic outer continental shelf energy resources: An economic analysis
[COM-75-10330/9] 07 p0152 N75-26484
Mineral resources and the environment. Appendix to section 2: Report of panel on estimation of mineral reserves and resources
[PB-239581/2] 07 p0153 N75-26488
Mineral resources and the environment. Appendix to section 4: Report of panel on demand for fuel and mineral resources
[PB-239583/8] 07 p0153 N75-26490

MER: Ultimate recovery vs rate. A reservoir simulation study. Volume 1 --- oil and gas production
[PB-239767/7] 07 p0157 N75-26526
MER: Ultimate recovery vs rate. A reservoir simulation study. Volume 2: Appendices --- oil and gas production
[PB-239768/5] 07 p0157 N75-26527
Carbon isotopes in oil-gas geology
[NASA-TT-F-682] 07 p0160 N75-27563
NAVIGATION AIDS
The use of solar cells in the lighthouse service
06 p0054 A75-24255
NETHERLANDS
The economics of using wind power for electricity supply in the Netherlands and for water supply on Curacao
[NASA-TT-F-15982] 05 p0024 N75-10587
NEUTRON EMISSION
An electron beam initiated fusion neutron generator
06 p0045 A75-19657
NEW YORK
Economic and energy conservation relationship relevant to state of New York building design and contract awards
[PB-237006/2] 06 p0082 N75-17824
Use of solar energy in buildings in New York state
[PB-236974/2] 06 p0083 N75-17825
NICKEL CADMIUM BATTERIES
Milliwatt fuel cell system for sensors
05 p0008 A75-10565
High energy density sintered plate type sealed nickel cadmium battery cells. I - The positive electrode/plaque relationships
05 p0008 A75-10569
High energy density sintered plate type nickel-cadmium battery cells. II - Electrochemical impregnation methods to produce nickel oxide electrodes
05 p0008 A75-10570
A novel negative-limited sealed nickel-cadmium cell
05 p0008 A75-10571
Nickel-cadmium cells
[NASA-CR-143715] 07 p0128 N75-21792
NICKEL ZINC BATTERIES
Nickel-zinc batteries for hybrid vehicle operation
[PB-239710/7] 07 p0156 N75-26514
NITROGEN
Concerning the use of a nitrogen-potassium gaseous mixture for protection of MHD-generator electrodes by suction
07 p0112 A75-31569
NITROGEN OXIDES
Oxides of nitrogen control techniques for appliance conversion to hydrogen fuel
05 p0006 A75-10541
NOISE REDUCTION
Organic Rankine cycle silent power plant 1.5 kW, 28 volts dc
[AD-A000900] 06 p0088 N75-18745
NONCONDENSABLE GASES
Controlled heat pipes
05 p0012 A75-12912
NORTH CAROLINA
A state energy management plan for North Carolina, phase 1: A quantitive description of the current situation and analysis of the determinants and consequences of future energy use
[PB-238197/8] 07 p0130 N75-21819
NORWAY
Oslo's future power supply
[NF-20121] 06 p0067 N75-16087
NUCLEAR ELECTRIC POWER GENERATION
Nuclear energy requirements for hydrogen production from water
05 p0005 A75-10533
Problems of direct conversion of thermal and nuclear energy to electric energy
07 p0120 A75-36415
California energy workshop: Developing a plan of action to meet the energy crisis in California --- oil recovery, nuclear electric power generation, and offshore energy sources
[PB-237045/0] 06 p0082 N75-17822
The action of EDF in the prevention of atmospheric pollution --- by expanding nuclear electric power generation
[BLL-CE-TRANS-6500-(9022.09)] 06 p0083 N75-17833
A preliminary technology assessment of ocean thermal gradient energy generation
[PB-238646/4] 07 p0144 N75-24147
Energy policy and resource management
[GPO-33-634] 07 p0149 N75-25300
Study of an integrated power, water and wastewater utility complex
[PB-239408/8] 07 p0157 N75-26523
An agro-power-waste water complex for land disposal of waste heat and waste water
[PB-239675/2] 07 p0161 N75-27570
NUCLEAR ELECTRIC PROPULSION
SENSE 2: Space applications of nuclear power. Volume 1: Commercial communications satellite
[AEC-SNS-3063-3-VOL-1] 06 p0065 N75-15742
NUCLEAR ENERGY
The economics of nuclear power
06 p0047 A75-22734
Fuels, minerals, and human survival --- Book
07 p0117 A75-34850
Advanced nuclear research
[GPO-41-253] 05 p0026 N75-10764
Development, growth, and state of the nuclear industry
[GPO-33-873] 05 p0038 N75-15150
Comparison of the environmental aspects of nuclear and fossil fueled power stations
[CONF-740555-1] 06 p0077 N75-16995
Production of hydrogen from water using nuclear energy. A review --- for hydrogen-based energy
[JAERI-M-5642] 06 p0093 N75-19824
Ainse Engineering Conference --- energy report
[CONF-740814-ABSTS] 07 p0129 N75-21801
Brief examination of the status of nuclear power in the republic, using 1974 costs
[PEL-237E] 07 p0135 N75-22909
Energy Reorganization Act of 1974 --- the Energy Research and Development Administration and Nuclear Energy Commission
[S-REPT-93-1252] 07 p0142 N75-24123
Evaluation of power facilities; A reviewer's handbook --- electric and nuclear power plants
[PB-239221/5] 07 p0146 N75-24198
NUCLEAR EXPLOSIONS
Project Rio Blanco data report: Production testing (RB-E-01), November 1973 and January - February 1974
[NVO-148] 06 p0094 N75-19833
NUCLEAR FISSION
Nuclear system that burns its own wastes shows promise
[NASA-NEWS-RELEASE-75-44] 06 p0085 N75-18716
Advanced concepts in fusion-fission hybrid reactors
[UCRL-75835] 07 p0131 N75-22113
NUCLEAR FUELS
Alternative fuels for aviation
07 p0121 A75-36719
Exploration for fossil and nuclear fuels from orbital altitudes --- results of ERTS program for oil exploration
[NASA-TM-X-70781] 05 p0027 N75-11413
NUCLEAR FUSION
Conceptual design of a series of laser-fusion power plants of 100 to 3000 MW/e/
05 p0007 A75-10562
Current expectations for fusion power from toroidal machines
05 p0014 A75-12996
New applications for optical components - High energy focusing
05 p0015 A75-16525
The outlook for fusion energy sources - Remaining technological hurdles
06 p0059 A75-27782
Laser thermonuclear fusion
07 p0112 A75-32617
Utilization of plasma exhaust energy for fuel production
[COO-3028-7] 05 p0028 N75-11465
Applications of fusion power technology to the chemical industry
[BNL-18815] 05 p0029 N75-11730
Outlook for fusion energy sources: Remaining technological hurdles
[UCRL-75418] 05 p0029 N75-11745
Survey of applications of fusion power technology to the chemical and material processing industry
[BNL-18866] 05 p0031 N75-12443

Fusion power by magnetic confinement
[WASH-1290] 05 p0031 N75-12797
Status and objective of Tokamak systems for fusion research
[WASH-1295] 05 p0035 N75-13644
Interesting possibilities of fusion-fission --- for thermonuclear power generation
[BNWL-SA-5069] 06 p0096 N75-20106
Magnetic Energy Transfer and Storage (METS) program schedules for a Fusion Test Reactor (FTR)
[LA-5748-MS] 06 p0106 N75-21097
Review of the prospects for laser induced thermonuclear fusion
[AECL-4840] 06 p0106 N75-21099
MIT fusion technology program --- nuclear reactors and reactor materials
[COO-2431-1] 06 p0106 N75-21101
Synopsis of studies on synthetic fuels production by fusion reactors
[BNL-19336] 06 p0106 N75-21104
Advanced concepts in fusion-fission hybrid reactors
[UCRL-75835] 07 p0131 N75-22113

NUCLEAR HEAT
Nuclear district-heating and nuclear long-distance energy
[JUL-1077] 06 p0093 N75-19828

NUCLEAR MAGNETIC RESONANCE
Pulsed nuclear magnetic resonance studies of oil shales--estimation of potential oil yields
[PB-240023/2] 07 p0148 N75-25283

NUCLEAR PHYSICS
Technology and community development materials processing, and electrical and nuclear technology --- technical research center of Finland
05 p0031 N75-12695

NUCLEAR POWER PLANTS
Fundamentals of automatic control of space nuclear power plants --- Russian book
06 p0048 A75-23229
Nuclear power growth, 1974 - 2000 --- forecasting future reactor technology
[WASH-1139-74] 05 p0031 N75-12723
Application study of a nuclear coal solution gasification process for Oklahoma coal, volume 1
[PB-236156/6] 05 p0037 N75-14279
Coordinated extension of power plants in the 1980's. A statement submitted to the Ministry of Commerce, Shipping, and Industry by the Energy Committee of the Power Plants
[NP-20023] 06 p0067 N75-16088
Interesting possibilities of fusion-fission --- for thermonuclear power generation
[BNWL-SA-5069] 06 p0096 N75-20106
Nuclear reactor process heat capabilities, potential, and economics
[CONF-741032-1] 07 p0131 N75-22112
Brief examination of the status of nuclear power in the republic, using 1974 costs
[PEL-237E] 07 p0135 N75-22909
Nuclear energy center site survey: Scope of work
[PB-240453/1] 07 p0152 N75-25348
Environmental statement related to the proposed Callaway Plant units 1 and 2. Union Electric Company docket nos. STN 50-483 and STN 50-486
[PB-240193/3] 07 p0152 N75-25349
Waste heat disposal from nuclear power plants
[CCM-75-10407/5] 07 p0158 N75-27324

NUCLEAR POWER REACTORS
Space power systems - Retrospect and prospect
[IAF PAPER 74-082] 05 p0014 A75-13714
Fusion power by magnetic confinement
[WASH-1290] 05 p0031 N75-12797

NUCLEAR POWERED SHIPS
Submarine tanker concepts and problems
[CCM-75-10009/9] 07 p0132 N75-22264

NUCLEAR PROPULSION
Nuclear propulsion technology transfer to energy systems
[AIAA PAPER 74-1072] 05 p0001 A75-10264
Physics and potentials of fissioning plasmas for space power and propulsion
[IAF PAPER 74-087] 05 p0015 A75-13719

NUCLEAR REACTOR CONTROL
Fusion power by magnetic confinement
[WASH-1290] 05 p0031 N75-12797

NUCLEAR REACTORS
The production of gaseous energy carriers from fossil fuels
06 p0049 A75-23502
Energy supply in a closed cycle --- nuclear energy for nonelectrical use
06 p0049 A75-23503
MIT fusion technology program --- nuclear reactors and reactor materials
[COO-2431-1] 06 p0106 N75-21101
Synopsis of studies on synthetic fuels production by fusion reactors
[BNL-19336] 06 p0106 N75-21104
Direct conversion of plasma energy to electricity for mirror fusion reactors
[UCRL-76051] 07 p0129 N75-21800
Advanced concepts in fusion-fission hybrid reactors
[UCRL-75835] 07 p0131 N75-22113

NUCLEAR RESEARCH
Fusion power research - Where do we stand
05 p0013 A75-12995
Advanced nuclear research
[GPO-41-253] 05 p0026 N75-10764

O

OCCLUSION
Arterial gas occlusions in operating heat pipes
[AIAA PAPER 75-657] 07 p0114 A75-32915

OCEAN CURRENTS
Power from ocean waves
[ASME PAPER 74-WA/PWR-5] 05 p0018 A75-16879
Gulf stream based ocean thermal power plants
[AIAA PAPER 75-643] 06 p0063 A75-28603

OCEAN DATA ACQUISITIONS SYSTEMS
Energy sources for ocean technology --- for unmanned surface stations and manned underwater stations
07 p0114 A75-33118

OCEAN SURFACE
Ocean thermal power and windpower systems - Natural solar energy conversion for near-term impact on world energy markets
06 p0060 A75-27790
Characteristics of a rocking wave power device --- for waterwave energy conversion
06 p0062 A75-28450
Systems aspects of ocean thermal energy conversion
[AIAA PAPER 75-615] 06 p0062 A75-28593
Site limitations on Solar Sea Power Plants
[AIAA PAPER 75-618] 06 p0062 A75-28594
Ocean thermal gradient hydraulic power plant
07 p0124 A75-37849
Foam solar sea power plant
07 p0124 A75-37850
Energy exchange at the surface of the western North Atlantic Ocean
[AD-A007296] 07 p0146 N75-24285

OCEANOGRAPHY
A preliminary technology assessment of ocean thermal gradient energy generation
[PB-238646/4] 07 p0144 N75-24147

OCEANS
Solar sea thermal energy
[GPO-37-476] 05 p0030 N75-12430

OCTANES
Benthal decomposition of adsorbed octadecane --- impact of oil pollution, deoxygenation of waterways
06 p0106 N75-20891

OFFSHORE ENERGY SOURCES
Hot side heat exchanger for an ocean thermal difference power plant
05 p0004 A75-10527
Offshore investigation: Producible shut-in leases, January 1974, phase 1 --- potentially productive oil and gas wells
05 p0027 N75-11457
Offshore investigation: Producible shut-in leases as of January 1974, phase 2 --- an estimation of natural gas reserves in offshore wells
05 p0027 N75-11458
Offshore investigation: Producible shut-in leases as of January 1974 (second phase)
[PB-234490/1] 05 p0040 N75-15174
California energy workshop: Developing a plan of action to meet the energy crisis in California --- oil recovery, nuclear electric power generation, and offshore energy sources
[PB-237045/0] 06 p0082 N75-17822

OCS oil and gas: An environmental assessment, volume 3 --- effect of natural phenomena on OCS gas and oil development
06 p0083 N75-17836
OCS oil and gas: An environmental assessment, volume 1
06 p0083 N75-17837
OCS oil and gas: An environmental assessment, volume 4
06 p0084 N75-17839
OCS oil and gas: An environmental assessment, volume 5
06 p0084 N75-17840
Relationships between bidding and hydrocarbon production of the Federal Outer Continental Shelf (through 1970) --- offshore energy sources
[PB-238188/7] 07 p0127 N75-21788

OFFSHORE PLATFORMS
Solar Sea Power Plants (SSPP): A critical review and survey
[NASA-TM-X-70783] 05 p0028 N75-11459

OHIO
Determine utility of ERTS-1 to detect and monitor area strip mining and reclamation --- southeastern Ohio
[E75-10327] 07 p0158 N75-27515

OHMIC DISSIPATION
Silicon solar cells for highly concentrated sunlight
07 p0120 A75-36363

OIL ADDITIVES
Dry oil
[BIL-M-23508-(5828.4F)] 06 p0074 N75-16969

OIL EXPLORATION
Oil exploration needs for digital processing of imagery
05 p0001 A75-10437
Laser induced luminescence signatures of refined and virgin crude petroleum - Their composition and remote sensing implications
06 p0050 A75-23790
Further development of scientific research in the field of geology and of the survey and exploration of petroleum and gas
[JPRS-63414] 05 p0027 N75-11410
Exploration for fossil and nuclear fuels from orbital altitudes --- results of ERTS program for oil exploration
[NASA-TM-X-70781] 05 p0027 N75-11413
Offshore investigation: Producible shut-in leases, January 1974, phase 1 --- potentially productive oil and gas wells
05 p0027 N75-11457
Bureau of Mines energy program, 1973 --- discovery and production of oil, gas, and fluid fuels
[PB-234682/3] 05 p0040 N75-15172
Offshore investigation: Producible shut-in leases as of January 1974 (second phase)
[PB-234490/1] 05 p0040 N75-15174
Development of oil and gas on the Continental Shelf
[GPO-31-891] 06 p0075 N75-16973
OCS oil and gas: An environmental assessment, volume 3 --- effect of natural phenomena on OCS gas and oil development
06 p0083 N75-17836
OCS oil and gas: An environmental assessment, Volume 2
06 p0084 N75-17838
OCS oil and gas: An environmental assessment, volume 4
06 p0084 N75-17839
OCS oil and gas: An environmental assessment, volume 5
06 p0084 N75-17840
Stratigraphy, sedimentology and oil and gas geology of the Lower Cretaceous in central Alberta
07 p0137 N75-22961
Pulsed nuclear magnetic resonance studies of oil shales--estimation of potential oil yields
[PB-240023/2] 07 p0148 N75-25283

OIL FIELDS
Solvent stimulation tests in two California oilfields
[PB-237849/5] 06 p0090 N75-18761

OIL RECOVERY
Prototype oil shale leasing program
[GPO-28-686] 05 p0039 N75-15160
Char oil energy development
[PB-234018/0] 05 p0040 N75-15173
Basic research needs for tertiary oil recovery: Proceedings of a National Science Foundation Workshop
[PB-236726/6] 06 p0066 N75-16072
Average oil yeild tables for oil shale sequences in cores from the Uinta Basin, Utah, that average 15, 20, 25, 30, 35, and 40 gallons per ton
[PB-236068/3] 06 p0072 N75-16124
Dry oil
[BLL-M-23508-(5828.4F)] 06 p0074 N75-16969
California energy workshop: Developing a plan of action to meet the energy crisis in California --- oil recovery, nuclear electric power generation, and offshore energy sources
[PB-237045/0] 06 p0082 N75-17822
OCS oil and gas: An environmental assessment, Volume 1
06 p0083 N75-17837
Pollutional problems and research needs for an oil shale industry
[PB-236608/6] 06 p0084 N75-17848
Profitability analysis of producing crude oil by waterflooding using a simulation technique
[PB-237843/8] 06 p0088 N75-18738
Solvent stimulation tests in two California oilfields
[PB-237849/5] 06 p0090 N75-18761
Evaluation of thermal methods for recovery of viscous oils in Missouri and Kansas
[PB-237831/3] 06 p0090 N75-18762
In situ oil shale conversion and recovery
[SLA-74-0162] 06 p0093 N75-19825
Methodical approach to temperature and pressure measurements for in situ energy-recovery processes
[UCID-16631] 06 p0097 N75-20693
Production of oil from fractured reservoirs by water displacement
07 p0127 N75-21716
Oil displacement by different surfactant and polymer waterflood systems
07 p0134 N75-22858
At-sea testing of a high seas oil recovery system
[AD-A006938] 07 p0136 N75-22953
Interdisciplinary study of atmospheric processes and constituents of the mid-Atlantic coastal region. Attachment 3: Data set for Craney Island oil refinery installation experiment --- air pollution monitoring
[NASA-CR-142823] 07 p0141 N75-24121
Interdisciplinary study of atmospheric processes and constituents of the mid-Atlantic coastal region. Attachment 4: Data set for background investigation of atmospheric constituents for Nansemond River site --- a proposed oil refinery site
[NASA-CR-142821] 07 p0141 N75-24122
Shale retorting in a 150-ton batch-type pilot plant
[PB-240263/4] 07 p0151 N75-25328
Atlantic outer continental shelf energy resources: An economic analysis
[COM-75-10330/9] 07 p0152 N75-26484
MER: Ultimate recovery vs rate. A reservoir simulation study. Volume 1 --- oil and gas production
[PB-239767/7] 07 p0157 N75-26526
MER: Ultimate recovery vs rate. A reservoir simulation study. Volume 2: Appendices --- oil and gas production
[PB-239768/5] 07 p0157 N75-26527

OIL SLICKS
At-sea testing of a high seas oil recovery system
[AD-A006938] 07 p0136 N75-22953

OILS
Impact of motor gasoline lead additive regulations on petroleum refineries and energy resources, 1974-1980, phase 1
[PB-234185/7] 05 p0025 N75-10601
Synthetic oil from coal
[PB-234460/4] 05 p0040 N75-15176
Collection and concentration of solar energy using Fresnel type lenses
[NASA-CR-142194] 06 p0080 N75-17784
Submarine tanker concepts and problems
[COM-75-10009/9] 07 p0132 N75-22264
World oil developments and US oil import policies
[GPO-22-893] 07 p0148 N75-25294

OKLAHOMA
Application study of a nuclear coal solution gasification process for Oklahoma coal, volume 1 [PB-236156/6] 05 p0037 N75-14279
Evaluation of the suitability of Skylab data for the purpose of petroleum exploration [E75-10257] 07 p0147 N75-25237
ONBOARD EQUIPMENT
Cryogenic heat pipe experiment - Flight performance onboard a sounding rocket [AIAA PAPER 75-729] 07 p0113 A75-32872
OPERATIONAL PROBLEMS
Main problems met in the study of cryogenic generators 06 p0061 A75-27962
Conference proceedings, Steam Power Plant Workshop [PB-239514/3] 07 p0144 N75-24148
OPTICAL DATA PROCESSING
Oil exploration needs for digital processing of imagery 05 p0001 A75-10437
OPTICAL EQUIPMENT
Optical interfaces in solar energy utilization 07 p0123 A75-37331
OPTICAL FILTERS
Collection and concentration of solar energy using Fresnel type lenses [NASA-CR-142194] 06 p0080 N75-17784
OPTICAL PROPERTIES
Research on cadmium stannate selective optical films for solar energy applications [PB-236208/5] 06 p0071 N75-16117
OPTICAL REFLECTION
The COMSAT non-reflective silicon solar cell - A second generation improved cell 06 p0053 A75-24245
Use of flexible reflective surfaces for solar energy concentration 06 p0056 A75-25678
Stationary concentrating reflector cum tracking absorber solar energy collector - Optical design characteristics 07 p0120 A75-36307
OPTICAL TRACKING
Stationary concentrating reflector cum tracking absorber solar energy collector - Optical design characteristics 07 p0120 A75-36307
OPTIMAL CONTROL
Powerplant energy management --- transport aircraft engine thrust control [AIAA PAPER 74-1066] 05 p0001 A75-10259
Extended energy management methods for flight performance optimization [AIAA PAPER 75-30] 05 p0021 A75-18269
Fundamentals of automatic control of space nuclear power plants --- Russian book 06 p0048 A75-23229
OPTIMIZATION
The Energy Systems Optimization Computer Program /ESOP/ developed for Modular Integrated Utility Systems /MIUS/ analysis 05 p0006 A75-10551
Optimization of parameters of permeable thermoelectric generators 07 p0110 A75-30487
Optimal solar energy collector system 07 p0115 A75-33970
On the optimum tilt of a solar collector 07 p0115 A75-33971
Optimization of the operating conditions of a combined generator-cooler thermoelement 07 p0121 A75-37155
Optimization of fusion power density in the two-energy-component tokamak reactor 07 p0124 A75-37836
ORBITAL ASSEMBLY
Overcoming two significant hurdles to space power generation Transportation and assembly [AIAA PAPER 75-641] 06 p0063 A75-28601
ORGANIC COMPOUNDS
Biological conversion of organic refuse to methane [PB-235468/6] 05 p0041 N75-15183
ORGANIC LIQUIDS
Technology considerations for Organic Rankine Cycle Electric Power Systems 05 p0002 A75-10484
ORGANIC MATERIALS
Two-stage methane production from solid wastes [ASME PAPER 74-WA/ENER-11] 05 p0017 A75-16842
ORGANIC SEMICONDUCTORS
Analysis of conversion efficiency of organic-semiconductor solar cells 05 p0010 A75-11146
ORGANIC SULFUR COMPOUNDS
Chemistry of organic sulfur compounds contained in petroleums and petroleum products, Volume 7 [TT-70-57759] 07 p0138 N75-23691
ORGANIC WASTES (FUEL CONVERSION)
Production of gaseous fuel by pyrolysis of municipal solid waste [NASA-CR-141791] 07 p0140 N75-24105
OXIDATION
Electrically rechargeable redox flow cells 05 p0008 A75-10573
Development of a soluble reactants and products secondary battery 07 p0127 N75-21790
The oxidation of ethylene in automotive engine exhaust gas; an experimental investigation 07 p0138 N75-23719
OXIDE FILMS
Transparent heat-mirror films of TiO2/Ag/TiO2 for solar energy collection and radiation insulation 05 p0015 A75-16378
A 15% efficient antireflection-coated metal-oxide-semiconductor solar cell 07 p0119 A75-36275

P

P-N JUNCTIONS
GaP p-n junctions and possibilities for their application in the conversion of solar energy into electric 05 p0011 A75-12198
II-VI photovoltaic heterojunctions for solar energy conversion 05 p0012 A75-12734
Dynamic method for calculating the series resistance of a semiconductor photoelectric converter 06 p0057 A75-26713
High-efficiency graded band-gap Al/x/Ga/1-x/As-GaAs solar cell 06 p0058 A75-27519
The conversion efficiency of ideal Shockley p-n junction photovoltaic converters in concentrated sunlight 07 p0120 A75-36362
Dynamic calculation of semiconductor photoconverter series resistance 07 p0122 A75-37164
P-TYPE SEMICONDUCTORS
Advances in the theory and application of ESF cells --- Back Surface Field solar cells 07 p0123 A75-37402
PARABOLIC BODIES
Design of a tubular heat collector for a solar power installation with a paraboloCylindric concentrator 05 p0020 A75-17069
PARABOLIC REFLECTORS
Energy distribution in the concentration field of a two-mirror device with a paraboloidal back reflector 07 p0122 A75-37157
Comparative performance characteristics of cylindrical parabolic focusing and flat plate solar energy collectors [CONF-741104-3] 06 p0103 N75-20872
PARABOLOID MIRRORS
Compact solar energy concentrator 05 p0021 A75-19050
Method of calibrating a solar power plant with a paraboloidal mirror 07 p0116 A75-34315
Fabricating paraboloidal high-temperature solar concentrators from mollified sectors 07 p0122 A75-37166
PARALLELEPIPEDS
Approximate analysis of the steady temperature field of a parallelepiped with a local energy source 07 p0112 A75-32212

PARTICULATE SAMPLING
The collaborative study of EPA methods, 5, 6, and 7 in fossil fuel-fired steam generators
[PB-237695/2] C6 p0091 N75-18788
PASSENGER AIRCRAFT
Energy efficiency of current intercity passenger transportation modes
[AIAA PAPER 75-314] C6 p0047 A75-22513
PAVEMENTS
Snow and ice removal from pavements using stored earth energy --- via heat pipes
[PB-240623/9] C7 p0162 N75-27581
PELLETS
A review of thermal battery technology
05 p0007 A75-10557
Laser compression of matter - Optical power and energy requirements
C6 p0046 A75-22352
Pellet type thermal battery
[SAND-74-0007] C6 p0076 N75-16991
PERFORMANCE
Development of a soluble reactants and products secondary battery
C7 p0127 N75-21790
PERFORMANCE PREDICTION
A 10% efficient economic RTG design --- radioisotope thermoelectric generator
C5 p0003 A75-10506
Solar augmented home heating heat pump system
C5 p0004 A75-10524
Development of a theoretical method for predicting the performance of hydrogen-oxygen MHD generators
C5 p0009 A75-10578
Electrostatic voltage generation from flowing water
C5 p0009 A75-10580
The analysis of the performance of a pancake absorber-heat exchanger for a solar concentrator
[ASME PAPER 74-WA/SOL-1] 05 p0018 A75-16884
Thermal performance characteristics of heat pipes
06 p0046 A75-21465
Performance of a solar battery using quasi-cylindrical array of plane mirrors as a concentrator
07 p0109 A75-29478
Outdoor flat-plate collector performance prediction from solar simulator test data
[AIAA PAPER 75-741] C7 p0113 A75-32862
Investigations of the factors affecting the performance of a rotating heat pipe
C7 p0120 A75-36357
A generalised analysis of the performance of a variety of drive systems for high Reynolds number, transonic wind tunnels
[RAE-TR-73134] C6 p0073 N75-16572
Electronic model of the U-25 device
06 p0081 N75-17794
Solar collector performance evaluated outdoors at NASA-Lewis Research Center
[NASA-TM-X-71689] C7 p0128 N75-21794
The effect of sunshine testing on terrestrial solar cell system components
[NASA-TM-X-71722] C7 p0140 N75-24109
Solar collector performance studies
[PB-239758/6] 07 p0156 N75-26520
PERFORMANCE TESTS
Performance testing of thermoelectric generators at JPI
C5 p0002 A75-10503
Operational testing of the high performance thermoelectric generator /HPG-02/
C5 p0003 A75-10505
Comparative performance characteristics of cylindrical parabolic and flat plate solar energy collectors
[ASME PAPER 74-WA/ENER-3] 05 p0016 A75-16835
Performance of a laser mirror heat pipe
[ASME PAPER 74-WA/HT-61] 05 p0018 A75-16869
Investigation of the technology and performance of lithium doped solar cells --- feasibility study for mass production
06 p0052 A75-24219
Performance of advanced silicon solar cells in a space environment
C6 p0052 A75-24232
Solar collector performance evaluated outdoors at NASA-Lewis Research Center
06 p0058 A75-27531
Status of the NASA-Lewis flat-plate collector tests with a solar simulator
06 p0058 A75-27533
The International Heat Pipe Experiment --- ten experiments in zero gravity
[AIAA PAPER 75-726] 07 p0113 A75-32870
Cryogenic heat pipe experiment - Flight performance onboard a sounding rocket
[AIAA PAPER 75-729] 07 p0113 A75-32872
Measurements of the performance of an electrohydrodynamic heat pipe
[AIAA PAPER 75-659] 07 p0114 A75-32917
Field performance and operation of a flat-glass solar heat collector
07 p0115 A75-33973
Development of the KIVA-I MHD open cycle generator
07 p0124 A75-37686
PERIODIC VARIATIONS
Experience in setting up solar-energy survey for Azerbaidzhan
C5 p0020 A75-17081
PERMEABILITY
Capillary flow through heat-pipe wicks
[AIAA PAPER 75-661] 07 p0114 A75-32919
Fracture-induced permeability: Present situation and prospects for coal
[UCID-16593] C6 p0094 N75-19830
PERTURBATION THEORY
Extended energy management methods for flight performance optimization
[AIAA PAPER 75-30] 05 p0021 A75-18269
PETROGRAPHY
Evaluation of the suitability of Skylab data for the purpose of petroleum exploration
[E75-10257] 07 p0147 N75-25237
PETROLOGY
Coal petrography and petrology. A bibliography 1964 - 1973
[PB-236351/3] C6 p0072 N75-16123
The influence of the petrology of the Karagandin coals on their methane contents
[BLL-RTS-9309] 07 p0158 N75-27511
PHASE TRANSFORMATIONS
Thermodynamic considerations of 'solid state engines' based on thermoelastic martensitic transformations and the shape memory effect
06 p0045 A75-19631
PHOTOCHEMICAL REACTIONS
Photochemical conversion of solar energy
[PB-236266/3] C5 p0037 N75-14281
Photochemical conversion of solar energy --- study of iron-thionine photogalvanic cells
[PB-235474/4] 05 p0038 N75-14282
Photochemical conversion of solar energy
[PB-235503/0] 06 p0070 N75-16106
Photochemical conversion of solar energy
[PB-238533/4] 07 p0143 N75-24132
PHOTOELECTRIC CELLS
Temperature sensor for photoelectric energy converters
06 p0057 A75-26712
Dynamic method for calculating the series resistance of a semiconductor photoelectric converter
06 p0057 A75-26713
Full-scale tests of 'photovolt' high-voltage photocells at high light flux levels
07 p0122 A75-37162
Photoelectric energy converter temperature sensor
07 p0122 A75-37163
Dynamic calculation of semiconductor photoconverter series resistance
07 p0122 A75-37164
PHOTOELECTRIC GENERATORS
GaP p-n junctions and possibilities for their application in the conversion of solar energy into electric
05 p0011 A75-12198
Testing of a photoelectric generator in a mountainous region of the Azerbaidzhan SSR
06 p0057 A75-26714
Dependence of the basic parameters of Al/x/Ga/1-x/As-GaAs solar converters on temperature and optical intensity
07 p0112 A75-32824
Investigation of the electrical and temperature characteristics of a silicon photoelectric converter under natural conditions
07 p0116 A75-34314

Investigation of photoelectric converter operation under conditions of strong illumination
07 p0119 A75-36015
Photoelectric generator testing in the Azerbaidzhan SSR mountains
07 p0122 A75-37165

PHOTOLUMINESCENCE
Laser induced luminescence signatures of refined and virgin crude petroleum - Their composition and remote sensing implications
06 p0050 A75-23790

PHOTOMAPPING
Net radiation and other energy-related maps from remotely sensed imagery
07 p0121 A75-36811

PHOTOSYNTHESIS
Prospects of photosynthetic energy production
06 p0060 A75-27792
Fuel production /biomass energy/ --- by fuel plantation development
07 p0111 A75-31275
Proceedings of the Workshop on Bio-Solar Conversion
[PB-236142/6] 06 p0069 N75-16096

PHOTOVOLTAGES
Advances in the theory and application of BSF cells --- Back Surface Field solar cells
07 p0123 A75-37402

PHOTOVOLTAIC CELLS
NASA objectives for improved solar power plants
05 p0002 A75-10485
Status of JPL solar powered experiments for terrestrial applications
05 p0005 A75-10530
II-VI photovoltaic heterojunctions for solar energy conversion
05 p0012 A75-12734
Methods for low cost manufacture of silicon solar arrays
[ASME PAPER 74-WA/ENER-4] 05 p0016 A75-16836
Improvements in analysis and technology of silicon solar cells with increased efficiency
06 p0051 A75-24216
High efficiency silicon solar cells
06 p0052 A75-24217
CdS-Cu2S cells - An outlook for terrestrial applications
06 p0052 A75-24223
Further progress in the technology of silk screened CdS solar cells
06 p0052 A75-24225
Process development for low cost integrated solar arrays
06 p0054 A75-24259
The Mitre solar energy demonstration system
06 p0055 A75-24676
Temperature dependence of the spectral characteristics of quick-response silicon photocells
07 p0119 A75-36013
Full-scale tests of 'photovolt' high-voltage photocells at high light flux levels
07 p0122 A75-37162
The high intensity solar cell - Key to low cost photovoltaic power
07 p0123 A75-37400
Solar photovoltaic energy
[GPO-39-576] 05 p0032 N75-13379
Solar energy: Sandia's photovoltaic research program
[SIA-74-281] 05 p0034 N75-13392

PHOTOVOLTAIC CONVERSION
Photovoltaic power generation; Proceedings of the International Conference, Hamburg, West Germany, September 25-27, 1974
06 p0051 A75-24213
Report on photovoltaics research and technology in the United States
06 p0051 A75-24214
Historic development of photovoltaic power generation
06 p0051 A75-24215
An analysis of photovoltaic power generation and thermal control interfaces --- for solar arrays
06 p0053 A75-24243
Solar energy for earth: An AIAA assessment --- Book
07 p0110 A75-31267
Photovoltaic power --- solar energy for terrestrial applications
07 p0111 A75-31271
Geosynchronous satellite solar power --- energy transmission to earth
07 p0111 A75-31272
Solar energy - The physics of the greenhouse effect
07 p0120 A75-36306
The conversion efficiency of ideal Shockley p-n junction photovoltaic converters in concentrated sunlight
07 p0120 A75-36362
Effect of impurity doping concentration on solar cell output
07 p0124 A75-37404
Photovoltaic conversion of solar energy for terrestrial applications. Volume 2: Invited papers
[PB-236164/0] 06 p0072 N75-16122
Assessment of the technology required to develop photovoltaic power system for large scale national energy applications
[NSF/RA/N-74-072] 06 p0080 N75-17785
Cylindrical erbium oxide radiator structures for thermophotovoltaic generators
[AD-A001525] 07 p0129 N75-21806

PILOT PLANTS
Pilot solar air-conditioning plant and results of its use
07 p0111 A75-31512
Demonstration plant, clean boiler fuels from coal. Volume 3: Preliminary design/economics analysis
[PB-238529/2] 07 p0142 N75-24127
Shale retorting in a 150-ton batch-type pilot plant
[PB-240263/4] 07 p0151 N75-25328

PIPE FLOW
Controlled heat pipes
05 p0012 A75-12912

PIPELINES
Evaluation of coal-gasification technology. Part 1: Pipeline-W quality gas
[PB-234036/2] 05 p0034 N75-13396
Dry oil
[BLL-M-23508-(5828.4F)] 06 p0074 N75-16969
Energy statistics. A supplement to the summary of National Transportation statistics
[PB-236767/8] 07 p0130 N75-21817

PISTON ENGINES
The Stirling engine for vehicle propulsion
C6 p0050 A75-23509
Stirling cycle ergine and refrigeration systems
[NASA-CASE-NPO-13613-1] C7 p0133 N75-22747
PITCHING MOMENTS
Unsteady aerodynamics of variable pitch vertical axis windmill
[AIAA PAPER 75-649] C6 p0063 A75-28604
PLANTS (BOTANY)
Bio-conversion of water hyacinths into methane gas, part 1
[NASA-TM-X-72725] C7 p0160 N75-27564
PLASMA CONDUCTIVITY
Calculation of the electrical conductivity of the combustion products of the working medium in an open-cycle MHD generator
C7 p0112 A75-31568
Effect of inhomogeneity of conductivity on end effect in a sectional MHD generator
C7 p0119 A75-36233
PLASMA CONTROL
Fusion reactors as future energy sources
05 p0011 A75-11735
Current expectations for fusion power from toroidal machines
05 p0014 A75-12996
Numerical simulation of direct energy conversion --- from fusion reactions
C6 p0045 A75-19660
The outlook for fusion energy sources - Remaining technological hurdles
C6 p0059 A75-27782
Optimization of fusion power density in the two-energy-component tokamak reactor
07 p0124 A75-37836
Outlook for fusion energy sources: Remaining technological hurdles
[UCRL-75418] C5 p0029 N75-11745
PLASMA DYNAMICS
Fluctuations of electric power in MHD channels
07 p0110 A75-30949
PLASMA ELECTRODES
Empirical method of designing the current-voltage characteristics for the discharge mode of a thermionic converter
C6 p0057 A75-26332
Concerning the use of a nitrogen-potassium gaseous mixture for protection of MHD-generator electrodes by suction
C7 p0112 A75-31569
PLASMA GENERATORS
An electron beam initiated fusion neutron generator
C6 p0045 A75-19657
PLASMA HEATING
The outlook for fusion energy sources - Remaining technological hurdles
06 p0059 A75-27782
Plasma heating methods --- for controlled fusion
07 p0119 A75-35920
Electronbeam heating for fusion
07 p0120 A75-36295
PLASMA PHYSICS
Energy characteristics of coaxial plasma source
[AD-767419] C6 p0073 N75-16368
PLASMA POTENTIALS
Physics and potentials of fissioning plasmas for space power and propulsion
[IAF PAPER 74-087] C5 p0015 A75-13719
PLASMA PROPULSION
Physics and potentials of fissioning plasmas for space power and propulsion
[IAF PAPER 74-087] C5 p0015 A75-13719
PLASMA-PARTICLE INTERACTIONS
Electronbeam heating for fusion
07 p0120 A75-36295
PLASMAS (PHYSICS)
Direct conversion of plasma energy to electricity for mirror fusion reactors
[UCRL-76051] 07 p0129 N75-21800
PLASTIC MEMORY
Thermodynamic considerations of 'solid state engines' based on thermoelastic martensitic transformations and the shape memory effect
C6 p0045 A75-19631
PLASTICS
Problems of the future and potentialities of system engineering --- metallic materials, plastics, traffic and energy supplies
[ESRO-TT-110] 06 p0107 N75-21218
PLUGGING
Liquid plugging in in situ coal gasification processes
[UCRL-51686] 07 p0127 N75-21480
PLUTONIUM ISOTOPES
Two-watt radioisotope power generators for underwater applications
05 p0007 A75-10556
PLUTONIUM 238
A modular heat source for curium-244 and plutonium-238
05 p0002 A75-10497
POLICIES
The role for Federal R and D on alternative automotive power systems
[PB-238771/0] 07 p0137 N75-23391
Mineral resources and the environment. Appendix to section 1: Report of panel on materials conservation through technology
[PB-239580/4] 07 p0153 N75-26487
POLITICS
Oil for the free world in the 1970's --- demand and supply
[AD-779352] 05 p0031 N75-12448
The USA: The scientific and technical revolution and trends in foreign policy
[NASA-TT-F-16102] 06 p0096 N75-20160
Materials and the new dimensions of conflict, revised version
[AD-A004263] 07 p0154 N75-26499
POLLUTION CONTROL
Energy, hydrogen, and pollution --- energy technology
06 p0046 A75-22041
A non-polluting powerplant for large airships
[AIAA PAPER 75-927] 07 p0121 A75-37005
Pollution-free electrochemical power generation from low grade coal
[PB-236162/4] 06 p0070 N75-16109
Reduction of atmospheric pollution by the application of fluidized-bed combustion
[PB-235840/6] 06 p0072 N75-16151
Development of high specific energy batteries for electric vehicles
[ANL-8058] 06 p0076 N75-16990
Energy conversion from coal utilizing CPU-400 technology
[PB-237028/6] 06 p0083 N75-17828
Background information for standards of performance: Coal preparation plants. Volume 2: Summary and test data
[PB-237696/0] 06 p0091 N75-18797
Evaluation of pollution control in fossil fuel conversion processess. Gasification, section 1: Synthane process
[PB-237113/6] 06 p0095 N75-19879
Evaluation of pollution control in fossil fuel conversion processes: Gasification. Section 1: Lurgi process
[PB-237694/5] 06 p0096 N75-19880
Economic-environmental power dispatch
07 p0128 N75-21791
At-sea testing of a high seas oil recovery system
[AD-A006938] 07 p0136 N75-22953
Characterization of sulfur recovery from refinery fuel gas
[PB-239777/6] 07 p0151 N75-25326
Assessment of the potential of clean fuels and energy technology
[PB-239970/7] 07 p0162 N75-27583
Air pollution: Conference on Low Pollution Power Systems Development
[PB-240564/5] 07 p0162 N75-27618
Development of low emission porous plate combustor for automotive gas turbine and Rankine cycle engines --- air pollution control
[PB-240776/5] 07 p0162 N75-27619
Evaluation of pollution control in fossil fuel conversion processes. Liquefaction, section 1: COED process
[PB-240371/5] 07 p0162 N75-27626

POLLUTION MONITORING
Meteorological factors and dispersion of pollutants in the atmosphere - A preliminary study about a large power plant
06 p0045 A75-21150
Inspection and maintenance of light-duty gasoline powered motor vehicles: A guide for implementation --- emissions inspection program
[PB-236587/2] 06 p0090 N75-18784
Field surveillance and enforcement guide for petroleum refineries
[PB-236669/8] 06 p0090 N75-18786
Interdisciplinary study of atmospheric processes and constituents of the mid-Atlantic coastal region. Attachment 3: Data set for Craney Island oil refinery installation experiment --- air pollution monitoring
[NASA-CR-142823] 07 p0141 N75-24121
Interdisciplinary study of atmospheric processes and constituents of the mid-Atlantic coastal region. Attachment 4: Data set for background investigation of atmospheric constituents for Nansemond River site --- a proposed oil refinery site
[NASA-CR-142821] 07 p0141 N75-24122
Marine pollution monitoring (petroleum): Proceedings of a Symposium and Workshop held at the National Bureau of Standards
[COM-75-50071/0] 07 p0146 N75-24183
POLYMERIC FILMS
The effect of sunshine testing on terrestrial solar cell system components
07 p0123 A75-37396
POLYMERS
Oil displacement by different surfactant and polymer waterflood systems
07 p0134 N75-22858
POLYPHENYL ETHER
On the potentialities of polyphenylene oxide (PPO) as a wet-insulation material for cargo tanks of ING-carriers
[REPT-194-M] 05 p0035 N75-14002
PONDS
An analytical and experimental investigation of a laboratory solar pond model
[ASME PAPER 74-WA/SOL-3] 05 p0019 A75-16886
Solar pond
[NASA-CASE-NPO-13581-1] 07 p0160 N75-27560
POROUS MATERIALS
Capillary flow through heat-pipe wicks
[AIAA PAPER 75-661] 07 p0114 A75-32919
Porous matrix structures for alkaline electrolyte fuel cells
07 p0123 A75-37243
Electrochemical power sources --- heat and mass transfer in porous media
[AD-A001610] 06 p0094 N75-19836
POROUS PLATES
Development of low emission porous plate combustor for automotive gas turbine and Rankine cycle engines --- air pollution control
[PB-240776/5] 07 p0162 N75-27619
PORTABLE EQUIPMENT
Manportable thermoelectric generator
[AD-A002042] 06 p0095 N75-19847
POTASSIUM
Operational, maintenance, and environmental problems associated with a fossil fuel-fired potassium steam binary vapor cycle
[ORNL-NSF-EP-30] 06 p0090 N75-18769
POWDER (PARTICLES)
Solar selective surfaces made of semiconducting powders
[ASME PAPER 74-WA/HT-13] 05 p0017 A75-16857
POWER CONDITIONING
Power conversion of energy fluctuations
05 p0011 A75-11497
POWER EFFICIENCY
Potential of Rankine engines to produce power from waste heat streams
05 p0006 A75-10547
Thermodynamics of multistage air-cooled gas turbine
06 p0050 A75-23817
An analysis of photovoltaic power generation and thermal control interfaces --- for solar arrays
06 p0053 A75-24243
Development of a flexible, fold-out solar array --- power to weight ratio for communication satellites
06 p0053 A75-24252
Power generation and efficiency in GaAs traveling-wave amplifiers
07 p0110 A75-30750
Optimization of fusion power density in the two-energy-component tokamak reactor
07 p0124 A75-37836
Remote platform power conserving system
[NASA-CASE-GSC-11182-1] 05 p0032 N75-13007
Effect of gas turbine efficiency and fuel cost on cost of producing electric power
[PB-234159/2] 05 p0034 N75-13397
POWER GAIN
Power generation and efficiency in GaAs traveling-wave amplifiers
07 p0110 A75-30750
POWER PLANTS
Evaluation of central solar tower power plant
05 p0003 A75-10515
Closed loop chemical systems for energy transmission, conversion and storage
05 p0005 A75-10538
Conceptual design of a series of laser-fusion power plants of 100 to 3000 MW/e/
05 p0007 A75-10562
Concepts for central solar electric power generation
05 p0021 A75-17504
An economic analysis of fuel selection for power generation
06 p0055 A75-24751
Site limitations on Solar Sea Power Plants
[AIAA PAPER 75-618] 06 p0062 A75-28594
Thermal power plants --- German book
06 p0064 A75-28962
Tropical ocean thermal power plants and potential products
[AIAA PAPER 75-617] 06 p0064 A75-29116
Solar thermal subsystem specification study
[PB-238005/3] 06 p0083 N75-17829
Variations in heat exchanger design for ocean thermal difference power plants
[PB-238572/2] 07 p0143 N75-24134
Technical and economic feasibility of the ocean thermal differences process as a solar-driven energy process
[PB-239374/2] 07 p0150 N75-25317
Ocean thermal difference power plant turbine design
[PB-239371/8] 07 p0150 N75-25318
POWER SUPPLIES
Thermodynamic analysis of a solar energy system with a closed-cycle gas-turbine converter
06 p0049 A75-23402
Multimegawatt fuel cell power system
07 p0124 A75-37656
NSF-Rann energy abstracts: A monthly abstract journal of energy research
[ORNL-EIS-74-52-VOL-2-NO-1] 05 p0024 N75-10592
POWER SUPPLY CIRCUITS
Terrestrial applications of FEP-encapsulated solar cell modules --- power systems using Flucrinated Ethylene Propylene encapsulation
06 p0054 A75-24258
POWER TRANSMISSION
Lasers investigated for space propulsion
06 p0061 A75-28439
Derivation of a total satellite energy system --- solar power station for terrestrial consumption
[AIAA PAPER 75-640] 06 p0064 A75-29118
Laser energy conversion
07 p0125 A75-38474
PREDICTION ANALYSIS TECHNIQUES
MEGASTAR: The Meaning of Energy Growth: An Assessment of Systems, Technologies, and Requirements
[NASA-CR-120355] 05 p0023 N75-10584
PRESSURE CHAMBERS
Prospects for utilization of underwater houses and chambers in development of marine oil deposits
05 p0029 N75-11606
PRESSURE MEASUREMENTS
Methodical approach to temperature and pressure measurements for in situ energy-recovery processes
[UCID-16631] 06 p0097 N75-20693

PRESSURE VESSELS
Procedure for preparation for shipment of natural gas storage vessel
[NASA-CR-141455] 05 p0036 N75-14135
Survey of hydrogen compatibility problems in energy storage and energy transmission applications
[SAND-74-8219] 06 p0087 N75-18726
PRIMARY BATTERIES
Non-hazardous primary lithium-organic electrolyte battery BA-5590 ( )/U
[AD-A003312] 07 p0129 N75-21804
PROBABILITY THEORY
Statistical estimation of wildcat well outcome probabilities by visual analysis of structure contour maps of Stafford County, Kansas
06 p0092 N75-19778
PROCEEDINGS
Proceedings of the 2nd Annual Illinois Energy Conference
[PB-240548/8] 07 p0161 N75-27575
PRODUCT DEVELOPMENT
Heat pipe manufacturing study
[NASA-CR-139140] 05 p0023 N75-10347
Development of advanced fuel cell system, phase 2
[NASA-CR-134721] 06 p0067 N75-16084
Fuel gas production from solid waste
[PB-238068/1] 06 p0095 N75-19843
Methyl alcohol production by in situ coal gasification
[UCID-51600] 07 p0128 N75-21797
PRODUCTION ENGINEERING
Investigation of the technology and performance of lithium doped solar cells --- feasibility study for mass production
06 p0052 A75-24219
Heat pipe manufacturing study
[NASA-CR-139140] 05 p0023 N75-10347
Prospect for geothermal power
[LA-UR-74-1111] 06 p0086 N75-18723
Technical evaluation services, clean liquid and/or solid fuels from coal
[PB-237216/7] 07 p0129 N75-21803
Dependence of coal liquefaction behavior on coal characteristics
[PB-238522/7] 07 p0130 N75-21812
Insufficient utilization of scientific advances --- sociopolitical and economic management of technological development
07 p0137 N75-23365
An analysis of constraints on increased coal production
[PB-240613/0] 07 p0157 N75-26525
MER: Ultimate recovery vs rate. A reservoir simulation study. Volume 1 --- oil and gas production
[PB-239767/7] 07 p0157 N75-26526
MER: Ultimate recovery vs rate. A reservoir simulation study. Volume 2: Appendices --- oil and gas production
[PB-239768/5] 07 p0157 N75-26527
PRODUCTION MANAGEMENT
Coal in Alabama
[PB-236583/1] 06 p0088 N75-18736
PROJECT PLANNING
Combustion dynamics research for 'Project Independence'
[AIAA PAPER 74-1069] 05 p0001 A75-10262
Program plan for environmental effects of energy
[PB-235115/3] 05 p0040 N75-15177
Research and technology operating plan summary: Fiscal year 1975 research and technology program --- space programs, energy technology, and aerospace sciences
[NASA-TM-X-70410] 06 p0096 N75-20155
PROMETHIUM
Advanced betavoltaic power sources
05 p0007 A75-10563
PROPELLANT TRANSFER
How spacecraft are fueled --- technology of fueling spacecraft for flight
[JPRS-63514] 05 p0027 N75-10983
PROPULSION SYSTEM CONFIGURATIONS
On the future of jet propulsion in subsonic transport aviation
06 p0058 A75-27777
Future long-range transports: Prospects for improved fuel efficiency
[NASA-TM-X-72659] 06 p0079 N75-17339
Propulsion units for high speed ships
[JPRS-64897] 07 p0148 N75-25295
PROPULSION SYSTEM PERFORMANCE
Floating vs flying - A propulsion energy comparison
06 p0056 A75-25987
Engine development program for the AFL remotely piloted vehicle
[AD-787507] 06 p0065 N75-15658
Preliminary study of advanced turbofans for low energy consumption
[NASA-TM-X-71663] 06 p0084 N75-18241
PROPULSIVE EFFICIENCY
Future long-range transports - Prospects for improved fuel efficiency
[AIAA PAPER 75-316] 06 p0047 A75-22514
Floating vs flying - A propulsion energy comparison
06 p0056 A75-25987
A non-polluting powerplant for large airships
[AIAA PAPER 75-927] 07 p0121 A75-37005
The role of computers in future propulsion controls
07 p0137 N75-23582
PROTON IRRADIATION
The effects of irradiation on high-efficiency silicon solar cells
06 p0051 A75-24199
Electron and proton irradiation of high-efficiency silicon solar cells
06 p0053 A75-24233
PROTOTYPES
A prototype solar powered, Rankine Cycle system providing residential air conditioning and electricity
05 p0004 A75-10523
Solar air conditioning systems using Rankine power cycles - Design and test results of prototype three ton unit
07 p0117 A75-34931
Space and energy conservation housing prototype unit development
[NASA-CR-143201] 07 p0160 N75-27567
PUBLIC HEALTH
Report of the Interagency Working Group on health and environmental effects of energy use
[PB-237937/8] 06 p0084 N75-17858
PUBLIC RELATIONS
The energy crisis and decision making in the family
[PB-238783/5] 06 p0106 N75-21028
PULSE GENERATORS
Chemical to electromagnetic energy conversion techniques --- explosive flux compression technology
[AD-783901] 05 p0026 N75-10609
PULSED LASERS
Laser compression of matter - Optical power and energy requirements
06 p0046 A75-22352
PUMPING
Optimising pumped storage with tidal power in an estuary
[ASME PAPER 74-WA/PWR-7] 05 p0018 A75-16881
PUMPS
Some generalizations of sample water-supply calculations for solar-powered pumping plants
05 p0020 A75-17077
Solar powered pump
[NASA-CASE-NPO-13567-1] 07 p0133 N75-22746
PYROLYSIS
Thermolysis of water for the generation of hydrogen
06 p0049 A75-23504
Retorting indexes for oil-shale pyrolyses from ethylene-ethane ratios of product gases
[PB-234050/3] 05 p0034 N75-13399
Pyrolysis system evaluation study
[NASA-CR-141664] 06 p0086 N75-18722
An economic analysis of oil shale operations featuring gas combustion retorting
[PB-237851/1] 06 p0093 N75-19813
Production of gaseous fuel by pyrolysis of municipal solid waste
[NASA-CR-141791] 07 p0140 N75-24105
Energy recovery from solid waste. Volume 2: Technical report --- pyrolysis and biodegradation
[NASA-CR-2526] 07 p0148 N75-25292
PYROMETALLURGY
Bureau of Mines research 1973. Summary of significant results in mining, metallurgy, and energy
[PB-234733/4] 05 p0040 N75-15171

PYROTECHNICS
Energy conversion. 1: Non-propulsive aspects --- fuels and pyrotechnics
[AD-A000077] 06 p0079 N75-17454

R

RADIANT FLUX DENSITY
Experience in setting up solar-energy survey for Azerbaidzhan
05 p0020 A75-17081
Method for calculating solar radiation for semicylindrical collectors
06 p0057 A75-26718
RADIANT HEATING
Solar energy trap
[NASA-CASE-MFS-22744-1] 05 p0024 N75-10586
RADIATION ABSORPTION
Solar ponds for space heating --- energy storage by convectionless shallow water
07 p0109 A75-29471
RADIATION DAMAGE
Investigation of the technology and performance of lithium doped solar cells --- feasibility study for mass production
06 p0052 A75-24219
Electron and proton irradiation of high-efficiency silicon solar cells
06 p0053 A75-24233
RADIATION EFFECTS
Radiation effects on high efficiency silicon-solar cells
06 p0051 A75-24197
The effects of irradiation on high-efficiency silicon solar cells
06 p0051 A75-24199
The effect of sunshine testing on terrestrial solar cell system components
07 p0123 A75-37396
RADIATION HAZARDS
Soil burial of radioisotopic fuel capsules
06 p0046 A75-21274
RADIATION MEASUREMENT
Net radiation and other energy-related maps from remotely sensed imagery
07 p0121 A75-36811
RADIATION SHIELDING
Optimisation of solar cell shielding for geostationary missions
06 p0051 A75-24203
RADIATIVE HEAT TRANSFER
Study of channel-type systems for solar-energy radiative heat transport
05 p0010 A75-11196
A study of channel systems for radiative solar-heat transfer
06 p0049 A75-23408
Thermodynamic analysis and parameter optimization of a solar thermoelectric power unit with radiation heat dissipation
[AD-A000211] 06 p0082 N75-17819
RADIOACTIVE ISOTOPES
SENSE 2: Space applications of nuclear power. Volume 1: Commercial communications satellite
[AEC-SNS-3063-3-VOL-1] 06 p0065 N75-15742
Multi-hundred watt radioisotope thermoelectric generator program, part 1 --- ground support equipment and safety management
[GESP-7107-PT-1] 06 p0092 N75-19354
Multi-hundred watt radioisotope thermoelectric generator program, part 2 --- ground support equipment
[GESP-7107-PT-2] 06 p0092 N75-19355
Heat transfer design and proof tests of a radioisotope thermoelectric generator
[AD-A002218] 06 p0092 N75-19608
RADIOACTIVE WASTES
Soil burial of radioisotopic fuel capsules
06 p0046 A75-21274
Nuclear system that burns its own wastes shows promise
[NASA-NEWS-RELEASE-75-44] 06 p0085 N75-18716
RADIOISOTOPE BATTERIES
RTG technology development - Where we are/where we are going --- radioisotope thermoelectric generator
05 p0002 A75-10496
A modular heat source for curium-244 and plutonium-238
05 p0002 A75-10497
A 10% efficient economic RTG design --- radioisotope thermoelectric generator
05 p0003 A75-10506
Cost effective designing for the economic RTG --- radioisotope thermoelectric generators
05 p0003 A75-10507
Light-weight radioisotope thermoelectric generator design
05 p0003 A75-10508
Two-watt radioisotope power generators for underwater applications
05 p0007 A75-10556
Advanced betavoltaic power sources
05 p0007 A75-10563
Soil burial of radioisotopic fuel capsules
06 p0046 A75-21274
RTG electrical power for spacecraft --- Radioisotope Thermoelectric Generators
06 p0057 A75-26067
Low-power turbines using organic vapor
07 p0110 A75-30692
Radioisotope space power generator
[GA-A-12848] 05 p0038 N75-14832
RAIL TRANSPORTATION
Energy efficiency of current intercity passenger transportation modes
[AIAA PAPER 75-314] 06 p0047 A75-22513
Transportation vehicle energy intensities. A joint DOT/NASA reference paper --- energy consumption of air and ground vehicles
[NASA-TM-X-62404] 05 p0035 N75-13690
Industrial energy studies of ground freight transportation, volume 1
[PB-236016/2] 06 p0069 N75-16099
Industrial energy studies of ground freight transportation. Volume 2: Appendices
[PB-236017/0] 06 p0069 N75-16100
RANKINE CYCLE
Technology considerations for Organic Rankine Cycle Electric Power Systems
05 p0002 A75-10484
A prototype solar powered, Rankine Cycle system providing residential air conditioning and electricity
05 p0004 A75-10523
Potential of Rankine engines to produce power from waste heat streams
05 p0006 A75-10547
Assessment of Rankine cycle for potential application to solar-powered cooling of buildings
[ASME PAPER 74-WA/SOL-7] 05 p0019 A75-16890
Solar air conditioning systems using Rankine power cycles - Design and test results of prototype three ton unit
07 p0117 A75-34931
A non-polluting powerplant for large airships
[AIAA PAPER 75-927] 07 p0121 A75-37005
Organic Rankine cycle silent power plant 1.5 kW, 28 volts dc
[AD-A000900] 06 p0088 N75-18745
Assessment of the Rankine cycle for potential application to solar powered cooling of buildings
[PB-238069/9] 06 p0089 N75-18755
Sizing of focused solar collector fields with specified collector tube inlet temperature --- Rankine cycle
[SLA-74-5288] 06 p0094 N75-19832
Feasibility demonstration of a solar powered turbocompressor air conditioning and heating system
[PB-238570/6] 07 p0130 N75-21816
Ocean thermal difference power plant turbine design
[PB-239371/8] 07 p0150 N75-25318
Development of low emission porous plate combustor for automotive gas turbine and Rankine cycle engines --- air pollution control
[PB-240776/5] 07 p0162 N75-27619
RAPID TRANSIT SYSTEMS
Caltech seminar series on energy consumption in private transportation
[PB-235348/0] 05 p0040 N75-15179
RATES (PER TIME)
Time factors in slowing down the rate of growth of demand for primary energy in the United States
06 p0059 A75-27780

REACTION KINETICS
Retorting indexes for oil-shale pyrolyses from ethylene-ethane ratios of product gases
[PB-234050/3] 05 p0034 N75-13399
Summary report of workshop on Energy Related Basic Combustion Research
[PB-236714/2] 06 p0079 N75-17456
Conversion of cellulosic wastes to oil
[PB-240839/1] 07 p0161 N75-27572
REACTOR CORES
Applications of plasma core reactors to terrestrial energy systems
[AIAA PAPER 74-1074] 05 p0010 A75-11281
Physics and potentials of fissioning plasmas for space power and propulsion
[IAF PAPER 74-087] 05 p0015 A75-13719
REACTOR DESIGN
Conceptual design of a series of laser-fusion power plants of 100 to 3000 MW/e/
05 p0007 A75-10562
Component design considerations for gas turbine HTGR power plant --- High-Temperature Gas-cooled Reactor
[ASME PAPER 75-GT-67] 07 p0116 A75-34620
Clinch River Breeder Reactor: A combined power and fuel source
[CONF-740609-4] 05 p0038 N75-14593
Advanced concepts in fusion-fission hybrid reactors
[UCRL-75835] 07 p0131 N75-22113
REACTOR MATERIALS
Foreseeable thermal, mechanical, and materials engineering problems of fusion reactor power plants
[SMRT PAPER A2/1] 06 p0046 A75-21713
MIT fusion technology program --- nuclear reactors and reactor materials
[COO-2431-1] 06 p0106 N75-21101
REACTOR TECHNOLOGY
Current expectations for fusion power from toroidal machines
05 p0014 A75-12996
Foreseeable thermal, mechanical, and materials engineering problems of fusion reactor power plants
[SMRT PAPER A2/1] 06 p0046 A75-21713
The economics of nuclear power
06 p0047 A75-22734
Electronbeam heating for fusion
07 p0120 A75-36295
Review of direct energy conversion of ion beams: Experimental results and reactor applications
[UCRL-75600] 05 p0028 N75-11466
Survey of applications of fusion power technology to the chemical and material processing industry
[BNL-18866] 05 p0031 N75-12443
Nuclear power growth, 1974 - 2000 --- forecasting future reactor technology
[WASH-1139-74] 05 p0031 N75-12723
RECLAMATION
Biological conversion of organic refuse to methane
[PB-235468/6] 05 p0041 N75-15183
RECYCLING
Bureau of Mines research programs on recycling and disposal of mineral, metal, and energy-based wastes
[PB-227476/9] 05 p0042 N75-15203
RED SEA
The hot deeps of the Red Sea as a potential heat source for thermoelectric power generation
05 p0004 A75-10516
REDUCTION (CHEMISTRY)
Electrically rechargeable redox flow cells
05 p0008 A75-10573
Development of a soluble reactants and products secondary battery
07 p0127 N75-21790
REFINING
Impact of motor gasoline lead additive regulations on petroleum refineries and energy resources, 1974-1980, phase 1
[PB-234185/7] 05 p0025 N75-10601
National Crude Oil Refinery Development Act, part 2
[GPO-35-578] 05 p0027 N75-10860
The National Coal Conversion Act and the National Crude Oil Refinery Development Act
[GPO-28-964] 05 p0027 N75-10861
Retorting indexes for oil-shale pyrolyses from ethylene-ethane ratios of product gases
[PB-234050/3] 05 p0034 N75-13399
Effects of changing the proportions of automotive distillate and gasoline produced by petroleum refining
[PB-236900/7] 06 p0085 N75-18443
Industrial energy study of the petroleum refining industry
[PB-238671/2] 07 p0130 N75-21818
A simulation model of the development of petroleum refining capacity --- using recursive linear programming
[AD-A003723] 07 p0161 N75-27569
REFRACTORY MATERIALS
Aluminum nitride and silicon nitride for high-temperature vehicular gas turbine engines
05 p0011 A75-11362
Corrosion studies of materials for auxiliary equipment in MHD power plants
06 p0055 A75-24384
Materials screening program for the LLL geothermal project
[UCRL-75353] 06 p0082 N75-17815
Refractory materials for coal-fueled MHD power generation
[PB-239607/5] 07 p0157 N75-26524
REFRIGERATING
Power conversion of energy fluctuations
05 p0011 A75-11497
Solar energy storage within the absorption cycle
[ASME PAPER 74-WA/HT-18] 05 p0017 A75-16864
REFRIGERATING MACHINERY
Selection and evaluation of the University of Florida's solar powered absorption air conditioning system
[ASME PAPER 74-WA/SOL-6] 05 p0019 A75-16889
Cooling by solar heat --- heating and cooling system for buildings
[AIAA PAPER 75-609] 06 p0062 A75-28590
Heat pumps in large buildings --- a refrigerating unit for heating and cooling
[OA-TRANS-939] 06 p0078 N75-17184
Stirling cycle engine and refrigeration systems
[NASA-CASE-NPO-13613-1] 07 p0133 N75-22747
REGENERATION (ENGINEERING)
Recuperator development trends for future high temperature gas turbines --- heat exchanger design
[ASME PAPER 75-GT-50] 07 p0116 A75-34607
Evaluation of a fossil fuel fired ceramic regenerative heat exchanger
[PB-236346/3] 06 p0092 N75-19599
REGIONAL PLANNING
Regional economics: A subset of simulation of the effects of coal-fired power development in the four corners region
06 p0107 N75-21153
Evaluation of power facilities; A reviewer's handbook --- electric and nuclear power plants
[PB-239221/5] 07 p0146 N75-24198
REGULATIONS
Institutional and environmental problems in geothermal resource development
06 p0100 N75-20843
Preliminary investigation into regulatory powers and policies on electric utility peak load pricing
[PB-239761/0] 07 p0151 N75-25324
RELIABILITY ANALYSIS
Operating experiences with terrestrial solar battery systems in Japan
05 p0005 A75-10531
Compatibility and reliability of heat pipe materials
[AIAA PAPER 75-660] 07 p0114 A75-32918
RELIABILITY ENGINEERING
Development of a thermal battery for emergency radio power under arctic conditions
05 p0007 A75-10560
Silicon solar cells for highly concentrated sunlight
07 p0120 A75-36363
Generation of electric power at high reliability levels using a group of solar power plants in an energy system
07 p0122 A75-37159
Principles of a composite study involving combined use of solar and wind energy
07 p0122 A75-37160
Generalizations of composite studies involving combined use of wind and solar energy
07 p0122 A75-37161

REMOTE REGIONS
Some aspects of a solar battery system and its use for irrigation in remote sun-rich regions
06 p0054 A75-24256
Testing of a photoelectric generator in a mountainous region of the Azerbaidzhan SSR
06 p0057 A75-26714
Photoelectric generator testing in the Azerbaidzhan SSR mountains
07 p0122 A75-37165
REMOTE SENSORS
Milliwatt fuel cell system for sensors
05 p0008 A75-10565
Laser induced luminescence signatures of refined and virgin crude petroleum - Their composition and remote sensing implications
06 p0050 A75-23790
Remote sensing applied to energy-related problems; Proceedings of the Symposium-Course, Miami, Fla., December 2-4, 1974
07 p0118 A75-35451
Remote sensing for Western coal and oil shale development planning and environmental analysis
07 p0118 A75-35458
Determining potential solar power sites in western hemisphere ocean and land areas based upon satellite observations of cloud cover
07 p0118 A75-35461
Multispectral data systems for energy related problems --- strip mining and power plant site monitoring
07 p0118 A75-35464
Remote sensing applied to mine subsidence - Experience in Pennsylvania and the Midwest
07 p0121 A75-36809
REMOTELY PILOTED VEHICLES
Engine development program for the APL remotely piloted vehicle
[AD-787507] 06 p0065 N75-15658
RENDEZVOUS TRAJECTORIES
Solar electric propulsion spacecraft power subsystem for an Encke comet rendezvous mission
05 p0002 A75-10481
REQUIREMENTS
Energy-related research and development in the United States Air Force
06 p0075 N75-16979
RESEARCH
Radioisotope space power generator
[GA-A-12848] 05 p0038 N75-14832
RESEARCH AND DEVELOPMENT
Combustion dynamics research for 'Project Independence'
[AIAA PAPER 74-1069] 05 p0001 A75-10262
Combustion R&D - Key to our energy future --- pollution reduction using hydrocarbon fuels
05 p0009 A75-10596
Wind energy developments in the 20th century
05 p0020 A75-17503
Technology utilization - Incentives and solar energy
06 p0048 A75-22913
The application of aerospace technology in the cryogenics field
06 p0048 A75-23239
Report on photovoltaics research and technology in the United States
06 p0051 A75-24214
Progress in the development of cadmium sulphide terrestrial solar batteries
06 p0052 A75-24224
Development of a flexible, fold-out solar array --- power to weight ratio for communication satellites
06 p0053 A75-24252
The future of silicon solar cells for terrestrial use
06 p0058 A75-27717
DFVLR activities in the area of energy research
07 p0118 A75-35096
Energy transportation, distribution, and storage
[WASH-1281-4] 05 p0024 N75-10595
A review of the status of MHD power generation technology including suggestions for a Canadian MHD research program
[UTIAS-39] 05 p0035 N75-13641
Bureau of Mines energy program, 1973 --- discovery and production of oil, gas, and fluid fuels
[PB-234682/3] 05 p0040 N75-15172
Idaho geothermal R and D project report for period 16 December 1973 - 15 March 1974
[ANCR-1155] 06 p0076 N75-16985
Recommended research program in geothermal chemistry
[WASH-1344] 06 p0077 N75-16997
US energy R and D policy: The role of economics
[RFF-WORKING-PAPER-EN-4] 06 p0080 N75-17783
Research and technology operating plan summary: Fiscal year 1975 research and technology program --- space programs, energy technology, and aerospace sciences
[NASA-TM-X-70410] 06 p0096 N75-20155
Wind power installations. Present condition and possible lines of development
[NASA-TT-F-16204] 07 p0128 N75-21796
Energy R/D Data Workshop
[PB-237493/2] 07 p0130 N75-21811
A review of the Project Independence report submitted to Office of Energy Research and Development, National Science Foundation, 10 January 1975
[PB-238791/8] 07 p0131 N75-21823
The role for Federal R and D on alternative automotive power systems
[PB-238771/0] 07 p0137 N75-23391
NSF-RANN energy abstracts. A monthly abstract journal of energy research
[ORNL-EIS-74-52-VOL-2-NO-6] 07 p0146 N75-24532
Solar Energy Research, Development, and Demonstration Act of 1974
[GPO-39-827] 07 p0149 N75-25299
RESEARCH FACILITIES
Mission and organization of the DFVLR: Two years of integrated society of German aeronautical and space flight research
[NASA-TT-F-16086] 05 p0035 N75-13882
Solar collector performance evaluated outdoors at NASA-Lewis Research Center
[NASA-TM-X-71689] 07 p0128 N75-21794
RESEARCH MANAGEMENT
Rationale for setting priorities for new energy technology research and development
[UCRL-51511] 05 p0024 N75-10594
Electric power systems analysis research
[PB-239236/3] 07 p0143 N75-24139
RESEARCH PROJECTS
Roles for solar thermal conversion systems in our energy economy
06 p0059 A75-27784
The 1974 AGARD Annual Meeting: The energy problem: Impacts on military research and development
06 p0075 N75-16977
Geothermal reservoir engineering research
06 p0101 N75-20853
Phase 0 study for a geothermal superheated water proof of concept facility
06 p0102 N75-20858
Scientific research seeks new sources of energy
06 p0107 N75-21216
Various research tasks related to energy information and data activities: Task 4 priorities analysis
[PB-240424/2] 07 p0151 N75-25329
RESERVES
The reserve base of bituminous coal and anthracite for underground mining in the Eastern United States
[PB-237815/6] 06 p0085 N75-18713
Mineral resources and the environment. Appendix to section 1: Report of panel on materials conservation through technology
[PB-239580/4] 07 p0153 N75-26487
Mineral resources and the environment. Appendix to section 2: Report of panel on estimation of mineral reserves and resources
[PB-239581/2] 07 p0153 N75-26488
RESERVOIRS
Optimising pumped storage with tidal power in an estuary
[ASME PAPER 74-WA/PWR-7] 05 p0018 A75-16881
Relationships of earth fracture systems to productivity of a gas storage reservoir
[PB-237894/1] 06 p0089 N75-18759
RESIDENTIAL AREAS
A case study - Utilization of solar energy in residential dwellings
[ASME PAPER 74-WA/SOL-2] 05 p0018 A75-16885

The Solar Community - Energy for residential heating, cooling, and electrical power
06 p0059 A75-27785
Design and construction of a residential solar heating and cooling system
07 p0109 A75-29472
Residential energy conservation
[TID-26534] 05 p0031 N75-12442
Design and construction of a residential solar heating and cooling system
[PB-237042/7] 06 p0082 N75-17823
The development of a solar residential heating and cooling system
[NASA-CR-142728] 07 p0140 N75-24107
The residential user and the electrical load factor
[PB-238535/9] 07 p0145 N75-24152
Project conserve, a pilot project in homeowner energy conservation
[PB-240407/7] 07 p0161 N75-27577

RESOURCE ALLOCATION
Oversight: Mandatory petroleum allocation programs
[GPO-31-027] 06 p0081 N75-17806
Electric power rights: One approach to rationing
[PB-238537/5] 07 p0143 N75-24138
An approach to the power shortage problem: Optimal allocation of existing excess reserves through interregional transmission
[PB-238578/9] 07 p0144 N75-24151
Energy rationing and energy conservation: Foundations for a social policy
[PB-239766] 07 p0162 N75-27579

RESOURCES MANAGEMENT
U.S. energy resources - Outlook for the future
05 p0014 A75-12999
Energy. Volume 1 - Demands, resources, impact, technology, and policy --- Book
06 p0045 A75-20066
Energy supply and demand challenges and some possible solutions
06 p0059 A75-27779
Fuels, minerals, and human survival --- Book
07 p0117 A75-34850
Public works for water and power development and Atomic Energy Commission Appropriation Bill, 1975. Part 6: Tennessee Valley Authority
[GPO-32-403] 05 p0026 N75-10859
Project Independence
05 p0029 N75-12428
Energy from US and Canadian tar sands: Technical, environmental, economic, legislative, and policy aspects
[GPO-43-005] 06 p0067 N75-16083
Energy resources and utilization
06 p0075 N75-16983
Intermediate-term energy programs to protect against crude-petroleum import interruptions: Feasible alternatives, program costs, and operational methods of funding
[PB-237209/2] 06 p0083 N75-17826
Methanol from forestry, municipal, and agricultural organic residues
[BNWL-SA-5053] 06 p0085 N75-18702
Overview of Reclamation's geothermal program in Imperial Valley, California
06 p0098 N75-20835
Geophysical, geochemical, and geological investigations of the Dunes geothermal system, Imperial Valley, California
[IGPP-UCR-74-31] 06 p0098 N75-20836
The Colorado School of Mines Nevada geothermal study
06 p0099 N75-20837
Heat flow and geothermal potential of the East Mesa KGRA, Imperial Valley, California
06 p0099 N75-20838
A brief description of geological and geophysical exploration of the Marysville geothermal area
06 p0099 N75-20839
Hawaii geothermal project
06 p0099 N75-20840
Measuring ground movement in geothermal areas of Imperial Valley, California
06 p0099 N75-20842
Imperial Valley's proposal to develop a guide for geothermal development within its county
06 p0100 N75-20844
The Lawrence Berkeley Laboratory geothermal program in northern Nevada
06 p0100 N75-20845
The total flow concept for geothermal energy conversion
06 p0100 N75-20846
San Diego Gas and Electric Company Imperial Valley geothermal activities
06 p0100 N75-20847
Progress of the LASL dry hot rock geothermal energy project
06 p0100 N75-20848
The Marysville, Montana Geothermal Project
06 p0100 N75-20849
Preliminary results of geothermal desalting operations at the East Mesa test site Imperial Valley, California
06 p0101 N75-20850
Geothermal reservoir engineering research
06 p0101 N75-20853
Geothermal down well pumping system
06 p0101 N75-20854
Phase 0 study for a geothermal superheated water proof of concept facility
06 p0102 N75-20858
Cooperative efforts by industry and government to develop geothermal resources
06 p0102 N75-20861
Energy system modeling-interfuel competition
[PB-239292/6] 07 p0143 N75-24140
National energy flow accounts
[PB-239275/1] 07 p0146 N75-24539
Evaluation of the suitability of Skylab data for the purpose of petroleum exploration
[E75-10257] 07 p0147 N75-25237
Energy policy and resource management
[GPO-33-634] 07 p0149 N75-25300
Energy legislation --- energy conservation and resources management
[GPO-33-571] 07 p0149 N75-25301
Five year program planning document for end use energy conservation, research, development, and demonstration
[PB-240406/9] 07 p0152 N75-25331
Mineral resources and the environment --- energy conservation and energy policy
[PB-239579/6] 07 p0153 N75-26486
An analysis of constraints on increased coal production
[PB-240613/0] 07 p0157 N75-26525

ROCKET ENGINE DESIGN
Lasers investigated for space propulsion
06 p0061 A75-28439

ROCKS
Geothermal energy: A new application of rock mechanics
[LA-UR-74-821] 06 p0068 N75-16089

ROCKY MOUNTAINS (NORTH AMERICA)
Progress and problems in developing nuclear and other experimental techniques for recovering natural gas in the Rocky Mountain area
[B-164105] 06 p0075 N75-16975

ROTATING BODIES
Investigations of the factors affecting the performance of a rotating heat pipe
07 p0120 A75-36357

ROTATING ELECTRICAL MACHINES
A high-speed superconducting generator
06 p0060 A75-27960

ROTOR AERODYNAMICS
Unsteady aerodynamics of variable pitch vertical axis windmill
[AIAA PAPER 75-649] 06 p0063 A75-28604

ROTOR BLADES (TURBOMACHINERY)
Structural analysis of wind turbine rotors for NSF-NASA Mod-0 wind power system
[NASA-TM-X-3198] 06 p0080 N75-17712
Applied aerodynamics of wind power machines --- rotor blades (turbomachinery)
[PB-238595/3] 07 p0133 N75-22669

ROVER PROJECT
Application of technology from the Rover program and related developments --- to energy needs
[LA-5558] 05 p0028 N75-11468

RUBBER
An evaluation of discarded tires as a potential source of fuel
05 p0012 A75-12416
An evaluation: The potential of discarded tires as a source of fuel
[NASA-TM-X-58143] 05 p0038 N75-15153

S

SAFETY DEVICES
Non-hazardous primary lithium-organic electrolyte battery BA-5590 ( )/U
[AD-A003312] 07 p0129 N75-21804
SAFETY FACTORS
Procedure for preparation for shipment of natural gas storage vessel
[NASA-CR-141455] 05 p0036 N75-14135
SAFETY MANAGEMENT
Cryogenics safety in a hydrogen fuel society
06 p0061 A75-27973
Operational, maintenance, and environmental problems associated with a fossil fuel-fired potassium steam binary vapor cycle
[ORNL-NSF-EP-30] 06 p0090 N75-18769
Multi-hundred watt radioisotope thermoelectric generator program, part 1 --- ground support equipment and safety management
[GESP-7107-PT-1] 06 p0092 N75-19354
Dimensions/NES, volume 59, number 2, February 1975 --- energy conservation, safety management, toxic hazards
[CCM-75-50141/02] 07 p0151 N75-25330
SATELLITE ANTENNAS
Latest developments of the circular solar array --- with deployment structure for central antenna communication satellite
06 p0053 A75-24246
SATELLITE ATTITUDE CONTROL
Effect of attitude constraints on solar-electric geocentric transfers
[AIAA PAPER 75-350] 06 p0055 A75-24957
SATELLITE DESIGN
The technology of the solar generator on the Symphonie satellite
06 p0053 A75-24237
Power generation for the X4 spacecraft - A step in the development of a high power/mass ratio, hybrid solar array for applications spacecraft
06 p0053 A75-24251
The satellite solar power station option --- for solar energy trarsmission to earth
07 p0118 A75-35465
SATELLITE INSTRUMENTS
A flexible cryogenic heat pipe
[AIAA PAPER 75-658] 07 p0114 A75-32916
SATELLITE OBSERVATION
Determining potential solar power sites in western hemisphere ocean and land areas based upon satellite observations of cloud cover
07 p0118 A75-35461
SATELLITE POWER TRANSMISSION (TO EARTH)
The satellite solar power station - An option for energy production on earth
[AIAA PAPER 75-637] 06 p0063 A75-28600
The adaptation of free space power transmission technology to the SSPS concept --- Satellite Solar Power Stations
[AIAA PAPER 75-642] 06 p0063 A75-28602
Geosynchronous satellite solar power --- energy transmission to earth
07 p0111 A75-31272
Satellites for energy transmission to earth - Technical and socioeconomic studies
07 p0125 A75-38644
Solar power generating systems as sources of non-polluting energy (power generation in space and power generation on the ground)
[NASA-TT-F-16091] 05 p0033 N75-13383
SATELLITE SOLAR ENERGY CONVERSION
Analysis of different systems concerning the energy distribution on board a satellite
[IAF PAPER 74-C84] 05 p0014 A75-13716
Geosynchronous satellite solar power --- energy transmission to earth
07 p0111 A75-31272
Solar power generating systems as sources of non-polluting energy (power generation in space and power generation on the ground)
[NASA-TT-F-16091] 05 p0033 N75-13383
SATELLITE SOLAR POWER STATIONS
The satellite solar power station - An option for energy production on earth
[AIAA PAPER 75-637] 06 p0063 A75-28600
Overcoming two significant hurdles to space power generation Transportation and assembly
[AIAA PAPER 75-641] 06 p0063 A75-28601
The adaptation of free space power transmission technology to the SSPS concept --- Satellite Solar Power Stations
[AIAA PAPER 75-642] 06 p0063 A75-28602
Derivation of a total satellite energy system --- solar power station for terrestrial consumption
[AIAA PAPER 75-640] 06 p0064 A75-29118
The satellite solar power station option --- for solar energy transmission to earth
07 p0118 A75-35465
Solar power generating systems as sources of non-polluting energy (power generation in space and power generation on the ground)
[NASA-TT-F-16091] 05 p0033 N75-13383
The modular solar energy satellite: Investigation on large solar cell surfaces in space for the purpose of earth power supply
[ILR-17-1974] 05 p0036 N75-14271
Feasibility study of a satellite solar power station
[NASA-CR-2357] 07 p0138 N75-23683
SCALE MODELS
Development of a flexible, fold-out solar array --- power to weight ratio for communication satellites
06 p0053 A75-24252
A practical model law for chemical explosive fracture of oil shale
06 p0078 N75-17023
SCHOOLS
Solar energy school heating augmentation experiment. Design, construction and construction and initial operation
[PB-239397/3] 07 p0150 N75-25314
SCHOTTKY DIODES
Temperature effects in Schottky-barrier silicon solar cells
07 p0115 A75-34175
SCRAP
Bureau of Mines research programs on recycling and disposal of mineral, metal, and energy-based wastes
[PB-227476/9] 05 p0042 N75-15203
SEA GRASSES
The oceanic biomass energy plantation --- seaweed harvesting for food and fuel
[AIAA PAPER 75-635] 06 p0063 A75-28599
SEA WATER
Steady state free convection in an unconfined geothermal reservoir
05 p0009 A75-11069
Solar sea power
[PB-235469/4] 05 p0038 N75-14284
Solar sea power --- axial flow pumps
[PB-236997/3] 06 p0082 N75-17821
Feasibility study of a 100 megawatt open cycle ocean thermal difference power plant
[PB-238571/4] 07 p0130 N75-21821
Technical and economic feasibility of the ocean thermal differences process as a solar-driven energy process
[PB-239374/2] 07 p0150 N75-25317
Ocean thermal difference power plant turbine design
[PB-239371/8] 07 p0150 N75-25318
SECONDARY INJECTION
Evaluation of thermal methods for recovery of viscous oils in Missouri and Kansas
[PB-237831/3] 06 p0090 N75-18762
SECURITY
Energy and security: Implications for American policy
[AD-785084] 05 p0032 N75-12857
SEDIMENTARY ROCKS
Stratigraphy, sedimentology and oil and gas geology of the Lower Cretaceous in central Alberta
07 p0137 N75-22961
SEEBECK EFFECT
High efficiency thermoelectric generator
05 p0014 A75-13067
SEISMOLOGY
Measuring ground movement in geothermal areas of Imperial Valley, California
06 p0099 N75-20842

SELENIDES
RTG technology development - Where we are/where we are going --- radioisotope thermoelectric generator
05 p0002 A75-10496
A 10% efficient economic RTG design --- radioisotope thermoelectric generator
05 p0003 A75-10506
RTG electrical power for spacecraft --- Radioisotope Thermoelectric Generators
06 p0057 A75-26067
SEMICONDUCTING FILMS
High efficiency thermoelectric generator
05 p0014 A75-13067
Dynamic method for calculating the series resistance of a semiconductor photoelectric converter
06 p0057 A75-26713
A 15% efficient antireflection-coated metal-oxide-semiconductor solar cell
07 p0119 A75-36275
Dynamic calculation of semiconductor photoconverter series resistance
07 p0122 A75-37164
SEMICONDUCTOR DEVICES
Advanced photovoltaic power sources
05 p0007 A75-10563
Solar cells - Operation, development and applications
05 p0015 A75-15201
Effectiveness of using semiconductor heat pumps under the conditions of the Turkmen SSR
05 p0020 A75-17083
Effect of heat trarsfer from the lateral surfaces of semiconductor thermocouples on the energy characteristics of a thermoelectric generator
05 p0021 A75-18798
Devices based on thermoelectrical phenomena
[AD-783821] 05 p0026 N75-10836
Development of low cost thin film polycrystalline silicon solar cells for terrestrial applications
[PB-238505/2] 06 p0105 N75-20890
SEMICONDUCTOR JUNCTIONS
Glass-Si heterojunction solar cells
[PB-239282/7] 07 p0145 N75-24156
SEMICONDUCTORS (MATERIALS)
Solar selective surfaces made of semiconducting powders
[ASME PAPER 74-WA/HT-13] 05 p0017 A75-16857
SEPARATORS
Porous matrix structures for alkaline electrolyte fuel cells
07 p0123 A75-37243
SERVICE LIFE
Development of a thermal battery for emergency radio power under arctic conditions
05 p0007 A75-10560
A novel negative-limited sealed nickel-cadmium cell
05 p0008 A75-10571
Solar cell modules for lightweight solar arrays --- onboard communication satellites
06 p0057 A75-26068
Compatibility and reliability of heat pipe materials
[AIAA PAPER 75-660] 07 p0114 A75-32918
SEWAGE
Laboratory semiautomatic infrared device for determining the composition of petroleum products in sewage
07 p0125 A75-38648
SHALE OIL
Economic impact of the oil shale industry in western Colorado
[GPO-28-608] 05 p0024 N75-10588
Oil shale development, part 2
[GPO-30-368] 05 p0027 N75-11455
Retorting indexes for oil-shale pyrolyses from ethylene-ethane ratios of product gases
[PB-234050/3] 05 p0034 N75-13399
Primary data on economic activity and water use in prototype oil shale development areas of Colorado: An initial inquiry
[PB-236039/4] 05 p0037 N75-14277
Prototype oil shale leasing program
[GPO-28-686] 05 p0039 N75-15160
AEC in situ oil shale program
[UCID-16520] 06 p0068 N75-16090
Average oil yeild tables for oil shale sequences in cores from the Uinta Basin, Utah, that average 15, 20, 25, 30, 35, and 40 gallons per ton
[PB-236068/3] 06 p0072 N75-16124
Polluticnal problems and research needs for an oil shale industry
[PB-236608/6] 06 p0084 N75-17848
In situ oil shale: A cost sensitivity analysis
[SAND-74-0146] 06 p0087 N75-18727
Shale retorting in a 150-ton batch-type pilot plant
[PB-240263/4] 07 p0151 N75-25328
Determination of carbonate minerals of Green River formation oil shales, Piceance Creek Basin, Colorado
[PB-240669/2] 07 p0159 N75-27554
SHALES
A practical model law for chemical explosive fracture of oil shale
06 p0078 N75-17023
Mechanical properties of oil shale from Anvil Point under conditions of uniaxial compression
[SAND-74-0035] 06 p0092 N75-19390
In situ oil shale conversion and recovery
[SLA-74-0162] 06 p0093 N75-19825
The identification of gamma-valerolactone in waste from an oil-shale in situ retort --- determination of chemical composition by mass spectroscopy of effluents from crude oil shales causing water pollution
[PB-240098/4] 07 p0147 N75-24852
SHORT HAUL AIRCRAFT
Evaluation of advanced lift concepts and potential fuel conservation for short-haul aircraft
[NASA-CR-2502] 06 p0073 N75-16557
Evaluation of advanced lift concepts and fuel conservative short-haul aircraft, volume 1
[NASA-CR-137525] 06 p0096 N75-20291
Evaluation of advanced lift concepts and fuel conservative short-haul aircraft, volume 2
[NASA-CR-137526] 06 p0097 N75-20292
SIBERIA
Improving the oil storage system of western Siberia
[AD-A002717] 06 p0092 N75-19705
SILICON
Solar selective surfaces made of semiconducting powders
[ASME PAPER 74-WA/HT-13] 05 p0017 A75-16857
Development of low cost thin film polycrystalline silicon solar cells for terrestrial applications
[PB-238505/2] 06 p0105 N75-20890
V-grooved silicon solar cells
[NASA-TM-X-71715] 07 p0141 N75-24119
Research and development of low cost processes for integrated solar arrays
[PB-239760/2] 07 p0156 N75-26519
SILICON FILMS
Methods for low cost manufacture of silicon solar arrays
[ASME PAPER 74-WA/ENER-4] 05 p0016 A75-16836
SILICON JUNCTIONS
The effects of irradiation on high-efficiency silicon solar cells
06 p0051 A75-24199
Improvements in analysis and technology of silicon solar cells with increased efficiency
06 p0051 A75-24216
High efficiency silicon solar cells
06 p0052 A75-24217
Development and space qualification of new high-efficiency silicon solar cells
06 p0052 A75-24218
Investigation of the technology and performance of lithium doped solar cells --- feasibility study for mass production
06 p0052 A75-24219
High-speed silicon processing for low cost solar cells - A comparative analysis
06 p0052 A75-24222
Performance of advanced silicon solar cells in a space environment
06 p0052 A75-24232
The future of silicon solar cells for terrestrial use
06 p0058 A75-27717
Investigation of the electrical and temperature characteristics of a silicon photoelectric converter under natural conditions
07 p0116 A75-34314

Temperature dependence of the spectral characteristics of quick-response silicon photocells
07 p0119 A75-36013
V-grooved silicon solar cells
07 p0123 A75-37397
Effects of high doping levels on silicon solar cell performance
07 p0123 A75-37403

SILICON NITRIDES
Aluminum nitride and silicon nitride for high-temperature vehicular gas turbine engines
05 p0011 A75-11362

SILVER
Transparent heat-mirror films of TiO2/Ag/TiO2 for solar energy collection and radiation insulation
05 p0015 A75-16378

SINTERING
High energy density sintered plate type sealed nickel cadmium battery cells. I - The positive electrode/plaque relationships
05 p0008 A75-10569
High energy density sintered plate type nickel-cadmium battery cells. II - Electrochemical impregnation methods to produce nickel oxide electrodes
05 p0008 A75-10570

SITES
Nuclear energy center site survey: Scope of work
[PB-240453/1] 07 p0152 N75-25348

SKYLAB 4
The detection of geothermal areas from Skylab thermal data
[NASA-CR-143133] 07 p0158 N75-27540

SNAP 19
SNAP 19 Viking RTG flight configuration and integration testing --- Radioisotope Thermoelectric Generator
05 p0003 A75-10504

SNOW COVER
Snow and ice removal from pavements using stored earth energy --- via heat pipes
[PB-240623/9] 07 p0162 N75-27581

SODIUM CARBONATES
Coal gasification by Atomics International's Rockgas process
[ASME PAPER 74-WA/PWR-11] 05 p0018 A75-16883

SOIL MAPPING
Helium survey, a possible technique for locating geothermal reservoirs
07 p0118 A75-35438

SOIL MOISTURE
An agro-power-waste water complex for land disposal of waste heat and waste water
[PB-239675/2] 07 p0161 N75-27570

SOLAR ARRAYS
NASA objectives for improved solar power plants
05 p0002 A75-10485
Solar cell and array standardization for Air Force spacecraft
05 p0002 A75-10486
Status of JPL solar powered experiments for terrestrial applications
05 p0005 A75-10530
Methods for low cost manufacture of silicon solar arrays
[ASME PAPER 74-WA/ENER-4] 05 p0016 A75-16836
Report on photovoltaics research and technology in the United States
06 p0051 A75-24214
The technology of the solar generator on the Symphonie satellite
06 p0053 A75-24237
An analysis of photovoltaic power generation and thermal control interfaces --- for solar arrays
06 p0053 A75-24243
Latest developments of the circular solar array --- with deployment structure for central antenna communication satellite
06 p0053 A75-24246
Design and qualification of the CTS solar cell blanket --- onboard Canadian Communications Technology Satellite
06 p0053 A75-24248
Power generation for the X4 spacecraft - A step in the development of a high power/mass ratio, hybrid solar array for applications spacecraft
06 p0053 A75-24251
Development of a flexible, fold-out solar array --- power to weight ratio for communication satellites
06 p0053 A75-24252
Solar cell modules for lightweight solar arrays --- onboard communication satellites
06 p0057 A75-26068
Photovoltaic power --- solar energy for terrestrial applications
07 p0111 A75-31271
Power collection reduction by mirror surface nonflatness and tracking error for a central receiver solar power system
07 p0120 A75-36305
Test report SEPS solar array root section model
[NASA-CR-120606] 06 p0067 N75-16085
Solar Power Array for the Concentration of Energy (SPACE)
[PB-236247/3] 06 p0071 N75-16114
Cost competitiveness of a solar cell array power source for ATS-6 educational TV terminal
[NASA-TM-X-71720] 07 p0140 N75-24110
Research on solar cell arrays and electric energy
[PB-239338/7] 07 p0155 N75-26504
Research and development of low cost processes for integrated solar arrays
[PB-239760/2] 07 p0156 N75-26519

SOLAR CELLS
Solar cell and array standardization for Air Force spacecraft
05 p0002 A75-10486
Analysis of conversion efficiency of organic-semiconductor solar cells
05 p0010 A75-11146
Recent advances in components of space power systems
[IAF PAPER 74-083] 05 p0014 A75-13715
Solar cells - Operation, development and applications
05 p0015 A75-15201
Radiation effects on high efficiency silicon-solar cells
06 p0051 A75-24197
The effects of irradiation on high-efficiency silicon solar cells
06 p0051 A75-24199
Optimisation of solar cell shielding for geostationary missions
06 p0051 A75-24203
Photovoltaic power generation; Proceedings of the International Conference, Hamburg, West Germany, September 25-27, 1974
06 p0051 A75-24213
Improvements in analysis and technology of silicon solar cells with increased efficiency
06 p0051 A75-24216
High efficiency silicon solar cells
06 p0052 A75-24217
Development and space qualification of new high-efficiency silicon solar cells
06 p0052 A75-24218
Investigation of the technology and performance of lithium doped solar cells --- feasibility study for mass production
06 p0052 A75-24219
High-speed silicon processing for low cost solar cells - A comparative analysis
06 p0052 A75-24222
CdS-Cu2S cells - An outlook for terrestrial applications
06 p0052 A75-24223
Progress in the development of cadmium sulphide terrestrial solar batteries
06 p0052 A75-24224
Further progress in the technology of silk screened CdS solar cells
06 p0052 A75-24225
Development of very low cost solar cells for terrestrial power generation
06 p0052 A75-24226
Performance of advanced silicon solar cells in a space environment
06 p0052 A75-24232
Electron and proton irradiation of high-efficiency silicon solar cells
06 p0053 A75-24233
The COMSAT non-reflective silicon solar cell - A second generation improved cell
06 p0053 A75-24245

Solar one - The Delaware solar house and results obtained during the first year of operation
C6 p0054 A75-24254
The use of solar cells in the lighthouse service
C6 p0054 A75-24255
Some aspects of a solar battery system and its use for irrigation in remote sun-rich regions
C6 p0054 A75-24256
Terrestrial applications of FEP-encapsulated solar cell modules --- power systems using Fluorinated Ethylene Propylene encapsulation
C6 p0054 A75-24258
Process development for low cost integrated solar arrays
C6 p0054 A75-24259
Epitaxial silicon solar cell
C6 p0056 A75-25086
Solar cell modules for lightweight solar arrays --- onboard communication satellites
C6 p0057 A75-26068
High-efficiency graded band-gap Al/x/Ga/1-x/As-GaAs solar cell
C6 p0058 A75-27519
GaAs concentrator solar cell
C6 p0058 A75-27520
Solar cells - Present state and perspectives on terrestrial applications
C6 p0058 A75-27716
The future of silicon solar cells for terrestrial use
C6 p0058 A75-27717
Solar electric and thermal conversion system in close proximity to the consumer --- solar panels on house roofs
[AIAA PAPER 75-628] C6 p0062 A75-28597
Performance of a solar battery using quasi-cylindrical array of plane mirrors as a concentrator
C7 p0109 A75-29478
Temperature effects in Schottky-barrier silicon solar cells
C7 p0115 A75-34175
Temperature dependence of the spectral characteristics of quick-response silicon photocells
C7 p0119 A75-36013
Efficient CuInSe2/CdS solar cells
C7 p0119 A75-36274
A 15% efficient antireflection-coated metal-oxide-semiconductor solar cell
C7 p0119 A75-36275
The conversion efficiency of ideal Shockley p-n junction photovoltaic converters in concentrated sunlight
C7 p0120 A75-36362
Silicon solar cells for highly concentrated sunlight
C7 p0120 A75-36363
Full-scale tests of 'photovolt' high-voltage photocells at high light flux levels
C7 p0122 A75-37162
The effect of sunshine testing on terrestrial solar cell system components
C7 p0123 A75-37396
V-grooved silicon solar cells
C7 p0123 A75-37397
The high intensity solar cell - Key to low cost photovoltaic power
C7 p0123 A75-37400
Advances in the theory and application of BSF cells --- Back Surface Field solar cells
C7 p0123 A75-37402
Effects of high doping levels on silicon solar cell performance
C7 p0123 A75-37403
Effect of impurity doping concentration on solar cell output
C7 p0124 A75-37404
The modular solar energy satellite: Investigation on large solar cell surfaces in space for the purpose of earth power supply
[ILR-17-1974] 05 p0036 N75-14271
Direct solar energy conversion for large scale terrestrial use
[PE-236193/9] C6 p0071 N75-16115
Development of low cost thin film polycrystalline silicon solar cells for terrestrial applications
[PB-238505/2] C6 p0105 N75-20890
Photovoltaic cell array
[NASA-CASE-MFS-22458-1] 07 p0134 N75-22900
Columnar silicon film solar cells for terrestrial applications
[PB-238534/2] 07 p0135 N75-22916
Summary of high efficiency silicon solar cell meeting held at NASA-Lewis
[NASA-TM-X-71729] 07 p0138 N75-23681
Feasibility study of a satellite solar power station
[NASA-CR-2357] 07 p0138 N75-23683
Photovoltaic solar power systems
07 p0139 N75-24098
Space satellite power system --- conversion of solar energy by photovoltaic solar cell arrays
[NASA-CR-142799] 07 p0139 N75-24099
The high intensity solar cell: Key to low cost photovoltaic power
[NASA-TM-X-71718] 07 p0140 N75-24108
The effect of sunshine testing on terrestrial solar cell system components
[NASA-TM-X-71722] 07 p0140 N75-24109
V-grooved silicon solar cells
[NASA-TM-X-71715] 07 p0141 N75-24119
Terrestrial photovoltaic power systems with sunlight concentration
[PB-238506/0] 07 p0143 N75-24136
Glass-Si heterojunction solar cells
[PB-239282/7] 07 p0145 N75-24156
Research on solar cell arrays and electric energy
[PB-239338/7] 07 p0155 N75-26504
Research and development of low cost processes for integrated solar arrays
[PB-239760/2] 07 p0156 N75-26519

SOLAR COLLECTORS
Heat mirrors for solar-energy collection and radiation insulation
05 p0004 A75-10525
Comparative performance characteristics of cylindrical parabolic and flat plate solar energy collectors
[ASME PAPER 74-WA/ENER-3] 05 p0016 A75-16835
Solar selective surfaces made of semiconducting powders
[ASME PAPER 74-WA/HT-13] 05 p0017 A75-16857
Natural convection in enclosed spaces - A review of application to solar energy collection
[ASME PAPER 74-WA/HT-12] 05 p0017 A75-16860
Solar radiation heat transfer to high temperature heat carriers
[ASME PAPER 74-WA/HT-14] 05 p0017 A75-16861
The analysis of the performance of a pancake absorber-heat exchanger for a solar concentrator
[ASME PAPER 74-WA/SOL-1] 05 p0018 A75-16884
A case study - Utilization of solar energy in residential dwellings
[ASME PAPER 74-WA/SOL-2] 05 p0018 A75-16885
An analytical and experimental investigation of a laboratory solar pond model
[ASME PAPER 74-WA/SOL-3] 05 p0019 A75-16886
Performance of the thermal trap solar collector
[ASME PAPER 74-WA/SOL-5] 05 p0019 A75-16888
Design of a tubular heat collector for a solar power installation with a parabolocylindric concentrator
05 p0020 A75-17069
Simulation of a solar heating and cooling system --- for houses
06 p0048 A75-23018
Some aspects of a solar battery system and its use for irrigation in remote sun-rich regions
06 p0054 A75-24256
Method for calculating solar radiation for semicylindrical collectors
06 p0057 A75-26718
GaAs concentrator solar cell
06 p0058 A75-27520
Solar collector performance evaluated outdoors at NASA-Lewis Research Center
06 p0058 A75-27531
Status of the NASA-Lewis flat-plate collector tests with a solar simulator
06 p0058 A75-27533
Cooling by solar heat --- heating and cooling system for buildings
[AIAA PAPER 75-609] 06 p0062 A75-28590
Solar ponds for space heating --- energy storage by convectionless shallow water
07 p0109 A75-29471
Parametric performance and cost models for solar concentrators
07 p0109 A75-29476

Performance of a solar battery using guasi-cylindrical array of plane mirrors as a concentrator
07 p0109 A75-29478
Calculation of flat-plate collector loss coefficients --- of solar radiation
07 p0109 A75-29480
Solar-thermal electric power
07 p0111 A75-31270
Trapezoidal grooves as moderately concentrating solar energy collectors
[AIAA PAPER 75-738] 07 p0113 A75-32860
Numerical modeling of flat plate solar collectors
[AIAA PAPER 75-739] 07 p0113 A75-32861
Outdoor flat-plate collector performance prediction from solar simulator test data
[AIAA PAPER 75-741] 07 p0113 A75-32862
Glass solar heat collector development
[AIAA PAPER 75-740] 07 p0115 A75-33758
Optimal solar energy collector system
07 p0115 A75-33970
On the optimum tilt of a solar collector
07 p0115 A75-33971
Field performance and operation of a flat-glass solar heat collector
07 p0115 A75-33973
Evaluation of central solar tower power plant
07 p0116 A75-34531
Modeling of solar absorption air conditioning
07 p0117 A75-34932
Solar characteristics of new absorptive coatings used on solar collectors
07 p0117 A75-34934
Methodology of research of flat-plate solar collector absorptive coatings
07 p0117 A75-34935
An ecologic solar heated and cooled home
07 p0118 A75-34937
Determination of the surface shapes of film-type solar energy concentrators with seams
07 p0119 A75-36017
Power collection reduction by mirror surface nonflatness and tracking error for a central receiver solar power system
07 p0120 A75-36305
Solar energy - The physics of the greenhouse effect
07 p0120 A75-36306
Stationary concentrating reflector cum tracking absorber solar energy collector - Optical design characteristics
07 p0120 A75-36307
Fabricating paraboloidal high-temperature solar concentrators from mollified sectors
07 p0122 A75-37166
Solar incidence factor and other geometric considerations of solar energy collection
[SAND-74-26] 05 p0034 N75-13390
Axial temperature differential analysis of linear focused collectors for solar power
[SIA-74-5078] 05 p0036 N75-14268
Design analysis of asymmetric solar receivers
[SAND-74-0124] 06 p0076 N75-16986
Collection and concentration of solar energy using Fresnel type lenses
[NASA-CR-142194] 06 p0080 N75-17784
The evaluation of surface geometry modification to improve the directional selectivity of solar energy collectors
[PB-236412/3] 06 p0083 N75-17830
Solar kine: Answer to the agricultural energy challenge of our time
06 p0086 N75-18721
Solar thermal conversion program. Central receiver POCE project, subsystem specifications studies
[PB-238002/0] 06 p0087 N75-18733
Summary of results of solar power arrays for the concentration of energy study
[PB-238003/8] 06 p0089 N75-18756
Report and recommendations of the Solar Energy Data Workshop
[PB-238066/5] 06 p0089 N75-18757
Solar collector thermal power system. Volume 1: Preliminary technology systems study
[AD-A000940] 06 p0091 N75-19339
Solar collector thermal power system. Volume 2: Development, fabrication, and testing of fifteen foot heat pipes
[AD-A000941] 06 p0091 N75-19340
Solar collector thermal power system. Volume 3: Basic study and experimental evaluation of thermal train components
[AD-A000942] 06 p0091 N75-19341
Sizing of focused solar collector fields with specified collector tube inlet temperature --- Rankine cycle
[SLA-74-5288] 06 p0094 N75-19832
Comparative performance characteristics of cylindrical parabolic focusing and flat plate solar energy collectors
[CONF-741104-3] 06 p0103 N75-20672
Solar heating and cooling of buildings study conducted for department of the Army. Volume 1: Executive summary and implementation plans
[AD-A002576] 06 p0104 N75-20679
Solar heating and cooling of buildings study conducted for Department of the Army. Volume 2: Technical report
[AD-A002563] 06 p0104 N75-20880
Research on the application of solar energy to the food drying industry
[PB-238073/1] 06 p0105 N75-20888
Solar collector performance evaluated outdoors at NASA-Lewis Research Center
[NASA-TM-X-71689] 07 p0128 N75-21794
The evaluation of surface geometry modification to improve the directional selectivity of solar energy collectors
[PB-238509/4] 07 p0130 N75-21822
Outdoor flat-plate collector performance prediction from solar simulator test data
[NASA-TM-X-71707] 07 p0140 N75-24111
Standardized solar simulator tests of flat plate solar collectors. 1: Soltex collector with two transparent covers
[NASA-TM-X-71738] 07 p0141 N75-24118
Interim standard for solar collectors, first draft
[PB-239757/8] 07 p0150 N75-25313
Solar energy school heating augmentation experiment. Design, construction and construction and initial operation
[PB-239397/3] 07 p0150 N75-25314
Conservation and better utilization of electric power by means of thermal energy storage and solar heating. Solar collector performance studies
[PB-239355/1] 07 p0150 N75-25320
Method of testing for rating solar collectors based on thermal performance --- flat plate collectors
[COM-75-10276/4] 07 p0150 N75-25321
Development of flat-plate solar collectors for the heating and cooling of buildings
[NASA-CR-134804] 07 p0154 N75-26495
Solar heating experiment on the Grover Cleveland School, Boston, Massachusetts
[PB-239516/8] 07 p0155 N75-26505
Solar heating and cooling experiment for a school in Atlanta
[PB-240611/4] 07 p0155 N75-26510
Solar collector performance studies
[PB-239758/6] 07 p0156 N75-26520

SOLAR ELECTRIC PROPULSION
Solar electric propulsion spacecraft power subsystem for an Encke comet rendezvous mission
05 p0002 A75-10481
Interplanetary spacecraft design using solar electric propulsion
[AIAA PAPER 74-1084] 05 p0010 A75-11283
Natural environment design criteria for the Solar Electric Propulsion Stage (SEPS)
[NASA-TM-X-64929] 07 p0138 N75-23682
Solar electric propulsion system thermal analysis --- including heat pipes and multilayer insulation
[NASA-CR-120770] 07 p0147 N75-24842

SOLAR ENERGY
Prospects for tapping solar energy on a large scale
05 p0015 A75-14014
A case study - Utilization of solar energy in residential dwellings
[ASME PAPER 74-WA/SOL-2] 05 p0018 A75-16685
Some generalizations of sample water-supply calculations for solar-powered pumping plants
05 p0020 A75-17077
Experience in setting up solar-energy survey for Azerbaidzhan
05 p0020 A75-17081

Technology utilization - Incentives and solar energy
C6 p0048 A75-22913
Simulation of a solar heating and cooling system --- for houses
06 p0048 A75-23018
Solar operation of ammonia-water multistage air conditioning cycles in the tropics
06 p0048 A75-23021
The Solar Community - Energy for residential heating, cooling, and electrical power
C6 p0059 A75-27785
The nature of the sunspot phenomenon. III - Energy consumption and energy transport. IV - The intrinsic instability of the magnetic configuration
C6 p0064 A75-29137
Hydrogen production from solar energy
07 p0109 A75-29477
A commentary on solar energy
07 p0116 A75-34532
Effective utilization of solar energy to produce clean fuel
[PB-233956/2] 05 p0026 N75-10605
Our prodigal sun --- solar energy technology
[NASA-EP-118] 05 p0032 N75-12885
Utilization of solar energy --- an assessment of present technology
[NASA-TT-F-16090] 05 p0033 N75-13382
Prospects for solar energy utilization
[SAND-74-8604] 05 p0034 N75-13389
Solar incidence factor and other geometric considerations of solar energy collection
[SAND-74-26] 05 p0034 N75-13390
Solar energy: Sandia's photovoltaic research program
[SIA-74-281] 05 p0034 N75-13392
Axial temperature differential analysis of linear focused collectors for solar power
[SIA-74-5078] 05 p0036 N75-14268
Photochemical conversion of solar energy
[PB-236266/3] 05 p0037 N75-14281
Photochemical conversion of solar energy --- study of iron-thionine photogalvanic cells
[PB-235474/4] 05 p0038 N75-14282
Solar sea power
[PB-235469/4] 05 p0038 N75-14284
Solar energy
[NASA-TT-F-16092] 05 p0038 N75-15149
Research applied to solar-thermal power systems: Chemical vapor deposition research for fabrication of solar energy convertors
[PB-234565/0] 05 p0041 N75-15186
Photochemical conversion of solar energy
[PB-235503/0] 06 p0070 N75-16106
Air-stable selective surfaces for solar energy collectors
[PB-236196/2] 06 p0071 N75-16116
Research on cadmium stannate selective optical films for solar energy applications
[PB-236208/5] 06 p0071 N75-16117
Solar thermal electric power systems
[PB-236368/7] 06 p0071 N75-16118
Chemical vapor deposition research for fabrication of solar energy convertors
[PB-236189/7] 06 p0072 N75-16119
Terrestrial photovoltaic power systems with sunlight concentration
[PB-236180/6] 06 p0072 N75-16120
Photovoltaic conversion of solar energy for terrestrial applications. Volume 2: Invited papers
[PB-236164/0] 06 p0072 N75-16122
Sensible heat storage in liquids --- solar energy applications
[SII-73-0263] 06 p0074 N75-16773
Solar energy program plan for heating and cooling buildings
[WASH-1337-5-DRAFT] 06 p0077 N75-16993
Solar total energy program
[SAND-74-0208] 06 p0081 N75-17810
Use of solar energy in buildings in New York state
[PB-236974/2] 06 p0083 N75-17825
Solar thermal subsystem specification study
[PB-238005/3] 06 p0083 N75-17829
Solar energy concentrator system for crystal growth and zone refining in space
[NASA-CR-120623] 06 p0086 N75-18719
Summary of results of solar power arrays for the concentration of energy study
[PB-238003/8] 06 p0089 N75-18756
LIL-SOHIO solar process heat project
[UCID-16630-74-1] 06 p0093 N75-19827
Solar energy: A bibliography
[TID-3351] 06 p0103 N75-20871
Comparative performance characteristics of cylindrical parabolic focusing and flat plate solar energy collectors
[CONF-741104-3] 06 p0103 N75-20872
Research on the application of solar energy to the food drying industry
[PB-238073/1] 06 p0105 N75-20888
Putting the sun to work: A history and directory of currently available solar energy applications
[PB-238189/5] 07 p0129 N75-21810
Photovoltaic cell array
[NASA-CASE-MFS-22458-1] 07 p0134 N75-22900
Electric power for space satellites
[NASA-TM-X-66808] 07 p0137 N75-23678
Oceanic and atmospheric energy sources
07 p0139 N75-24101
The national solar energy program
07 p0139 N75-24102
Solar energy research and development
[GPO-40-684] 07 p0139 N75-24104
V-grooved silicon solar cells
[NASA-TM-X-71715] 07 p0141 N75-24119
Terrestrial photovoltaic power systems with sunlight concentration
[PB-238506/0] 07 p0143 N75-24136
Proceedings of 5th annual symposium: Energy Research and Development --- solar energy, windpower utilization, thermonuclear power generation
[AD-A007799] 07 p0144 N75-24142
A preliminary technology assessment of ocean thermal gradient energy generation
[PB-238646/4] 07 p0144 N75-24147
Symposium on the Material Science Aspects of Thin Film Systems for Solar Energy Conversion
[PB-239270/2] 07 p0144 N75-24150
Solar energy for process steam generation
[PB-238109/3] 07 p0145 N75-24154
Solar Energy Research, Development, and Demonstration Act of 1974
[GPO-39-827] 07 p0149 N75-25299
Technical and economic feasibility of the ocean thermal differences process as a solar-driven energy process
[PB-239374/2] 07 p0150 N75-25317
Solar heating and cooling experiment for a school in Atlanta
[PB-240611/4] 07 p0155 N75-26510
Fluid manifold design for a solar energy storage tank
[NASA-TM-X-64940] 07 p0160 N75-27562

SOLAR ENERGY ABSORBERS
Solar farms utilizing low-pressure closed-cycle gas turbines
05 p0003 A75-10514
Operating experiences with terrestrial solar battery systems in Japan
05 p0005 A75-10531
Solar thermal absorption heat pump breakeven coefficient of performance
[ASME PAPER 74-WA/ENER-2] 05 p0015 A75-16834
Solar energy storage within the absorption cycle
[ASME PAPER 74-WA/HT-18] 05 p0017 A75-16864
The analysis of the performance of a pancake absorber-heat exchanger for a solar concentrator
[ASME PAPER 74-WA/SOL-1] 05 p0018 A75-16884
Thin film coatings in solar-thermal power systems
C6 p0056 A75-25679
Modeling of the CSU heating/cooling system --- Colorado State University solar house computer simulation
07 p0109 A75-29473
A new concept for solar energy thermal conversion
07 p0110 A75-30368
Determination of some thermophysical characteristics of a solar-type pebble accumulator
07 p0116 A75-34317
Solar characteristics of new absorptive coatings used on solar collectors
07 p0117 A75-34934

Methodology of research of flat-plate solar collector absorptive coatings
07 p0117 A75-34935
The University of Florida solar powered intermittent ammonia/water absorption air conditioner
07 p0118 A75-34936
Stationary concentrating reflector cum tracking absorber solar energy collector - Optical design characteristics
07 p0120 A75-36307
Solar energy absorber
[NASA-CASE-MFS-22743-1] 05 p0024 N75-10585
Solar energy trap
[NASA-CASE-MFS-22744-1] 05 p0024 N75-10586
The evaluation of surface geometry modification to improve the directional selectivity of solar energy collectors
[PB-236412/3] 06 p0083 N75-17830
Solar thermal conversion program. Central receiver POCE project, subsystem specifications studies
[PB-238002/0] 06 p0087 N75-18733
Solar thermal power systems based on optical transmission
[PB-237005/4] 06 p0088 N75-18742
Reflector-absorber systems for solar thermionic converters
[ESRO-TT-123] 06 p0104 N75-20878
Terrestrial photovoltaic power systems with sunlight concentration
[PB-238582/1] 06 p0105 N75-20886
Workshop Proceedings on Solar Cooling for buildings, held in conjunction with the Semiannual Meeting of the American Society of Heating, Refrigerating and Air Conditioning Engineers (ASHRAE)
[PB-239419/5] 07 p0144 N75-24145
Solar collector performance studies
[PB-239758/6] 07 p0156 N75-26520
Solar pond
[NASA-CASE-NPO-13581-1] 07 p0160 N75-27560

SOLAR ENERGY CONVERSION

Evaluation of central solar tower power plant
05 p0003 A75-10515
Economics analyses of solar energy utilization
05 p0004 A75-10520
Metal hydrides for thermal energy storage
05 p0004 A75-10522
A prototype solar powered, Rankine Cycle system providing residential air conditioning and electricity
05 p0004 A75-10523
Solar augmented home heating heat pump system
05 p0004 A75-10524
Heat mirrors for solar-energy collection and radiation insulation
05 p0004 A75-10525
Analysis of conversion efficiency of organic-semiconductor solar cells
05 p0010 A75-11146
Study of channel-type systems for solar-energy radiative heat transport
05 p0010 A75-11196
GaP p-n junctions and possibilities for their application in the conversion of solar energy into electric
05 p0011 A75-12198
Solar energy: Technology and applications --- Book
05 p0012 A75-12425
II-VI photovoltaic heterojunctions for solar energy conversion
05 p0012 A75-12734
Utilization of solar energy today
05 p0012 A75-12987
Solar energy conversion and storage systems for the future
05 p0013 A75-12988
Solar cells - Operation, development and applications
05 p0015 A75-15201
Transparent heat-mirror films of TiO2/Ag/TiO2 for solar energy collection and radiation insulation

Solar heating and cooling of buildings study conducted for Department of the Army. Volume 2: Technical report
[AD-A002563] 06 p0104 N75-20880
Feasibility demonstration of a solar powered turbocompressor air conditioning and heating system
[PB-238570/6] 07 p0130 N75-21816
Solar residential heating and cooling system development test program
[NASA-TM-X-64924] 07 p0135 N75-22903
Modeling of solar heating and air conditioning
[PB-239189/4] 07 p0136 N75-22926
The development of a solar residential heating and cooling system
[NASA-CR-142728] 07 p0140 N75-24107
Interim standard for solar collectors, first draft
[PB-239757/8] 07 p0150 N75-25313
Solar energy school heating augmentation experiment. Design, construction and construction and initial operation
[PB-239397/3] 07 p0150 N75-25314

Conservation and better utilization of electric power by means of thermal energy storage and solar heating. Solar collector performance studies
[PB-239355/1] 07 p0150 N75-25320
Development of flat-plate solar collectors for the heating and cooling of buildings
[NASA-CR-134804] 07 p0154 N75-26495
Summary of NASA Lewis Research Center solar heating and cooling and wind energy programs
[NASA-TM-X-71745] 07 p0154 N75-26497
Research on solar cell arrays and electric energy
[PB-239338/7] 07 p0155 N75-26504
Solar heating experiment on the Grover Cleveland School, Boston, Massachusetts
[PB-239516/8] 07 p0155 N75-26505
Solar heating and cooling experiment for a school in Atlanta
[PB-240611/4] 07 p0155 N75-26510
Investment possibility of financial institutions in solar heating
[PB-239756/0] 07 p0155 N75-26511
Design and test report for transportable solar laboratory program
[PB-240609/8] 07 p0156 N75-26512
Conservation and better utilization of electric power by means of thermal energy storage and solar heating
[PB-239395/7] 07 p0157 N75-26521
Conservation and better utilization of electric power by means of thermal energy storage and solar heating, executive summary
[PB-239394/0] 07 p0157 N75-26522

SOLAR MAGNETIC FIELD
The nature of the sunspot phenomenon. III - Energy consumption and energy transport. IV - The intrinsic instability of the magnetic configuration
06 p0064 A75-29137

SOLAR PHYSICS
The Mitre solar energy demonstration system
06 p0055 A75-24676

SOLAR PROPULSION
Power processor design considerations for a solar electric propulsion spacecraft
[NASA-CR-140842] 05 p0029 N75-12064

SOLAR RADIATION
Solar radiation heat transfer to high temperature heat carriers
[ASME PAPER 74-WA/HT-14] 05 p0017 A75-16861
The effect of sunshine testing on terrestrial solar cell system components
07 p0123 A75-37396
Solar energy --- and solar powered equipment
[NASA-TT-F-16155] 06 p0081 N75-17787
Report and recommendations of the Solar Energy Data Workshop
[PB-238066/5] 06 p0089 N75-18757

SOLAR REFLECTORS
Study of energy distribution in the field of concentration of a solar power plant with a hyperboloid counterreflector
05 p0010 A75-11195
Compact solar energy concentrator
05 p0021 A75-19050
Material considerations involved in solar energy conversion
06 p0047 A75-22522
Energy distribution in the concentration field of a solar installation with a hyperboloidal counter-reflector
06 p0049 A75-23407
Performance of a solar battery using quasi-cylindrical array of plane mirrors as a concentrator
07 p0109 A75-29478
Method of calibrating a solar power plant with a paraboloidal mirror
07 p0116 A75-34315
Energy distribution in the concentration field of a two-mirror device with a paraboloidal back reflector
07 p0122 A75-37157
Reflector-absorber systems for solar thermionic converters
[ESRO-TT-123] 06 p0104 N75-20878

SOLAR SIMULATION
Modeling of solar absorption air conditioning
07 p0117 A75-34932

SOLAR SIMULATORS
Status of the NASA-Lewis flat-plate collector tests with a solar simulator
06 p0058 A75-27533
Outdoor flat-plate collector performance prediction from solar simulator test data
[AIAA PAPER 75-741] 07 p0113 A75-32862
Outdoor flat-plate collector performance prediction from solar simulator test data
[NASA-TM-X-71707] 07 p0140 N75-24111
Standardized solar simulator tests of flat plate solar collectors. 1: Soltex collector with two transparent covers
[NASA-TM-X-71738] 07 p0141 N75-24118

SOLID PROPELLANTS
Use of low grade solid fuels in gas turbines
[ASME PAPER 74-WA/ENER-5] 05 p0016 A75-16837

SOLIDS
Energy recovery from solid waste --- production engineering model
06 p0079 N75-17200
Solids emission from power station furnaces --- industrial pollution control
[BLL-CE-TRANS-6524-(9022.09)] 07 p0157 N75-26528

SOLVENT EXTRACTION
Development of a process for producing an ashless, low-sulfur fuel from coal. Volume 4. Product studies. Part 3 Products from coal minerals
[PB-237764/6] 06 p0095 N75-19840
Development of a process for producing an ashless, low-sulfur fuel from coal. Volume 4. Product studies. Part 4. Sulfur removal from coal minerals
[PB-237765/3] 06 p0095 N75-19841
Development of a process for producing an ashless, low-sulfur fuel from coal. Volume 4. Product studies. Part 5. Developmental and rate studies in processing of coal minerals
[PB-237766/1] 06 p0095 N75-19842
Solvent refined coal studies
[PB-238532/6] 07 p0134 N75-22897
Technology and use of lignite
[PB-238666/2] 07 p0142 N75-24131

SOUNDING ROCKETS
The International Heat Pipe Experiment --- ten experiments in zero gravity
[AIAA PAPER 75-726] 07 p0113 A75-32870

SPACE ENVIRONMENT SIMULATION
Performance of advanced silicon solar cells in a space environment
06 p0052 A75-24232
Electron and proton irradiation of high-efficiency silicon solar cells
06 p0053 A75-24233

SPACE MANUFACTURING
Solar energy concentrator system for crystal growth and zone refining in space
[NASA-CR-120623] 06 p0086 N75-18719

SPACE MISSIONS
Natural environment design criteria for the Solar Electric Propulsion Stage (SEPS)
[NASA-TM-X-64929] 07 p0138 N75-23682

SPACE POWER REACTORS
Economic radioisotope thermoelectric generator program: Program plan
[IESD-3112-3] 05 p0034 N75-13393

SPACE PROGRAMS
Technology application at Rockwell International
06 p0078 N75-17189
Research and technology operating plan summary: Fiscal year 1975 research and technology program --- space programs, energy technology, and aerospace sciences
[NASA-TM-X-70410] 06 p0096 N75-20155
Future space transportation systems systems analysis study, phase 1 technical report
[NASA-CR-141856] 07 p0147 N75-24802

SPACE SHUTTLE ORBITERS
Electrical power generation subsystem for Space Shuttle Orbiter
05 p0002 A75-10477

SPACE SHUTTLES
Overcoming two significant hurdles to space power generation Transportation and assembly
[AIAA PAPER 75-641] 06 p0063 A75-28601

SPACE TRANSPORTATION
Overcoming two significant hurdles to space power generation Transportation and assembly
[AIAA PAPER 75-641] 06 p0063 A75-28601

Future space transportation systems systems analysis study, phase 1 technical report
[NASA-CR-141856] C7 p0147 N75-24802
SPACEBORNE PHOTOGRAPHY
The detection of geothermal areas from Skylab thermal data
[NASA-CR-143133] C7 p0158 N75-27540
SPACECRAFT COMPONENTS
Investigations and selection of components and materials for flexible solar generator
06 p0050 A75-24182
Solar collector thermal power system. Volume 1: Preliminary technology systems study
[AD-A000940] C6 p0091 N75-19339
Solar collector thermal power system. Volume 2: Development, fabrication, and testing of fifteen foot heat pipes
[AD-A000941] 06 p0091 N75-19340
Solar collector thermal power system. Volume 3: Basic study and experimental evaluation of thermal train components
[AD-A000942] C6 p0091 N75-19341
SPACECRAFT DESIGN
Interplanetary spacecraft design using solar electric propulsion
[AIAA PAPER 74-1084] 05 p0010 A75-11283
The heat pipe - Its development, and its aerospace applications
C5 p0015 A75-15054
SPACECRAFT ENVIRONMENTS
The International Heat Pipe Experiment --- ten experiments in zero gravity
[AIAA PAPER 75-726] 07 p0113 A75-32870
SPACECRAFT LAUNCHING
How spacecraft are fueled --- technology of fueling spacecraft for flight
[JPRS-63514] 05 p0027 N75-10983
SPACECRAFT MODULES
The modular solar energy satellite: Investigation on large solar cell surfaces in space for the purpose of earth power supply
[IIR-17-1974] 05 p0036 N75-14271
SPACECRAFT POWER SUPPLIES
Electrical power generation subsystem for Space Shuttle Orbiter
05 p0002 A75-10477
Solar electric propulsion spacecraft power subsystem for an Encke comet rendezvous mission
05 p0002 A75-10481
Technology considerations for Organic Rankine Cycle Electric Power Systems
05 p0002 A75-10484
NASA objectives for improved solar power plants
05 p0002 A75-10485
Solar cell and array standardization for Air Force spacecraft
05 p0002 A75-10486
RTG technology development - Where we are/where we are going --- radioisotope thermoelectric generator
05 p0002 A75-10496
Performance testing of thermoelectric generators at JPL
05 p0002 A75-10503
SNAP 19 Viking RTG flight configuration and integration testing --- Radioisotope Thermoelectric Generator
05 p0003 A75-10504
Space power systems - Retrospect and prospect
[IAF PAPER 74-082] 05 p0014 A75-13714
Recent advances in components of space power systems
[IAF PAPER 74-083] 05 p0014 A75-13715
Analysis of different systems concerning the energy distribution on board a satellite
[IAF PAPER 74-084] 05 p0014 A75-13716
Advances in space power generation
[IAF PAPER 74-086] 05 p0015 A75-13718
Fundamentals of automatic control of space nuclear power plants --- Russian book
06 p0048 A75-23229
Radiation effects on high efficiency silicon-solar cells
06 p0051 A75-24197
Optimisation of solar cell shielding for geostationary missions
06 p0051 A75-24203
Photovoltaic power generation; Proceedings of the International Conference, Hamburg, West Germany, September 25-27, 1974
06 p0051 A75-24213
Historic development of photovoltaic power generation
06 p0051 A75-24215
Development and space qualification of new high-efficiency silicon solar cells
C6 p0052 A75-24218
Latest developments of the circular solar array --- with deployment structure for central antenna communication satellite
06 p0053 A75-24246
Design and qualification of the CTS solar cell blanket --- onboard Canadian Communications Technology Satellite
06 p0053 A75-24248
Power generation for the X4 spacecraft - A step in the development of a high power/mass ratio, hybrid solar array for applications spacecraft
06 p0053 A75-24251
Development of a flexible, fold-out solar array --- power to weight ratio for communication satellites
06 p0053 A75-24252
RTG electrical power for spacecraft --- Radioisotope Thermoelectric Generators
06 p0057 A75-26067
Lasers investigated for space propulsion
C6 p0061 A75-28439
Power processor design considerations for a solar electric propulsion spacecraft
[NASA-CR-140842] 05 p0029 N75-12064
Evaluation of an ion exchange membrane fuel cell for space power
[AD-786888] 05 p0037 N75-14274
Development of advanced fuel cell system, phase 3
[NASA-CR-134818] 07 p0154 N75-26496
SPACECRAFT PROPULSION
Nuclear propulsion technology transfer to energy systems
[AIAA PAPER 74-1072] 05 p0001 A75-10264
Interplanetary spacecraft design using solar electric propulsion
[AIAA PAPER 74-1084] 05 p0010 A75-11283
Physics and potentials of fissioning plasmas for space power and propulsion
[IAF PAPER 74-087] 05 p0015 A75-13719
Lasers investigated for space propulsion
06 p0061 A75-28439
French activity in electric propulsion
07 p0120 A75-36539
SPECIFIC HEAT
Nuclear reactor process heat capabilities, potential, and economics
[CONF-741032-1] C7 p0131 N75-22112
SPECTRAL REFLECTANCE
Use of flexible reflective surfaces for solar energy concentration
06 p0056 A75-25678
SPECTRAL SIGNATURES
Laser induced luminescence signatures of refined and virgin crude petroleum - Their composition and remote sensing implications
06 p0050 A75-23790
SPECTROSCOPIC ANALYSIS
Mass spectrometric analysis of product water from coal gasification
[PB-240835/9] 07 p0158 N75-27120
SPECTRUM ANALYSIS
Temperature dependence of the spectral characteristics of quick-response silicon photocells
07 p0119 A75-36013
SPRINGS (WATER)
Helium survey, a possible technique for locating geothermal reservoirs
07 p0118 A75-35438
STAINLESS STEELS
Compatibility and reliability of heat pipe materials
[AIAA PAPER 75-660] 07 p0114 A75-32918
STANDARDS
Energy and environmental standards --- environmental standards and energy policy
[GPO-37-171] 05 p0030 N75-12431
Interim standard for solar collectors, first draft
[PB-239757/8] 07 p0150 N75-25313

STATIONARY ORBITS
Optimisation of solar cell shielding for geostationary missions
06 p0051 A75-24203

STATISTICAL ANALYSIS
Statistical estimation of wildcat well outcome probabilities by visual analysis of structure contour maps of Stafford County, Kansas
06 p0092 N75-19778

STEAM
Operational, maintenance, and environmental problems associated with a fossil fuel-fired potassium steam binary vapor cycle
[ORNL-NSF-EP-30] 06 p0090 N75-18769
The direct production of hydrocarbons from coal-steam systems
[PB-239356/9] 07 p0138 N75-23740

STEAM FLOW
Analytical description of the modern steam automobile
[NASA-TM-X-72199] 05 p0035 N75-14134
Coal processing by electrofluids
[PB-236588/0] 06 p0088 N75-18743
Geothermal steam condensate reinjection
06 p0102 N75-20863

STEAM TURBINES
A central receiver solar power plant in a hybrid mode of operation --- solar/fossil-fueled steam power plant
[AIAA PAPER 75-624] 06 p0062 A75-28596
A non-polluting powerplant for large airships
[AIAA PAPER 75-927] 07 p0121 A75-37005
Geothermal steam condensate reinjection
06 p0102 N75-20863

STEELS
The impact of energy shortages on the iron and steel industries
[PB-238749/6] 07 p0145 N75-24158

STELLARATORS
Plasma heating methods --- for controlled fusion
07 p0119 A75-35920

STILLS
Solar stills for agricultural purposes
07 p0115 A75-33972

STIRLING CYCLE
Prospects for using dynamic thermocompression converter in solar power plants
05 p0020 A75-17076
Stirling engines - Capabilities and prospects
06 p0048 A75-23237
The Stirling engine for vehicle propulsion
06 p0050 A75-23509
Stirling cycle engine and refrigeration systems
[NASA-CASE-NPO-13613-1] 07 p0133 N75-22747
Development and evaluation of a Stirling-Cycle energy conversion system
[PB-239086/2] 07 p0136 N75-22918

STOCHASTIC PROCESSES
Principles of a composite study involving combined use of solar and wind energy
07 p0122 A75-37160

STOCKPILING
Fuel and energy data: United States by states and regions, 1972
[PB-236581/5] 06 p0077 N75-17004

STORAGE
Metal hydrides as hydrogen storage media
[BNL-18887] 05 p0030 N75-12440

STORAGE BATTERIES
Operating experiences with terrestrial solar battery systems in Japan
05 p0005 A75-10531
60 watt hydride-air fuel cell system
05 p0008 A75-10567
Predicted energy densities for nickel-hydrogen and silver-hydrogen cells embodying metallic hydrides for hydrogen storage
05 p0008 A75-10572
The impact of advanced batteries on electric power generation
05 p0013 A75-12991
Recent advances in components of space power systems
[IAF PAPER 74-C83] 05 p0014 A75-13715
Analysis of different systems concerning the energy distribution on board a satellite
[IAF PAPER 74-C84] 05 p0014 A75-13716
Corrosion and related problems in high-temperature cells
06 p0055 A75-24377
Fundamental research on the selection of new electrochemical generators of medium power
06 p0060 A75-27827
Sulfur-based lithium-organic electrolyte secondary batteries
[AD-A003309] 06 p0104 N75-20882
Development of a soluble reactants and products secondary battery
07 p0127 N75-21790

STORAGE TANKS
Thermal energy storage devices suitable for solar heating
05 p0007 A75-10553
A hot liquid energy storage system utilizing natural circulation
[ASME PAPER 74-WA/HT-16] 05 p0017 A75-16862
Storage of summertime waste heat from electric generating plants for use in wintertime
[AIAA PAPER 75-743] 07 p0113 A75-32852
Improving the oil storage system of western Siberia
[AD-A002717] 06 p0092 N75-19705
Erecting gas storage facilities and oil centers
[AD-A006559] 07 p0134 N75-22783
Fluid manifold design for a solar energy storage tank
[NASA-TM-X-64940] 07 p0160 N75-27562

STORM DAMAGE
OCS oil and gas: An environmental assessment, volume 3 --- effect of natural phenomena on OCS gas and oil development
06 p0083 N75-17836

STRATIGRAPHY
Stratigraphy, sedimentology and oil and gas geology of the Lower Cretaceous in central Alberta
07 p0137 N75-22961

STREAM FUNCTIONS (FLUIDS)
Steady state free convection in an unconfined geothermal reservoir
05 p0009 A75-11069

STRESS-STRAIN DIAGRAMS
Investigations and selection of components and materials for flexible solar generator
06 p0050 A75-24182

STRIP MINING
Determine utility of ERTS-1 to detect and monitor area strip mining and reclamation --- southeastern Ohio
[E75-10327] 07 p0158 N75-27515

STRONTIUM FLUORIDES
Strontium fluoride research in heat source and compatibility tests --- waste utilization
[BNWL-1845-2] 07 p0152 N75-25695
Strontium heat source development programs --- waste utilization
[BNWL-1845-4] 07 p0152 N75-25696

STRUCTURAL ANALYSIS
Structural analysis of wind turbine rotors for NSF-NASA Mod-0 wind power system
[NASA-TM-X-3198] 06 p0080 N75-17712
Coal structure and reactivity
[TID-26637] 06 p0097 N75-20805
Potential structural material problems in a hydrogen energy system
[NASA-TM-X-71752] 07 p0154 N75-26500

STRUCTURAL DESIGN
Solar cell modules for lightweight solar arrays --- onboard communication satellites
06 p0057 A75-26068
The Shell natural gas airship, and other L.T.A. activities by Aerospace Developments
[AIAA PAPER 75-932] 07 p0121 A75-37008
Economic and energy conservation relationship relevant to state of New York building design and contract awards
[PB-237006/2] 06 p0082 N75-17824
An interdisciplinary engineering approach to a facility design study with emphasis on energy conservation. Volume 2: Main report text
[AD-A006804] 07 p0142 N75-24129
Propulsion units for high speed ships
[JPRS-64897] 07 p0148 N75-25295

STRUCTURAL DESIGN CRITERIA
Design analysis of asymmetric solar receivers
[SAND-74-0124] 06 p0076 N75-16986

STRUCTURAL ENGINEERING
An interdisciplinary engineering approach to a facility design study with emphasis on energy conservation. Volume 1: Executive summary
[AD-A006803] 07 p0149 N75-25304

An interdisciplinary engineering approach to a facility design study with emphasis on energy conservation. Volume 3: Appendices
[AD-A006805] C7 p0149 N75-25305
SUBSIDENCE
Remote sensing applied to mine subsidence - Experience in Pennsylvania and the Midwest
C7 p0121 A75-36809
SUBSONIC AIRCRAFT
The use of hydrogen in commercial aircraft - An assessment
05 p0006 A75-10542
Advanced subsonic transports - A challenge for the 1990's
[AIAA PAPER 75-304] C6 p0049 A75-23251
On the future of jet propulsion in subsonic transport aviation
C6 p0058 A75-27777
SUBSONIC FLOW
Possible development of acoustical instability in a system consisting of a combustion chamber and a subsonic MHD generator
C6 p0045 A75-19959
SULFUR
Characterization of sulfur recovery from refinery fuel gas
[PB-239777/6] C7 p0151 N75-25326
SULFUR COMPOUNDS
The hydrogen sulfide emissions abatement program at the Geysers Geothermal Power Plant
C6 p0102 N75-20859
Sulfer in coals
[TT-7C-57216] C7 p0155 N75-26503
SULFUR OXIDES
Mineral resources and the environment. Appendix to section 3: Report of panel on the implications of mineral production for health and the environment
[PB-239582/0] C7 p0153 N75-26489
SUN
Our prodigal sun --- solar energy technology
[NASA-EP-118] C5 p0032 N75-12885
SUNSPOTS
The nature of the sunspot phenomenon. III - Energy consumption and energy transport. IV - The intrinsic instability of the magnetic configuration
C6 p0064 A75-29137
SUPERCONDUCTING MAGNETS
Will superconducting magnetic energy storage be used on electric utility systems
C6 p0056 A75-25832
Superconducting synchronous machine
C6 p0061 A75-27967
Superconducting magnetic energy storage --- theta pinch thermonuclear fusion test reactor
[LA-UR-74-737] C5 p0032 N75-12814
Energy and cryoengineering
[LA-UR-74-741] C6 p0082 N75-17814
SUPERCONDUCTING POWER TRANSMISSION
Application of superconducting electrical machinery to the propulsion systems of commercial vessels --- gas turbines
[CGM-75-10137] C7 p0147 N75-25200
SUPERCONDUCTIVITY
A superconducting microwave engine
C6 p0056 A75-25831
Wisconsin superconductive energy storage project, volume 1
[PB-238082/2] C6 p0105 N75-20887
SUPERCONDUCTORS
The Electric Power Research Institute's role in applying superconductivity to future utility systems
C6 p0056 A75-25827
A high-speed superconducting generator
C6 p0060 A75-27960
Superconductive d.c. generator
C6 p0061 A75-27961
Main problems met in the study of cryogenic generators
C6 p0061 A75-27962
Economic and system aspects of a superconducting magnetic energy storage device and a dc superconducting transmission line
[LA-UR-74-1145] C6 p0091 N75-19080
SUPERSONIC TRANSPORTS
Conceptual design of reduced energy transports
[AIAA PAPER 75-303] C6 p0047 A75-22508
Study of active cooling for supersonic transports
[NASA-CR-132573] C6 p0079 N75-17336
SURFACE COOLING
Effect of heat transfer from the lateral surfaces of semiconductor thermocouples on the energy characteristics of a thermoelectric generator
05 p0021 A75-18798
SURFACE ENERGY
Net radiation and other energy-related maps from remotely sensed imagery
07 p0121 A75-36811
SURFACE FINISHING
V-grooved silicon solar cells
07 p0123 A75-37397
SURFACE GEOMETRY
The COMSAT non-reflective silicon solar cell - A second generation improved cell
06 p0053 A75-24245
Trapezoidal grooves as moderately concentrating solar energy collectors
[AIAA PAPER 75-738] 07 p0113 A75-32860
Determination of the surface shapes of film-type solar energy concentrators with seams
07 p0119 A75-36017
The evaluation of surface geometry modification to improve the directional selectivity of solar energy collectors
[PB-236412/3] 06 p0083 N75-17830
SURFACE NAVIGATION
The use of solar cells in the lighthouse service
06 p0054 A75-24255
SURFACE PROPERTIES
Air-stable selective surfaces for solar energy collectors
[PB-236196/2] 06 p0071 N75-16116
Fracture-induced permeability: Present situation and prospects for coal
[UCID-16593] 06 p0094 N75-19830
The evaluation of surface geometry modification to improve the directional selectivity of solar energy collectors
[PB-238509/4] 07 p0130 N75-21822
SURFACE VEHICLES
Mode shift strategies in intercity transportation and their effect on energy consumption
[AIAA PAPER 75-315] 06 p0055 A75-25013
SURFACE WATER
Determine utility of ERTS-1 to detect and monitor area strip mining and reclamation --- southeastern Ohio
[E75-10327] 07 p0158 N75-27515
SURFACTANTS
Oil displacement by different surfactant and polymer waterflood systems
07 p0134 N75-22858
SYMPHONIE SATELLITES
The technology of the solar generator on the Symphonie satellite
06 p0053 A75-24237
SYNCHRONOUS MOTORS
Superconducting synchronous machine
06 p0061 A75-27967
SYNCHRONOUS SATELLITES
The technology of the solar generator on the Symphonie satellite
06 p0053 A75-24237
Geosynchronous satellite solar power --- energy transmission to earth
07 p0111 A75-31272
SYNTHANE
Conceptual design of a heat pipe methanator --- conversion of synthesis coal gas to methane
[LA-5596] 06 p0074 N75-16774
Bio-conversion of water hyacinths into methane gas, part 1
[NASA-TM-X-72725] 07 p0160 N75-27564
SYNTHETIC FUELS
Char oil energy development
[PB-233263/3] 05 p0025 N75-10603
Coal processing by electrofluids
[PB-236588/0] 06 p0088 N75-18743
Synthetic Liquid Fuel Research and Development Act of 1974 --- energy conservation and cost analyses
[GPO-44-818] 06 p0103 N75-20867
Synthetic fuels for ground transportation with special emphasis on hydrogen
[NASA-TM-X-72652] 06 p0103 N75-20868
Synthetic fuels from fusion reactors
[BNL-19351] 06 p0106 N75-21098

Synopsis of studies on synthetic fuels production by fusion reactors
[BNL-19336] C6 p0106 N75-21104
Technology assessment of portable energy RDT and P, phase 1
[NASA-CR-137653] 07 p0134 N75-22902
Preparation of gas turbine engine fuel from synthetic crude oil derived from coal
[AD-A007923] C7 p0147 N75-24966
Conversion of cellulosic wastes to oil
[PB-240839/1] 07 p0161 N75-27572
SYSTEM EFFECTIVENESS
Electrostatic voltage generation from flowing water
05 p0009 A75-10580
Derivation of a total satellite energy system --- solar power station for terrestrial consumption
[AIAA PAPER 75-640] 06 p0064 A75-29118
On the optimum tilt of a solar collector
07 p0115 A75-33971
SYSTEMS ANALYSIS
Energy systems - Modeling and policy analysis
06 p0055 A75-24750
Solar power system and component research program
[PB-236159/0] 05 p0037 N75-14280
Electric power systems analysis research
[PB-239236/3] 07 p0143 N75-24139
Using systems methods for analysing integrated energy supply, summary
[BLL-CF-TRANS-6473-(9022.09)] 07 p0153 N75-26491
SYSTEMS ENGINEERING
Cost effective designing for the economic RTG --- radioisotope thermoelectric generators
05 p0003 A75-10507
Light-weight radioisotope thermoelectric generator design
05 p0003 A75-10508
A planning methodology for the analysis and design of wind-power systems
05 p0004 A75-10517
Small coal burning gas turbine for modular integrated utility systems
05 p0006 A75-10546
Independent energy systems for better efficiency
05 p0006 A75-10549
Conceptual design of a series of laser-fusion power plants of 100 to 3000 MW/e/
05 p0007 A75-10562
Sizing of solar energy storage systems using local weather records
[ASME PAPER 74-WA/HT-20] 05 p0017 A75-16865
Systems aspects of ocean thermal energy conversion
[AIAA PAPER 75-615] 06 p0062 A75-28593
100 MWe solar power plant design configuration and performance
[AIAA PAPER 75-623] 06 p0062 A75-28595
Design and construction of a residential solar heating and cooling system
07 p0109 A75-29472
Solar-thermal electric power
07 p0111 A75-31270
Ocean thermal energy conversion
07 p0111 A75-31274
Minimum cost solar thermal electric power systems - A dynamic programming based approach
07 p0112 A75-32097
Optimal solar energy collector system
07 p0115 A75-33970
Component design considerations for gas turbine HTGR power plant --- High-Temperature Gas-cooled Reactor
[ASME PAPER 75-GT-67] 07 p0116 A75-34620
Solar air conditioning systems using Rankine power cycles - Design and test results of prototype three ton unit
07 p0117 A75-34931
Principles of a composite study involving combined use of solar and wind energy
07 p0122 A75-37160
Generalizations of composite studies involving combined use of wind and solar energy
07 p0122 A75-37161
Development of the KIVA-I MHD open cycle generator
07 p0124 A75-37686
Advanced heat source concepts --- module design for space electric power generation
[MLM-2134] 05 p0024 N75-10591
Caltech seminar series on energy consumption in private transportation
[PB-235348/0] 05 p0040 N75-15179
State of the art and prospects for electric vehicles
[BLL-CA-TRANS-1250-(6196.3)] 06 p0074 N75-16712
The multirim superflywheel
[AD-A001081] 06 p0085 N75-18594
Large diameter 300 PSI gasifier. Preliminary engineering report. Volume 1: Description
[PB-238360/2] 06 p0105 N75-20889
Problems of the future and potentialities of system engineering --- metallic materials, plastics, traffic and energy supplies
[ESRO-TT-110] 06 p0107 N75-21218
The development of a solar residential heating and cooling system
[NASA-CR-142728] 07 p0140 N75-24107
Vulnerability of natural gas systems --- industrial management and operations
[AD-A007583] 07 p0144 N75-24143
Long term power system dynamics. Volume 1: Summary and technical report
[PB-240799/7] 07 p0161 N75-27573
SYSTEMS MANAGEMENT
Management of power plant waste heat in cold regions
[AD-A003217] 06 p0104 N75-20881

T

TABLES (DATA)
Fuel and energy data: United States by states and regions, 1972
[PB-236581/5] 06 p0077 N75-17004
A study of technological improvements in automobile fuel consumption. Volume 3A: Appendixes 1 - 111
[PB-238695/1] 07 p0133 N75-22483
TANK GEOMETRY
Study of the influence of container design and the thermal inertness of solar water heaters on their efficiency
07 p0119 A75-36018
TANKER SHIPS
On the potentialities of polyphenylene oxide (PPO) as a wet-insulation material for cargo tanks of LNG-carriers
[REPT-194-M] 05 p0035 N75-14002
TAR SANDS
Energy from US and Canadian tar sands: Technical, environmental, economic, legislative, and policy aspects
[GPO-43-005] 06 p0067 N75-16083
TECHNOLOGICAL FORECASTING
Hydrogen for the electric utilities - Long range possibilities
05 p0005 A75-10536
Next generation transports will emphasize fuel savings
05 p0011 A75-11426
Fuel outlook dictating technical transport research
05 p0011 A75-11427
Fusion reactors as future energy sources
05 p0011 A75-11735
Solar energy conversion and storage systems for the future
05 p0013 A75-12988
The impact of advanced batteries on electric power generation
05 p0013 A75-12991
Current expectations for fusion power from toroidal machines
05 p0014 A75-12996
Windpower - Look backward, then move forward confidently --- for electric power generation in rural areas
05 p0014 A75-12997
U.S. energy resources - Outlook for the future
05 p0014 A75-12999
Prospects for tapping solar energy on a large scale
05 p0015 A75-14014
Power from ocean waves
[ASME PAPER 74-WA/PWR-5] 05 p0018 A75-16879
The energy perspective --- world fossil fuel reserves and alternate energy sources
05 p0019 A75-17000
Future long-range transports - Prospects for improved fuel efficiency
[AIAA PAPER 75-316] 06 p0047 A75-22514
Advanced subsonic transports - A challenge for the 1990's
[AIAA PAPER 75-304] 06 p0049 A75-23251

The future of silicon solar cells for terrestrial use
06 p0058 A75-27717
On the future of jet propulsion in subsonic transport aviation
06 p0058 A75-27777
Energy supply and demand challenges and some possible solutions
06 p0059 A75-27779
The outlook for fusion energy sources - Remaining technological hurdles
06 p0059 A75-27782
New technology challenges in exploration, exploitation and environmental impact of geothermal systems
06 p0060 A75-27788
Prospects of photosynthetic energy production
06 p0060 A75-27792
Geothermal energy --- technology assessment
06 p0060 A75-27826
Fundamental research on the selection of new electrochemical generators of medium power
06 p0060 A75-27827
Solar energy in earth processes --- review
06 p0061 A75-28437
Energy: A plan for action --- Book
07 p0110 A75-30375
Energy's hazy future --- electric generating capacity scenarios and forecasts
07 p0110 A75-31195
A commentary on solar energy
07 p0116 A75-34532
Fuels, minerals, and human survival --- Book
07 p0117 A75-34850
DFVLR activities in the area of energy research
07 p0118 A75-35096
Laser energy conversion
07 p0125 A75-38474
Nuclear power growth, 1974 - 2000 --- forecasting future reactor technology
[WASH-1139-74] 05 p0031 N75-12723
Dependence of the United States on essential imported materials, year 2000; volume 1
[AD-A000842] 06 p0096 N75-20157
Dependence of the United States on essential imported materials, year 2000. Volume 2: Appendices
[AD-A000843] 06 p0096 N75-20158
Impact of future use of electric cars in the Los Angeles region. Volume 2: Task reports on electric car characterization and baseline projections
[PB-238878/3] 07 p0131 N75-22200
Impact of future use of electric cars in the Los Angeles region. Volume 3: Task reports on impact and usage analysis
[PB-238879/1] 07 p0131 N75-22201

TECHNOLOGY ASSESSMENT

Combustion dynamics research for 'Project Independence'
[AIAA PAPER 74-1069] 05 p0001 A75-10262
Intersociety Energy Conversion Engineering Conference, 9th, San Francisco, Calif., August 26-30, 1974, Proceedings
05 p0001 A75-10476
RTG technology development - Where we are/where we are going --- radioisotope thermoelectric generator
05 p0002 A75-10496
Economics analyses of solar energy utilization
05 p0004 A75-10520
Status of JPL solar powered experiments for terrestrial applications
05 p0005 A75-10530
A review of thermal battery technology
05 p0007 A75-10557
Advanced betavoltaic power sources
05 p0007 A75-10563
Energy crisis - Fact or fiction
05 p0011 A75-12115
Energy development; Proceedings of the Energy Sources Conference, Anaheim, Calif., July 14-19, 1974
05 p0012 A75-12986
Progress in coal gasification
05 p0013 A75-12993
Fusion power research - Where do we stand
05 p0013 A75-12995
Space power systems - Retrospect and prospect
[IAF PAPER 74-082] 05 p0014 A75-13714
Recent advances in components of space power systems
[IAF PAPER 74-083] 05 p0014 A75-13715
Advances in space power generation
[IAF PAPER 74-086] 05 p0015 A75-13718
Rating aircraft on energy
05 p0015 A75-14346
Progress in development of auxiliary MHD power plant components at Avco Everett Research Laboratory, Inc
[ASME PAPER 74-WA/ENER-6] 05 p0016 A75-16838
The energy perspective --- world fossil fuel reserves and alternate energy sources
05 p0019 A75-17000
Fusion power - Prospects and impact
05 p0021 A75-18080
Air transportation energy consumption - Yesterday, today, and tomorrow
[AIAA PAPER 75-319] 06 p0047 A75-22515
Some LNG vehicle developments --- for automotive conversion systems and fueling stations
06 p0048 A75-23236
Stirling engines - Capabilities and prospects
06 p0048 A75-23237
Report on photovoltaics research and technology in the United States
06 p0051 A75-24214
Historic development of photovoltaic power generation
06 p0051 A75-24215
Latest developments of the circular solar array --- with deployment structure for central antenna communication satellite
06 p0053 A75-24246
Review of central power magnetohydrodynamics
[AIAA PAPER 75-264] 06 p0055 A75-25005
Lighter than air - A look at the past, a look at the possibilities
06 p0056 A75-25995
Status of the NASA-Lewis flat-plate collector tests with a solar simulator
06 p0058 A75-27533
Solar cells - Present state and perspectives on terrestrial applications
06 p0058 A75-27716
Thermoelectric generators --- using semiconductor thermocouples
06 p0058 A75-27718
Coal gasification - A review of status and technology
06 p0059 A75-27781
Solar heating and cooling of buildings
06 p0059 A75-27783
Solar energy for earth: An AIAA assessment --- Book
07 p0110 A75-31267
Photovoltaic power --- solar energy for terrestrial applications
07 p0111 A75-31271
Fuel production /biomass energy/ --- by fuel plantation development
07 p0111 A75-31275
Solar production of electrical energy
07 p0112 A75-31588
Laser thermonuclear fusion
07 p0112 A75-32617
Energy sources for ocean technology --- for unmanned surface stations and manned underwater stations
07 p0114 A75-33118
Solar heating and cooling of buildings using heat pumps /Brief survey/
07 p0116 A75-34321
Economic and technical aspects of wind generation systems
07 p0116 A75-34533
Recuperator development trends for future high temperature gas turbines --- heat exchanger design
[ASME PAPER 75-GT-50] 07 p0116 A75-34607
Alternative fuels for aviation
07 p0121 A75-36719
Energy and Resources - A plan is outlined according to which solar and wind energy would supply Denmark's needs by the year 2050 --- solar and wind power utilization for Denmark
07 p0124 A75-37846

MEGASTAR: The Meaning of Energy Growth: An Assessment of Systems, Technologies, and Requirements
[NASA-CR-120355] 05 p0023 N75-10584
How spacecraft are fueled --- technology of fueling spacecraft for flight
[JPRS-63514] 05 p0027 N75-10983
Utilization of solar energy --- an assessment of present technology
[NASA-TT-F-16090] 05 p0033 N75-13382
A review of the status of MHD power generation technology including suggestions for a Canadian MHD research program
[UTIAS-39] 05 p0035 N75-13641
Solar energy
[NASA-TT-F-16092] 05 p0038 N75-15149
Assessment of the technology required to develop photovoltaic power system for large scale national energy applications
[NSF/RA/N-74-072] 06 p0080 N75-17785
Energy systems analysis and technology assessment program
[BNL-18984] 06 p0094 N75-19831
Energy utilization by households and technology assessment as a way to increase its effectiveness --- management methods and family decision making
06 p0097 N75-20829
DOT/NASA comparative assessment of Brayton engines for guideway vehicles and busses. Volume 2: Analysis and results
[NASA-SP-354-VOL-2] 07 p0133 N75-22745
Technology assessment of portable energy RDT and P, phase 1
[NASA-CR-137654] 07 p0134 N75-22901
Technology assessment of portable energy RDT and P, phase 1
[NASA-CR-137653] 07 p0134 N75-22902
A preliminary technology assessment of ocean thermal gradient energy generation
[PE-238646/4] 07 p0144 N75-24147
Technology assessment of portable energy RDT and P
[NASA-CR-137655] 07 p0160 N75-27565

TECHNOLOGY TRANSFER

Nuclear propulsion technology transfer to energy systems
[AIAA PAPER 74-1072] 05 p0001 A75-10264
The application of aerospace technology in the cryogenics field
06 p0048 A75-23239
Solar cells - Present state and perspectives on terrestrial applications
06 p0058 A75-27716
Technology and community development materials processing, and electrical and nuclear technology --- technical research center of Finland
05 p0031 N75-12695
Lead accumulator batteries in telecommunications
[BIL-TRANS-2943-(9022.81)] 06 p0074 N75-16967
Proceedings of the first 1974 Technology Transfer Conference
[NASA-CR-142119] 06 p0078 N75-17188
Technology application at Rockwell International
06 p0078 N75-17189
The Environmental protection agency industrial technology transfer program
06 p0078 N75-17193
Transfer of space technology to industry
06 p0078 N75-17195
Applications of aerospace technology in the electric power industry
06 p0079 N75-17197
The initiatives of the Los Alamos Scientific Laboratory in the transfer of a new excavation technology
06 p0079 N75-17203
Economic modeling and energy policy planning --- technology transfer, market research
06 p0079 N75-17210

TECHNOLOGY UTILIZATION

Two-watt radioisotope power generators for underwater applications
05 p0007 A75-10556
Applications of plasma core reactors to terrestrial energy systems
[AIAA PAPER 74-1074] 05 p0010 A75-11281
Mission applications of electric propulsion
[AIAA PAPER 74-1085] 05 p0010 A75-11284
Solar energy: Technology and applications --- Book
05 p0012 A75-12425
Prospects and scientific problems of the utilization of methods of direct electric power generation from chemical fuels /fuel cells/
05 p0012 A75-12911
Utilization of solar energy today
05 p0012 A75-12987
The heat pipe - Its development, and its aerospace applications
05 p0015 A75-15054
New applications for optical components - High energy focusing
05 p0015 A75-16525
Coal gasification by Atomics International's Rockgas process
[ASME PAPER 74-WA/PWR-11] 05 p0018 A75-16883
A case study - Utilization of solar energy in residential dwellings
[ASME PAPER 74-WA/SOL-2] 05 p0018 A75-16885
Energy. Volume 1 - Demands, resources, impact, technology, and policy --- Book
06 p0045 A75-20066
Progress in heat pipe and porous heat exchanger technology
06 p0045 A75-20686
Liquid hydrogen --- liquefaction, storage, transportation, applications
06 p0046 A75-22043
Technology utilization - Incentives and solar energy
06 p0048 A75-22913
Solar generators for terrestrial applications
06 p0054 A75-24257
Current worldwide utilization and ultimate potential of geothermal energy systems
06 p0060 A75-27787
The adaptation of free space power transmission technology to the SSPS concept --- Satellite Solar Power Stations
[AIAA PAPER 75-642] 06 p0063 A75-28602
Optical interfaces in solar energy utilization
07 p0123 A75-37331
Advanced nuclear research
[GPO-41-253] 05 p0026 N75-10764
Application of technology from the Rover program and related developments --- to energy needs
[LA-5558] 05 p0028 N75-11468
Applications of fusion power technology to the chemical industry
[BNL-18815] 05 p0029 N75-11730
A survey of ING technological needs in the USA: 1974 to beyond 2000
05 p0030 N75-12435
Survey of applications of fusion power technology to the chemical and material processing industry
[BNL-18866] 05 p0031 N75-12443
Japanese/United States Symposium on Solar Energy systems. Volume 1: Summary of proceedings
[MTR-6284-VOL-1] 05 p0036 N75-14264
Beneficial uses of waste heat
[RT/PRCT-(74)10] 06 p0068 N75-16091
Energy conversion from coal utilizing CFU-40C technology
[PB-235817/4] 06 p0068 N75-16093
Air conditioning of office buildings with all-electric supply. Part 1: Technical conception
[CA-TRANS-938-PT-1] 06 p0074 N75-16970
Review of thermal battery technology
[SLA-74-5381] 06 p0076 N75-16989
Proceedings of the first 1974 Technology Transfer Conference
[NASA-CR-142119] 06 p0078 N75-17188
Energy recovery from solid waste --- production engineering model
06 p0079 N75-17200
The initiatives of the Los Alamos Scientific Laboratory in the transfer of a new excavation technology
06 p0079 N75-17203
Combining total energy and energy industrial center concepts to increase utilization efficiency of geothermal energy
06 p0102 N75-20860
Cooperative efforts by industry and government to develop geothermal resources
06 p0102 N75-20861
Putting the sun to work: A history and directory of currently available solar energy applications
[PB-238189/5] 07 p0129 N75-21810

Insufficient utilization of scientific advances --- sociopolitical and economic management of technological development C7 p0137 N75-23365

TELECOMMUNICATION
Low-power turbines using organic vapor 07 p0110 A75-30892
Lead accumulator batteries in telecommunications [BLL-TRANS-2943-(9022.81)] 06 p0074 N75-16967

TEMPERATURE CONTROL
A design parameter for assessing wicking capabilities of heat pipes [AIAA PAPER 74-1266] 05 p0010 A75-11107
The heat pipe - Its development, and its aerospace applications 05 p0015 A75-15054
An analysis of photovoltaic power generation and thermal control interfaces --- for solar arrays C6 p0053 A75-24243
Heat pipe thermal control set point shift 07 p0115 A75-33271
Study of active cooling for supersonic transports [NASA-CR-132573] 06 p0079 N75-17336

TEMPERATURE DISTRIBUTION
Determination of the temperature field in a tubular thermoelectric module 05 p0020 A75-17068
Approximate analysis of the steady temperature field of a parallelepiped with a local energy source 07 p0112 A75-32212
Sizing of focused solar collector fields with specified collector tube inlet temperature --- Rankine cycle [SLA-74-5288] 06 p0094 N75-19832

TEMPERATURE EFFECTS
Dependence of the basic parameters of Al/x/Ga/1-x/As-GaAs solar converters on temperature and optical intensity 07 p0112 A75-32824
Temperature effects in Schottky-barrier silicon solar cells 07 p0115 A75-34175
Temperature dependence of the spectral characteristics of quick-response silicon photocells 07 p0119 A75-36013

TEMPERATURE GRADIENTS
Hot side heat exchanger for an ocean thermal difference power plant 05 p0004 A75-10527
A heat pump powered by natural thermal gradients 05 p0006 A75-10550
Ocean thermal gradient hydraulic power plant C7 p0124 A75-37849
Foam solar sea power plant 07 p0124 A75-37850
Axial temperature differential analysis of linear focused collectors for solar power [SLA-74-5078] 05 p0036 N75-14268

TEMPERATURE MEASUREMENT
Theoretical determination of the temperature in a solar water heater /steady state/ 07 p0112 A75-31513
Investigation of the electrical and temperature characteristics of a silicon photoelectric converter under natural conditions 07 p0116 A75-34314

TEMPERATURE MEASURING INSTRUMENTS
Methodical approach to temperature and pressure measurements for in situ energy-recovery processes [UCID-16631] C6 p0097 N75-20693

TEMPERATURE PROFILES
Thermal performance characteristics of heat pipes C6 p0046 A75-21465

TEMPERATURE SENSORS
Temperature sensor for photoelectric energy converters C6 p0057 A75-26712
Photoelectric energy converter temperature sensor 07 p0122 A75-37163

TERMINOLOGY
Various research tasks related to energy information and data activities. Task 2 national energy indexing schemes: Characterization of problem [PB-240423/4] 07 p0152 N75-25774

TEST FACILITIES
Recent MHD generator testing at Avco Everett Research Laboratory, Inc [ASME PAPER 74-WA/ENER-7] 05 p0016 A75-16839

TEXAS
Evaluation of the suitability of Skylab data for the purpose of petroleum exploration [E75-10257] 07 p0147 N75-25237

THERMAL ABSORPTION
Solar thermal absorption heat pump breakeven coefficient of performance [ASME PAPER 74-WA/ENER-2] 05 p0015 A75-16834

THERMAL BATTERIES
A review of thermal battery technology 05 p0007 A75-10557
Development and performance of a miniature, high-voltage thermal battery 05 p0007 A75-10559
Development of a thermal battery for emergency radio power under arctic conditions 05 p0007 A75-10560
Corrosion and related problems in high-temperature cells 06 p0055 A75-24377
Development and performance of a miniature, high-voltage thermal battery [SLA-74-5363] 06 p0076 N75-16988
Review of thermal battery technology [SLA-74-5381] 06 p0076 N75-16989
Pellet type thermal battery [SAND-74-0007] 06 p0076 N75-16991
Sixty minute thermal battery: A feasibility study [SLA-73-5888] 06 p0077 N75-16994

THERMAL CONDUCTIVITY
Transverse header heat pipe [AIAA PAPER 75-656] 07 p0114 A75-32914
Heat pipe thermal control set point shift 07 p0115 A75-33271

THERMAL CONTROL COATINGS
Solar characteristics of new absorptive coatings used on solar collectors 07 p0117 A75-34934
Solar electric propulsion system thermal analysis --- including heat pipes and multilayer insulation [NASA-CR-120770] 07 p0147 N75-24642

THERMAL DEGRADATION
Silicon solar cells for highly concentrated sunlight 07 p0120 A75-36363
Pyrolysis system evaluation study [NASA-CR-141664] 06 p0086 N75-18722
Energy recovery from solid waste. Volume 2: Technical report --- pyrolysis and biodegradation [NASA-CR-2526] 07 p0148 N75-25292

THERMAL DISSOCIATION
Thermolysis of water for the generation of hydrogen 06 p0049 A75-23504

THERMAL ENERGY
Solar farms utilizing low-pressure closed-cycle gas turbines 05 p0003 A75-10514
Metal hydrides for thermal energy storage 05 p0004 A75-10522
Thermal energy storage devices suitable for solar heating 05 p0007 A75-10553
The Harwell thermo-mechanical generator 05 p0009 A75-10579
Performance of the thermal trap solar collector [ASME PAPER 74-WA/SOL-5] 05 p0019 A75-16888
Theory of heat extraction from fractured hot dry rock 06 p0057 A75-26544
Roles for solar thermal conversion systems in our energy economy 06 p0059 A75-27784
Current worldwide utilization and ultimate potential of geothermal energy systems 06 p0060 A75-27787
New technology challenges in exploration, exploitation and environmental impact of geothermal systems 06 p0060 A75-27788
Ocean thermal power and windpower systems - Natural solar energy conversion for near-term impact on world energy markets 06 p0060 A75-27790
Thermal power plants --- German book 06 p0064 A75-28962

Ocean thermal energy conversion system evaluation
[AIAA PAPER 75-616] C6 p0064 A75-29115
Tropical ocean thermal power plants and potential products
[AIAA PAPER 75-617] C6 p0064 A75-29116
Solar thermal conversion mission analysis
[AIAA PAPER 75-619] C6 p0064 A75-29117
A new concept for solar energy thermal conversion
C7 p0110 A75-30368
Ocean thermal energy conversion
C7 p0111 A75-31274
Approximate analysis of the steady temperature field of a parallelepiped with a local energy source
C7 p0112 A75-32212
Survey on power fluid for thermal power from low temperature and small temperature difference heat source
C7 p0119 A75-36173
Problems of direct conversion of thermal and nuclear energy to electric energy
C7 p0120 A75-36415
Ocean thermal gradient hydraulic power plant
C7 p0124 A75-37849
Research applied to solar-thermal power systems: Chemical vapor deposition research for fabrication of solar energy convertors
[PB-234565/0] 05 p0041 N75-15186
Geothermal energy: A new application of rock mechanics
[LA-UR-74-821] C6 p0068 N75-16089
Evaluation of thermal methods for recovery of viscous oils in Missouri and Kansas
[PB-237831/3] 06 p0090 N75-18762

THERMAL FATIGUE
Investigations and selection of components and materials for flexible solar generator
06 p0050 A75-24182

THERMAL INSULATION
Heat mirrors for solar-energy collection and radiation insulation
05 p0004 A75-10525
On the potentialities of polyphenylene oxide (PPO) as a wet-insulation material for cargo tanks of ING-carriers
[BEPT-194-M] 05 p0035 N75-14002
Project conserve, a pilot project in homeowner energy conservation
[PB-240407/7] 07 p0161 N75-27577

THERMAL MAPPING
The detection of geothermal areas from Skylab thermal data
[NASA-CR-143133] C7 p0158 N75-27540

THERMAL POLLUTION
Environmental impact of a geothermal power plant
06 p0049 A75-23291
Beneficial uses of waste heat
[PB/PPCT-(74)10] 06 p0068 N75-16091

THERMAL RADIATION
An analytical and experimental investigation of a laboratory solar pond model
[ASME PAPER 74-WA/SOL-3] 05 p0019 A75-16886

THERMAL REACTORS
Thermal power plants --- German book
06 p0064 A75-28962

THERMAL RESISTANCE
Controlled heat pipes
05 p0012 A75-12912
Determination of the temperature field in a tubular thermoelectric module
05 p0020 A75-17068
Optimization of parameters of permeable thermoelectric generators
07 p0110 A75-30487
Designing heat pipe heat sinks
[AIAA PAPER 75-724] 07 p0113 A75-32868

THERMAL SIMULATION
Modeling of the CSU heating/cooling system --- Colorado State University solar house computer simulation
07 p0109 A75-29473

THERMIONIC CONVERTERS
Empirical method of designing the current-voltage characteristics for the discharge mode of a thermionic converter
06 p0057 A75-26332
Design study of the energy characteristics of thermionic electric power generating components and assemblies
06 p0064 A75-28893
Reflector-absorber systems for solar thermionic converters
[ESRO-TT-123] 06 p0104 N75-20878

THERMIONIC POWER GENERATION
Design study of the energy characteristics of thermionic electric power generating components and assemblies
06 p0064 A75-28893
Results of work on thermoemission conversion
[AD-A002655] 07 p0131 N75-22114

THERMISTORS
Temperature sensor for photoelectric energy converters
06 p0057 A75-26712
Photoelectric energy converter temperature sensor
07 p0122 A75-37163

THERMOCHEMICAL PROPERTIES
The generation of hydrogen by the thermal decomposition of water
05 p0005 A75-10532

THERMOCHEMISTRY
Nuclear energy requirements for hydrogen production from water
05 p0005 A75-10533
Efficiencies of electrolytic and thermochemical hydrogen production
06 p0045 A75-20300
Energy, hydrogen, and pollution --- energy technology
06 p0046 A75-22041
Fundamental aspects of systems for the thermochemical production of hydrogen from water
[LA-UR-74-1459] 07 p0127 N75-21391

THERMOCOUPLES
Effect of heat transfer from the lateral surfaces of semiconductor thermocouples on the energy characteristics of a thermoelectric generator
05 p0021 A75-18798

THERMODYNAMIC CYCLES
Small coal burning gas turbine for modular integrated utility systems
05 p0006 A75-10546
Solar operation of ammonia-water multistage air conditioning cycles in the tropics
06 p0048 A75-23021
On the future of jet propulsion in subsonic transport aviation
06 p0058 A75-27777
Part load specific fuel consumption of gas turbines
06 p0063 A75-28650
Thermal power plants --- German book
06 p0064 A75-28962
Development of the KIVA-I MHD open cycle generator
07 p0124 A75-37686

THERMODYNAMIC EFFICIENCY
Prospects for using dynamic thermocompression converter in solar power plants
05 p0020 A75-17076
Thermodynamic considerations of 'solid state engines' based on thermoelastic martensitic transformations and the shape memory effect
06 p0045 A75-19631
Efficiencies of electrolytic and thermochemical hydrogen production
06 p0045 A75-20300
Thermodynamic analysis of a solar energy system with a closed-cycle gas-turbine converter
06 p0049 A75-23402
Thermodynamics of multistage air-cooled gas turbine
06 p0050 A75-23817
A generalization of the Carnot theorem - The theorem of useful power
06 p0057 A75-26448
Part load specific fuel consumption of gas turbines
06 p0063 A75-28650
Method of testing for rating solar collectors based on thermal performance --- flat plate collectors
[COM-75-10276/4] 07 p0150 N75-25321

THERMODYNAMIC PROPERTIES
A heat pump powered by natural thermal gradients
05 p0006 A75-10550

Application of thermodynamic and material- and energy-balance calculations to gasification processes
C6 p0055 A75-24785
Heat Pipe Symposium/Workshop
[PB-236008/9] C5 p0035 N75-14094
Analytical description of the modern steam automobile
[NASA-TM-X-72199] C5 p0035 N75-14134

THERMODYNAMICS
Thermodynamics of liquid metal MHD converters
[AD-A007415] C7 p0144 N75-24141

THERMOELASTICITY
Thermodynamic considerations of 'solid state engines' based on thermoelastic martensitic transformations and the shape memory effect
C6 p0045 A75-19631

THERMOELECTRIC COOLING
Convergence and speed of calculations for thermoelectric heat pump
C5 p0020 A75-17084
Optimization of the operating conditions of a combined generator-cooler thermoelement
C7 p0121 A75-37155

THERMOELECTRIC GENERATORS
RTG technology development - Where we are/where we are going --- radioisotope thermoelectric generator
C5 p0002 A75-10496
A modular heat source for curium-244 and plutonium-238
C5 p0002 A75-10497
Performance testing of thermoelectric generators at JPL
C5 p0002 A75-10503
SNAP 19 Viking RTG flight configuration and integration testing --- Radioisotope Thermoelectric Generator
C5 p0003 A75-10504
Operational testing of the high performance thermoelectric generator /HPG-02/
C5 p0003 A75-10505
A 10% efficient economic RTG design --- radioisotope thermoelectric generator
C5 p0003 A75-10506
Cost effective designing for the economic RTG --- radioisotope thermoelectric generators
C5 p0003 A75-10507
Light-weight radioisotope thermoelectric generator design
C5 p0003 A75-10508
Two-watt radioisotope power generators for underwater applications
C5 p0007 A75-10556
The Harwell thermo-mechanical generator
C5 p0009 A75-10579
High efficiency thermoelectric generator
C5 p0014 A75-13067
Utilization of tubular thermoelectric modules in solar generators
C5 p0020 A75-17067
Determination of the temperature field in a tubular thermoelectric module
C5 p0020 A75-17068
Effect of heat transfer from the lateral surfaces of semiconductor thermocouples on the energy characteristics of a thermoelectric generator
C5 p0021 A75-18798
RTG electrical power for spacecraft --- Radioisotope Thermoelectric Generators
C6 p0057 A75-26067
Thermoelectric generators --- using semiconductor thermocouples
C6 p0058 A75-27718
Optimization of parameters of permeable thermoelectric generators
C7 p0110 A75-30487
Optimization of the operating conditions of a combined generator-cooler thermoelement
C7 p0121 A75-37155
Devices based on thermoelectrical phenomena
[AD-783821] C5 p0026 N75-10836
Economic radioisotope thermoelectric generator program: Program plan
[IESD-3112-3] C5 p0034 N75-13393
Economic radioisotope thermoelectric generator study program
[IESD-3112-1] C5 p0036 N75-14269
Economic radioisotope thermoelectric generator study program: Appendices.
[IESD-3112-2] C5 p0036 N75-14270
Multi-hundred watt radioisotope thermoelectric generator program, part 1 --- ground support equipment and safety management
[GESP-7107-PT-1] C6 p0092 N75-19354
Multi-hundred watt radioisotope thermoelectric generator program, part 2 --- ground support equipment
[GESP-7107-PT-2] C6 p0092 N75-19355
Heat transfer design and proof tests of a radioisotope thermoelectric generator
[AD-A002218] C6 p0092 N75-19608
Manportable thermoelectric generator
[AD-A002042] C6 p0095 N75-19847
Thermal diagrams of thermoelectrical devices
[AD-787420] C7 p0135 N75-22911

THERMOELECTRIC POWER GENERATION
Solar farms utilizing low-pressure closed-cycle gas turbines
C5 p0003 A75-10514
Evaluation of central solar tower power plant
C5 p0003 A75-10515
The hot deeps of the Red Sea as a potential heat source for thermoelectric power generation
C5 p0004 A75-10516
Thin film coatings in solar-thermal power systems
C6 p0056 A75-25679
Solar energy for earth: An AIAA assessment --- Book
C7 p0110 A75-31267
Solar-thermal electric power
C7 p0111 A75-31270
Photovoltaic power --- solar energy for terrestrial applications
C7 p0111 A75-31271
Geosynchronous satellite solar power --- energy transmission to earth
C7 p0111 A75-31272
Minimum cost solar thermal electric power systems - A dynamic programming based approach
C7 p0112 A75-32097
Survey on power fluid for thermal power from low temperature and small temperature difference heat source
C7 p0119 A75-36173
Controlling the response of thermoelements that generate electricity
C7 p0121 A75-37154
Devices based on thermoelectrical phenomena
[AD-783821] C5 p0026 N75-10836
Thermodynamic analysis and parameter optimization of a solar thermoelectric power unit with radiation heat dissipation
[AD-A000211] C6 p0082 N75-17819

THERMOELECTRICITY
Solar collector thermal power system. Volume 1: Preliminary technology systems study
[AD-A000940] C6 p0091 N75-19339
Solar collector thermal power system. Volume 2: Development, fabrication, and testing of fifteen foot heat pipes
[AD-A000941] C6 p0091 N75-19340
Solar collector thermal power system. Volume 3: Basic study and experimental evaluation of thermal train components
[AD-A000942] C6 p0091 N75-19341
Thermal diagrams of thermoelectrical devices
[AD-787420] C7 p0135 N75-22911

THERMOHYDRAULICS
Gulf stream based ocean thermal power plants
[AIAA PAPER 75-643] C6 p0063 A75-28603
Theoretical research on the operation of a solar water heater and comparison with experimental data
C7 p0112 A75-31515

THERMOLUMINESCENCE
Novel materials for power systems. Part 3: Selective emitters for energy conversion
[AD-784449] C5 p0026 N75-10608

THERMONUCLEAR POWER GENERATION
Conceptual design of a series of laser-fusion power plants of 100 to 3000 MW/e/
C5 p0007 A75-10562
Fusion reactors as future energy sources
C5 p0011 A75-11735
Fusion power research - Where do we stand
C5 p0013 A75-12995

Current expectations for fusion power from toroidal machines
05 p0014 A75-12996
Fusion power - Prospects and impact
05 p0021 A75-18080
An electron beam initiated fusion neutron generator
06 p0045 A75-19657
Numerical simulation of direct energy conversion --- from fusion reactions
06 p0045 A75-19660
Foreseeable thermal, mechanical, and materials engineering problems of fusion reactor power plants
[SMRT PAPER A2/1] 06 p0046 A75-21713
Plasma heating methods --- for controlled fusion
07 p0119 A75-35920
DCTR power supply and energy storage review meeting
[WASH-1310] 05 p0031 N75-12445
Superconducting magnetic energy storage --- theta pinch thermonuclear fusion test reactor
[LA-UR-74-737] 05 p0032 N75-12814
Status and objective of Tokamak systems for fusion research
[WASH-1295] 05 p0035 N75-13644
New approaches to CTR: General relativistic power plants
[UCRL-75443] 06 p0073 N75-16362
Steps into the future. Development of the power industry in the USSR
[BIL-M-23330-(5828.4F)] 06 p0085 N75-18714
Man-made sun. Thermonuclear engineering developments
[BIL-M-23333-(5828.4F)] 06 p0091 N75-19014
Proceedings of 5th annual symposium: Energy Research and Development --- solar energy, windpower utilization, thermonuclear power generation
[AC-A007799] 07 p0144 N75-24142

THERMOPHYSICAL PROPERTIES
Determination of some thermophysical characteristics of a solar-type pebble accumulator
07 p0116 A75-34317

THETA PINCH
Superconducting magnetic energy storage --- theta pinch thermonuclear fusion test reactor
[LA-UR-74-737] 05 p0032 N75-12814

THIN FILMS
Heat mirrors for solar-energy collection and radiation insulation
05 p0004 A75-10525
Development of very low cost solar cells for terrestrial power generation
06 p0052 A75-24226
Use of flexible reflective surfaces for solar energy concentration
06 p0056 A75-25678
Thin film coatings in solar-thermal power systems
06 p0056 A75-25679
Determination of the surface shapes of film-type solar energy concentrators with seams
07 p0119 A75-36017
Research on cadmium stannate selective optical films for solar energy applications
[PB-236208/5] 06 p0071 N75-16117
Development of low cost thin film polycrystalline silicon solar cells for terrestrial applications
[PB-238505/2] 06 p0105 N75-20890
Symposium on the Material Science Aspects of Thin Film Systems for Solar Energy Conversion
[PB-239270/2] 07 p0144 N75-24150

THORIUM
Assessment of uranium and thorium resources in the United States and the effect of policy alternatives
[PB-238658/9] 07 p0143 N75-24133

THRUST CONTROL
Powerplant energy management --- transport aircraft engine thrust control
[AIAA PAPER 74-1066] 05 p0001 A75-10259

THRUST VECTOR CONTROL
Effect of attitude constraints on solar-electric geocentric transfers
[AIAA PAPER 75-350] 06 p0055 A75-24957
French activity in electric propulsion
07 p0120 A75-36539

TIDE POWERED GENERATORS
Tidal power and its integration into the electric system
05 p0013 A75-12994

TIDEPOWER
Tidal power and its integration into the electric system
05 p0013 A75-12994
Optimising pumped storage with tidal power in an estuary
[ASME PAPER 74-WA/PWR-7] 05 p0018 A75-16881
Other primary energy resources --- geothermal, tidal, wind, waterwave and glacier energy utilization
06 p0050 A75-23512

TIME LAG
'Time is energy' /Henson and Stringfellow Memorial Lecture/ --- VTOL aircraft developments
07 p0112 A75-32324
Controlling the response of thermoelements that generate electricity
07 p0121 A75-37154

TIME OPTIMAL CONTROL
Effect of attitude constraints on solar-electric geocentric transfers
[AIAA PAPER 75-350] 06 p0055 A75-24957

TIRES
An evaluation of discarded tires as a potential source of fuel
05 p0012 A75-12416
An evaluation: The potential of discarded tires as a source of fuel
[NASA-TM-X-58143] 05 p0038 N75-15153

TITANIUM COMPOUNDS
Iron titanium hydride as a source of hydrogen fuel for stationary and automotive applications
[BNL-18651] 05 p0030 N75-12441

TITANIUM OXIDES
Transparent heat-mirror films of TiO2/Ag/TiO2 for solar energy collection and radiation insulation
05 p0015 A75-16378

TOKAMAK FUSION REACTORS
Fusion power research - Where do we stand
05 p0013 A75-12995
Foreseeable thermal, mechanical, and materials engineering problems of fusion reactor power plants
[SMRT PAPER A2/1] 06 p0046 A75-21713
Plasma heating methods --- for controlled fusion
07 p0119 A75-35920
Optimization of fusion power density in the two-energy-component tokamak reactor
07 p0124 A75-37836
Man-made sun. Thermonuclear engineering developments
[BLL-M-23333-(5828.4F)] 06 p0091 N75-19014
Synthetic fuels from fusion reactors
[BNL-19351] 06 p0106 N75-21098

TOROIDAL PLASMAS
Current expectations for fusion power from toroidal machines
05 p0014 A75-12996
Foreseeable thermal, mechanical, and materials engineering problems of fusion reactor power plants
[SMRT PAPER A2/1] 06 p0046 A75-21713
Plasma heating methods --- for controlled fusion
07 p0119 A75-35920

TOWERS
Evaluation of central solar tower power plant
07 p0116 A75-34531

TOXIC HAZARDS
Dimensions/NBS, volume 59, number 2, February 1975 --- energy conservation, safety management, toxic hazards
[COM-75-50141/02] 07 p0151 N75-25330

TOXICOLOGY
Environmental aspects of cadmium sulfide usage in solar energy conversion. Part 1: Toxicological and environmental health considerations, a bibliography
[PB-238285/1] 06 p0105 N75-20884

TRAFFIC
Problems of the future and potentialities of system engineering --- metallic materials, plastics, traffic and energy supplies
[ESRO-TT-110] 06 p0107 N75-21218

TRAJECTORY OPTIMIZATION
Effect of attitude constraints on solar-electric geocentric transfers
[AIAA PAPER 75-350] 06 p0055 A75-24957

TRANSIENT HEATING
Dynamic response of solar heat storage systems
[ASME PAPER 74-WA/HT-22] 05 p0018 A75-16867
TRANSMISSION LINES
The Electric Power Research Institute's role in applying superconductivity to future utility systems
06 p0056 A75-25827
Economic and system aspects of a superconducting magnetic energy storage device and a dc superconducting transmission line
[LA-UR-74-1145] 06 p0091 N75-19080
TRANSONIC WIND TUNNELS
A generalised analysis of the performance of a variety of drive systems for high Reynolds number, transonic wind tunnels
[RAE-TR-73134] 06 p0073 N75-16572
TRANSPORT AIRCRAFT
Powerplant energy management --- transport aircraft engine thrust control
[AIAA PAPER 74-1066] 05 p0001 A75-10259
Next generation transports will emphasize fuel savings
05 p0011 A75-11426
Fuel outlook dictating technical transport research
05 p0011 A75-11427
Rating aircraft on energy
05 p0015 A75-14346
Conceptual design of reduced energy transports
[AIAA PAPER 75-303] 06 p0047 A75-22508
Future long-range transports - Prospects for improved fuel efficiency
[AIAA PAPER 75-316] 06 p0047 A75-22514
Advanced subsonic transports - A challenge for the 1990's
[AIAA PAPER 75-304] 06 p0049 A75-23251
Future long-range transports: Prospects for improved fuel efficiency
[NASA-TM-X-72659] 06 p0079 N75-17339
Fuel conservation possibilities for terminal area compatible aircraft
[NASA-CR-132608] 06 p0091 N75-19224
TRANSPORT VEHICLES
A comparative analysis of the energy consumption for several urban passenger ground transportation systems
[PB-238041/8] 06 p0107 N75-21160
TRANSPORTATION
Guidelines to reduce energy consumption through transportation actions
[PB-235983/4] 06 p0068 N75-16094
Transportation and the new energy policies: Truck sizes and weights, part 2
[GPO-29-802] 06 p0073 N75-16410
Submarine tanker concepts and problems
[CCM-75-10009/9] 07 p0132 N75-22264
TRANSPORTATION ENERGY
Fuel energy systems - Conversion and transport efficiencies
05 p0007 A75-10554
Evaluation of the energy perfection of the different forms of transport --- aerodynamic coefficients and lift drag ratio
[AD-A006562] 07 p0137 N75-23392
TRAPS
Solar energy trap
[NASA-CASE-MFS-22744-1] 05 p0024 N75-10586
TRAVELING WAVE AMPLIFIERS
Power generation and efficiency in GaAs traveling-wave amplifiers
07 p0110 A75-30750
TREES (PLANTS)
Energy plantations: Should we grow trees for power plant fuel?
[VPI-X-129] 05 p0030 N75-12436
Energy plantations: Should we grow trees for power plant fuel
[PB-238417/0] 07 p0130 N75-21815
The energy plantation
07 p0139 N75-24103
TROPICAL REGIONS
Solar operation of ammonia-water multistage air conditioning cycles in the tropics
06 p0048 A75-23021
Tropical ocean thermal power plants and potential products
[AIAA PAPER 75-617] 06 p0064 A75-29116
TRUCKS
Independent truckers and the energy crisis
[GPO-31-412] 05 p0023 N75-10581
Transportation and the new energy policies: Truck sizes and weights, part 2
[GPO-29-802] 06 p0073 N75-16410
TUBE HEAT EXCHANGERS
The analysis of the performance of a pancake absorber-heat exchanger for a solar concentrator
[ASME PAPER 74-WA/SOL-1] 05 p0018 A75-16884
Utilization of tubular thermoelectric modules in solar generators
05 p0020 A75-17067
Design of a tubular heat collector for a solar power installation with a parabolocylindric concentrator
05 p0020 A75-17069
TUNING
Interferometric tuning of a 15-atm CO2 laser
06 p0058 A75-27518
TUNNELING (EXCAVATION)
Legal economic, and energy considerations in the use of underground space
[PB-236755/5] 06 p0080 N75-17749
TURBINE BLADES
Aluminum nitride and silicon nitride for high-temperature vehicular gas turbine engines
05 p0011 A75-11362
TURBINE ENGINES
Thermal power plants --- German book
06 p0064 A75-28962
Survey on power fluid for thermal power from low temperature and small temperature difference heat source
07 p0119 A75-36173
Turbine design and application, volume 3
[NASA-SP-290-VOL-3] 07 p0147 N75-24741
TURBINE PUMPS
Energy storage underground --- hydroelectric pumped-storage and combustion turbine facilities
05 p0013 A75-12989
Pumped air storage for electric power generation
05 p0013 A75-12990
TURBOCOMPRESSORS
Feasibility demonstration of a solar powered turbocompressor air conditioning and heating system
[PB-238570/6] 07 p0130 N75-21816
TURBOFAN ENGINES
Gas turbine engines - A state-of-the-art review
05 p0009 A75-10840
On the future of jet propulsion in subsonic transport aviation
06 p0058 A75-27777
Study of the costs and benefits of composite materials in advanced turbofan engines
[NASA-CR-134696] 06 p0073 N75-16637
Preliminary study of advanced turbofans for low energy consumption
[NASA-TM-X-71663] 06 p0084 N75-18241
TURBOGENERATORS
Concepts for central solar electric power generation
05 p0021 A75-17504
Low-power turbines using organic vapor
07 p0110 A75-30892
Wind power --- electricity generation
07 p0111 A75-31273
Geothermal power station --- using heat pipes
[AD-785948] 05 p0037 N75-14275
Electric power generation utilizing a heat pipe turbine-generator
07 p0139 N75-24096
Variations in heat exchanger design for ocean thermal difference power plants
[PB-238572/2] 07 p0143 N75-24134
TURBOPROP ENGINES
Gas turbine engines - A state-of-the-art review
05 p0009 A75-10840
Preliminary study of advanced turboprops for low energy consumption
[NASA-TM-X-71740] 07 p0146 N75-24739
TURBOSHAFTS
Gas turbine engines - A state-of-the-art review
05 p0009 A75-10840
TWO PHASE FLOW
Investigations of the factors affecting the performance of a rotating heat pipe
07 p0120 A75-36357

U

U.S.S.R.
Energy from the earth's depths
[BIL-M-23516-(5828.4F)] 06 p0074 N75-16968
Exploration of Antarctica: Past and present

URANIUM
Assessment of uranium and thorium resources in the United States and the effect of policy alternatives
[PB-238658/9] 07 p0143 N75-24133
URANIUM PLASMAS
Applications of plasma core reactors to terrestrial energy systems
[AIAA PAPER 74-1074] 05 p0010 A75-11281
Physics and potentials of fissioning plasmas for space power and propulsion
[IAF PAPER 74-087] 05 p0015 A75-13719
URBAN DEVELOPMENT
Energy from urban wastes
05 p0006 A75-10548
URBAN PLANNING
The Solar Community - Energy for residential heating, cooling, and electrical power
06 p0059 A75-27785
URBAN TRANSPORTATION
Energy efficiency of current intercity passenger transportation modes
[AIAA PAPER 75-314] 06 p0047 A75-22513
Mode shift strategies in intercity transportation and their effect on energy consumption
[AIAA PAPER 75-315] 06 p0055 A75-25013
A comparative analysis of the energy consumption for several urban passenger ground transportation systems
[PB-238041/8] 06 p0107 N75-21160
Impact of future use of electric cars in the Los Angeles region. Volume 1: Executive summary and technical report
[PB-238877/5] 07 p0131 N75-22199
Impact of future use of electric cars in the Los Angeles region. Volume 2: Task reports on electric car characterization and baseline projections
[PB-238878/3] 07 p0131 N75-22200
Impact of future use of electric cars in the Los Angeles region. Volume 3: Task reports on impact and usage analysis
[PB-238879/1] 07 p0131 N75-22201
DOT/NASA comparative assessment of Brayton engines for guideway vehicles and busses. Volume 2: Analysis and results
[NASA-SP-354-VOL-2] 07 p0133 N75-22745
Papers and proceedings of two energy crisis seminars --- for urban transportation
[PB-239164/7] 07 p0156 N75-26513
USER MANUALS (COMPUTER PROGRAMS)
Long term power system dynamics. Volume 2: Long-term power system dynamics simulation program
[PB-240800/3] 07 p0161 N75-27574
USER REQUIREMENTS
Solar electric and thermal conversion system in close proximity to the consumer --- solar panels on house roofs
[AIAA PAPER 75-628] 06 p0062 A75-28597
UTAH
Average oil yeild tables for oil shale sequences in cores from the Uinta Basin, Utah, that average 15, 20, 25, 30, 35, and 40 gallons per ton
[PB-236068/3] 06 p0072 N75-16124
UTILITIES
Small coal burning gas turbine for modular integrated utility systems
05 p0006 A75-10546
The Energy Systems Optimization Computer Program /ESOP/ developed for Modular Integrated Utility Systems /MIUS/ analysis
05 p0006 A75-10551
The PCG-1 fuel cell powerplant for electric utility use
05 p0013 A75-12992
The Hydrogen Economy - A utility perspective --- energy technology
05 p0014 A75-12998
Hydrogen storage and production in utility systems
[BNL-18920] 06 p0097 N75-20580
Utility company views of geothermal development
06 p0102 N75-20864
UTILIZATION
Effective utilization of solar energy to produce clean fuel
[PB-233956/2] 05 p0026 N75-10605

V

V GROOVES
V-grooved silicon solar cells
07 p0123 A75-37397
VACUUM DEPOSITION
Thin film coatings in solar-thermal power systems
06 p0056 A75-25679

VACUUM TESTS
Ames Heat Pipe Experiment (AHPE) experiment description document --- performance testing in a vacuum environment
[NASA-CR-114413] 07 p0138 N75-23880
VAPOR DEPOSITION
Chemical vapor deposition research for fabrication of solar energy convertors
[PB-235481/9] 05 p0041 N75-15185
Research applied to solar-thermal power systems: Chemical vapor deposition research for fabrication of solar energy convertors
[PB-234565/0] 05 p0041 N75-15186
Chemical vapor deposition research for fabrication of solar energy convertors
[PB-236189/7] 06 p0072 N75-16119
Chemical vapor deposition research for fabrication of solar energy converters
[PB-238947/6] 07 p0143 N75-24137
VAPOR PHASES
Workshop in Gas-Phase Molecular Interactions and the Nation's Energy Problem
[PB-236712/6] 06 p0086 N75-18718
VAPORIZING
Operational, maintenance, and environmental problems associated with a fossil fuel-fired potassium steam binary vapor cycle
[ORNL-NSF-EP-30] 06 p0090 N75-18769
VEGETATION
Effective utilization of solar energy to produce clean fuel
[PB-233956/2] 05 p0026 N75-10605
Determine utility of ERTS-1 to detect and monitor area strip mining and reclamation --- southeastern Ohio
[E75-10327] 07 p0158 N75-27515
VEHICULAR TRACKS
A wind energy conversion system based on the tracked-vehicle airfoil concept
05 p0004 A75-10518
VERTICAL TAKEOFF AIRCRAFT
'Time is energy' /Benson and Stringfellow Memorial Lecture/ --- VTOL aircraft developments
07 p0112 A75-32324
VIKING MARS PROGRAM
SNAP 19 Viking RTG flight configuration and integration testing --- Radioisotope Thermoelectric Generator
05 p0003 A75-10504
VIRGINIA
Interdisciplinary study of atmospheric processes and constituents of the mid-Atlantic coastal region. Attachment 3: Data set for Craney Island oil refinery installation experiment --- air pollution monitoring
[NASA-CR-142823] 07 p0141 N75-24121
Interdisciplinary study of atmospheric processes and constituents of the mid-Atlantic coastal region. Attachment 4: Data set for background investigation of atmospheric constituents for Nansemond River site --- a proposed oil refinery site
[NASA-CR-142821] 07 p0141 N75-24122
VISCOUS FLUIDS
Theoretical study of the energy output of two magnetohydrodynamic generators
07 p0125 A75-38568
VOLT-AMPERE CHARACTERISTICS
Methanol/air acidic fuel cell system
05 p0008 A75-10566
Report on progress in achieving direct conversion of a major fraction of sonic flow kinetic power into electrical power by electrofluid dynamic /EFD/ processes
05 p0009 A75-10576
Further progress in the technology of silk screened CdS solar cells
06 p0052 A75-24225
Empirical method of designing the current-voltage characteristics for the discharge mode of a thermionic converter
06 p0057 A75-26332
Temperature effects in Schottky-barrier silicon solar cells
07 p0115 A75-34175
Investigation of photoelectric converter operation under conditions of strong illumination
07 p0119 A75-36015
The conversion efficiency of ideal Shockley p-n junction photovoltaic converters in concentrated sunlight
07 p0120 A75-36362
Effects of high doping levels on silicon solar cell performance
07 p0123 A75-37403
VOLTAGE CONVERTERS (DC TO DC)
Milliwatt fuel cell system for sensors
05 p0008 A75-10565
VOLTAGE GENERATORS
Electrostatic voltage generation from flowing water
05 p0009 A75-10580

W

WALL TEMPERATURE
Thermal performance characteristics of heat pipes
06 p0046 A75-21465
WASTE DISPOSAL
Soil burial of radioisotopic fuel capsules
06 p0046 A75-21274
Biological conversion of organic refuse to methane
[PB-235468/6] 05 p0041 N75-15183
Bureau of Mines research programs on recycling and disposal of mineral, metal, and energy-based wastes
[PB-227476/9] 05 p0042 N75-15203
Pollutional problems and research needs for an oil shale industry
[PB-236608/6] 06 p0084 N75-17848
Nuclear system that burns its own wastes shows promise
[NASA-NEWS-RELEASE-75-44] 06 p0085 N75-18716
Fuel gas production from solid waste
[PB-238068/1] 06 p0095 N75-19843
Energy recovery from solid waste. Volume 1: Summary report
[NASA-CR-2525] 06 p0098 N75-20830
Waste heat disposal from nuclear power plants
[COM-75-10407/5] 07 p0158 N75-27324
An agro-power-waste water complex for land disposal of waste heat and waste water
[PB-239675/2] 07 p0161 N75-27570
WASTE ENERGY UTILIZATION
Economics of a hydrogen storage peaking power plant
[ASME PAPER 74-WA/PWR-6] 05 p0018 A75-16680
Urban waste energy resources
[AIAA PAPER 75-632] 06 p0062 A75-28598
Storage of summertime waste heat from electric generating plants for use in wintertime
[AIAA PAPER 75-743] 07 p0113 A75-32852
Bioconversion --- of solar energy and solid waste energy into useable fuels
[GPO-37-403] 05 p0028 N75-11463
Air conditioning of office buildings with all-electric supply. Part 1: Technical conception
[CA-TRANS-938-PT-1] 06 p0074 N75-16970
Energy recovery from solid waste --- production engineering model
06 p0079 N75-17200
Energy recovery from solid waste. Volume 1: Summary report
[NASA-CR-2525] 06 p0098 N75-20830
Management of power plant waste heat in cold regions
[AD-A003217] 06 p0104 N75-20881
Production of gaseous fuel by pyrolysis of municipal solid waste
[NASA-CR-141791] 07 p0140 N75-24105
Utilisation of waste heat from inductive melting installations
[BLL-OA-TRANS-949-(6196.3)] 07 p0153 N75-26492
Animal waste conversion systems based on thermal discharge
[PB-240113] 07 p0159 N75-27548
Use of thermally enriched water for growing field crops in Minnesota
[PB-240112] 07 p0159 N75-27549
An agro-power-waste water complex for land disposal of waste heat and waste water
[PB-239675/2] 07 p0161 N75-27570
WASTE UTILIZATION
Potential of Rankine engines to produce power from waste heat streams
05 p0006 A75-10547
Energy from urban wastes
05 p0006 A75-10548

An evaluation of discarded tires as a potential source of fuel
05 p0012 A75-12416
Two-stage methane production from solid wastes
[ASME PAPER 74-WA/ENER-11] 05 p0017 A75-16842
Gasification of solid wastes in fixed beds
[ASME PAPER 74-WA/PWR-10] 05 p0018 A75-16882
Energy problems - Solar energy and manure gas
05 p0020 A75-17024
Methanol from forestry, municipal, and agricultural organic residues
[BNWL-SA-5053] 06 p0085 N75-18702
Pyrolysis system evaluation study
[NASA-CR-141664] 06 p0086 N75-18722
Waste lubricating oil research. A comparison of bench-test properties of re-refined and virgin lubricating oils --- materials recovery
[PB-238124/2] 06 p0097 N75-20746
Energy recovery from solid waste. Volume 1: Summary report
[NASA-CR-2525] 06 p0098 N75-20830
Energy and fixed nitrogen from agricultural residues
[BNWL-SA-5070] 06 p0103 N75-20874
Where the boilers are: A survey of electric utility boilers with potential capacity for burning solid waste as fuel
[PB-239392/4] 07 p0143 N75-24135
Energy recovery from solid waste. Volume 2: Technical report --- pyrolysis and biodegradation
[NASA-CR-2526] 07 p0148 N75-25292
Strontium fluoride research in heat source and compatibility tests --- waste utilization
[BNWL-1845-2] 07 p0152 N75-25695
Strontium heat source development programs --- waste utilization
[BNWL-1845-4] 07 p0152 N75-25696
Study of an integrated power, water and wastewater utility complex
[PB-239406/8] 07 p0157 N75-26523
Conversion of cellulosic wastes to oil
[PB-240839/1] 07 p0161 N75-27572

WATER
The generation of hydrogen by the thermal decomposition of water
05 p0005 A75-10532
Nuclear energy requirements for hydrogen production from water
05 p0005 A75-10533
Thermolysis of water for the generation of hydrogen
06 p0049 A75-23504
Primary data on economic activity and water use in prototype oil shale development areas of Colorado: An initial inquiry
[PB-236039/4] 05 p0037 N75-14277
Production of hydrogen from water using nuclear energy. A review --- for hydrogen-based energy
[JAERI-M-5642] 06 p0093 N75-19824
Fundamental aspects of systems for the thermochemical production of hydrogen from water
[IA-UR-74-1459] 07 p0127 N75-21391

WATER CONSUMPTION
The economics of using wind power for electricity supply in the Netherlands and for water supply on Curacao
[NASA-TT-F-15982] 05 p0024 N75-10587

WATER FLOW
Hot side heat exchanger for an ocean thermal difference power plant
05 p0004 A75-10527
Electrostatic voltage generation from flowing water
05 p0009 A75-10580
Steady state free convection in an unconfined geothermal reservoir
05 p0009 A75-11069
Production of oil from fractured reservoirs by water displacement
07 p0127 N75-21716
Solar powered pump
[NASA-CASE-NPO-13567-1] 07 p0133 N75-22746
Oil displacement by different surfactant and polymer waterflood systems
07 p0134 N75-22858

WATER INJECTION
Profitability analysis of producing crude oil by waterflooding using a simulation technique
[PB-237843/8] 06 p0088 N75-18738
Solvent stimulation tests in two California oilfields
[PB-237849/5] 06 p0090 N75-18761

WATER MANAGEMENT
Some aspects of a solar battery system and its use for irrigation in remote sun-rich regions
06 p0054 A75-24256

WATER POLLUTION
Environmental impact of a geothermal power plant
06 p0049 A75-23291
Benthal decomposition of adsorbed octadecane --- impact of oil pollution, deoxygenation of waterways
06 p0106 N75-20891
At-sea testing of a high seas oil recovery system
[AD-A006938] 07 p0136 N75-22953
Marine pollution monitoring (petroleum): Proceedings of a Symposium and Workshop held at the National Bureau of Standards
[COM-75-50071/0] 07 p0146 N75-24183
The identification of gamma-valerolactone in waste from an oil-shale in situ retort --- determination of chemical composition by mass spectroscopy of effluents from crude oil shales causing water pollution
[PB-240098/4] 07 p0147 N75-24852

WATER QUALITY
Mass spectrometric analysis of product water from coal gasification
[PB-240835/9] 07 p0158 N75-27120

WATER RESOURCES
Some generalizations of sample water-supply calculations for solar-powered pumping plants
05 p0020 A75-17077
Complex utilization of a solar power plant
07 p0116 A75-34320
Digest of energy facts for water resources studies in Minnesota
[PB-239961/6] 07 p0156 N75-26515
The impact of energy development on water resources in arid lands. Literature review and annotated bibliography
[PB-240008/3] 07 p0157 N75-26550

WATER TEMPERATURE
Theoretical determination of the temperature in a solar water heater /steady state/
07 p0112 A75-31513
Theoretical research on the operation of a solar water heater and comparison with experimental data
07 p0112 A75-31515
Study of the influence of container design and the thermal inertness of solar water heaters on their efficiency
07 p0119 A75-36018
Collection and concentration of solar energy using Fresnel type lenses
[NASA-CR-142194] 06 p0080 N75-17784
Animal waste conversion systems based on thermal discharge
[PB-240113] 07 p0159 N75-27548

WATER TREATMENT
Solar stills for agricultural purposes
07 p0115 A75-33972
Study of an integrated power, water and wastewater utility complex
[PB-239408/8] 07 p0157 N75-26523

WATERWAVE ENERGY
Other primary energy resources --- geothermal, tidal, wind, waterwave and glacier energy utilization
06 p0050 A75-23512

WATERWAVE ENERGY CONVERSION
Characteristics of a rocking wave power device --- for waterwave energy conversion
06 p0062 A75-28450
Site limitations on Solar Sea Power Plants
[AIAA PAPER 75-618] 06 p0062 A75-28594

WATERWAVE POWERED MACHINES
The oceanic biomass energy plantation --- seaweed harvesting for food and fuel
[AIAA PAPER 75-635] 06 p0063 A75-28599

WEATHER DATA RECORDERS
Sizing of solar energy storage systems using local weather records
[ASME PAPER 74-WA/HT-20] 05 p0017 A75-16665

WEIGHT ANALYSIS
Light-weight radioisotope thermoelectric generator design
05 p0003 A75-10508
Solar cell modules for lightweight solar arrays --- onboard communication satellites
06 p0057 A75-26068

WEIGHT REDUCTION
Evaluation of the overall fuel mass penalty of an aircraft system
07 p0121 A75-36720
WEIGHTLESS FLUIDS
Cryogenic heat pipe experiment - Flight performance onboard a sounding rocket
[AIAA PAPER 75-729] 07 p0113 A75-32872
WEIGHTLESSNESS
The International Heat Pipe Experiment --- ten experiments in zero gravity
[AIAA PAPER 75-726] 07 p0113 A75-32870
WELLS
Offshore investigation: Producible shut-in leases, January 1974, phase 1 --- potentially productive oil and gas wells
05 p0027 N75-11457
Radiological surveillance program for the project Gasbuggy production test, 15 May - 6 November 1973
[NVOO-1V-539-30] 06 p0073 N75-16337
Dry oil
[BII-M-23508-(5828.4F)] 06 p0074 N75-16969
WEST INDIES
The economics of using wind power for electricity supply in the Netherlands and for water supply on Curacao
[NASA-TT-F-15982] 05 p0024 N75-10587
WHEELS
Wind power machines --- including operating principles
[NASA-TT-F-16195] 06 p0080 N75-17786
WHISKERS (SINGLE CRYSTALS)
A new concept for solar energy thermal conversion
07 p0110 A75-30368
WICKS
A design parameter for assessing wicking capabilities of heat pipes
[AIAA PAPER 74-1266] 05 p0010 A75-11107
An investigation of heat-pipe wick characteristics
05 p0012 A75-12914
WIND SHEAR
Structural analysis of wind turbine rotors for NSF-NASA Mod-0 wind power system
[NASA-TM-X-3198] 06 p0080 N75-17712
WIND TUNNEL DRIVES
A generalised analysis of the performance of a variety of drive systems for high Reynolds number, transonic wind tunnels
[RAE-TR-73134] 06 p0073 N75-16572
WIND TUNNELS
Wind engines and wind installations
[NASA-TT-F-16170] 07 p0135 N75-22904
WIND VELOCITY MEASUREMENT
Wind power potential of Alaska. Part 1: Surface wind data from specific coastal sites
[PB-238507/8] 06 p0105 N75-20885
WINDMILLS (WINDPOWERED MACHINES)
Unsteady aerodynamics of variable pitch vertical axis windmill
[AIAA PAPER 75-649] 06 p0063 A75-28604
Utilization of wind energy
07 p0110 A75-30891
Wind power --- electricity generation
07 p0111 A75-31273
Economic and technical aspects of wind generation systems
07 p0116 A75-34533
Wind energy utilization prospects
07 p0117 A75-34928
Standardized wind electric power unit
[AD-783764] 05 p0025 N75-10598
Wind power projects of the French electrical authority
[NASA-TT-F-16057] 05 p0033 N75-13384
Exploiting wind power for the production of electricity --- windmill utilization in Denmark
[NASA-TT-F-16058] 05 p0033 N75-13385
Structural analysis of wind turbine rotors for NSF-NASA Mod-0 wind power system
[NASA-TM-X-3198] 06 p0080 N75-17712
Wind power machines --- including operating principles
[NASA-TT-F-16195] 06 p0080 N75-17786
Wind motors: Theory, construction, assembly and use in drawing water and generating electricity
[NASA-TT-F-16201] 06 p0093 N75-19821
Applied aerodynamics of wind power machines --- rotor blades (turbomachinery)
[PB-238595/3] 07 p0133 N75-22669
WINDPOWER UTILIZATION
A planning methodology for the analysis and design of wind-power systems
05 p0004 A75-10517
Windpower - Look backward, then move forward confidently --- for electric power generation in rural areas
05 p0014 A75-12997
Prospects for tapping solar energy on a large scale
05 p0015 A75-14014
Considerations regarding a utilization of solar energy --- thermal, electric and wind energy systems
06 p0050 A75-23510
Other primary energy resources --- geothermal, tidal, wind, waterwave and glacier energy utilization
06 p0050 A75-23512
Ocean thermal power and windpower systems - Natural solar energy conversion for near-term impact on world energy markets
06 p0060 A75-27790
Utilization of wind energy
07 p0110 A75-30891
Wind power --- electricity generation
07 p0111 A75-31273
Wind energy utilization prospects
07 p0117 A75-34928
Principles of a composite study involving combined use of solar and wind energy
07 p0122 A75-37160
Generalizations of composite studies involving combined use of wind and solar energy
07 p0122 A75-37161
Energy and Resources - A plan is outlined according to which solar and wind energy would supply Denmark's needs by the year 2050 --- solar and wind power utilization for Denmark
07 p0124 A75-37846
The economics of using wind power for electricity supply in the Netherlands and for water supply on Curacao
[NASA-TT-F-15982] 05 p0024 N75-10587
Wind energy developments in the 20th century
[NASA-TM-X-71634] 05 p0033 N75-13380
Wind power projects of the French electrical authority
[NASA-TT-F-16057] 05 p0033 N75-13384
Exploiting wind power for the production of electricity --- windmill utilization in Denmark
[NASA-TT-F-16058] 05 p0033 N75-13385
Wind energy
[GPO-37-390] 05 p0033 N75-13387
Report of the Wind Power Committee --- a feasibility analysis of the use of wind for a major energy source
[NASA-TT-F-16062] 05 p0039 N75-15154
Wind power potential of Alaska. Part 1: Surface wind data from specific coastal sites
[PB-238507/8] 06 p0105 N75-20885
Plans and status of the NASA-Lewis Research Center wind energy project
[NASA-TM-X-71701] 07 p0128 N75-21795
Wind power installations. Present condition and possible lines of development
[NASA-TT-F-16204] 07 p0128 N75-21796
Wind engines and wind installations
[NASA-TT-F-16170] 07 p0135 N75-22904
Oceanic and atmospheric energy sources
07 p0139 N75-24101
Proceedings of 5th annual symposium: Energy Research and Development --- solar energy, windpower utilization, thermonuclear power generation
[AD-A007799] 07 p0144 N75-24142
Development of an electrical generator and electrolysis cell for a wind energy conversion system
[PB-239272/8] 07 p0150 N75-25315
Summary of NASA Lewis Research Center solar heating and cooling and wind energy programs
[NASA-TM-X-71745] 07 p0154 N75-26497
WINDPOWERED GENERATORS
A planning methodology for the analysis and design of wind-power systems
05 p0004 A75-10517
A wind energy conversion system based on the tracked-vehicle airfoil concept
05 p0004 A75-10518

Windpower - Look backward, then move forward confidently --- for electric power generation in rural areas
05 p0014 A75-12997
Wind energy developments in the 20th century
05 p0020 A75-17503
Utilization of wind energy
07 p0110 A75-30891
Wind power --- electricity generation
07 p0111 A75-31273
Economic and technical aspects of wind generation systems
07 p0116 A75-34533
Summary of NASA-Lewis Research Center solar heating and cooling and wind energy programs
07 p0123 A75-37240
Wind and solar power engineering
[AD-786844] 05 p0039 N75-15168
Wind motors: Theory, construction, assembly and use in drawing water and generating electricity
[NASA-TT-F-16201] 06 p0093 N75-19821
Applied aerodynamics of wind power machines --- rotor blades (turbomachinery)
[PB-238595/3] 07 p0133 N75-22669
Development of an electrical generator and electrolysis cell for a wind energy conversion system
[PB-239272/8] 07 p0150 N75-25315

WINDPOWERED PUMPS
Wind motors: Theory, construction, assembly and use in drawing water and generating electricity
[NASA-TT-F-16201] 06 p0093 N75-19821
Wind engines and wind installations
[NASA-TT-F-16170] 07 p0135 N75-22904

WORKING FLUIDS
Dynamic response of solar heat storage systems
[ASME PAPER 74-WA/HT-22] 05 p0018 A75-16867
Stirling engines - Capabilities and prospects
06 p0048 A75-23237
Transverse header heat pipe
[AIAA PAPER 75-656] 07 p0114 A75-32914
Measurements of the performance of an electrohydrodynamic heat pipe
[AIAA PAPER 75-659] 07 p0114 A75-32917
Compatibility and reliability of heat pipe materials
[AIAA PAPER 75-660] 07 p0114 A75-32918
Analysis of gas dissociation solar thermal power system
07 p0115 A75-33974
Survey on power fluid for thermal power from low temperature and small temperature difference heat source
07 p0119 A75-36173

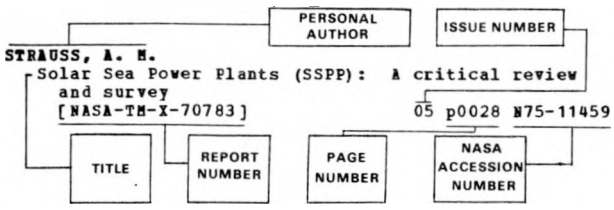
WYOMING
Preliminary evaluation of underground coal gasification at Fanna, Wyoming
[BM-TPR-82] 05 p0025 N75-10599

Z

ZONE MELTING
Solar energy concentrator system for crystal growth and zone refining in space
[NASA-CR-120623] 06 p0086 N75-18719

PERSONAL AUTHOR INDEX

Typical Personal Author Index Listing



Listings in this index are arranged alphabetically by personal author. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document listed (e.g., NASA report, translation, NASA contractor report). The issue, page and accession numbers are located beneath and to the right of the title, e.g., 05 p0028 N75-11459. Under any one author's name the accession numbers are arranged in sequence with the *IAA* accession numbers appearing first.

A

AABOT, H. W. C.
Management of power plant waste heat in cold regions
[AD-A003217] 06 p0104 N75-20881

ABBASI, S.
Energy policy and resource management
[GPO-33-634] 07 p0149 N75-25300

ABBIN, J. P., JR.
Sizing of focused solar collector fields with specified collector tube inlet temperature
[SLA-74-5288] 06 p0094 N75-19832

ABDUAZIZOV, A.
Fabricating paraboloidal high-temperature solar concentrators from mollified sectors
07 p0122 A75-37166

ABHAT, A.
Investigation of bubble formation in arteries of gas-controlled heat pipes
[AIAA PAPER 75-655] 07 p0114 A75-32913

ABIDOV, T. Z.
Design of a tubular heat collector for a solar power installation with a parabolocylindric concentrator
05 p0020 A75-17069

ABRAMS, M. J.
The detection of geothermal areas from Skylab thermal data
[NASA-CR-143133] 07 p0158 N75-27540

ACKERMAN, J. P.
Status and outlook for energy conversion via fuel cells
[CONF-740462-1] 06 p0087 N75-18729

ACTON, J. P.
Electricity conservation measures in the commercial sector: The Los Angeles experience
[R-1592-FEA] 05 p0034 N75-13388

ADAMS, D.
Interdisciplinary study of atmospheric processes and constituents of the mid-Atlantic coastal region. Attachment 3: Data set for Craney Island oil refinery installation experiment
[NASA-CR-142823] 07 p0141 N75-24121
Interdisciplinary study of atmospheric processes and constituents of the mid-Atlantic coastal region. Attachment 4: Data set for background investigation of atmospheric constituents for Hansemond River site
[NASA-CR-142821] 07 p0141 N75-24122

ADAMS, K. G.
In situ oil shale: A cost sensitivity analysis
[SAND-74-0146] 06 p0087 N75-18727

ADAMS, R. G.
Component design considerations for gas turbine HTGR power plant
[ASME PAPER 75-GT-67] 07 p0116 A75-34620

AFANASEV, IU. V.
Laser thermonuclear fusion
07 p0112 A75-32617

AIKENS, D. A.
Electrochemical power sources
[AD-A001610] 06 p0094 N75-19836

AKIYAMA, S.
Superconducting synchronous machine
06 p0061 A75-27967

AL-JUNAILY, F. K.
Investigations of the factors affecting the performance of a rotating heat pipe
07 p0120 A75-36357

ALEREZA, T.
Assessment of Rankine cycle for potential application to solar-powered cooling of buildings
[ASME PAPER 74-WA/SOL-7] 05 p0019 A75-16890
Assessment of the Rankine cycle for potential application to solar powered cooling of buildings
[PB-238069/9] 06 p0089 N75-18755

ALEXANDER, A. D., III
United States transportation fuel economics (1975 - 1995)
[NASA-TM-X-3197] 06 p0107 N75-21154

ALFF, H. K.
Pumped air storage for electric power generation
05 p0013 A75-12990

ALFORD, W. J., JR.
Future long-range transports - Prospects for improved fuel efficiency
[AIAA PAPER 75-316] 06 p0047 A75-22514
Future long-range transports: Prospects for improved fuel efficiency
[NASA-TM-X-72659] 06 p0079 N75-17339

ALICH, J. A., JR.
Effective utilization of solar energy to produce clean fuel
[PB-233956/2] 05 p0026 N75-10605

ALIEV, M. P.
Testing of a photoelectric generator in a mountainous region of the Azerbaidzhan SSR
06 p0057 A75-26714
Investigation of the electrical and temperature characteristics of a silicon photoelectric converter under natural conditions
07 p0116 A75-34314
Photoelectric generator testing in the Azerbaidzhan SSR mountains
07 p0122 A75-37165

ALIKOV, A. K.
Fabricating paraboloidal high-temperature solar concentrators from mollified sectors
07 p0122 A75-37166

ALLEN, A. E.
Energy storage undergound
05 p0013 A75-12989

ALLEN, C. H.
A process for cleaning and removal of sulfur compounds from low Btu gases
[PB-236522/9] 06 p0065 N75-15768

ALLEN, G. M.
The hydrogen sulfide emissions abatement program at the Geysers Geothermal Power Plant
06 p0102 N75-20859

ALLEN, R. L., III
Benthal decomposition of adsorbed octadecane
06 p0106 N75-20891

ALLEN, B.
Proceedings of the Solar Heating and Cooling for Buildings Workshop. Part 2: Panel sessions, March 23
[PB-235483/5] 06 p0069 N75-16095
ALLEN, P. F.
A modular heat source for curium-244 and plutonium-238
05 p0002 A75-10497
ALLISON, H. J.
Solar energy conversion and storage systems for the future
05 p0013 A75-12988
Prospects for tapping solar energy on a large scale
05 p0015 A75-14014
Economic and technical aspects of wind generation systems
07 p0116 A75-34533
Wind energy utilization prospects
07 p0117 A75-34928
Development of an electrical generator and electrolysis cell for a wind energy conversion system
[PB-239272/8] 07 p0150 N75-25315
ALLISON, J.
The COMSAT non-reflective silicon solar cell - A second generation improved cell
06 p0053 A75-24245
ALLRED, E. R.
Use of thermally enriched water for growing field crops in Minnesota
[PB-240112] 07 p0159 N75-27549
ALTMAN, M.
Conservation and better utilization of electric power by means of thermal energy storage and solar heating
[PB-239395/7] 07 p0157 N75-26521
Conservation and better utilization of electric power by means of thermal energy storage and solar heating, executive summary
[PB-239394/0] 07 p0157 N75-26522
ALTSEIMER, J. H.
Nuclear propulsion technology transfer to energy systems
[AIAA PAPER 74-1072] 05 p0001 A75-10264
ALYAUTDINOV, R. A.
Electronic model of the U-25 device
06 p0081 N75-17794
AMATO, R. V.
Remote sensing applied to mine subsidence - Experience in Pennsylvania and the Midwest
07 p0121 A75-36809

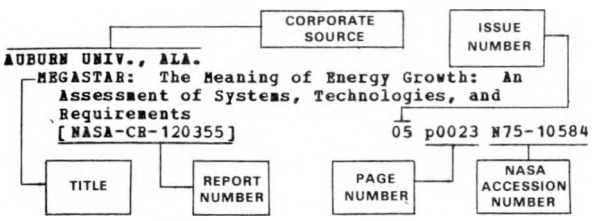
CORPORATE SOURCE INDEX

Typical Corporate Source Index Listing



The title of the document is used to provide a brief description of the subject matter. The issue, page number and NASA or AIAA accession number are included in each entry to assist the user in locating the abstract in the abstract section of an individual supplement of *Energy*. If applicable, a report number is also included as an aid in identifying the document.

A

ADVANCED KINETICS, INC., COSTA MESA, CALIF.
Chemical to electromagnetic energy conversion techniques
[AD-783901] 05 p0026 N75-10609
ADVISORY GROUP FOR AEROSPACE RESEARCH AND DEVELOPMENT, PARIS (FRANCE).
The 1974 AGARD Annual Meeting: The energy problem: Impacts on military research and development

Papers and proceedings of two energy crisis seminars
[PB-239164/7] 07 p0156 N75-26513
APPLIED PHYSICS LAB., JOHNS HOPKINS UNIV., SILVER SPRING, MD.
Engine development program for the APL remotely piloted vehicle
[AD-787507] 06 p0065 N75-15658
The multirim superflywheel
[AD-A001081] 06 p0085 N75-18594
APPLIED URBANETICS, INC., WASHINGTON, D.C.
Project conserve, a pilot project in homeowner energy conservation
[PB-240407/7] 07 p0161 N75-27577
ARGONNE NATIONAL LAB., ILL.
Reduction of atmospheric pollution by the application of fluidized-bed combustion
[PB-235840/6] 06 p0072 N75-16151
High energy battery program at Argonne National Laboratory
[ANL-8064] 06 p0076 N75-16984
Development of high specific energy batteries for electric vehicles
[ANL-8058] 06 p0076 N75-16990
Status and outlook for energy conversion via fuel cells
[CONF-740462-1] 06 p0087 N75-18729
Development of lithium/sulfur cells for application to electric automobiles
[CONF-740805-7] 06 p0094 N75-19829
ARIZONA STATE FUEL AND ENERGY OFFICE, PHOENIX.
Putting the sun to work: A history and directory of currently available solar energy applications
[PB-238189/5] 07 p0129 N75-21810

ARIZONA STATE UNIV., TEMPE.
An intercell heat pipe for fuel cell and battery cooling
[AD-782888] 05 p0027 N75-11226
Terrestrial photovoltaic power systems with sunlight concentration
[PB-236180/6] 06 p0072 N75-16120
Terrestrial photovoltaic power systems with sunlight concentration
[PB-238582/1] 06 p0105 N75-20886
Terrestrial photovoltaic power systems with sunlight concentration
[PB-238506/0] 07 p0143 N75-24136
ARIZONA UNIV., TUCSON.
Chemical vapor deposition research for fabrication of solar energy convertors
[PB-235481/9] 05 p0041 N75-15185
Research applied to solar-thermal power systems: Chemical vapor deposition research for fabrication of solar energy convertors
[PB-234565/0] 05 p0041 N75-15186
Chemical vapor deposition research for fabrication of solar energy convertors
[PB-236189/7] 06 p0072 N75-16119
Regional economics: A subset of simulation of the effects of coal-fired power development in the four corners region
06 p0107 N75-21153
Solar photothermal power conversion
07 p0139 N75-24100
Chemical vapor deposition research for fabrication of solar energy converters
[PB-238947/6] 07 p0143 N75-24137
Symposium on the Material Science Aspects of Thin Film Systems for Solar Energy Conversion
[PB-239270/2] 07 p0144 N75-24150
The impact of energy development on water resources in arid lands. Literature review and annotated bibliography
[PB-240008/3] 07 p0157 N75-26550
ARMY AIR MOBILITY RESEARCH AND DEVELOPMENT LAB., CLEVELAND, OHIO.
A compressor designed for the energy research and development agency automotive gas turbine program
[NASA-TM-X-71719] 07 p0141 N75-24116
ARMY CHEMICAL CENTER, EDGEWOOD, MD.
Proceedings of 5th annual symposium: Energy Research and Development
[AD-A007799] 07 p0144 N75-24142
ARMY COLD REGIONS RESEARCH AND ENGINEERING LAB., HANOVER, N.H.
Management of power plant waste heat in cold regions
[AD-A003217] 06 p0104 N75-20881
ARMY ELECTRONICS COMMAND, FORT MONMOUTH, N.J.
Cylindrical erbium oxide radiator structures for thermophotovoltaic generators
[AD-A001525] 07 p0129 N75-21806
ARMY ELECTRONICS TECHNOLOGY AND DEVICES LAB., FORT MONMOUTH, N.J.
Nickel-zinc batteries for hybrid vehicle operation
[PB-239710/7] 07 p0156 N75-26514
ARMY FOREIGN SCIENCE AND TECHNOLOGY CENTER, CHARLOTTESVILLE, VA.
Standardized wind electric power unit
[AD-783764] 05 p0025 N75-10598
Devices based on thermoelectrical phenomena

[PB-235475/1] 05 p0038 N75-14283
Solar thermal electric power systems
[PB-236368/7] 06 p0071 N75-16118
WESTINGHOUSE ELECTRIC CORP., LESTER, PA.
Advanced coal gasification system for electric power generation
[PB-236971/8] 06 p0089 N75-18747
WESTINGHOUSE ELECTRIC CORP., MADISON, PA.
Clinch River Breeder Reactor: A combined power and fuel source
[CONF-740609-4] 05 p0038 N75-14593
WESTINGHOUSE ELECTRIC CORP., PITTSBURGH, PA.
Clean power generation from coal
[PB-234188/1] 05 p0035 N75-13401
WISCONSIN UNIV., MADISON.
Wisconsin superconductive energy storage project, volume 1
[PB-238082/2] 06 p0105 N75-20887
Modeling of solar heating and air conditioning
[PB-239189/4] 07 p0136 N75-22926
A simulation model of the development of petroleum refining capacity
[AD-A003723] 07 p0161 N75-27569
The household energy game
[COM-75-10304/4] 07 p0161 N75-27578
Increased fuel economy in transportation systems by use of energy management. Volume 1: General results and discussion
[PB-240220/4] 07 p0163 N75-27970

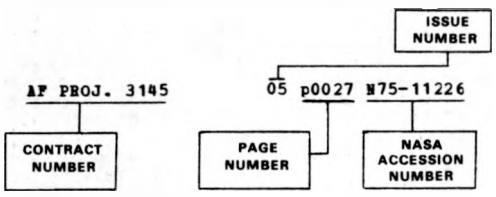
WOODS HOLE OCEANOGRAPHIC INSTITUTION, MASS.
Energy exchange at the surface of the western North Atlantic Ocean
[AD-A007296] 07 p0146 N75-24285
WYOMING UNIV., LARAMIE.
The direct production of hydrocarbons from coal-steam systems
[PB-239356/9] 07 p0138 N75-23740

X

XEROX ELECTRO-OPTICAL SYSTEMS, PASADENA, CALIF.
Solar collector thermal power system. Volume 1: Preliminary technology systems study
[AD-A000940] 06 p0091 N75-19339
Solar collector thermal power system. Volume 2: Development, fabrication, and testing of fifteen foot heat pipes
[AD-A000941] 06 p0091 N75-19340
Solar collector thermal power system. Volume 3: Basic study and experimental evaluation of thermal train components
[AD-A000942] 06 p0091 N75-19341

CONTRACT NUMBER INDEX

Typical Contract Number Index Listing



Listings in this index are arranged alphanumerically by contract number. Under each contract number, the accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order with the *IAA* accession numbers appearing first. The accession number denotes the number by which the citation is identified in either the *IAA* or *STAR* section. Preceding the accession number are the issue and page number in the particular supplement in which the citation may be found.

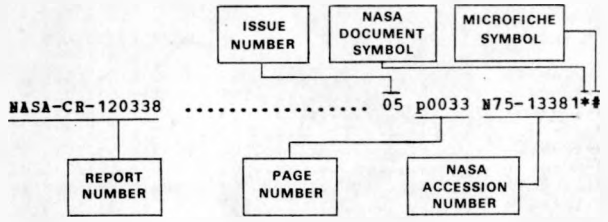
Typical Report/Accession Number Index Listing



Listings in this index are arranged alphanumerically by report number. The issue and page number indicate the actual Supplement and page where the citation may be located. The accession number denotes the number by which the citation is identified. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche. A plus sign (+) indicates a document that cannot be microfiched but for which one-to-one fasimile is available.
