FOREWORD

The Bureau of Radiological Health develops and carries out a national program to control unnecessary human exposure to potentially hazardous ionizing and nonionizing radiations and to ensure the safe, efficacious use of such radiations. The Bureau publishes the results of its work in scientific journals and in its own technical reports.

These reports provide a mechanism for disseminating results of Bureau and contractor projects. They are distributed to Federal, State, and local governments; industry; hospitals; the medical profession; educators; researchers; libraries; professional and trade organizations; the press; and others. The reports are sold by the Government Printing Office and/or the National Technical Information Service.

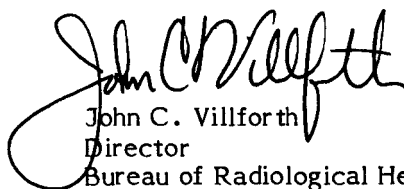

The Bureau also makes its technical reports available to the World Health Organization. Under a memorandum of agreement between WHO and the Department of Health, Education, and Welfare, three WHO Collaborating Centers have been established within the Bureau of Radiological Health, FDA:

WHO Collaborating Center for Standardization of Protection Against Nonionizing Radiations;

WHO Collaborating Center for Training and General Tasks in Radiation Medicine; and

WHO Collaborating Center for Nuclear Medicine.

Please report errors or omissions to the Bureau. Your comments and requests for further information are also encouraged.

John C. Villforth
Director
Bureau of Radiological Health

PREFACE

This BRH Publications Index is updated and published annually for the use of the Bureau's staff as a convenient record of publications produced over the years. The Index is used by the Technical Information Staff for management of its publication distribution and supply system and for answering public inquiries. The Index is distributed to Bureau staff, State radiological health programs, and those libraries on the BRH mailing list.

The assistance of Mrs. Dorothy Smith, Secretary to the Bureau's Information Clearance Committee, and Mrs. Mescal Wimberly, Data Systems and Mathematics Staff, was essential in the publication of this index and is sincerely appreciated.

A handwritten signature in black ink, reading "John G. Bailey". The signature is fluid and cursive, with the first letters of each word being capitalized and prominent.

BRH PUBLICATIONS INDEX

INTRODUCTION

The Key Word in Context (KWIC) index to the publications of the Bureau of Radiological Health was prepared to aid in the retrieval and identification of publications originated or authored by Bureau staff or published by the Bureau. These publications include journal articles, government publications and technical reports, selected staff papers, and Bureau news releases issued by HEW.

For convenience, the document is divided into four sections, KWIC Index, Author Index, Bibliography Index, and BRH Publications Subject Index, as described below.

KWIC Index

The KWIC Index is a listing of each title of Bureau-originated (author or contractor) publication of which the Bureau has evidence of publication. The index is an alphabetical permutation of the keywords in each title. The computer is programmed to reject certain title words, such as all one- and two-letter words and other nondescriptive words from alphabetization in the KWIC Index. A one-line entry appears for each keyword in the title. An asterisk indicates the first word in the title. To the right of each entry is a five-digit accession number. The first two digits indicate the year of BRH Information Clearance Committee processing, and the last three digits show the Information Clearance Committee serial number of the manuscript within that year. Assigned publication numbers have usually been included as part of the title for ease of retrieval through the KWIC Index.

Not all publications receive clearance through the BRH Information Clearance Committee. Such items not cleared have been assigned accession numbers between 400 and 599 within each year. Published abstracts have not been included. Information Clearance Committee records were started in 1961 when the Committee was formed. Publications prior to 1961 have been assigned accession numbers in the 400 series.

DHEW news releases pertinent to BRH have been assigned accession numbers beginning with 600 within each year. Descriptive titles have been assigned to the releases for ease of identification and retrieval.

The length of title appearing in the KWIC Index is limited by the computer program used to generate the KWIC. Thus, if the complete title is needed, it can be located in the Bibliography Index by using the accession number.

In many cases, the exact title as it appeared in the publication was modified because of the computer system limitations (e.g., no superscripts, lower case or Greek symbols). The radionuclide designations were changed so that they could be grouped alphabetically in the KWIC Index. Also, hyphens were either added or deleted to facilitate alphabetical listing of keywords in the KWIC Index and to reduce the number of nonsignificant listings. Examples of the changes are:

- carbon dioxide replaces CO₂
- I-125 replaces ¹²⁵I or iodine-125
- gamma-ray replaces γ-ray
- in-vitro replaces in vitro

Author Index

The Author Index provides an alphabetical listing of all authors whose names appear in the Bibliography Index. The column to the left of the alphabetical author listing contains the accession numbers as described for the KWIC Index. The column to the right of the alphabetical author listing contains one-digit numbers to indicate the author order (first author, second author, and so forth). Not all authors were, or are, Bureau of Radiological Health staff. Some publications are listed because the Bureau sponsored their publication.

Bibliography Index

The Bibliography Index gives the complete title of each article (except as modified for the KWIC Index), the author(s), and the publication citation using, when possible, the abbreviations for journals recommended by Index Medicus List of Periodicals. The accession numbers are not continuous since these numbers are assigned to manuscripts submitted for clearance and, of course, all do not receive publication.

BRH Publications Subject Index

This Index is based upon limited, manual subject indexing with no cross references and lists only those reports published by the Bureau since 1972 when the FDA publication numbering system originated.

Availability of Publications Listed

Most of the articles listed that have been published in journals are available through regular technical libraries. The Bureau's technical reports series are available from the Technical Information Staff, until the supply is depleted. In all applicable cases, the technical reports have been submitted to the National Technical Information Service (NTIS), formerly the Clearinghouse for Federal Scientific and Technical Information (CFSTI), Springfield, Virginia 22151, for announcement in their abstract journal. The PB number indicated for the report should be cited when ordering from the NTIS.

In many cases, the publications are available for purchase from the Superintendent of Documents (Supt. Doc.), U.S. Government Printing Office, Washington, DC 20402. Stock number and price are indicated in the bibliography for ordering. Each document for sale by NTIS or Superintendent of Documents receives an initial publication price which is subject to change. The prices in this index have not been updated to reflect any such changes over the years.

Effective with this issue of the Index is a procedure for determining actual dollar costs for publications available from NTIS. To establish the current cost of a publication from NTIS refer to the corresponding code number in the NTIS North American Continent Price Schedule below. Cost data on previously listed citations have not been changed. All future items, however, will state the new price codes. This issue of the Index has but one item quoting the new price code (see 79400). The current Price Schedule will be published in each new edition of the Index.
