3896 IN-SITU PREPARATION OF ELECTRODES FOR BATTERIES. Lambert, C.; Bono, P.; Pichon, B. (to Societe Generale de Constructions Electriques et Mecaniques(Alsthom)). French Patent 2,225,849. 08 Nov 1974. Filed date 16 Apr 1973. 6p.
ELECTRIC BATTERIES;ELECTRODES;IN-SITU PROCESSING;CHEMICAL PREPARATION

3897 STOPPER FOR SECONDARY BATTERIES. Schmidt, H. GE 2,321,930. 7 Nov 1974. Filed date 30 Apr 1973. 5p.
Floating needle for external electrolyte level control. ELECTRIC BATTERIES;CLOSURES; ELECTROLYTES;LEVELS

3898 INCREASING THE ENERGY STORAGE CAPACITY OF AN ELECTRODE OF AMORPHOUS CARBON. Metcalfe, J.E., III; Rightmire, R.A.; Marse, A.V. (to Standard Oil Co. (Ohio)). German(FRG) Patent 2,320,413. 7 Nov 1974. Filed date 21 Apr 1973. 19p.
ENERGY STORAGE;CATHODES;CARBON;SULFUR; HALIDES;OXYCHLORIDES;LITHIUM-SULFUR BATTERIES; ELECTRIC BATTERIES

3899 EXPANDER FOR LEAD BATTERY ANODE. Yampol'skaya, E.G.; Smirnova, I.A.; Moiseeva, V.I.; Zinchenko, Yu.A.; Sapotnitskii, S.A.; Belodubrovskii, R.B.; Alekseeva, N.G.; Kryukova, L.I. USSR Patent 449,401. 5 Nov 1974. Filed date 1 Jun 1973.
LEAD-ACID BATTERIES;ANODES;RESINS;ADDITIVES; ORGANIC COMPOUNDS;BARIUM SULFATES

3900 LEAD BATTERY ELECTRODES. Zinchenko, Yu.A.; Tyutina, L.S.; Chaivanova, A.G.; Kucher, D.A.; Denisova, A.A.; Bogachek, G.G.; Stepanov, V.I.; Laevskii, D.I.; Yampol'skaya, E.G. USSR Patent 449,402. 5 Nov 1974. Filed date 1 Jun 1973.
LEAD-ACID BATTERIES;ELECTRODES;FABRICATION; DRYING;IMPREGNATION;BORIC ACID

3901 ELECTROCHEMICAL CONTACT. (to Gates Rubber Co.). Belgian Patent 817,275. 4 Nov 1974. Filed date 14 Nov 1972. 23p.
Patent; between pole and electrolyte. ELECTRIC BATTERIES;ELECTRIC CONTACTS;ELECTRODES; ELECTROLYTES;FASTENERS;LEAD;LEAD ALLOYS;TIN ALLOYS;CALCIUM ALLOYS;ANTIMONY ALLOYS

3902 NICKEL ELECTRODES FOR ALKALI BATTERIES. Kanada, Y. (to Ray-O-Vac Co., (Japan) Ltd.). Japanese Patent 114,748. 1 Nov 1974. Filed date 9 Mar 1973. 3p.
Patent; preparation. NICKEL-CADMIUM BATTERIES;NICKEL-ZINC BATTERIES;IRON-NICKEL BATTERIES;ELECTRIC BATTERIES;CATHODES;NICKEL; NICKEL COMPOUNDS;HYDROXIDES;CHEMICAL PREPARATION;NICKEL OXIDES;NICKEL SULFATES; SODIUM COMPOUNDS;HYPOCHLOROUS ACID;POTASSIUM HYDROXIDES;GRAPHITE;POLYSTYRENE

3903 ELECTROCHEMICAL BEHAVIOR OF IRON IN ALKALINE SULPHATE SOLUTIONS. Geana, D.; El Miligy, A.A.; Lorenz, W.J. (Univ., Karlsruhe, Ger.). J. Appl. Electrochem.; 4: No. 4, 337-345(Nov 1974).
MEDIUM TEMPERATURE;METAL-GAS BATTERIES;IRON; AIR;IRON-NICKEL BATTERIES;ELECTRODES; ELECTROCHEMISTRY

3904 EVALUATION OF EXPANDERS USED IN THE NEGATIVE LEAD BATTERY ELECTRODE. Azim, A.A.; Ismail, A.A. (National Research Center, Cairo). J. Appl. Electrochem.; 4: No. 4, 351-356(Nov 1974).
LEAD-ACID BATTERIES;ANODES;ALKYNES;BARIUM SULFATES;HUMIC ACIDS;LIGNIN;HYDROGEN; PERFORMANCE

3905 CORROSION OF PURE AND AMALGAMATED ZINC IN CONCENTRATED ALKALI HYDROXIDE SOLUTIONS. Vorkapic, L.Z.; Drazic, D.M.; Despic, A.R. (Inst. of Chemistry, Technology, and Metallurgy, Belgrade). J. Electrochem. Soc.; 121: No. 11, 1385-1392(Nov 1974).
The problem of corrosion of zinc in alkaline solutions has become a topic of considerable interest with the increasing use of zinc as the anode in a variety of alkaline batteries (primary alkaline zinc battery, secondary silver--zinc, and both primary and secondary zinc--air batteries), some of which contain great promise for propulsion of electric vehicles. Corrosion of pure and amalgamated zinc in pure concentrated KOH solutions was investigated using two methods: galvanostatic measurements of the kinetics of hydrogen evolution with electrodic assessment of corrosion properties of the system and volumetric measurement of the hydrogen evolution reflecting directly the rate of corrosion. The latter was followed as a function of time during 150 h. It was found that the corrosion rate varies considerably with time, and it was suggested that different factors control the initial and the steady-

state corrosion. The initial corrosion rate increases with increasing KOH concentration; this behavior is indicative of the chemical mechanism of hydrogen evolution. The change of the corrosion rate with time and the steady-state corrosion rate can be explained in terms of formation of an impermeable ZnO film at the surface.

3906 EFFECTS OF CALCIUM, TIN, AND BISMUTH ON THE EARLY STRENGTH OF CALCIUM--LEAD ALLOYS. Myers, M.; van Handle, H.R.; DiMartini, C.R. (American Smelting and Refining Co., South Plainfield, NJ). J. Electrochem. Soc.; 121: No. 11, 1526-1530(Nov 1974).
Over the last several years, interest in calcium--lead alloys for use as grids in SLI batteries has greatly increased due to the expected requirement for maintenance-free (low-gassing) batteries in the automotive industry. The effects of calcium content as well as additions of tin and bismuth on the mechanical properties of calcium--lead alloys were investigated. The alloys were wrought and heat-treated in order to avoid the problems raised by the presence of casting variables. The previously reported increase in the rate of hardening with increasing calcium content was confirmed. Binary alloys containing less than 0.04% calcium showed no strengthening 1 h after quench from the solution treatment temperature, while 0.1% calcium nearly doubled in tensile strength in only 5 min. Tin, in additions of 0.5 and 1%, completely restrained hardening in the first hour after quench in both 0.06 and 0.1% calcium alloy. Bismuth additions were made up to 1000 ppm. No effect was noted on the early strength of the 0.1% calcium alloys, but the rate of hardening of the 0.06% calcium alloys was significantly enhanced by the presence of bismuth. These findings show that early strength of calcium--lead alloys may be improved by limiting tin content, increasing calcium content, or adding bismuth to low-percentage calcium alloys.

3907 LEAD ALLOYS OF HIGH CREEP RUPTURE STRENGTH. Heuber, U. (to Metallgesellschaft AG). GE 2,319,711. 31 Oct 1974. Filed date 18 Apr 1973. 6p.
LEAD BASE ALLOYS;ANTIMONY ALLOYS;ARSENIC ADDITIONS;COPPER ADDITIONS;SILVER ADDITIONS;TIN ADDITIONS;SULFUR ADDITIONS;CREEP;RUPTURES; ELECTRIC BATTERIES;LEAD-ACID BATTERIES; ELECTRODES

3908 INTRODUCTION OF ACTIVE MATERIALS INTO POROUS ELECTRODE FRAMEWORKS FOR ALKALINE BATTERIES. Buder, E.; Knabenbauer, W. (to Varta Batterie AG). GE 2,318,075. 31 Oct 1974. Filed date 11 Apr 1973. 12p.
ELECTRIC BATTERIES;ELECTRODES;PRODUCTION; DIFFUSION

3909 GAS DIFFUSION ELECTRODE FOR BATTERIES. Vignaud, R. (to Societe les Piles Wonder). French Patent 2,224,881. 31 Oct 1974. Filed date 5 Apr 1973. 13p.
Mixture of conducting material (e.g. powdered metal) and hologenated material (e.g. teflon;patent. ELECTRIC BATTERIES;ELECTRODES; GASES;DIFFUSION;POLYETHYLENES;METALS;POWDERS; TEFLON;ACTIVATED CARBON;IRON;NICKEL;CHROMIUM; COBALT;SILVER;COPPER;MERCURY;PLATINUM;PALLADIUM; METAL-GAS BATTERIES

3910 ALKALINE BATTERY SEPARATOR. (to Fuji Electrochemical Co., Ltd.). French Patent 2,224,879. 31 Oct 1974. Filed date 6 Apr 1973. 9p.
BATTERY SEPARATORS;HYDROXIDES;POLYPROPYLENE; AQUEOUS SOLUTIONS;PERFORMANCE;FABRICATION; SURFACTANTS;POLYACETALS;AMINES

3911 METALLIC CASES FOR ALKALINE BATTERIES. (to Fuji Electrochemical Co., Ltd.). French Patent 2,224,878. 31 Oct 1974. Filed date 6 Apr 1973. 9p.
ELECTRIC BATTERIES;CONTAINERS;HYDROXIDES; IRON;ZINC;CHROMATES

3912 MOLDING AND HARDENING GRIDS FOR LEAD STORAGE BATTERY PLATES. (to Varta Batterie AG). French Patent 2,224,551. 31 Oct 1974. Filed date 4 Apr 1973. 5p.
LEAD-ACID BATTERIES;GRIDS;PLATES;MOLDING; HARDENING;LEAD ALLOYS;ANTIMONY ALLOYS

3913 LEAD BATTERY ALLOY. Ustimov, M.I.; Elyakov, I.I. (to Kalinin, M.I., Chimkent Lead Plant). USSR Patent 448,242. 30 Oct 1974. Filed date 3 May 1973.
LEAD-ACID BATTERIES;LEAD ALLOYS;ELECTRODES; CHEMICAL PREPARATION;ARSENATES;SODIUM COMPOUNDS; ZINC CHLORIDES;AMMONIUM COMPOUNDS;CHLORIDES; ANTIMONY COMPOUNDS;OXYGEN;ANODES

3914 SILVER ELECTRODE FOR BATTERY. Shteinberg, A.N.; Osipov, B.N.; Lev, M.B.; Knyazev, B.D.; Mendzheritskii, E.A.; Trofimov, A.V.; Makeichik, V.Ya. USSR Patent 448,514. 30 Oct 1974. Filed date 28 Dec 1972. 110p.
Patent; fabrication. ELECTRIC BATTERIES; ELECTRODES;SILVER-ZINC BATTERIES;SILVER-CADMIUM BATTERIES;FABRICATION;CATHODES

3915 ALKALINE CELLS WITH ANODES MADE FROM ZINC FIBERS AND NEEDLES. Louzas, D.V. (to Union Carbide Corp.). US Patent 3,844,838. 29 Oct 1974. Filed date 3 Apr 1970. 21p.
ZINC;ANODES;NICKEL-ZINC BATTERIES;SILVER-ZINC BATTERIES;FABRICATION;HYDROXIDES

3916 INSULATING SEAL FOR MOLTEN SALT BATTERY. Sharma, R.A.; Rhodes, J.F. (to General Motors Corp.). US Patent 3,844,842. 29 Oct 1974. Filed date 28 Nov 1972. 5p.
Patent; LiF + filler for high-temperature batteries, fabrication. MOLTEN SALTS;HIGH TEMPERATURE;ELECTRIC BATTERIES;DIELECTRIC MATERIALS;SEALS;LITHIUM FLUORIDES;FILLERS; ELECTROLYTES;GRAPHITE;CYLINDERS;YTTRIUM OXIDES; FABRICATION

3917 ALKALINE CELLS WITH ANODES MADE FROM ZINC FIBERS AND NEEDLES. Louzos, D.V. (to Union Carbide Corp., New York, NY). US Patent 3,844,838. 29 Oct 1974. Filed date 13 Mar 1972. 22p.
Patent; process for preparing fibers and needles. ELECTRIC BATTERIES;HYDROXIDES;NICKEL-ZINC BATTERIES;SILVER-ZINC BATTERIES;ZINC-MANGANESE BATTERIES;ANODES;FIBERS;CHEMICAL PREPARATION;MOLDING

3918 EVALUATION OF THE CORROSION RATE OF LEAD AND ITS ALLOYS USED FOR STORAGE BATTERIES. Kukoz, F.I.; Sapozhnikov, A.V. UR 447,780. 25 Oct 1974. Filed date 26 Jan 1973.
LEAD;LEAD ALLOYS;CORROSION;SULFURIC ACID; ALTERNATING CURRENT;POLARIZATION;LEAD-ACID BATTERIES;ELECTRODES;ANODES

3919 MICROPOROUS SEPARATOR FOR BATTERY.

Druzhinin, E.A. USSR Patent 447,779. 25 Oct 1974. Filed date 26 Jan 1973.
BATTERY SEPARATORS;FABRICATION;POROSITY; SURFACTANTS;PRESSING;MEDIUM TEMPERATURE; CHLORINATED ALIPHATIC HYDROCARBONS

3920 SOLID ELECTROLYTE COMPOSITION FOR SECONDARY BATTERY. Ikeda, H.; Narukawa, S.; Kawai, Y. (to Sanyo Electric Co., Ltd.). Japanese Patent 74,112,195. 25 Oct 1974. Filed date 28 Feb 1973. 3p.
NaI--$(CH_2)_6N_4CH_3I$ for Na batteries; patent. ELECTRIC BATTERIES;ELECTROLYTES;SOLIDS;SODIUM IODIDES;ORGANIC NITROGEN COMPOUNDS;IODINATED ALIPHATIC HYDROCARBONS

3921 ELECTRICAL CONDUCTOR FOR LEAD STORAGE BATTERIES. Sundberg, E.G.; Quist, K.; Wingbro, T. (to Aktiebolag Tudor). German(FRG) Patent 2,415,032. 24 Oct 1974. Filed date 3 Apr 1973. 14p.
LEAD-ACID BATTERIES;LEAD;COPPER;ALUMINIUM; ALUMINIUM ALLOYS;COPPER ALLOYS;LEAD ALLOYS; ELECTRIC CONDUCTORS;CONDUCTOR DEVICES;EXTRUSION

3922 APPARATUS FOR DETERMINING THE DENSITY OF ELECTROLYTE IN LEAD STORAGE BATTERIES. Schmechtig, R. (to Aktiebolag Tudor). German(FRG) Patent 2,415,033. 24 Oct 1974. Filed date 3 Apr 1973. 16p.
LEAD-ACID BATTERIES;ELECTROLYTES;DENSITY; DENSIMETERS;PIPES;LEAKS;DESIGN

3923 LEAD DIOXIDE CELL. Matsuno, S.; Kobayashi, S. (to Yuasa Battery Co., Ltd.). Japanese Patent 74 39,328. 24 Oct 1974. Filed date 8 Dec 1967. 3p.
Patent; $PbO_2$/Al or Mg. ELECTRIC BATTERIES; LEAD OXIDES;ALUMINIUM;MAGNESIUM;SEAWATER; ELECTROLYTES;CATHODES;ELECTRIC CONDUCTIVITY

3924 APPARATUS AND METHOD FOR MAINTAINING BATTERIES AT OPERATIONAL TEMPERATURE. Terasaki, M. (to Japan Storage Battery Co., Ltd.). Japanese Patent 111,129. 23 Oct 1974. Filed date 26 Feb 1973. 3p.
HEATING;SODIUM-SULFUR BATTERIES;ELECTRIC BATTERIES;SODIUM HYDROXIDES;SODIUM NITRATES; ZINC CHLORIDES

3925 ELECTRODE FOR SECONDARY STORAGE BATTERY. Langer, A.; Patton, J.T. (to Westinghouse Electric Corp.). Canadian Patent 956,698. 22 Oct 1974. Filed date 02 Oct 1969. 18p.
Ni fibers with iron oxide as active agent, additives; patent. IRON-NICKEL BATTERIES;ANODES; ELECTRIC BATTERIES;ELECTRODES;NICKEL;IRON OXIDES;SULFUR;SELENIUM;TELLURIUM;ALKALI METALS; IRON COMPOUNDS;PERFORMANCE

3926 CATHODES FOR ALKALINE BATTERIES. Yasuda, H. (to Japan Storage Battery Co., Ltd.). Japanese Patent 74,109,842. 18 Oct 1974. Filed date 22 Feb 1973. 3p.
ELECTRIC BATTERIES;HYDROXIDES;CATHODES; CHEMICAL PREPARATION;ALUMINIUM;ALUMINIUM COMPOUNDS;NICKEL HYDROXIDES;SINTERED MATERIALS; PERFORMANCE;NICKEL;SUBSTRATES;NICKEL NITRATES; IMPREGNATION;NICKEL-CADMIUM BATTERIES;NICKEL-ZINC BATTERIES;IRON-NICKEL BATTERIES

3927 PLATE GRID FOR LEAD STORAGE BATTERIES. Brinkmann, J.; Trippe, G.; Heissman, W. (to Varta Batterie Aktiengesellschaft). US Patent 3,959,015. 18 Oct 1974. Priority date 21 Dec 1973, German, Federal Republic of (F.R. Germany). vp.
A grid plate for a lead storage battery includes generally parallel, vertically extending grid rods and a current take-off connector positioned adjacent the upper ends of the rods. At least some of the rods have the portions farthest from the take-off connector formed as half rods and the portions closest to the connector as whole rods. Another embodiment has at least some of the rods formed partly as half rods located on only one side of a plane parallel to the grid surface and partly as whole rods located on both sides of the plane.

3928 GAS VENT FOR LEAD BATTERIES. McDowall, W.L. (to Dunlop Australia Ltd.). German(FRG) Patent 2,413,638. 17 Oct 1974. Filed date 22 Mar 1973. 12p.
LEAD-ACID BATTERIES;VENTS;TEFLON;DESIGN

3929 MANGANESE DIOXIDE. Shiramoto, T. (to Matsushita Electric Industrial Co., Ltd.). Japanese Patent 74 109,297. 17 Oct 1974. Filed date 20 Feb 1973. 2p.
Patent; chemical preparation. MANGANESE OXIDES;ZINC-MANGANESE BATTERIES;ANODES;CHEMICAL PREPARATION

3930 COMPACTING OF ACTIVE MATERIAL FOR BATTERIES. Wiepen, R. (to Varta Batterie AG). German(FRG) Patent 2,315,984. 17 Oct 1974. Filed date 30 Mar 1973. 8p.
LEAD-ACID BATTERIES;PLATES;TUBES;LEAD OXIDES; FABRICATION;COMPACTING;COMPRESSION

3931 RECLAIMING ELECTROLYTE FOR REUSE IN BATTERIES. Marchetti, R.A. US Patent 3,841,916. 15 Oct 1974. Filed date 5 Sep 1972. 3p.
LEAD-ACID BATTERIES;ELECTROLYTES;RECOVERY

3932 LEAD ALLOY FOR GRIDS OF LEAD--ACID BATTERIES. Barnes, S.C.; Lawrie, R.J. (to Lucas, Joseph, (Batteries) Ltd.). GE 2,414,976. 10 Oct 1974. Filed date 7 Apr 1973. 8p.
Casting. LEAD-ACID BATTERIES;GRIDS;HIGH TEMPERATURE;CASTING;LEAD BASE ALLOYS;CALCIUM ADDITIONS;LITHIUM ADDITIONS;ALUMINIUM ADDITIONS

3933 COMPOSITE POROUS ELECTRODE. Yao, N-P; Oliver, R.L.; Seiger, H.N. (to Textron, Inc.). US Patent 3,840,407. 08 Oct 1974. Filed date 19 Jun 1972. 10p.
ELECTRIC BATTERIES;POROSITY;ELECTRODES;GASES; DIFFUSION;METAL-GAS BATTERIES;FABRICATION

3934 RECHARGEABLE CELL HAVING CERAMIC--METAL TERMINAL SEAL RESISTANT TO ALKALI ELECTROLYTE. Bondley, R.J. (to General Electric Co.). US Patent 3,840,408. 8 Oct 1974. Filed date 20 Sep 1971. 6p.
ELECTRIC BATTERIES;ELECTRODES;NICKEL; CERAMICS;HYDROXIDES;ELECTROLYTES;ALUMINIUM OXIDES;BONDING;NICKEL-CADMIUM BATTERIES;NICKEL-ZINC BATTERIES;IRON-NICKEL BATTERIES

3935 SEPARATOR FOR ALKALINE CELLS. Takasawa, N.; Matsuki, Y. (to Furukawa Battery Co., Ltd.). Japanese Patent 74 105,934. 7 Oct 1974. Filed date 16 Feb 1973. 2p.
Patent; preparation. BATTERY SEPARATORS;PVA; SILVER-CADMIUM BATTERIES;PERFORMANCE; FABRICATION;CHEMICAL PREPARATION

3936 WETTABLE BATTERY SEPARATOR AND PROCESS THEREFOR. Wszolek, W.R.; Cogliana, J.A. (to W. R. Grace and Co.). US Patent 3,951,691. 7 Oct 1974. vp.
A process for imparting permanent wettability to a battery separator comprising a non-woven mat of polyolefin fiber is described. The process comprises impregnating the mat with 0.2 to 30 percent by weight of an α-olefin/α,β-unsaturated acid or anhydride copolymer, the copolymer containing about 5 to about 80 weight percent α,β-unsaturated acid or anhydride and being dissolved in an amount ranging from 0.5 percent to 33 percent by weight in an aqueous base and thereafter regenerating the copolymer to a water-insoluble, substantially free acid form by volatilization or neutralization of the base.

3937 BATTERY CASING. Thornton, R.F. (to General Electric Co.). US Patent 3,959,011. 4 Oct 1974. vp.
A battery casing comprises an inner casing of a solid sodium ion-conductive material with one open end and an outer metallic casing with an upper portion and a lower portion. The upper portion has opposite open ends, with an inwardly extending flange affixed to the upper portion at its first open end. The lower portion has opposite open ends, a removable closure for its first open end, and an opening in the removable closed ends. The upper and lower portions are joined together at their associated second open ends. A metallic closure consists of a cap portion with a flange and a cap insert. The flange of the cap portion is positioned adjacent the flange of the upper portion of the outer metallic casing. A first glass seal seals together the adjacent flanges of the upper portion of the outer metallic casing and of the cap portion of the metallic closure, and seals the adjacent flanges to the outer wall of the inner casing adjacent its open end. A second glass seal seals together the opposite surface of the flange of the upper portion of the outer metallic casing and a portion of the outer wall of the inner casing. The cap insert is adapted to be positioned within the cap portion, thereby closing the open end of the inner casing.

3938 STORAGE BATTERY PLATE. Morelock, C.R.; Lord, P.C.; Weininger, J.L. (to General Electric Co.). US Patent 3,839,090. 1 Oct 1974. Filed date 20 Aug 1973. 5p.
LEAD-ACID BATTERIES;PLATES;GRIDS;WIRES;LEAD; LEAD ALLOYS;CARBON;FIBERS;FABRICATION

3939 ELECTROINITIATED POLYMERIZATION OF TETRAHYDROFURAN. Dey, A.N.; Rudd, E.J. (P.R. Mallory and Co., Burlington, MA). J. Electrochem. Soc.; 121: No. 10, 1294-8(Oct 1974).
ELECTRIC BATTERIES;ELECTROLYTES;FURANS; POLYMERIZATION;ELECTROCHEMISTRY;MEDIUM TEMPERATURE

3940 MANGANESE DIOXIDE ELECTRODE AT POTENTIALS AT AND CLOSE TO THE OPEN CIRCUIT POTENTIAL OF THE ELECTRODE. Valand, T. (Norwegian Defence Research Establishment, Kjeller). Electrochim. Acta; 19: No. 10, 639-643(Oct 1974).
A thermodynamic treatment of the proton equilibrium shows that the electrode potential of the manganese dioxide electrode referred to the hydrogen electrode in the same solution should be pH independent. As this is not confirmed by the literature values of the electrode potential, a study of the electrode near the open circuit potential was performed. The results were treated by using a spherical model for diffusion in the electrode. 5 figures.

3941 BATTERY AND BATTERY SEPARATOR. Megahed, E.S.; Peters, R.W. (to ESB Inc). German(FRG) Patent 2,413,954. 26 Sep 1974. Filed date 23 Mar 1973. 57p.
Patent; organic compounds. POTASSIUM HYDROXIDES;HYDROXIDES;BATTERY SEPARATORS; BINDERS;ZINC OXIDES;CELLULOSE ESTERS;CELLULOSE; CELLOPHANE;INORGANIC COMPOUNDS;FABRICATION

3942 SILVER ELECTRODES FOR CHEMICAL SOURCES OF ELECTRIC POWER. Terent'ev, N.K.; Seliverstov, S.D.; Fishman, B.I.; Nikol'skii, V.A.; Malyarov, Yu.G. USSR Patent 444,281. 25 Sep 1974. Filed date 19 Mar 1973.
FABRICATION;SILVER;ELECTRODES;ELECTRIC BATTERIES;SILVER-ZINC BATTERIES;SILVER-CADMIUM BATTERIES;CATHODES

3943 PREPARATION OF CADMIUM ELECTRODES. Gutrdige, I.P. (to International Nickel Co., Inc., New York, NY). US Patent 3,837,919. 24 Sep 1974. Filed date 20 Oct 1972. 4p.
NICKEL-CADMIUM BATTERIES;ANODES;CADMIUM HYDROXIDES;ELECTRODEPOSITION;CADMIUM NITRATES; NICKEL NITRATES

3944 ELECTROCHEMICAL GENERATORS. Cailley, J.-P.; Braun, H. (to Saft-Societe des Accumulateurs Fixes et de Traction, Romainville, France). US Patent 3,837,925. 24 Sep 1974. Filed date 25 Sep 1972. 6p.
Patent; description of electrode assembly. ELECTRIC BATTERIES;DESIGN;ELECTRODES;CONNECTORS

3945 ELECTRODE FOR LEAD STORAGE BATTERY. Ziegler, S.; Seiboth, W. (to Bosch, Robert, GmbH). GE 2,310,402. 19 Sep 1974. Filed date 2 Mar 1973. 6p.
LEAD-ACID BATTERIES;ELECTRODES;FABRICATION; ALUMINIUM

3946 LEAD ALLOYS FOR STORAGE-BATTERY PLATES. Peters, K. (to Electric Power Storage Ltd.). GE 2,412,320. 19 Sep 1974. Filed date 15 Mar 1973. 14p.
LEAD-ACID BATTERIES;PLATES;LEAD BASE ALLOYS; BRINELL HARDNESS;BENDING;ANTIMONY ALLOYS; ARSENIC ADDITIONS;COPPER;TIN;TELLURIUM;SULFUR

3947 APPARATUS FOR INDICATING DENSITY THRESHOLD VALUE AND ITS USE WITH STORAGE BATTERIES. Piessis, R. (to Societe Fulmen; Compagnie Europeene d'Accumulateurs). German(FRG) Patent 2,409,960. 19 Sep 1974. Filed date 12 Mar 1973. 10p.
ELECTRIC BATTERIES;ELECTROLYTES;DENSITY; MEASURING INSTRUMENTS;TUBES;LEVELS;LIQUIDS;LEAD-ACID BATTERIES

3948 ELECTRODES, ESPECIALLY CONTROL AND GAS-CONSUMING ELECTRODES FOR LEAD STORAGE BATTERIES. Jung, M. (to Varta Batterie AG). German(FRG) Patent 2,312,131. 19 Sep 1974. Filed date 12 Mar 1973. 18p.
Patent; graphite, teflon, WC. ELECTRODES; LEAD-ACID BATTERIES;GRAPHITE;TEFLON;TUNGSTEN CARBIDES

3949 ACTIVE IRON MASS FOR ELECTRODES.

Oliapuram, A. (to Varta Batterie AG). German(FRG) Patent 2,312,132. 19 Sep 1974. Filed date 12 Mar 1973. 7p.
Patent; fabrication. IRON-NICKEL BATTERIES; ANODES;FABRICATION;HYDROXIDES;CHEMICAL PREPARATION;MEDIUM TEMPERATURE

3950 UNSATURATED POLYESTER RESIN COMPOSITIONS. Shigaki, Y. (to Moon Star Chemical Corp.). Japanese Patent 98,891. 18 Sep 1974. Filed date 12 Jan 1973. 3p.
ELECTRIC BATTERIES;CONTAINERS;FABRICATION; EPOXIDES;POLYESTERS;RESINS;CHEMICAL PREPARATION

3951 NICKEL FLUORIDE. Saldick, J. (to FMC Corp.). US Patent 3,836,634. 17 Sep 1974. Filed date 10 Feb 1969. 2p.
Patent; Li/$NiF_2$ cathode preparion. METAL-NONMETAL BATTERIES;LITHIUM;NICKEL FLUORIDES; CATHODES;CHEMICAL PREPARATION

3952 LAMINATED DIFFUSION BONDED BATTERY PLAQUES. Pollack, W. (to Westinghouse Electric Corp.). US Patent 3,835,514. 17 Sep 1974. Filed date 17 May 1971. 9p.
Patent; preparation. NICKEL-CADMIUM BATTERIES;IRON-NICKEL BATTERIES;FABRICATION; LAMELLAE;CATHODES;BONDING;MEDIUM PRESSURE;HIGH PRESSURE

3953 PRODUCTION OF NICKEL FLUORIDE. Saldick, J. (to FMC Corp., New York, NY). US Patent 3,836,634. 17 Sep 1974. Filed date 10 Feb 1969. 4p.
Patent; for lithium--nickel fluoride batteries. NICKEL FLUORIDES;METAL-NONMETAL BATTERIES;CATHODES;LITHIUM;CHEMICAL PREPARATION; HIGH TEMPERATURE

3954 EXPLOSION-PROOF VENTING DEVICE FOR ELECTRICAL STORAGE BATTERIES. Auerbach, J. US Patent 3,944,437. 16 Sep 1974. vp.
An explosion-proof venting device for storage batteries comprises a cup-shaped body having a substantially tubular lower end for connection with a cell aperture of the storage battery; a centrally pierced horizontal plate connected to the cup-shaped body near the top thereof; a ring-shaped disc of acid-resistant porous material, serving as a flame barrier, attached to the underside of the horizontal plate; a lid carried on the top end of the cup-shaped body and spaced from the horizontal plate, the space between the lid and the plate having access to the atmosphere; and directing means for forcing gas entering the tubular lower end of the cup-shaped body to pass through the disc and the plate before passing to the atmosphere.

3955 LOW PRESSURE NICKEL HYDROGEN CELL. Dunlop, J.D.; Earl, M.W.; Van Ommering, G. (to Communications Satellite Corp.). US Patent 3,959,018. 16 Sep 1974. Filed date 27 Nov 1972. vp.
An improved rechargeable power cell comprises a sealed container which includes a first electrode means comprising an oxidizing agent, a second electrode means comprising a catalyst mounted on a conductive support (the catalyst being a material capable of dissociating molecular hydrogen to monatomic hydrogen), an alkaline electrolyte, electrolyte retaining means disposed between the first and second electrode means, and a supply of hydrogen in the container. The improvement comprises a hexagonal rare earth intermetallic hydride disposed within the container out of contact with the electrolyte. The intermetallic hydride is a material capable of absorbing and desorbing hydrogen in response to changes in pressure.

3956 SAFETY DEVICE AGAINST OVERCHARGING FOR MAINENANCE-FREE STORAGE BATTERIES. Eisenacher, W.; Blaich, E. (to Bosch, Robert, GmbH). GE 2,310,403. 12 Sep 1974. Filed date 2 Mar 1973. 9p.
BATTERY CHARGING;LEAD-ACID BATTERIES;GASES; PRESSURE DEPENDENCE

3957 LEAD STORAGE BATTERY. Kondo, K.; Ito, T.; Ohtomo, K. (to Kanebo Co., Ltd.). German(FRG) Patent 2,406,412. 12 Sep 1974. Filed date 14 Feb 1973. 41p.
Patent; acid- and oxidation-resistant separator with improved performance. LEAD-ACID BATTERIES;BATTERY SEPARATORS;DESIGN

3958 TUBULAR ELECTRODE PLATES FOR LEAD STORAGE BATTERIES. Sucher, J.; Steffens, K. (to Varta Batterie AG). German(FRG) Patent 2,311,082. 12 Sep 1974. Filed date 6 Mar 1973. 8p.
TUBES;PLATES;ELECTRODES;LEAD-ACID BATTERIES; SEALS;POLYPROPYLENE;POLYETHYLENES;FABRICATION

3959 TUBULAR ELECTRODE PLATES FOR LEAD STORAGE BATTERIES. Luedicke, W. (to Varta Batterie AG). German(FRG) Patent 2,311,051. 12 Sep 1974. Filed date 6 Mar 1973. 8p.
LEAD-ACID BATTERIES;ELECTRODES;PLATES;TUBES; FABRICATION;LEAD

3960 HOUSING FOR BATTERY CELL WITH PROTECTION FOR PRESSURE AND TEMPERATURE. Rackin, M.H. (to Motorola, Inc.). US Patent 3,933,526. 9 Sep 1974. vp.
A housing for a rechargeable battery cell having two-electrodes, includes the following: a tubular member having two ends; a closure for the first end having a first conducting contact connected to a first electrode of the battery; a conducting inner closure for the second end connected to the second electrode of the battery; and a conducting outer closure for the second end having a second conducting contact. The outer closure is movable from a first normal position, in which the outer closure makes electrical connection with the inner closure, to a second position, in which the outer closure is spaced apart from the inner closure. T his outer closure is responsive to a rise in temperature in the battery cell, and moves to the second position to open the circuit from the first and second conducting contacts to the electrodes of the battery.

3961 SECONDARY ELECTROCHEMICAL CELLS WITH A CHALOGEN CATHODE. Rubischko, R.J.; Cairns, E.J.; Steunenberg, R.K. (to US AEC). US Patent 3,833,421. 3 Sep 1974. Filed date 27 Dec 1972. 8p.
Li/S or similar materials; patent. METAL-NONMETAL BATTERIES;CATHODES;FABRICATION;ALKALI METALS;ELECTRIC-POWERED VEHICLES;SULFUR; SELENIUM;LITHIUM;SODIUM

3962 BATTERY CHARGE CONDITION MONITORING. Christianson, C.C. SAE Prepr.; No. 740728, vp.(Sep 1974).
Basic techniques are presented for determining the charge condition of electric-vehicle propulsion batteries of both the lead--acid and nickel--cadmium types. The techniques

presented include those employing measurement of battery parameters, such as electrolyte properties, voltage, and internal resistance, and those utilizing coulometric measurements. An application example employing the coulometric approach is described to demonstrate the usefulness of an accurate battery charge condition signal in an automated material handling car system.

3963 DEVELOPMENT OF LOW ANTIMONY LEAD ALLOYS FOR STARTER BATTERY GRIDS. Borchers, H.; Nijhawan, S.C.; Scharfenberger, W. (Technische Univ., Munich). Metall; 28: No. 9, 863-867(Sep 1974). (In German).
The applicability in starter grids of lead alloys containing 3.5 to 1.6% Sb rather than 5 to 8% was investigated. It was found that decreasing Sb decreases mechanical strength. However, more than sufficient strength can be restored by simple age hardening, i.e., by faster cooling after solidification, or solution annealing and quenching, and by arsenic addition. Increasing tendency for coarse-grain formation with decrease in Sb content, solidification cracks, and other casting defects which decrease the ductility of the starter grids can be eliminated by selenium grain-refining additions. Additions of tin improve mold-filling capacity. Micrographs and plotted properties are given.

3964 LEAD STORAGE BATTERY. Ito, T.; Ohtomo, K. (to Kanebo Kabushiki Kaisha). US Patent 3,953,236. 30 Aug 1974. Priority date 5 Sep 1973, Japan. vp.
A paste-type lead storage battery is composed of unit cells. Each is constructed in laminated form and includes a positive plate coated on both surfaces with an active material, a fibrous structure placed on each side of the positive plate, and a negative plate placed on each fibrous structure. The improvement comprises a separator interposed between the fibrous structure and the negative plate on both sides of the positive plate. The separator consists of a paper-like sheet having continuous microporous openings throughout its entire area and containing at least 70 percent by weight of phenol resin fibers, each having a diameter of 5 microns or less and produced by melt-spinning and curing a novolak resin. The phenol resin fibers have at least 60 percent by mole of the phenolic hydroxyl groups of the resin capped to esterify or etherify the phenolic hydroxyl groups.

3965 POROUS NICKEL PLATES FOR ELECTRODES. Hancock, H.; Evans, D.J. (to Sherritt Gordon Mines Ltd.). GE 2,407,030. 29 Aug 1974. Filed date 22 Feb 1973. 16p.
Method for fabrication. NICKEL-CADMIUM BATTERIES;NICKEL-ZINC BATTERIES;NICKEL-HYDROGEN BATTERIES;IRON-NICKEL BATTERIES;NICKEL; FABRICATION;CATHODES;ELECTRIC BATTERIES

3966 SEPARATORS FOR ALKALINE BATTERIES. (to Gates Rubber Co.). British Patent 1,365,313. 29 Aug 1974. Filed date 3 Aug 1970. 6p.
Patent; 180 cycles, mid-life voltage = 1.55 V. BATTERY SEPARATORS;HYDROXIDES;DESIGN;GELS; NICKEL-ZINC BATTERIES;PERFORMANCE;LIFETIME

3967 CATHODES FOR LEAD--ACID BATTERIES. (to Accumulatoren-Fabrik Oerlikon). German(FRG) Patent 2,409,172. 29 Aug 1974. Filed date 28 Feb 1973. 9p.
Patent; fabrication. LEAD-ACID BATTERIES; CATHODES;FABRICATION;LEAD;DUSTS;CELLULOSE ESTERS;WATER

3968 MIXTURE FOR MAKING POROUS ELECTRODES. Gugunishvili, G.G.; Takaishvili, O.G.; Lezhava, T.I.; Gvelesiani, D.F.; Motsonelidze, E.P.; Karachentseva, Yu.M.; Mdinaradze, A.G.; Kokhreidze, R.K.; Zambakhidze, R.T. USSR Patent 440,727. 25 Aug 1974. Filed date 6 Mar 1972.
POROSITY;ELECTRODES;MIXTURES;FABRICATION; ETHANOL;SILVER NITRATES;SILVER;WATER;ELECTRIC BATTERIES

3969 INCREASING THE CATALYTIC ACTIVITY OF RARE METAL-DOPED ACTIVATED CARBON FOR OXYGEN ELECTRODES OF ELECTROCHEMICAL CELLS WITH ACID ELECTROLYTES. Boehm, H.; Hartmann, V. (to Licentia Patent-Verwaltungs/G.m.b.H.). German(FRG) Patent 2,305,627. 22 Aug 1974. Filed date 06 Feb 1973. 10p.
CATHODES;METAL-GAS BATTERIES;OXYGEN;DOPED MATERIALS;ACTIVATED CARBON;CATALYSTS;CHEMICAL PREPARATION;FABRICATION

3970 VALVE FOR DEGASSING SECONDARY BATTERIES. Mittermaier, X. (to Mittermaier, F.X., und Soehne Accumulatorenfabrik und Elektrizitaetswerk Isen). German(FRG) Patent 2,305,063. 22 Aug 1974. Filed date 2 Feb 1973. 10p.
ELECTRIC BATTERIES;VALVES;GASES

3971 CATHODE MIX FOR ALKALINE CELL. Tsuchida, T.; Shinoda, K.; Yamamoto, K.; Sakamoto, N.; Nishio, M. (to Fuji Electrochemical Co., Ltd.). US Patent 3,830,661. 20 Aug 1974. Filed date 28 Oct 1972. 4p.
CATHODES;FABRICATION;HYDROXIDES;CHEMICAL PREPARATION;SLURRIES;WATER;CELLULOSE;SPHERES; VERY HIGH PRESSURE;ELECTRIC BATTERIES

3972 ELECTRICAL CONNECTORS AND ELECTRODE HOLDER INTEGRATED IN A GLASS FIBER MAT FOR LEAD SECONDARY BATTERIES. Jonville, P.; Stoehr, H.; Beccu, K.D.; Baronnet, R. (to Battelle Memorial Inst.--International Div.). GE 2,407,426. 14 Aug 1974. Filed date 12 Feb 1973. 15p.
LEAD-ACID BATTERIES;CONNECTORS;ELECTRODES; SUPPORTS;ANODES;FABRICATION;LEAD BASE ALLOYS; ANTIMONY ALLOYS

3973 LEAD--CALCIUM WROUGHT ALLOYS. Prengaman, R.D. (to St. Joe Minerals Corp.). German(FRG) Patent 2,339,779. 14 Aug 1974. Filed date 31 Jan 1973. 28p.
ELECTRIC BATTERIES;LEAD-ACID BATTERIES; ELECTRODES;LEAD BASE ALLOYS;TIN ALLOYS;CALCIUM ADDITIONS;TENSILE PROPERTIES

3974 SOLID ELECTROLYTE SINTERED MATTER SUCH AS IMPERMEABLE BETA-ALUMINA. Hasegawa, M.; Takagi, M. (to Showa Denko K.K.). JA 30,485. 13 Aug 1974. Filed date 6 Nov 1968. 2p.
Chemical preparation for alkali metal--Na batteries. ELECTROLYTES;ALUMINIUM OXIDES; SINTERED MATERIALS;ALKALI METALS;SODIUM;METAL-METAL BATTERIES;CHEMICAL PREPARATION

3975 SODIUM BORATE GLASS COMPOSITIONS AND BATTERIES CONTAINING SAME. Tsang, F.Y. (to Dow Chemical Co.). US Patent 3,829,331. 13 Aug 1974. Filed date 30 Dec 1971. 3p.
SODIUM COMPOUNDS;BORATES;GLASS;SODIUM-SULFUR

BATTERIES;LITHIUM-SULFUR BATTERIES;MEMBRANES; SODIUM IONS;ION EXCHANGE MATERIALS;SODIUM FLUORIDES;MAGNESIUM FLUORIDES;ANODES

3976 STORAGE BATTERY PLATES. Brinkmann, J.; Rasche, M.; Heissmann, W. (to Varta Batteries AG). German(FRG) Patent 2,305,309. 8 Aug 1974. Filed date 3 Feb 1973. 15p.
LEAD-ACID BATTERIES;PLATES;LEAD;FABRICATION; GRIDS;PLASTICS;GLASS;FIBERS;ANODES

3977 HOMOGENEOUS CATHODE MIXTURES FOR SECONDARY ELECTROCHEMICAL POWER-PRODUCING CELLS. Cairns, E.J.; Shimotake, H.; Selman, J.R. (to US AEC). US Patent 3,827,910. 6 Aug 1974. Filed date 30 Nov 1972. 12p.
METAL-NONMETAL BATTERIES;CATHODES; FABRICATION;CHEMICAL PREPARATION;ALKALI METALS; LITHIUM;SULFUR;SELENIUM ALLOYS;THALLIUM ALLOYS; PHOSPHORUS SULFIDES;CHALCOGENIDES

3978 NICKEL ELECTRODES. Pickett, D.F. (to US Dept. of the Air Force). US Patent 3,827,911. 6 Aug 1974. Filed date 21 Feb 1973. 3p.
NICKEL-CADMIUM BATTERIES;CATHODES;CHEMICAL PREPARATION;ALCOHOLS;NICKEL NITRATES;COBALT NITRATES

3979 HALOGEN RETENTION VENT MEANS FOR BATTERY. Zito, R., Jr. (to Zito Co., Inc.). US Patent 3,827,915. 6 Aug 1974. Filed date 3 Feb 1971. 7p.
Patent; rechargeable metal halide battery. ELECTRODES;METAL-GAS BATTERIES;HALOGENS; GRAPHITE;DESIGN;ANODES;CATHODES

3980 BETA-ALUMINA SINTERED MATTER FOR SOLID ELECTROLYTE. Miyake, Y.; Ninaki, S.; Ogino, I. (to Agency of Industrial Sciences and Technology). JA 30,484. 2 Aug 1974. Filed date 2 Aug 1968. 3p.
Chemical preparation. ALUMINIUM OXIDES; ELECTROLYTES;SODIUM-SULFUR BATTERIES;CHEMICAL PREPARATION;SINTERED MATERIALS

3981 SINTERED PVC SEPARATOR FOR BATTERIES. Gruene, H. (to Varta Batterie AG). German(FRG) Patent 2,303,750. 1 Aug 1974. Filed date 26 Jan 1973. 5p.
PVC;SINTERED MATERIALS;BATTERY SEPARATORS; POWDERS;PLASTICIZERS;OCTADECANOIC ACID;LEAD COMPOUNDS;FABRICATION

3982 DENSIMETER FOR LIQUIDS ESPECIALLY BATTERY ELECTROLYTES. Plessis, R. (to Soc. Fulmen; Compagnie Europeenne d'Accumulateurs). German(FRG) Patent 2,403,275. 1 Aug 1974. Filed date 31 Jan 1973. 8p.
DENSIMETERS;LIQUIDS;ELECTROLYTES;LEAD-ACID BATTERIES;THERMISTORS;DESIGN

3983 SYSTEM FOR CONTROLLING A PULSE CONVERTOR FOR ACCUMULATOR CHARGING. Maznev, A.S.; Levitskii, B.Yu.; Dulov, N.N.; Lyamin, K.B. Elektrotekhnika; No. 8, 30-2(Aug 1974). (In Russian).
ELECTRIC BATTERIES;BATTERY CHARGERS;PULSE CONVERTERS;CONTROL SYSTEMS;PULSES;THYRISTORS; ELECTRIC-POWERED VEHICLES

3984 SUBSTITUTION OF SILVER BY VARIOUS METAL IONS IN MODIFIED AGI SOLID ELECTROLYTES. Scrosati, B.; Pistoia, G.; Lazzari, M.; Bicelli, L.P. (Rome Univ, Italy). J. Appl. Electrochem.; 4: No. 3, 201-209(Aug 1974).
The substitution process of silver by various metals in $RbAg_4I_5$ and other solid electrolytes of the AgI-modified type has been investigated. This process is of technological interest since it permits the use of copper, zinc or cadmium instead of silver as anode materials in solid state batteries which utilize these electrolytes. 14 refs.

3985 POROUS COBALT ANODE FOR ALKALINE BATTERIES. Ewe, H.H.; Justi, E.W. GE 2,261,378. 25 Jul 1974. Filed date 15 Dec 1972. 12p.
NiO(OH)/alk./Co; patent. ELECTRIC BATTERIES; COBALT;ANODES;FABRICATION;SINTERING;HIGH PRESSURE;HIGH TEMPERATURE;NICKEL HYDROXIDES; HYDROXIDES

3986 POTASSIUM SILICATE ELECTROLYTE FOR CELLS WITH NEGATIVE ZINC ELECTRODE. Drury, J.S.; Hampson, N.A.; Marshall, A. (to Shell Internationale Research Maatschappij B. V.). German(FRG) Patent 2,402,436. 25 Jul 1974. Filed date 19 Jan 1973. 21p.
Increased lifetime;patent. ZINC-AIR BATTERIES;POTASSIUM HYDROXIDES;POTASSIUM SILICATES;PERFORMANCE;LIFETIME;PASSIVATION; ELECTROLYTES

3987 BATTERY COVER. Kraals, R. US Patent 3,825,447. 23 Jul 1974. Filed date 17 Jul 1972. 4p.
LEAD-ACID BATTERIES;CONTAINERS;SEALS

3988 IMMOBILIZED BATTERY ELECTROLYTE. Cestaro, J.P.; Crosby, L.J. (to NL Industries, Inc.). US Patent 3,930,881. 22 Jul 1974. vp.
An immobilized electrolyte paste adaptable for use in a lead--acid storage battery is discussed. The immobilized electrolyte paste comprises 1.5 to 4.0 parts sulfuric acid having a specific gravity from 1.050 to 1.350 and 1 part organic microparticles inert to sulfuric acid and having a particle diameter of 0.1 to 3 μ. A lead--acid storage battery comprises a battery case; positive and negative lead base plates wherein the positive and negative plates are alternately spaced apart in the battery case; means for maintaining the positive and negative plates in this spaced apart relationship; and an immobilized electrolyte paste which comprises a mixture of 1.5 to 4 parts sulfuric acid having a specific gravity from 1.050 to 1.350 and 1 part organic microparticles inert to sulfuric acid and having a particle diameter of 0.1 to 3 μ.

3989 TUBULAR ELECTRODE FOR ELECTRICAL STORAGE BATTERY. Karlsson, R.A. (to Aktiebolag Tudor). Swedish Patent 368,641. 8 Jul 1974. Filed date 25 Oct 1972. 8p.
Patent; construction. LEAD-ACID BATTERIES; ELECTRODES;TUBES;DESIGN;FABRICATION

3990 BATTERY SEPARATOR. Palmer, N.I.; Sugarman, N.; Grammer, D.O. (to Grace, W.R., and Co.). German(FRG) Patent 2,363,914. 4 Jul 1974. Filed date 21 Dec 1972. 48p.
BATTERY SEPARATORS;FABRICATION;ORGANIC POLYMERS;PLATES;FIBERS;WETTING AGENTS; POLYPROPYLENE;HETEROCYCLIC COMPOUNDS;ORGANIC OXYGEN COMPOUNDS;PHENOLS

3991 BATTERY SEPARATOR. Palmer, N.I.; Sugarman, N. (to Grace, W.R., and Co.).

German(FRG) Patent 2,363,915. 4 Jul 1974. Filed date 21 Dec 1972. 42p.
Patent; fibers of a hydrophobic organic polymer containing a tenside. BATTERY SEPARATORS;SHEETS;FIBERS;ORGANIC POLYMERS; POLYPROPYLENE;FABRICATION;AROMATICS; HETEROCYCLIC COMPOUNDS;ORGANIC OXYGEN COMPOUNDS

3992 HIGH TEMPERATURE BATTERY PACKAGE AND A METHOD OF ASSEMBLING SAME. Beardshear, D.H.; Limbach, R.H. (to Magnavox Co., Fort Wayne, IN). US Patent 3,822,150. 2 Jul 1974. Filed date 15 May 1972. 8p.
ELECTRIC BATTERIES;NICKEL-CADMIUM BATTERIES; LOW TEMPERATURE;HIGH TEMPERATURE;PARAFFIN; CONTAINERS;THERMAL INSULATION;TEMPERATURE CONTROL;SATELLITES

3993 FORMATION PROCESSES OF THE LEAD--ACID BATTERY NEGATIVE PLATES. Pavlov, D.; Iliev, V.; Papazov, G.; Bashtavelova, E. (Bulgarian Acad. Sci., Sofia). J. Electrochem. Soc.; 121: No. 7, 854-60(Jul 1974).
Processes within bulk of the negative plate. LEAD-ACID BATTERIES;ANODES;CHEMICAL REACTIONS; ELECTROCHEMISTRY;PLATES

3994 BATTERY SEPARATOR. Palmer, N.I.; Grammer, D.O. (to Grace, W.R., and Co.). German(FRG) Patent 2,363,913. 27 Jun 1974. Filed date 21 Dec 1972. 47p.
BATTERY SEPARATORS;FABRICATION;POLYPROPYLENE; PLASTICS

3995 HYDROPHILIC DIAPHRAGM. Murata, K.; Nimune, S.; Ashida, K.;. (to Yuasa Battery Co.). Japanese Patent 7,424,985. 26 Jun 1974. Filed date 4 Jun 1970. 3p.
NONE

3996 ELECTRODE OF LITHIUM--ALUMINUM ALLOY. Settle, J.L.; Myles, K.M.; Battles, J.E. (to United States Atomic Energy Commission). US Patent Application 481,285. 20 Jun 1974. 17p.
Patent; preparation. LITHIUM ALLOYS; ALUMINIUM ALLOYS;ANODES;CHEMICAL PREPARATION; FABRICATION;ELECTRIC BATTERIES;LITHIUM-SULFUR BATTERIES

3997 DETERMINING THE CAPACITY OF ELECTRODES OF THE NICKEL--IRON STORAGE BATTERY. Novakovskii, A.M.; Grushkina, S.A.; Kozlova, R.L. USSR Patent 431,586. 05 Jun 1974. Filed date 25 Sep 1972.
IRON-NICKEL BATTERIES;ELECTRODES;PERFORMANCE

3998 PRODUCTION OF A CADMIUM ELECTRODE FOR THE ALKALINE STORAGE BATTERY. Terent'ev, N.K.; Pozin, Yu.M.; Fishman, B.I. USSR Patent 431,584. 5 Jun 1974. Filed date 12 Feb 1973.

4004 TURNING A COMPONENT SUPPLY PROBLEM TO ADVANTAGE WITH PLASTICS: RADICAL REDESIGN OF STORAGE BATTERY BOXES. Miller, W.G. Eur. Plast. News; 1: No. 2, 40-42(Jun 1974).
This paper describes R and D work performed by one of the British companies aimed at the replacement of traditional glass containers in emergency lighting batteries with those made of plastics. Design considerations are reported along with material property requirements. Styrene-acrylonitrile (SAN) copolymer has been found to meet these requirements. SAN boxes were made on a giant injection molding machine and tested under working conditions.

4005 SILVER/SILVER CHLORIDE ELECTRODES: SURFACE MORPHOLOGY ON CHARGING AND DISCHARGING. Katan, T.; Szpak, S.; Bennion, D.N. (Lockheed Palo Alto Research Lab., CA). J. Electrochem. Soc.; 121: No. 6, 757-764(Jun 1974).
Transport modes were determined from examinations of morphology for electrochemical oxidation and reduction within electrodes consisting of beds of silver spheres 37.2 μm in diameter in 1N KCl and subjected to 5.0 mA $cm^{-2}$ applied current density. Oxidation proceeded via silver dissolution, probably at dislocation sites, followed by diffusion and, then, deposition of AgCl in characteristic, bulbed mounds which grow together to form layers of approximately uniform thickness. AgCl film thickness, for the case of partially covered underlying silver, was about 3500 A, and the distance from silver dissolution pits to AgCl deposition sites was found to be increased from 4000 to 40,000 A as the local transfer current density became larger within the sphere bed.

Reduction of anodically formed AgCl on partially covered silver proceeded by an opposite path: solution and diffusion of AgCl, and deposition of silver on preferred sites of surrounding bare silver surface.

4006 BATTERY WITH NEGATIVE ELECTRODE OF ALKALI METAL. Lehmann, G. (to Societe des Accumulateurs Fixes et de Traction). French Patent 2,204,900. 24 May 1974. Filed date 30 Oct 1972. 6p.

4009 IMMOBILIZING AGENTS FOR ELECTROLYTE SOLUTIONS IN BATTERIES. Guth, J.L.; Schutz, R.A.; Wey, R.L.J. French Patent 2,204,050. 17 May 1974. Filed date 23 Oct 1972. 5p.
Patent; keolin. ELECTRIC BATTERIES; ELECTROLYTES;SILICATES;CRYSTALS;KAOLIN

4010 STORAGE BATTERY GAS RECOMBINATION CATALYST DEVICE. Dietz, H. US Patent 3,930,890. 14 May 1974. Priority date 23 May 1973, German, Federal Republic of (F.R. Germany). vp.
A device for promoting catalytic recombination of gases generated in a storage battery is described. It comprises a catalyst body encased in a porous hydrophobic shell consisting of superposed layers of sintered and unsintered polytetrafluoroethylene. The body is of such dimensions and constitution that a number of such bodies may float freely on the electrolyte of a storage battery and that the specific weight of the device as a whole is less than the specific weight of the electrolyte in its condition of lowest battery charge. The catalyst body is constituted largely of a material having a high proportion of void space in its interior and a low bulk density and serving as a carrier for a finally divided catalyst material.

4011 SUPPORT FRAME FOR THE ACTIVE MATERIAL OF ELECTRODES FOR BATTERIES OR FUEL CELLS. Hoppenrath, M.; Benczur-Urmossy, G. (to Deutsche Automobilgesellschaft mbH). German(FRG) Patent 2,251,160. 9 May 1974. Filed date 19 Oct 1972. 11p.
A graphite fiber body was 90 percent saturated with acetone and then transferred to a bath containing $NiCl_2.6H_2O$ 30, $NH_3$ 100, and $NaBH_4$ 3 g/l. After 24 hr, more $NaBH_4$ (1.5 g/l) was added. After 2 days 3 g Ni (containing B) was deposited on the graphite felt.

4012 ACTIVATED STABLE OXYGEN ELECTRODE. Zimmermann, G.; Schonborn, M.; Magenau, H.; Jahnke, H.; Becker, B. (to Robert Borsch GmbH). US Patent 3,930,884. 8 May 1974. Priority date 25 May 1973, German, Federal Republic of (F.R. Germany). vp.
A stable oxygen electrode which retains its useful catalytic activity over a long service life is described comprising an electrode carrier containing an activated transition metal chelate of 5,14-dihydrodibenzo(5,9,14,18)-tetraaza(14)-annulene, said activated metal chelate having been activated by heating in an inert gas atmosphere at a temperature between about 600°C and 1000°C for a minimum time of 5 minutes.

4013 PLATE GRID IN USE FOR A PLATE FOR A LEAD STORAGE BATTERY. Ikari, S.; Hayakawa, T.; Kamikawa, Y.; Imai, F. (to Keishin Matsumoto). US Patent 3,944,431. 3 May 1974. vp.
A plate grid for use in a plate for a lead storage battery is described. It contains a woven member having several spaced latitudinal wire members of acid-resisting material and several spaced longitudinal wire members which are woven together. The longitudinal wire members each include a wire element of acid-resisting material and a wire element of electrically conductive material selected from a group consisting of lead and lead alloy. The electrically conductive wire element is wound around acid-resisting wire element of the longitudinal wire member. The grid also contains a collector of electrically conductive material selected from a group consisting of lead and lead alloy. The collector is attached to one of the ends of the longitudinal wire members, whereby the collector is electrically connected to the electrically conductive wire elements of the longitudinal wire members.

4018 METHOD AND APPARATUS FOR PASTING BATTERY PLATES. Pankow, H.G.; Larkin, T.M.; Young, R.L.; McClelland, D.H. (to Gates Rubber Co.). US Patent 3,951,688. 23 Apr 1974. vp.

A method for pasting lead--acid battery plate porous substrates with an electrochemically active thixotropic paste composition which maintains a non-plastic condition during the pasting operation comprises the following steps: circulating the paste in a substantially closed loop network so as to agitate and thoroughly mix the paste; diverting a predetermined volumetric flow rate of the paste from the loop network to a discharge nozzle; discharging the paste in the form of a thin ribbon through the nozzle positioned in close proximity to the substrate at the predetermined volumetric flow rate without substantially deforming the substrate, while simultaneously moving the substrate horizontally beneath the nozzle in a continuous manner to deposit the paste onto the upper surface of the moving substrate to form a pasted substrate; moving the pasted substrate through the nip of a set of driven rolls, the rolls being spaced apart a predetermined distance; and compressing the paste into the interstices of the porous substrate to produce a plate of desired thickness and density of paste.

4019 OXYGEN ELECTRODE MATERIAL. Kudo, T.; Yoshida, M.; Okamoto, O. (to Hitachi, Ltd.). US Patent 3,804,674. 16 Apr 1974. Filed date 19 May 1971. 6p.

FUEL CELLS;METAL-GAS BATTERIES;CATHODES; OXYGEN;NEODYMIUM OXIDES;SAMARIUM OXIDES;BARIUM OXIDES;CALCIUM OXIDES;STRONTIUM OXIDES;COBALT OXIDES;MIXTURES;MATERIALS

4020 APPARATUS AND METHOD FOR MAKING BATTERY ELECTRODES. Chevet, R. (to Compagnie Generall d'Electricite). French Patent 2,199,617. 12 Apr 1974. Filed date 19 Sep 1972. 6p.

Patent; pouring suspension of soot, teflon, and cellulose through cylindrical Ni mesh and heat testing. ELECTRODES;FABRICATION;CYLINDERS; ALCOHOLS;TEFLON;CELLULOSE;CARBON;NICKEL;HEAT TREATMENTS;ELECTRIC BATTERIES

4021 SILVER--TUNGSTEN CARBIDE ELECTRODE. (to Siemens, AG). French Patent 2,198,786. 5 Apr 1974. Filed date 12 Sep 1972. 10p.

ELECTRIC BATTERIES;FUEL CELLS;ELECTRODES; CHEMICAL PREPARATION;TUNGSTEN CARBIDES;SILVER; FABRICATION

4022 ANTIMONY PLATING OF LEAD--ACID STORAGE BATTERIES GRIDS. Hughel, T.J.; Hammar, R.H. (to General Motors Corp.). US Patent 3,933,524. 5 Apr 1974. vp.

A grid for a Faure-type lead--acid storage battery positive plate comprises a substantially nonantimonial lead alloy substructure having an antimony deposit on its surface. The deposit density is at least about 0.0002 grams per square centimeter but less than about 0.00132 grams per square centimeter.

4023 EFFECT OF ADDITIVES ON THE REACTION MECHANISM OF THE PB/PBSO$_4$ ELECTRODE. Simon, A.C.; Caulder, S.M.; Gurlusky, P.J.; Pierson, J.R. (Nav. Res. Lab., Washington, DC). J. Electrochem. Soc.; 121: No. 4, 463-7(Apr 1974).

BaSO$_4$, lignin. LEAD-ACID BATTERIES;CHEMICAL REACTION KINETICS;ADDITIVES;LIGNIN;BARIUM SULFATES;ANODES;LIFETIME;PASSIVATION;CRYSTAL GROWTH;LEAD

4024 SCANNING ELECTRON MICROSCOPE INVESTIGATIONS ON SILVER OXIDE ELECTRODES. Franssen, H.; Haeusler, E.; Boehnstedt, W. (Friemann and Wolf, Duisburg, Germany). Metalloberflaeche; 28: No. 4, 140-2(Apr 1974). (In German).

Morphological changes in sintered powder metallurgy electrodes due to oxidation during cycling. ELECTRON MICROSCOPY;SILVER OXIDES; SINTERED MATERIALS;ELECTROCHEMISTRY;OXIDATION; OPERATION;BATTERY CHARGING;SILVER-CADMIUM BATTERIES;SILVER-ZINC BATTERIES;CATHODES; ELECTRIC BATTERIES;ELECTRODES

4025 SCANNING ELECTRON MICROSCOPE INVESTIGATIONS ON SILVER OXIDE ELECTRODES. Franssen, H.; Haeusler, E.; Boehnstedt, W. (Friemann and Wolf, Duisburg, Ger.). Metalloberflaeche; 28: No. 4, 140-142(Apr 1974). (In German).

Changes in the morphology of sintered powder metallurgically produced silver electrodes, caused by electrochemical oxidation during initial charging and discharging of electric batteries, are illustrated by electron micrographs. The resulting roughening and, therefore, size increase of the particle surfaces explains the increased efficiency.

4026 ELECTRODE FORMED OF LITHIUM AND A METAL CONDUCTOR METALLURGICALLY BOUND. (to E. I. du Pont de Nemours and Co.). French Patent 2,196,850. 22 Mar 1974. Filed date 25 Aug 1972. 12p.

ANODES;LITHIUM;FABRICATION;SHEETS;STAINLESS STEELS;SUBSTRATES;ZINC;BONDING;LITHIUM-SULFUR BATTERIES;ELECTRIC BATTERIES

4027 METHOD OF MAKING BATTERY PLATE GRIDS FOR LEAD--ACID BATTERIES AND ALLOYS THEREFOR. Barnes, S.C.; Lawrie, R.J. (to Joseph Lucas (Batteries) Ltd.). US Patent 3,939,009. 22 Mar 1974. Priority date 7 Apr 1973, United Kingdom of Great Britain and Northern Ireland (UK). vp.

A method of manufacturing a battery plate grid for a lead--acid battery is explained. A molten alloy is produced which consists of calcium + lithium (0.22 to 1.04 at. percent), aluminium (0.035 to 0.25 at. percent), and lead. The atomic percentage of lithium is not less than 0.15 and does not exceed 0.90, and the atomic percentage of calcium is not less than 0.07 and does not exceed 0.49. The molten alloy is then cast into the shape of the grid.

4028 FUEL CELL ELECTRODE. Murata, T.; Maeda, Y.; Tsuchida, T.; Shinoda, K.; Yamamoto, K. (to Fuji Electrochemical Co., Ltd.). German(FRG) Patent 2,337,646. 21 Mar 1974. Filed date 31 Aug 1972. 12p.

The fabrication of an oxygen electrode for fuel cells or zinc--air batteries is described. A silver oxide--activated carbon--teflon mixture is compacted on a nickel screen.

4029 BATTERY CASING AND HERMETICALLY SEALED SODIUM--SULFUR BATTERY. Mitoff, S.P.; Powers, R.W.; Breiter, M.W. (to General Electric Co.). US Patent 3,960,596. 4 Mar 1974. vp.

A battery casing comprises a ceramic ring, an inner casing of a solid sodium ion-conductive material with one open end, a glass seal sealing a portion of the outer wall of the inner casing adjacent its open end within and to the ceramic ring, a first outer metallic casing with opposite open ends and a flange at one open end, and a second outer metallic casing with opposite open ends. The first outer metallic casing surrounds the inner casing and is spaced away from it. The flange of the first outer metallic casing is adjacent the ceramic ring, a glass seal sealing the flange of the first outer metallic casing to one surface of the ceramic ring. The first outer metallic casing and the inner casing define a completely open chamber between the exterior surface of the inner casing and the interior surface of the outer casing. There is a removable metallic closed end for the opposite open end of the first outer casing. The second outer metallic casing with opposite open ends and a flange at one open end is positioned with the flange adjacent the ceramic ring, whereby the second outer metallic casing is spaced from and extends in an opposite direction to the first outer metallic casing portion. A glass seal seals the flange of the second outer metallic casing to the opposite surface of the ceramic ring. There is a second removable metallic closed end for the opposite open end of the second outer metallic casing.

4030 ZINC-CONTAINING ELECTRODE. Kandler, L. (to Rheinisch-Westfalisches Elektrizitalswerk Aktiengesellschaft). US Patent 3,930,883. 27 Feb 1974. Priority date 16 Aug 1969, German, Federal Republic of (F.R. Germany). vp.

A method of making a negative electrode for an alkaline accumulator is described. It consists of the following steps: (1) electrolytic deposition of zinc and calcium upon a conductive support in the form of Zn, $Zn(OH)_2$, and $Ca(OH)_2$ from an electrolytic bath containing zinc ions, calcium ions, and nitrate ions with the ratio of zinc ions to calcium ions made relatively high and establishing the proportions of zinc and calcium deposited on the support in a first electrochemically active layer directly upon the support; (2) electrochemical deposition on the first electrochemically active layer of an outer electrochemically active layer containing zinc and calcium as Zn, $Zn(OH)_2$, and $Ca(OH)_2$ from an electrolyte containing zinc ions, calcium ions, and nitrate ions with the ratio of zinc ion to calcium ion made less than in step (1), whereby the outer layer has a smaller ratio of zinc to calcium; and (3) formation of the above-mentioned layers by electrolyzing same to transform the deposited zinc ion of the layers into elemental zinc.

4031 FORMING AN ELECTRODE OF MIXED CATALYST POWDER. Paynter, J. (to General Electric Co.). US Patent 3,793,083. 19 Feb 1974. Filed date 30 Dec 1968. 8p.

ELECTRIC BATTERIES;METAL-GAS BATTERIES;AIR; HYDROXIDES;ELECTRODES;FABRICATION;POWDERS; SINTERED MATERIALS

4032 VARYING THE INTERNAL RESISTANCE IN THE ELECTROFORMATION OF STORAGE-BATTERY PLATES WITH CURRENT OF CHANGING POLARITY. Gisin, S.S. Elektroprom-st. Priborostr.; 9: No. 2, 60-3(Feb 1974). (In Bulgarian).

LEAD-ACID BATTERIES;PLATES;ELECTRIC CONDUCTIVITY;ELECTROCHEMISTRY;BATTERY CHARGING; SYNTHESIS;ELECTRIC CURRENTS

4033 AUTOMATIC BATTERY CHARGER. Serra, A. 21: No. 231, 36-7(Feb 1974). (In Spanish).

designed for lead--acid batteries. BATTERY CHARGERS;LEAD-ACID BATTERIES;DESIGN;FABRICATION

4034 CHANGE OF THE ELECTROLYTE CONCENTRATION IN METALLOCERAMIC CADMIUM ELECTRODES OF ALKALINE STORAGE BATTERY. Uvarov, V.B.; Boldin, R.V.; Rotinyan, A.L. (Leningrad Technological Inst.). Elektrokhimiya; 10: No. 2, 334-336(Feb 1974). (In Russian).

4036 AUTOMATIC CHARGING OF LEAD ACID BATTERIES USING SILICON CONTROLLED RECTIFIERS. Manoharan, L.C. (Natl. Aeronaut. Lab., Bangalore, India). Int. J. Electron.; 36: No. 2, 231-8(Feb 1974).

LEAD-ACID BATTERIES;BATTERY CHARGERS; RECTIFIERS;OPERATION

4037 ANODIC POLARIZATION OF ALUMINUM IN ORGANIC ELECTROLYTES. Matsuda, Y.; Ouchi, Y.; Tamura, H. (Yamaguchi Univ., Tokiwadai, Ube, Japan). J. Appl. Electrochem.; 4: No. 1, 53-6(Feb 1974).

Nitromethane, acetonitile, propylene carbonate, formamide, or tetrahydrofuran in $AlCl_3$. ALUMINIUM;POLARIZATION;ELECTRODES; ELECTROLYTES;ANODES;ELECTRIC BATTERIES;NITRO COMPOUNDS;CARBONIC ACID ESTERS;NITRILES; FORMAMIDE;FURANS;ALUMINIUM CHLORIDES; ELECTROCHEMISTRY

4038 VARIABLE COMPOSITION OF BASIC LEAD SULFATES. Dapo, R.F. (Gould Inc., Mendota Heights, MN). J. Electrochem. Soc.; 121: No. 2, 253-254(Feb 1974).

LEAD-ACID BATTERIES;LEAD SULFATES;CHEMICAL COMPOSITION;MATERIALS;CHEMICAL PREPARATION

4039 STORAGE BATTERY PLATE AND MANUFACTURING PROCESS THEREFOR. Brinkmann, J.; Rasche, M.; Heissmann, W. (to Varta Batterie Aktiengesellschaft). US Patent 3,944,432. 29 Jan 1974. Priority date 3 Feb 1973, German, Federal Republic of (F.R. Germany). vp.

A storage battery plate comprises a grid formed of plastic strips and plastic cross-connections between the strips, the strips defining channels for containing the active mass; a grid of lead bars recessed within the channels; active mass substantially filling the channels and surrounding the recessed lead bars, the active mass being positioned to leave edges of the plastic strips and cross-connections exposed; and electrolyte-permeable fibrous mats covering the grid on both sides, the mats being firmly attached to the exposed edges of the plastic strips and plastic cross-connections.

4040 METAL--AIR BATTERIES AND FUEL CELLS. Zaromb, S. US Patent 3,788,899. 29 Jan

1974. Filed date 12 Apr 1967. 8p.
The battery comprises an anode, a depolarized cathode, liquid electrolyte and circulation means, electrolyte container, and means to produce changes in the volume of electrolyte and thereby control the current density at the surfaces of the anode and the cathode. The anode may be a consumable metal, especially Al. The volume changes are effected by expanding or collapsing an expandable pocket in the container.

4041 CATHODES FOR METAL--AIR-TYPE FUEL CELLS. Conzani, V. (to Ricerche Conversione Energia). German(FRG) Patent 3,255,984. 10 Jan 1974. Priority date 26 Jun 1972, Italy. 9p.
The porous metal cathodes were treated with a poly(tetrafluoroethylene) suspension in vacuo. The porous cathode was impregnated 3 times with a 30 percent teflon suspension of grain size 0.2-0.3 μ at 12 mm pressure and dried at 80°. Then the cathode was coated with a 60 percent teflon suspension, dried again, and sintered at 320°.

4042 CATHODE FOR METAL--AIR-TYPE FUEL CELLS. Conzani, V. (to Ricerche Conversione Energia, SpA). German(FRG) Patent 2,255,985. 10 Jan 1974. Filed date 26 Jun 1972. 11p.
METAL-GAS BATTERIES;CATHODES;AIR;CARBON BLACK;GRAPHITE;XYLENES;ACETIC ACID ESTERS

4043 SOME ASPECTS OF GAS RECOMBINATION IN LEAD--ACID SYSTEMS. Mahato, B.K.; Weissman, E.Y.; Laird, E.C. (Globe-Union Inc., Milwaukee, WI). J. Electrochem. Soc.; 121: No. 1, 13-16(Jan 1974).

4070 THEORY OF POROUS ELECTRODES. XII. NEGATIVE PLATE OF THE LEAD--ACID BATTERY. Micka, K.; Rousar, I. (J. Heyrovsky Inst. Phys. Chem. Electrochem., Czech. Acad. Sci., Prague, Czech.). Electrochim. Acta; 19: No. 8, 499-502(1974).
Transport of mass and electricity. LEAD-ACID BATTERIES;ANODES;MASS TRANSFER;DIFFERENTIAL EQUATIONS;CHARGE TRANSPORT;ELECTRICITY;NERNST EFFECT;NUMERICAL SOLUTION;ELECTRODES;THICKNESS; POROSITY

4071 KINETIC STUDY OF THE ALUMINIUM ELECTRODE IN MOLTEN 60 MOLE PERCENT ALUMINIUM CHLORIDE--40 MOLE PERCENT SODIUM CHLORIDE AT 453°K. Uhlig, G.F.; Andersen, T.N.; Johns, S.; Eyring, H. (Dept. Chem., Univ. Utah, Salt Lake City). Daehan Hwahak Hwoejee; 18: No. 6, 400-7(1974).
ELECTRIC BATTERIES;ANODES;ALUMINIUM;LITHIUM-SULFUR BATTERIES;CHEMICAL REACTION KINETICS; POLARIZATION;DISSOLUTION;DEPOSITION;MOLTEN SALTS;HALIDES;ALUMINIUM CHLORIDES;SODIUM CHLORIDES

4072 DETERMINATION OF SODIUM AND MAGNESIUM IN BETA-ALUMINATE MATERIALS BY ATOMIC ABSORPTION SPECTROPHOTOMETRY. Tamnev, B.K.; Khavezov, I.; Iotova, L.K. (Inst. gen. Inorg. Chem., Bulg. Acad. Sci., Sofia, Bulgaria). Z. Anal. Chem.; 271: No. 5, 349-51(1974).
SODIUM-SULFUR BATTERIES;ALUMINIUM OXIDES; CERAMICS;MEMBRANES;ABSORPTION SPECTROSCOPY; SODIUM;MAGNESIUM;CHEMICAL ANALYSIS;QUANTITATIVE CHEMICAL ANALYSIS;BATTERY SEPARATORS

4073 EVALUATION OF FILLERS USED IN THE NEGATIVE LEAD BATTERY ELECTRODE. Abdul Azim, A.A.; Ismail, A.A. (Natl. Res. Cent., Cairo, Egypt). J. Appl. Electrochem.; 4: No. 4, 351-6(1974).
Acetylene black, $BaSO_4$, lignin, humic acid, wood flours. FILLERS;PERFORMANCE TESTING;LEAD-ACID BATTERIES;ANODES;BARIUM SULFATES;LIGNIN; HUMIC ACIDS;WOOD;FLOUR;HYDROGEN;EMISSION;CARBON BLACK

4074 THICKNESS OPTIMIZATION OF POWDER-METALLURGICAL BATTERY ELECTRODES. Barsukov, V.Z.; Sagoyan, L.N. Sb. Rab. Khim. Istochnikam Toka; 9: 81-6(1974).
THICKNESS;OPTIMIZATION;POWDER METALLURGY; ELECTRODES;ELECTRIC BATTERIES;EQUIVALENT CIRCUITS;MATHEMATICAL MODELS

4075 ELECTROCHEMICAL OXIDATION KINETICS OF THE NICKEL SUPPORT OF A POWDER-METALLURGICAL NICKEL OXIDE ELECTRODE IN A HIGH-PRESSURE HYDROGEN ATMOSPHERE. Shokhor, A.B.; Tsenter, B.I.; Kloss, A.I.; Sergeev, V.M. Sb. Rab. Khim. Istochnikam Toka; 9: 107-13(1974).
NICKEL-HYDROGEN BATTERIES;ELECTROCHEMICAL CORROSION;OXIDATION;CHEMICAL REACTION KINETICS; SUPPORTS;NICKEL;POWDER METALLURGY;NICKEL OXIDES; HYDROGEN;MEDIUM PRESSURE;TIME DEPENDENCE;MEDIUM TEMPERATURE;LIFETIME;ANODES

4076 OXIDATION OF POWDER-METALLURGICAL ELECTRODES BY POTASSIUM HYPOCHLORITE. Miroshnichenko, A.S.; Nikol'skii, V.A.; Pozin, Yu.M. Sb. Rab. Khim. Istochnikam Toka; 9: 119-21(1974).
NICKEL-CADMIUM BATTERIES;NICKEL-ZINC BATTERIES;IRON-NICKEL BATTERIES;CATHODES; OXIDATION;POWDER METALLURGY;HYPOCHLOROUS ACID; POTASSIUM COMPOUNDS;FABRICATION;NICKEL OXIDES; MEDIUM TEMPERATURE;ELECTRIC BATTERIES; ELECTRODES

4077 EFFECT OF TECHNOLOGICAL FACTORS ON THE PROPERTIES OF CAST ELECTRODES FOR CHEMICAL CURRENT SOURCES WITH COPPER(I) CHLORIDE. II. Bogorodskii, V.A.; Pestrikov, V.F.; Khranilov, Yu.P.; Bairachnyi, E.V.; Ivanov, E.G.; Berkman, E.A. Sb. Rab. Khim. Istochnikam Toka; 9: 210-14(1974).
ELECTRIC BATTERIES;ELECTRODES;CHEMICAL PROPERTIES;CASTING;CHEMICAL REACTION KINETICS; COPPER CHLORIDES;SODIUM CHLORIDES;STIRRING; SOLUBILITY;DIAGRAMS;OXIDATION;TEMPERATURE DEPENDENCE

4078 SELF-DISCHARGE KINETICS OF SILVER OXIDE ELECTRODES IN ALKALINE BATTERIES. Alekseeva, N.I.; Berkman, E.A.; Ivanova, R.P. Sb. Rab. Khim. Istochnikam Toka; 9: 217-28(1974).
CHEMICAL REACTION KINETICS;SILVER OXIDES; SILVER-CADMIUM BATTERIES;CATHODES;TIME DEPENDENCE;PHASE STUDIES

4079 SINTERING OF BETA-ALUMINIUM OXIDE. Kovachev, I. (Sci.-Res. Tekhnol. Inst. Powder Metall., Sofia, Bulgaria). pp 249-52 of Teor. Tekhnol. Spekaniya, Dokl. Mezhdunar. Kollok., 2nd, 1971. Samsonov, G.V. (ed.). Kiev, USSR; "Naukova Dumka" (1974).
ALUMINIUM OXIDES;SINTERING;VERY HIGH TEMPERATURE;BATTERY SEPARATORS;SODIUM-SULFUR BATTERIES;FABRICATION

4080 USE OF ION EXCHANGERS AS AN ADDITION TO THE MASS OF POSITIVE PLATES IN LEAD STORAGE BATTERIES. Molchan, A.G. Tr. Novocherkassk. Politekh. Inst.; No. 287, 101-5(1974).

LEAD-ACID BATTERIES;CATHODES;ION EXCHANGE MATERIALS;MASS;PLATES

4081 USE OF A HYDROVIBROABRASIVE EROSION METHOD TO STUDY THE SURFACE STRENGTH OF SILVER OXIDE ELECTRODES OF CHEMICAL CURRENT SOURCES. Semenchenko, S.A.; Ereiskaya, G.P.; Lozovskaya, T.A. Sb., Mosk. Inst. Stali Splavov; 77: 152-4(1974).
SILVER-CADMIUM BATTERIES;SILVER-ZINC BATTERIES;LEAD;SILVER OXIDES;METAL-NONMETAL BATTERIES;CATHODES;MASS TRANSFER;SOUND WAVES; POTASSIUM HYDROXIDES;QUARTZ;CHEMICAL PREPARATION;EROSION

4082 LEAD--ACID BATTERY. 3. RECONFIRMATION OF THE ELECTRODE FORMATION METHOD. III. Achiwa, S. (Shiga Prefect. Junior Coll., Japan). Shiga-Kenritsu Tanki Daigaku Gakujutsu Zasshi; 15: 1-4(1974).
LEAD-ACID BATTERIES;ELECTRODES;FABRICATION; SULFURIC ACID;OXALIC ACID

4083 MANUFACTURE OF A DRY-CHARGED NICKEL OXIDE ELECTRODE BY CHEMICAL OXIDATION. Romanov, V.V.; Sandler, P.I. Zh. Prikl. Khim.; 47: No. 9, 2031-5(1974).
KOH--$K_2S_2O_8$ solution. IRON-NICKEL BATTERIES; NICKEL-CADMIUM BATTERIES;CATHODES;FABRICATION; OXIDATION;POTASSIUM HYDROXIDES;PLATES;THICKNESS; POTASSIUM COMPOUNDS;THIOSULFATES;NICKEL-ZINC BATTERIES;ELECTRIC BATTERIES;ELECTRODES

4084 NONDESTRUCTIVE METHOD OF MONITORING THE QUALITY OF POWDER-METALLURGICAL NICKEL ELECTRODES OF NICKEL--CADMIUM BATTERIES. Kukoz, F.I.; Bogdanov, V.I.; Golubtsov, A.A. Zh. Prikl. Khim.; 47: No. 9, 2144(1974).
CATHODES;NICKEL-CADMIUM BATTERIES;MONITORING; POWDER METALLURGY;ELECTROMAGNETIC TESTING;EDDY CURRENTS;POROSITY;QUALITY CONTROL

4085 STRUCTURE OF THE LEAD/LEAD SULFATE ELECTRODE IN THE REDUCED STATE AND THE CHANGES PRODUCED BY LIGNIN DERIVATIVES AND BARIUM SULFATE. Simon, A.C.; Caulder, S.M.; Gurlusky, P.J.; Pierson, J.R. (Nav. Res. Lab., Washington, DC). Electrochim. Acta; 19: No. 11, 739-43(1974).
LEAD-ACID BATTERIES;ANODES;BARIUM SULFATES; LIGNIN;DENDRITES;LEAD;LEAD SULFATES

4086 CYCLOVOLTAMETRIC STUDY OF LEAD--ACID BATTERY ELECTRODES. Urrutia, J.L. (Fabr. Esp. Magnetos, S.A., Madrid, Spain). Rev. Metal. (Madrid); 10: No. 4, 241-5(1974).
α- and β-$PbO_2$. LEAD-ACID BATTERIES;CATHODES; EQUILIBRIUM;PERFORMANCE;ELECTRIC POTENTIAL

4087 SINTERED TYPE ALKALINE STORAGE BATTERY. XV. EFFECT OF LITHIUM ION ON THE FORMATION OF ACTIVE MATERIAL FROM NICKEL PLAQUE AT VARIOUS TEMPERATURES. Yamashita, D.; Ohata, I. (Fac. Sci. Eng., Ritumeikan Univ., Kyoto, Japan). Nippon Kagaku Kaishi; No. 10, 1876-82(1974).
HYDROXIDES;SINTERED MATERIALS;LITHIUM IONS; TEMPERATURE DEPENDENCE;NICKEL;ELECTRIC CONDUCTIVITY;NICKEL ALLOYS;LITHIUM ALLOYS; OXIDATION;LITHIUM HYDROXIDES;ELECTROCHEMISTRY; ELECTRIC BATTERIES;ELECTRODES;NICKEL-CADMIUM BATTERIES;NICKEL-ZINC BATTERIES;IRON-NICKEL BATTERIES;CATHODES

4088 DIFFERENCE BETWEEN WATERPROOFED AND HYDROPHILIC ELECTRODES. II. BIPOROUS MODEL. Chirkov, Yu.G. (Inst. Elektrokhim., Moscow, USSR). Elektrokhimiya; 10: No. 12, 1804-10(1974).
ELECTRODES;MATHEMATICAL MODELS;ELECTRIC BATTERIES

4089 DIRECT ELECTROCHEMICAL REDUCTION OF CADMIUM OXIDE IN ALKALINE ELECTROLYTE. Sivaramaiah, G.; Rao, P.V.V.; Udupa, H.V.K. (Cent. Electrochem. Res. Inst., Karaikudi, India). Trans. Soc. Adv. Electrochem. Sci. Technol.; 9: No. 4, 167-9(1974).
NICKEL-CADMIUM BATTERIES;ANODES;BATTERY CHARGING;ELECTROCHEMISTRY;REDUCTION;CADMIUM OXIDES;HYDROXIDES;ELECTROLYTES;NICKEL;SINTERED MATERIALS;SOLUBILITY

4090 DEVELOPMENT OF LOW ANTIMONY LEAD ALLOYS FOR STARTER BATTER GRIDS. Borchers, H.; Nijhawan, S.C.; Scharfenberger, W. (Tech. Univ. Muenchen, Munich, Germany). Metall; 28: No. 9, 863-7(1974).
LEAD BASE ALLOYS;ANTIMONY ALLOYS;ARSENIC ADDITIONS;SELENIUM ADDITIONS;TIN ADDITIONS; TENSILE PROPERTIES;QUENCHING;ANNEALING;TESTING; CHEMICAL PREPARATION;FABRICATION;GRIDS;LEAD-ACID BATTERIES

4091 WETPROOFED OXYGEN (AIR)--CARBON ELECTRODES. II. EFFECT OF THE WETPROOFING AGENT ON THE STRUCTURAL, PHYSICAL, AND ELECTROCHEMICAL CHARACTERISTICS OF THE ELECTRODES. Iliev, I.; Gamburtsev, S.; Kaisheva, A.; Bakanova, E.; Mukhovski, I.; Budevski, E. (Cent. Lab. Electrochem. Power Sources, Bulg. Acad. Sci., Sofia, Bulgaria). Izv. Otd. Khim. Nauki, Bulg. Akad. Nauk.; 7: No. 2, 233-9(1974).
METAL-GAS BATTERIES;CATHODES;AIR;OXYGEN; CARBON;ELECTRODES;LIFETIME;POTASSIUM HYDROXIDES; POLYETHYLENES;POLYPROPYLENE;TEFLON;WATER;2-METHYLPROPANE;PHYSICAL PROPERTIES

4092 INFRARED SPECTROSCOPIC STUDY OF THE PROPERTIES OF A NICKEL OXIDE ELECTRODE. I. EFFECT OF CHARGING CONDITIONS ON THE IR SPECTRA OF A NICKEL OXIDE ELECTRODE IN CHARGED AND DISCHARGED STATES. Shamina, I.S.; Malandin, O.G.; Rakhovskaya, S.M.; Vereshchagina, L.A. (Sarat. Gos. Univ. im. Chernyshevskogo, Saratov, USSR). Elektrokhimiya; 10: No. 10, 1571-4(1974).
NICKEL-CADMIUM BATTERIES;IRON-NICKEL BATTERIES;NICKEL-ZINC BATTERIES;INFRARED SPECTRA;BATTERY CHARGING;CHEMICAL PREPARATION; CATHODES;NICKEL OXIDES;ELECTRODES;ELECTRIC BATTERIES;POTASSIUM HYDROXIDES;PROTONS;PHASE DIAGRAMS;CHEMICAL COMPOSITION;PROTONS

4093 SCANNING ELECTRON-MICROSCOPY STUDIES OF SILVER OXIDE ELECTRODES. Franssen, H.; Haeusler, E.; Boehnstedt, W. (Entwicklungsabt., Friemann und Wolf GmbH, Duisburg, Germany). Metalloberflaeche-Angew. Elektrochem.; 28: No. 4, 140-2(1974).
SILVER-ZINC BATTERIES;SILVER-CADMIUM BATTERIES;CATHODES;SILVER OXIDES;ELECTRODES; ELECTRIC BATTERIES;SINTERED MATERIALS;SILVER; CRYSTAL STRUCTURE;OXIDATION;PERFORMANCE

4094 ADSORPTION OF UNSATURATED AND AROMATIC KETONES ON MERCURY. Vishvanath, S.R.; Sathyanarayana, S. (Dep. Inorg. Phys. Chem., Indian Inst. Sci., Bangalore, India). J. Electrochem. Soc. India; 23: No. 1, 3-6(1974).
Corrosion inhibition by $(CH_3)_2C{:}CHCOCH_3$. ELECTRIC BATTERIES;HYDROXIDES;ANODES;CORROSION PROTECTION;SURFACTANTS;KETONES;AROMATICS;

MERCURY;BENZOPHENONE

4095 ANALYSIS OF POROUS ALKALINE CADMIUM ELECTRODES. I. ANODIC HIGH RATE TRANSIENTS. Selanger, P. (Chem. Cent., Lund Inst. Technol., Lund, Sweden). J. Appl. Electrochem.; 4: No. 3, 249-57(1974).
SILVER-CADMIUM BATTERIES;NICKEL-CADMIUM BATTERIES;ANODES;POROSITY;HYDROXIDES;CADMIUM; TRANSIENTS;ONE-DIMENSIONAL CALCULATIONS; MATHEMATICAL MODELS;CHEMICAL COMPOSITION; ELECTROLYTES;CHEMICAL REACTIONS;ELECTRIC POTENTIAL;FAILURES;MASS TRANSFER;FUNCTIONAL MODELS;ELECTRODES;ELECTRIC BATTERIES

4096 ANALYSIS OF POROUS ALKALINE CADMIUM ELECTRODES. II. POTENTIAL RECOVERY TRANSIENTS AFTER A PERIOD OF DISCHARGE. Selanger, P. (Chem. Cent., Lund Inst. Technol., Lund, Sweden). J. Appl. Electrochem.; 4: No. 3, 259-62(1974).
Influence of porosity. NICKEL-CADMIUM BATTERIES;SILVER-CADMIUM BATTERIES;ELECTRIC BATTERIES;ANODES;ELECTRODES;HYDROXIDES; TRANSIENTS;CADMIUM;SIMULATION;POROSITY

4097 ANALYSIS OF POROUS ALKALINE CADMIUM ELECTRODES. III. APPLICATION OF CHARGE POROSITY DIAGRAMS IN ELECTRODE DESIGN. Selanger, P. (Chem. Cent., Univ. Lund., Lund, Sweden). J. Appl. Electrochem.; 4: No. 3, 263-6(1974).
NICKEL-CADMIUM BATTERIES;SILVER-CADMIUM BATTERIES;ELECTRIC BATTERIES;ELECTRODES;ANODES; CADMIUM;HYDROXIDES;POROSITY;DESIGN;CHEMICAL REACTIONS;DIAGRAMS;MASS TRANSFER;ELECTROLYTES; COMPARATIVE EVALUATIONS;CADMIUM HYDROXIDES;ZINC HYDROXIDES;IRON HYDROXIDES

4098 PROPERTIES OF A SOLID ELECTROLYTE FROM BETA-ALUMINA SYNTHESIZED BY A GAS-FLAME METHOD. Danilov, A.V.; Shakhabidinov, Z.N.; Smirnyi, V.V.; Delarova, N.I. Zh. Prikl. Khim.; 47: No. 9, 2053-6(1974).
METAL-NONMETAL BATTERIES;ELECTROLYTES; CHEMICAL PREPARATION;ALUMINIUM OXIDES;GASES; FLAMES;SODIUM CARBONATES;SODIUM COMPOUNDS; ALUMINATES;ELECTRIC CONDUCTIVITY;ACTIVATION ENERGY;SODIUM IONS;THERMOELECTRIC PROPERTIES; CHEMICAL PROPERTIES

4099 OXYGEN (AIR) WATERPROOFED GAS-DIFFUSION ELECTRODES FOR ELECTROCHEMICAL POWER SOURCES OPERATING WITH LIQUID FUELS OR SOLID FUELS DISPERSED IN AN ELECTROLYTE. Iliev, I.; Gamburtsev, S.; Kaisheva, A.; Budevski, E. (Cent. Lab. Electrochem. Power Sources, Sofia, Bulgaria). Izv. Otd. Khim. Nauki, Bulg. Akad. Nauk.; 7: No. 4, 755-61(1974).
CATHODES;OXYGEN;AIR;METAL-GAS BATTERIES; BATTERY SEPARATORS;OPTIMIZATION;CARBON; POLYAMIDES;FIBERS;FUEL CELLS;FABRICATION

4100 MIGRATION OF ARSENIC AND ANTIMONY ON THE NEGATIVE ELECTRODE OF A LEAD BATTERY AND SELF-DISCHARGE OF THE NEGATIVE ELECTRODE. Ravdel, A.A.; Novikova, N.A.; Dasoyan, M.A.; Gordyakova, G.N.; Ratner, M.L.; Milovidova, N.V.; Musakina, A.A. Sb. Rab. Khim. Istochnikam Toka; 9: 20-8(1974).
LEAD-ACID BATTERIES;ANODES;ARSENIC;ANTIMONY; GASES;BATTERY CHARGING;ANTIMONY HYDRIDES; ARSENIC HYDRIDES;HYDROGEN;CORROSION;DIFFUSION; MASS TRANSFER;CHEMICAL REACTION KINETICS

4101 EFFECT OF LITHIUM HYDROXIDE ADDITIONS ON THE ELECTROCHEMICAL BEHAVIOR OF NICKEL(II) HYDROXIDE THIN-LAYER ELECTRODES. Cherepkova, I.A.; Kholodova, M.M.; Sysoeva, V.V.; Milyutin, N.N. 9: 57-65(1974).
IRON-NICKEL BATTERIES;NICKEL-CADMIUM BATTERIES;NICKEL-ZINC BATTERIES;CATHODES; ELECTROCHEMISTRY;LITHIUM HYDROXIDES;NICKEL HYDROXIDES;OXYGEN;EMISSION;ELECTRIC POTENTIAL; LITHIUM IONS;CHEMICAL PROPERTIES;ELECTROLYTES

4102 CURRENT GENERATION AT THE HYDROGEN ELECTRODE OF NICKEL--HYDROGEN BATTERIES. Tsenter, B.I.; Kloss, A.I.; Veselova, S.S. Sb. Rab. Khim. Istochnikam Toka; 9: 65-8(1974).
NICKEL-HYDROGEN BATTERIES;CATHODES;ELECTRIC CURRENTS;MEDIUM PRESSURE;POWDER METALLURGY; PLATINUM;CATALYSTS;PRESSURE DEPENDENCE; PERFORMANCE

4103 SATURATION KINETICS OF POWDER METALLURGICAL GRIDS IN NICKEL NITRATE SOLUTION. Pozin, Yu.M.; Shtertser, N.I.; Grilikhes, N.E.; Fishman, B.I. Sb. Rab. Khim. Istochnikam Toka; 9: 73-7(1974).
40° to 90°. ELECTRIC BATTERIES;ELECTRODES; GRIDS;CHEMICAL REACTION KINETICS;SATURATION; POWDER METALLURGY;NICKEL NITRATES;POROSITY; SINTERED MATERIALS;PLATES;MEDIUM TEMPERATURE; AMMONIUM COMPOUNDS;NITRITES;NICKEL OXIDES

4104 DISTRIBUTION OF THE ACTIVE MASS ON THE POWER-METALLURGICAL ANODE OF NICKEL--CADMIUM BATTERIES. Pozin, Yu.M.; Fishman, B.I. Sb. Rab. Khim. Istochnikam Toka; 9: 77-81(1974).
NICKEL-CADMIUM BATTERIES;ANODES;POWDER METALLURGY;FILLERS;TEMPERATURE DEPENDENCE; SINTERING;AMMONIUM COMPOUNDS;CARBONATES;UREA; NICKEL;PLATES;CADMIUM HYDROXIDES;SATURATION; TIME DEPENDENCE

4105 HOT PRESSED BETA ALUMINA FOR SODIUM--SULFUR BATTERIES. Seo, E.T.; Sayano, R.R.; McClanahan, M.L.; Silverman, H.P. (TRW Systems Group, TRW Inc., Redondo Beach, CA). Power Sources Symp., Proc.; 26: 74-7(1974).
Expected achievements: 50 W/lb, 50-W-hr/lb, 20 A-hr, 100 cycles. SODIUM-SULFUR BATTERIES; ELECTROLYTES;ALUMINIUM OXIDES;HOT PRESSING; FABRICATION;MAGNESIUM OXIDES;SODIUM OXIDES; MATHEMATICAL MODELS;FUNCTIONAL MODELS;TESTING; PERFORMANCE;PLANNING

4106 NEW PROCESS FOR THE PRODUCTION OF SYNTHETIC BATTERY GRADE MANGANESE DIOXIDE. Scaife, P.H.; Swinkels, D.A.J.; Ward, R.K.C.; Lewis, J.E. (BHP Central Research Lab., Shortland, Australia). pp 50-59 of Process industry of Australia. Rice, R.G. (ed.). St. Lucia, Australia; Institute of Chemical Engineering (1974).
Chloride process. ZINC-MANGANESE BATTERIES; ANODES;PRODUCTION;MANGANESE OXIDES

4107 EXPANDER ACTION IN THE LEAD--ACID BATTERY. III. IMPEDANCE AND PASSIVATION STUDIES OF SOME TANNING AGENTS AS POTENTIAL EXPANDERS. Brennan, M.P.J.; Hampson, N.A. (Dep. Chem., Univ. Technol., Loughborough/ Leics, England). J. Electroanal. Chem. Interfacial Electrochem.; 54: No. 2, 263-8(1974).
LEAD-ACID BATTERIES;MATERIALS;EXPANSION; IMPEDANCE;PASSIVATION;ANODES;CHEMICAL REACTIONS; PERCHLORIC ACID

4108 REACTION POSSIBILITIES IN ELECTRODES OF SOLID-STATE BATTERIES. Baukal, W. (Battelle-

Inst. e.V., Frankfurt/Main, Germany). Electrochim. Acta; 19: No. 11, 687-94(1974).
ELECTRIC BATTERIES;ELECTRODES;SOLIDS; MIXTURES;MATHEMATICAL MODELS;ELECTRIC CONDUCTIVITY;CONFIGURATION

4109 ELECTROCHEMISTRY OF MANGANESE DIOXIDE AND PRODUCTION AND PROPERTIES OF ELECTROLYTIC MANGANESE DIOXIDE (EMD). Kozawa, A. (Battery Prod. Div., Union Carbide Corp., Parma, Ohio). Batteries (N.Y.); 1: 385-519(1974).
ZINC-MANGANESE BATTERIES;CATHODES; ELECTROCHEMISTRY;MANGANESE OXIDES;CHEMICAL PROPERTIES;PRODUCTION

4110 EFFECT OF THE SUBSTRATE ON THE ANODIC BEHAVIOR OF SILVER OXIDE ELECTRODE. Fedorova, T.V.; Arkhangel'skaya, Z.P.; Bogdanova, E.V. Sb. Rab. Khim. Istochnikam Toka; 9: 124-8(1974).
CHEMICAL REACTIONS;SILVER OXIDES;GRIDS; POTASSIUM HYDROXIDES;COPPER;NICKEL;SILVER; MOLYBDENUM;PALLADIUM;COATINGS;SILVER-ZINC BATTERIES;SILVER-CADMIUM BATTERIES;CATHODES; ELECTRIC BATTERIES;ELECTRODES

4111 EFFECT OF ZINCATE IONS ON THE COURSE OF CATHODIC PROCESSES ON THE SILVER OXIDE ELECTRODE. Shuvalova, I.N.; Arkhangel'skaya, Z.P.; Aleksandrova, I.A. Sb. Rab. Khim. Istochnikam Toka; 9: 136-9(1974).
ELECTRIC POTENTIAL;TIME DEPENDENCE;SILVER OXIDES;POTASSIUM HYDROXIDES;CHEMICAL REACTIONS; ZINC COMPOUNDS;OXYGEN COMPOUNDS;SILVER-ZINC BATTERIES;SILVER-CADMIUM BATTERIES;CATHODES; ELECTRODES;ELECTRIC BATTERIES

4112 PROCESSES OCCURRING DURING THE STORAGE OF A POROUS CADMIUM ELECTRODE IN THE CHARGED STATE. Papazova, E.I.; Nikol'skii, V.A.; Andreeva, G.P.; Krivoplyas, N.G. Sb. Rab. Khim. Istochnikam Toka; 9: 145-51(1974).
SILVER-CADMIUM BATTERIES;ANODES;STORAGE; CHEMICAL COMPOSITION;GRAIN GROWTH

4113 MODIFIED REGENERATED CELLULOSE SEPARATOR FILMS. Gershman, M.B. Sb. Rab. Khim. Istochnikam Toka; 9: 161-5(1974).
BATTERY SEPARATORS;FILMS;CELLULOSE; FORMALDEHYDE;CELLOPHANE;MECHANICAL PROPERTIES; MEDIUM TEMPERATURE;AQUEOUS SOLUTIONS;CHEMICAL PREPARATION;HEAT TREATMENTS;ZINC;DENDRITES; PERFORMANCE;SILVER-ZINC BATTERIES;NICKEL-ZINC BATTERIES;ZINC-MANGANESE BATTERIES

4114 SEPARATOR FILMS MADE FROM LOW-SUBSTITUTED CARBOXYMETHYLCELLULOSE. Gershman, M.B.; Vasil'eva, G.G.; Petropavlovskii, G.A. Sb. Rab. Khim. Istochnikam Toka; 9: 165-9(1974).
FILMS;BATTERY SEPARATORS;CHEMICAL PREPARATION;MECHANICAL PROPERTIES;SILVER-ZINC BATTERIES;NICKEL-ZINC BATTERIES;SILVER-CADMIUM BATTERIES;ZINC-MANGANESE BATTERIES; POLYSACCHARIDES;MONOCARBOXYLIC ACIDS

4115 OXIDATION KINETICS OF FRESHLY PASTED LEAD STORAGE BATTERY PLATES DURING DRYING. Kornienko, P.M.; Shchelevskaya, N.T. Protsessy Perenosa Tepla i Massy Pri Sushke Razlichn. Materialov; 151-61(1974).
OXIDATION;CHEMICAL REACTION KINETICS;LEAD-ACID BATTERIES;PLATES;DRYING

4116 RAPID METHOD OF DETERMINING CADMIUM INTERGROWTH TIME IN ALKALINE CADMIUM--NICKEL BATTERY SEPARATORS. Nazarova, T.M.; Abakhaev, M.G. Issled. v Obl. Khim. Istochnikov Toka; No. 3, 42-9(1974).
NICKEL-CADMIUM BATTERIES;BATTERY SEPARATORS; HYDROXIDES;GRAIN GROWTH;CADMIUM;GROWTH;CRYSTAL GROWTH

4117 ELECTROCHEMICAL IMPREGNATION OF NICKEL HYDROXIDE INTO A POROUS NICKEL PLATE. Takamura, T.; Shirogami, T.; Nakamura, T. (Toshiba Res. Dev. Cent., Tokyo Shibaura Electr. Co., Ltd., Kawasaki, Japan). Denki Kagaku Oyobi Kogyo Butsuri Kagaku; 42: No. 11, 582-8(1974).
34 mAlcm$^2$. NICKEL-CADMIUM BATTERIES;CATHODES; NICKEL HYDROXIDES;IMPREGNATION;ELECTROCHEMISTRY; PLATES;PERFORMANCE

4118 RATIONAL DEGREE OF FILLING OF PORES OF POWDER-METALLURGICAL NICKEL OXIDE ELECTRODE BY THE ACTIVE MEDIA. Barsukov, V.Z.; Boldin, R.V.; Milyutin, N.N.; Sagoyan, L.N.; Timoshenko, T.A. Sb. Rab. Khim. Istochnikam Toka; 9: 99-102(1974). (In Russian).
IRON-NICKEL BATTERIES;NICKEL-CADMIUM BATTERIES;NICKEL-ZINC BATTERIES;CATHODES;NICKEL OXIDES;POWDER METALLURGY;ELECTRIC CURRENTS; TEMPERATURE DEPENDENCE;ELECTRIC BATTERIES; ELECTRODES

4119 EFFECT OF TECHNOLOGICAL FACTORS ON THE STRUCTURE OF PASTES AND THE FORMED ACTIVE SUBSTANCE OF THE POSITIVE ELECTRODE OF A LEAD BATTERY. Kolikova, G.A.; Bordt, E.F.; Novoderezhkin, V.V.; Dasoyan, M.A. Sb. Rab. Khim. Istochnikam Toka; 9: 38-42(1974). (In Russian).
LEAD-ACID BATTERIES;CATHODES;ELECTRICAL PROPERTIES

4120 VOLUME CHANGE IN THE ACTIVE SUBSTANCES OF A LEAD BATTERY. Aguf, I.A. Sb. Rab. Khim. Istochnikam Toka; 9: 34-38(1974). (In Russian).
LEAD-ACID BATTERIES;VOLUME;EQUATIONS; ELECTRODES

4121 EFFECT OF SAMPLE CONFIGURATION ON ITS CORROSION DEFORMATION. Aguf, I.A.; Mikhailova, N.K. Sb. Rab. Khim. Istochnikam Toka; 9: 18-19(1974). (In Russian).
Behavvior of grid fibers, polygonal shapes.
LEAD-ACID BATTERIES;GRIDS;CATHODES;CORROSION; DEFORMATION;SIMULATION;MATHEMATICAL MODELS; SHAPE;CONFIGURATION

4122 PHYSICO-CHEMICAL CHANGES AT THE INTERFACE OF A GRAPHITE CHLORINE ELECTRODE WITH LITHIUM CHLORIDE ELECTROLYTE. Bradley, T.G.; Sharma, R.A. (General Motors Corp., Warren, MI). pp 32-42 of Corrosion problems in energy conversion and generation. Tedman, C.S. Jr. (ed.). Princeton, NJ; Electrochemical Society, Inc. (1974).
From Proceedings of the symposium on corrosion problems in energy conversion and generation; New York, New York, USA (15 Oct 1974).
See CONF-7410138--.
LITHIUM-CHLORINE BATTERIES;CATHODES;GRAPHITE; LITHIUM CHLORIDES;ELECTROLYTES;CHEMICAL REACTIONS;INTERFACES;ADHESION;FILMS

4123 CORROSION AND COMPATIBILITY OF MATERIALS IN INORGANIC OXYHALIDES. Auborn, J.J.; French, K.W.; Heller, A. (GTE Labs. Inc.,

Waltham, MA). pp 56-61 of Corrosion problems in energy conversion and generation. Tedman, C.S. Jr. (ed.). Princeton, NJ; Electrochemical Society, Inc. (1974).
From Proceedings of the symposium on corrosion problems in energy conversion and generation; New York, New York, USA (15 Oct 1974).
See CONF-7410138--.
$Li/SOCl_2$--$LiAlCl_4$/C and $Li/SO_2Cl_2$--$LiAlCl_4$/C cells, operate at ambient temperature. LITHIUM; CARBON;METAL-NONMETAL BATTERIES;MATERIALS; CORROSION;MEDIUM TEMPERATURE;SEALS;BATTERY SEPARATORS;CONTAINERS;TESTING;METALS;POLYMERS; GLASS;CERAMICS;LITHIUM CHLORIDES;ALUMINIUM CHLORIDES;SULFUR COMPOUNDS;OXYCHLORIDES

4124 RESULTS OF THERMAL BATTERY CELL TESTING. Bush, D.M. (Sandia Labs., Albuquerque, NM). Power Sources Symp., Proc.; 26: 144-147(1974).
Description of single-cell tester. METAL-METAL BATTERIES;TESTING;DESIGN

4125 STRUCTURAL TRANSFORMATIONS OF LEAD(IV) OXIDE ACTIVE MATERIAL DURING CYCLING. Simon, A.C.; Caulder, S.M.; Stemmle, J.T. (Naval Research Lab., Washington, DC). J. Electrochem. Soc.; 122: No. 4, 461-466(1974).
CATHODES;LEAD-ACID BATTERIES;CRYSTAL STRUCTURE;LEAD SULFATES;LEAD OXIDES;DEPOSITION

4126 MECHANISM OF CURRENT GENERATION IN WATERPROOFED ELECTRODES. Chirkov, Yu.G.; Shteinberg, G.V.; Baranov, A.P.; Dribinskii, A.V.; Mokrousov, L.N. (Inst. Elektrokhim., Moscow, USSR). pp 486-8 of Tezisy Dokl. - Vses. Soveshch. Elektrokhim., 5th. Volume 2. Moscow; Vses. Inst. Nauchn. Tekh. Inf. (1974).
ELECTRIC BATTERIES;ELECTRODES;ELECTRIC CURRENTS;CHEMICAL REACTION KINETICS; ELECTROCHEMISTRY

4127 EFFECT OF TECHNOLOGICAL FACTORS ON THE PROPERTIES OF CAST ELECTRODES FOR CHEMICAL CURRENT SOURCES WITH COPPER(I) CHLORIDE. I. Bogorodskii, V.A.; Pestrikov, V.F.; Khranilov, Yu.P.; Bairachnyi, E.V.; Ivanov, E.G.; Berkman, E.A. Sb. Rab. Khim. Istochnikam Toka; 9: 205-10(1974).

4141 REDUCTION OF OXTGEN ON NICKEL--COBALT OXIDES. II. CORRELATION BETWEEN CRYSTAL STRUCTURE AND ACTIVITY OF $CO_2NIO_4$ AND RELATED OXIDES. King, W.J.; Tseung, A.C.C. (City Univ., London). Electrochim. Acta; 19: No. 8, 493-498(1974).
The implications of the substitution of nickel for cobalt in $Co_3O_4$ to give $Co_2NiO_4$ are discussed. From the effects of substitution of other ions into $Co_2NiO_4$ its curious properties may partly be understood. The cations present are unable to satisfy the requirements of both crystallographic siting and oxidation state to fit the classical spinel distribution. The result is a weakening of the crystal lattice and hence rather loosely bonded oxygen, e.g., possibly as $O^-$ instead of $O^{2-}$. This factor causes the low thermal stability and the exceptional activity towards oxygen reduction, and is maximized by incorporating the highest possible proportion of nickel and then heat-treating the catalyst near its point of breakdown. The importance of preparing the oxide in complete absence of $OH^-$ or $H_2O$ is deduced. A site and charge distribution for $Co_2NiO_4$ based on this work and other published data is advanced. The importance of the ferrimagnetic order remains to be clarified. The electrocatalyst is gradually and irreversibly deactivated on exposure to alkaline electrolyte. A mechanism for this unfortunate property is suggested.

4142 REDUCTION OF OXYGEN ON NICKEL--COBALT OXIDES. I. THE INFLUENCE OF COMPOSITION AND PREPARATION METHOD ON THE ACTIVITY OF NICKEL--COBALT OXIDES. King, W.J.; Tseung, A.C.C. (City Univ., London). Electrochim. Acta; 19: No. 8, 485-491(1974).
Nickel cobalt oxides were prepared by coprecipitation, freeze drying and nitrate decomposition. The resistivity, surface area, crystal structure and electrochemical activity of the powders were determined. The highest activity was found in freeze dried samples with the composition $Co_2NiO_4$ and the spinel structure. TGA and x-ray analysis showed that the spinel phase is metastable and begins to change to a cubic phase at about 450°C, significantly reducing the electrochemical performance. Maximum activity in the catalyst is obtained by heat-treating it to this point.

4143 EFFECT OF LEAD SALT ADDITIONS ON THE PROPERTIES OF A ZINC OXIDE ELECTRODE IN ALKALINE ELECTROLYTES. Ravdel, A.A.; Novikova, N.A.; Levinzon, L.M.; Musakina, A.A.; Larionova, G.V. Sb. Rab. Khim. Istochnikam Toka; 9: 128-131(1974). (In Russian).

The subject of Zn--O cells is discussed with emphasis on the oxygen electrode. Determination of the structure and electrochemical properties of the electrode, preparation of a porous, Teflon-covered electrode, and preparation of catalysts is included. (RWR)

4145 BIG CHANGE IN PRODUCT CALLS FOR INNOVATIVE CUSHIONING, PACKAGING. Ostrander, H.L. (Western Electric Co., Springfield, NJ). Package Eng.; 19: No. 10, 60-63(1974).
Work performed by Western Electric Company to develop a suitable package for a new, round lead--acid storage battery for telephone central offices is reported. Configuration study was followed by materials testing with particular attention to shock resistance. PS foam was selected and used for field trials. In all these tests scrutiny revealed batteries intact. This package has demonstrated its reliability.

4149 MIXED SOLVENTS FOR HIGH AND LOW TEMPERATURE ORGANIC ELECTROLYTE BATTERIES. Dey, A.; Sullivan, B.P. (to P. R. Mallory and Co., Inc.). US Patent 3,947,289. 23 Nov 1973. vp.
An electrolyte for use in active-metal high-potential electrochemical cells is described. It comprises an active metal salt dissolved in a nonaqueous solvent system comprising (a) at least 10 volume percent of tetrahydrofuran or N-nitrosodimethylamine-butyrolactone, 1,3-dioxolane, dimethoxyethane, bis (2-ethoxy) ethyl ether, bis (2-methoxy) ethoxy-ethyl ether and mixtures thereof.

4150 CONTROLLED POROSITY AND PORE SIZE SUBSTRATES FOR NICKEL--CADMIUM CELLS. Gordy, D.J.; Luksha, E.; Menard, C.J. (Gould Labs., Mendota Heights, MN). Contract NAS5-21097. J. Electrochem. Soc.; 120: 1447-51(Nov 1973).

4159 CREEP RESISTANCE OF LEAD CASTING ALLOYS FOR BATTERY GRIDS. Drefahl, K.; Heubner, U. (Metallgesellsch, Frankfurt am Main). Z. Metallkd.; 64: No. 10, 669-672(Oct 1973). (In German).
The creep behavior of commercial lead battery grids was determined at 20°C. For grids of lead--antimony alloys containing arsenic and copper, the 1000-h creep strength lies between 2.0 and 2.3 kg/mm², near the values of 2.4 to 2.5 kg/mm² typical for technically useful dispersion-hardened lead alloys. The creep strength increases with increasing arsenic content while, in the concentration range studied (5 to 9 wt % Sb, 0.01 to 0.05 wt % Cu), variations of the antimony and copper contents have only minor effects. The creep strength of maximum 0.8 kg/mm² of the Pb--0.07 Ca alloy studied is small and lower than many of the

values given in the literature for wrought lead--calcium alloys.

4160 THEORY OF POROUS ELECTRODES. XI. POSITIVE PLATE OF THE LEAD--ACID BATTERY. Micka, K.; Rousar, I. (Acad. Sci., Prague, Czechoslovakia). Electrochim. Acta; 18: No. 9, 629-33(Sep 1973).
LEAD-ACID BATTERIES;MASS TRANSFER; ELECTROCHEMISTRY;ELECTRODES;DIFFERENTIAL EQUATIONS;CATHODES

4161 FORMING TANK FOR LEAD--ACID BATTERY PLATES. Roach, A. (to Eltra Corp.). US Patent 3,754,994. 28 Aug 1973. Filed date 24 May 1972. 5p.
In this tank for electrical forming of plates for lead--acid batteries, plates of opposite polarity are suspended at the side of the tank. The tank is designed to accommodate plates of various sizes. (RWR)

4162 MICROPOROUS CERAMIC SEPARATOR FOR BATTERIES. Kamii, I.; Takagaki, T. (to Japan Storage Battery Co., Ltd.). Japanese Patent 1973-26,889. 17 Aug 1973. Filed date 23 May 1968. 4p.
A method for fabricating microporous ceramic separators for primary and secondary batteries and fuel cells is described. The ceramic separator is produced by quenching a molten composition of less than or equal to $^5/_3$ mole $Al_2O_3$ to 1 mole $SiO_2$ by immersing in $H_2O$, pulverizing, and baking at 950 to 1250°.

4163 STABILIZATION OF BORON PHOSPHATE SULFURIC ACID GELS. Biddick, R.E.; Ockerman, J.B. (to Dept. of the Army). US Patent 3,751,304. 7 Aug 1973. Filed date 24 Feb 1971. 3p.
A method is described in the patent for preventing the release of liquid from a sulfuric acid boron phosphate gel used in water-activated lead--acid storage batteries, and, more particularly, the addition of an excess amount of aluminum metal, magnesium or lithium aluminum hydride to this gel.

4164 HYDROGEN ENERGY STORAGE ELECTRODE. Linkohr, R. (to Deutsche Automobilgesellschaft mbH). GE 2,200,806. 26 Jul 1973. Filed date 8 Jan 1972. 10p.
ELECTRIC BATTERIES;NICKEL-HYDROGEN BATTERIES; CATHODES;HYDROGEN;FABRICATION;CHEMICAL PREPARATION;ELECTRODES

4165 DEGASSING APPARATUS FOR STORAGE BATTERIES. Retif, R. (to Soc. des Accumulateurs Fixes et de Traction). German(FRG) Patent 2,302,348. 26 Jul 1973. Filed date 19 Jan 1972. 13p.
ELECTRIC BATTERIES;ELECTROLYTES;LIQUIDS; TUBES;DESIGN;DEGASSING

4166 SEPARATOR FOR CONTROLLING ALKALI METAL ION FLOW IN AN ELECTRODE-ACTIVE MATERIAL OR ELECTROLYTE. Chiku, T.; Kamigaito, O.; Isogai, A. (to Toyota Central Research and Development Labs., Inc.). US Patent 3,743,543. 3 Jul 1973. Filed date 3 Oct 1969. 6p.
BATTERY SEPARATORS;ALUMINIUM OXIDES;SODIUM-SULFUR BATTERIES;ELECTROCHEMICAL CELLS;DESIGN

4167 CADMIUM ELECTRODES. Pickett, D.F. US Patent 375,239. 29 Jun 1973. Filed date 29 Jun 1973. 20p.
NICKEL-CADMIUM BATTERIES;ANODES;CHEMICAL PREPARATION

4168 IC TIMER AUTOMATICALLY MONITORS BATTERY VOLTAGE. McGowan, E.J. Jr. (Stoelting Co., Chicago, Il). Electronics; 46: No. 13, 130-1(21 Jun 1973).
Keeps full charge on standby battery. ELECTRIC BATTERIES;ELECTRIC POTENTIAL; INTEGRATED CIRCUITS;MONITORING;BATTERY CHARGING; JUNCTION DIODES;BATTERY CHARGERS;DESIGN

4169 ALLOYS FOR ELECTRODE GRIDS FOR LEAD--ACID BATTERIES. Sims, R.I. (to Lucas, Joseph, (Batteries) Ltd.). German(FRG) Patent 2,260,355. 20 Jun 1973. Filed date 15 Dec 1971. 9p.
Patet. LEAD-ACID BATTERIES;GRIDS;LEAD BASE ALLOYS;CALCIUM ADDITIONS;ALUMINIUM ADDITIONS; FABRICATION

4170 PROTECTIVE COATINGS ON POSITIVE NICKEL ELECTRODES. Bauer, M.; Ewe, H.; Justi, E. (to Varta AG). German(FRG) Patent 2,161,898. 20 Jun 1973. Filed date 14 Dec 1971. 11p.
Carbonyl-Ni electrode supports in batteries, fuel cells, and electrolytic cells with alkaline electrolytes were considered. $Ni(OH)_2$ formation on the support was prevented by heating in air (or oxygen) at 200 to 350°; a protective layer of NiO was thus formed. Electrolyte-flow resistance was greatly improved. (RWR)

4171 CELL OR BATTERY HOUSING OF SYNTHETIC RESIN FOR MAINTENANCE-FREE BATTERIES. Von Roda, E.; Trankle, E. (to Bosch, Robert, GmbH). US Patent 3,738,860. 12 Jun 1973. Filed date 26 May 1970. 5p.
LEAD-ACID BATTERIES;ELECTRIC BATTERIES; RESINS;POLYSTYRENE;POLYPROPYLENE;CONTAINERS; SHELLS;PERFORMANCE

4172 HYDROGEN STORAGE ELECTRODE. Linkohr, R.; Holz, R.; Plust, H.G. (to Deutsche Automobilgesellschaft mbH). GE 2,160,202. 7 Jun 1973. Filed date 4 Dec 1971. 10p.
NICKEL-HYDROGEN BATTERIES;METAL-GAS BATTERIES;ELECTRODES;FABRICATION

4173 NEGATIVE ELECTRODE PLATE FOR LEAD STORAGE BATTERIES. Yamamoto, S.; Aizawa, K. (to Furukawa Battery Co., Ltd.). Japanese Patent 37,643. 2 Jun 1973. Filed date 15 Sep 1971. 3p.
Patent; lignin and PVA additives extend battery lifetime. LEAD-ACID BATTERIES;ANODES; PLATES;PVA;LIGNIN;LIFETIME;FABRICATION;LEAD OXIDES;TESTING

4174 PROPERTIES OF LICL AND $(CH_3)_4NCL$ SOLUTIONS IN WATER--METHANOL MIXTURES. Miles, M.H.; Jiamsakul, V. (Middle Tennessee State Univ., Murfreesboro). J. Electrochem. Soc.; 120: No. 6, 709-12(Jun 1973).

4179 BEHAVIOR OF THE SILVER/SILVER CHLORIDE ELECTRODE IN CONCENTRATED AQUEOUS SODIUM CHLORIDES. Gibbard, H.F. Jr. (Southern Illinois Univ., Carbondale). J. Electrochem. Soc.; 120: No. 5, 624-627(May 1973).
The reported solute and solvent activities of concentrated aqueous sodium chloride are not thermodynamically consistent within the apparent experimental errors. This result is attributed to a deviation of the silver, silver chloride electrode owing to the formation of a solid solution of silver chloride and sodium chloride. Electrochemical cell measurements and x-ray diffraction results are reported in support of these conclusions. The mole fractions and activities of silver chloride in the solid solutions are calculated from solubility equilibria and are correlated with literature values of the activity coefficients of sodium chloride.

4180 PREPARATION OF AN ALKALINE IRON ELECTRODE MATERIAL USING SULFUR ACIDS. Jackovitz, J.F.; Pantier, E.A. (to Westinghouse Electric Corp.). US Patent 3,947,292. 18 Apr 1973. Filed date 18 Feb 1971. vp.
An activated iron electrode material suitable for use in a battery electrode plate is described. It consists essentially of (1) iron particles consisting essentially of substantially pure iron oxides selected from the group consisting of FeO, $Fe_3O_4$, $Fe_2O_3.H_2O$ and mixtures thereof and (2) the chemical reaction product of an iron particle component consisting essentially of substantially pure iron oxides selected from the group consisting of FeO, $Fe_2O_3$, $Fe_2O_3$, $Fe_3O_4$, $Fe_2O_3.H_2O$ and mixtures thereof and at least one sulfur-substituted organic acid selected from the group consisting of thiolic, dithiolic, and mercapto-carboxylic acids, the mixture containing about 0.01 to 2 weight percent total sulfur. The plaque can be between 75 and 95 percent porous and the iron particle component can be selected from the group consisting of FeO, $Fe_2O_3$, $Fe_3O_4$, $Fe_2O_3.H_2O$ and mixtures thereof.

4181 ONE LAMP CAN MONITOR BATTERY VOLTAGE. Thai, N.D. (Huntec. Ltd., Toronto, Ontario). Electronics; 46: No. 8, 106(12 Apr 1973).
ELECTRIC BATTERIES;ELECTRIC POTENTIAL; MONITORING;POWER SUPPLIES;ELECTRONIC CIRCUITS

4182 SEMICONDUCTING CATHODE FOR STORAGE BATTERIES. (to Molecular Energy Corp.). French Patent 2,146,169. 6 Apr 1973. Filed date 22 Jul 1971. 8p.
CATHODES;SEMICONDUCTOR MATERIALS;SULFIDES; HALIDES;OXIDES;METAL-NONMETAL BATTERIES; FABRICATION

4183 HEAT RESISTANT SUBSTRATES AND A BATTERY SEPARATOR MADE THEREFROM. Langer, A.; Scala, L.C.; Ruffing, C.R. (to Westinghouse Electric Corp.). US Patent 3,953,241. 26 Mar 1973. Filed date 12 Mar 1970. vp.
A flexible porous substrate comprises a caustic resistant porous flexible support. At least one side of the support is in contact with and attached to a membrane consisting essentially of a caustic resistant solid polymeric matrix containing a network of a plurality of interconnected pores having diameters between about 5 and 75 microns, and interdispersed caustic resistant inorganic filler particles having a particle size diameter of between about 74 to 700 microns. The weight ratio of filler:polymer in the polymeric matrix ranges from 1:1 to 5:1, so that are a large number of filler particle contact points in the polymeric matrix.

4184 REACTION CATALYST FOR THE ELIMINATION OF OXYHYDROGEN GAS IN LEAD--ACID STORAGE BATTERIES. Lahme, N.; Sassmannshausen, G. (to Accumulatorenwerk Hoppecke). US Patent 3,940,348. 15 Mar 1973. Priority date 18 Mar 1972, German, Federal Republic of (F.R. Germany). vp.
A unitary catalyst element for catalytically recombining into water a gas mixture of oxygen and hydrogen formed during operation of lead--acid storage battery is described. It comprises a single elongated catalyst carrier body in the form of a permeable coherent solid, an active metallic catalyst material of the platinum group carried on the surface of the permeable catalyst carrier body, and an axially disposed core member of highly heat conductive material enclosed within said catalyst carrier body.

4185 C-MOS VOLTAGE MONITOR PROTECTS NI--CD BATTERIES. Wilke, W. (Univ. of Wisconsin, Madison). Electronics; 46: No. 5, 85-6(1 Mar 1973).
NICKEL-CADMIUM BATTERIES;ELECTRIC POTENTIAL; MONITORING;SAFETY;OPERATION;MOS TRANSISTORS

4186 MEASUREMENT OF ZINCATE PERMEATION IN A POLYETHYLENE BATTERY SEPARATOR WITH CONTROLLED EXTERNAL HYDRODYNAMIC CONDITIONS. Litt, M.; Nanis, L.; Chen, J.L.P. (Univ. of Pennsylvania, Philadelphia). J. Electrochem. Soc.; 120: No. 3, 324-8(Mar 1973).
ZINCATES;BATTERY SEPARATORS;POLYETHYLENES; SPACE VEHICLES;SPACECRAFT POWER SUPPLIES; MEMBRANES;SILVER-ZINC BATTERIES;MEDIUM TEMPERATURE;POTASSIUM HYDROXIDES;ACTIVATION ENERGY;ACRYLIC ACID;AROMATICS;GRAFT POLYMERS; CROSS-LINKING

4187 EXTRACTION OF BATTERY-GRADE MANGANESE DIOXIDE FROM LOW-GRADE MANGANESE ORES. Yousef, A.A.; Arafa, M.A.; Boulos, T.R.

Aufbereit.-Tech.; 14: No. 3, 162-5(Mar 1973). (In German).
ZINC-MANGANESE BATTERIES;CATHODES;MANGANESE OXIDES;MANGANESE ORES;LEACHING;FABRICATION; SULFUR OXIDES;AIR;SATURATION;AQUEOUS SOLUTIONS; CHEMICAL PREPARATION

4188 PREPARATION OF VACUUM-DEPOSITED FILMS ON RUBIDIUM SILVER IODIDE. Kennedy, J.H.; Chen, F.; Hunter, J. (Univ. of California, Santa Barbara). J. Electrochem. Soc.; 120: No. 3, 454-458(Mar 1973).
Vacuum-deposited thin films of $RbAg_4I_5$ were prepared exhibiting conductivities of 0.25 $(ohm-cm)^{-1}$ at 25 C and an activation energy of 2.3 kcal/mole. The purest films of $RbAg_4I_5$ were produced when the evaporation source composition was 83 to 85 mole per cent (m/o) AgI. Electrolytic cells of the type Ag/$RbAg_4I_5$/Au were prepared and were studied by cyclic voltammetry with a silver reference electrode and as coulometers. Cells could be cycled electrochemically over 1000 times, but coalescence of $RbAg_4I_5$ films eventually led to loss of electrode contact. Degradation was accelerated when the cells were exposed to humid air.

4189 SINTERED ALUMINA WITH GOOD ION PERMEABILITY PROPERTIES. (to Toyota Central Research and Development Labs., Inc.). French Patent 2,139,677. 16 Feb 1973. Filed date 28 May 1971. 16p.
SODIUM-SULFUR BATTERIES;BATTERY SEPARATORS; FABRICATION;ALUMINIUM OXIDES;SINTERED MATERIALS; CHEMICAL PREPARATION

4190 LITHIUM BATTERY ELECTROLYTE ADDITIVE AND METHOD OF IMPROVING DISCHARGE RATE. Butler, J.N.; Cogley, D.R. (to Dept. of Air Force). US Patent 3,716,410. 13 Feb 1973. Filed date 27 Sep 1971. 5p.
A method is described for improving the discharge rate of lithium batteries by adding a small amount of a hexamethyl phosphoramide additive to the lithium perchlorate--propylene carbonate electrolyte of the battery.

4191 CATHODES FOR SECONDARY ELECTROCHEMICAL POWER-PRODUCING CELLS. Cairns, E.J.; Kyle, M.; Shimotake, H. (to Atomic Energy Commission). US Patent 3,716,409. 13 Feb 1973. Filed date 8 Sep 1971. 12p.
A secondary electrochemical power-producing cell includes an anode containing lithium, an electrolyte containing lithium ions, and a cathode containing sulfur. The cathode comprises plates of a porous substrate material impregnated with sulfur alternating with layers (which may also comprise porous substrate plates) containing electrolyte.

4192 CURRENT DISTRIBUTION IN THE POROUS LEAD DIOXIDE ELECTRODE. Simonsson, D. (Royal Inst. of Technol., Stockholm, Sweden). J. Electrochem. Soc.; 120: No. 2, 151-7(Feb 1973).
CATHODES;LEAD-ACID BATTERIES;ELECTRIC CURRENTS;DISTRIBUTION;PLATES;PASSIVATION

4193 ZINC ELECTRODES FOR RECHARGEABLE ZINC/AIR CELLS. Dietz, H. (Robert Bosch, Stuttgart, Germany). Chem.-Ing.-Tech.; 45: No. 4, 197-200(Feb 1973). (In German).
ANODES;ZINC-AIR BATTERIES;ELECTRIC-POWERED VEHICLES;POTASSIUM CARBONATES;PERFORMANCE; HYDROGEN;GASES;EMISSION;LIFETIME

4194 EFFECTS OF MERCURY ON THE SURFACES OF POLYCRYSTALLINE COPPER, TIN AND ZINC. Barnard, R. (Ever Ready Co., London, England). J. Appl. Electrochem.; 3: No. 1, 17-22(Feb 1973).
ELECTRIC BATTERIES;ELECTRODES;TIN;ZINC; COPPER;POLYCRYSTALS;MERCURY;SURFACES;POTASSIUM HYDROXIDES;HYDROGEN;CHEMICAL REACTIONS

4195 IRON ELECTRODES FOR METAL/AIR CELLS. Cnobloch, H.; Groeppel, D.; Nippe, W.; von Sturm, F. (Siemens, Erlangen, Germany). Chem.-Ing.-Tech.; 45: No. 4, 203-6(Feb 1973). (In German).

4232 CERAMIC SEPARATORS FOR A HIGH TEMPERATURE LITHIUM BATTERY. Fishwick, J.H.; Yeh, W.C.T. (Foote Mineral Co., Exton, PA). Am. Ceram. Soc. Bull.; 51: No. 8, 633-636(Aug 1972).
Seven materials based on the cations Li and Ca, and aluminate and zirconate anions, were tested for their ability to withstand the attack of molten lithium and fused LiCl--KCl eutectic at 580°C. $CaZrO_3$ exhibited the highest resistance. $CaZrO_3$ is recommended for consideration as a separator material in a lithium battery operating up to 580°C.

4233 LEAD SULFATE DISTRIBUTION IN DISCHARGED NEGATIVE ELECTRODE PLATES OF LEAD BATTERIES. Panesar, H.S.; Portscher, V. (VARTA Forschungs- und Entwicklungszentrum, Kelkheim, Ger.). Metalloberflaeche; 26: No. 7, 252-253(Jul 1972). (In German).
Three $PbSO_4$ profiles are plotted and discussed; one shows $PbSO_4$ distribution in totally discharged negative electrode plates as a function of discharge density (1.5 to 180 mA/cm²). Two show $PbSO_4$ distribution as a function of the state of discharge (25 to 100%) for discharge densities of 30 and 180 mA/cm², respectively.

4234 EFFECT OF GRID CAST STRUCTURE ON THE ANODIC CORROSION OF LEAD. Feliu, S.; Galan, L.; Gonzalez, J.A. Werkst. Korros.; 23: No. 7, 554-561(Jul 1972).
Unalloyed lead, Pb--0.09Ca, Pb--0.46Ag, Pb--6Sb, Pb--11.6Sb, and Pb--6Sb--0.2Ag--0.2As--0.5Sn were subjected to anodic corrosion in $H_2SO_4$ at current densities of 0.84 and 0.14 mA/cm². Specimens varied in grain size. Weight losses were determined and correlated with results of microscopic examinations. Grain size did affect corrosion, but the effect depended on composition. An explanation is suggested in terms of selective attack of the material and disintegration of structural units.

4235 REMOVAL OF SURFACE ANTIMONY FROM ANTIMONY LEAD ALLOYS BY SULFURIC ACID--HYDROGEN PEROXIDE PICKLING. Crompton, T.R.; Uitenbroek, G. (Oldham and Son Ltd., Manchester, Eng.). J. Electrochem. Soc.; 119: No. 6, 655-660(Jun 1972).
It is shown that treatment of cast antimonial lead alloys with mixtures of hydrogen peroxide and sulfuric acid at 20°C dissolves surface antimony at an appreciably greater rate than occurs with sulfuric acid alone, even at elevated temperatures. Optimum hydrogen peroxide--sulfuric acid reagent compositions were established for the maximum solution of antimony from the alloy. A correlation exists between the quantity of antimony removed by this treatment and the quantity of antimony that is subsequently released from the alloy into sulfuric acid electrolyte when it is set up as an anode against pure lead cathodes. Batteries made using positive grids which have been pickled in hydrogen peroxide--sulfuric acid mixtures, then brightened by dipping in a 10% aqueous solution of diethylene triamine were shown to have a greater life on charge/discharge cycles than batteries made using standard unpickled grids.

4236 EFFECT OF COPPER ON ANODIC CORROSION RATE IN $H_2SO_4$, MECHANICAL PROPERTIES, AND FLUIDITY OF LEAD AND LEAD ANTIMONY ALLOYS. Kirow, A.; Rogatschev, T.; Denew, D. (Forschungsinstitut fuer Nichteisenmetalle NIPKIZM, Sofia). Metalloberflaeche; 26: No. 6, 234-237(Jun 1972). (In German).
Experimental data are plotted for Pb alloys with 0 to 11.57% Sb and 0 to 2% Cu. Mechanical strength and fluidity increase slightly with increase of Cu to 0.06%, then decrease with larger copper additions. The combined effects of Sb and Cu on $H_2SO_4$ corrosion resistance of lead are complex. Starter batteries of a Pb-6.12.Sb--0.069Cu alloy were found to be superior in service to those with Pb--Sb alloys.

4237 METAL OXIDE FABRICS. Hamling, B.H. (to Union Carbide Corp.). US Patent 3,663,182. 16 May 1972. Filed date 1 Nov 1963. 7p.
Patent; continuation of US Patent 3,385,915; for use as fuel cell or battery separators. ELECTRIC BATTERIES;ZIRCONIUM OXIDES;TANTALUM OXIDES;CORROSION RESISTANCE;BATTERY SEPARATORS; FUEL CELLS;ELECTRICAL INSULATORS;REFRACTORIES; CELLULOSE;MATRIX MATERIALS;DESIGN;FABRICATION

4238 TITANIUM ELECTRODES FOR FUEL CELLS AND BATTERIES CONTAINING ACID ELECTROLYTE. Binder, H.; Sandstede, G. (to Battelle-Institut e.V.). German(FRG) Patent 2,054,963. 10 May 1972. Filed date 9 Nov 1970. 20p.
Patent; acid-resistant coating. ACID ELECTROLYTE FUEL CELLS;TITANIUM;ELECTRODES; PROTECTIVE COATINGS;TUNGSTEN OXIDES;SODIUM OXIDES;NICKEL OXIDES;ALUMINIUM OXIDES;STRONTIUM OXIDES;FABRICATION;CARBON;POLYETHYLENES;TEFLON; LEAD-ACID BATTERIES;CORROSION RESISTANCE

4239 EFFECT OF THE LEWIS BASICITY OF ORGANIC SOLVENTS ON THE ELECTROCHEMICAL BEHAVIOR OF METAL HALIDE ELECTRODES. Clinckspoor, G. (Univ., Bonn). Metalloberflaeche; 26: No. 5, 191-196(May 1972). (In German).
The purpose of the investigation was to study the suitability of the chlorides and fluorides of silver, copper, and nickel as cathode material in high-energy batteries in which lithium is used as the anode material in proton-free organic solvents (specifically propylene carbonate). The results are negative because no solvents could be found having all the required properties, which are analyzed. Investigation of NiS and CuS as conducting cathode material is suggested as an alternative.

4240 EFFECT OF THE LEWIS BASICITY OF ORGANIC SOLVENTS ON THE ELECTROCHEMICAL BEHAVIOR OF METAL HALIDE ELECTRODES. Clinckspoor, G. (Univ., Bonn). Metalloberflaeche; 26: No. 5, 191-196(May 1972). (In German).
The purpose of the investigation was to study the suitability of the chlorides and fluorides of silver, copper, and nickel as cathode material in high energy batteries in which lithium is used as the anode material in proton-free organic solvents (specifically propylene carbonate). The results are negative because no solvents could be found having all the required properties, which are analyzed. Investigation of NiS and CuS as conducting cathode material is suggested as an alternative.

4241 ELECTRODE STRUCTURES FOR METAL/OXYGEN BATTERIES AND FUEL CELLS. Gregory, D.P. (to Energy Conversion Ltd.). British Patent 1,272,095. 26 Apr 1972. Filed date 21 Mar 1969. 4p.
FUEL CELLS;METAL-GAS BATTERIES;CATHODES; TEFLON;PVC;DIFFUSION;FABRICATION;DESIGN

4242 SOLID-STATE IONICS - SOLIDS WITH HIGH IONIC CONDUCTIVITY IN THE SYSTEMS SILVER IODIDE--SILVER OXYACID SALTS. Takahashi, T.; Ikeda, S.; Yamamoto, O. (Nagoya Univ., Japan). J. Electrochem. Soc.; 119: No. 4, 477-82(Apr 1972).
SOLIDS;IONIC CONDUCTIVITY;SILVER IODIDES; ELECTROLYTES;ELECTROCHEMISTRY;SILVER PHOSPHATES; SILVER COMPOUNDS;PYROPHOSPHATES;PHASE DIAGRAMS; ELECTRIC BATTERIES

4243 ACTIVE MATERIAL ELECTRODE AND CELL COMPRISING IMPROVED BATTERY-GRADE DIVALENT SILVER OXIDE. Tvarusko, A. (to ESB Inc.). US Patent 3,650,832. 21 Mar 1972. Filed date 12 Nov 1965. 5p.
An additive for silver oxide electrodes improves electric conductivity and/or stability in electrolyte. Selenium, tellurium, mercury, or a combination of mercury with tin or lead may be used. (RWR)

4244 HEATING DEVICE FOR VEHICLE STORAGE BATTERIES. Jordan, H.J. (to ESB Inc.). US Patent 3,649,366. 14 Mar 1972. Filed date 19 Feb 1970. 5p.
Heat is supplied by a resistive coating or a metallic foil bonded to the outside of the battery case. Power can be obtained from the vehicle or an external source. (RWR)

4245 POROUS CARBON MATERIAL FOR USE AS A BATTERY OR FUEL CELL ELECTRODE. Reed, M.W. Jr.; Schwemer, W.C. (to Advanced Tech. Center, Inc.). US Patent 3,647,551. 7 Mar 1972. Filed date 7 Nov 1966. 5p.
FUEL CELLS;CARBON;PVC;CATALYSTS;ELECTRODES; FABRICATION;ELECTRIC BATTERIES

4246 MAKING ELECTRODES FOR LEAD--ACID STORAGE BATTERIES. Anderson, J.L.; Nilsson, O.K.G. (to Aktiebolag Tudor). US Patent 3,647,548. 7 Mar 1972. Filed date 5 Jun 1970. 4p.
This electrode is of the type having several rods. The fabrication procedure is discussed. (RWR)

4247 REMOVAL OF NITRATES FROM SINTERED NICKEL STORAGE-BATTERY PLAQUES IMPREGNATED WITH NICKEL SALTS. Nervik, T. (to ESB Inc.). US Patent 3,647,547. 7 Mar 1972. Filed date 26 Aug 1970. 2p.
The presence of nitrates can be deleterious for sealed cells. A more effective procedure for removing nitrates is explained. Basically, it involves treating with solutions of potassium persulfate and then sodium acetate in sodium hydroxide before washing. (RWR)

4248 TUBULAR-TYPE POSITIVE PLATES FOR USE IN LEAD--ACID STORAGE BATTERIES. Cording, W.T. (to ESB Inc.). US Patent 3,647,546. 7 Mar 1972. Filed date 21 May 1970. 4p.
This plate design has a tight-fitting, shrinkable sleeve enclosing the tube and the spine. A multiopening sleeve of this type can surround some or all of the tubes of a single plate. (RWR)

4249 HYDRATING A BATTERY PLAQUE IMPREGNATED WITH A METAL NITRATE IN A HYDROXIDE SOLUTION AND SUBSEQUENT RECOVERY OF THE NITRATE BY-PRODUCT AS CRYSTALS. Bergum, B.C.; Svardal, P.S. (to ESB Inc.). US Patent 3,647,586. 7 Mar 1972. Filed date 22 Jan 1970. 5p.
A method for producing battery electrodes is described. Battery plaque impregnated with cadmium, cobalt, nickel, or silver nitrate is immersed in a hot, concentrated solution of an alkali metal hydroxide, which process results in precipitation of metal (Cd, Co, Ni, Ag) hydroxide within the plaque. The proper methods for handling and recycling the solutions involved to minimize losses are explained. (RWR)

4250 POROUS CARBON MATERIAL FOR USE AS A BATTERY OR FUEL CELL ELECTRODE. Reed, M.W. Jr.; Schwemer, W.C. (to Advanced Technology Center, Inc.). US Patent 3,647,551. 7 Mar 1972. Filed date 7 Nov 1966. 5p.
The preparation of a monolithic material from poly(vinylidene chloride) with a metallic activator distributed uniformly throughout is described. Electrodes made by the process explained are characterized as having good mechanical strength and are electrically conductive. (RWR)

4251 BATTERY SEPARATOR. Arrance, F.C.; Rosa, A.G. (to McDonnell Douglas Corp.). US Patent 3,647,554. 7 Mar 1972. Filed date 17 Apr 1969. 10p.
The separator described is especially useful in high-energy-density batteries with deep discharge cycles, such as Ag/Zn batteries. It consists of a rigid, porous inorganic material (e.g., ceramic) with a flexible coating or film consisting of potassium titanate in the form of short fibers and a curable organic polymer such as poly(phenylene oxide). The coating is cured

to form a porous, flexible structure. Air drying and heating finish the fabrication procedure. (RWR)

4252 USE OF PALLADIUM-CATALYZED AIR CATHODES IN A SECONDARY ZINC-AIR CELL. Thacker, R. (General Motors Corp., Warren, MI). Energy Convers.; 12: No. 1, 17-20(Mar 1972).
ZINC-AIR BATTERIES;PALLADIUM;CATALYSTS; CATHODES;NICKEL;PERFORMANCE

4253 DISPOSABLE ANODE PACKAGE. Hamlen, R.P.; Siwek, E.G. (to Dept. of the Navy). US Patent 3,645,794. 29 Feb 1972. Filed date 19 Feb 1970. 5p.
A disposable anode package for use in mechanically rechargeable metal--air batteries is described. It includes an anode, a cellophane separator, and spacing material between anode and separator. Flocculent material formed at the anode is contained, and the spent anode and its associated by-products can be readily removed. (RWR)

4254 PRODUCING POROUS METAL STRUCTURES FOR BATTERY ELECTRODES. Hein, E.R.; Veit, W.E. (to ESB Inc.). US Patent 3,645,793. 29 Feb 1972. Filed date 1 Jun 1970. 5p.
Zinc and cadmium powders were mixed (individually) with acid solutions and formed into porous electrodes by pressing. Although acetic acid was used, hydrochloric, tartaric, or benzoic acid would also be suitable. Electrodes of good strength resulted. (RWR)

4255 CYCLING BATTERY ELECTRODES IN BULK. Bergum, B.G. (to ESB Inc.). US Patent 3,644,146. 22 Feb 1972. Filed date 6 Feb 1968. 4p.
A device for charging battery electrodes is described. The device consists of two concentric rotating cylinders. An inner barrel serves as a cathode and contains positive electrodes to be regenerated. An outer barrel serves as anode connector and contains negative electrodes. (RWR)

4256 CONTINUOUS WET-PROOFING PROCESS FOR THE CROSS SECTIONS OF ELECTRODES USED IN FUEL CELLS AND HYBRID SYSTEMS. Hollax, E.; Leuschke, W.; Zimmermann, K.; Mai, E. German(GDR) Patent 88,122. 20 Feb 1972. Filed date 24 Jul 1970. 2p.
FUEL CELLS;METAL-GAS BATTERIES;CARBON; BINDERS;WATERPROOFING;ELECTRODES;FABRICATION

4257 DRY-CHARGED, STORABLE NEGATIVE PLATES FOR LEAD STORAGE BATTERIES. Ziegler, S. (to Bosch, Robert, GmbH). German(FRG) Patent 2,039,767. 17 Feb 1972. Filed date 11 Aug 1970. 7p.
After forming and setting, the plates are impregnated with a solution (suspension) of lignin or a lignin compound and then dried. (RWR)

4258 ELECTRODE FOR ELECTROCHEMICAL CELLS. Marchetto, M. (to Siemens AG). German(FRG) Patent 2,037,795. 3 Feb 1972. Filed date 30 Jul 1970. 11p.
A thin, light, nonseparable, two-layer electrode which resists damage from handling and operating conditions is described. It consists of a layer containing a uniform mixture of powdered catalyst and asbestos, covered with a protective layer of fibrous material such as asbestos. A typical catalyst is Raney nickel. A method for preparing such electrodes is discussed. (RWR)

4259 ZINC ELECTRODE CONTAINING AN ADDITIVE TO REDUCE GASSING AT THE ZINC ELECTRODE IN A HEAT-STERILIZED SILVER--ZINC ALKALINE BATTERY. Nordblom, G.F.; James, H.I. (to ESB Inc.). US Patent 3,639,176. 1 Feb 1972. Filed date 4 Sep 1968. 3p.
Sterilization of Ag/Zn batteries at 145° is detrimental to HgO, the usual additive. Since HgS can stand this treatment, zinc electrodes were prepared by mixing HgS about 1:20 with ZnO powder and compressing this mixture into a silver grid. An HgS--PbS additive is also feasible. (RWR)

4260 RANEY METAL SHEET MATERIAL FOR USE AS ELECTRODES. Goldberger, M. (to Catalytic Tech. Corp.). US Patent 3,637,437. 25 Jan 1972. Filed date 2 Nov 1964. 5p.
Aluminum alloyed with such metals as silver, nickel, platinum, iron, or cobalt is heated to just above the melting point and sprayed on an appropriate substrate to form a sheet about 0.1 mm thick. The sheets are leached with a dilute base to remove most of the aluminum. The sheets are for use in gas diffusion electrodes for fuel cells, batteries, and propulsion devices. (RWR)

4261 PREPARING LITHIUM-FILLED FORAMINOUS METAL SUBSTRATES. Hanawalt, B.D. (to Foote Mineral Co.). US Patent 3,634,144. 11 Jan 1972. Filed date 14 Jul 1970. 5p.
A method for preparing lithium battery anodes is described. A metal substrate (such as nickel) is oxidized and then dipped into a bath of molten lithium. It was found that 96% of the porous volume was filled with lithium. (RWR)

4262 METAL ELECTRODES CONTAINING ACRYLONITRILE--BUTADIENE--STYRENE COPOLYMER BINDERS. Von Sturm, F.; Naschwitz, W.; Groepel, D.; Rummel, W. (to Siemens AG). German(FRG) Patent 2,032,549. 5 Jan 1972. Filed date 1 Jul 1970. 14p.
A process for fabricating fuel-cell or electrochemical-cell electrodes consisting of Raney nickel or silver powder and asbestos coatings is described. The metal powder was mixed with an aqueous dispersion of the copolymer binder, pressed, cross-linked, and saponified. (RWR)

4263 STUDY OF LEAD-RICH PB--CD--SB ALLOYS. Rao, P.; Mao, G.W. (Gould Inc., St. Paul, MN). J. Inst. Met.; 100: 13-19(Jan 1972).
During an investigation of the lead/acid battery characteristics of some lead-rich alloys in the Pb--Sb system, the initial results revealed a maximum in tensile properties for an as-cast alloy at a composition of Pb--3.0% Cd--2.5% Sb. The ultimate tensile strength and 0.2% offset yield strength for this alloy are 72.5 MN/m² and 43.5 MN/m², respectively.

4264 EFFECT OF ELECTRODE STRUCTURES ON CAPACITY OF SEALED CELLS DURING CYCLING. Chua, D.; Diefendorf, R.J. (Rensselaer Polytechnic Inst., Troy, NY). pp 52-55 of Proceedings of the 25th power sources symposium. Red Bank, NJ; PSC Publications Committee (1972).
From 25. power source symposium; Atlantic City, New Jersey, USA (23 May 1972).

4285 (AD/A--005060) EFFECT OF COBALT ON THE CHARACTERISTICS OF LAMELLAR STRUCTURE NICKEL OXIDE ELECTRODES OPERATING IN A ZINCATE ELECTROLYTE. Kuzmin, Yu.A.; Mashevich, M.N.; Uflyand, N.Yu.; Frolova, S.P. Translated from Sb. Rab. Khim. Istochnikam Toka; 7: 163-167(1972). 9p. (FSTC-HT--23-0999-74). NTIS $3.25.
A lamellar structure nickel oxide with an additive of cobalt has stable and high efficiency for nickel (68--75 percent) in a zincate electrolyte. Replacing the nickel oxide with a metal ceramic lamellar structure electrode with cobalt additive results in a low-cost nickel-zinc storage battery; in specific characteristics it is close to cadmium-nickel and iron-nickel, with average discharge voltage exceeding the voltage of the latter by 0.4 V, that is, by 32 percent. (GRA)

4286 (AD/A--006079) EFFECT OF THE ELECTROLYTE TEMPERATURE DURING CHARGING OF PLATES ON THE CHARACTERISTICS OF ELECTRODES AND CELLS OF LEAD--ACID AUTOMOTIVE STORAGE BATTERIES. Bordt, E.F.; Novoderezhkin, V.V.; Kudzevich, Z.S. Translated from Sb. Rab. Khim. Istochnikam Toka; 7: vp.(1972). 16p. (FSTC-HT--23-1000-74). NTIS $3.25.
A study was made of the effect that increasing the initial electrolyte temperature from 20 to 40 and increasing the process-averaged temperature from 40 to 64 has on the characteristics of electrodes and automotive batteries based on these electrodes. (GRA)

4287 SOLID ELECTROLYTES FOR BATTERIES. Baukal, W. (Battelle Institut eV, Frankfurt am Main). pp 345-359 of From electrocatalysis to fuel cells. Sandstede, G. (ed.). Seattle; University of Washington Press (1972).
New types of solid electrolytes have been discovered during the last few years, and applications in new battery systems have been developed. The properties of the most important solid electrolytes are reviewed, and a tentative classification is presented. Most of the early battery systems contained silver halides as electrolyte. Modern batteries include the compounds $Ag_3SI$, $RbAg_4I_5$, LiI, $CaF_2$, and $\beta$-$Al_2O_3$. The review covers the state of development of these batteries, the problems encountered in practice with the individual systems, and their possible applications. 1 figure, 4 tables, 73 references.

4288 ANODIC OXIDATION OF SODIUM AND LITHIUM

AMALGAMS. Deprez, J.; Rialland, J.F.; Robert, J. J. Chim. Phys.; 69: No. 10, 1440-1444(1972). (In French).
Dissolving alkali metals in mercury enables reduction of the rate of their anodic oxidation in aqueous media. These amalgams can be used as anodes which result in higher power densities than more typical electrodes. Oxidation of Li and Na amalgams is discussed, along with interfering reactions. (RWR)

4289 IMPROVEMENT OF THE PRODUCTION OF CERMET ELECTRODES FOR NICKEL--CADMIUM STORAGE BATTERIES. Shul'gina, G.A. Tr. Novocherkassk. Politekh. Inst.; No. 266, 96-99(1972). (In Russian).

4291 FORMING LEAD-BASED ANODES. Ogorodnichuk, V.I.; Voitsekhovich, R.I. Otkrytiya, Izobret., Prom. Obraztsy, Tovarnye Znaki; 49: No. 6, 88(1972).
Lead-based anodes can be produced by forming a layer of lead dioxide by chemical treatment in a solution of sulfuric acid in potassium permanganate at 80 to 100°. The solution is mixed by compressed air. (RWR)

4292 MECHANISM OF THE FORMATION OF BLISTERS ON THE LEAD ELECTRODE OF THE LEAD--ACID BATTERY. Yarnell, C.F. (Bell Telephone Labs., Inc., Murray Hill, NJ). J. Electrochem. Soc.; 119: No. 1, 19-24(1972).
Charging of a lead-acid battery sometimes leads to formation of blisters on the anode. The mechanism of this process was investigated. It was found that a fissure develops between lead formed from a lead sulfate surface layer and lead in the center of the electrode. Hydrogen trapped in this fissure pushes the surface layer out to form the blister. Blistering can be eliminated in low concentrations of electrolyte. (RWR)

4293 NICKEL HYDROXIDE ELECTRODE. V. ANALYSIS AND ELECTROCHEMICAL BEHAVIOR OF CADMIUM--NICKEL--HYDROXIDES. Bode, H.; Denmstedt, W. Electrochim. Acta; 17: No. 4, 609-618(1972). (In German).
Chemical reactions of cadmium and nickel hydroxides in potassium hydroxide are discussed. (RWR)

4294 NEW WATER-ACTIVATED LEAD--ACID BATTERY CONCEPT. Amlie, R.F.; Weissman, E.Y.; Morehouse, C.K.; Qureshi, N.M. (Globe-Union, Inc., Milwaukee). J. Electrochem. Soc.; 119: No. 5, 568-571(1972).
A reserve-type lead--acid battery is based on water-soluble $H_2SO_4$ gels (with small amounts of $H_3BO_3$ and $H_3PO_4$). These gels perform well when properly prepared. Included in the discussion are performance, lifetime, and composition of the electrolyte. (RWR)

4295 HERMETIC COMPRESSION SEALS FOR ALKALINE BATTERIES. McHenry, E.J.; Hubbauer, P. (Bell Telephone Labs., Inc., Murray Hill, NJ). J. Electrochem. Soc.; 119: No. 5, 564-568(1972).
Two new types of seals were developed for use in nickel--cadmium or other alkaline batteries. One is a simpler, smaller version of an existing type of seal. The other uses an injection-molded nylon bushing. Accelerated thermal cycle tests were used to evaluate the reliability of the seals. (RWR)

4296 QUINONES AS REDOX SYSTEMS FOR OXYGEN CATHODES OR SECONDARY CELL CATHODES. Alt, H.; Binder, H.; Klempert, G.; Koehling, A.; Sandstede, G. (Farbwerke Hoechst AG, Frankfurt am Main). Chem.-Ing.-Tech.; 44: No. 4, 195-198(1972). (In German).
Chloranil and duroquinone, when mixed as solids with carbon, can serve as electrodes; they can be reduced and oxidized with only slight polarization. Electrodes made hydrophobic with teflon can be recharged with air. Quinones are stable and rechargeable in electrolytes with aprotic organic solvents. (RWR)

4297 ELECTROCHEMICAL DETERMINATION OF THE RATE OF ZINCATE DIFFUSION THROUGH A HYDRATE-CELLULOSE SEPARATOR. Mikhalenko, M.G.; Flerov, V.N. (Gorky Polytechnic Inst., USSR). Elektrokhimiya; 8: No. 1, 81-83(1972). (In Russian).
A cell was provided with a separating partition containing a 4-$cm^2$ hole covered by a hydrate-cellulose separator. With potassium hydroxide in the catholyte, the diffusion coefficient at room temperature decreased as the difference in concentration of zincate in the chamber decreased. Increasing the concentration difference first increased, then decreased the amount of zinc diffusion. Tripling the number of separator layers decreased zinc diffusion considerably. (RWR)

4298 POTENTIODYNAMIC STUDY OF THE EFFECT OF ALUMINUM ON THE BEHAVIOR OF AN IRON ELECTRODE IN ALKALINE SOLUTION. Teplinskaya, T.K.; Kochetova, T.I.; Novakovskii, A.M. (Akkumulyatornyi Inst., Leningrad). Elektrokhimiya; 8: No. 3, 380-383(1972). (In Russian).
The effect of aluminum on the charge--discharge processes of a smooth iron electrode in KOH was studied. Additional peaks appeared in the I-V curves as the concentration of Al was raised. The effect of aluminum on the iron electrode was believed to be due to a decrease in the cathodic reduction of $Fe(OH)_2$. (RWR)

4299 MECHANISM OF THE PROCESSES OF FORMATION OF LEAD--ACID BATTERY POSITIVE PLATES. Pavlov, D.; Papazov, G.; Lliev, V. (Inst. of Physical Chemistry, Sofia). J. Electrochem. Soc.; 119: No. 1, 8-19(1972).
In the first step water and sulfuric acid penetrate into the plate; tet-PbO and basic lead sulfates are converted to $PbSO_4$ and $\alpha$-$PbO_2$, which form regions that advance into the paste. In the second step water is consumed in the plate. Lead sulfate is oxidized to $\beta$-$PbO_2$, and the acid diffuses in the direction opposite to that of the first step. The rate-limiting steps of the processes are ion diffusion and migration. (RWR)

4300 1971 F. M. BECKET MEMORIAL AWARD REPORT. PRELIMINARY INVESTIGATION INTO THE BEHAVIOR OF

LEAD ALLOY ANODES IN SULFURIC AND CHROMIC ACID SOLUTIONS. Parker, T.E. (McMaster Univ., Hamilton, Ont.). J. Electrochem. Soc.; 119: No. 1, 13C-25C(1972).
Polarization was measured in dilute sulfuric acid and chromic acid for lead anodes with less than 10 wt. percent tin or antimony. Alloying with antimony decreased passive current, increased range of passivity, and lowered critical potential for passive film formation in sulfuric acid. Brightening current decreased in $CrO_3$ solution. On the other hand, alloying with tin did not improve corrosion resistance of the lead anode. (RWR)

4301 ELECTROCHEMICAL PROPERTIES OF $RbAg_4I_5$ SOLID ELECTROLYTE. II. SILVER ELECTRODE REVERSIBILITY. Scrosati, B.; Butherus, A. (Univ., Rome). J. Electrochem. Soc.; 119: No. 2, 128-133(1972).
Planar silver electrodes were found to be reversible, whereas mixed Ag--electrolyte electrodes were not. It was concluded that a practical rechargeable cell will require planar silver electrodes of very great surface area, and that the cell will have to be designed in such a way as to allow for changes in cell thickness during cycling. (RWR)

4302 CATHODIC DISCHARGE CONTROLLED BY DISSOLUTION KINETICS. Nicholson, M.M.; Iverson, M.L. (North American Rockwell Corp., Canoga Park, CA). J. Electrochem. Soc.; 119: No. 2, 133-138(1972).
The constant-current discharge of a thin-layer cathode with control of the electroactive material by dissolution and diffusion is modeled analytically. Although apparently first worked out for an electrolytic cell, the electrode configuration considered (electrode--electrolyte--planar surface) provides a model of the inner structure of a porous battery cathode. (RWR)

4303 DEVELOPMENT TRENDS IN LEAD MATERIALS. Beyer, B. (Forschungsinstitut NE-Metalle, Freiberg, Ger.). Neue Huette; 17: No. 2, 65-71(1972). (In German).
Chemical and mechanical properties and industrial uses of lead and its alloys are briefly summarized. The following topics are emphasized: lead uses in batteries and bearings, dispersion hardening of lead. (RWR)

4304 (FSTC-HT--23-0343-74) PERFORATOR OF LAMELLAR TAPES FOR ALKALINE STORAGE BATTERY ELECTRODES. Takarev, A.F.; Vdovin, Yu.V.; Gavryushov, A.N. 1972. Translation of USSR Patent 350,075. 5p. NTIS $4.00.
A mechanism for perforating the lamellar tapes used as alkaline battery electrodes is described. The device eliminates the loss of material from the tape in the punching process. This is accomplished by a roller punch and die configuration in which the die inset diameter is a tooth diameter larger than the diameter of the punch tooth.

4305 RECENT ADVANCES IN INSOLUBLE ANODES. Narasimhan, K.C.; Udupa, H.V.K. (Central Electrochemical Research Inst., Karaikudi, India). Chem. Ind. Dev.; 6: No. 2, 26-30(1972).
Review, device unspecified. ELECTRIC BATTERIES;ANODES;REVIEWS

4306 PRESSED-TYPE ALKALINE STORAGE BATTERY. V. ADDITION OF ANTIMONY TO THE NEGATIVE ACTIVE MATERIAL OF THE PRESSED-TYPE NICKEL--CADMIUM STORAGE BATTERY. Yamashita, D.; Yamamoto, Y. (Ritsumeikan Univ., Kyoto). Nippon Kagaku Kaishi; No. 2, 309-313(1972). (In Japanese).
NICKEL-CADMIUM BATTERIES;ANODES;ANTIMONY; CHEMICAL REACTIONS;ADDITIVES;CADMIUM HYDROXIDES; POLYETHYLENES;GRAIN GROWTH;CADMIUM

4307 ELECTRODES FOR USE IN ZINC--HALOGEN ELECTROLYTIC CELLS AND (OR) BATTERIES. Jenkins, J.M. (to Unigate Ltd.). British Patent 1,258,503. 30 Dec 1971. Filed date 21 Feb 1969. 8p.
This electrode consists of an anodizable metal coated with zinc, zinc alloy, or zinc salt. Ammonium chloride can be added to zinc powder to vary electrode porosity. The powder may be applied in any of several different ways. Uses of the electrode include electrolysis cells for brine and batteries for electric-powered vehicles. (RWR)

4308 BATTERY SEPARATORS MADE FROM POROUS SINTERED POLYMER MATERIALS. Hall, C.J. (to Electric Power Storage Ltd.). British Patent 1,258,404. 30 Dec 1971. Filed date 11 Nov 1968. 3p.
A method for making a battery separator is described. A layer of polymer powder is heated until it fuses into a sheet. The sheet is impregnated with a silicate solution and immersed in sulfuric acid. (RWR)

4309 FORMING RECHARGEABLE ELECTRODES UTILIZING AN UNSINTERED FLUOROCARBON BINDER. Rampel, G. (to General Electric Co.). US Patent 3,630,781. 28 Dec 1971. Filed date 13 Jul 1968. 5p.
A method for fabricating electrodes which involves teflon is described. An aqueous dispersion is mixed with the desired electrochemically active material such as zinc or its oxide, cadmium or its oxide, copper or its oxide, silver or its oxide, nickel oxide, etc. After the dispersion is broken, the mixture can be spread on a current collector of such metal as copper. (RWR)

4310 RESERVE BATTERY ELECTRODES USING BONDED ACTIVE MATERIALS. Kilduff, T.J. (to Secretary of the Army). US Patent 3,629,007. 21 Dec 1971. Filed date 6 Aug 1969. 5p.
ELECTRIC BATTERIES;ELECTRODES;FABRICATION; PLASTICS;LAYERS;BONDING;LEAD-ACID BATTERIES

4311 IONENE MEMBRANE SEPARATOR. Moacanin, J.; Tom, H.Y. (to National Aeronautics and Space Administration). US Patent 3,629,161. 21 Dec 1971. Filed date 24 Sep 1969. 3p.
A water-insoluble, permselective membrane was prepared by grafting PVA with a N,N,N',N'-tetramethylhexaonediamine-1,6-dibromohexene copolymer in an aqueous solution containing tetrachloro-o-benzoquinone. The membrane does not swell in water. (RWR)

4312 RESERVE BATTERY ELECTRODES USING BONDED ACTIVE MATERIALS. Kilduff, T.J. (to Dept. of the Army). US Patent 3,629,007. 21 Dec 1971. Filed date 6 Aug 1969. 6p.
Electrodes are fabricated by coating a metal support with a noncorrodible, conducting material, and coating this with the active material. Several methods for applying the coating are discussed. (RWR)

4313 POSITIVE PLATES FOR LEAD--ACID STORAGE

BATTERY CELLS. Hill, S. (to ESB Inc.). US Patent 3,629,006. 21 Dec 1971. Filed date 16 Apr 1970. 3p.
Battery plates are preformed in a weak electrolyte solution, and formation is completed in a strongly alkaline solution. Plates so produced have active materials of almost entirely $\alpha$-$PbO_2$. (RWR)

4314 PRODUCING BETA-ALUMINA ELECTROLYTES. Charles, R.J.; Mitoff, S.P.; Morris, W.G. (to General Electric Co.). US Patent 3,625,773. 7 Dec 1971. Filed date 17 Dec 1969. 3p.
2% MgO was mixed with sodium $\beta$ alumina, and the mixture was formed in a die at 25 kpsi. The resulting material had a resistivity of 12 to 25 $\Omega$-cm at 300°. (RWR)

4315 ELECTRODE--SEPARATOR COMBINATION FOR USE IN BATTERIES. (to McDonnell Douglas Corp.). US Patent 3,625,772. 7 Dec 1971. Filed date 30 Aug 1966. 6p.
The electrode is positioned symmetrically and between two rigid, porous separators of inorganic material which are slightly larger than the electrode to allow for sealing with epoxy around the edges. (RWR)

4316 BATTERY ELECTRODE MATRIXES. Arrance, F.C.; Rosa, A.G. (to McDonnell Douglas Corp.). US Patent 3,625,765. 7 Dec 1971. Filed date 22 Jul 1969. 8p.
A sponge-like material is impregnated with a slurry containing a conducting active anode material and a plastic binder. The electrode made from this material is heated to increasingly high temperatures. The porous matrix which remains can itself be used as an electrode, or its pores can be filled with active material. (RWR)

4317 FLEXIBLE, POROUS BATTERY SEPARATOR. Arrance, F.C.; Rosa, A.G. (to McDonnell Douglas Corp.). US Patent 3,625,771. 7 Dec 1971. Filed date 27 Mar 1969. 12p.
Porous particulate inorganic matter, short-fiber potassium titanate particles, a curable organic polymer, and an organic compound derived from organic acids are mixed. The mixture is dissolved in a volatile solvent, spread on a support, and cured. The film can be applied directly on a battery electrode, cast as a free film or coated on a flexible matrix. (RWR)

4318 FLEXIBLE MATRIX AND BATTERY SEPARATOR EMBODYING IT. Arrance, F.C.; Rosa, A.G. (to McDonnell Douglas Corp.). US Patent 3,625,770. 7 Dec 1971. Filed date 2 Jun 1969. 10p.
The separator is made by immersing a mat of chrysotile asbestos in a 13% solution of poly(phenylene oxide) at 150°F. The results is dip-coated with an inorganic separator material. The product has improved resistance to potassium hydroxide. (RWR)

4319 QUINONE ELECTRODES FOR PRIMARY AND SECONDARY BATTERIES. Alt, H.; Koehling, A.; Von Benda, K.; Sandstede, G.; Binder, H. (to Battelle-Institut e.V.). German(FRG) Patent 2,024,724. 25 Nov 1971. Filed date 15 May 1970. 9p.
ELECTRIC BATTERIES;ELECTRODES;QUINONES

4320 FAST-RECHARGEABLE SEALED NICKEL--CADMIUM BATTERY CELLS COMBINED WITH EXCESS PRESSURE AND TEMPERATURE CONTROLS. Belove, L. (to Sonotone Corp.). US Patent 3,622,397. 23 Nov 1971. Filed date 12 Mar 1968. 10p.
Temperature- and pressure-sensitive switches cut off battery charging current if preset levels are exceeded. A resealable, pressure-responsive vent is also described. (RWR)

4321 NEGATIVE COBALT-POWDER ELECTRODES FOR ALKALINE STORAGE BATTERIES. Schilling, H.H. German(FRG) Patent 2,018,635. 11 Nov 1971. Filed date 18 Apr 1970. 10p.
A method for fabricating electrodes by filling porous containers with cobalt powder to a predetermined vibration density is discussed. A capacity of 0.6 Ah/g of cobalt was found. (RWR)

4322 CHARGING SECONDARY METAL--AIR CELLS. Moran, P.J. (to General Electric Co.). US Patent 3,619,297. 9 Nov 1971. Filed date 26 Jun 1969. 4p.
The electrode described has an electrically conducting substrate impregnated with metal catalyst and a porous, conducting sheet near but insulated from the substrate. Porous separators may be positioned between the substrate and the sheet. (RWR)

4323 SINTERED ZINC ELECTRODE. Arrance, F.C.; Berger, C. (to McDonnell Douglas Corp.). US Patent 3,617,592. 2 Nov 1971. Filed date 1 Apr 1966. 4p.
The electrode described was fabricated by compacting a 3:1 mixture of calcined and uncalcined zinc oxide at 2 to 10 kpsi, sintering the mixture at 600 to 1450°, and electrically converting it to zinc. This ceramic-like electrode was intended for high-energy-density alkaline batteries like the Ag/Zn battery. (RWR)

4324 INTENSIFYING THE PROCESS OF LAMELLAE FORMATION FOR LEAD BATTERIES. Penchev, P.R.; Kolev, S.N.; Gishin, S.S.; Ivanov, S.V.; Stanev, V.I. Elektrotekhnika; No. 11, 58-59(Nov 1971). (In Russian).
Results of investigating the intensification of the electrolytic lamellae (electrodes) formation process for lead batteries are presented. It is shown that by switching the current periodically to the opposite polarity it is possible to increase the current density of formation and significantly shorten the process time.

4325 SEPARATOR FOR A DRY-CHARGE LEAD STORAGE BATTERY. Lauck, H. (to Varta AG). German(FRG) Patent 2,018,472. 28 Oct 1971. Filed date 17 Apr 1970. 9p.
A sintered membrane, this separator was fabricated from a mixture of a powdered thermoplastic and a gel-forming powdered synthetic resin. The material was impregnated with concentrated sulfuric acid. (RWR)

4326 DRY-CHARGE ELECTRODES FOR LEAD STORAGE BATTERIES. Flechsig, E.; Ziegler, S. (to Bosch, Robert, GmbH). German(FRG) Patent 2,018,499. 28 Oct 1971. Filed date 17 Apr 1970. 11p.
Electrodes were prepared by adding resin derivates to the electrode plate active mass. The alkyl resin Collidin MC3 worked successfully. Abietic acid and several of its esters were also used, with favorable results. (RWR)

4327 NICKEL ELECTRODE FOR AN ALKALINE BATTERY. Jost, E.M. (to Texas Instruments Inc.). US Patent 3,615,833. 26 Oct 1971. Filed date 12 Apr 1967. 5p.
A method for fabricating a positive nickel electrode is described. (RWR)

4328 LEAD OXIDE SULFURIC ACID BATTERY HAVING A POSITIVE ELECTRODE COMPRISING A TITANIUM--MOLYBDENUM--ZIRCONIUM ALLOY GRID. Ruben, S. US Patent 3,615,831. 26 Oct 1971. Filed date 18 Feb 1969. 4p.
The cathode described has a grid of β-Ti--Mo--Zr alloy (>75% Ti). The grid has a nonpolarizing gold coating covered with the active lead oxide. The method of fabrication is discussed. $TiOSO_4$ was added to improve lifetime and localized attack. (RWR)

4329 BATTERY SEPARATOR FOR ALKALINE STORAGE BATTERIES. Wetherell, T.J. (to High Energy Processing Corp.). US Patent 3,615,865. 26 Oct 1971. Filed date 26 Jan 1969. 2p.
This separator is composed of a matted web of polymeric fibers, a polymeric saturant, and a coating of acrylic or methacrylic acid. The saturant and coating are irradiated to cross-link them. (RWR)

4330 ZINC ADDITIVE IN NICKEL--CADMIUM CELLS. Johnson, D.H. (to Union Carbide Corp.). US Patent 3,615,830. 26 Oct 1971. Filed date 13 Aug 1969. 5p.
The performance of NiCd batteries was improved by pressing zinc and ZnO into the $Ni(OH)_2$ cathode. (RWR)

4331 BATTERY PASTE EXPANDER MATERIAL. Limbert, J.L.; Procter, H.G.; Poe, D.T. (to General Motors Corp.). US Patent 3,615,788. 26 Oct 1971. Filed date 30 Oct 1969. 4p.
Battery paste expander material for the negative plate of a lead--acid storage battery had the following composition: finely divided carbon; barium sulfate; lignosulfonic acid; sulfur; carbohydrates; and $Ca^{2+}$, $Na^+$, and $NH_4^+$ ions. (RWR)

4332 ELECTROLYTE FOR ACTIVATING A METAL FOIL. Turner, T.S.; Whittle, J.E. (to International Nickel Ltd.). German(FRG) Patent 2,004,469. 21 Oct 1971. Filed date 31 Jan 1970. 5p.
Foils for alkaline storage batteries can be activated with a solution made by adding an ammonium salt to a Ni-amine complex electrolyte. (RWR)

4333 ELECTRODES FOR ELECTROCHEMICAL CELLS. (to Kombinat VEB Galvanische Elemente). French Patent 2,064,666. 27 Aug 1971. Filed date 9 Oct 1969. 6p.
The outer surface of this electrode consists of a layer of nickel powder in solified poly(vinyl acetate). (RWR)

4334 NICKEL HYDROXIDE ELECTRODE. Wagner, O.C.; Sulkes, M.J. (to Dept. of the Army). US Patent 3,597,829. 10 Aug 1971. Filed date 18 May 1969. 2p.
The preparation of an electrode for use in an alkaline nickel battery is described. A nickel hydroxide dispersion is embedded into a nickel foam matrix, dried, and pressed. (RWR)

4335 FERRITE-BASED ACTIVE MATERIAL FOR ALKALINE STORAGE BATTERY NEGATIVE ELECTRODES. Labat, J.; Jarrousseau, J.C. (to Societe des Accumulateurs Fixes et de Traction). French Patent 2,058,489. 2 Jul 1971. Filed date 10 Sep 1969. 7p.
Methods for preparing $CdFe_2O_4$ and $CuFe_2O_4$ are described. Their use results in batteries with higher capacity than those made with iron oxides. (RWR)

4336 ELECTRODES BASED ON COPPER(II) SULFIDE. Dechenaux, V.; Gerbier, G. (to Societe des Accumulateurs Fixes et de Traction). French Patent 2,053,662. 21 May 1971. Filed date 11 Jul 1969. 6p.
The electrodes were prepared by sulfiding powdered copper in two steps. Acetylene black or flake nickel were added to increase conductivity. These electrodes had a capacity of 205 Wh/kg when discharged over 40 hours in a battery with a lithium anode. (RWR)

4337 ELECTRODES FOR ELECTROCHEMICAL CELLS, COMPRISING METAL CHLORIDES AS ACTIVE MATERIAL. Gabano, J.P. (to Societe des Accumulateurs Fixes et de Traction). French Patent 2,052,244. 14 May 1971. Filed date 31 Jul 1969. 7p.
A method for forming CuCl or AgCl electrodes in situ is described; the appropriate metal is reacted with $SOCl_2$. (RWR)

4338 SEPARATORS FOR ELECTROCHEMICAL CELLS. Arrance, F.C. (to McDonnell Douglas Corp.). French Patent 2,050,884. 7 May 1971. Filed date 27 Jun 1969. 17p.
High-strength, low-resistance inorganic separators can be made from mixtures of $FeCr_2O_4$, $MnO_2$, serpentine, dolomite, and bauxite. A stable solid solution of a spinel is formed. The mixture is ground, mixed with wax, and formed into plates which are fused by heating. Characteristics of the plates are given. Silver or zinc batteries with this separator have capacities of 220 to 308 Wh/kg. (RWR)

4339 ELECTRICAL CONDUCTIVITY MEASUREMENTS IN ANHYDROUS HYDROGEN FLUORIDE. Clark, R.P.; Moser, J.R. (Sandia Labs., Albuquerque, NM). J. Electrochem. Soc.; 118: No. 4, 666-9(Apr 1971).
LiF, NaF, $KF.2H_2O$, $SrF_3$, $KNO_3$. HYDROFLUORIC ACID;ELECTRIC CONDUCTIVITY;LITHIUM FLUORIDES; SODIUM FLUORIDES;POTASSIUM FLUORIDES;STRONTIUM FLUORIDES;POTASSIUM NITRATES;LOW TEMPERATURE; QUANTITY RATIO;TEMPERATURE DEPENDENCE; ELECTROCHEMISTRY;ELECTRIC BATTERIES; ELECTROLYTES

4340 CHANGES IN CELLULOSE-BASE SEPARATORS DURING USE IN SILVER--ZINC ELECTRIC BATTERIES. Jovanovic, S.; Rakin, P.; Vojnovic, M. Metalloberflaeche; 25: No. 3, 90-94(Mar 1971). (In German).
The distribution of silver and zinc on the different layers of Ag--Zn separator were determined after different periods of service, and the degree of polymerization of the separator cellophane was analyzed. Zinc metallization was found on all layers, whereas silver metallization occurred mainly next to the positive electrode. Cellophane degradation (considered to be negligible) is analyzed as the combined effect of alkaline hydrolysis and silver salt oxidation.

4341 CATALYST FOR THE REACTION OF HYDROGEN

AND OXYGEN. Tsubota, S. (to Japan Storage Battery Co., Ltd.). Japanese Patent 1971-07,581. 25 Feb 1971. Filed date 25 Feb 1967. 3p.

A palladium catalyst for the recombination of H and O in storage batteries is discussed. A means for chemical preparation of this catalyst is set forth. This catalyst has a higher activity than conventional catalysts. (RWR)

4342 ACTIVE CARBON-PARAFFIN ELECTRODE. Grangaard, D.H. (to Kimberly-Clark Corp.). French Patent 2,044,461. 19 Feb 1971. Filed date 21 May 1969. 12p.

Electrodes used as cathodes in secondary batteries with nickel anodes and NaOH electrolyte are described. They are made by compressing a carbon--paraffin mixture at approximately 160° under 18 to 70 kg/cm² pressure. These electrodes are easily regenerated by exposure to air which is blown past them. (RWR)

4343 CADMIUM-CONTAINING ACTIVE MATERIAL FOR NEGATIVE ELECTRODES OF ALKALINE STORAGE BATTERIES. Ackermann, R.; Unger, D.; Kretzschmar, J.; Flemming, W.; Hofmann, H.; Bauer, R.; Wiesenhuetter, J.; Schwabe, L. German(GDR) Patent 79,519. 5 Feb 1971. Filed date 14 Apr 1969. 3p.

A method for preparing cadmium-containing active material is described. An electrode made from this material showed a current capacity of 215 Ah/kg after the first charging cycle. (RWR)

4344 EFFECT OF SURFACE-ACTIVE ADDITIONS ON THE POLARIZATION DISTRIBUTION IN THE DEPTH OF POROUS ELECTRODES. Aguf, I.A. Elektrotekhnika; No. 2, 55-56(Feb 1971). (In Russian).

The analysis presented is applied to the case where the speed of adsorption of the surface-active materials affecting the potential distribution is limited by the ionization of the responding particles. Equations are derived to show that the uniformity of the operation of the negative electrode of the lead storage battery can be improved by use of the anion-active additions.

4345 BEHAVIOR OF SOME SURFACE-ACTIVE MATERIALS IN THE LEAD STORAGE BATTERIES. Manoim, G.I.; Dasoyan, M.A.; Novoderezhkin, V.V. Elektrotekhnika; No. 1, 52-56(Jan 1971). (In Russian).

Some materials are investigated used in the batteries as depassivators of the negative electrodes (''expanders''). The possibility of their combination with the inhibitors of the lead oxidation drying with air--α-oxynaphthenic acid is also studied, as well as the solubility of the surface-active materials in water. The effect is shown of the surface-active materials on the development of the negative electrode surface during cycling, and upon the speed of sedimentation of the lead dioxide suspension in sulfuric acid.

4346 KINETICS OF DECOMPOSITION OF THE ACTIVE MATERIAL IN SILVER OXIDE ELECTRODES OF CHEMICAL SOURCES OF CURRENT. Kotousov, S.G.; Arkhangel'skaya, Z.P.; Berezina, N.V. J. Appl. Chem. USSR (Engl. Transl.); 44: No. 1, 189-191(Jan 1971).

Translated from Zh. Prikl. Khim.; 44: No. 1, 195-198(Jan 1971).

Constancy of the phase composition of the silver oxide electrodes is the decisive factor in the shelf life of dry-charged silver--zinc cells. The character of the variation of the AgO decomposition rate with time at 20 to 70°C depends on the structure and composition of the active material in the charged electrode and on the oxygen content of the ambient gaseous medium. Higher stability is attained if $Ag_2O$ is used as the original component in the active material and the electrodes are stored in the sealed state. Inclusions of metallic silver in the active material accelerate decompositions of AgO. The efficiency of a cell with silver oxide electrodes after prolonged storage (10 y) can be determined by accelerated storage tests at 50°C for 3 months.

4347 EFFICIENCY OF A CADMIUM ELECTRODE IN A SILVER--CADMIUM BATTERY WITH DIFFERENT DEGREES OF CHARGE. Papazova, E.I.; Nikol'skii, V.A.; Andreeva, G.P.; Berkman, E.A. Sb. Rab. Khim. Istoh. Toka, Nauch.-Issled. Akkumul. Inst.; No. 6, 134-41(1971).

4352 (AD/A--005978) AUTOMATIC CHARGE--DISCHARGE DEVICE FOR TESTING STORAGE BATTERIES. Koshmin, V.P. Translated from Sb. Rab. Khim. Istochnikam Toka; No. 6, 247-254(1971). 16p. (FSTC-HT--23-173-75). NTIS $3.25.

The article gives a description of and specifications for AZRU-17-0,8, an automatic charge-discharge device. It is used for charging and discharging various kinds of storage batteries with nominal voltages from 12-24 volts and charge currents up to 1.5 a. Discharge current ranges from 0.5 to 10 a. Charging takes place in two steps: first, charge current is stabilized; then, current decreases while charge voltage is stabilized. (GRA)

4353 INVESTIGATION ON FLOATING VOLTAGE OF LEAD--ACID STORAGE BATTERIES. Sada, S.; Haraguchi, S. Rev. Electr. Commun. Lab. (Tokyo); 19: No. 1-2, 99-107(1971).
It was found that the optimum floating charge-voltage for batteries using a 1.215 specific gravity electrolyte is 2.16 V per cell, that the optimum floating charge for specific gravity 1.240 electrolyte batteries is 2.18 V per cell, and that their allowable voltage range is plus or minus 2 percent.

4354 ACTIVE MASS OF THE NICKEL OXIDE ELECTRODE FOR AN ALKALINE STORAGE BATTERY. Shapot, M.B.; Gershman, M.B.; Margolin, E.G. (Accumulator Plant, Leningrad). Izobret., Prom. Obraztsy, Tovarnye Znaki; 48: No. 36, 170(1971).
A method for preparing the active material of a nickel oxide electrode is discussed. Precipitation of cobalt hydroxide is followed by precipitation of nickel hydroxide. The product is filtered, dried, washed, dried again, and ground. (RWR)

4355 ACTIVE SUBSTANCE FOR THE NICKEL OXIDE ELECTRODE OF AN ALKALINE STORAGE BATTERY. Novakovskii, A.M.; Gorkhovikova, L.V.; Drachev, G.G. Otkrytiya, Izobret., Prom. Obraztsy, Tovarnye Znaki; 48: No. 31, 197(1971).
A procedure for preparing the active material for a nickel oxide electrode is discussed. Nickel hydroxide was mixed with graphite and a coated cobalt additive. (RWR)

4356 EXPANDER FOR THE NEGATIVE ELECTRODE OF A LEAD--ACID STORAGE BATTERY. Sapotnitskii, S.A.; Kryukova, L.I.; Yampol'skaya, E.G.; Smirnova, I.A.; Ershova, M.I.; Belodubrovskii, R.B. Otkrytiya, Izobret., Prom. Obraztsy, Tovarnye Znaki; 48: No. 31, 197(1971).
A procedure for preparing an expander is discussed. Lignosulfonates obtained by passing a liquid through a cation exchanger with barium-containing compounds were treated. (RWR)

4357 EXPANDER FOR THE NEGATIVE ELECTRODE OF A LEAD--ACID STORAGE BATTERY. Sapotnitskii, S.A.; Kryukova, L.I.; Yampol'skaya, E.G.; Smirnova, I.A.; Ershova, M.I.; Belodubrovskii, R.B. Otkrytiya, Izobret., Prom. Obraztsy, Tovarnye Znaki; 48: No. 31, 196(1971).
A procedure for preparing an expander is outlined. Lignosulfonic acid is treated with phenols, then mixed with barium sulfate and heated for several hours at about 125° and three atmospheres pressure. (RWR)

4358 MOLYBDENUM TRIOXIDE, A NEW ELECTRODE MATERIAL FOR NONAQUEOUS SECONDARY BATTERY APPLICATIONS. Campanella, L.; Pistoia, G. (Univ., Rome). J. Electrochem. Soc.; 118: No. 12, 1905-1908(1971).
The behavior of $MoO_3$ in $LiAlCl_4$--butyrolactone (I) indicated good cathodic efficiency, low polarization, and low solubility. The redox process was reversible. The results were favorable for use of $MoO_3$ as positive electrode material. (RWR)

4359 POLARIZATION CHARACTERISTICS OF ALLOYED LEAD ANODES. Zubarovskii, A.I.; Kalinovskii, E.A.; Nikiforov, A.F.; Stender, V.V. (Chemical-Technical Inst., Dnepropetrovsk, USSR). Khim. Tekhnol. (Kharkov); No. 17, 94-100(1971). (In Russian).
Polarization curves were measured for lead and lead base alloys in sulfuric acid. For alloys with 0.5 to 20 percent Ag, Ag oxidation was accompanied by transfer of $Ag^+$ ions into solution. The significance of surface conditions was discussed. Results for alloys with 1 to 20 percent Tl are also shown. (RWR)

4360 MODULATION-SPECTROSCOPIC INVESTIGATIONS ON NICKEL ELECTRODES. Gobrecht, H.; Paatsch, W.; Thull, R. (Univ., Berlin). Ber. Bunsenges. Phys. Chem.; 75: No. 12, 1353-1357(1971). (In German).
An optical electrical method to determine the change of the structure of semiconducting passive layers on nickel electrodes is described. Modulated reflection from a passive nickel electrode provides information on the structure of the layer in the potential region between first and second passivity. (RWR)

4361 SWELLING OF THE ACTIVE POSITIVE MATERIAL IN A NICKEL--CADMIUM ALKALINE STORAGE BATTERY. Wojciak, W.; Paszkiewicz, M.; Konopinski, W. (Univ., Poznan, Poland). Poznan. Tow. Przyj. Nauk Pr. Kom. Mat.-Przyr.; 12: No. 5, 333-341(1971). (In Polish).
Investigation showed that the swelling was caused by the increased volume of the phase agglutinating $Ni(OH)_2$ crystallites; the size of the crystallites themselves did not change. (RWR)

4362 SCANNING ELECTRON MICROSCOPE AS A TOOL FOR BATTERY PLATE RESEARCH. Hughel, T.J.; Hammar, R.H. (General Motors Research Lab., Warren, MI). pp 35-59 of Seventh symposium on research and development of non-mechanical and electrical power sources. Collins, D.H. (ed.). Newcastle upon Tyne, Eng.; Oriel Press (1971).
An ''intertwined'' structure was seen in unformed positive plates. It was thought to be tetrabasic $PbSO_4$. On formed negative plates an open dendritic structure was seen. (RWR)

4363 ELECTROCHEMICAL PROPERTIES OF NICKEL HYDROXIDE ELECTRODES. MacArthur, D.M. pp 91-118 of Seventh symposium on research and development of non-mechanical and electrical power sources. Collins, D.H. (ed.). Newcastle upon Tyne, Eng.; Oriel Press (1971).
Reaction processes taking place at hydrated nickel hydroxide electrodes were studied with sintered and film-type electrodes. There was no significant difference between chemical and electrochemical precipitation methods of electrode impregnation. Overcharge, especially at high rates was detrimental. (RWR)

4364 ELECTRICAL CONDUCTIVITY OF ELECTROLYTES USED IN ALKALINE STORAGE CELLS. Antonenko, P.A.; Barsukov, V.Z.; Sagoyan, L.N. (Dnepropetrovsk Chemical-Technology Inst., USSR). Khim. Tekhnol. (Kharkov); No. 23, 42-44(1971).
Use of a colloidal-liquid junction as a simple dc method for measuring the electric

conductivity of KOH, NaOH, LiOH, and KOH + LiOH solutions over a wide temperature range is explained. Concentrations ranged from 3 to 9N; temperature, from -40 to +50°. (RWR)

4365 GAS EVOLUTION STUDIES WITH POWDER COMPACT ZINC ANODES. Ramasamy, N.; Sarangapani, S.; Nityanandan, J.P.; Venkatesan, S.; Aravamuthan, V. (Central Electrochemical Research Inst., Karaikudi, India). Corros. Sci.; 11: No. 11, 873-884(1971).
The corrosion behavior of anode materials was studied to determine effects of electrolyte composition, nature of the zinc anode, type of substrate, and role of inhibitors. It is concluded that a compromise must be reached between optimum performance and anode corrosion. (RWR)

4366 THERMODYNAMIC STUDY OF LITHIUM METAL--ORGANIC ELECTROLYTE BATTERIES. Caiola, A.; Guy, H.; Sohm, J.C. (Ecole Electrochemistry, Grenoble, France). Entropie; No. 40, 24-34(1971). (In French).
Entropy and enthalpy were calculated for lithium--metallic salt pairs to be used in high energy-density storage batteries. Salts considered as a positive electrode were $VF_3$, $CrF_3$, $CrF_2$, $MnF_2$, $FeF_2$, $CoF_2$, $NiF_2$, $CuF_2$, $ZnF_2$, $MoF_3$, $AgF_2$, $SnF_4$, $CrCl_3$, $CuCl_2$, $MoCl_5$, $MoCl_3$, $WCl_6$, $CuSO_4$, $FeS_2$, $CoS_2$, $Co_3S_4$, $NiS_2$, CuS, $MoS_3$, $NiCO_3$, $CoCO_3$, $Cu(HCO_2)_2$, and $CuC_2O_4$. (RWR)

4367 EFFECT OF OP-45 ADDITIVES AND A COPOLYMER OF STYRENE WITH MALEIC ANHYDRIDE ON THE PROPERTIES OF A ZINC ELECTRODE IN ALKALINE SOLUTIONS. Mikhalenko, M.G.; Flerov, V.N. (Gorky Polytechnic Inst., USSR). Izv. Vyssh. Uchebn. Zaved., Khim. Khim. Tekhnol.; 14: No. 12, 1876-1879(1971). (In Russian).
Passivation of large block zinc anodes can be inhibited by styrene--maleic anhydride copolymers or OP-45. These substances also retard aging of zincate solutions and inhibit corrosion of powdered zinc electrodes in Ni/Zn batteries, although they accelerate corrosion of zinc in alkaline solutions low in zinc content. (RWR)

4368 QUINONES AS RECHARGEABLE AND REGENERABLE BATTERY CATHODE AND MATERIALS. Alt, H.; Binder, H.; Koehling, A.; Sandstede, G. (Battelle Inst. eV., Frankfurt am Main). J. Electrochem. Soc.; 118: No. 12, 1950-1953(1971).
Quinones were found to be suitable cathode materials for Zn/air cells and secondary batteries. Volt--amp curves showed reversible behavior for electrodes of chloranil and graphitized carbon. The quinones can be rapidly regenerated with air or oxygen. Duroquinone was also investigated. (RWR)

4369 ACID-RESISTANT GLASS FIBER FOR BATTERY SEPARATORS. Simova, V.; Ruseva, V. Stroit. Mater. Silik. Prom-st.; 12: No. 11, 27-29(1971). (In Bulgarian).
Optimum composition for these glass-cloth separators was 68 percent $SiO_2$, 3 percent $Al_2O_3$, 8.5 percent CaO, 2.5 percent MgO, 13 percent $Na_2O$, and 5 percent ZnO. The glass was fused at 1450° and drawn at about 1100°. (RWR)

4370 PERFORMANCE OF BETA-ALUMINA CERAMIC ELECTROLYTE IN SODIUM--SULFUR CELLS. Miles, L.J.; Wynn Jones, I. (Electric Council Research Center, Capenhurst, Eng.). pp 245-264 of Seventh international symposium on power sources. III. Collins, D.H. (ed.). Newcastle upon Tyne, Eng.; Oriel Press (1971).
Preparation was by zone sintering at 1600 to 900°. A 30-A Na/S cell was made with an electrolyte of about 100 $cm^2$ active area. At 300 to 90° the discharge performance was limited predominantly by the conductivity of the electrolyte. About 20% of the internal voltage drop resulted from polarization phenomena. (RWR)

4371 BATTERY SEPARATOR MATERIALS. Lander, J.J. (Air Force Aero-Propulsion Lab., Wright-Patterson AFB, OH). SAMPE Q.; 3: No. 1, 27-31(1971).
BATTERY SEPARATORS;MATERIALS;REVIEWS

4372 HYDROPHILIC TREATMENT FOR HYDROPHOBIC GAS ELECTRODES. Witherspoon, R.R. (to General Motors Corp.). US Patent 3,779,812. 2 Nov 1970. 7p.
The effective internal reactive surface area of gas electrodes can be increased by coating the electrodes with an alkaline earth metal carboxylate and then converting the carboxylate to its corresponding oxide or hydroxide. Electrodes were fabricated and brushed with a solution of hydrated magnesium acetate dissolved in aqueous isopropyl alcohol. The treated electrodes stabilized in 5 minutes during test, while the untreated ones took 2 hours, at 500 $mA/cm^2$. (RWR)

4373 RECENT PROGRESS IN THE DEVELOPMENT OF SOLID ELECTROLYTE BATTERIES. Hull, M.N. (US Army Electronics Command, Fort Monmouth, NJ). Energy Convers.; 10: No. 4, 215-26(Nov 1970).
ELECTRIC BATTERIES;ELECTROLYTES;SOLIDS; ELECTRIC CONDUCTIVITY

4374 RECTIFIER ASSEMBLY FOR AUTOMOBILE ALTERNATORS. Suenaga, M. (Tokyo Shibaura Electric Co., Ltd., Kawasaki, Japan); Machii, T.; Agawa, Y.; Sawano, T. Toshiba Rev., Int. Ed.; No. 51, 23-27(Nov 1970).
A three-phase, full-wave rectifying circuit called the rectifier assembly is mechanically sturdy because it is free of any soldered leads. It is also moisture resistant through any epoxy resin hermetic seal. The features, manufacturing process, and performance of the rectifier assembly are described.

4375 POWER FOR PORTABLES. Chase, R.F. (General Electric Co., Lynchburg, VA). IEEE Trans. Veh. Technol.; VT-19: No. 4, 248-251(Nov 1970).
A battery charger for mobile two-way radio power supplies is described. The use of a two-level charger with voltage sensing results in lower thermal stress on the battery during a 14- to 16-hr recharge cycle. It also provides information for the user on the state of charge of the battery.

4376 ROLE OF POROSITY IN THE MODERN TECHNOLOGY OF BATTERIES. Euler, K.J. (Varta AG, Hanover). Bull. Schweiz. Elektrotech. Ver.; 61: No. 22, 1054-1058(31 Oct 1970). (In French).
The study is concerned with energy generation in the positive plates of lead and steel storage batteries and dry cells, and the phenomena dependent on their porous structure. During the discharge of the $Pb_2$ plates, $PbSO_4$ elements are formed at the pore ends. The spatial distribution of the electrochemical

phenomena is shown to change very slowly during battery charging and discharging. The polyporous systems in the dry cells are analyzed to show that, for locally dependent porosity, even thick electrodes may evenly discharge.

4377 RECHARGEABLE GALVANIC CELL AND ELECTROLYTE THEREFOR-II. Lee, R.S. (to Union Carbide Corp.). US Patent 3,944,430. 18 Sep 1970. vp.
A rechargeable galvanic cell includes a zinc anode, a cathode, and an electrolyte. The electrolyte comprises an aqueous solution containing soluble zinc and a quaternary ammonium compound in an amount sufficient to suppress formation of dendrites on the zinc anode during charging of the cell, the amount being a concentration of the quaternary ammonium compound in the electrolyte within the range of from about 5 x $10^{-4}$ molar to about 5 x $10^{-1}$ molar.

4378 NEGATIVE PLATES FOR DRY-CHARGED LEAD STORAGE BATTERIES. Fiedler, V.; Malikova, V.; Weber, H. Czech Patent 138,199. 15 Sep 1970. Filed date 4 Sep 1967. 3p.
Impregnation of negative plates with acid solutions of sulfomethylated tannins was found to improve the charging properties at low temperatures. Methods for synthesizing tannins are described. Charging capacity at 0° was 7.3A. (RWR)

4379 POSITIVE GRID DESIGN PRINCIPLES. Cannone, A.G.; Feder, D.O.; Biagetti, R.V. Bell Syst. Tech. J.; 49: No. 7, 1279-1303(Sep 1970).
Accelerated test data which show the superior anodic corrosion and growth behavior of pure lead as compared to lead--calcium and lead--antimony positive grids for lead--acid batteries in float service are presented. A novel grid design concept has been developed and applied to the design of pure lead circular grids. Batteries incorporating these circular grids increase in capacity with age rather than decrease in capacity as do rectangular grids.

4380 POLYVINYL CHLORIDE BATTERY JARS AND COVERS. Huseby, T.W.; Ryan, J.T.; Hubbauer, P. Bell Syst. Tech. J.; 49: No. 7, 1359-1376(Sep 1970).
A detailed materials engineering evaluation of low-cost, high-impact, structurally modified rigid polyvinyl chloride (PVC) has demonstrated that battery jars and covers can be molded from PVC in conventional equipment. The battery jars are flame resistant, transparent, and sufficiently tough to withstand considerable abuse without cracking.

4381 TECHNIQUES FOR BONDING THE POSITIVE PLATES. Cushman, R.H. Bell Syst. Tech. J.; 49: No. 7, 1419-1446(Sep 1970).
Two fusion-bonding processes have been devised for bonding adjacent curved- or flat-lead lugs of the positive plates used in a new lead--acid battery.

4382 ELECTROCHEMICAL COMPATIBILITY OF PLASTICS. Butherus, A.D.; Lindenberger, W.S.; Vaccaro, F.J. Bell Syst. Tech. J.; 49: No. 7, 1377-1392(Sep 1970).
An accelerated test method is described by which the extraction rate of organic residues from the plastic container of a storage battery into the cell electrolyte is predicted, and the electrochemical effects of these residues is determined.

4383 POST SEALS FOR THE NEW BELL SYSTEM BATTERY. Sharpe, L.H.; Shroff, J.R.; Vaccaro, F.J. Bell Syst. Tech. J.; 49: No. 7, 1405-1417(Sep 1970).
A novel post seal for a new storage battery consists of a cylindrical ''clamp'' of a rigid cured epoxy resin molded in place on the lead posts and a flexible one-piece butyl rubber structure attached to the epoxy and to the battery jar cover. Accelerated tests show that the seal effectively slows lead corrosion.

4384 TETRABASIC LEAD SULFATE AS A PASTE MATERIAL FOR POSITIVE PLATES. Biagetti, R.V.; Weeks, M.C. Bell Syst. Tech. J.; 49: No. 7, 1305-1319(Sep 1970).
A reproducible method of synthesizing tetrabasic lead sulfate ($4PbO.PbSO_4$) which produces discrete elongated crystals is discussed.

4385 JAR-COVER SEALS. Dahringer, D.W.; Shroff, J.R. Bell Syst. Tech. J.; 49: No. 7, 1393-1403(Sep 1970).
A novel jar-cover seal was designed and fabricated for a new storage battery. The seal consists of a tongue-and-groove seal joint design (jar and cover, respectively) with an infrared heat absorbing layer at the joint interface which seals the jar and cover surfaces when exposed to high-intensity concentrated infrared energy.

4386 HIGH-TEMPERATURE INSULATION. Meadowcroft, D.B. (Central Electricity Research Lab., Leatherhead, Eng.). Proc. Br. Ceram. Soc.; No. 18, 7-16(Aug 1970).
The high-temperature electrical properties of oxide insulators are reviewed. In particular, the conduction processes and the effects of impurities on resistivity are considered for alumina, beryllia, and magnesia. The factors which may limit the use of oxide insulators at elevated temperatures, such as leakage currents, chemical stability, and thermal shock resistance, are discussed by reference to practical examples, including magnesia-insulated cables, use of insulation in a nuclear environment, and uses of beryllia, magnesia, and alumina, respectively, for insulation in the lithium--chlorine battery, molten-carbonate fuel cell, and MHD power generator duct. Minimum leakage currents, chemical stability, and thermal shock resistance are particularly necessary for the practical use of insulation at high temperatures.

4387 BEHAVIOR OF NICKEL OXIDE ELECTRODES OF ALKALINE CELLS IN CONCENTRATED SOLUTIONS OF NICKEL SALTS. Pozin, Yu.M.; Shtertser, N.I. Zh. Prikl. Khim.; 43: No. 7, 1482-1486(Jul 1970). (In Russian).
The potential of porous nickel plates filled with higher nickel oxide shifts in the negative direction in concentrated neutral $Ni(NO_3)_2$ and $NiCl_2$ solutions owing to reduction of nickel oxides. The rate of reduction of higher nickel oxides is limited by the rate of the accompanying anodic process. The reduction is most rapid in $NiCl_2$ solution, where the anodic process consists of dissolution of metallic nickel, and slower in $Ni(NO_3)_2$ solution, in which nickel is passivated easily. The reduction products of higher nickel oxides are apparently basic nickel salts, because the x-

ray diffraction diagrams of plates treated in $Ni(NO_3)_2$ and $NiCl_2$ solutions show a number of significant deviations from the usual nickelous hydroxide structure.

4388 USE OF POLYAMIDES IN THE ACCUMULATOR INDUSTRY. Zahoran, J.; Kallay, F. Muanyag Gumi; 7: No. 7, 231-232(Jul 1970). (In Hungarian).
For the production of cases and lids for alkaline silver--zinc accumulators, high-impact polystyrene has generally been used. The results of recent tests show that the ''Bonamid'' polyamide produced by Borsodi Vegyi Kombinat (Chemical Works, Borsod) is adequate in all respects for this purpose.

4389 THERMODYNAMICS OF LITHIUM AND POTASSIUM IODIDE IN ANHYDROUS PROPYLENE CARBONATE. Salomon, M. (NASA Electronics Research Center, Cambridge, MA). J. Electroanal. Chem. Interfacial Electrochem.; 26: No. 2-3, 319-329(Jul 1970).
The thermodynamic properties of lithium and potassium iodide in anhydrous propylene carbonate were determined by the emf method. Ion-pairing effects are negligible and the solvation of anions increases from Cl- to I-. This order is opposite to that in aqueous solution. Free energies and enthalpies of solvation for the alkali halides and several other salts were calculated. The experimental work consisted of emf measurements on the cells Li/LiI--PC/TlI,Tl(Hg) and K(Hg)/KI--PC/TlI,Tl(Hg).

4390 USE OF THIRD ELECTRODES IN A SECONDARY ZINC-AIR BATTERY. Postula, J.J.; Thacker, R. (General Motors Corp., Warren, MI). Energy Convers.; 10: No. 2, 45-9(Apr 1970).
ZINC-AIR BATTERIES;BATTERY CHARGING; ELECTRODES;OPERATION

4391 INFLUENCE OF THE POROUS STRUCTURE OF A ZINC ELECTRODE ON ITS ELECTRICAL CHARACTERISTICS. Reshetova, G.N.; Afanas'eva, L.A.; Arkhangel'skaya, Z.P. Zh. Prikl. Khim.; 43: No. 4, 843-847(Apr 1970). (In Russian).
Owing to the use of porous electrodes in current sources, a study was made of the influence of the density of the active material in a porous zinc electrode on its structural characteristics and efficiency under anodic polarization in an alkaline electrolyte (10 N KOH). The true specific surface of electrodes is 8.5 sq m/g at about 70 percent porosity, of the active material, and 0.4 sq m/g at 30 percent porosity. Electrodes in which the total pore volume is 60 to 65 percent of the total volume of the active material have the best electrical characteristics in conjunction with adequate mechanical strength. The coefficient of utilization of the active material in electrodes of optimal porosity is 75 percent at 30 A/sq diam current density. When the porosity is decreased to 30 percent, the coefficient of utilization is only 20 percent. The range of permissible densities of the active material, in which the coefficient of utilization is close to the optimal value and electrode polarization is slight, becomes wider with decrease of the discharge current density and with rise of temperature.

4392 INTERPHASIAL COMPONENTS OF CONVENTIONAL ELECTRODE POTENTIALS. Bockris, J.O. (Univ. of Pennsylvania, Philadelphia). Energy Convers.; 10: No. 2, 41-43(Apr 1970).
Electrode potential measurement questions are discussed which arise when it is attempted to express classical thermodynamic approach in terms of definable potentials of phases. An electrode potential means the difference of the inner potential differences at the metal--solution interface together with the relevant metal phase. A simple system is outlined which is used to describe cell potential in terms of inner potentials. Errors and misconceptions are discussed which originate from neglecting the existence of potential difference at metal--metal junctions and from the confusion about the term electrode potential which is often connected with the metal--solution potential difference.

4393 STUDIES ON AIR BATTERY WITH CAUSTIC ALKALINE ELECTROLYTE. Momose, K.; Ishihara, K.; Miyoshi, J. Natl. Tech. Rep. (Matsushita Electr. Ind. Co., Osaka); 16: No. 2, 201-208(Apr 1970). (In Japanese).
To obtain an efficient electrolyte regenerator in an air battery, the properties of calcium hydroxide were examined in detail, especially porosity of coarse grains. The effects of the grain size of calcium hydroxide, electrolyte concentration, discharge rate, and ambient temperature on the discharge characteristics of air batteries were studied. It was found that calcium hydroxide of from 8 to 48 mesh gives the best performance as a regenerator and that the regenerating efficiency is the highest if potassium hydroxide of 30 percent concentration is used. The efficiency of the electrolyte in these two batteries was found to be about three times higher than that observed in batteries without regenerators.

4394 PROTECTION OF OVERCHARGE AND OVERDISCHARGE WITH CONTACTLESS VOLTAGE SWITCH. Furuishi, H.; Kawamoto, K.; Koyama, Y. Natl. Tech. Rep. (Matsushita Electr. Ind. Co., Osaka); 16: No. 2, 269-276(Apr 1970). (In Japanese).
A new relay circuit was developed for the control of opening and closing of the circuit between power source and applied load by discriminating input signals. A semiconductor relay device was also developed and is now applied as charger for conventional batteries, with successful performance in regard to the protection of overcharge as well with regards the high-rate charge. It also prevents batteries from overdischarge when applied to conventional electrical appliances. In addition, it is reasonably expected that this device can be applied to various control apparatus in combination with detector devices.

4395 REACTION OF OXYGEN AT METALLIC NEGATIVE ELECTRODE (LEAD AND CADMIUM). Sekido, S.; Yamashita, M.; Iizima, T. Natl. Tech. Rep. (Matsushita Electr. Ind. Co., Osaka); 16: No. 2, 217-222(Apr 1970). (In Japanese).
The effects of applied potential, proportion of exposed area, partial pressure of oxygen, concentration of electrolyte, and discharge depth of the electrode are discussed in detail. It was found that two different kinds of reactions occur on the electrode. The one occurs at the exposed area of electrode and is independent of the current. The other is of electrochemical character and occurs at the meniscus region. Different behavior was found between lead and cadmium electrodes for the former reaction.

4396 EFFECT OF THE METHOD OF PRODUCTION ON THE CAPACITY OF SINTERED NICKEL ELECTRODES FOR ALKALINE ELECTRIC STORAGE BATTERIES. Drazic,

D.M.; Vujcic, V.; Rakin, R. Metalloberflaeche; 24: No. 3, 76-77(Mar 1970). (In German).
By using as a matrix a carbonyl nickel/nickel oxide mixture of a composition such that 75 percent of the metallic nickel of the electrode is formed during sintering at 300 C in a hydrogen atmosphere by reduction of the nickel oxide, the conventional repeated salt impregnation of the matrix can be reduced to a single nickel nitrate solution impregnation to obtain electrodes of comparable capacity.

4397 BATTERY WITH ALMOST UNLIMITED LIFE HAS RIGID PVC CASING. Mod. Plast.; 47: No. 2, 42(Feb 1970).
LEAD-ACID BATTERIES;PACKAGING;CYLINDRICAL CONFIGURATION;LIFETIME;PVC;CONTAINERS

4398 NEW STORAGE BATTERY PROMISES LONGER LIFE. Power (N.Y.); 114: No. 2, 73(Feb 1970).
A lead-acid battery with an anticipated life of more than 30 yr uses circular grids made of pure lead.

4399 TRANSISTORIZED CONVERTER FOR AUTOMATIC CHARGING OF SILVER--CADMIUM STORAGE BATTERIES. Venediktov, Yu.P.; Leont'ev, N.I.; Repin, O.M.; Saimukov, V.N. Elektrichestvo; No. 1, 82-83(Jan 1970). (In Russian).

4426 APPLICATION OF CHARGING SYSTEMS TO FARM, CONSTRUCTION, AND INDUSTRIAL MACHINERY. Martin, R.A.; Renner, G.R.; Rowls, G.A.; Stenklyft, G.H. New York; Society of Automotive Engineers, Inc. (1970). 15p.
New developments in charging systems offer improvements in performance, life, and reliability when the systems are properly applied to the vehicle. These developments include the Integral Charging System with a built-in integrated-circuit regulator, sealed side-terminal battery, and improved application aids.

4427 BATTERY MATERIALS, 1970. Conrad, P. Park Ridge, NJ; Noyes Data Corp. (1970). 171p.
The publication covers materials for aqueous battery system including lead--acid, silver--zinc, nickel--cadmium and other types of batteries. The ''dry'' battery systems reviewed include zinc, magnesium, aluminum, aminoethylene, mercuric oxide and lead--acid dry cells. The review includes organic, solid, and molten electrolyte systems, as well as radioactive batteries. The review as a whole is based on data from patents and commercially available products.

4428 PREPARATION OF HIGHLY POROUS NICKEL SUBSTRATES FOR SINTERED ELECTRODES OF STORAGE BATTERIES. Chebakov, V.D.; Karev, B.D.; Kukoz, F.I. Tr. Novocherkassk. Politekh. Inst.; 21-23(1970). (In Russian).
A powder layer was sputtered on both sides of a nickel foil and sintered at 950°. (RWR)

4429 VOLUMETRIC DETERMINATION OF LEAD SULFATE CONTENT IN THE ACTIVE MASSES OF LEAD BATTERY ELECTRODES. Sorokina, M.N.; Ryzhkov, E.M. Sb. Rab. Khim. Istochnikam Toka; No. 5, 223-227(1970). (In Russian).
Carboxyarsenazo was used as an indicator in the titration of $SO_4^{--}$ with $Ba(NO_3)_2$ in an aqueous ethanol solution. With this method the phase composition of the active mass of a negative electrode could be determined from one sample. The sample was treated with boiling sodium acetate in sodium formate; the metallic lead was dissolved in nitric acid, and the amount of lead sulfate remaining was determined. (RWR)

4430 EFFECT OF THE DISCHARGE TEMPERATURE ON OPERATIONAL AND STRUCTURAL CHARACTERISTICS OF A SILVER OXIDE ELECTRODE. Ereiskaya, G.P.; Dunaeva, T.I.; Skalozubov, M.F. Tr. Novocherkassk. Politekh. Inst.; No. 217, 36-41(1970). (In Russian).
Tests were made on pressed electrodes in 10N KOH. Lowering the discharge temperature to -10° produced a sharp decrease in the capacitance of the electrodes. Decrease during cycling is less at +90° than at +20°. The submicrostructure of reduced silver on forced discharge systems changed; there was a loss of contact between active mass particles, and these no longer took part in current production. (RWR)

4431 DETERMINATION OF THE DEGREE OF REDUCTION OF ACTIVE MASSES OF A STORAGE CELL IRON ELECTRODE. Galat, N.I.; Kukoz, F.I.; Bogdanov, V.I. Tr. Novocherkassk. Politekh. Inst.; No. 217, 113-115(1970). (In Russian).
The amount of reduction was determined through the magnetic susceptibility. The susceptibility was proportional to [FeO]. (RWR)

4432 FEASIBILITY OF USING MAGNETIC MEASUREMENTS FOR THE SELECTION OF CONCENTRATIONS OF SULFUR ADDITIVES IN THE ACTIVE MASS OF AN IRON ELECTRODE. Galat, N.I.; Babkov, S.N.; Kabanov, N.A.; Kukoz, F.I.; Makarov, V.I. Tr. Novocherkassk. Politekh. Inst.; No. 217, 45-48(1970). (In Russian).
Formulas for calculating the capacitance of iron electrodes for alkaline batteries were presented. (RWR)

4433 EFFECT OF THE CHARGE TIME ON THE LIFE OF A SILVER BATTERY ELECTRODE. Milov, V.A.; Skalozubov, M.F.; Gaivoronskaya, N.P.; Dunaeva, T.I.; Ereiskaya, G.P.; Osipchuk, N.Yu. Tr.

Novocherkassk. Politekh. Inst.; No. 217, 27-31(1970). (In Russian).
The utilization factor of the active mass of the silver electrodes was studied as a function of the number of cycles for various charging times. An electrode which is chargeable to the potential of termination of oxygen liberation showed a high utilization factor for a significant number of cycles. The charge in utilization factor reached a maximum at about a half dozen cycles. (RWR)

4434 OXIDATION OF SINTERED NICKEL BASES WITH OZONE. Khodarev, O.N.; Pervushin, Yu.N.; Skalozubov, M.F. Tr. Novocherkassk. Politekh. Inst.; No. 217, 14-17(1970). (In Russian).
The lower nickel hydroxides were the primary product when sintered nickel bases of nickel oxide electrodes for alkaline batteries were oxidized in a humid $O_3$--$O_2$ mixture. Optimum conditions for oxidation were found. (RWR)

4435 MAGNETIC SEPARATION OF ACTIVE MATERIALS OF AN IRON ELECTRODE. Kukoz, F.I.; Galat, N.I.; Lipkin, S.S.; Makarov, V.I. Tr. Novocherkassk. Politekh. Inst.; No. 217, 52-53(1970). (In Russian).
Materials for an alkaline storage battery were obtained by magnetic separation using a direct and an alternating field. The iron was in powder form. (RWR)

4436 PRODUCTS OF OXIDATION OF NICKEL WITH OZONE. Khodarev, O.N.; Pervushin, Yu.N.; Kudoz, F.I.; Skalozubov, M.F. Tr. Novocherkassk. Politekh. Inst.; No. 217, 10-13(1970). (In Russian).
$\beta$-NiOOH and $Ni(OH)_2$ suitable for use in alkaline storage batteries were obtained by oxidation of Ni in $O_2$ and $O_3$. (RWR)

4437 EFFECT OF LOW-FREQUENCY ACOUSTICAL VIBRATIONS ON THE FORMATION OF ACTIVE MATERIALS OF A LEAD BATTERY POSITIVE ELECTRODE. Sapozhnikov, A.V.; Skalozubov, M.F.; Morozov, V.A. Tr. Novocherkassk. Politekh. Inst.; No. 217, 65-68(1970). (In Russian).
Vibration at 100 Hz of lead battery positive electrodes during formation resulted in a more active $PbO_2$ $\beta$-phase. (RWR)

4438 REDUCTION OF THE CAPACITY OF SILVER ELECTRODES OPERATING IN FORCED DISCHARGE SYSTEMS. Gaivoronskaya, N.P.; Dunaeva, T.I.; Ereiskaya, G.P.; Skalozubov, M.F. Tr. Novocherkassk. Politekh. Inst.; No. 217, 31-36(1970). (In Russian).
It was found that long, slow charging resulted in higher battery capacity. Forced discharges caused a notable increase in electrode surface area. Recommendations for charging modes are suggested. (RWR)

4439 CYCLING OF A POSITIVE LEAD ELECTRODE IN THE AREA OF LEAD SULFATE AND OXYGEN FORMATION POTENTIALS. Molchan, A.G.; Skalozubov, M.F. Tr. Novocherkassk. Politekh. Inst.; No. 217, 63-65(1970). (In Russian).
Charging and discharging times and currents were measured in the areas of oxygen and lead sulfate formation potential. Electrical capacity increased after cycling. The importance of the desorption processes of initially adsorbed lead sulfate molecules is pointed out. After four or five cycles, the amount of electricity obtained from the battery during operation is less than that used to charge the battery. (RWR)

4440 DEVELOPMENT OF MODIFIED POLYOLEFIN MEMBRANES FOR REVERSE OSMOSIS. Hamil, H.F.; Harlowe, W.W. Jr.; Wong, C.M.; Gillam, W.S.; Podall, H.E.; Kindley, L.M. Washington, DC; Office of Saline Water (1970). 58p.
As part of a project to develop a sterilizable battery separator for silver--zinc batteries, a process for the modification of polyethylene film involving grafting with acrylic acid followed by crosslinking using divinylbenzene was developed. Both reactions were initiated by radiation from a cobalt-60 source. Application of the above process to modification of polyethylene films with other monomers capable of free radical polymerization was undertaken to develop a membrane suitable for desalination of sea or brackish water by reverse osmosis.

4441 DETERMINATION OF THE ELECTRONIC TRANSFERENCE NUMBERS OF SOLID ELECTROLYTES. Liant, C.C. (P.R. Mallory and Co., Inc., Burlington, MA). Trans. Faraday Soc.; 65: No. 564, 3369-3374(Dec 1969).
ELECTRIC BATTERIES;ELECTROLYTES;SOLIDS; ELECTROCHEMISTRY

4442 LITHIUM ANODE PROPERTIES IN A NONAQUEOUS CELL. Jackson, G.W. (Union Carbide Corp., Cleveland); Blomgren, G.E. J. Electrochem. Soc.; 116: No. 11, 1483-1487(Nov 1969).
Li/$AlCl_3$ in propylene carbonate/AgCl. SILVER CHLORIDES;PERFORMANCE;POLARIZATION;METAL-NONMETAL BATTERIES;ALUMINIUM CHLORIDES;CARBONIC ACID ESTERS;ANODES;LITHIUM;ELECTROLYTES

4443 ANODES FOR REFUELABLE MAGNESIUM--AIR BATTERIES. Hamlen, R.P.; Jerabek, E.C.; Ruzzo, J.C.; Siwek, E.G. (General Electric Co., NY). J. Electrochem. Soc.; 116: No. 11, 1588-1592(Nov 1969).
The purpose of this work was to select an anode alloy and an electrolyte--separator system for use with magnesium--air cells. The cells are to be employed in a battery with replaceable anodes and electrolyte. This system differs from the silver chloride--magnesium seawater cell in that the product is primarily a hydroxide rather than a chloride, and all of the magnesium hydroxide (or hydroxychloride) product must be contained within the cell rather than being flushed out. Since the product sludge must remain within the cell, the total ampere-hour discharge between refuelings is determined by the volume of sludge per ampere-hour and by the total cell volume available for containment of the sludge.

4444 HIGH-RATE OXIDATION OF SILVER ELECTRODES IN CHLORIDE SOLUTIONS. Bro, P. (P.R. Mallory and Co., Inc., Burlington, MA); Marincic, N. J. Electrochem. Soc.; 116: No. 10, 1338-1341(Oct 1969).
ELECTRIC BATTERIES;CATHODES;SILVER;SILVER CHLORIDES;BATTERY CHARGING;HEATING

4445 ELECTRON MICROPROBE STUDY OF THE ACTIVE MATERIALS IN THE LEAD--ACID STORAGE BATTERY. Chiku, T. (Toyota Central Research and Development Lab., Inc., Nagoya, Japan); Nakajima, K. J. Electrochem. Soc.; 116: No. 10, 1407-1409(Oct 1969).
LEAD-ACID BATTERIES;MATERIALS;MICROANALYSIS; LEAD SULFATES;ANODES;BATTERY CHARGING; ELECTRODES

4446 HIGH RATE OXIDATION OF SILVER ELECTRODES IN CHLORIDE SOLUTIONS. Bro, P.; Marincic, N. (P. R. Mallory and Co., Inc., Burlington, MA). J. Electrochem. Soc.; 116: No. 10, 1338-1341(Oct 1969).

The search for a rechargeable battery cathode capable of accepting a high charging rate with a high efficiency showed that flat silver/silver chloride electrodes could be charged under constant current conditions at rates as high as 150 C (300 $mA^2$). The high rate of charge was accompanied by a considerable evolution of heat at the electrode, and the charging process was generally terminated by the boiling of the electrolyte. Low rates of charge in the same system below 60 $mA^2$ led to the formation of silver chloride films which could not be discharged efficiently.

4447 PHASE DIAGRAM OF SYSTEM LICL--KCL--$CACRO_4$. Clark, R.P.; Blucher, R.L.; Goldsmith, H.J. (Sandia Labs., Albuquerque, NM). J. Chem. Eng. Data; 14: No. 4, 465-470(Oct 1969).

The phase diagram was determined for the system LiCl--KCl--$CaCrO_4$. Binary eutectics were located at 60 wt % KCl--40 wt % $CaCrO_4$ (mp 651 C) and 62 wt % LiCl--38 wt % $CaCrO_4$ (m 638 C); ternary eutectic was found at 41 wt % LiCl--50 wt % KCl-- 9 wt % $CaCrO_4$ (mp 342 C). It was verified by x-ray diffraction that LiCl--KCl--$CaCrO_4$ is stable diagonal section in quaternary reciprocal system K, Li, $CaCrO_4$, Cl. The salt mixture LiCl--KCl--$CaCrO_4$, is electrolyte--depolarizer combination used in thermal cells (voltaic cells employing molten salt electrolyte).

4448 POLARIZATION OF PARTLY WETTED POROUS ELECTRODES. Ruetschi, P. (ESB Inc., Yardley, PA); Ockerman, J.B. J. Electrochem. Soc.; 116: No. 9, 1222-1227(Sep 1969).

4462 ELECTROCHEMICAL BEHAVIOR OF ZINC IN ALKALINE MEDIA. Elder, J.P. (Metals and Controls, Inc., Attleboro, MA). J. Electrochem. Soc.; 116: No. 6, 757-762(Jun 1969).
There is strong evidence of the increasing predominance of rechargeable alkaline battery systems. Within this field, there is an ever-increasing interest in the use of zinc as the favored anode material. One of the main disadvantages in the use of zinc as the negative electrode in silver--zinc and nickel--zinc cells lies in the fact that zinc hydroxide is highly soluble in the strongly alkaline aqueous electrolytes employed in these systems. Impedance data have been employed to support the conclusion that the kinetically controlling stage in the zinc dissolution is the rate of diffusion of zinc atoms through the thickening oxide film. It would appear that the cathodic behavior of passivated zinc is dependent not only on the prior anodic history of the electrode, but also on the nature of the electrolyte.

4463 USE OF STEREOMETRIC METALLOGRAPHY FOR DETERMINATION OF STRUCTURAL CHARACTERISTICS OF POROUS NICKEL BODIES FOR ALKALINE STORAGE CELL PLATES. Kukoz, F.I. (Polytechnical Inst., Moscow); Mityagina, Z.I.; Skalozubov, M.F.; Chebakov, V.D. Zh. Prikl. Khim.; 42: No. 4, 800-804(Apr 1969). (In Russian).

4467 CONTROLLED CURRENT DEPOSITION OF ZINC FROM ALKALINE SOLUTION. Arouete, S.; Blurton, K.F.; Oswin, H.G. (Leesona Moos Labs., Great Neck, NY). J. Electrochem. Soc.; 116: No. 2, 166-169(Feb 1969).
Electrodeposition of zinc onto foil electrodes from alkaline zincate solutions with direct current results in dendritic or black, porous solutions with direct current results in dendritic or black, porous mossy deposits. Smoother deposits are obtained with a pulsed current source or periodic reversal of current. The nature of the deposit with obtained pulsed charging depends on current density, amount of charge passing through electrolytic cell, on time, and off time; optimum values of these parameters are dependent on cell geometry. The results are relevant to secondary silver/zinc batteries.

4468 BATTERY CELL. (to Leesona Corp.). British Patent 1,138,468. 1 Jan 1969. Priority date 25 Jan 1965, United States of America (USA). vp.
Patent; air- or oxygen-depolarized cathode. METAL-GAS BATTERIES;AIR;OXYGEN;CATHODES;DESIGN; TEFLON

4477 ZINC--AIR GENERATORS. Saada, A.; Vignaud, M. pp 144-148 of Third international symposium on fuel cells. Brussels; Presses Academiques Europeennes (1969). (In French)
From 3. international symposium on fuel cells; Brussels, Belgium (16 Jun 1969).
See CONF-690671--.
Electrodes were developed whose performance, lifetime, and cost answer specific usage conditions. The use of zinc--air generators in primary or secondary batteries or in mechanically rechargeable batteries is discussed, and their characteristics are given.

4478 DISPERSE CATALYST GENERATORS. Bonnemay, M.; Bronoel, G.; Daul, M.; Doniat, D. (CNRS, Bellvue, France). pp 247-252 of Third international symposium on fuel cells. Brussels; Presses Academiques Europeennes (1969). (In French)
From 3. international symposium on fuel cells; Brussels, Belgium (16 Jun 1969).
See CONF-690671--.
The use of dispersed electrodes was studied for the development of fuel cells and batteries. The characteristics of a new battery with a dispersed positive electrode are reported.

4479 DEVELOPMENTS IN ALTERNATOR SYSTEMS FOR VEHICLES. Winkley, A.W. (Joseph Lucas (Electrical) Ltd., Birmingham, Eng.). Proc. Inst. Mech. Eng. (London); 184: vp(1969).
BATTERY CHARGERS;ALTERNATORS;REVIEWS; VEHICLES

4480 CHOICE OF ALTERNATOR OR DYNAMO. Jenkinson, R.A. (Joseph Lucas (Electrical) Ltd., Birmingham, Eng.). Proc. Inst. Mech. Eng. (London); 184: 1-5(1969).
A general case for the change from dynamos to alternators has been presented. This rests on the need to improve generator performance to combat worsening traffic conditions together with rising electrical loads. Greater scope for development is seen to exist in the alternator than in the dynamo. The present application for the dynamo lies only with small vehicles of low engine capacity.

4481 DISPERSED-CATALYST ELECTRODES FOR FUEL CELLS AND BATTERIES. Bonnemay, M.; Bronoel, G.; Daul, M.; Doniat, D. (CNRS, Bellevue, France). pp 247-252 of Journees Int. Etude Piles Combust., C.R., 3rd. Brussels; Presses Acad. Eur. (1969). (In French)
Circulating the catalyst as a suspension yields better diffusion of gas to electrode. A hydrogen fuel cell yielded 100 $mA/cm^2$ at 0.6 V and $40^0$, and a cadmium/air battery produced 1.0 V for 70 Wh/kg. (RWR)

4482 LEAD--ANTIMONY--CADMIUM ALLOYS FOR BATTERY GRIDS. Bagshaw, N.E. (Electric Power Shortage Ltd., Swinton, Eng.). pp 209-220 of Third international conference on lead. Dunlop, R.H. (ed.). Oxford; Pergamon Press (1969).
Pb--2Sb--2Cd pseudo-binary alloys (4 to 5% of the intermetallic compound SbCd) were found to perform well, especially in those types of batteries where charge retention is important, as in aircraft standby batteries. (RWR)

4483 CHANGES IN MICROSTRUCTURE OF SINTERED SILVER ELECTRODE AFTER REPEATED CYCLING AT LOW CURRENT. Wales, C.P.; Simon, A.C. J. Electrochem. Soc.; 115: No. 12, 1228-1236(Dec 1968).

4503 THERMODYNAMIC PROPERTIES OF THE NICKEL--CADMIUM ALKALINE AND LEAD--LEAD OXIDE ACID CELLS. Caulder, S.M. Brooklyn; Polytechnic Inst. of Brooklyn (Jun 1968). vp.
University Microfilms Order No. 68-16,235.
Thesis (Ph. D.).
The effect of electrolyte composition and concentration on nickel--cadmium and lead--acid cells was investigated. Changes in the degree of hydration of the electrodes as a result of electrolyte composition causes changes in the observed enthalpies. For example, the enthalpy of a nickel--cadmium cell containing 7.9N KOH electrolyte was -33.2 kcal/ equivalent, but was -37.7 kcal/ equivalent with 6.3N LiOH electrolyte. The average heat capacities of lead--acid cells were measured to be 42.5 and 192 cal/C for various acid concentrations.

4515 ANODIC OXIDATION OF MANGANESE OXIDES IN ALKALINE ELECTROLYTES. Kyang, H.Y.; Liang, C.C. J. Electrochem. Soc.; 115: No. 1, 6-10(Jan 1968).
OXIDATION;MANGANESE OXIDES;HYDROXIDES; POTASSIUM HYDROXIDES;QUANTITY RATIO;ELECTRODES; ELECTRIC BATTERIES;ZINC-MANGANESE BATTERIES; CATHODES

4516 SEMICONDUCTOR CHARGING DEVICE FOR AUXILIARY BATTERIES ON SHORT DISTANCE TRANSPORT VEHICLES. Sauer, H. Siemens-Z.; 42: No. 1, 36-39(Jan 1968). (In German).
BATTERY CHARGERS;VEHICLES;THYRISTORS; ELECTRIC BATTERIES

4517 MODERN CHARGERS PROTECT YOUR BATTERY INVESTMENT. Schwind, G.F. Mater. Handl. Eng.; 23: No. 1, 90-93(Jan 1968).
Discharge indicator. BATTERY CHARGERS;TRUCKS; OPERATION;LEAD-ACID BATTERIES

4518 LOW-VOLTAGE CONVERSION FROM PRIMARY AND SECONDARY SOURCES. Pasciutti, E.R. (Goddard Space Flight Center, Greenbelt, MD). pp 653-661 of Intersociety energy conversion engineering conference. New York; Inst. of Electrical and Electronics Engineers, Inc. (1968).
From Intersociety energy conversion engineering conference; Boulder, CO (13 Aug 1968).
RADIOISOTOPE HEAT SOURCES;THERMOELECTRIC GENERATORS;ENERGY STORAGE;ELECTRIC BATTERIES; VOLTAGE REGULATORS;POWER CONDITIONING CIRCUITS

4519 LIGHTWEIGHT AUTOMATIC CHARGER/ CONTROLLER. Froeschle, T.A. (Bose Corp.); Bose, A.G. (MIT). pp 32-5 of Proceedings of 22nd Annual Power Sources Conference, Fort Monmouth, NJ, 14-16 May 1968. Red Bank, NJ; PSC Publications Committee (1968).
From 22. Annual Power Sources Conference, Session on Battery Chargers; Fort Monmouth, NJ (14-16 May 1968).
BATTERY CHARGERS;NICKEL-CADMIUM BATTERIES; ENERGY CONVERSION;ELECTRONIC CIRCUITS;DESIGN; SPECIFICATIONS

4520 PORTABLE MILITARY CHARGER FOR ZINC--SILVER OXIDE BATTERIES. Pilla, L.J. (U.S. Army Electronics Command). pp 39-41 of Proceedings of 22nd Annual Power Sources Conference, Fort Monmouth, NJ, 14-16 May 1968. Red Bank, NJ; PSC Publications Committee (1968).
From 22. Annual Power Sources Conference, Session on Battery Chargers; Fort Monmouth, NJ (14-16 May 1968).
SILVER-ZINC BATTERIES;BATTERY CHARGERS; DESIGN;ELECTRONIC CIRCUITS;FABRICATION; PERFORMANCE

4521 COULOMETER CONTROL OF BATTERY CHARGING. Turlock, L.A.; Haines, R.L.; Braun, H.R.; King, T.E. (Defence Chemical Biological and Radiation Establishment, Canada). pp 50-3 of Proceedings of 22nd Annual Power Sources Conference, Fort Monmouth, NJ, 14-16 May 1968. Red Bank, NJ; PSC Publications Committee (1968).
From 22. Annual Power Sources Conference, Session on Overcharge Protection; Fort Monmouth, NJ (14-16 May 1968).
BATTERY CHARGING;AMMETERS;CONTROL SYSTEMS; CADMIUM;CADMIUM HYDROXIDES;NICKEL-CADMIUM BATTERIES;AIRCRAFT;PERFORMANCE;ELECTRONIC CIRCUITS

4522 AUXILIARY ELECTRODE CHARGE CONTROL. Ford, F.E. (NASA, Goddard). pp 53-7 of Proceedings of 22nd Annual Power Sources Conference, Fort Monmouth, NJ, 14-16 May 1968. Red Bank, NJ; PSC Publications Committee (1968).
From 22. Annual Power Sources Conference, Session on Overcharge Protection; Fort Monmouth, NJ (14-16 May 1968).
ELECTRODES;BATTERY CHARGING;CONTROL SYSTEMS; SPACE VEHICLES;NICKEL-CADMIUM BATTERIES; SATELLITES;PERFORMANCE

4523 MERCURY COULOMETERS. Beusman, C.C.; Finger, E.P. (Curtis Instruments, Inc.). pp 57-61 of Proceedings of 22nd Annual Power Sources Conference, Fort Monmouth, NJ, 14-16 May 1968. Red Bank, NJ; PSC Publications Committee (1968).
From 22. Annual Power Sources Conference, Session on Overcharge Protection; Fort Monmouth, NJ (14-16 May 1968).
MERCURY;AMMETERS;BATTERY CHARGING;CONTROL SYSTEMS;DESIGN

4524 HIGH RATE BATTERY CHARGER SYSTEM. Kantner, E.; Lennon, H.J. (Gulton Indus., Inc.). pp 61-5 of Proceedings of 22nd Annual Power Sources Conference, Fort Monmouth, NJ, 14-16 May 1968. Red Bank, NJ; PSC Publications Committee (1968).
From 22. Annual Power Sources Conference, Session on Overcharge Protection; Fort Monmouth, NJ (14-16 May 1968).
AIRCRAFT;NICKEL-CADMIUM BATTERIES;BATTERY CHARGERS;DIAGRAMS;ELECTRONIC CIRCUITS;DESIGN; LOGIC CIRCUITS;PERFORMANCE;LOW TEMPERATURE; MEDIUM TEMPERATURE;ELECTRIC POTENTIAL

4525 ALKALINE IRON ELECTRODE. Hills, S.; Salkind, A.J. (ESB, Inc.). pp 66-9 of Proceedings of 22nd Annual Power Sources Conference, Fort Monmouth, NJ, 14-16 May 1968. Red Bank, NJ; PSC Publications Committee (1968).
From 22. Annual Power Sources Conference, Session on Iron and Cadmium Electrodes; Fort Monmouth, NJ (14-16 May 1968).
History, performance, fabrication. IRON-NICKEL BATTERIES;ANODES;PERFORMANCE;FABRICATION

4526 SINTERED IRON ELECTRODE. Bowerman, E.R. (General Telephone and Electronics Labs. Inc.). pp 70-2 of Proceedings of 22nd Annual Power Sources Conference, Fort Monmouth, NJ, 14-16 May 1968. Red Bank, NJ; PSC Publications Committee (1968).
From 22. Annual Power Sources Conference, Session on Iron and Cadmium Electrodes; Fort Monmouth, NJ (14-16 May 1968).
IRON-NICKEL BATTERIES;ANODES;PERFORMANCE; SINTERED MATERIALS

4527 STABLE ZINC ELECTRODES. Goodkin, J. (Yardney Electric Corp.). pp 79-82 of Proceedings of 22nd Annual Power Sources Conference, Fort Monmouth, NJ, 14-16 May 1968. Red Bank, NJ; PSC Publications Committee (1968).
From 22. Annual Power Sources Conference, Session on Zinc--Silver Oxide Batteries; Fort Monmouth, NJ (14-16 May 1968).
Maintenance of Zn electrode shape. SILVER-ZINC BATTERIES;ANODES;SHAPE;BINDERS;TEFLON; PERFORMANCE;DESIGN

4528 PERFORMANCE WITH STABLE SEPARATORS. Himy, A. (McDonnell Douglas Corp.). pp 82-5 of Proceedings of 22nd Annual Power Sources Conference, Fort Monmouth, NJ, 14-16 May 1968. Red Bank, NJ; PSC Publications Committee (1968).
From 22. Annual Power Sources Conference, Session on Zinc--Silver Oxide Batteries; Fort Monmouth, NJ (14-16 May 1968).
SILVER-ZINC BATTERIES;BATTERY SEPARATORS; PERFORMANCE TESTING;MEDIUM TEMPERATURE;CERAMICS; STABILITY;SATELLITES;ELECTRIC POTENTIAL; PERFORMANCE

4529 REPLACEABLE ZINC ANODES. Knapp, H.R. (U.S. Army Electronics Command). pp 114-16 of Proceedings of 22nd Annual Power Sources Conference, Fort Monmouth, NJ, 14-16 May 1968. Red Bank, NJ; PSC Publications Committee (1968).
From 22. Annual Power Sources Conference, Session on Zinc--Air Batteries; Fort Monmouth,

NJ (14-16 May 1968).
Recent progress in development and performance. ZINC-AIR BATTERIES;ANODES; FABRICATION;PERFORMANCE TESTING;STORAGE; PACKAGING

4530 ELECTRODES FOR ZINC--AIR BATTERIES. Voorhies, J.D. (American Cyanamid Co.). pp 124-7 of Proceedings of 22nd Annual Power Sources Conference, Fort Monmouth, NJ, 14-16 May 1968. Red Bank, NJ; PSC Publications Committee (1968).
From 22. Annual Power Sources Conference, Session on Zinc--Air Batteries; Fort Monmouth, NJ (14-16 May 1968).
Cathodes with unmetallized C and effect on Zn anode of peroxide generated by cathodes. ZINC-AIR BATTERIES;ELECTRODES;ANODES;CATHODES; POLARIZATION;POTASSIUM HYDROXIDES;LIFETIME; PERFORMANCE;TEMPERATURE DEPENDENCE;HYDROGEN PEROXIDE

4531 THERMOELECTRIC SILENT BATTERY CHARGER. Angello, J.P. (U.S. Army Electronics Command). pp 35-8 of Proceedings of 22nd Annual Power Sources Conference, Fort Monmouth, NJ, 14-16 May 1968. Red Bank, NJ; PSC Publications Committee (1968).
From 22. Annual Power Sources Conference, Session on Battery Chargers; Fort Monmouth, NJ (14-16 May 1968).
BATTERY CHARGERS;THERMOELECTRIC GENERATORS; LOW TEMPERATURE;LEAD-ACID BATTERIES;PERFORMANCE TESTING

4532 SILVER--ZINC CELLS WITH ELECTROLYTICALLY DEPOSITED CALCIUM HYDROXIDE SEPARATORS. Hamlen, R.P.; McQuade, J.M.; Siwek, E.G. Electrochem. Technol.; 6: No. 1-2, 83-85(1968).
Separation deposited on cathode; performance. SILVER-ZINC BATTERIES;CALCIUM HYDROXIDES;BATTERY SEPARATORS;SILVER OXIDES; CATHODES;ELECTRODEPOSITION;CALCIUM COMPOUNDS; ACETATES;PERFORMANCE

4533 ORGANIC AND MOLTEN SALT ELECTROLYTES. Jasinski, R. New York; American Society of Mechanical Engineers (1968). 4p.
Discussion of present problems with these electrolytes. ELECTRIC BATTERIES;PERFORMANCE; ELECTROLYTES;CHEMICAL REACTIONS;HEATING

4534 NEW FUEL GAGE FOR ELECTRICALLY POWERED VEHICLES. Beusman, C.C.; Finger, E.P. New York; Society of Automotive Engineers, Inc. (1968). 6p.
Unit has automatic stop when 100 percent of capacity is reached. ELECTRIC BATTERIES;FUEL GAGES;ELECTRIC-POWERED VEHICLES;BATTERY CHARGING;CONTROL SYSTEMS;VOLTAMETRY;CHARGED CURRENTS;BATTERY CHARGERS

4535 *FAST CHARGING SYSTEMS FOR NICD* BATTERIES. Zinder, D.A. IEEE Trans. Ind. Gen. Appl.; IGA-4: No. 5, 555-560(1968).
NICKEL-CADMIUM BATTERIES;BATTERY CHARGERS; DESIGN;SPECIFICATIONS

4536 COMMENTS ON CURRENT DISTRIBUTION IN AND ON POROUS ELECTRODES. Brodd, R.J. Electrochem. Technol.; 6: No. 7-8, 289-294(1968).
ELECTRIC BATTERIES;ELECTRODES;POROSITY; PERFORMANCE;ELECTRIC CURRENTS;DESIGN;CURRENT DENSITY;THICKNESS

4537 ABNORMAL CORROSION OF PRESSURE-CAST, LEAD--CALCIUM BATTERY GRIDS. Howard, A.M. (Eltra Corp., Conshohocken, PA); Willihnganz, E. Electrochem. Technol.; 6: No. 9-10, 370-374(1968).
LEAD-ACID BATTERIES;LEAD BASE ALLOYS;CALCIUM ALLOYS;MICROSTRUCTURE;FREEZING;GRIDS; MICROSTRUCTURE;LIFETIME;CORROSION;CASTING; FAILURES

4538 PORTABLE MILITARY CHARGER FOR ZINC--SILVER OXIDE BATTERIES. Pilla, L.J. Proc. Am. Power Conf.; 30: 39-41(1968).
From 22. annual power sources conference; Fort Monmouth, NJ, USA (14 May 1968).
6V, 60Ah. SILVER-ZINC BATTERIES;BATTERY CHARGERS;RADAR;SPECIFICATIONS

4539 PLASTICS IN BATTERIES AND FUEL CELLS. Barak, M. Rubber Plast. Age; 48: No. 11, 1202-1205(11 Nov 1967).
Likelihood of increased use. ELECTRIC BATTERIES;HYDROXIDES;LEAD-ACID BATTERIES; PLASTICS;POLYSTYRENE;POLYPROPYLENE;NYLON;PVC; ABS;CONTAINERS;COVERINGS;MATERIALS;FUEL CELLS

4540 TRIAL PREPARATION OF NEGATIVE PLATES OF PRESSED-TYPE ALKALINE STORAGE BATTERY. Yamashita, D.; Yamamoto, Y. Nippon Kagaku Kaishi; 70: No. 10, 1628-1633(Oct 1967).
*CdO, $Cd(O)_2$, polyethylene and polyethylene* oxide. ANODES;PLATES;HYDROXIDES;PRESSING; CADMIUM OXIDES;CADMIUM HYDROXIDES;POLYETHYLENES; PERFORMANCE;NICKEL-CADMIUM BATTERIES;SILVER-CADMIUM BATTERIES;ELECTRIC BATTERIES;ORGANIC OXYGEN COMPOUNDS;ORGANIC POLYMERS;HETEROCYCLIC COMPOUNDS

4541 IMPURITY EFFECTS IN HIGH CURRENT DENSITY $CL_2$ ELECTRODES. Swinkels, D.A.J. J. Electrochem. Soc.; 114: No. 8, 812-816(Aug 1967).
ELECTRODES;IMPURITIES;CHLORINE;METAL-GAS BATTERIES;CATHODES;GASES;POLARIZATION;LITHIUM CHLORIDES;ZINC-CHLORINE BATTERIES;LITHIUM-CHLORINE BATTERIES

4542 CD--CD COULOMETER CONTROLS BATTERY CHARGE. Belove, L. Electro-Technol. (N.Y.); 80: No. 2, 94, 96, 106(Aug 1967).
Prevents overcharging. BATTERY CHARGERS; CONTROL SYSTEMS;NICKEL-CADMIUM BATTERIES

4543 PHASE PROPERTIES OF POSITIVE ACTIVE ELEMENTS OF LEAD STORAGE BATTERIES. Rusin, A.I.; Dasoyan, M.A.; Fedorova, N.N. Elektrotekhnika; No. 8, 4(Aug 1967). (In Russian).
LEAD-ACID BATTERIES;CATHODES;PHASE STUDIES;X RADIATION;CHEMICAL ANALYSIS;LEAD OXIDES

4544 PREPARATION AND ELECTROCHEMICAL PROPERTIES OF DISLOCATION-FREE (100) FACES OF MONOCRYSTAL SILVER ELECTRODES. Budevski, E.; Bostanov, V.; Vitanov, T.; Stoinov, Z.; Kotseva, A.; Kaishev, R. Elektrokhimiya; 3: No. 7, 656-664(Jul 1967). (In Russian).
CATHODES;SILVER-ZINC BATTERIES;SILVER-CADMIUM BATTERIES;CHEMICAL PREPARATION;CHEMICAL REACTION KINETICS;SILVER NITRATES

4545 PROPERTIES, CONSTRUCTION, AND TECHNICAL APPLICATIONS OF OXYGEN-DIFFUSION ELECTRODES. Schmidt, H.; Vielstich, W. Chem.-Ing.-Tech.; 39: No. 12, 761-766(26 Jun 1967). (In

German).
FUEL CELLS;ZINC-AIR BATTERIES;CATHODES; FABRICATION

4546 ALKALINE MANGANESE DIOXIDE ELECTRODE. I. Boden, D.; Venuto, C.J.; Wisler, D.; Wylie, R.B. J. Electrochem. Soc.; 114: No. 5, 415-417(May 1967).
Kinetics of cathodic reduction processes. HYDROXIDES;CATHODES;MANGANESE OXIDES;REDUCTION; ZINC-MANGANESE BATTERIES;X-RAY DIFFRACTION; CHEMICAL ANALYSIS;CHEMICAL REACTION KINETICS; FILMS;ELECTRIC CONDUCTIVITY

4547 BATTERY CHARGING INSTALLATION FOR OVERSEAS CENTER IN PORT OF HAMBURG. Naegler, J.; Weiss, A. Foerdern Heben; 17: No. 4, 180-183(Mar 1967). (In German).
BATTERY CHARGERS;TRUCKS;THYRISTORS;ELECTRIC-POWERED VEHICLES

4548 COULOGRAVIMETRIC STUDY OF SINTERED SILVER ELECTRODE IN 1 MOLAR POTASSIUM HYDROXIDE. Langer, A.; Patton, J.T. J. Electrochem. Soc.; 114: No. 2, 113-117(Feb 1967).
Slope changes in weight change/Coulomb curves. CATHODES;SILVER-ZINC BATTERIES;SILVER-CADMIUM BATTERIES;SINTERED MATERIALS;POTASSIUM HYDROXIDES;WEIGHT;ELECTROCHEMISTRY;VOLUME;PHASE TRANSFORMATIONS;ELECTRIC POTENTIAL

4549 STRESS CORROSION IN GRIDS OF LEAD--ACID STORAGE BATTERY. Simon, A.C. J. Electrochem. Soc.; 114: No. 1, 1-8(Jan 1967).
LEAD-ACID BATTERIES;STRESSES;CORROSION;GRIDS; LEAD BASE ALLOYS;ANTIMONY ALLOYS

4550 HIGH-RATE BATTERY ELECTRODES. Shepherd, C.M.; Langelan, H.C. J. Electrochem. Soc.; 114: No. 1, 8-13(Jan 1967).
Performance of plates produced by electrolytic reduction. FABRICATION;PLATES; POROSITY;REDUCTION;ANODES;LOW TEMPERATURE; NICKEL-CADMIUM BATTERIES;NICKEL-ZINC BATTERIES; ZINC-MANGANESE BATTERIES;ZINC-AIR BATTERIES; ZINC-CHLORINE BATTERIES;CADMIUM-AIR BATTERIES; LEAD-ACID BATTERIES;CATHODES;ELECTRODES;SILVER-CADMIUM BATTERIES;SILVER-ZINC BATTERIES

4551 NOVEL AIR ELECTRODE. Landi, H.P.; Voorhies, J.D.; Barber, W.A. (Stamford Research Labs., American Cyanamid Co., Stamford, CT). Am. Chem. Soc., Div. Fuel Chem., Prepr.; 11: No. 3, 12-21(1967).
From 154. ACS Division of Fuel Chemistry National Meeting. Biennial Fuel Cell Symposium; Chicago, IL (10-15 Sep 1967).
For use in free liquid electrolyte or matrix-electrolyte cells. FUEL CELLS;CATHODES;AIR; PLASTICS;CARBON;GRAPHITE;POROSITY;FABRICATION; CATALYSTS;PERFORMANCE;METAL-GAS BATTERIES

4552 STORAGE OF CHLORINE ON ACTIVATED CHARCOAL IN LOW-PRESSURE, HIGH-PERFORMANCE SECONDARY BATTERIES. Werth, J.; Zeitner, E.J.,Jr. (General Motors Research Labs., Santa Barbara, CA). pp 927-32 of Advances in Energy Conversion Engineering. Papers presented at 1967 Intersociety Energy Conversion Engineering Conference, August 13-17, Miami Beach, Florida. New York; American Society Mechanical Engineers (1967).
From 2. intersociety energy conversion engineering conference; Miami Beach, Florida, USA (13 Aug 1967).
METAL-GAS BATTERIES;ZINC-CHLORINE BATTERIES; CHLORINE;GASES;STORAGE;OPERATION;CHARCOAL; ACTIVATED CARBON

4553 BATTERY CHARGERS AND HAND CRANK GENERATORS. Byrnes, H.J. (U.S. Army Electronics Command). pp 85-8 of Proceedings of 21st Annual Power Sources Conference, Fort Monmouth, NJ, 16-18 May 1967. Red Bank, NJ; PSC Publications Committee (1967).
From 21. Annual Power Sources Conference, Session on Power Technology; Fort Monmouth, NJ (16-18 May 1967).
BATTERY CHARGERS;NICKEL-CADMIUM BATTERIES; SILVER-CADMIUM BATTERIES;SILVER-ZINC BATTERIES; OPERATION;DIAGRAMS

4554 CONTROL CONCEPTS FOR SILENT BATTERY CHARGERS. Brzonkala, K.J. (U.S. Army Electronics Command). pp 88-91 of Proceedings of 21st Annual Power Sources Conference, Fort Monmouth, NJ, 16-18 May 1967. Red Bank, NJ; PSC Publications Committee (1967).
From 21. Annual Power Sources Conference, Session on Power Technology; Fort Monmouth, NJ (16-18 May 1967).
Advanced power conversion and modulation techniques. BATTERY CHARGERS;CONTROL SYSTEMS; SWITCHES;MODULATION;ELECTRONIC CIRCUITS

4555 VALVE ELECTRODE FOR USE IN FUSED SALTS. Swinkels, D.A.J. Electrochem. Technol.; 5: No. 7-8, 396-399(1967).
Fabrication. CATHODES;CHLORINE;LITHIUM CHLORIDES;FABRICATION;LITHIUM-CHLORINE BATTERIES;MOLTEN SALTS

4556 INFLUENCE OF SINTER TEMPERATURE ON CAPACITY OF SILVER ELECTRODES. Bogenschuetz, A.F.; Krahl, P.; Schult, J. Electrochem. Technol.; 5: No. 7-8, 405-406(1967).
SILVER;SINTERING;TEMPERATURE DEPENDENCE; PERFORMANCE;HIGH TEMPERATURE;ELECTRIC BATTERIES; ELECTRODES;SILVER-ZINC BATTERIES;SILVER-CADMIUM BATTERIES;CATHODES

4557 USE OF ALTERNATORS ON BRITISH PASSENGER CARS. Edwards, L.E.; Winkley, A.W. Proc. Inst. Mech. Eng. (London); 182: No. 2, 43-59(1967).
AUTOMOBILES;ALTERNATORS;PERFORMANCE;BATTERY CHARGERS;SPECIFICATIONS;DESIGN;USES

4558 CRYSTALLOGRAPHIC CHANGES ENCOUNTERED IN PROCESSING OF POSITIVE LEAD--ACID BATTERY ACTIVE MATERIAL. Pierson, J.R. Electrochem. Technol.; 5: No. 7-8, 323-327(1967).
LEAD-ACID BATTERIES;CATHODES;MICROSCOPY;X-RAY DIFFRACTION;LEAD OXIDES;CHEMICAL PREPARATION;CRYSTAL STRUCTURE

4559 ELECTROCHEMICAL PRECIPITATION OF $Ni(OH)_2$ INTO POROUS ELECTRODES. McHenry, E.J. Electrochem. Technol.; 5: No. 5/6, 275-279(1967).
NICKEL-CADMIUM BATTERIES;NICKEL HYDROXIDES; CATHODES;NICKEL-ZINC BATTERIES;IMPREGNATION; FABRICATION;PRECIPITATION;ELECTROCHEMISTRY; SINTERED MATERIALS;NICKEL

4560 POSITIVE PLATE SULFATION PROCESSES IN THIN- AND THICK-PLATE PB--CA GRID BATTERIES. Tudor, S.; Weisstuch, A.; Davang, S.H. Electrochem. Technol.; 5: No. 1/2, 21-25(1967).
LEAD-ACID BATTERIES;CATHODES;OPERATION; CHEMICAL REACTIONS;LEAD BASE ALLOYS;CALCIUM

ALLOYS;AUTORADIOGRAPHY;LEAD SULFATES;THICKNESS; ELECTROCHEMISTRY;ADDITIVES;PHOSPHORIC ACID

4561 ANODIC CORROSION OF NICKEL SINTER IN POSITIVE ELECTRODES OF NICKEL--CADMIUM BATTERIES CONTAINING CARBONATE. Okinaka, Y.; Turner, D.R. Electrochem. Technol.; 5: No. 3/4, 67-72(1967).
CATHODES;NICKEL-CADMIUM BATTERIES;CORROSION; NICKEL;SINTERED MATERIALS;NICKEL HYDROXIDES; PLATES;CHEMICAL REACTION KINETICS;FABRICATION

4562 SILVER DEPOSITION ON BATTERY SEPARATORS. Dirkse, T.P. Electrochem. Technol.; 5: No. 5/6, 301-302(1967).
BATTERY SEPARATORS;SILVER;DEPOSITION;SILVER-ZINC BATTERIES;SILVER-CADMIUM BATTERIES; HYDROXIDES;SILVER OXIDES;DIFFUSION; ELECTROCHEMISTRY

4563 CHARGING BEHAVIOR OF CADMIUM HYDROXIDE ELECTRODES AT LOW TEMPERATURES. Gottlieb, M.H. Electrochem. Technol.; 5: No. 1-2, 12-17(1967).
CADMIUM HYDROXIDES;ELECTRODES;BATTERY CHARGING;LOW TEMPERATURE;GASES;MEDIUM TEMPERATURE;SILVER-CADMIUM BATTERIES;NICKEL-CADMIUM BATTERIES;ANODES

4564 ELECTRON MICROBEAM PROBE ANALYSES OF NICKEL--CADMIUM BATTERY PLATES. Lifshin, E.; Weininger, J.L. Electrochem. Technol.; 5: No. 1/2, 5-8(1967).
NICKEL-CADMIUM BATTERIES;PLATES;ANODES; ELECTRON MICROPROBE ANALYSIS;X-RAY EMISSION ANALYSIS;CADMIUM

4565 METHODS FOR DETERMINING THE STRUCTURAL AND STOICHIOMETRIC CHANGES OF $NI(OH)_2$ ELECTRODES DURING POLARIZATION IN ALKALINE ELECTROLYTE. Aia, M.A.; Kober, F.P. (Bayside Lab., NY). Am. Chem. Soc., Div. Fuel Chem., Prepr.; 11: No. 1, 224-229(1967).
From 153rd national meeting, American Chemical Society; Miami Beach, Florida, USA (9 Apr 1967).
See CONF-670401--P1.
NICKEL HYDROXIDES;CHEMICAL REACTIONS; PHYSICAL PROPERTIES;CRYSTAL STRUCTURE; POLARIZATION;CATHODES;NICKEL-CADMIUM BATTERIES; NICKEL-ZINC BATTERIES;IRON-NICKEL BATTERIES; NICKEL-HYDROGEN BATTERIES;ELECTRIC BATTERIES; ELECTRODES

4566 AUTOMATIC REGISTRATION OF ELECTROLYTE SPECIFIC GRAVITY IN LEAD--ACID BATTERIES. Burbank, J.; Goldstein, E. J. Electrochem. Soc.; 113: No. 12, 1329-1331(Dec 1966).
LEAD-ACID BATTERIES;ELECTROLYTES;DENSITY; MEASURING METHODS

4567 AUTOMATIC CHARGING METHODS FOR PORTABLE BATTERY OPERATED EQUIPMENT. Eberts, K. IEEE Trans. Ind. Electron. Control Instrum.; IECI-12: No. 2, 57-62(Nov 1966).
BATTERY CHARGERS;DESIGN;APPLIANCES;JUNCTION DIODES;SEMICONDUCTOR SWITCHES;ELECTRONIC CIRCUITS

4568 TRANSISTORIZED CURRENT CONTROLLER. Sabah, N.H. Ind. Electron.; 4: No. 10, 473-477(Oct 1966).
For testing starter batteries. AUTOMOBILES; LEAD-ACID BATTERIES;AUTOMATION;ELECTRIC CURRENTS;CONTROL SYSTEMS;TESTING;ELECTRONIC CIRCUITS;SEMICONDUCTOR DEVICES;TRANSISTORS; TEMPERATURE DEPENDENCE

4569 NONLAMINATED NICKEL OXIDE ELECTRODE WITH PLASTIC BINDER. Sagoyan, L.N. J. Appl. Chem. USSR (Engl. Transl.); 39: No. 9, 1999-2001(Sep 1966).
Translated from Zh. Prikl. Khim.; 39: No. 9, 2131-2133(Sep 1966).
NICKEL OXIDES;PLASTICS;BINDERS;FABRICATION; NICKEL HYDROXIDES;CARBONATES;AMMONIUM COMPOUNDS; POLYSTYRENE;GRAPHITE;ELECTRIC-POWERED VEHICLES; CATHODES;IRON-NICKEL BATTERIES;NICKEL-CADMIUM BATTERIES;AUTOMOBILES

4570 MANGANESE DIOXIDE ELECTRODE IN ALKALINE ELECTROLYTE-ELECTRON--PROTON MECHANISM FOR DISCHARGE PROCESS FROM $MNO_2$ TO $MNO_{1.5}$. Kozawa, A.; Powers, R.A. J. Electrochem. Soc.; 113: No. 9, 870-878(Sep 1966).
Polarization of $MnO_2$ electrode in KOH prepared with $D_2O$ vs $H_2O$. ZINC-MANGANESE BATTERIES;CATHODES;CHEMICAL REACTION KINETICS; POTASSIUM HYDROXIDES;MANGANESE OXIDES;REDUCTION; TEMPERATURE DEPENDENCE;WATER;HEAVY WATER;ZINC IONS;DEUTERIUM;ISOTOPE EFFECTS;POLARIZATION

4571 INFORMATION ABOUT NICKEL HYDROXIDE ELECTRODE. Bode, H.; Dehmelt, K.; Witte, J. Electrochim. Acta; 11: No. 8, 1079-1087(Aug 1966).
Chemical reactions. NICKEL-CADMIUM BATTERIES; IRON-NICKEL BATTERIES;NICKEL-ZINC BATTERIES; CATHODES;NICKEL HYDROXIDES;HYDRATES;CHEMICAL REACTIONS

4572 EXPERIMENTAL CURRENT DISTRIBUTION IN POROUS BATTERY ELECTRODES. Brodd, R.J. Electrochim. Acta; 11: No. 8, 1107-1117(Aug 1966).
Ways to ensure uniformity. ELECTRIC CURRENTS; SPATIAL DISTRIBUTION;POROSITY;ELECTRIC BATTERIES;ELECTRODES;DESIGN

4573 SOLAR BATTERY CHARGER. Bollen, D. Wireless World; 72: No. 7, 343-6(Jul 1966).
ELECTRIC BATTERIES;SOLAR CELLS;BATTERY CHARGER

4574 CURRENT DISTRIBUTION AT GAS-ELECTRODE--ELECTROLYTE INTERFACE. Bennion, D.N.; Tobias, C.W. J. Electrochem. Soc.; 113: No. 6, 589-599(Jun 1966).
Electrolyte film above intrinsic meniscus on Ni and Ag oxygen cathodes. METAL-GAS BATTERIES; NICKEL;SILVER;OXYGEN;CATHODES;ELECTROLYTES; INTERFACES;ELECTRIC CURRENTS;DISTRIBUTION; MATHEMATICAL MODELS;ELECTROCHEMISTRY

4575 CHARACTERIZATION OF POSITIVE PLATES OF LEAD BATTERIES BY X-RAY DIFFRACTION. Kordes, D. Chem.-Ing.-Tech.; 38: No. 6, 638-642(Jun 1966). (In German).
CATHODES;LEAD-ACID BATTERIES;X-RAY DIFFRACTION;LEAD OXIDES;CRYSTAL STRUCTURE

4576 PHENOLIC RESIN AND BATTERY SEPARATOR IMPREGNATED THEREWITH. Beaulieu, R.D.; Le Blanc, J.R. (to Monsanto Co.). US Patent 3,247,025. 19 Apr 1966. Filed date 29 Aug 1963. vp.
BATTERY SEPARATORS;PHENOLS;RESINS;ALDEHYDES; SURFACTANTS;IMPREGNATION

4577 POTASSIUM DISTRIBUTION IN NICKEL OXIDE ELECTRODES. Kober, F.P.; Lublin, P. J.

Electrochem. Soc.; 113: No. 4, 396-398(Apr 1966).
POTASSIUM;IMPURITIES;ELECTRON MICROPROBE ANALYSIS;NICKEL-HYDROGEN BATTERIES;IRON-NICKEL BATTERIES;NICKEL-CADMIUM BATTERIES;NICKEL-ZINC BATTERIES;CATHODES;ELECTRIC BATTERIES; ELECTRODES

4578 DISCHARGE CHARACTERISTICS OF LEAD/LEAD SULFATE ELECTRODE. Gillibrand, M.I.; Lomax, G.R. Electrochim. Acta; 11: No. 3, 281-287(Mar 1966).
LEAD-ACID BATTERIES;LEAD;LEAD SULFATES; PERFORMANCE;SULFURIC ACID;CURRENT DENSITY; TEMPERATURE EFFECTS;ELECTROLYTES;DIFFUSION; SULFATES;IONS;ANODES;ELECTROCHEMISTRY

4579 POLARIZATION STUDIES ON SINTERED PLATE ELECTRODES CONTAINING VARIOUS AMOUNTS OF $NI(OH)_2$. Jost, E.; Rufenacht, F. J. Electrochem. Soc.; 113: No. 2, 97-100(Feb 1966).
PLATES;SINTERED MATERIALS;NICKEL OXIDES; NICKEL HYDROXIDES;PERFORMANCE;POLARIZATION; ELECTROCHEMISTRY;POTASSIUM HYDROXIDES;IRON-NICKEL BATTERIES;NICKEL-CADMIUM BATTERIES; NICKEL-HYDROGEN BATTERIES;NICKEL-ZINC BATTERIES; CATHODES;ELECTRODES;ELECTRIC BATTERIES

4580 MICROPORE: SINTERED PVC SEPARATOR FOR LEAD STORAGE BATTERIES. Aoyama, S.; Ogino, T.; Nagai, S.; Okawa, Y.; Suzuki, F. Sumitomo Electr. Tech. Rev.; No. 7, 80-89(Feb 1966).
BATTERY SEPARATORS;PVC;SINTERED MATERIALS; LEAD-ACID BATTERIES;ELECTRIC CONDUCTIVITY

4581 BATTERY SEPARATOR EMBODYING RIBS APPLIED FROM COMPOSITION OF PLASTISOL AND AQUEOUS PHENOLIC RESIN. Little, J.F. (to United States Rubber Co.). US Patent 3,228,803. 11 Jan 1966. vp.
BATTERY SEPARATORS;RESINS;FABRICATION; PHENOLS;FORMALDEHYDE

4582 USE OF ION EXCHANGE MEMBRANES AS SEPARATORS IN BATTERIES. Shaffer, L.H. J. Electrochem. Soc.; 113: No. 1, 1-6(Jan 1966).
BATTERY SEPARATORS;ION EXCHANGE MATERIALS; MEMBRANES;SILVER-ZINC BATTERIES;OPERATION

4583 SURFACE CHANGES OF LEAD ELECTRODES CAUSED BY ELECTROLYSIS. Metzler, H.; Schwarz, W. Electrochim. Acta; 11: No. 1, 111-114(Jan 1966). (In German).
LEAD-ACID BATTERIES;ELECTRODES;SURFACES; CHEMICAL REACTIONS;SULFURIC ACID;LEAD;ANODES; LEAD SULFATES;CRYSTAL STRUCTURE;SIZE; POLARIZATION

4584 ELECTROLYTES FOR NON-AQUEOUS BATTERIES. Boden, D.P. (Electric Storage Battery Co.). pp 63-6 of Proceedings of 20th Annual Power Sources Conference, Fort Monmouth, NJ, 24-26 May 1966. Red Bank, NJ; PSC Publications Committee (1966).
From 20. Annual Power Sources Conference. Session on High Energy Density Battery Systems; Fort Monmouth, NJ (24-26 May 1966).
Li/$LiClO_4$ propylene carbonate/$CuF_2$: electrolytic conductance. METAL-NONMETAL BATTERIES;ELECTROLYTES;LITHIUM;LITHIUM COMPOUNDS;PERCHLORATES;CARBONATES;HYDROCARBONS; COPPER FLUORIDES;IONS;MOBILITY;SOLVATION; ELECTROCHEMISTRY;ELECTRIC CONDUCTIVITY

4585 CHARGE CONTROL DEVICES. 3. AMP-GATE DIODE FOR CHARGE CONTROL OF SEALED RECHARGEABLE CELLS. Amsterdam, R.E. (P.R. Mallory and Co., Inc.). pp 105-9 of Proceedings of 20th Annual Power Sources Conference, Fort Monmouth, NJ, 24-26 May 1966. Red Bank, NJ; PSC Publications Committee (1966).
From 20. Annual Power Sources Conference. Session on Secondary Batteries; Fort Monmouth, NJ (24-26 May 1966).
BATTERY CHARGING;CONTROL EQUIPMENT;NICKEL-CADMIUM BATTERIES;SATELLITES;ELECTRONIC CIRCUITS;PERFORMANCE;ELECTRIC CURRENTS;TESTING

4586 CHARGE CONTROL DEVICES. 2. CHARGE CONTROL METHODS FOR NI--CD BATTERIES. Carson, W.N. (Gen. Elec. Co.). pp 103-5 of Proceedings of 20th Annual Power Sources Conference, Fort Monmouth, NJ, 24-26 May 1966. Red Bank, NJ; PSC Publications Committee (1966).
From 20. Annual Power Sources Conference. Session on Secondary Batteries; Fort Monmouth, NJ (24-26 May 1966).
NICKEL-CADMIUM BATTERIES;BATTERY CHARGING; CONTROL SYSTEMS;SATELLITES;SPACE VEHICLES; ELECTRONIC CIRCUITS

4587 CHARGE CONTROL DEVICES. 1. THIRD ELECTRODE CHARGE CONTROL. Grieger, P.F. (McGraw-Edison Co.). pp 99-102 of Proceedings of 20th Annual Power Sources Conference, Fort Monmouth, NJ, 24-26 May 1966. Red Bank, NJ; PSC Publications Committee (1966).
From 20. Annual Power Sources Conference. Session on Secondary Batteries; Fort Monmouth, NJ (24-26 May 1966).
VCB Black $O_2$-reduction control system. NICKEL-CADMIUM BATTERIES;BATTERY CHARGING; MEDIUM PRESSURE;ELECTRIC POTENTIAL;POLARIZATION; ELECTRIC CURRENTS;CONTROL SYSTEMS

4588 MANUALLY OPERATED GENERATOR USING HARMONIC DRIVE SYSTEM. Cole, R.H. (Honeywell, Inc.). pp 210-14 of Proceedings of 20th Annual Power Sources Conference, Fort Monmouth, NJ, 24-26 May 1966. Red Bank, NJ; PSC Publications Committee (1966).
From 20. Annual Power Sources Conference. Session on Power Conditioning; Fort Monmouth, NJ (24-26 May 1966).
BATTERY CHARGERS;ELECTRIC BATTERIES;RADIO EQUIPMENT POWER SUPPLIES;ELECTRONIC CIRCUITS

4589 SILVER BATTERIES. 3. ELECTRODEPOSITED INORGANIC SEPARATOR FOR AG--CD BATTERIES. Consiglio, J.A. (Gen. Elec. Co.). pp 126-8 of Proceedings of 20th Annual Power Sources Conference, Fort Monmouth, NJ, 24-26 May 1966. Red Bank, NJ; PSC Publications Committee (1966).
From 20. Annual Power Sources Conference. Session on Secondary Batteries; Fort Monmouth, NJ (24-26 May 1966).
Films of $Ca(OH)_2$ or $Mg(OH)_2$. SILVER-CADMIUM BATTERIES;BATTERY SEPARATORS;CALCIUM HYDROXIDES; MAGNESIUM HYDROXIDES;FILMS;PERFORMANCE;CHEMICAL PREPARATION;TESTING

4590 SILVER BATTERIES. 2. IMPROVED ZN ELECTRODES FOR SECONDARY BATTERIES. Oxley, J.E.; Fleischmann, C.W.; Oswin, H.G. (Leesona Moos Labs.). pp 123-6 of Proceedings of 20th Annual Power Sources Conference, Fort Monmouth, NJ, 24-26 May 1966. Red Bank, NJ; PSC Publications Committee (1966).
From 20. Annual Power Sources Conference. Session on Secondary Batteries; Fort Monmouth, NJ (24-26 May 1966).
SILVER-ZINC BATTERIES;ZINC;ELECTRODES;

ELECTROCHEMISTRY;ELECTRIC CURRENTS;DESIGN; BATTERY CHARGING

4591 CHARGE CONTROL DEVICES. 6. AUXILIARY ELECTRODE INSTRUMENTATION. Sizemore, K.O.; Hennigan, T.J. (NASA). pp 116-20 of Proceedings of 20th Annual Power Sources Conference, Fort Monmouth, NJ, 24-26 May 1966. Red Bank, NJ; PSC Publications Committee (1966).
From 20. Annual Power Sources Conference. Session on Secondary Batteries; Fort Monmouth, NJ (24-26 May 1966).
NICKEL-CADMIUM BATTERIES;BATTERY CHARGING; CONTROL SYSTEMS;ELECTRODES;ELECTRONIC CIRCUITS; ELECTRIC POTENTIAL;PERFORMANCE;POWER CONDITIONING CIRCUITS;SATELLITES

4592 NICKEL--CADMIUM BATTERIES. 5. GASSING BEHAVIOR OF $NI(OH)_2$ ELECTRODES. Kroger, H.H.; Consiglio, J.A. (Gen. Elec. Co.). pp 145-8 of Proceedings of 20th Annual Power Sources Conference, Fort Monmouth, NJ, 24-26 May 1966. Red Bank, NJ; PSC Publications Committee (1966).
From 20. Annual Power Sources Conference. Session on Secondary Batteries; Fort Monmouth, NJ (24-26 May 1966).
NICKEL-CADMIUM BATTERIES;NICKEL HYDROXIDES; CATHODES;GASES;OXYGEN

4593 NICKEL--CADMIUM BATTERIES. 4. SELF DISCHARGE ON $NI(OH)_2$ ELECTRODES. Bradshaw, B.C. (US Army Electronics Command). pp 140-4 of Proceedings of 20th Annual Power Sources Conference, Fort Monmouth, NJ, 24-26 May 1966. Red Bank, NJ; PSC Publications Committee (1966).
From 20. Annual Power Sources Conference. Session on Secondary Batteries; Fort Monmouth, NJ (24-26 May 1966).
NICKEL-CADMIUM BATTERIES;CATHODES;NICKEL OXIDES;OXYGEN;ELECTRIC POTENTIAL

4594 CHARGE CONTROL DEVICES. 5. CHARGE CONTROL OF AG--CD CELLS AND AG--ZN CELLS. Hennigan, T.J.; Sizemore, K.O. (NASA). pp 113-16 of Proceedings of 20th Annual Power Sources Conference, Fort Monmouth, NJ, 24-26 May 1966. Red Bank, NJ; PSC Publications Committee (1966).
From 20. Annual Power Sources Conference. Session on Secondary Batteries; Fort Monmouth, NJ (24-26 May 1966).
SILVER-CADMIUM BATTERIES;SILVER-ZINC BATTERIES;BATTERY CHARGING;SATELLITES;CONTROL SYSTEMS;TESTING

4595 CHARGE CONTROL DEVICES. 4. COULOMETRIC CONTROL OF CHARGING OF NI--CD SECONDARY BATTERIES. Haines, R.L.; Henderson, I.H.S.; McKague, F/L.J.R.; King, T.E. (Canadian Defence Res. Board). pp 109-12 of Proceedings of 20th Annual Power Sources Conference, Fort Monmouth, NJ, 24-26 May 1966. Red Bank, NJ; PSC Publications Committee (1966).
From 20. Annual Power Sources Conference. Session on Secondary Batteries; Fort Monmouth, NJ (24-26 May 1966).
NICKEL-CADMIUM BATTERIES;BATTERY CHARGING; VOLTAMETRY;CONTROL SYSTEMS;SATELLITES; FABRICATION;PERFORMANCE

4596 CYCLING CHARACTERISTICS OF SILVER ELECTRODE IN ALKALINE SOLUTIONS. Dirkse, T.P. Electrochem. Technol.; 4: No. 3/4, 163-165(1966).
HYDROXIDES;CURRENT DENSITY;BATTERY CHARGING; MEDIUM TEMPERATURE;SINTERED MATERIALS;LOW TEMPERATURE;SILVER-CADMIUM BATTERIES;SILVER-ZINC BATTERIES;CATHODES;SILVER;ELECTRODES; ELECTRIC BATTERIES

4597 MIXED POWDER HYDROGEN ELECTRODE. Drazic, D.M.; Despic, A.R.; Vujcic, V.L. Electrochem. Technol.; 4: No. 3/4, 175-176(1966).
Al--Ni alloy. HYDROGEN FUEL CELLS;ANODES; NICKEL ALLOYS;ALUMINIUM ALLOYS;SINTERED MATERIALS;POROSITY;FABRICATION;SINTERING;NICKEL-HYDROGEN BATTERIES

4598 AUTOMATIC BATTERY CHARGER FOR FIELD USE. Dando, T.O. Washington, DC; U. S. Geological Survey (1966). vp.
For several 12-V batteries simultaneously. BATTERY CHARGERS;AUTOMATION;OPERATION

4599 ELECTROLYTIC IMPREGNATION METHOD: NICKEL HYDROXIDE ELECTRODE. Kober, F.P. Electrochem. Technol.; 4: No. 7/8, 423-426(1966).
NICKEL-CADMIUM BATTERIES;CATHODES;NICKEL HYDROXIDES;IMPREGNATION;FABRICATION;POROUS MATERIALS;NICKEL-ZINC BATTERIES; ELECTROCHEMISTRY

4600 BATTERY CELL CONNECTOR IMPROVEMENTS. Orlando, D.; Oswald, T. New York; Society of Automotive Engineers (1966). 7p.
ELECTRIC BATTERIES;CONNECTORS;MECHANICAL PROPERTIES;ELECTRICAL PROPERTIES;SEALS

4601 SOME NEWS OF EUROPEAN STARTER BATTERIES. Blaich, E.O.A. New York; Society of Automotive Engineers (1966). 9p.
ELECTRIC BATTERIES;CONTAINERS;POWER; AUTOMOBILES;PLASTICS

4602 WHAT'S NEW IN ONE-PIECE COVER BATTERY CONSTRUCTION. Sabatino, A. New York; Society of Automotive Engineers (1966). 6p.
ELECTRIC BATTERIES;CONTAINERS;DESIGN

4603 BATTERY PERFORMANCE NEGATIVE-PLATE IMPROVEMENTS. Brodhacker, J.W. New York; Society of Automotive Engineers (1966). 5p.
ANODES;PERFORMANCE;LIFETIME;DESIGN;OILS; SULFATES;CHEMICAL REACTIONS;LEAD-ACID BATTERIES

4604 PRODUCTION OF POROUS NICKEL ELECTRODES FOR GAS-TIGHT BATTERIES. Scheibe, H. Abh. Dtsch. Akad. Wiss. Berlin, Kl. Math., Phys. Tech.; No. 1, 185-190(1966). (In German).
SEALS;FABRICATION;NICKEL;SINTERED MATERIALS; ELECTRODES;ELECTRIC BATTERIES;NICKEL-CADMIUM BATTERIES;NICKEL-ZINC BATTERIES;IRON-NICKEL BATTERIES;NICKEL-HYDROGEN BATTERIES;CATHODES

4605 FLAT CURRENT-GENERATION SYSTEM. Automob. Eng.; 55: No. 13, 521-526(Dec 1965).
LEAD-ACID BATTERIES;ALTERNATORS;VOLTAGE REGULATORS;CONTROL SYSTEMS;AUTOMOBILES; OPERATION

4606 ANALYSIS OF CHARGE--DISCHARGE CHARACTERISTICS OF NICKEL OXIDE ELECTRODES BY INFRARED SPECTROSCOPY. Kober, F.P. J. Electrochem. Soc.; 112: No. 11, 1064-1067(Nov 1965).
NICKEL OXIDES;PERFORMANCE;BATTERY CHARGING; ELECTRICAL PROPERTIES;HYDROXYL RADICALS;NICKEL

HYDROXIDES;INFRARED SPECTROMETERS;NICKEL-HYDROGEN BATTERIES;IRON-NICKEL BATTERIES;NICKEL-CADMIUM BATTERIES;NICKEL-ZINC BATTERIES; CATHODES;ELECTRIC BATTERIES;ELECTRODES

4607 HYDROGEN PERMEATION STUDIES. Heinrich, R.R.; Johnson, C.E.; Crouthamel, C.E. J. Electrochem. Soc.; 112: No. 11, 1067-1073(Nov 1965).
Suitability of V in lithium hydride cell.
CATHODES;MATERIALS;COMPATIBILITY;IRON ALLOYS; MOLYBDENUM ALLOYS;VANADIUM;PERMEABILITY; ELECTROCHEMICAL CELLS

4608 CURRENT DISTRIBUTION IN STORAGE BATTERY PLATES WITH TUBULAR COMPONENTS. Euler, J.; Horn, L. Electrochim. Acta; 10: No. 11, 1057-1066(Nov 1965). (In German).
LEAD-ACID BATTERIES;NICKEL-HYDROGEN BATTERIES;IRON-NICKEL BATTERIES;NICKEL-CADMIUM BATTERIES;NICKEL-ZINC BATTERIES;ELECTRIC CURRENTS;SPATIAL DISTRIBUTION;CURRENT DENSITY; PLATES;HYDROXIDES;ELECTRIC BATTERIES

4609 ADVANCES IN AUTOMOBILE BATTERY CHARGING EQUIPMENT. Wright, M.J. Direct Curr.; 10: No. 4, 171-176(Nov 1965).
AUTOMOBILES;LEAD-ACID BATTERIES;BATTERY CHARGERS;ELECTRIC GENERATORS;VOLTAGE REGULATORS; ALTERNATORS;SEMICONDUCTOR RECTIFIERS

4610 RECHARGING ACCESSORY IMPROVES CORDLESS DEVICES. Mittleman, J. Electron. Prod. (Garden City, N.Y.); 8: No. 5, 28-29(Oct 1965).
ELECTRIC BATTERIES;BATTERY CHARGERS; OPERATION;PERFORMANCE

4611 PRODUCTION OF POROUS NICKEL FOR ALKALINE-BATTERY AND FUEL-CELL ELECTRODES: PRACTICAL AND ECONOMIC CONSIDERATIONS. Tracey, V.A. Powder Metall.; 8: No. 16, 241-255(Aut 1965).
NICKEL;FABRICATION;SINTERING;PRESSING; COMPACTING;ROLLING;FUEL CELLS;ELECTRODES; ELECTRIC BATTERIES;NICKEL-CADMIUM BATTERIES; NICKEL-ZINC BATTERIES;NICKEL-HYDROGEN BATTERIES; IRON-NICKEL BATTERIES;CATHODES;HYDROXIDES

4612 MECHANISM OF FORMATION OF LEAD ANODES IN $H_2SO_4$--$HClO_4$ MIXTURES. Ragheb, A.; Machu, W.; Boctor, H. Werkst. Korros.; 16: No. 9, 755-761(Sep 1965). (In German).
LEAD-ACID BATTERIES;ANODES;LEAD;LEAD OXIDES; SULFURIC ACID;PERCHLORIC ACID;FABRICATION; CHEMICAL PREPARATION

4613 TUNNEL-DIODE DETECTS BATTERY VOLTAGE LEVELS. Layte, H. Electron. Des.; 13: No. 18, 44(30 Aug 1965).
TUNNEL DIODES;VOLTMETERS;ELECTRIC BATTERIES; ELECTRIC POTENTIAL;ELECTRONIC CIRCUITS; PERFORMANCE

4614 MICROSCOPIC EXAMINATION OF ACTIVE MATERIALS FROM LEAD--ACID CELLS. Bagshaw, N.E.; Wilson, K.P. Electrochim. Acta; 10: No. 8, 867-873(Aug 1965).
LEAD-ACID BATTERIES;PLATES;INTERFACES; MICROSCOPY;ELECTROCHEMISTRY

4615 INFLUENCE OF ELECTRODE REACTION KINETICS ON POLARIZATION OF FLOODED POROUS ELECTRODES. Grens, E.A. II; Tobias, C.W. Electrochim. Acta; 10: No. 8, 761-772(Aug 1965).
ELECTRIC BATTERIES;ELECTRODES;CHEMICAL REACTIONS;POLARIZATION;OVERVOLTAGE;POROSITY; CURRENT DENSITY;PERFORMANCE;CHEMICAL REACTION KINETICS;ELECTRIC CONDUCTIVITY

4616 DESIGN OF OPTIMUM LEAD CORES FOR ARMORED PLATES IN LEAD ACCUMULATORS. Ludwig, R. Elektrotech. Z., A; 86: No. 13, 431-435(25 Jun 1965). (In German).
LEAD-ACID BATTERIES;PLATES;VOLTAGE DROP;GAIN; DESIGN;OPTIMIZATION

4617 (AD--620123) METHOD OF MANUFACTURING POSITIVE ELECTRODES FOR SILVER--ZINC BATTERIES. Romanov, V.V. Jun 1965. Translation of Russian Patent 138,283. (FTD-TT--65-185). 4p.
SILVER-ZINC BATTERIES;CATHODES;FABRICATION; SILVER;POWDERS;PRESSING;CELLOPHANE;MAGNESIUM HYDROXIDES;OXYGEN

4618 INFLUENCE OF SURFACE-ACTIVE AGENTS ON PASSIVATION OF LEAD ELECTRODE. Lazarev, V.F.; Ovcharenko, V.I.; Levin, A.I.; Rudoi, V.M. J. Appl. Chem. USSR (Engl. Transl.); 38: No. 6, 1284-1287(Jun 1965).
Translated from Zh. Prikl. Khim.; 38: No. 6, 1305-1309(Jun 1965).
LEAD-ACID BATTERIES;PASSIVATION;LEAD; POLARIZATION;ANODES;IMPEDANCE;LAYERS

4619 EFFECTS OF FOREIGN IONS ON NICKEL HYDROXIDE AND CADMIUM ELECTRODES. Casey, E.J.; Dubois, A.R.; Lake, P.E.; Moroz, W.J. J. Electrochem. Soc.; 112: No. 4, 371-383(Apr 1965).
87 references. NICKEL-CADMIUM BATTERIES; ELECTRODES;POTASSIUM HYDROXIDES;IONS;IMPURITIES

4620 PRODUCTION OF POROUS MEMBRANES FOR BATTERIES AND FUEL CELLS. Kravic, A.F. Can. Min. Metall. Bull.; 58: No. 636, 422-427(Apr 1965).
Nickel. NICKEL;MEMBRANES;POROSITY; FABRICATION;ROLLING;POWDERS;SINTERING; ELECTRODES;ELECTRIC BATTERIES;FUEL CELLS;NICKEL-CADMIUM BATTERIES;NICKEL-ZINC BATTERIES;IRON-NICKEL BATTERIES;NICKEL-HYDROGEN BATTERIES; CATHODES

4621 (AD--807778) AUTOMATIC CHARGING OF UNSPILLABLE LEAD ACCUMULATORS. Beier, H.G.; Richt, H. Translated from Funkschau; No. 1, vp(Jan 1965). 10p. (TIL-T--5697).
BATTERY CHARGERS;LEAD-ACID BATTERIES; ELECTROLYTES;GELS;ELECTRONIC CIRCUITS;DESIGN

4622 FORMING PROCESS IN NICKEL POSITIVE ELECTRODES. Tuomi, D. J. Electrochem. Soc.; 112: No. 1, 1-12(Jan 1965).
CATHODES;NICKEL HYDROXIDES;NICKEL-CADMIUM BATTERIES;NICKEL-ZINC BATTERIES;NICKEL-HYDROGEN BATTERIES;FABRICATION;IRON-NICKEL BATTERIES; ELECTRIC BATTERIES

4623 CHARGE CONTROL OF NICKEL--CADMIUM BATTERIES. AUXILIARY ELECTRODES FOR OVERCHARGE AND OVERDISCHARGE CONTROL. Catotti, A.J.; Read, M.D. (General Electric Co.). pp 63-6 of Proceedings of 19. Annual Power Sources Conference, Fort Monmouth, NJ, 18-20 May 1965. Red Bank, NJ; PSC Publications Committee (1965).
From 19. annual power sources conference; Fort Monmouth, New Jersey, USA (18 May 1965).
NICKEL-CADMIUM BATTERIES;BATTERY CHARGING; ELECTRODES;POLARIZATION;TEMPERATURE DEPENDENCE;

MEDIUM TEMPERATURE;GASES;SATELLITES

4624 EVALUATION OF AUXILIARY ELECTRODE MATERIALS. Grieger, P.F. (McGraw-Edison Co.). pp 58-62 of Proceedings of 19. Annual Power Sources Conference, Fort Monmouth, NJ, 18-20 May 1965. Red Bank, NJ; PSC Publications Committee (1965).
From 19. annual power sources conference; Fort Monmouth, New Jersey, USA (18 May 1965).
NICKEL-CADMIUM BATTERIES;BATTERY CHARGING; ELECTRODES;POLARIZATION;DESIGN

4625 SEALED ZINC--SILVER OXIDE BATTERIES. PART 3. Lander, J.J.; Keralla, J.A. (General Motors Corp.); Scardaville, P.A. (Radiation Applications Inc.). pp 77-80 of Proceedings of 19. Annual Power Sources Conference, Fort Monmouth, NJ, 18-20 May 1965. Red Bank, NJ; PSC Publications Committee (1965).
From 19. annual power sources conference; Fort Monmouth, New Jersey, USA (18 May 1965).
SILVER-ZINC BATTERIES;BATTERY SEPARATORS; PERFORMANCE TESTING;LIFETIME

4626 STUDIES ON THE STABILITY OF OXIDES OF SILVER. Nagy, G.D.; Moroz, W.J.; Casey, E.J. (Canadian Defense Research Board). pp 80-5 of Proceedings of 19. Annual Power Sources Conference, Fort Monmouth, NJ, 18-20 May 1965. Red Bank, NJ; PSC Publications Committee (1965).
From 19. annual power sources conference; Fort Monmouth, New Jersey, USA (18 May 1965).
SILVER OXIDES;PYROLYSIS;SILVER-ZINC BATTERIES;SILVER-CADMIUM BATTERIES;ELECTRODES; STABILITY;CHEMICAL PREPARATION

4627 DRY PROCESS ELECTRODES FOR ZN--AGO BATTERIES. Wilburn, N.T. (US Army Electronics Command). pp 101-4 of Proceedings of 19. Annual Power Sources Conference, Fort Monmouth, NJ, 18-20 May 1965. Red Bank, NJ; PSC Publications Committee (1965).
From 19. annual power sources conference; Fort Monmouth, New Jersey, USA (18 May 1965).
SILVER-ZINC BATTERIES;ELECTRODES;FABRICATION; SILVER OXIDES;EFFICIENCY;PERFORMANCE

4628 LIGHTWEIGHT BATTERY CHARGER. Schwarz, F.C. (General Electric Co.). pp 127-9 of Proceedings of 19. Annual Power Sources Conference, Fort Monmouth, NJ, 18-20 May 1965. Red Bank, NJ; PSC Publications Committee (1965).
From 19. annual power sources conference; Fort Monmouth, New Jersey, USA (18 May 1965).
BATTERY CHARGING;ELECTRONIC CIRCUITS; EQUIVALENT CIRCUITS;BATTERY CHARGERS

4629 AUTOMATIC BATTERY CHARGING SYSTEM. Davis, J.J.; Michlidge, M.G. (Electro-Optical Systems, Inc.). pp 130-2 of Proceedings of 19. Annual Power Sources Conference, Fort Monmouth, NJ, 18-20 May 1965. Red Bank, NJ; PSC Publications Committee (1965).
From 19. annual power sources conference; Fort Monmouth, New Jersey, USA (18 May 1965).
SILVER-CADMIUM BATTERIES;BATTERY CHARGING; POWER CONDITIONING CIRCUITS;BATTERY CHARGERS; PERFORMANCE

4630 DRY PROCESS ELECTRODES FOR ZN--AGO BATTERIES. Wilburn, N.T. Proc., Ann. Power Sources Conf.; 19: 101-4(1965).
Fabrication and properties. SILVER-ZINC BATTERIES;CATHODES;FABRICATION;CHEMICAL PREPARATION;PRODUCTION;PHYSICAL PROPERTIES

4631 SEALED ZINC--SILVER OXIDE BATTERIES. III. Lander, J.J.; Keralla, J.A.; Scardaville, P.A. Proc., Ann. Power Sources Conf.; 19: 77-80(1965).
Fabrication and testing of separators. SILVER-ZINC BATTERIES;BATTERY SEPARATORS; POLYETHYLENES;TEFLON;CROSS-LINKING;IRRADIATION; FABRICATION;PERFORMANCE TESTING

4632 BENEFICIAL EFFECT OF LITHIATED ELECTROLYTE ON IRON BATTERY ELECTRODES. Hills, S. (Elec. Storage Battery Co., West Orange, NJ). J. Electrochem. Soc.; 112: No. 10, 1048-9(1965).
IRON-NICKEL BATTERIES;ANODES;ELECTRIC BATTERIES;ELECTRODES;IRON;POTASSIUM HYDROXIDES; ELECTROLYTES;LITHIUM HYDROXIDES;EFFICIENCY

4633 APPLICATION OF AUTORADIOGRAPHIC TECHNIQUES TO BATTERY RESEARCH. Tudor, S.; Weisstuch, A.; Davang, S.H. Electrochem. Technol.; 3: No. 3/4, 90-94(1965).
CALCIUM ALLOYS;LEAD BASE ALLOYS;LEAD-ACID BATTERIES;ELECTRODES;AUTORADIOGRAPHY; RADIOISOTOPES;CATHODES;ELECTRIC BATTERIES; SULFATES

4634 MEASUREMENT OF ZINCATE DIFFUSION THROUGH MEMBRANE. Dirkse, T.P. Electrochem. Technol.; 3: No. 3/4, 106-108(1965).
SILVER-ZINC BATTERIES;DIFFUSION;MEMBRANES; BATTERY SEPARATORS;TRACER TECHNIQUES; RADIOISOTOPES;IONS;ZINCATES

4635 RATE OF HYDROGEN EVOLUTION OF ZINC ELECTRODES IN ALKALINE SOLUTIONS. Snyder, R.N.; Lander, J.J. Electrochem. Technol.; 3: No. 5/6, 161-166(1965).
SILVER-ZINC BATTERIES;SEALS;GASES;ANODES; HYDROGEN;HYDROXIDES;PERFORMANCE;POTASSIUM HYDROXIDES;MERCURY OXIDES;ADDITIVES

4636 PRECISION CONSTANT CURRENT/VOLTAGE LOAD FOR BATTERY STUDIES. Barnartt, S.; Malmberg, P.R.; Gosser, R.B. Electrochem. Technol.; 3: No. 11/12, 327-331(1965).
NICKEL-CADMIUM BATTERIES;ELECTRIC BATTERIES; BATTERY CHARGING;VOLTAGE REGULATORS;CONTROL SYSTEMS

4637 LONGITUDINAL CURRENT DISTRIBUTION ON STORAGE BATTERY PLATES CONSISTING OF TUBULAR ELEMENTS. Euler, J.; Horn, L. Arch. Elektrotech. (Berlin); 50: No. 2, 85-90(1965). (In German).
Plate fabrication. LEAD-ACID BATTERIES; PLATES;ELECTRIC CURRENTS;SPATIAL DISTRIBUTION; TUBES;FABRICATION

4638 INVESTIGATION OF RECRYSTALLIZATION OF ZINC OXIDE IN ZINCATE SOLUTION USING ISOTOPE TRACING METHOD. Zoeld, E. Period. Polytech. Chem. Eng.; 9: No. 1, 35-45(1965). (In Hungarian).
44 references. RECRYSTALLIZATION;ZINC OXIDES SILVER-ZINC BATTERIES;TRACER TECHNIQUES; RADIOISOTOPES;ANODES

4639 RECTIFIER EQUIPMENT FOR SUPPLY OF TELEPHONE EXCHANGES. Kovacevic, D. Elektrotch. Vestn.; 32: No. 8/9, 224-226(1965). (In Slovene).

Capacity: >500 A at 60 V. RECTIFIERS;BATTERY CHARGERS;COMMUNICATIONS

4640 DISPERSION STRENGTHENED LEAD IN BATTERIES. Roberts, D.H.; Ratcliff, N.A. Metallurgia; 70: No. 421, 223-227(Nov 1964).
LEAD;DISPERSION HARDENING;LEAD-ACID BATTERIES;ELECTRODES;FABRICATION;CORROSION RESISTANCE;PERFORMANCE;GRIDS

4641 ADSORPTION MECHANISM OF EXPANDER ACTION. Yampol'skaya, E.G.; Kabanov, B.N. J. Appl. Chem. USSR (Engl. Transl.); 37: No. 11, 2501-2504(Nov 1964).
Translated from Zh. Prikl. Khim.; 37: No. 11, 2536-2539(Nov 1964).
LEAD-ACID BATTERIES;PLATES;CAKING;SWELLING; COVERINGS;ELECTRODES;SURFACTANTS

4642 ROLE OF METALLIC OXIDES IN PROCESSES AT ELECTRIC BATTERY ELECTRODES. Brenet, J.P. Rev. Gen. Electr.; 73: No. 10, 511-515(Oct 1964). (In French).
ELECTRIC BATTERIES;CATHODES;OVERVOLTAGE; OXIDES;POLARIZATION;MATERIALS;CRYSTAL DEFECTS

4643 ROLE OF ANTIMONY IN POSITIVE PLATE BEHAVIOR IN LEAD--ACID CELL. Burbank, J. J. Electrochem. Soc.; 111: No. 10, 1112-1116(Oct 1964).
LEAD-ACID BATTERIES;LEAD OXIDES;ANTIMONY ADDITIONS;PLATES;CATHODES

4644 INFLUENCE OF CERTAIN ADDITIVES TO ACTIVATED CARBON ON ITS PROPERTIES AS HYDROGEN ELECTRODE MATERIAL. Tomassi, W.; Kurylowicz, J. Int. Chem. Eng.; 4: No. 4, 695-700(Oct 1964).
NICKEL-HYDROGEN BATTERIES;ANODES;ZINC-AIR BATTERIES;ZINC-CHLORINE BATTERIES;LITHIUM-CHLORINE BATTERIES;CADMIUM-AIR BATTERIES;IRON-AIR BATTERIES;CATHODES;HYDROGEN FUEL CELLS; ANODES;ADDITIVES;ACTIVATED CARBON

4645 ROLE OF BARIUM SULFATE IN NEGATIVE PLATE OF LEAD STORAGE BATTERY. Kasparov, Ya.B.; Yampol'skaya, E.G.; Kabanov, B.N. J. Appl. Chem. USSR (Engl. Transl.); 37: No. 9, 1922-1925(Sep 1964).
Translated from Zh. Prikl. Khim.; 37: No. 9, 1936-1941(Sep 1964).
LEAD-ACID BATTERIES;BARIUM SULFATES;PLATES; ANODES;LEAD;BINDERS

4646 BATTERY INDUSTRY STANDARDS AND SPECIFICATIONS. SPE J.; 20: No. 9, 993-996(Sep 1964).
ELECTRIC BATTERIES;MATERIALS;STANDARDS; SPECIFICATIONS;PLASTICS

4647 ALKALI METAL VOLTAIC CELLS. Hamby, D.C.; Steller, B.W.; Chase, J.B. J. Electrochem. Soc.; 111: No. 8, 998-1002(Aug 1964).
Na(Sn) or Li(Sn)/$CaCl_2$, NaCl, KCl, or LiCl/ Ni or $Cl_2$--C. MOLTEN SALTS;LITHIUM-CHLORINE BATTERIES;METAL-GAS BATTERIES;METAL-METAL BATTERIES;SODIUM;LITHIUM;TIN ADDITIONS;CALCIUM CHLORIDES;SODIUM CHLORIDES;POTASSIUM CHLORIDES; LITHIUM CHLORIDES;NICKEL;CARBON;CHLORINE; BATTERY SEPARATORS;MEMBRANES;CERAMICS; FABRICATION;HIGH TEMPERATURE;ALUMINIUM COMPOUNDS;SILICATES

4648 EXPERIMENTAL APPROACH TO REVERSIBLE OXYGEN ELECTRODE. Criddle, E.E. Electrochim. Acta; 9: No. 7, 853-868(Jul 1964).
FUEL CELLS;CATHODES;OXYGEN;PLATINUM; POTASSIUM HYDROXIDES;IMPURITIES;PH VALUE; PRESSURE DEPENDENCE;PERFORMANCE;METAL-GAS BATTERIES

4678 SHEET-LIKE ELECTRODES FOR STORAGE BATTERIES. Dalton, H.R. German(FRG) Patent 1,136,387. 13 Sep 1962. Filed date 28 Jul 1958. 5p.
A process for preparing sheet electrodes consisting of two or three layers and having smooth surfaces is described. In essence, finely divided carbon black is mixed with a solution of plastic resin containing softening agents and spread on a carrier (which is later removed). The product has a resistance of approximately 5 omega/cm. (RWR)

4679 POROUS ELECTRODE BODIES FOR PRIMARY AND SECONDARY CELLS. Metzler, O.; Kaus, W. Belgian Patent 616,596. 15 Aug 1962. Priority date 26 Apr 1961, German, Federal Republic of (F.R. Germany). 14p.
These electrode bodies are constructed by soldering grains of resins, e.g., polyethylene, polypropylene, polymers of tetrafluoroethylene, trifluoroethylene chloroethylene, etc. Proper porosity is achieved by use of different grain sizes or various retarding agents. Pore surfaces are coated with carbon black or similar material, and active material is introduced by means of solutions. (RWR)

4693 WORKING SURFACE OF ELECTRODES IN A LEAD BATTERY. Skalozubov, M.F. Zh. Prikl. Khim.; 35: 1812-1814(1962).
The radioisotope $^{35}S$ was used in the evaluation of the specific surface of the electrodes in a lead battery. (RWR)

4694 STORAGE-BATTERY ELECTRODES. (to Electric Storage Battery Co.). Belgian Patent 611,248. 29 Dec 1961. Filed date 7 Dec 1961. 20p.
Two incompatible thermoplastic resins are mixed with a powdered electrochemical active substance. The substance may be, for example, an oxide of cadmium, iron, lead, or zinc or nickel hydroxide. After the mixture is shaped into elements which are inserted into conducting sheaths for an electrode, the one resin is washed out to form a porous electrode. (RWR)

4711 SEPARATOR FOR ELECTRIC BATTERIES. Horn, L.; Philipp, F. (to Varta Aktiengesellschaft). US Patent 3,097,975. 17 May 1960. vp.
In a storage battery of the type described, in combination, a separator consists essentially of a plurality of superposed sheets consisting of crimped electrolyte-resistant polyamide fibers. An ion-permeable, fluid-impermeable foil is interposed between and contacts at least two of the plurality of sheets.

4714 LEAD SULFATE: HEAT CAPACITY AND ENTROPY FROM 15 TO 330°K. Broadale, G.E.; Hopkins, T.E. (Univ. of California, Berkeley). J. Phys. Chem.; 64: 687(1960).
Values of the heat capacity, entropy, and enthalpy temperature dependence, $(H^{o}-H_{0}^{o}/T)$, are tabulated at 5-degree intervals from 15 to 60 K and at 10-degree intervals from 60 to 330 K. The values at 298.15 K are 24.667, 35.509, and 16.083 cal/K, respectively.

4715 METHOD OF INCORPORATING AN ELECTRO-CHEMICALLY ACTIVE CADMIUM COMPOUND INTO A POROUS NICKEL PLAQUE. Casey, E.J.; Nagy, G.D. (to Minister of National Defence). US Patent 3,068,310. 7 Dec 1959. vp.
A method of incorporating an electrochemically active cadmium compound into a porous, sintered nickel plaque in the preparation of negative plates for nickel--cadmium storage batteries comprises soaking the plaque for at least about 10 minutes in molten $Cd(NO_3)_2$, $4H_2O$ which has been heated to boiling at a subatmospheric pressure, removing the plaque and reducing the cadmium nitrate contained herein by heating the plate in a hydrogen-filled container for about $^1/_2$ hour to about 2 hours at a temperature of from about 200°C to about 300°C, and allowing the plaque to cool in a hydrogen atmosphere.

4716 METHOD OF TREATING STORAGE BATTERY ELECTRODES. Duddy, J.C. (to Electric Storage Battery Co.). US Patent 3,067,273. 4 Dec 1959. vp.
A process for treating electrodes for lead--acid batteries of the pasted lead grid type comprises the steps of rapidly applying pressure of from about 80 pounds per square inch to about 400 pounds per square inch to the electrodes with platens heated to a temperature of from about 225°F. to about 350°F., maintaining the pressure for a period of from about fifteen seconds to about five minutes, and then slowly releasing the pressure to permit the gradual release of steam. The faces of the above mentioned platens form a seal with the electrode grids which confines the steam generated within the paste to the grids.

4720 OXYGEN OVERVOLTAGE AND ELECTRODE POTENTIALS OF $\alpha$ AND BETA-$PbO_2$. Ruetschi, P.; Angstadt, R.T.; Cahan, B.D. J. Electrochem. Soc.; 106: No. 7, 547-551(Jul 1959).
LEAD-ACID BATTERIES;CATHODES;LEAD OXIDES; ELECTRODEPOSITION;OXYGEN;OVERVOLTAGE;TIME DEPENDENCE;ELECTRIC POTENTIAL;PH VALUE; PRODUCTION

4721 ION-EXCHANGE PROPERTY OF MANGANESE DIOXIDE. Kozawa, A. J. Electrochem. Soc.; 106: No. 7, 552-556(Jul 1959).
ION EXCHANGE;MANGANESE OXIDES;CATHODES;ZINC-MANGANESE BATTERIES;CHEMICAL REACTION KINETICS

4722 NEW EXPERIMENTAL TECHNIQUE FOR STUDY OF FILMS PRODUCED AT ELECTROCHEMICAL INTERFACEES. Cahan, R.D.; Reutschi, P. J. Electrochem. Soc.; 106: No. 7, 543-547(Jul 1959).
Corrosion films. FILMS;INTERFACES; ELECTROCHEMISTRY;CORROSION;MEASURING METHODS; ELECTRODES;ELECTRIC BATTERIES;LEAD-ACID BATTERIES;ANODES;TRANSIENTS

4723 ACTIVATOR FOR DRY-CHARGED ELECTROCHEMICAL BATTERIES AND THE LIKE. Doyen, J. (to Yardney International Corp.). US Patent 3,075,034. 5 Jun 1959. vp.
A system for developing a sudden and sustained increase in gas pressure in a duct comprises a cartridge adapted to discharge explosion gases into the duct upon being detonated, a container of fluid under pressure having a discharge port opening into the duct, frangible seal means initially blocking the port, and activator means responsive to the combustion gases for unblocking the port. The activator is provided with communicating axial and transverse bores for conducting the fluid from the container to the duct.

4724 LEAD--TIN--BARIUM ALLOY FOR POSITIVE GRIDS OF LEAD/ACID BATTERIES. Parr, N.L.; Muscott, A.; Crocker, A.J. J. Inst. Met.; 87: No. 10, 321-329(Jun 1959).
LEAD-ACID BATTERIES;GRIDS;CATHODES;LEAD BASE ALLOYS;TIN ALLOYS;BARIUM ALLOYS;MATERIALS; DECOMPOSITION

4725 SILVER OXIDE ELECTRODE. Dirkse, T.P. J. Electrochem. Soc.; 106: No. 5, 453-457(May 1959).
Electrochemistry. SILVER OXIDES;CATHODES; SILVER-CADMIUM BATTERIES;SILVER-ZINC BATTERIES; ELECTROCHEMISTRY;CRYSTAL STRUCTURE;ELECTRIC BATTERIES;ELECTRODES

4726 HYDROGEN OVERPOTENTIAL ON POROUS LEAD ELECTRODES. Gillibrand, M.I.; Lomax, G.R. Trans. Faraday Soc.; 55: No. 436, 643-653(Apr 1959).
HYDROGEN;OVERVOLTAGE;LEAD;ANODES;SULFURIC ACID;CURRENT DENSITY;POROSITY;LEAD-ACID BATTERIES

4727 LEAD--PLATINUM BI-ELECTRODES. Shreir, L.L. Platinum Met. Rev.; 3: No. 2, 44-46(Apr 1959).
Change in electrode behavior effected by introducing small piece of Pt into Pb electrode. LEAD-ACID BATTERIES;ANODES;LEAD; PLATINUM;CHEMICAL REACTIONS

4728 EVOLUTION OF POLARIZATION CURVES OF MONOCRYSTALLINE ZINC ELECTRODES AS FUNCTION OF CRYSTALLOGRAPHIC ORIENTATION. Hamelin, A. C. R. Acad. Bulg. Sci.; 248: No. 8, 1170-1172(23 Feb 1959). (In French).
NICKEL-ZINC BATTERIES;SILVER-ZINC BATTERIES; ZINC-MANGANESE BATTERIES;ZINC-AIR BATTERIES; ZINC-CHLORINE BATTERIES;POLARIZATION;ANODES; MONOCRYSTALS;ORIENTATION;ELECTRIC POTENTIAL

4729 POTENTIAL OF MANGANESE DIOXIDE ELECTRODE AND SURFACE COMPOSITION OF OXIDE. Kozawa, A. J. Electrochem. Soc.; 106: No. 2, 79-82(Feb 1959).
Effect of heating. ELECTRIC POTENTIAL; MANGANESE OXIDES;CATHODES;ZINC-MANGANESE BATTERIES;SURFACES;CHEMICAL COMPOSITION;HEATING; ADSORPTION;MANGANESE IONS;OXYGEN;DESORPTION

4730 STRAIN ELECTROMETRY AND CORROSION. IV. Giddings, J.C.; Funk, A.G.; Christensen, C.J.; Eyring, H. J. Electrochem. Soc.; 106: No. 2, 91-95(Feb 1959).
Film properties and strain potential. STRAINS;CORROSION;FILMS;TRANSIENTS;ORGANIC COMPOUNDS;COATINGS;CORROSION INHIBITORS; ELECTRIC BATTERIES;ELECTRODES;COPPER;ALUMINIUM; SILVER-ZINC BATTERIES;NICKEL-ZINC BATTERIES; IRON-NICKEL BATTERIES;ZINC-MANGANESE BATTERIES; ZINC-AIR BATTERIES;ZINC-CHLORINE BATTERIES; ANODES;CATHODES;NICKEL-CADMIUM BATTERIES;SILVER-CADMIUM BATTERIES;NICKEL-HYDROGEN BATTERIES

4731 OXYGEN ELECTRODE. I. Davies, M.O.; Clark, M.; Yeager, E.; Hovorka, F. J. Electrochem. Soc.; 106: No. 1, 56-61(Jan 1959).
Isotopic investigation of electrode mechanisms. ELECTROCHEMISTRY;CHEMICAL REACTION KINETICS;OXYGEN;PEROXIDES;CARBON;HYDROXIDES; ELECTRODES;METAL-GAS BATTERIES;CATHODES;FUEL CELLS;ZINC-AIR BATTERIES;CADMIUM-AIR BATTERIES; IRON-AIR BATTERIES

4732 STUDY OF THE SILVER(I) OXIDE--SILVER(II) OXIDE ELECTRODE. Bonk, J.F.; Garrett, A.B. J. Electrochem. Soc.; 106: No. 7, 612(1959).
The temperature coefficient of emf of the cell Ag, $Ag_2O$/NaOH(1M)/AgO, $Ag_2O$, Pt is +0.00022 V/C. The free energy, enthalpy, and entropy changes for the above cell reaction, AgO + Ag = $Ag_2O$, are -6.049 kcal/mole, -4.537 kcal/mole, and 5.07 cal/C-mole, respectively. From these values the free energy, enthalpy, and entropy of Ag (II) oxide at 25 C are calculated to be 3.463 kcal/mole, -2.769 kcal/mole, and 13.81 cal/C-mole, respectively.

4733 CORROSION OF ZINC ELECTRODE IN SILVER--ZINC--ALKALI CELL. Dirkse, T.P.; De Haan, F. J. Electrochem. Soc.; 105: No. 6, 311-315(Jun 1958).
SILVER-ZINC BATTERIES;POTASSIUM HYDROXIDES; ANODES;ZINC;CORROSION;MEDIUM TEMPERATURE;OXYGEN; SILVER OXIDES;DISSOLUTION

4734 SINTERED NICKEL MATRIX CATHODE. Fane, R.W. Br. J. Appl. Phys.; 9: No. 4, 149-153(Apr 1958).
Performance. SINTERED MATERIALS;NICKEL-CADMIUM BATTERIES;NICKEL-ZINC BATTERIES;IRON-NICKEL BATTERIES;CATHODES;ALKALINE EARTH METAL COMPOUNDS;CARBONATES;BORON;ADDITIVES;LIFETIME; PULSES;DIRECT CURRENT;FABRICATION;CHEMICAL REACTION KINETICS;ELECTROCHEMISTRY;NICKEL-HYDROGEN BATTERIES

4735 RELATION OF CONDITIONS OF ELECTRODEPOSITION OF MANGANESE DIOXIDE TO DISCHARGE CHARACTERISTICS. Kozawa, A.; Vosburgh, W.C. J. Electrochem. Soc.; 105: No. 2, 59-63(Feb 1958).
Influence of temperature, current density, and impurities in preparation of electrodeposited electrodes. ZINC-MANGANESE BATTERIES;CATHODES;ELECTRODEPOSITION;MANGANESE OXIDES;FABRICATION;TEMPERATURE DEPENDENCE; CURRENT DENSITY;IMPURITIES;HEATING

4736 DEPENDENCE OF ELECTRICAL EROSION OF ANODE ON DISTANCE BETWEEN ELECTRODES. Zingerman, A.S.; Kaplan, D.A. Zh. Tekh. Fiz.; 28: No. 2, 389-393(Feb 1958). (In Russian).
ELECTRIC BATTERIES;ANODES;CONFIGURATION; ELECTRODES;DECOMPOSITION;EROSION

4737 IT'S STILL 12 VOLTS. Hartzell, H.L. New York; Society of Automotive Engineers (1958). 12p.
AUTOMOBILES;LEAD-ACID BATTERIES;ELECTRIC GENERATORS;BATTERY CHARGERS;ELECTRIC POTENTIAL

4738 DISINTEGRATION OF LEAD CATHODES. II. Gastwirt, L.W.; Salzberg, H.W. J. Electrochem. Soc.; 104: No. 12, 701-703(Dec 1957).
LEAD-ACID BATTERIES;ELECTRODES;LEAD; DECOMPOSITION;MEDIUM TEMPERATURE;SULFURIC ACID; PHOSPHORIC ACID;SULFATES;CHLORIDES;PHOSPHATES; ALKALI METAL COMPOUNDS;AMMONIUM COMPOUNDS; CHEMICAL REACTION KINETICS

4739 ATOMIC INSTRUMENTATION AT DELCO--REMY BATTERY PLANT. Automot. Ind.; 117: No. 9, 68-69(1 Nov 1957).
$^{90}Sr$ thickness gage. RADIOMETRIC GAGES; THICKNESS GAGES;THICKNESS;VARIATIONS;BATTERY SEPARATORS;PRODUCTION;STRONTIUM 90;GEIGER-MUELLER COUNTERS;DESIGN

4740 OLDHAM ''PG'' BATTERY. Automot. Eng. (N.Y.); 47: No. 8, 313-314(Aug 1957).
PVC--glass fiber plate. TRUCKS;ELECTRIC-POWERED VEHICLES;ELECTRIC BATTERIES;PLATES;PVC; GLASS;FIBERS

4741 OVERPOTENTIAL OF MANGANESE DIOXIDE ELECTRODE. II. Yoshizawa, S.; Vosburgh, W.C. J. Electrochem. Soc.; 104: No. 7, 399-406(Jul 1957).
OVERVOLTAGE;ZINC-MANGANESE BATTERIES; CATHODES;GRAPHITE;ELECTRODEPOSITION; ELECTROLYTES;INORGANIC ACIDS;SULFURIC ACID; SULFURIC ACID;MANGANESE SULFATES;SODIUM SULFATES;PH VALUE;CURRENT DENSITY;TEMPERATURE DEPENDENCE

4742 ANODIC CORROSION AND HYDROGEN AND OXYGEN OVERVOLTAGE ON LEAD AND LEAD ANTIMONY ALLOYS. Ruetschi, P.; Cahan, B.D. J. Electrochem. Soc.; 104: No. 7, 406-413(Jul 1957).
LEAD-ACID BATTERIES;GRIDS;CORROSION;CATHODES; HYDROGEN;OXYGEN;OVERVOLTAGE;LEAD;LEAD BASE ALLOYS;ANTIMONY ALLOYS

4743 STUDY OF ELECTRODE PHENOMENA IN STORAGE BATTERIES. Winkler, H. Elektrie; 11: No. 5, 223-228(May 1957). (In German).
ELECTROCHEMISTRY;CHEMICAL REACTIONS;CHEMICAL REACTION KINETICS;CATHODES;NICKEL-CADMIUM BATTERIES;ELECTRODES;ELECTRIC BATTERIES

4744 REPRODUCIBLE AND STABLE SILVER--SILVER OXIDE ELECTRODE. Hamer, W.J.; Craig, D.N. J. Electrochem. Soc.; 104: No. 4, 206-211(Apr 1957).
CHEMICAL PREPARATION;SILVER;SILVER OXIDES; SILVER-CADMIUM BATTERIES;SILVER-ZINC BATTERIES; CATHODES;ELECTRIC BATTERIES;ELECTRODES

Current research efforts and a computer analysis of foreign electrochemical traction battery technology utilizing various standardization and simulation techniques support the following ranking of foreign electric vehicle technology: United States, United Kingdom; Japan; Federal Republic of Germany; USSR; France; Italy; and Sweden. All-electric vehicle systems (battery-battery or battery-fuel cells) are not presently competitive, on an energy or power density basis, with conventional, fossil-fueled, internal combustion engine systems. All-electric vehicle systems, however, offer an alternate or complementary mode of transportation in major metropolitan areas by reducing atmospheric pollution and fossil fuel consumption. Advanced lead-acid, nickel-iron, and nickel-zinc traction batteries offer the greatest promise for urban transit vehicles(city buses, microbuses, and commuter cars). Commercial application of these electrochemical propulsion systems will receive considerable government and public support over the next 10 years in Europe, Japan, and the USSR. High-energy electrochemical propulsion systems such as the sodium-sulfur, lithium-sulfur, and metal-air traction battery systems are theoretically promising. Actual utilization of these power sources in small military and domestic vehicles is anticipated by the late 1980s.

4853 (ANL--76-8, pp A.2-A.18) SECONDARY BATTERIES FOR LOAD LEVELING. Birk, J.R.; Kalhammer, F.R. (Electric Power Research Inst., Palo Alto, CA). 1976.
From Battery workshop; Argonne, Illinois, USA (21 Mar 1976).
Proceedings of the symposium and workshop on advanced battery research and design, March 22--24, 1976.
More than fifty years ago, secondary batteries were used advantageously to store and deliver electric energy for electric rail and city emergency power systems. Today, batteries are being considered seriously for storage of off-peak energy because they promise a possibly unique combination of favorable operational characteristics, flexible siting, and environmental compatibility. These prospects have given rise to broad and growing activities in research, development, and engineering of advanced battery concepts and systems for utility energy storage. The technical and cost criteria for utility energy storage are briefly discussed here. Candidate battery systems are reviewed in terms of their characteristics and basic prospects to meet utility criteria. The question of the technoeconomic feasibility of lead--acid batteries for utility energy storage is also examined. Significant technical and economic obstacles on the way to practical utility batteries are identified and related to the major ongoing development efforts. 3 figures, 5 tables.

4854 (ANL--76-8, pp A.19-A.33) SECONDARY BATTERIES FOR ELECTRIC VEHICLES. Landgrebe, A.R. (Energy Research and Development Administration, Washington, DC). 1976.
From Battery workshop; Argonne, Illinois, USA (21 Mar 1976).
Proceedings of the symposium and workshop on advanced battery research and design, March 22--24, 1976.
An important part of the Energy Storage Program of the U. S. Energy Research and Development Administration is the development of secondary storage batteries for automotive propulsion applications. The successful development of batteries for this purpose will provide significant savings of oil resource and will also have beneficial environmental effects. Of the battery systems being developed, major efforts are presently or will be concentrated on the following seven systems: advanced lead--acid, nickel--iron, nickel--zinc, zinc--air, iron--air, lithium--metal sulfide, and sodium--sulfur batteries. The probability that one or more of these systems will meet the technical requirements for the intended application within the next several years appears good. The ultimate technical/economic feasibility of these systems cannot be assessed at this time because many engineering problems must still be resolved. However, the high-temperature systems, Li--MS and Na--S systems, appear to be good candidates for electric vehicles in the long term. 7 tables.

4855 (ANL--76-8, pp A.107-A.128) BATTERY DEVELOPMENT IN JAPAN. Yao, N.P. (Argonne National Lab., IL). 1976.
From Battery workshop; Argonne, Illinois, USA (21 Mar 1976).
Proceedings of the symposium and workshop on advanced battery research and design, March 22--24, 1976.
The main thrust of battery development in Japan is toward application in electric vehicles. Incentives to develop commercial-scale electric vehicles in Japan are the

desires to improve the air and noise quality in big cities, and to secure an international position in the electric vehicle field and thereby expand Japan's economy. Development of advanced battery technology for electric vehicles has been in progress as a part of the National Electric Vehicle Research and Development Project, instituted early in 1971 by the Agency of Industrial Science and Technology, MITI, Japan. Three general types of advanced vehicle batteries are being developed under the national project: lead--acid, metal/air, and sodium/sulfur. Progress has been made in each of the advanced batteries since 1971. Battery performance goals established for 1977, which marks the conclusion of the national project, incorporate an increase of cycle life requirement with reduced specific energy goals. Performance demonstration of the advanced batteries in experimental electric vehicles is expected early in 1977. 12 figures, 4 tables.

Report covers the inspection and test of a storage-battery locomotive manufactured by the Geo. D. Whitcomb Co., Rochelle, Ill., to which Approval 1500 was assigned.

4863 (BM-TP--264) PRELIMINARY INVESTIGATIONS OF STORAGE-BATTERY LOCOMOTIVES: SPECIFICATIONS, LABORATORY TESTS, PERMISSIBLE SCHEDULE. Ilsley, L.C.; Brunot, H.B. (Bureau of Mines, Washington, D.C. (USA)). 1920. 35p. TIC.
Report deals with the development of specifications for Schedule 15 and gives data to assist those who are developing apparatus to meet the requirements of this schedule.

4864 (COM--74-10101/5) ELECTRIC AUTOMOBILES. A BIBLIOGRAPHY WITH ABSTRACTS. REPORT FOR 1964--NOVEMBER 1973. Ringe, J.W. (National Technical Information Service, Springfield, Va. (USA)). Dec 1973. 42p. (NTIS-WIN--74-002). NTIS $20.00.
The NTISearch bibliography contains 36 selected abstracts of research reports retrieved using the NTIS on-line search system NTISearch. Included are studies of battery systems, emissions, costs and experimental evaluations of electric and hybrid vehicle propulsion.

4865 (COM--74-11573) ELECTRIC AUTOMOBILES. A BIBLIOGRAPHY WITH ABSTRACTS. REPORT FOR 1964--SEPTEMBER 1974. Lehmann, E.J. (National Technical Information Service, Springfield, Va. (USA)). Oct 1974. 76p. (NTIS-WIN--74-082). NTIS $20.00.

4891 (CONF-711166--, pp 473-481) REAL-TIME SIMULATION OF LOADS FOR ELECTRIC VEHICLE BATTERIES. Roe, R.B. (ESB Inc., Yardley, PA). Nov 1971.
From 2. international electric vehicle symposium; Atlantic City, New Jersey, USA (8 Nov 1971).
International electric vehicle symposium.
Controlled track testing provides a realistic method of evaluating the performance of an electric-vehicle battery system, but it is difficult, time-consuming, and expensive. Real-time load simulation is a procedure for testing batteries or other power sources under conditions which duplicate those of actual operation. It allows laboratory determination of field performance. The system and procedure for real-time simulation are described. Logic diagrams for the system and its most important part, the programmable load module, are given. Preliminary analysis of field measurements on the ESB Electric Vehicle over metropolitan cycles is discussed. Additional capabilities of the system are indicated. 6 figures. (RWR)

4892 (CONF-711166--) INTERNATIONAL ELECTRIC VEHICLE SYMPOSIUM, ATLANTIC CITY, NEW JERSEY, 8--10 NOVEMBER 1971. (Electric Vehicle Council, New York (USA)). Nov 1971. 783p. Electric Vehicle Council, New York, NY.
From 2. international electric vehicle symposium; Atlantic City, New Jersey, USA (8 Nov 1971).
Fifty-five papers, opening remarks for the various sessions, and one paper abstract are presented. The sessions are: (1) general session; (2) international session; (3) off-the-road vehicles; (4) electric vehicle components; (5) electric vehicle systems; (6) on-the-road vehicles; (7) electric railways; (8) battery research; (9) hybrid and flywheel systems; (10) on-campus activity session; and (11) a concluding session. A separate abstract was prepared for each of the fifty-five papers for the Energy Data Base. (PMA)

4893 (CONF-711166--, pp 15-42) ELECTROCHEMICAL FUTURE. Bockris, J.O. Nov 1971.
From 2. international electric vehicle symposium; Atlantic City, New Jersey, USA (8

Nov 1971).
International electric vehicle symposium.
The air pollution problem associated with fossil-fuel driven automobiles is reviewed, and the possibilities of powering electric automobiles with storage batteries and fuel cells are discussed. Problems include: (1) slow recharging; (2) thermal pollution from primary energy sources; (3) high initial cost; (4) lack of current research; and (5) low performance (acceleration, etc.). Running costs would be less; even now, the cost of driving electric cars on hydrogen, using fuel cells, would be less than that of using tax-free present gasoline. (PMA)

4894 (CONF-711166--, pp 51-55) WATTS ON. Hender, B.S. Nov 1971.
From 2. international electric vehicle symposium; Atlantic City, New Jersey, USA (8 Nov 1971).
International electric vehicle symposium.
A brief review of work in electric-powered vehicle technology being carried out in Europe is given. Topics include electric batteries, electric motors, control systems, torque converters, motor brushes, and battery chargers. (PMA)

4895 (CONF-711166--, pp 56-69) DAIHATSU ELECTRIC VEHICLES. Takaoka, I.; Yumoto, I.; Kawakatsu, S. (Daihatsu Kogyo Co., Ltd., Osaka). Nov 1971.
From 2. international electric vehicle symposium; Atlantic City, New Jersey, USA (8 Nov 1971).
International electric vehicle symposium.
Specifications and performance data are presented for an electric-powered vehicle used as a signtseeing taxicab at the EXPO '70 site. Several other electric-powered models are described, including a three-wheeled compact, a van, and a pick-up truck. (PMA)

4896 (CONF-711166--, pp 70-82) DEVELOPMENT OF THE ELECTRIC VEHICLE AT NISSAN MOTOR CO., LTD. Watnabe, A. (Nissan Motor Co., Tokyo). Nov 1971.
From 2. international electric vehicle symposium; Atlantic City, New Jersey, USA (8 Nov 1971).
International electric vehicle symposium.
The electric-powered vehicle development program of the Nisson Motor Company is described, and specifications are given for various experimental and prototype vehicles. A shorthaul urban electric vehicle was developed under the following criteria: 30 mile driving range per charge; maximum speed of about 30 mph; and that it be easily driven. (PMA)

4897 (CONF-711166--, pp 83-86) NEW CHANCES FOR ELECTRIC ROAD VEHICLES. Muller, I.H.G. Nov 1971.
From 2. international electric vehicle symposium; Atlantic City, New Jersey, USA (8 Nov 1971).
International electric vehicle symposium.
The two major problems associated with electric-powered vehicles are their high cost and the heaviness of the batteries which reduces range. Realistic possibilities are discussed for making electric road traffic economical and for solving the range problem satisfactorily. (PMA)

4898 (CONF-711166--, pp 87-96) BRITISH ELECTRIC VEHICLES IN COMMERCIAL AND MUNICIPAL USE. Warrington, J.M. Nov 1971.
From 2. international electric vehicle symposium; Atlantic City, New Jersey, USA (8 Nov 1971).
International electric vehicle symposium.
A brief description is given of some new developments in British electric-powered vehicles for commercial and municipal use. The vehicles described rely on lead--acid batteries, since the lead--acid remains the most highly developed, economical, and reliable. Topics discussed include control systems, a dairy vehicle, a metropolitan delivery van, refuse collection vehicles, street cleaning vehicles, ambulances, a multi-purpose high voltage sub-station vehicle, and personnel carriers. (PMA)

4899 (CONF-711166--, pp 102-110) CZECHOSLOVAK ELECTRIC CAR EMA 1 AND EMA 2. Seda, I.B. (Research and Development Inst. for Electrical Machines, Brno). Nov 1971.
From 2. international electric vehicle symposium; Atlantic City, New Jersey, USA (8 Nov 1971).
International electric vehicle symposium.
The design and performance testing of an electric-powered automobile and an electric-powered platform delivery truck are described. The automobile, designated EMA 1, is designed for the city transport of two adults and two children and uses standard lead--acid storage batteries. The electric truck, EM2, has a load carrying capacity of one ton and also uses lead--acid batteries. Topics discussed include electric motors, speed control, performance, weight, brakes, chassis, and transmissions. (PMA)

4900 (CONF-711166--, pp 117-120) RIDE: DON'T WALK. Balfour, R.L. Nov 1971.
From 2. international electric vehicle symposium; Atlantic City, New Jersey, USA (8 Nov 1971).
International electric vehicle symposium.
The development of an aluminum electric-powered golf car is described. A high-speed model was driven almost 5,000 miles in New York, was licensed by the state of New York, and passed the state's vehicle inspection. It achieves speeds of 24 to 26 mph and operates up to 53 miles on a single battery charge. (PMA)

4901 (CONF-711166--, pp 121-125) RIDE: DON'T WALK. Davis, R.E. Nov 1971.
From 2. international electric vehicle symposium; Atlantic City, New Jersey, USA (8 Nov 1971).
International electric vehicle symposium.
An electric-powered riding mower presently manufactured and marketed by John Deere is described. The electric motors are powered by three 12V deep-cycle batteries, which can be drained and recharged many times. Battery charging, machine operation, power transmission, safety features, and machine cost are discussed. (PMA)

4902 (CONF-711166--, pp 126-128) INDUSTRY GOES FOR ELECTRICS. Leighton, E.H. Nov 1971.
From 2. international electric vehicle symposium; Atlantic City, New Jersey, USA (8 Nov 1971).
International electric vehicle symposium.
The use of electric-powered trucks, principally fork lift trucks, in the materials handling industry, is discussed. Recent battery developments, solid-state controls, and improved high-voltage systems have made electric trucks much more economical. Savings

resulting from high-rise materials storage are also discussed. (PMA)

4903 (CONF-711166--, pp 129-135) INDUSTRY GOES FOR ELECTRICS. Carliss, O.S. Nov 1971.
From 2. international electric vehicle symposium; Atlantic City, New Jersey, USA (8 Nov 1971).
International electric vehicle symposium.
The use of electric-powered trucks in industry is compared with that of internal combustion engine trucks. The mounting concern over internal combustion exhaust gases makes electric-powered vehicles more attractive. Building ventilation is an added cost affecting capital, operation cost, and maintenance costs. Noise is also becoming a serious factor. (PMA)

4904 (CONF-711166--, pp 136-138) WE USE ELECTRICS. Kohler, R.L. Nov 1971.
From 2. international electric vehicle symposium; Atlantic City, New Jersey, USA (8 Nov 1971).
International electric vehicle symposium.
The savings realized by using electric-powered lift trucks for stores operations at the Potomac Edison Company are discussed. Total average cost of using an electric unit for one year was found to be $344 versus $1,142 per year for a gasoline-powered unit. (PMA)

4905 (CONF-711166--, pp 149-171) APPLICATION OF POWER SEMICONDUCTORS IN ELECTRIC VEHICLES. Bixby, B.J.; Borst, D.W.; Carver, L.R. (International Rectifier, El Segundo, CA). Nov 1971.
From 2. international electric vehicle symposium; Atlantic City, New Jersey, USA (8 Nov 1971).
International electric vehicle symposium.
Power semiconductor devices used in dc to dc converters are discussed with particular reference to electric-vehicle applications. A representative vehicle drive has a dc power source and a series motor controlled by a chopper regulator. Methods of achieving desired thyristor and rectifier diode characteristics are discussed. (PMA)

4906 (CONF-711166--, pp 187-227) CONTROL AND CHARGING SYSTEMS FOR ELECTRIC VEHICLES. Gurwicz, D. Nov 1971.
From 2. international electric vehicle symposium; Atlantic City, New Jersey, USA (8 Nov 1971).
International electric vehicle symposium.
Solid state electronic circuits for use in conjunction with electric vehicle dc motors are discussed. Topics include: (1) control systems using SCR's; (2) braking systems (including regenerative braking); (3) separately excited (shunt) motor control systems; (4) battery charging systems; and (5) an integrated control and charging system. (PMA)

4907 (CONF-711166--, pp 333-343) DESIGN AND DEVELOPMENT OF A VAN WITH AN A-C ELECTRIC DRIVE. Murphy, G.J. Nov 1971.
From 2. international electric vehicle symposium; Atlantic City, New Jersey, USA (8 Nov 1971).
International electric vehicle symposium.
The design and construction of a 7500 pound electric-powered van are described. The van is powered by lead-acid batteries and an ac induction motor controlled by solid state electronic circuits. The operation of the motor and associated electronics is described, and block diagrams of the various systems are given. (PMA)

4908 (CONF-711166--, pp 344-372) CASE HISTORY AND ECONOMIC STUDY OF AN ELECTRIC COMMUTER VEHICLE. Thiele, T.N.; Moore, D.L. Nov 1971.
From 2. international electric vehicle symposium; Atlantic City, New Jersey, USA (8 Nov 1971).
International electric vehicle symposium.
The design and performance testing of an electric-powered vehicle (a converted Karmann Ghia limited to two passengers) is described. Thirty lead--acid batteries provided a 120V system, yielding a one hour discharge capacity of 19.5 KWh. A standard 4-speed mechanical transmission and clutch were used, and the shunt-wound motor was static field controlled. The motor, power train, controls, operating experience, and cost considerations are discussed. (PMA)

4909 (CONF-711166--, pp 373-388) DEVELOPMENT OF A SECOND GENERATION ELECTRIC HIGHWAY VEHICLE AND SUPPORT EQUIPMENT. Goldman, W.E. Nov 1971.
From 2. international electric vehicle symposium; Atlantic City, New Jersey, USA (8 Nov 1971).
International electric vehicle symposium.
A program to design and test electric-powered automobiles is described. Several prototypes were developed, and improvements in batteries, the front wheel drive system, and vehicle construction are discussed. Results are given of tests of range and acceleration. (PMA)

4910 (CONF-711166--, pp 394-404) WE ARE READY. Hafer, P.R. Nov 1971.
From 2. international electric vehicle symposium; Atlantic City, New Jersey, USA (8 Nov 1971).
International electric vehicle symposium.
The history, use, and operating characteristics of multistop vehicles (delivery trucks, for example) are presented, and a research and development program for electric-powered multistop vehicles is described. Testing of a van and two buses has shown that such vehicles are ready to be put to practical use. Vehicle performance and components are described, and air pollution problems due to electric-powered vehicles and internal combustion engines are compared. (PMA)

4911 (CONF-711166--, pp 405-407) EFP PREPRODUCTION ELECTRIC PROTOTYPES. Aronson, R.R. Nov 1971.
From 2. international electric vehicle symposium; Atlantic City, New Jersey, USA (8 Nov 1971).
International electric vehicle symposium.
A brief description is given of a new product line of electric-powered vehicles including: a full-sized, 6-passenger sedan; a middle-sized 4-door station wagon for five passengers and 500 pounds of cargo; a two-door wagon accommodating two passengers and 500 pounds of cargo; and a 2-door four passenger shopper or commuter car. The batteries, control systems, and equipment for these cars are discussed. (PMA)

4912 (CONF-711166--, pp 408-432) FEASIBILITY STUDY OF THE ELECTRIC CAR FOR HAWAII. Hwang, H.H. Nov 1971.
From 2. international electric vehicle symposium; Atlantic City, New Jersey, USA (8 Nov 1971).

International electric vehicle symposium.
Preliminary results are presented of a system study to determine the feasibility of widespread use of the electric car in Hawaii. The study consists of the following two major parts: (1) the derivation of specifications of an electric commuter car and of an electric utility van in accordance with Oahu's driving conditions; and (2) the estimation of the number of electric cars that can be powered by Hawaiian Electric Company's present generating capacity. Results of the study are summarized, and design criteria for electric cars are discussed. The method used for estimating the number of electric cars which Hawaiian Electric Company's present generating capacity can power is described, and sample calculations for power and energy requirements for electric cars are given.

4913 (CONF-711166--, pp 699-725) PHYSICS AND THE ELECTRIC MOTORCYCLE. deBellis, T. Nov 1971.
From 2. international electric vehicle symposium; Atlantic City, New Jersey, USA (8 Nov 1971).
International electric vehicle symposium.
A description is given of an electric motorcycle built and tested by high school physics students. The physics of the vehicle design is given, including the electric battery, aerodynamics, and the electric motor. The electric cycle proved to be quiet and economical, and the acceleration was very rapid although jerky. (PMA)

4914 (CONF-711166--, pp 726-731) ELECTRIC VEHICLE ACTIVITY A GEORGIA TECH. Finley, C.C. Nov 1971.
From 2. international electric vehicle symposium; Atlantic City, New Jersey, USA (8 Nov 1971).
International electric vehicle symposium.
A report is given on the present status of a design project on electric vehicles at the Georgia Institute of Technology. Past efforts for participation in the Clean Air Car Race are discussed, as well as future plans in preparation for the Urban Vehicle Design Competition.

4915 (CONF-711166--, pp 744-749) ELECTRIC BUSES FOR LANSING, MICHIGAN. Erickson, C.R. Nov 1971.
From 2. international electric vehicle symposium; Atlantic City, New Jersey, USA (8 Nov 1971).
International electric vehicle symposium.
General specifications are currently being drawn for bids for six electric buses for use in a downtown mall-type area. State and federal funds will be used to finance the project, which will also include nine gasoline-powered buses, two radio equipped vans, and four conventional Diesel buses. A description is given of four proposals for the electric buses received from three different manufacturers of battery-powered buses and one from a manufacturer of battery-powered propulsion systems. (PMA)

4916 (CONF-711166--, pp 579-605) OVERVIEW OF HYBRID VEHICLES. Rosen, C. Nov 1971.
From 2. international electric vehicle symposium; Atlantic City, New Jersey, USA (8 Nov 1971).
International electric vehicle symposium.
Several alternative methods of meeting the 1976 Federal emission standards are proposed, and a hybrid heat engine/electric system appears to be cost and performance competitive with the suggested alternatives. The history of early automotive engines and hybrids is given, and series and parallel hybrids are compared. Exhaust gases and emission controls are discussed for a spark ignition engine/electric battery hybrid. (PMA)

4917 (CONF-711166--, pp 606-642) ASSESSMENT OF THE HYBRID HEAT ENGINE/ELECTRIC POWERTRAIN FOR USE IN URBAN BUSES. Lapedes, D.E. Nov 1971.
From 2. international electric vehicle symposium; Atlantic City, New Jersey, USA (8 Nov 1971).
International electric vehicle symposium.
A recently concluded major study to examine the hybrid heat engine/electric system as a potential low-pollution power source in street-operated vehicles is described. This system ranked high on Environmental Protection Agency's list of possible low-pollution power sources that might provide an alternative to the internal combustion engine. The specific purposes of the study were to provide EPA with a detailed analysis of the design feasibility of the hybrid system and an estimate of expected exhaust emission levels. Hence, the effort was directed primarily at providing an analysis of the system by examining through computer simulation the performance and exhaust emissions of vehicles operating over select driving cycles. In addition, general design goals were established for components and subsystems in the vehicle power-train for near-term prototype versions (circa 1975). The propulsion system investigated in the EPA study was limited solely to that hybrid heat engine/electric powertrain concept in which the power for vehicle propulsion is supplied by two specific sources: a heat engine and a set of batteries. The heat engine is designed to supply cruise power while the batteries are designed to supply power for acceleration. In this combination the heat engine can be reduced markedly in size compared to a conventional propulsion system and, by restricting the rpm range and permitting only slow acceleration of the engine, its design and operation can be optimized to substantially reduce exhaust emissions and enhance longevity. Moreover, the benefits accruing from restricted operation of the engine may also carry over to ancillary equipment such as catalytic converters.

4918 (CONF-711166--, pp 643-652) TEST RESULTS ON HYBRID VEHICLES. Friedmen, D. Nov 1971.
From 2. international electric vehicle symposium; Atlantic City, New Jersey, USA (8 Nov 1971).
International electric vehicle symposium.
Minicars, Inc. has been studying urban transportation systems since 1967. These studies included the development of special vehicles and computerized control systems to monitor the transportation systems. The last prototype vehicle developed for the Minicar Transit System in 1969 was a hybrid gasoline/electric vehicle. It was designed to meet special requirements imposed by safety, air pollution and size considerations. The development work on this hybrid power train indicated that there is a reduction in exhaust emissions when hybrid is compared with the normal ICE. More reduction is needed. The performance of the electrical system shows that the batteries used for these tests were acceptable as the energy storage element in the parallel hybrid system. The shunt DC motor/generator with armature and field control performed satisfactorily. The electric machine

continuous rated at 9.7 hp was capable of supplying the peak power of 27 hp when external cooling was applied. The new solid state controller proved to be simple, reliable, inexpensive, and sufficient for the present requirement.

4919 (CONF-711166--, pp 682-698) WHICH ARE BETTER FOR ELECTRIC VEHICLES: FLYWHEELS OR BATTERIES. Hoffman, G.A. Nov 1971.
From 2. international electric vehicle symposium; Atlantic City, New Jersey, USA (8 Nov 1971).
International electric vehicle symposium.
The result is given of an evaluation of flywheels of advanced design. The investigations promised no hope for flywheels to find eventual major use in vehicle propulsion. The best of flywheels simply compare unfavorably with batteries on most counts. Flywheel power plants turned out to be inferior in all instances in performance to batteries, from both standpoints of specific power and of specific energy. Furthermore, the environmental hazards posed even by the safest of these flywheels were assessed riskier than those of batteries, and cost-estimates for flywheels indicated that energy storage in rotokinetic devices will be twice to four times as expensive as in batteries.

4920 (CONF-711166--, pp 732-738) URBAN CAR FOR THE 1980'S. Bloom, J.A.; Root, R.M.; Alic, J.A. Nov 1971.
From 2. international electric vehicle symposium; Atlantic City, New Jersey, USA (8 Nov 1971).
International electric vehicle symposium.
The following design goals were established for an urban car: (1) should be substantially smaller than conventional cars; (2) must carry two persons; (3) must produce little or no toxic emissions at street level; (4) should protect the occupants from serious injury in a 50 mph barrier crash; (5) must be undamaged in 5 mph front and rear collisions; (6) must have a cruising speed of at least 45 mph; (7) must have a range of at least 50 miles in city driving; (8) must be able to accelerate from 0 to 45 mph in 15 seconds (0.14 g average); (9) must be able to decelerate from 45 to 0 mph in 85 feet (0.8 g average); (10) should have a noise level of 60 dB-A or below inside passenger compartment at 30 mph; (11) should have an exterior noise level below 65 dB-A at full acceleration from 30 mph; (12) should have minimum of 4 $ft^3$ of storage space; and (13) should have a consumer cost in mass production of less than $2500. These goals are examined and justified.

4923 (CONF-740215--P1, pp 11p, Paper 7405) BATTERY MANUFACTURE'S POINT OF VIEW. David, E.E. Jr. 1974.
From 3. international electric vehicle symposium; Washington, District of Columbia, USA (19 Feb 1974).
Proceedings of the third international electric vehicle symposium.
The challenge a battery manufacturer must accept and the responsibility he must assume if electric vehicles are to compete successfully with internal combustion engine vehicles are discussed. An assessment of new, high-energy density batteries for electric vehicle applications is given, and when they will become commercially available is discussed. Batteries, electrical systems, and vehicle manufacturers' interactions with mass merchandisers and the electric utility industry to make vehicles successful commercial realities are described.

4924 (CONF-740215--P1, pp 11p, Paper 7410) ELECTRIC VEHICLE PROPULSION SYSTEMS IN TERMS OF ENERGY ECONOMY AND ECOLOGY. Mueller, H.G. (Rheinisch-Westfaelisches Elektrizitaetswerk Ag, Essen). 1974.
From 3. international electric vehicle symposium; Washington, District of Columbia, USA (19 Feb 1974).
Proceedings of the third international electric vehicle symposium.
World-wide shortages, declining availability, and rising prices are expected to characterize future world oil supplies, impairing area-orientated individual transport systems which depend exclusively on petroleum derivates. Electric energy can be generated from many different primary energy sources, among which non-polluting nuclear energy will gain increasingly in importance in future. Electric power meets all conceivable requirements of environmental protection, and is therefore particularly suitable as a traction or propulsion energy source in road transport. Electromobiles and their propulsion and control components can be composed of modules developed by related technologies and can assume many transport functions, especially in the traffic patterns of conurbations. Major development tasks exist for the storage of electric energy and for suitable supply and service infrastructure. Standards and technical specifications have to be developed rapidly, and they must be based on empirical values derived from major model experiments and tests. Such major test projects require both close cooperation between government authorities, industry and science and generous promotion by subsidies from public funds.

4925 (CONF-740215--P1, pp 15p, Paper 7411) SUPPLY OF PROPULSION ENERGY TO ELECTRICALLY POWERED VEHICLES AND ITS INCORPORATION IN THE LOAD CURVES OF PUBLIC UTILITIES. Oehms, K.J. (Rheinisch-Westfaelisches Elektrizitaetswerk AG, Essen); Busch, H. 1974.
From 3. international electric vehicle symposium; Washington, District of Columbia, USA (19 Feb 1974).
Proceedings of the third international electric vehicle symposium.
Electric power, which can be generated from many different sources of primary energy, has well proved its merits as a medium of energy easy to distribute while not polluting the

environment for many applications, and will have to be made available increasingly also for the supply of electric road vehicles during the eighties. As is the case with other types of equipment, the operating characteristics of electric road vehicles as well as the geographic and time pattern of their energy demand to be covered by supply facilities will have to be studied in order to develop patterns for a practical incorporation of the new consumers in the load potential of supply networks. By an optimum design and organization of the overall infrastructure for the supply of electric road vehicles, which can be achieved by several methods to be tested in large-scale type experiments for their relative merits, the total costs for this type of propulsion energy can be reduced to a minimum.

THEORETICAL APPROACH TO ELECTRIC BATTERY VEHICLE PERFORMANCE. Walz, A.H. (Technische Univ., Berlin). 1974.
From 3. international electric vehicle symposium; Washington, District of Columbia, USA (19 Feb 1974).
Proceedings of the third international electric vehicle symposium.
The mechanics of vehicles of any kind (including electric) are already developed as far as forces, powers, and energy required at the wheels are concerned. A brief statement of related results is given. The special feature of low battery energy density and corresponding high ratio of battery weight to total vehicle weight is considered by an additional set of equations describing the efficiency behavior of the electric components (battery, motor, and speed control). Thus, a useful theoretical basis for numerical design optimization at given requirements of performance is established.

HOW TO CONVERT PETROL-CARS INTO ELECTRIC CARS. Sandelowsky, S. 1974.
From 3. international electric vehicle symposium; Washington, District of Columbia, USA (19 Feb 1974).
Proceedings of the third international electric vehicle symposium.
Gasoline cars and vehicles used in innertown-traffic, where speed is limited and daily range is low can easily be produced as electric cars and vehicles without considerable increase of costs. Starting with a discussion of general conditions for innertown traffic, (i.e. acceleration, security, costs, maintenance, economy) details such as power, driving system, fuel consumption and general performance are discussed. Features and performance of electric motors are discussed with regard to different design, especially the current consumption for certain traffic situations. The battery problem, typical battery performance, and electric driving systems are considered, and speed control, how it is done now and how it should be made for reasons of economy and for suitable conversion solutions, is described. Examples of converted vehicles and of costs and weight are presented.

INDUSTRIAL TRUCKS: A STATUS REPORT ON ELECTRICS IN EUROPE. Gribble, D.C. (Lead Development Association, London). 1974.
From 3. international electric vehicle symposium; Washington, District of Columbia, USA (19 Feb 1974).
Proceedings of the third international electric vehicle symposium.
Battery-powered trucks have come under intense selling competition from diesels all over Europe. One reason is that diesel oil has been cheaper as a fuel than battery power, but this is likely to be reversed in favor of electrics when the new oil prices take effect. Developments in self-compensating chargers and easier-to-service truck controllers are designed to make electrics even simpler to operate while improving flexibility. The user of trucks, who has the last say, has fully endorsed the innovations of recent years and is still very battery minded. The outlook, therefore, remains good for electrics and battery power.

CARE AND MAINTENANCE OF ELECTRIC VEHICLES. Schultz, G.V. 1974.
From 3. international electric vehicle symposium; Washington, District of Columbia, USA (19 Feb 1974).
Proceedings of the third international electric vehicle symposium.
A discussion is given of maintenance costs and procedures for electric lift trucks or individual vehicles, and these are compared to gasoline-powered vehicles. Electronic test facilities, battery charging and battery acid loss are considered, and tables of ownership and maintenance costs and a recommended schedule of maintenance are included. (PMA)

4930 (CONF-740215--P1, pp 6p, Paper 7428)
DEVELOPMENT OF ELECTROCHEMICAL POWER SOURCES FOR ELECTRIC VEHICLES. George, J.H.B. 1974.
From 3. international electric vehicle symposium; Washington, District of Columbia, USA (19 Feb 1974).
Proceedings of the third international electric vehicle symposium.
An overview of the rather complicated and somewhat frustrating field of research into electrochemical power sources for electric vehicles is presented. The long-term outlook for battery-powered electric vehicles has, of course, been improved considerably by the recent events: because they use a universal fuel, electricity, derived from a great variety of primary energy sources, which in their diversity provide some assurance of continuity in supply; and because the performance and economic advantages of conventionally-powered vehicles, hitherto overwhelmingly superior to electrics in all except special situations, are now being eroded by a number of factors, some related to the increased cost of energy, and others to environmental clean-up, which have every appearance of being permanent. It seems unlikely, however, that self-propelled electric vehicles will ever achieve more than secondary importance in our total transportation system without the development of greatly improved power sources. Approaches to improving electrochemical power sources and their present state of development are reviewed.

4931 (CONF-740215--P1, pp 13p, Paper 7439)
U.S. POSTAL SERVICE: RESEARCH AND ENGINEERING DEPARTMENT ELECTRIC VEHICLE DEVELOPMENT AND TESTING PROGRAM. Makrides, G. 1974.
From 3. international electric vehicle symposium; Washington, District of Columbia, USA (19 Feb 1974).
Proceedings of the third international electric vehicle symposium.
The current U.S. Postal Service Electric Vehicle Program was initiated: (1) to demonstrate that battery-powered electric vehicles can be used to perform various delivery missions; (2) to support the national

program on ecology; and (3) to provide more effective fuel allocation. Postal routes for home and business delivery of mail and parcels are made to order for electric vehicles. Analysis of postal delivery route profiles shows that they consist of; (1) short ranges (the national average is 14 miles for 60,000 quarter-ton vehicles); (2) moderate speeds and accelerations; (3) high rate of stops per mile with considerable idle time (routes may have as many as 30 stops per mile, including scheduled and unscheduled stops); and (4) closed cycles (where vehicles leave and return to specified parking areas nightly and remain parked for periods of time from 15 to 18 hours). All these route conditions suit the electric vehicles' capabilities and do not stress greatly their limitations. The U.S. Postal Service, Research and Engineering Department, has supported under contract the design and fabrication of three different designs of quarter-ton capacity electric vehicles. Prototype models were built in early 1973, and test results for these prototypes are described.

4932 (CONF-740215--P1, pp 12p, Paper 7445) COMPARISON BETWEEN A PICK-UP VAN WITH INTERNAL COMBUSTION ENGINE AND AN ELECTRIC PICK-UP VAN. Altendorf, J.P.; Kalberlah, A.; Saridakis, N. (Volkswagenwerk AG, Wolfsburg, Germany). 1974.

From 3. international electric vehicle symposium; Washington, District of Columbia, USA (19 Feb 1974).

Proceedings of the third international electric vehicle symposium.

During the last few years an electric vehicle based on the VW Transporter has been developed and built in the Volkswagenwerk. About 20 of these vehicles and the push-through battery changing system are to be tested in collaboration with the Rheinisch Westfalische Elektrizitatswerke AG (RWE). The platform truck was chosen from the VW Transporter range as it appeared to be most suitable for this purpose on account of the existing storage compartment which allows the battery to be pushed in and out from both sides. A comparison is given of this electric vehicle with the platform truck driven by an internal combustion engine. To start with, the relationships between gross vehicle weight, battery weight, payload and range are discussed in general for this purpose. A comparison is then made between the two Transporters in respect of construction, driving characteristics and road performance. Furthermore, the possible applications for the electric vehicle in particular are discussed and the annual costs determined using certain assumptions.

4933 (CONF-740215--P1, pp 6p, Paper 7446) INTEGRATING PRODUCTION ELECTRIC VEHICLES INTO USER FLEETS. Warrington, J.M. (Harbilt Construction Co., Market Harborough, England). 1974.

From 3. international electric vehicle symposium; Washington, District of Columbia, USA (19 Feb 1974).

Proceedings of the third international electric vehicle symposium.

A discussion is given of the market potential for electric-powered vehicles in user fleets. Fleet owners who have fify vehicles or more centered in congested areas will have at least 15% of jobs achievable by electric vehicles. Although the vehicles are initially more expensive, about one-third of the cost is due to batteries, and the cost of battery recharging is practically negligible. Ease of maintenance is also a good selling point for electric vehicles. (PMA)

4934 (CONF-740215--P1, pp 22p, Paper 7450 A) EXPERIENCE WITH ELECTRIC DRIVES FOR VEHICLES. Domann, H.; Renner, S. 1974.

From 3. international electric vehicle symposium; Washington, District of Columbia, USA (19 Feb 1974).

Proceedings of the third international electric vehicle symposium.

The selection of the shunt-wound direct-current machine should be based on the requirements which a vehicle drive must fulfill. A thyristor control unit and auxiliary units are described, and results of test drives with a standard city bus are discussed.

4935 (CONF-740215--P2, pp 35p, Paper 7414) ELECTRIC VEHICLE SYSTEMS STUDY. Unnewehr, L.E. (Ford Motor Co., Dearborn, MI). 1974.

From 3. international electric vehicle symposium; Washington, District of Columbia, USA (19 Feb 1974).

Proceedings of the third international electric vehicle symposium.

The results of an extensive evaluation of electric vehicles is presented. Electric vehicle power trains are discussed, and it is noted that the technology required to build electric drives for vehicles is highly developed and capable of mass produced vehicles at the present time. Three types of potentially viable electric vehicles are discussed. The small city car and the van could find considerable application in today's transportation scheme, but still suffer a cost penalty over conventional ICE vehicles. The third car, a higher-performing metropolitan car, must await the development of high-energy batteries to become feasible.

4936 (CONF-740215--P2, pp 29p, Paper 7420) EFP'S CURRENT PROGRAM. Aronson, R.P. (Electric Fuel Propulsion Corp., Detroit). 1974.

From 3. international electric vehicle symposium; Washington, District of Columbia, USA (19 Feb 1974).

Proceedings of the third international electric vehicle symposium.

In June of this year, EFP (Electric Fuel Propulsion Corporation) will begin limited production of a highway passenger car similar to the Electrosport car whose performance is described in the Dana Corporation Test Report E-1870 attached to this paper. Top speed-69 mph; range-50 to 100 miles on a charge; acceleration-0 to 30 mph in less than 10 seconds. The charge time of the special tri-polar, lead-cobalt batteries in this car is approximately 37 minutes for an 80 percent recharge. Later on, a smaller car will be produced with an improved range performance similar to that shown in the Cornell/General Motors Test Report attached to this paper (CAL Report No. VJ-2623-K-1). These cars are made from specially designed chassis--built from the ground up--upon which regular Detroit production bodies are placed. The cars are not converted vehicles in the ordinary sense. They are designed to meet all applicable Federal Safety Standards. The new cars will be equipped with a second generation tri-polar, lead-cobalt battery never used before in an EFP car. This battery is described in U.S. Patent 3,518,127 attached to this paper. According to laboratory tests, this new battery will deliver approximately 20 percent more energy density at high discharge rates than the first generation tri-polar batteries which were used in the 60 vehicles EFP has produced in the past 7 years, including those vehicles covered by the Dana and Cornell/General Motors Test Reports.

ELECTRIC VEHICLES: POINT OF VIEW OF AN AUTOMOBILE MANUFACTURER. Gastaut, G. 1974.
From 3. international electric vehicle symposium; Washington, District of Columbia, USA (19 Feb 1974).
Proceedings of the third international electric vehicle symposium.
The RENAULT Group did not wish until now to discuss problems linked with possible electric vehicles, since the progress accomplished was small and the performance characteristics of such vehicles were far removed from those of conventional vehicles. Therefore, it was not believed that a beginning of a market could exist for such vehicles. Nevertheless, the Design departments of RENAULT and SAVIEM are working, directly or with outside companies, on batteries, electric motors, electronic regulation and, more generally, on the various possibilities of drive trains using electric power, at least in part. Different reasons have modified this attitude and make us now consider as possible the existence in the near future of a beginning of a market for such vehicles. These reasons are of two sorts: technical and economic. They were the ones which resulted in the signature of an important agreement between TREGIE (Group of Economic Interest including RENAULT, SAVIEM and SERI) and ELECTRICITE DE FRANCE (E.D.F.) (French Electric Power Authority). A report is given which tries to review these reasons and to show how an automobile manufacturer draws industrial consequences from them.

4938 (CONF-740215--P2, pp 30p, Paper 7478)
ELECTRICAL PROPULSION SYSTEMS FOR ROAD VEHICLES STATE OF THE ART AND PRESENT-DAY PROBLEMS. Bader, I.; Plust, H.G. (Deutsche Automobilgesellschaft mbH, Esslingen, Germany). 1974.
From 3. international electric vehicle symposium; Washington, District of Columbia, USA (19 Feb 1974).
Proceedings of the third international electric vehicle symposium.
An analysis of various all-electric and electro-hybrid drive versions has revealed that at the moment the only possible source of energy for electro-powered vehicle is the lead-acid battery, but that in the future also alkaline and high-temperature accumulators might gain increasing importance since using these units might mean a reduction in operating cost of the vehicles thus equipped. As a result, optimization of electrical propulsion systems for road vehicles at the moment means to minimize the weight of the energy storage unit that is necessary to meet the specified transport requirements and to make the fullest possible use of the limited amount of energy available. Future developments in the field of electrical drive units should aim at cutting down the considerable cost of operation in the starting range due to the power electronic system in accordance with the comparatively short periods of operation within this range.

4939 (CONF-740215--P2, pp 45p, Paper 7480)
EXPERIMENTS ON A TRIAL SERIES OF ELECTRICAL VEHICLES. Cochat, M.; Heurtin, J.; Wolf, R. 1974.
From 3. international electric vehicle symposium; Washington, District of Columbia, USA (19 Feb 1974).
Proceedings of the third international electric vehicle symposium.
A trial series of 90 light utility vehicles have been made by E.D.F. (Electricite de France) to be tested under ordinary working conditions. Those using them are either E.D.F. employees, municipal workers, or are employed in public or private enterprises. A description is given of the vehicles and their dynamic performance during the experiments, and a comparison is made with theoretical calculations. The experiments and work carried out on the vehicles are described, and the road-worthiness, maintenance, and energy consumption are considered with respect to the type of use.

4940 (CONF-740215--P2, pp 13p, Paper 7451)
SIMULATION OF LEAD--ACID CELLS. Moerdijk, M.C.W.; Venderbosch, H.W.; Kema, N.V. 1974.
From 3. international electric vehicle symposium; Washington, District of Columbia, USA (19 Feb 1974).
Proceedings of the third international electric vehicle symposium.
The possibility was investigated of providing trolley-buses with a small trailer supplied with a lead battery meant to be charged by the overhead wires. This enables the buses to run independently of overhead wires for some distance, which results in a greater flexibility in service. Simulation of the behavior of lead accumulators is especially useful in case of erratic charging patterns as occur in electric traffic. Complicated switching operations during battery testing to achieve certain types of currents are then superfluous (inadmissible simplifications of charging patterns during tests can be avoided). Another advantage is that more knowledge is obtained about the behavior and the limitations of the battery. A tentative description is given of the time dependent processes in a lead accumulator. Further refinements are possible, such as, e.g., the inclusion of a separator.

ZINC--AIR BATTERIES IN VEHICULAR APPLICATIONS. Appleby, A.J.; Pompon, J.P.; Jacquier, M. (Center de Recherches de la Compagnie Generale d'Electricite, Marcoussis, France). 1974.
From 3. international electric vehicle symposium; Washington, District of Columbia, USA (19 Feb 1974).
Proceedings of the third international electric vehicle symposium.
A zinc-air battery system is described in which the electrolyte is maintained in circulation and carries with it the active anode material (zinc powder). A discussion is given of why this system was chosen for an electric vehicle battery and under what conditions it represents an optimum solution. The circulating Zn-air system appears to be technically and economically well-placed when compared with other electric vehicle power sources. Its advantages may be summarized as follows: (1) its high performance is suited to a wide range of urban vehicle types; (2) utilization logistics are similar to present gasoline-powered vehicles; (3) its present high level of technological development is such that short-term introduction may be envisaged; and (4) price calculations show costs that are competitive with other electric (and gasoline) vehicle power systems.

4942 (CONF-740215--P2, pp 16p, Paper 7459)
FEASIBILITY STUDY OF ELECTRIC BUSES FOR PUBLIC TRANSIT IN HONOLULU, HAWAII. Hwang, H.H.; Okawa, R.T. (Univ. of Hawaii, Honolulu). 1974.
From 3. international electric vehicle symposium; Washington, District of Columbia, USA (19 Feb 1974).
Proceedings of the third international

electric vehicle symposium.
A self-propelled electric bus with a curb weight of 20,000 pounds and a seating capacity of 49 passengers appear to be technically feasible for use in Honolulu. The 4,375 pound lead-acid traction batteries currently available are capable of meeting the power requirements of such a bus, permitting it to perform comparably to the conventional bus. Limitations in driving range do exist. However, if air conditioning is not used, the bus is capable of making round trips on the shorter routes with one fully charged battery. If battery-charging stations are built such that the bus can obtain on-route battery replacements, then the bus is capable of making round trips on all routes. The majority of the routes require one battery change for a round trip when air conditioning is used. It is estimated that the electric bus needs less than one-half of the fuel required to power a conventional bus. Therefore, the implementation of electric buses is very timely and urgent at this moment of critical fuel shortage.

4943 (CONF-740215--P2, pp 15p, Paper 7460)
M.A.N.: ELECTRO BUS PLANNING AND FIRST TESTS. Hagen, H. (Maschinenfabrik Augsburg-Nurnberg (M.A.N.), Munich). 1974.
From 3. international electric vehicle symposium; Washington, District of Columbia, USA (19 Feb 1974).
Proceedings of the third international electric vehicle symposium.
In conjunction with Bosch, Varta and RWE, M.A.N. (Maschinenfabrik Augsburg-Nurnberg) developed a battery-powered electro-bus, in which the power supply unit is in an attached single-axle trailer. In this way it is possible to make the battery large enough for corresponding driver power without limiting the useful load possibilities of the vehicle. On the basis of the plan described, two prototypes were built and tried out in practical city service. The test results and furthar development are reported.

URBAN PUBLIC TRANSPORT IN FRANCE BY AUTONOMOUS ELECTRIC-POWERED BUS: REPORT AND ACTUAL TESTING OVER A TWO-YEAR PERIOD AND A DISTANCE OF 15,000 MILES. Lefort, L.; Martin, G.M. 1974.
From 3. international electric vehicle symposium; Washington, District of Columbia, USA (19 Feb 1974).
Proceedings of the third international electric vehicle symposium.
A discussion is given of the design and performance testing of a twenty-two passenger electric bus powered by lead-acid batteries. Various technical problems brought out by tests are described, and the economic results (cost per kilometer) are discussed. Two minibusses, in a year and a half, ran a cumulative distance of over 25,000 kilometers (15,540 miles) without any major trouble. (PMA)

4945 (CONF-740215--P2, pp 27p, Paper 7466)
WHO NEEDS ELECTRONICS. TORQUE CONVERTERS CAN DO THE JOB. Mangan, M.F.; Griffith, J.T. (Electricity Council Research Centre, Capenhurst, England). 1974.
From 3. international electric vehicle symposium; Washington, District of Columbia, USA (19 Feb 1974).
Proceedings of the third international electric vehicle symposium.
The problems associated with the development of the high powered electric road vehicle have been tackled mainly by the use of electronic controllers and compatible motors. As a technical solution to the problems, this approach has been very successful, but it has resulted in an expensive technology which is not in the usual repertoire of the automotive industry. An alternative approach using mechanical controlling elements is described which uses established automotive technology and which can be designed to give similar overall performance at a potentially lower price. Tests on an experimental van using the motor and industrial converter described have shown the reliable mixed driving range to be in excess of 40 miles, with a maximum recorded range in commuter driving of 53 miles per charge with an acceleration after 25 miles of between 14 and 15 seconds for 0 to 30 mph. These results were obtained using a battery pack which gave 230 Ah maximum from a nominal 96V lead acid battery. These figures are not as impressive as those claimed for vehicles fitted with electronic controllers but they were achieved using standard components with a minimum of capital and development cost. Similar development devoted to improvements in torque converter couplings would substantially improve the overall efficiency and since automotive technology is directly involved, such an approach could prove more attractive to the automotive industry.

4946 (CONF-740215--P2, pp 15p, Paper 7469)
BATTERY CHARGE CONDITION MONITORING: TECHNIQUES AND APPLICATIONS. Christianson, C.C. (Gould Labs., St. Paul). 1974.
From 3. international electric vehicle symposium; Washington, District of Columbia, USA (19 Feb 1974).
Proceedings of the third international electric vehicle symposium.
A description and comparison of the techniques available for monitoring battery charge condition are given. Attention will be primarily given to those techniques which are useful with lead-acid and nickel-cadmium batteries since these two types are primarily in use today. Some of the techniques will be applicable to any type of battery. A number of alternatives exist for accomplishing battery charge condition monitoring. The lead-acid battery is well suited to approaches based upon measurements of battery parameters where one of the most useful techniques is that incorporating an IR compensated terminal voltage. Coulometric techniques are suitable for essentially any type of battery. The most useful approaches are probably those which provide a signal proportional to the battery's charge condition. Coulometric techniques, for example, are essentially the only ones compatible with nickel-cadmium type batteries. Since coulometric techniques determine the battery recharge condition indirectly through measurement of battery charge and discharge currents, special application problems are involved in terms of maintaining synchronization between the actual battery's charge condition and that indicated by the coulometer. An accurate battery charge condition signal can be most useful in electric vehicle applications and can provide new ways for innovative system designers to solve their system application problems.

4947 (CONF-740215--P2, pp 25p, Paper 7470)
IMPACT OF ELECTRIC CARS FOR THE LOS ANGELES INTRASTATE AIR QUALITY CONTROL REGION. Hagey, G.; Hamilton, W.F. 1974.
From 3. international electric vehicle symposium; Washington, District of Columbia, USA (19 Feb 1974).
Proceedings of the third international

electric vehicle symposium.
Under the Clean Air Act Amendments of 1970, the Environmental Protection Agency promulgated National Ambient Air Quality Standards on April 30, 1971. The Los Angeles Air Quality Control Region, as well as certain other regions, will not be able to attain and maintain these ambient air qualities by combinations of emission controls on stationary sources and vehicles unless transportation controls are also used. It is conceivable that the future air quality in these areas might benefit from the use of electric cars. For example: a two-car strategy wherein non-electric cars are restricted from the heart of the urban area; or a strategy wherein electric cars account for a portion of the vehicle miles travelled throughout the area. Early results are presented from an ongoing EPA-sponsored study conducted by the General Research Corporation on the impact of electric cars for the Los Angeles Air Quality Control Region. The study is examining present and projected future electric car technology, and impacts in the areas of the environment, energy, natural resources, the transportation system and the economy. The study time periods are: present to 1985, and 1985 to 2000.

4948 (CONF-740215--P2, pp 14p, Paper 7473) DEVELOPMENT OF ELECTRIC VEHICLES IN JAPAN. Smith, G.E. (Univ. of Michigan, Ann Arbor). 1974.
From 3. international electric vehicle symposium; Washington, District of Columbia, USA (19 Feb 1974).
Proceedings of the third international electric vehicle symposium.
The development of electric vehicles in Japan is being actively pursued by several industrial and governmental concerns with the five year program funded by the federal government providing a large impetus to this development. It is significant that the agency through whom the funds are being appropriated has the responsibility for developing technologies to further the economic strength and development in Japan. Thus it would seem that the Japanese government expects the electric vehicle to have a market as a viable means of transportation. Those interested in electric vehicles will anxiously await the conclusions and results drawn from this program in Japan.

4949 (CONF-740215--P2, pp 25p, Paper 7461) OUTLINE PROJECT OF A HYBRID BUS. Brusaglino, G. (Technological Research Center, Turin); Bertoldi, F. 1974.
From 3. international electric vehicle symposium; Washington, District of Columbia, USA (19 Feb 1974).
Proceedings of the third international electric vehicle symposium.
A study was made of a hybrid bus for urban public transportation which would have low emissions and high performance levels. Diesel engines, gas turbines, Rankine engines, and stirling engines are evaluated as prime movers, while the energy storage systems considered were storage batteries and flywheels. The chosen system is a gas turbine-storage battery hybrid with separately excited dc motors. A description is given of the systems, components, and operating modes, and the basic design criteria of the vehicle and the propulsion system are described. Consideration is given to automatic programmed acceleration control. (PMA)

4951 (CONF-751238--, pp 58-61) UNITED KINGDOM'S RESEARCH AND DEVELOPMENT PROGRAM STATUS. Donald, G. (Dept. of the Environment, London). 1975.
From Symposium on low pollution power systems development; Rome, Italy (3 Dec 1975).
Symposium on low pollution power systems development.
A summary is given of the status of key research and development programs related to Low Pollution Power Systems Development (LPPSD) which the United Kingdom is pursuing. Topics include: (1) diesel engine noise; (2) sodium-sulfur batteries; (3) pollution control equipment; (4) stratified charge engines; (5) diesel exhaust odors; and (6) fuel economy.

4952 (CONF-760112--1) BATTERY RESEARCH SPONSORED BY THE U.S. ENERGY RESEARCH AND DEVELOPMENT ADMINISTRATION. Landgrebe, A.A.; Nelson, P.A. (Argonne National Lab., Ill. (USA)). 1976. Contract W-31-109-eng-38. 12p. Dep. NTIS $3.50.
From Symposium on United States lithium resources and requirements by the year 2000; Lakewood, Colorado, USA (22 Jan 1976).
An important part of the Energy Storage Program of the U.S. Energy Research and Development Administration is the development of storage batteries for load-leveling on electric utilities and automotive propulsion, and for application to new energy generating systems. The successful development of batteries for these purposes will provide significant savings of oil resources and will also have beneficial environmental effects. A very high manufacturing volume may be required for these batteries and the availability of the required raw materials is an important consideration. Lithium--aluminum/iron sulfide batteries show promise both for utility energy-storage batteries and electric vehicle batteries, and serious consideration should be given by the lithium industry to the availability of lithium resources. (auth)

4953 (CONF-760469--3) BATTERIES FOR UTILITY LOAD LEVELING. Nelson, P.A., Yao, N.P. (Argonne National Lab., Ill. (USA)). 1976. W-31-109-ENG-38 . 22p. Dep. NTIS $3.50.
From American power conference; Chicago, Illinois, USA (20 Apr 1976).
A critical need for conservation is to reduce the use of dwindling oil and gas resources in electric energy generation. Leveling or peak shaving electric utility loads by means of off-peak energy storage devices would allow an orderly shift to increased utilization of base-load energy, and thereby decrease the use of oil and gas by turbine generators. The concept of energy storage by batteries is particularly attractive for electric utility applications. This paper addresses three key areas: the technical and economic requirements of batteries for applications to electric utilities, the near-term technology for the lead--acid battery and the prospect for its use in utility applications, and the development status and the incentives for developing advanced battery

technology. The Battery Energy Storage Test Facility is also briefly discussed; it will provide a test bed for advanced batteries in a utility network. 1 figure, 6 tables. (RWR)

4954 (CONF-770430--P4(Draft), pp vp,) FIAT ELECTRIC CITY CAR PROTOTYPE. Brusaglino, G. (Centro Ricerche FIAT, Turin). 1977.
From 4. international symposium on automotive propulsion systems; Washington, District of Columbia, USA (17 Apr 1977).
Fourth international symposium on automotive propulsion systems. Volume IV.
Electric vehicles represent an important research activity at FIAT. One of the themes was the development of a two-seater city car prototype with properly designed body. The main purpose was to define a vehicle capable of meeting the requirements of comfortable and easy driving, handling, and parking and suitable performance for urban operation on level or hilly routes. The general concept is in accordance to near-future solution of the electrical power equipment, both for propulsion and on-board storage system. The propulsion system consists in a separately excited high specific power dc motor fed by transistor double chopper; a Ni-Zn battery has been recently provided for on-board storage equipment. A technical description is given, and results of road tests are reported.

4955 (CONF-770430--P4(Draft), pp vp,) PERIPHERIC EQUIPMENT FOR REDUCING MAINTENANCE OF ELECTRIC VEHICLE LEAD--ACID BATTERIES. Salamon, K. (VARTA Batterie AG, Kelkheim, Germany). 1977.
From 4. international symposium on automotive propulsion systems; Washington, District of Columbia, USA (17 Apr 1977).
Fourth international symposium on automotive propulsion systems. Volume IV.
Maintenance as well as controlling of electric-vehicle-batteries becomes a more and more important problem when the number of vehicles is increasing. Therefore, not only the energy-density of a battery but also the comfort of handling and servicing wins growing interest. This is the reason for considerable efforts in developing special devices called ''periphere components'' for easier maintenance and supervision of the battery and its performance. Some new developments on this field are reported: (1) gas recombination by catalysts; (2) central topping-up systems for eacy refilling of the battery; (3) monitoring of acid density, charge indicator; and (4) battery-cooling for heavy duty batteries.

4956 (CONF-770430--P4(Draft), pp vp,) PERFORMANCE STANDARDS FOR ELECTRIC VEHICLES. Brennand, J. (General Research Corp., Santa Barbara, CA). 1977.
From 4. international symposium on automotive propulsion systems; Washington, District of Columbia, USA (17 Apr 1977).
Fourth international symposium on automotive propulsion systems. Volume IV.
The rationale leading to recommendations for specific performance standards for near-term and advanced electric vehicles which are to be leased or purchased by the U.S. Energy Research and Development Administration is set forth. The underlying analytical basis is derived. Performance standards include ranges from 50 km (J227a/C, near-term private vehicles) to 150 km (J227a/D, advanced private vehicles). Energy consumption maximums at the input to the charger are 0.25 and 0.2 kW.h/ km for the private vehicles (near-term and advanced), and 0.45 and 0.35 kW.h/km for commercial vehicles.

4957 (CONF-770430--P4(Draft), pp vp,) SYSTEMATIC APPROACH TO THE EVOLUTION OF HIGH PERFORMANCE ELECTRIC VEHICLES. O'Connell, L.G. (Univ. of California, Livermore); Cooper, J.F.; Miller, A.B.; Newkirk, H.W. 1977.
From 4. international symposium on automotive propulsion systems; Washington, District of Columbia, USA (17 Apr 1977).
Fourth international symposium on automotive propulsion systems. Volume IV.
The performance characteristics of current and future electric vehicles are examined and compared to projected heat engine vehicle parameters. The shortcomings of electric vehicles in the near-term time frame are discussed. It is predicted that the all-electric vehicle will not gain wide acceptance in the near future because of degraded performance characteristics. Because the near-term low acceptance level of electric vehicles is caused by their overall lower performance level, a hybrid concept is examined which may give an enhanced performance level in the short range future. This type of vehicle is proposed as a much needed transition system to provide an evolutionary change from the heat engine system vehicle of today to electric vehicles with acceptable performance in the future.

4958 (CONF-770430--P4(Draft), pp vp,) FOUR PASSENGER ELECTRIC VEHICLE DESIGN. Schwarz, R. (ASL Engineering, Inc., Goleta, CA). 1977.
From 4. international symposium on automotive propulsion systems; Washington, District of Columbia, USA (17 Apr 1977).
Fourth international symposium on automotive propulsion systems. Volume IV.
A discussion is given of the tradeoffs involved in the design of a general purpose four-passenger electric vehicle. The advantages and disadvantages of three design approaches--series motor with chopper controller, separately excited motor with field control, and flywheel/electric hybrid--are discussed, along with the impact of battery characteristics on the performance of these three systems. The approaches taken in various aspects of vehicle design, including packaging, aerodynamics, and safety, to optimize overall performance and utility, are also discussed.

4959 (CONF-770430--P4(Draft), pp vp,) DESIGN OF A CURRENT TECHNOLOGY ELECTRIC VEHICLE. Guess, R.; Nial, W.; Pocobello, M. 1977.
From 4. international symposium on automotive propulsion systems; Washington, District of Columbia, USA (17 Apr 1977).
Fourth international symposium on automotive propulsion systems. Volume IV.
The U.S. Energy Research and Development Administration (ERDA) has initiated a program to develop totally new electric vehicles by 1979 with substantially improved performance over those available today. The rationale used in designing a 4 passenger electric vehicle for use in an urban environment is presented. A description is given of that part of the ERDA program undertaken by the General Electric Company with Triad Services, Incorporated as a subcontractor. The approach taken was to design an electric vehicle utilizing current technology and on the basis of trade-off analysis results identify the upgrading utilizing more advanced technology to reach ERDA goals. Advanced technology was to be incorporated to the extent it could be developed and made available by July, 1978. The

Current Technology Vehicle design represented the best that could be done with technology commercially available in 1976. The vehicle design, the drive train, the major components, and the control are described. The Current Technology Vehicle specifications as well as the general dimensional and weight characteristics are given. ERDA performance goals for a Near Term electric car are compared to the GE-1977 Current Technology Vehicle performance goals.

4960 (CONF-770430--P4(Draft), pp vp,) ELECTRIC- AND HYBRID-VEHICLE POWERTRAIN DEVELOPMENT. Altendorf, J.P.; Kalberlah, A.; Saridakis, N. (Volkswagenwerk AG, Wolfsburg, Germany). 1977.
From 4. international symposium on automotive propulsion systems; Washington, District of Columbia, USA (17 Apr 1977).
Fourth international symposium on automotive propulsion systems. Volume IV.
The advantages and disadvantages of electric and hybrid-drive vehicles are enumerated, and some possible uses of these types of vehicles are discussed. A detailed description is given of the VW electric delivery truck system consisting of the vehicle itself and the peripheral equipment required to operate it. Hybrid drive systems are also discussed. Both structure and function of a drive system of this kind are described in some detail as implemented by VW in a minibus. Emission and fuel consumption data derived from experiments performed on this vehicle are given.

4961 (CONF-770430--P4(Draft), pp vp,) FLYWHEEL ELECTRIC MOTOR HYBRID POWER TRAIN FOR ELECTRIC VEHICLES. Kugler, G.C. (ESB Tech. Center, Yardley, PA). 1977.
From 4. international symposium on automotive propulsion systems; Washington, District of Columbia, USA (17 Apr 1977).
Fourth international symposium on automotive propulsion systems. Volume IV.
A hybrid drive train for electric vehicles is described. The unit includes a flywheel to limit the power demands on the battery and an electric motor as the main power source. Advantages include extended battery life, increased range, and improved acceleration. The flywheel is of conventional design and the entire unit uses presently available components and materials. The advantages of the drive train increases as the number and severity of accelerations and decelerations in the driving cycle increase.

4962 (CONF-770430--P4(Draft), pp vp,) FLYWHEEL-BATTERY HYBRID POWER SYSTEM: A CONCEPT TO IMPROVE ELECTRIC VEHICLE PERFORMANCE. Davis, D.D.; Epps, R.C. (Univ. of California, Livermore). 1977.
From 4. international symposium on automotive propulsion systems; Washington, District of Columbia, USA (17 Apr 1977).
Fourth international symposium on automotive propulsion systems. Volume IV.
A concept for powering the automobile is re-examined: a hybrid propulsion system design based upon demonstrated technology that could substantially improve performance, range, and consumer acceptability of a battery-powered electric vehicle. In the proposed power system, a high-energy composite flywheel is coupled to a simple, efficient, electro-mechanical transmission. Today's ''state-of-the art'' lead-acid as well as near-term and advanced battery types are examined as prime power sources. Interactive control of battery and/or flywheel drive power is provided by a versatile microprocessor-based power control unit. In the power system proposed, the flywheel augments the battery during periods of high power demand: starting, acceleration, and hill climbing. The battery supplies cruise-and-control power plus the energy required to replenish flywheel losses. With battery power demand stabilized at a low value, specific energy is maintained near maximum resulting in increased vehicle range. Vehicle kinetic energy is restored to the flywheel when traveling downhill or during any period of deceleration. The flywheel-battery hybrid is thus able to make efficient use of a regenerative braking system to recover energy. A one and a half times greater range, when compared to all-battery power, is predicted for the hybrid-powered vehicle when operated in a stop-and-go commuter environment. Acceleration rates approaching those of internal combustion powered vehicles are attainable with the hybrid power system.

4963 (CONF-770430--P4(Draft), pp vp,) BATTERY-FLYWHEEL POWER SYSTEM FOR AN URBAN AUTOMOBILE. Rowlett, B.H. (AiResearch Manufacturing Co., Torrance, CA). 1977.
From 4. international symposium on automotive propulsion systems; Washington, District of Columbia, USA (17 Apr 1977).
Fourth international symposium on automotive propulsion systems. Volume IV.
A description is given of the work being done under contract to the Energy Research and Development Administration for an advanced electric vehicle design that includes a new concept that integrates the advantages of a flywheel energy storage system into a battery-powered automobile to reduce the fundamental performance limitations of the battery-powered vehicle. An output-coupled split-differential transmission is used to link the flywheel to the output shaft. The flywheel supplies the energy for all of the high-power requirements, which results in good vehicle acceleration characteristics; the combination of regenerative braking and load leveling of the battery current results in improved range of the vehicle.

4964 (CONF-770430--P4(Draft), pp vp,) NEW LOOK AT FLYWHEEL PROPULSION FOR URBAN TRANSIT BUSES. Lawson, L.J. (AiResearch Manufacturing Co., Torrance, CA). 1977.
From 4. international symposium on automotive propulsion systems; Washington, District of Columbia, USA (17 Apr 1977).
Fourth international symposium on automotive propulsion systems. Volume IV.
A program was initiated recently by the U.S. Department of Transportation Urban Mass Transportation Administration which is directed toward the demonstration and ultimate production of energy efficient transit buses that eliminate the noise, air pollution, and odors characteristic of present diesel buses. The results of the first tasks of the study phase of the program have shown the viability of four flywheel-propulsion configurations that can match or exceed the performance and route requirements of typical transit properties. These new flywheel drives are: (1) a pure flywheel system capable of operating several miles between short enroute or stationary charges; (2) a flywheel/battery hybrid system that uses a small flywheel to provide load leveling for the battery (which is to be periodically exchanged for recharging) and for regenerative braking; (3) a flywheel/diesel engine hybrid system in which the small flywheel reduces the required engine size by 70 percent without sacrifice of performance and provides regenerative braking; and (4) a

flywheel-augmented trolley coach that uses a relatively small flywheel to provide regenerative braking and efficient control while onwire as well as a limited offwire route capability. Due to component commonality and modularity, these concepts appear suitable to provide improved propulsion for a wide range of vehicles.

4965 (CONF-770430--P4(Draft), pp vp,) THEORETICAL PERFORMANCE UPGRADING OF THE E.V.A. ELECTRIC VEHICLE: BY USE OF A FLYWHEEL/BATTERY HYBRID POWER TRAIN SYSTEM. Davis, D.D. (Univ. of California, Livermore); Epps, R.C.; Renner, R.A. 1977.
From 4. international symposium on automotive propulsion systems; Washington, District of Columbia, USA (17 Apr 1977).
Fourth international symposium on automotive propulsion systems. Volume IV.
The performance improvement that could be realized by an electric vehicle through replacement of the existing electric drive train with one incorporating a flywheel/battery energy source is examined. The vehicle selected for the theoretical power train conversion is the electric sedan marketed by Electric Vehicle Associates (E.V.A.). The hybrid power train proposed, uses a high-energy composite flywheel coupled to a simple, efficient, electro-mechanical transmission. The lead-acid batteries installed by E.V.A. provide the prime power source. Interactive control of battery and/or flywheel drive power is provided by a versatile microprocessor-based power control unit. The flywheel allows efficient recovery of vehicle kinetic energy during braking and provides the energy base required to meet all high power transient demands. The flywheel also stabilizes battery demand at a low average value resulting in improved battery performance through increases in both cycle life and available energy. Due to the hybrid system described here, electric vehicle acceleration and range improvements are predicted to be in excess of 80 percent for the E.V.A. vehicle when operated in a stop-and-go commuter environment.

4966 (CONF-770430--P5(Draft), pp vp,) ENERGY FOR ROAD TRANSPORT IN THE UNITED KINGDOM. Porter, J.; Fitchie, J.W. (Transport and Road Research Lab., Crowthorne, Eng.). 1977.
From 4. international symposium on automotive propulsion systems; Washington, District of Columbia, USA (17 Apr 1977).
Fourth international symposium on automotive propulsion systems. Volume V.
Looking at the short-to-medium term, examples are given to illustrate the use of computer simulation and instrumented cars to identify and evaluate potential energy conservation measures. For the longer term, when natural crude oil becomes scarce and expensive, the study compares vehicles using synthetic gasoline from coal and battery vehicles and examines the factors needed to give a primary energy advantage of one type of vehicle over the other. However, other considerations need to be assessed and it is suggested that the main need now is to continue the research and initial development needed to keep both options open.

4969 (ERDA--76-136, pp 212-218) OVERVIEW OF ERDA BATTERY PROGRAM. Landgrebe, A.R. 1976.
From Highway vehicle systems contractors coordination meeting; Ann Arbor, Michigan, USA (4 May 1976).
Highway vehicle systems contractors coordination meeting. Tenth summary report.
The battery program is very large and complex with many different programs in progress and pending. The general thrust is for co-funded programs and complete involvement with industry. In addition, close coordination and cooperation is carried on with other research organizations like EPRI and other government agencies and laboratories. The National Battery Test Facility is at Argonne National Laboratory. In addition to test and evaluation, much of the technology assessment, cost analysis, and screening of new concepts and components are carried out at this laboratory. Secondary batteries for electric vehicles offer several potential advantages including conservation of resources and favorable environmental features. Several advanced batteries under development show promise of meeting the requirements for electric vehicles within the next decade. Potential vehicle batteries include improved lead-acid, and nickel-iron for the near term (one-to-three years); advanced lead-acid and nickel-zinc for the intermediate term (three-to-five years); and metal-air, lithium-metal sulfide, sodium-sulfur and other advanced systems for the longer term (greater than five years).

4970 (ERDA--76-136, pp 221-222) NEAR TERM BATTERY DEVELOPMENT PROJECTS. Yao, N.P. 1976.
From Highway vehicle systems contractors coordination meeting; Ann Arbor, Michigan, USA (4 May 1976).
Highway vehicle systems contractors coordination meeting. Tenth summary report.
The objectives of the aqueous battery programs at Argonne National Laboratory (ANL) are: (1) research, development and demonstration of near-to intermediate-range electric vehicle batteries; (2) development of near-range lead-acid battery for demonstration in electric utility; and (3) establishment of a centralized national battery test facility. The schedule for electric vehicle battery development is given. (PMA)

4971 (ERDA/NASA/1011--77/3) NEW BATTERIES AND THEIR IMPACT ON ELECTRIC VEHICLES. Schwartz, H.J. (National Aeronautics and Space Administration, Cleveland, Ohio (USA). Lewis Research Center). 1977. Contract EX-

76-A-31-1011. 16p. (NASA-TM-X--73672). Dep. NTIS, PC A02/MF A01.

The builder of an on-the-road electric vehicle (EV) has no problem in selecting a battery today because he has little choice. For small vehicles he must use a lead-acid golf car battery, while for a larger vehicle he may choose the heavier but more durable industrial-type lead-acid battery. This situation is changing rapidly. The technical literature is filled with recent papers recounting advances in one battery type or another. Each new battery offers a different combination of energy density (which defines the range capability of the vehicle), power density (which relates to the acceleration capability), cycle life, and cost (the battery economic parameters). To an EV manufacturer, this flood of data raises two questions: (1) how do I evaluate the various candidates for my job and (2) when can I expect a new battery to be ready for my vehicle. This paper suggests answers to these questions. 6 figures, 3 tables.

4973 (LBL--6301) INVESTIGATION OF THE FEASIBILITY OF A DUAL MODE ELECTRIC TRANSPORTATION SYSTEM. Bolger, J.G.; Kirsten, F.A. (California Univ., Berkeley (USA). Lawrence Berkeley Lab.). May 1977. Contract W-7405-ENG-48. 159p. Dep. NTIS, PC A07/MF A01.

A study is reported which explores the feasibility of a highway transportation system that electromagnetically transfers energy to vehicles from powered roadways for high-speed or long-range travel, and uses energy stored in the vehicles for other travel. The energy coupling between roadway and vehicle is functionally similar to a transformer. The roadway energy source is imbedded flush with the roadway surface. When vehicle's energy pickups are suspended over the source, energy is magnetically coupled through the clearance gap between source and pickup. Analyses and modeling indicated that adequate power can be efficiently coupled by the system. The economics of the system appear to be favorable, and no implementational problems were identified that would make the system impractical. In addition to the engineering development of the power system, including performance verification with prototype hardware, continuing efforts should further address the effects of stray magnetic fields, the compatibility of the system with existing automobiles, electrical safety, and the process of transition from the use of existing automobiles.

5008 (PB--251490, pp 10-42) POTENTIAL FOR ENERGY STORAGE SYSTEMS ON U.S. ELECTRIC UTILITY SYSTEMS. Sulzberger, V.T. (Public Service and Gas Co., Newark, NJ). Mar 1976.
Near-term energy storage technologies: workshop on lead--acid batteries, Palo Alto, California, November 18--19, 1975.
Preliminary results of an assessment of energy storage systems suitable for use by U.S. electric utility systems as peaking and intermediate generating capacity are discussed. These results, focusing on an economic comparison of selected energy storage systems, should help to identify utility requirements, potential applications, and guidelines for future R and D activities concerning energy storage systems. 3 figures, 10 tables (RWR)

5009 (PB--251490, pp 160-172) REPORT ON AN ENGINEERING STUDY OF A 20-MW, 200-MWH LEAD--ACID BATTERY ENERGY STORAGE DEMONSTRATION PLANT. Stolte, W.J. (Bechtel Corp., San Francisco). Mar 1976.
Near-term energy storage technologies: workshop on lead--acid batteries, Palo Alto, California, November 18--19, 1975.
This design study concludes that a 20-MW, 200-MWh lead--acid battery energy storage demonstration plant can be designed and constructed utilizing currently available technology. The demonstration plant would cost

$27,500,000 (July 1975 dollars) and would require 62 months to design and construct, including a two-year period for design, testing, and modification of test cells. The mature 20-MW, 200-MWh lead--acid battery energy storage plant would cost $22,000,000 in July 1975 dollars if built at the rate of ten plants per year. Implementing immediate cost reduction considerations could reduce the cost of the mature plant to $17,400,000. Only minimal environmental impacts result from constructing and operating this plant. 1 figure, 3 tables (RWR)

5010 (PB--251490, pp 174-187) TECHNICAL ANALYSIS. Birk, J.R. (Electric Power Research Inst., Palo Alto, CA). Mar 1976.
Near-term energy storage technologies: workshop on lead--acid batteries, Palo Alto, California, November 18--19, 1975.
This analysis attempts to explain the differences in alternative approaches discussed by various battery manufacturers; discuss confidence in and thoughts about the performance requirements, and cost projections of these lead--acid batteries; and project the cost ranges for battery systems. A summary of the various battery specifications and costs is given. Battery cooling/warming will be an important consideration. 1 figure, 5 tables (RWR)

5011 (PB--251490, pp 188-193) ECONOMIC ANALYSIS. Smith, J.C. Mar 1976.
Near-term energy storage technologies: workshop on lead--acid batteries, Palo Alto, California, November 18--19, 1975.
An attempt to put the information received from various manufacturers of lead--acid batteries into a utility perspective is made. ''Best guess'' numbers are used for costs of converters, cooling, and site/building/ engineering. 1 figure.

5012 (PB--251490, pp 194-209) POWER CONVERSION EQUIPMENT FOR STORAGE BATTERIES. Beck, J.W. (Electric Power Research Inst., Palo Alto, CA). Mar 1976.
Near-term energy storage technologies: workshop on lead--acid batteries, Palo Alto, California, November 18--19, 1975.
Because the energy stored in secondary batteries is retrieved as dc, equipment must be provided to convert the dc voltage and current to the 60 Hz ac energy supply required by electric utilities in the United States. The equipment performing this function is referred to often as power conditioning and control equipment, inverters, or power conversion equipment. The power conversion equipment must provide the interface between the utilities' electrical systems and the source or storage device. The requirements of the conversion equipment are discussed. The alternative approaches available to meet the requirements of the converters are introduced, and some of their salient features are mentioned. The basis for rating the power conversion equipment is discussed in the context of the equipment costs. The capabilities of the conversion equipment are treated in the context of potentially additional operating features of the batteries. 4 tables (RWR)

5013 (PB--262512) LONG TERM ENERGY ALTERNATIVES FOR AUTOMOTIVE PROPULSION: SYNTHETIC FUEL VERSUS BATTERY/ELECTRIC SYSTEM. EXECUTIVE SUMMARY. Hughes, E.E.; Walton, B.L.; Newgard, P.M.; Ryan, J.W.; Steele, R.V. (Stanford Research Inst., Menlo Park, Calif. (USA)). Aug 1976. Contract NSF-C915. 17p. (SRI-EGU--4064). NTIS, PC A02/MF A01.
See also PB--262513.
This is the executive summary report; for full report, see PB--262513.

5014 (PB--263592) STANDBY POWER FOR RAILROAD-HIGHWAY GRADE CROSSING WARNING SYSTEMS. FINAL REPORT JUN 1975--JUN 1976. Holmstrom, F.R. (Lowell Univ., Mass. (USA). Research Foundation). Sep 1976. Contract DOT-TSC-589. 26p. NTIS, PC A03/MF A01.
The requirements for standby power at railroad-highway grade crossings, as established by the states, the Association of American Railroads, and the individual railroads, are described. Standard means of satisfying these requirements, using 115 vac primary power and storage batteries for standby, are compared with a number of new techniques, now passing from experimental to operational use, that incorporate solar cells or thermoelectric generators. In addition, other even more innovative techniques are examined. The conclusion of this survey is that for most railroad grade crossing applications, the existing standard techniques (reliance on ac primary power and standby storage batteries) will continue to be the preferred choice. In a number of circumstances in which the provision of ac primary power is very expensive, the combination of solar cells or thermoelectric generators as the primary source, with storage batteries as standby, will be optimal.

5015 (TEC--75-006a) IMPACT OF FUTURE USE OF ELECTRIC CARS IN THE ST. LOUIS AND PHILADELPHIA REGIONS. VOLUME I. EXECUTIVE SUMMARY AND TECHNICAL REPORT. FINAL REPORT. Hamilton, W.F. (General Research Corp., Santa Barbara, Calif. (USA)). Sep 1975. Contract E(04-3)-1119. 109p. Dep. NTIS $5.45.
Impacts of the use of electric cars were projected for the St. Louis and Philadelphia regions in the years 1980, 1990, and 2000. As in a companion study for the Los Angeles region, the electric cars were four-passenger subcompacts using lead-acid and advanced batteries; urban driving ranges of about 55 and 140 miles, respectively, were possible. Los Angeles data indicate such cars could replace some 15 to 75 percent of future urban autos with little sacrifice of urban driving. Adequate raw materials and nighttime recharge power should be available for such use in any single urban region. The electric cars would not save energy overall relative to future internal-combustion subcompact cars, but they could bring about major reductions in petroleum consumption where recharge power is derived from other energy sources, as it is in St. Louis and, to a lesser extent, in Philadelphia. Air quality improvements due to electric car use would be modest in importance, because conventional cars replaced will be cleaner in the future, and non-automotive sources of air pollution will be relatively more important. The electric subcompacts will be 20 to 90 percent more expensive overall than conventional subcompacts until battery development significantly reduces battery depreciation costs.

5016 (TEC--75/006b) IMPACT OF FUTURE USE OF ELECTRIC CARS IN THE ST. LOUIS AND PHILADELPHIA REGIONS. VOLUME II. TASK REPORTS ON ELECTRIC CAR CHARACTERIZATION AND BASELINE PROJECTIONS. FINAL REPORT. Hamilton, W.F.; Eisenhut, J.C.; Sjovold, A.R. (General Research Corp., Santa Barbara, Calif. (USA)). Sep 1975. Contract E(04-3)-1119. 256p. Dep. NTIS $7.60.

Results are presented of a study of the projected effects of electric vehicles on energy use, the environment, and the economy of the two urban areas. Volume I contains an executive summary and a technical report, Volume II contains five task reports on electric car characteristics and baseline projections, and Volume III contains four task reports on impact analyses. The task reports in Volume II are on (1) characterization of battery-electric cars for future use; (2) population projections from 1980 to 2000; (3) transportation projections from 1980 to 2000; (4) electric energy projections from 1980 to 2000; and (5) economic projections from 1980 to 2000. A separate abstract for each section was prepared for ERDA Research Abstracts (ERA) and for Energy Abstracts for Policy Analysis (EAPA). (PMA)

5017 (TEC--75/006b, pp 44p, Task Report 1) CHARACTERIZATION OF BATTERY-ELECTRIC CARS FOR FUTURE USE IN THE ST. LOUIS AND PHILADELPHIA REGIONS. Hamilton, W.F. Sep 1975.

Impact of future use of electric cars in the St. Louis and Philadelphia regions. Volume II. Task reports on electric car characterization and baseline projections. Final report.

Electric cars for future use in St. Louis and Philadelphia are characterized to support subsequent analysis of their potential impacts. Like cars characterized previously for a study of impacts in the Los Angeles area, these cars are low-performance subcompacts weighing from 2200 to 3500 pounds; they can carry up to 4 passengers at freeway speeds, and offer urban driving ranges of 54 to 140 miles. In Philadelphia and St. Louis, where climatic conditions are much less moderate than in Los Angeles, average annual energy consumption of electric cars will be increased up to 10 percent by demands for heating and air conditioning, with consequent range losses which will moderately reduce applicability of the electric cars to daily driving patterns. A conventional subcompact with performance as low as the nearer-term electric car is also considered; its fuel economy, about 27 percent higher than that of the average subcompact, affords an appropriate basis for comparisons of energy consumption of electric and conventional cars.

5018 (TEC--75/006c) IMPACT OF FUTURE USE OF ELECTRIC CARS IN THE ST. LOUIS AND PHILADELPHIA REGIONS. VOLUME III. TASK REPORTS ON IMPACT AND USAGE ANALYSES. FINAL REPORT. Hamilton, W.F.; Eisenhut, J.C.; Fox, H.G.; Martinez, J.R.; Sjovold, A.R.; Tran, K.; Waller, W.E. (General Research Corp., Santa Barbara, Calif. (USA)). Sep 1975. Contract E(04-3)-1119. 338p. Dep. NTIS $10.60.

A study is presented in three volumes, the first containing a comprehensive account of the impacts that electric cars would have on energy use, the environment, and the economy in two urban areas, the remaining two volumes containing task reports documenting the analyses contained in the first volume. The four task reports contained in Volume III cover (1) energy impacts; (2) air quality impacts; (3) resource and environment impacts; and (4) economic impacts. A separate abstract for each of the four task reports was prepared for ERDA Research Abstracts (ERA) and for Energy Abstracts for Policy Analysis (EAPA). (PMA)

5019 (TEC--75/006c, pp 65p., Task Report 9) ECONOMIC IMPACTS OF ELECTRIC CARS IN ST. LOUIS AND PHILADELPHIA. Fox, H.G.; Waller, W.E. Sep 1975.

Impact of future use of electric cars in the St. Louis and Philadelphia regions. Volume III. Task reports on impact and usage analyses. Final report.

A study was made of the economic impacts that could be expected to accrue in the St. Louis and Philadelphia Regions in the event electric cars are substituted for internal-combustion-engine automobiles. Life-cycle costs are developed for average, conventional, and low-performance subcompact internal-combustion-engine automobiles and for electric cars with four different types of batteries of the 1980, 1990, and 2000 time periods. The impacts upon regional economic sectors that would be affected by electric car usage are also developed and are expressed as changes in employment, payrolls, and personal income. Findings from a previous electric car study pertaining to the Los Angeles region are presented for contrast and comparison. 3 figures, 33 tables.

5020 (TEC--75/006c, pp 120p., Task Report 7) AIR QUALITY IMPACTS OF ELECTRIC CARS IN THE ST. LOUIS AND PHILADELPHIA METROPOLITAN REGIONS, 1980--2000. Martinez, J.R.; Tran, K.T. Sep 1975.

Impact of future use of electric cars in the St. Louis and Philadelphia regions. Volume III. Task reports on impact and usage analyses. Final report.

A study was made of the air quality impact of replacing conventional heat engine passenger cars with electric vehicles in the St. Louis and Philadelphia regions for the years 1980, 1990, and 2000. Emissions from both stationary and mobile sources and air quality were estimated for each region with and without electric cars for these three years. In making these estimates, very high levels of electric car use were assumed: replacement of 20, 80, and 100 percent of the conventional passenger cars in 1980, 1990, and 2000, respectively. For both St. Louis and Philadelphia, the results show that use of electric cars would tend to reduce areawide emissions of total hydrocarbons and carbon monoxide. The reductions range from 6 percent in 1980 to 17 percent in 2000 for hydrocarbons, and from 10 percent in 1980 to 18 percent in 2000 for carbon monoxide. The overall effects on particulate emissions were essentially insignificant. Because of the greater demand for electricity induced by electric vehicles, emissions of sulfur oxides tended to increase. For Philadelphia the increases ranged from a maximum of 21 percent in 1990 to a minimum of 3 percent in 2000; for St. Louis, increases in sulfur oxides emissions ranged from 5 percent in 1980 to 14 percent in 1990. In the case of emissions of nitrogen oxides, electric vehicles produced imperceptible effects in Philadelphia. In St. Louis, nitrogen oxides increased 4 percent in 1980 and 9 percent in 1990, but decreased 6 percent in 2000, the increases being due to greater power plant emissions.

5021 (TEC--75/006c, pp 70p., Task Report 6) ENERGY IMPACTS OF ELECTRIC CARS IN ST. LOUIS AND PHILADELPHIA. Sjovold, A.R. Sep 1975.

Impact of future use of electric cars in the St. Louis and Philadelphia regions. Volume III. Task reports on impact and usage analyses. Final report.

Electric cars are projected to use primary energy more efficiently than the average future internal combustion engine (ICE) car, but less efficiently than subcompact ICE cars with which they are more nearly competitive in size and performance. At high electric car usage levels,

electrics would necessarily replace some of the larger, less-efficient ICE cars, and thereby provide some small savings in total primary energy consumption for automotive travel. Projected electric power generation capacity increases will be capable of supplying sufficient off-peak power to recharge a 100 percent electric car population in the year 2000. An approximately 80 percent electric car population in 1990 can be similarly accommodated. Recharge energy for higher levels of electric car use in St. Louis will initially come from coal-fired generation sources in 1980, and shift heavily (67 percent) to nuclear sources by 2000. In Philadelphia, 1980 recharge energy will come solely from oil-fired steam generation plants, and shift heavily (91 percent) to nuclear sources by 2000. These situations compare to that for Los Angeles where 1980 recharge energy comes solely from oil-fired steam, but less than 45 percent will come from nuclear sources in 2000. Consequently, relative savings in regional petroleum consumption are least in Philadelphia and Los Angeles in 1980, but greatest in Philadelphia in 2000. St. Louis offers the greatest relative petroleum savings in 1990, when Philadelphia and Los Angeles are in transition from oil-fired to nuclear generation sources.

5023 (UCID--17098(Vol.1)) BATTERY-FLYWHEEL HYBRID ELECTRIC POWER SYSTEM FOR NEAR-TERM APPLICATION. VOLUME I. SYSTEM DESCRIPTION. Davis, D.; D.; O'Connell, L.G.; Warner, S.E.; Raynard, A.E.; Rowlett, B.H. (California Univ., Livermore (USA). Lawrence Livermore Lab.). 15 Apr 1976. Contract W-7405-Eng-48. 52p. Dep. NTIS $4.50.
A description is given of a hybrid propulsion system design, based upon demonstrated technology, that will substantially improve performance, range, and consumer acceptability of a battery-powered electric vehicle. A newly demonstrated high-energy composite flywheel is coupled to an extremely simple, efficient, electro-mechanical transmission. Lead-acid batteries provide the prime power source. Interactive control of battery and flywheel drive power is provided by a versatile microprocessor-based power control unit. Efficient recovery of vehicle kinetic energy during braking, plus the energy base required to meet all high power transient demands, is provided by the flywheel. Battery demand is stabilized at a low average value resulting in improved battery performance through increases in both cycle life and available energy. Electric vehicle acceleration and range improvements due to the hybrid system described are predicted to be in excess of 80 percent for a vehicle operated in a stop-and-go commuter environment. This increase in performance is accompanied by a decrease in operating cost.

(California Univ., Livermore (USA). Lawrence Livermore Lab.). 12 Nov 1975. Contract W-7405--Eng-48. 18p. (CONF-760112--2). Dep. NTIS $4.50.
From Symposium on United States lithium resources and requirements by the year 2000; Lakewood, Colorado, USA (22 Jan 1976).
The lithium--water--air battery is a new primary battery of such exceptional power and energy that it is a candidate to provide propulsion for electric automobiles of the future. In the electrochemical reaction involved, lithium, oxygen, and $CO_2$ are combined; $Li_2CO_3$ is left as a by-product to be removed from the battery and recycled. A subcompact car weighing 910 kg would transform 7.2 kg of lithium in traveling 320 km at 97 km/hr. At least an equal amount of lithium per car would be unavailable because of the need to recycle the by-product ($Li_2CO_3$). Thus, a minimum of 14.4 kg of lithium per car is required to support a transportation system based upon this power source. Assuming that, in the year 2000, 12 to 16 percent of all vehicles are powered by lithium--water--air batteries, we will need 234,000 to 425,000 metric tons of lithium. This amount is somewhat less than the total known U.S. lithium reserves; but, if the current rate of consumption of lithium for other purposes continues, the supply of lithium will have to be increased. 4 figures, 5 tables (auth)

5027 (UCRL--78066) SUPPLY AND DEMAND OF FUEL SOURCES FOR AUTOMOBILES. Anderson, C.J. (California Univ., Livermore (USA). Lawrence Livermore Lab.). 11 May 1976. Contract W-7405-Eng-48. 11p. (CONF-760342--1). Dep. NTIS $3.50.
From Symposium on alternate fuel resources; Santa Maria, California, USA (25 Mar 1976).
A review is given of the state of domestic oil depletion in context of projected world oil production. An optimized strategy for dealing with this problem is discussed. The strategy is based on the development of low cost synfuels and preparation for the introduction and utilization of these synfuels; i.e., smaller more efficient cars are needed that can utilize available synfuels. In addition, advanced batteries are required before electricity from coal and/or nuclear energy can be effectively utilized in transportation. Finally, the result of an economic analysis that indicates the nature of optimization of the overall strategy is given.

5028 ELECTRIC VEHICLES AND COMPONENTS. Battery Man; 19: No. 7, 22, 25(Jul 1977).
Plans for the manufacture of battery-powered buses in the U.S. are briefly recounted. The bus can reach a maximum speed of 40 mph over a range of 40 miles and easily keep up with center-city traffic. (RWR)

5029 BATTERY/GASOLINE POWER PROBABLE SOLUTION. Battery Man; 19: No. 6, 8, 10(Jun 1977).

This hybrid taxi starts moving with power from eleven 12-volt, 80-ampere lead--acid batteries. When the vehicle reaches a speed at which an i.c. engine operates efficiently, that engine takes over. Thus, the taxi runs on pollution-free batteries in center city. 1 figure. (RWR)

5030 CONTROL SYSTEM FOR BATTERY HYBRID SYSTEM. Shibata, T.; Omae, T. (to Agency of Industrial Science and Tech.). US Patent 4,025,860. 24 May 1977. Priority date 14 Sep 1974, Japan. 8p.

An electric auto power supply has an energy battery which is capable of discharging a current for a comparatively long period of time and high in energy density, and a power battery which is capable of discharging a current of a comparatively high amperage and high in power density. The energy battery and the power battery are connected respectively by way of switching means in parallel relation to each other, so as to be used as a power source of an electromobile. The current discharged from these batteries is controlled, such that a current required for the travelling of the electromobile, which is dependent upon the travelling conditions, is supplied simultaneously from both batteries, or separately from individual batteries, or otherwise only from one battery, while a current is being charged to the other battery, thus extending the possible mileage range of the electromobile.

5031 BATTERY CONTROL SYSTEM FOR BATTERY OPERATED VEHICLES. Finger, E.P.; Marwell, E.M. (to Curtis Instruments, Inc.). US Patent 4,012,681. 15 Mar 1977. Filed date 3 Jan 1975. 6p.

A system is disclosed for monitoring the state of charge of batteries in a fleet of electrically powered vehicles. Each battery has associated with it an integrator module which registers both the depletion and charging of the battery. While the battery is in use in the vehicle, a portion of the current flowing from the battery is sent to the integrator module which registers the current depletion. A readout circuit is also coupled to the integrating device for indicating the condition of the battery while it is in the vehicle. When the battery reaches a predetermined low state of charge, circuitry provided for detecting this condition provides a prewarning signal and on further discharge disables nonessential auxiliary functions in the vehicle, leaving only those systems working which are necessary in order for the driver to be able to return to a battery charging station. At the charging station, the integrator module and the battery are removed from the vehicle and connected at the charging station. During charging, the integrator module is coupled to the charger and a portion of the current leaving the charger passes through the integrator module providing continuous display of the state of charge and information to regulate the charge rate and terminate charge when appropriate ampere hours have been returned to the battery.

5032 ENERGY EXCHANGER FOR AN ELECTRICAL VEHICLE. Lombard, C. (to Regie Nationale des Usines Renault). US Patent 4,010,407. 1 Mar 1977. Priority date 7 Mar 1974, France. 6p.

An energy exchanger for a battery driven vehicle comprising two rotatable electrical machines connected on the same shaft, one of high voltage, the other of low voltage. The electrical machines can each be operated in generator or motor modes and the machines are electrically connected together to the battery on a vehicle via an electrical control circuit such that the machines exchange energy between themselves and the battery, both to drive the vehicle by battery drain and to recharge the battery when the vehicle is decelerating. The battery can be recharged from an external power supply via the machines which then operate in generator mode.

5033 PM OWNERS REPORT: ELECTRIC CARS FINE FOR IN-TOWN COMMUTING, BUT LOTS OF KINKS TO WORK OUT. Lamm, M. Pop. Mech.; 147: No. 3, 90-93(Mar 1977).

A summary is given of electric car owner reports resulting from a nationwide survey based on 465,598 owner-driven miles, and a typical sampling of the comments from the 1,000 electric car owners surveyed are presented. Complaints included poor performance, rough ride, battery replacement costs, poor battery performance in cold weather, and poor ventilation systems. Several types of homebuilt electric vehicles and converted gasoline automobiles are described. (PMA)

5034 WHY WAIT FOR THOSE 'ALWAYS-JUST-ROUND-THE-CORNER' POWER SOURCES. Electr. Veh. Batteries; 63: No. 1, 14-16, 18, 28(Mar 1977).

The article is an extended summary of an address to the Fourth International Electric Vehicle Symposium in Dusseldorf, about energy sources as they relate to electric vehicles. As a standard for comparison, the author took the ESB EV-106 battery, a 6-volt lead-acid type in a polypropylene case, which was designed specifically for use in golf carts; it came closest to fulfilling the needs of electric cars in terms of the ''off-the-shelf hardware''. It would deliver 75 amps continuously for 106 minutes. The one hour rate was more severe but it had a specific energy of 24 Wh per kg. The EV-106 has a cycle life of 400, initial cost of $40/kWh, and a lifetime cost of 10 cents/kWh. The author considers that there is an 85% probability of improving the lead-acid type to give 40 Wh/kg (one-hr rate) a cycle life of 800, initial cost of $45/kWh, and a lifetime cost of 5.6 cents/kWh. The only new type given as much as ''50% probability'' is the nickel-zinc type which promises 60 Wh/kg (one-hr rate), a cycle life of 10 cents/kWh. The zinc-chlorine and the sodium-sulfur types are discussed, but their likelihood of commercialization in the near term is viewed as unlikely.

5035 STORED ENERGY: THE STATE OF THE ART. Battery Man; 19: No. 3, 14-15, 17, 23(Mar 1977).

The concept of energy storage and its necessity because of decling energy sources are outlined. Significant applications for energy storage are electric-powered vehicles and load leveling. These are discussed at the popular level. Prospects for development are expressed. (RWR)

5036 ELECTRICALLY PROPELLED VEHICLE. Christianson, C.C.; Bourke, R.F. (to Gould Inc.). US Patent 4,008,423. 15 Feb 1977. Filed date 11 Feb 1975. 28p.

A propulsion system for an electrical vehicle includes a linear proportional controller operable in a plurality of modes for

operating a dc drive motor via power derived from a propulsion battery. Low speed operation is achieved in an armature control mode wherein the controller is interposed between the propulsion battery and the motor armature while the motor field is coupled directly across the battery. High speeds are attained in a field control mode wherein the controller is interposed between the battery and motor field while the armature is coupled directly across the propulsion battery, thereby eliminating controller losses from the high current armature circuit. Switching between modes is achieved in a manner which minimizes stress on the switching elements. The controller is also adapted to operate in a charger mode wherein unregulated dc power is fed to the controller which functions to regulate the charge provided to the battery. Overall efficiency is increased by use of a dual chopper as a power modulator element. The circuit further includes protection means for controlling or preventing operation under conditions wherein circuit elements might be damaged.

5037 BATTERY VEHICLE FLEET DEMANDS CAREFUL MAINTENANCE. Mason, R.H. Coal Min. Process.; 14: No. 2, 64-67(Feb 1977).

Dependence on battery-powered equipment as the primary coal haulage system necessitates extremely close consideration of a maintenance program that provides optimum performance, extended battery service life, and minimum service cost. This article describes how Kessler Coals Inc. has achieved these maintenance objectives for its fleet of 20 battery vehicles performing a multitude of tasks in addition to coal haulage at its two mines near Whitesville, W.Va. The company's equipment standardization, record keeping, battery maintenance, battery equipment and haulage plan are highlighted.

5038 NOTEWORTHY ACHIEVEMENTS INSTEAD OF SENSATIONS. A REPORT ON THE FOURTH INTERNATIONAL ELECTRIC-VEHICLE SYMPOSIUM. Leonhard, A. (GES Gesellschaft fuer Elektrischen Strassenverkehr m.b.H., Duesseldorf (Germany, F.R.)). Elektrizitaetswirtschaft; 76: No. 1, 6-9(Jan 1977). (In German).

4 figs..

Increasing energy and environmental problems all over the world have led to increasing activity in the field of the electric vehicle for densely populated areas. Now a balance has been drawn up: 600 experts 28 countries met in Duesseldorf for the Fourth international electric-vehicle symposium in 1976. It was arranged by the Unipede, Paris, and the Electric Vehicle Council, New York; the hosts were the Vereinigung Deutscher Elektrizitaetswerke, VDEW. The author gives a short review of the five subject headings dealt with at the Symposium.

5039 PRELIMINARY RESULTS OF TRIALS OF ELECTRICALLY DRIVEN COMMERCIAL VEHICLES. Altendorf, J.P. (Volkswagenwerk A.G., Wolfsburg (Germany, F.R.)); Werner, F. (Daimler-Benz A.G., Stuttgart (Germany, F.R.)); Stracke, K.H. (GES Gesellschaft fuer Elektrischen Strassenverkehr m.b.H., Duesseldorf (Germany, F.R.)). Elektrotech. Z., A; 98: No. 1, 44-50(Jan 1977). (In German).

From 4. international electric vehicle symposium; Duesseldorf, Germany, F.R. (31 Aug - 2 Sep 1976).

5 figs.; 5 tabs.; 4 refs..

In a large test 50 electric transporters (20 VW and 30 DB) together with the accompanying batteries and supply components, were examined from the point of view of their application, with the object of obtaining technical and economic data for further development. In addition to giving the technical design of the vehicles a report is presented on the first results of ordinary everyday use. Except for initial difficulties the vehicles tested gave satisfactory results. But it was found that, in order to confirm the data, experience and statistical data, testing must be carried out on a wider basis.

5040 EXPERIENCE GAINED IN LARGE-SCALE TESTS WITH AN ELECTROBUS. Hagen, H.; Zelinka, R. (Maschinenfabrik Augsburg-Nuernberg (M.A.N.) A.G., Muenchen (Germany, F.R.)). Elektrotech. Z., A; 98: No. 1, 54-60(Jan 1977). (In German).

4 figs.; 4 tabs.; 3 refs..

In an extensive test 20 electric busses are running, half of them having separately excited or series excited motors. A report is given on experience gained in line operation since the end of 1974 with the vehicle, the drive and the battery. Up to the end of 1975 the buses travelled about 825,000 km.

5041 DESIGN OF ELECTRIC COMMERCIAL VEHICLES FOR PRODUCTION. Harding, G.G. Warrendale, PA; Society of Automotive Engineers (1977). 10p. (CONF-770205--58).

From Conference of the SAE International Automotive Engineering Congress and Exposition; Detroit, Michigan, USA (28 Feb 1977).

Development of high performance electric vehicles has been pursued both by simple conversions from standard gasoline vehicles, and by designing a purpose-built vehicle in the form of a taxi incorporating novel features. By combining the lower cost of the former method with the greater efficiency of the latter, the Mark III Lucas electric vehicle has been evolved based on a standard van, providing 1 ton payload capacity. The compact drive package can be fitted to a variety of vehicles at the initial manufacturing stage. Some of the implications for distribution and servicing of quantity-produced electric vehicles are considered.

5042 BATTERY POWERED JEEP AND VAN PERFORMANCE. Dowgiallo, E.J. Jr.; Snellings, I.R.; Blake, W.H. Warrendale, PA; Society of Automotive Engineers (1977). 8p. (CONF-770205--59).

From Conference of the SAE International Automotive Engineering Congress and Exposition; Detroit, Michigan, USA (28 Feb 1977).

A postal jeep and a commercial delivery van were evaluated. Energy data from operation over a test loop and various grades are presented for zero to 15 mph start/stop and 30 mph range runs. Test results are summarized in a graph for prediction of remaining miles based on route terrain. Jeep regenerative braking is discussed. A high power electrical simulator was used to reproduce a mountainous terrain load profile. The simulator was programmed with magnetic tapes made up from actual field recordings. This verified calculations, gave additional battery information and eliminated the need for a mountainous terrain test track.

5043 ACTUAL OPERATING EXPERIENCE OF LEAD-ACID BATTERIES FOR ELECTRIC MILK DELIVERY CARS. Nagano, T.; Maegawa, O.; Kamada, K.; Okazaki, I. Warrendale, PA; Society of Automotive Engineers (1977). 7p. (CONF-770205--60).

From Conference of the SAE International

Automotive Engineering Congress and Exposition; Detroit, Michigan, USA (28 Feb 1977).

An electric milk delivery car, using lead-acid batteries as the power source, has been put into practical use for about four and a half years. From the data obtained during these years, its feasibility was confirmed and some problems in battery handling were made clear to make most effective use of battery.

5044 CLEAN TRANSPORTATION FOR NEW TOWNS: DAIHATSU ELECTRIC VEHICLES IN THE SENBOKU AREA. Honda, S.; Sugitani, M.; Yumoto, I.; Kawakatsu, S. Warrendale, PA; Society of Automotive Engineers (1977). 13p. (CONF-770205--61).

From Conference of the SAE International Automotive Engineering Congress and Exposition; Detroit, Michigan, USA (28 Feb 1977).

Senboku is the name of a new town which is expected to become a model area of clean transportation in Japan. The transportation of peoples and goods would be systematized, and some kinds of electric vehicles would be used as its means with the valuation of non-pollution. Inside of Senboku area, a joint home delivery experimental test, using our newly developed electric cab-van of DAIHATSU ES40V, was finished. The electric propulsion systems, specification and performance of ES40V are discussed as well as its quick-charging system.

5045 HIGH ENERGY NICKEL--ZINC BATTERY FOR ELECTRIC VEHICLES. von Krusenstierna, O.; Reger, M. Warrendale, PA; Society of Automotive Engineers (1977). 9p. (CONF-770205--62).

From Conference of the SAE International Automotive Engineering Congress and Exposition; Detroit, Michigan, USA (28 Feb 1977).

Before far-term high energy electric vehicle batteries are developed, near-term lead-acid and intermediate batteries with energy densities 40 to 80 Wh/kg can meet the energy demands of a large number of commuter and delivery cars. A new nickel-zinc battery is described with energy densities of 50 to 80 Ah/kg depending on the choice of nickel cathodes. A vibration charging technique completely eliminates the zinc dendrite and shape effects, and the nickel cathodes therefore determine the lifetime. A 2 kW battery was deep cycled for 1200 cycles, and traction cells up to 350 Ah were field tested in vehicles.

5046 CHARGE-DISCHARGE BEHAVIOR OF THE C.G.E. CIRCULATING ZINC--AIR VEHICLE BATTERY. Appleby, A.J.; Jacquelin, J.; Pompon, J.P. Warrendale, PA; Society of Automotive Engineers (1977). 10p. (CONF-770205--64).

From Conference of the SAE International Automotive Engineering Congress and Exposition; Detroit, Michigan, USA (28 Feb 1977).

The primary unit of the C.G.E. zinc--air electric vehicle battery has been described in previous publications. It consists of a constant cross-section tubular fuel cell using zinc powder in circulating 12 N KOH solution. All the reaction product (zincate) is maintained in colloidal solution. The system is capable of lifetimes in excess of 1,800 hours and will be of low cost. A discussion is given of the technical aspects of recharge of the system, which, in contrast to the primary cell, is still in the laboratory engineering stage. The limitations of the system are discussed and the overall performance based on different parameters is given. A number of different economic options are examined.

5047 ELECTRIC CAR MAY BE ENERGY SAVER IN 2001. Charlesworth, G. (Open Univ., Milton Keynes, Eng.). Electr. Rev. (London); 199: No. 23, 16-17(10 Dec 1976).

A comparative evaluation is made in terms of primary energy efficiency of internal combustion engine automobiles and electric-powered vehicles for both present and projected future models. The sodium sulfur battery appears to be the front runner among battery candidates and is expected to achieve an energy density of about 550 MJ/ton. It is predicted that electric cars will be on the order of 1.7 times more efficient than combustion powered automobiles in their use of primary energy when moving the average payload. (PMA)

5048 ELECTRICAL CARS: MORE PUSH DOWN UNDER. Whitford, D. (Flinders Univ., South Australia). Electr. Rev. (London); 199: No. 22, 34(3 Dec 1976).

A brief description is given of advances in the design of electric vehicles. Transmissions and control systems were redesigned so that the mechanical requirements of the vehicle road wheels are matched to those of the electric motor, and the electrical requirements of the motor are matched to those of the power source. A pre-selector unit controls the battery voltage in 12 V increments to track the back e.m.f. of the motor as the vehicle speed varies. (PMA)

5049 ELECTRIC VEHICLE DEVELOPMENT. Automot. Eng. (N.Y.); 84: No. 8, 39-43(Aug 1976).

Recent technological advances in electric-powered vehicles are reviewed. Although the electric battery remains the limiting factor, vehicle range can be improved by reducing the peak current drains during acceleration, by semiconductor interrupted control methods, and by regenerative braking. Lead-acid batteries and nickel-cadmium batteries are compared, and hybrid systems with flywheels are considered. Performance test results for an experimental impact passenger car are given. (PMA)

5050 LEAD--OXYGEN DC POWER SUPPLY SYSTEM HAVING A CLOSED LOOP OXYGEN AND WATER SYSTEM. Britz, W.J.; Boshers, W.A.; Kaufmann, J.J. US Patent 3,964,928. 22 Jun 1976. Filed date 27 Dec 1974. 8p.

An electrical power system is described for supplying dc power to electrically motorized vehicles, emergency standby sources, and the like. A lead-oxygen battery cell used as a source of dc power includes a positive charging grid, a conventional negative electrode, a positive discharging electrode, and a teflon membrane member coated with a catalyst contained in an atmosphere of oxygen which is admitted to the cell through the teflon membrane. Oxygen is given off during the charging cycle and is compressed in a storage tank for re-use during each duty cycle providing a closed system wherein contamination is minimized and a long-life cycle can result.

5051 ECONOMY OF OPERATION OF ELECTROCHEMICAL STORAGE DEVICES AS COMPARED TO CONVENTIONAL PEAK POWER GENERATORS. Fischer, W. (Brown, Boveri und Cie A.G., Heidelberg (F.R. Germany). Zentrales Forschungslabor). Elektrotech. Z., A; 97: No. 6, 357-359(Jun 1976). (In German).

2 figs.; 1 tab.; 11 refs..

An uniform calculation method can be used to compute power production costs for different peak power generators. For this purpose the investment and the maintenance costs of power dependent and energy dependent components are

considered separately. The power production costs calculated in this way are compared for different peak power generators (pumped storage, gas turbine with and without compressed air reservoir, steam turbine with steam reservoir, electrochemical batteries). Furthermore, it is shown that the economic valuation is only very slightly dependent on the chosen boundary conditions (e.g. fuel cost, load factor, number of charge discharge cycles per day). Batteries can be installed close to the consumers or at the base power station. The first solution is economically feasible only at discharge periods up to about three hours.

5052 ELECTRIC-POWERED VEHICLE WITH INFINITELY VARIABLE SPEED TRANSMISSION. Dittrich, O. (P.I.V. Antrieb Werner Reimers K.G., Bad Homburg (Germany, F.R.)). Foerdern Heben; 26: No. 7, 725-728(Jun 1976). (In German).
8 figs..
An infinitely variable speed transmission for electric-powered vehicles is described. This type of transmission enables torque conversion in the range 1:4. Thus, the tractive power required for starting and for driving up slopes is provided, while the driving speed on level ground is also increased. The infinitely variable transmission is adjusted at all speeds by a centrifugal speed governor so that the speed and thus also the current of the motor is kept constant. This working point is chosen in the most suitable region with regard to motor efficiency, heating-up and battery capacity.

5053 LOW-CAPACITY BACK-UP POWER SUPPLIES. Revol, R.; Girard, J. (Serv. du Control Tech. des Telecomm., Issy-les-Moulineaux, France). Commutation Electron.; No. 53, 53-56(Apr 1976). (In French).
The design and uses of continuous power supplies in association with various types of telecommunication equipment are discussed. A comparative study of traditional electrochemical sources shows the difficulty of choosing from among commerical products. This study is rounded off with the description of prototypes using integral batteries.

5054 SPOT WELDING USING STORAGE BATTERIES AS AN ENERGY SOURCE. Hamasaki, M.; Matuoka, S. (Gov. Ind. Res. Inst., Shikoku, Japan). Trans. Jpn. Weld. Soc.; 7: No. 1, 3-8(Apr 1976).
The duty cycle of a spot welder is 10% at most; therefore, its continuous capacity is not large. On the other hand, a large-capacity welder is needed, because a large amount of current flows even if for a short time. To solve this problem, the authors tried to develop a new method in which batteries are inserted in the primary circuit of the transformer and a large ac current is obtained in the secondary. In this case, energy is stored in the batteries, over a relatively long time, and this energy is used to perform spot welding. There are two methods for charging the batteries, one in which charging is made off time and the other in which charging is made at night. Spot welding of 1.0, 2.3 and 3.2 mm thick mild steel plates was tried using both charging methods and resulted in successful welds.

5055 OPTIMUM VOLTAGE OF A BATTERY FOR EMERGENCY ILLUMINATION. Outulny, K. Elektrotech. Obz.; 65: No. 3, 160-162(Mar 1976). (In Czech).
The dependence of the investment costs on the choice of the voltage of a battery for emergency illumination is considered. The resultant relations are plotted on a graph, from which it is possible to find the optimum voltage of the battery at which the investment costs are lowest.

5056 CAN LEAD--ACID BATTERIES SHAVE UTILITY PEAKS. Smock, R. Electr. Light Power (Boston); 54: No. 2, 39-40(23 Feb 1976).
Lead-acid battery technology--either state-of-the-art or advanced--has become a serious contender as a utility storage/peaking system. Its benefits could permit more efficient use of existing base-load generating equipment, reducing fuel requirements; they could minimize the need for new peak-power rotating equipment installations, reducing fuel usage and siting concerns; they could be located either in urban or suburban locations, near either the generation or use points. Such installations would be quiet and contained in either new or existing buildings, built or modified at minimal cost; they would require minimal regular maintenance, involve no fuel deliveries, ash disposal, or noxious combustion emissions.

5057 CARDIAC PACEMAKER. Kolenik, S.A. (to Arco Nuclear Co.). German(FRG) Patent 2,524,815/A/. 2 Jan 1976. 19p. (In German).
5 figs..
The construction of a cardiac pacemaker is described which is characterized by particularly small dimensions, small weight and long life duration. The weight is under 100g, the specific weight under 1.7. Mass inertia forces which occur through acceleration and retardation processes, thus remain below the threshold values, above which one would have to reckon with considerable damaging of the surrounding body tissue. The maintaining of small size and slight weight is achieved by using an oscillator on COSMOS basis, where by considerably lower energy consumption, among others the lifetimes of the batteries used - a lithium anode with thionyl chloride electrolyte - is extended to over 5 years. The reliability can be increased by the use of 2 or more batteries. The designed dimension are 20x60x60 $mm^3$.

5058 REVIEW OF CANDIDATE BATTERIES FOR ELECTRIC VEHICLES. Gross, S. (Boeing Aerospace Co., Seattle). Energy Convers.; 15: No. 3/4, 95-112(1976).
Short summaries are presented of most of the battery systems that can be considered for electric vehicles. Many little-known systems are included, some with little or no experimental background, and thus are worth considering for future research. Electric vehicle battery requirements are postulated; on the basis of these requirements the battery candidates are evaluated for their near-term and long-term prospects. 204 references

5059 GEW COLOGNE ARE TESTING NEW ELECTRIC-POWERED VANS FOR URBAN USE. Seidel, S. Staedtetag; No. 5, 272-274(1976). (In German).
3 figs..
Electric-powered vehicles offer a way to alleviate the pressure on the environment from fumes and traffic noise. The use of these vehicles is of particular interest for service enterprises in towns of a larger size. In the FRG, the Gesellschaft fuer elektrischen Strassenverkehr mbH, Duesseldorf (GES), on behalf of the Bund and the Land North Rhine-

Westphalia, is concerned with the problematic points in the development of electric-powered vehicles and their use. At the moment, 30 Mercedes-Benz and 20 VW vans, converted to electric drive, are tested in everyday-routine. The GEW participates in this test program with 2 electro-vans of the type Mercedes-Benz LE 306. Technical data of these vehicles are presented. The aim of the test is to gain experience on the use of electric-powered vehicles and to supply the foundation for an economical mass production. Energy costs for the operation of the vehicles are at present DM 6.30/100 km.

5060 ELECTRIC VEHICLES IN COMMERCIAL TRANSPORT. Garrett, K. Automot. Eng. (London); 1: No. 6, 59-60(1976).

An electric-powered van, the Chrysler (UK) Silent Karrier, is described. The van has a payload of 1780 Kg, is capable of speeds up to 65 Km/h, and is powered by lead-acid batteries. A discussion is given of battery life and weight, vehicle design considerations, and vehicle operation. (PMA)

5061 SMALL ELECTRIC VEHICLE CONSIDERATIONS IN VIEW OF PERFORMANCE AND ENERGY USAGE. Yew, M.C.; McCulloch, D.E. (General Motors Corp., Warren, MI). pp 363-368 of Eleventh intersociety energy conversion engineering conference. Vol. I. New York; American Institute of Chemical Engineers (1976).

From 11. intersociety energy conversion engineering conference; State Line, Nevada, USA (12 Sep 1976).

See CONF-760906--P1.

Present and projected technology is covered on batteries, drive systems, packaging and accessories as it relates to small electric vehicles. Energy usage is compared between an electric vehicle and its internal combustion (IC) engine counterpart. It was concluded that even with Zn/Ni-oxide batteries, the performance and range of electric vehicles would still be rather modest in comparison of current IC engine vehicles. However, should no substantial new oil reserves be discovered, and should no low cost synthetic fuel be produced in quantity due either to capital requirements or technological difficulties, an advanced electric vehicle could become a viable second car in a two-car family.

5062 HIGH POWER DENSITY BIPOLAR LEAD-ACID BATTERY FOR ELECTRIC VEHICLE PROPULSION. Kassekert, D.W.; Isenberg, A.O.; Brown, J.T. (Westinghouse Electric Corp., Pittsburgh). pp 411-417 of Eleventh intersociety energy conversion engineering conference. Vol. I. New York; American Institute of Chemical Engineers (1976).

From 11. intersociety energy conversion engineering conference; State Line, Nevada, USA (12 Sep 1976).

See CONF-760906--P1.

A study was conducted to test the concept of using bipolar lead-acid batteries for electric vehicle propulsion. The goal of an experimental program was the construction and testing of a battery of sufficient size to permit valid extrapolation to larger size batteries. Peak specific power figures of over 200 watts per pound were achieved, and the specific energy of a bipolar battery was 12 to 13 watt hours per pound at the two hour discharge rate. It was considered that such a new battery system could be used as power source for buses, service vehicles, and personal commuter cars, with moderate cruising ranges of approximately 30 miles (48.27 km) but with good acceleration and hill climbing capability. It is hypothesized that the bipolar battery concept will also allow rapid battery recharge to extend the cruising range. A vehicle mission study was conducted using computer programs developed and verified for the various types of vehicles systems on other programs. The urban area of Seattle, Washington, was chosen for the mission studies, and terrain data on actual urban bus and suburban commuter vehicle routes were obtained. These data were combined with the performance data of prototype bipolar lead acid batteries. Vehicle system performance for various missions was computed and is reported.

5063 AMBIENT TEMPERATURE ELECTRIC VEHICLE BATTERIES BASED ON LITHIUM AND TITANIUM DISULFIDE. Gaines, L.H.; Francis, R.W.; Newman, G.H.; Rao, B.M.L. (Exxon Research and Engineering Co., Linden, NJ). pp 418-423 of Eleventh intersociety energy conversion engineering conference. Vol. I. New York; American Institute of Chemical Engineers (1976).

From 11. intersociety energy conversion engineering conference; State Line, Nevada, USA (12 Sep 1976).

See CONF-760906--P1.

Work in the $Li/TiS_2$ battery system was directed toward achieving the performance levels required for electric vehicle propulsion. Advances have been made in several areas: (1) the development of a practical $TiS_2$ cathode structure with high material utilization and excellent rate capability; (2) the development of lithium compatible electrolyte systems with extended cycle life; and (3) the demonstration in realistic laboratory test cells of over 250 deep discharge, high rate cycles. The predicted energy density of the $Li/TiS_2$ system in the electric vehicle application is on the order of 130 Wh/kg. This energy density is high enough to achieve a practical urban vehicle with a range of 160 km (100 miles). Based on the encouraging results obtained, development of the $Li/TiS_2$ system is proceeding with the specific goals of, first, the development of a more stable electrolyte suitable for large battery systems; second, determining optimum designs within the required economic and technical constraints; and, third, demonstrating batteries sized for vehicular use.

5064 ELECTRIC VEHICLE PERFORMANCE WITH ALTERNATE BATTERIES. Sudar, S.; Thomson, W. (Atomic International Div., Canoga Park, CA). pp 424-429 of Eleventh intersociety energy conversion engineering conference. Vol. I. New York; American Institute of Chemical Engineers (1976).

From 11. intersociety energy conversion engineering conference; State Line, Nevada, USA (12 Sep 1976).

See CONF-760906--P1.

A preliminary study was made of the performance of electric vehicles in support of a research and development program on advanced electric storage batteries. The electric vehicles studied were a 1134 kg (2500 lb) commuter car and a 3175 kg (7000 lb) van. Each was considered as an all-electric vehicle and also as a hybrid. Performance data calculated were range, acceleration, gradeability, and top speed. Advanced batteries having energy densities from 1.19 to 5.95 x $10^5$ J/kg (15 to 75 Wh/lb) were considered. Two such advanced batteries were considered; one was a lithium-iron sulfide design while the other was a zinc-nickel oxide design that features a rotating shutter.

5065 COMPUTER STUDY OF BATTERY ENERGY STORAGE AND POWER CONVERSION EQUIPMENT OPERATION. Beck, J.W. (Electric Power Research Inst., Palo Alto, CA); Carroll, D.P.; Gareis, G.E.; Krause, P.C.; Ong, C.M. IEEE Trans. Power Appar. Syst.; PAS-95: No. 4, 1064-1072(1976). From IEEE PES winter meeting and Tesla symposium; New York, NY, USA (25 Jan 1976).

Results are presented and discussed from a computer simulation of a battery energy storage/converter system connected to a representative utility substation. Switching of load, voltage waveforms, voltage levels, fault conditions, and power flow reversal are investigated for both line- and forced-commutated converters in the application. The interactions among the battery, the converter and its controls, and the substation are discussed. The investigations pointed out areas in which further consideration must be given to component selection for the battery/utility interface equipment, for example, dc reactor sizing, harmonic filtering, power factor control, thyristor firing control, and dc current interruption. 17 figures.

5066 PURPOSE-BUILT ELECTRIC TAXI. Warner, P. (David Ogle, Ltd, Letchworcs, Eng.). SAE Prepr.; No. 760124, 1-5(1976).

A prototype electric taxi was designed that is 3 ft shorter than the traditional London taxi, and the cab only 1 1/2 in. wider. Five of these vehicles would fit in the parking space required for four London taxis. Testing to date indicates that the purpose built electric taxi will have fuel costs per mile equivalent to 1/5 of the cost of a diesel taxi.

5067 COPPER ELECTRIC TOWN CAR. Pocobello, M.; Armstrong, D. SAE Prepr.; No. 760071, 1-10(1976).

The Copper Electric is a two-passenger prototype powered by eighteen lead--acid, six-volt batteries and driven by a separately-excited motor driving through a fixed-ratio transfer case and a spiral bevel gear set to the front wheels via independent axle shafts. The transfer case incorporates a toothed belt drive capable of handling maximum motor torque. The overall drive ratio is 4.95:1, resulting in an N/V ratio of 71.3. Range and performance targets are a maximum speed of 55 mph, acceleration to 30 mph in 12 s, range at 40 mph--120 miles and range in simulated city driving--74 miles.

5068 FUTURE ROLE OF ELECTRIC LAND TRANSPORTATION IN THE UNITED STATES. Hagey, G.; Hamilton, W. SAE Prepr.; No. 760118, 1-7(1976).

Electrification of land transportation, primarily automobiles, will be important to conserve petroleum before the year 2000. Even with existing battery technology, electric cars would be adequate for significant urban use as second cars, and with advanced batteries they could do much more, bringing about large petroleum savings in cities relying on coal or nuclear electric power, plus modest improvement of air quality. Overall costs of auto operation would be increased, however, and availability of some battery materials is limited.

5069 STUDY OF THE ENERGY UTILIZATION OF GASOLINE AND BATTERY-ELECTRIC POWERED SPECIAL PURPOSE VEHICLES. Sheridan, D.C.; Bush, J.J.; Kuziak, W.R. Jr. SAE Prepr.; No. 76011, 1-17(1976).

The guidelines of this study restricted it to three special-purpose cars that are smaller and have lower performance than conventional sub-compact cars and a delivery van. The most important guideline of the study required the performance levels and load carrying capacity of the gasoline and electric-powered vehicles to be the same. The results of the study indicate that a lead--acid-battery-powered, two-passenger shopper vehicle with a 40 km range consumed about 90% more petroleum per kilometer of driving than does its spark ignition engine powered counterpart. With coal as the prime source, they consume about the same amount of energy. Increases in desired range, performance and vehicle size beyond that of the shopper increase the electric vehicle energy consumption with respect to the gasoline-powered version. 17 refs.

5070 TROLLEY-WIRE-OPERATED UNDERGROUND LOCOMOTIVE WITH MANUAL AND REMOTE CONTROL, INCLUDING FULLY AUTOMATIC CONTROL AND SPEED REGULATION. Mittmann, U. AEG-Telefunken Prog.; No. 4, 128-132(1976).

AEG-TELEFUNKEN has supplied 16 trolley-wire-operated locomotives, Type HF 3 D, with manual and remote control, for a coal mine in the Ruhr District. The locomotives are equipped with an electronic controller. Since they were put into service in 1975, they have been meeting the targeted transportation objectives for a fully automatic underground haulage system.

5071 POST OFFICE TRIES LUCAS ELECTRICS. Baker, A. Automot. Eng. (London); 1: No. 1, 54(Oct 1975).

Ten Bedford vans, with Lucas electric traction equipment in place of the standard engine/gearbox group, are being put into service by the Post Office (United Kingdom). The vehicles, based on the CF one-ton van, are of two types--one for mail collection and delivery and the other for the telecommunications engineering service. Initially, the former will be operating in central London, to gain experience in dense traffic, and the latter, in the Stevenage area, where more rural conditions prevail. Polypropylene-case lead--acid SLI (Starting--Lighting--Ignition) batteries are used. The traction motors are rated at 37.2 kW. The maximum level-road speed is around 89 km/h and the acceleration from rest to 48 km/h is quite brisk, taking about 10 seconds. A regenerative braking system is fitted as a means of extending the range and increasing the life of the wheel brakes. An interesting feature of the system is that the regeneration is in two stages. The first stage comes in on over-run, when the driver lifts completely off the accelerator, and gives an equivalent retardation to engine braking. Light pressure on the brake pedal gives the second stage of regenerative braking, and heavier pressure brings in the wheel brakes. The first-stage regeneration cuts out automatically below 6.5 km/h to allow the vehicle to coast, the analogy here being with declutching.

5072 NEW GENERATION OF COMBINATION LOCOMOTIVES FOR UNDERGROUND MINING. Blutreich, J.N. (Ashland Div., Natl. Mine Service Co.). Min. Congr. J.; 61: No. 8, 44-7(Aug 1975).

Description of locomotives using overhead power or batteries as desired. MINING;ELECTRIC-POWERED VEHICLES;LEAD-ACID BATTERIES;USES; BATTERY CHARGING

5073 SELECTION OF THE PARAMETERS OF AN ACCUMULATOR POWER PLANT FOR AN ELECTROMOBILE. Listvinskii, M.S.; Kurzukov, N.I.; Pole, V.G.; Tyutryumov, O.S. Avtomob. Prom-st.; No. 8, 15-16(Aug 1975). (In Russian).

The selection of optimum variants of the battery power plant for an electric-powered automobile of 0.5 to 4 ton carrying capacity on the basis of modern domestic industrial batteries was studied. The basic criteria for rating the properties of the power plant were the weight ratio G/sub b//G/sub e/, where G/sub b/ = weight of the traction battery and G/sub e/ = total weight of the automobile, and the range L of the vehicle without additional battery charging. The study comprised experiments and calculations of power plant variants based on modern alkaline and acid batteries. The alkaline batteries were found to possess the highest energetic parameters, i.e., traction battery weight 24.7 to 37.4 percent of total weight, fuel distance 60 to 80 km on 1000 m distance at 60 km/hr speed, load capacity depending on the weight of hood, chassis and electric equipment 500 to 800 kg. Recommended variants of battery power plants for electric-powered automobiles of up to one ton capacity and designed for 40 km/hr maximum speed are tabulated.

5074 PROGRESS ON VOLTMOBILES. Callahan, J.M. Automot. Ind.; 153: No. 2, 26-27(15 Jul 1975).

Two new electric passenger automobiles, based on quite different approaches, are described. The Copper Electric Town Car, developed for the Copper Development Assn, is a two-passenger hatchback weighing 2952 lb, including 1206 lb of batteries. The Transformer I is a four-passenger ''luxury'' car based on the Chevrolet Chevelle, weighing 5850 lb, including 2340 lb of batteries. The smaller car has a maximum speed of 55 mph, acceleration from 0 to 30 mph in 11.8 s; normal charging time is 8 h. Town Car has a maximum range of 120 mi at 40 mph; its stop-and-go range is 75 mi. Eighteen 6-V lead--acid batteries are mounted on a tray which slides in from the rear of the car, occupying the central tunnel. Transformer I, developed by Electric Fuel Propulsion Corp., is powered by an 18-V lead--cobalt battery. It has a range of 70 mi at 40 mph, 50 mi with two stops per mile. Maximum speed is 60 mph; acceleration time from 0 to 30 mph is 12 s. Normal charging time is eight hours with 220 V, although 110 V can be used. The latter would take 48 hours for a full charge. An external fast charger could give the car an 80% charge in 45 to 60 minutes. A 10-minute charge would allow the car to travel 15 mi. A novel ''accessory'' for the larger vehicle is the availability of a mobile gasoline-powered 37.5-kV brushless generating set mounted on an 1860-lb trailer. This setup, although inefficient from an energy standpoint, enables the vehicle to operate where power-line charging facilities are unavailable.

5075 BATTERY CARS TODAY: SOME THEORY AND SOME PRACTICE. Prigmore, B.J. (Imperial Coll. of Science and Tech., London). Electron. Power; 21: No. 11, 671-673(12 Jun 1975).

This article reviews the current position of cars powered by conventional lead--acid batteries.

5076 BATTERIES POWER URBAN AUTOMS. Cairns, E.J.; McBreen, J. (Research Lab., Warren, MI). Ind. Res.; 17: No. 6, 56-60(Jun 1975).

R and D achievements are reviewed, and high temperature cells using lithium are evaluated. Equations, tables, and graphs illustrate data.

5077 ENERGY SOURCES FOR MARINE TECHNOLOGY. Fischer, W. (Brown, Boveri und Cie AG, Heidelberg). VDI (Ver. Dtsch. Ing.) Z.; 117: No. 9, 415-421(May 1975). (In German).

Energy sources for unmanned marine stations and manned underwater stations must satisfy numerous requirements. If one wants to judge which energy source should be used in a definite case of application, then it is necessary to evaluate its properties according to given criteria. Thereby, the mass related to the energy content of an energy source and the costs related to the energy, which come up at the application of an energy supply system, may serve as measures. These costs due to the supply system do not comprise only the prime costs but also a share from the operating costs.

5078 BATTERY CHARGING AND REPLACEMENT STATION FOR MULTICELL ACCUMULATORS OF BATTERY-POWERED VEHICLES. Hagen, H.; Laforce, E. (to Maschinenfabrik Augsburg-Nuernberg (M.A.N.) AG). German(FRG) Patent 2,118,847/C/. 30 Apr 1975. 7p. (In German).

3 figs..

The existing multicell accumulator replacement systems for battery-powered vehicles have the disadvantage that the vehicle must be positioned very accurately between the battery chambers of the replacement station. With non-trackbound vehicles, this is met with considerable difficulties. The present invention claims a charging and replacement station for the multicell accumulators of battery-powered vehicles which allows a fast battery replacement also for non-trackbound vehicles. The multicell accumulators are removed from the vehicle by means of a refuelling cart which can be driven into an opening between two parts of the replacement station designed as battery reception chambers. The technical details of the refuelling cart are described.

5079 MULTICELLED BATTERIES FOR BATTERY-POWERED VEHICLES. Salamon, K. (to Gesellschaft fuer Elektrischen Strassenverker m.b.H.). GE 2,350,353. 24 Apr 1975. Filed date 08 Oct 1973. 11p.

5080 LUCAS MIDI-BUS TO BE EVALUATED IN MANCHESTER. Energy Dig. (London) ; 4: No. 2, 39(Apr 1975).

A 34-passenger Midi-Bus, fitted with a traction motor, sophisticated control gear, and lightweight lead--acid batteries developed by the Lucas Group, traveled from Birmingham to Manchester. The bus covered the 86 miles from city center to city center via the M6 motorway at an average speed of nearly 30 mph, completing the journey in just over three hours. Total distance covered from depot to depot was 92 miles, and even then the batteries were not fully discharged. The vehicle is powered by a 360-volt dc motor which develops 130 bhp. This is mounted in the center of the chassis, driving the conventional back axle through a propeller shaft, the motor being controlled by a Lucas-designed SCR ''chopper'' controller. The controller operates by connecting and disconnecting the power source to the motor through a solid-state (SCR) switch so rapidly--a few hundred times a second--that the motor sees only the average of the

resultant ''chopped'' voltage. By changing the ratio of the open to closed times of the switch, the average voltage across the motor is varied. Additional solid-state circuitry automatically adjusts the power to the motor so that it is appropriate to the accelerator pedal position set by the driver and the vehicle speed. To extend the operating range of the bus, and minimize wear and tear on the mechanical brakes, a regenerative braking system is fitted. The Lucas vehicle can smoothly accelerate a full complement of passengers from 0 to 30 mph in under 15 seconds, while a top speed of more than 45 mph will ensure that it can quietly hold its own under the worst possible traffic conditions.

From Annual American power conference; Chicago, Illinois, USA (21 Apr 1975).
See CONF-750469--.
This paper covers the storage of electrical energy in large-scale electrochemical storage batteries, and the potential effects on electric utility economics and application practices. Significant operating and economic advantages are obtainable through storage. Electric utilities have already experienced such advantages with pumped-storage hydroinstallations. These advantages result simply from shifting the daily peak loads to coal and nuclear base plants during the off-peak hours and, therefore, displacing the need for peak generation that uses higher cost fuels.

5087 STATUS OF ELECTRIC VEHICLE DEVELOPMENT AROUND THE WORLD. Campbell, E.A. (Electric Vehicle Council, New York). Proc. Am. Power Conf.; 37: 1194-1202(1975).
From Annual American power conference; Chicago, Illinois, USA (21 Apr 1975).
See CONF-750469--.
The only energy-storage unit that can at present be used in electrically-driven road vehicles is the lead-acid storage battery, since all other electrochemical storage units are either too costly or have not yet reached an adequate state of development. There is not likely to be a dramatic breakthrough in this area for ten years. Due to the low energy density of lead-acid batteries, vehicles so powered have only a limited range. There are, however, missions which can be accomplished by such vehicles, including buses, multistop short-range urban delivery vans, and small personal cars meeting a majority of commuter and local travel requirements. Hoped-for independence from high-cost, imported petroleum mandates that the development of electric road vehicles and high-energy batteries to power them be pursued vigorously. The development of off-road applications using lead-acid battery power has up to now been considerably more fruitful than on-road applications and can be expected to reach even higher saturation in the years to come. (auth, Summary)

5089 PLUG FOR DETROIT. THE RESURGENCE OF THE ELECTRIC VEHICLE. Energy Dialog; No. 4, vp(1975).
A dialogue is presented on the status of electric-powered automobiles. Among the topics discussed are: (1) consumer desire for high-powered vehicles; (2) electric batteries as an energy source; and (3) the identification of factions for and against the full-scale development of electric vehicles. Participants in the discussion are the head of the Electric

Vehicle Council, the manager of San Francisco's BART, the research director for General Motors Corp., the originator of Mt. Washington's annual EV race, and a major manufacturer of electric batteries. (PMA)

5090 QUIET, EFFICIENT CONTROLLER FOR ELECTRIC VEHICLES. Armstrong, D.; Pocobello, M. (Triad Serv., Inc). SAE Prepr.; No. 750470, 1-7(1975).
This paper presents an alternative to conventional resistive, SCR, or battery switching controllers for wound-field D.C. motors. A system has been built and tested which keeps battery current (as selected by the driver) constant throughout any maneuver without the problems associated with switching controllers. A system description is included along with test results. Comparisons are made with battery scanning, SCR, and other control types which show this system of combined field control, voltage switching, and armature current control to be more efficient.

5101 PEAK LOAD LEVELLING SYSTEM. Frank, K.; Thorborg, K. (to Allmanna Svenska Elektriska Aktiebolaget). US Patent 3,932,799. 16 Oct 1974. Priority date 23 Oct 1973, Sweden. vp.
A load-leveling system for connection to an

alternating current network is described. The system comprises an electrochemical direct current energy supply, a line-commutated controllable electronic power convertor having dc terminals connected to the energy supply and ac terminals for connection to the ac network, and continuously controllable reactive power generating means connected to the ac terminals. The reactive power generating means comprise a fixed capacitor battery and a line-commutated reactive power convertor. The convertor comprises two line-commutated thyristor convertor connections, each connection having dc and ac terminals. The convertor connections are series connected through their dc terminals and have transformer means connecting their ac terminals. The first convertor connection has a higher rated voltage than the second. Means for setting the control angle of the first convertor connection to either one of two substantially fixed values, corresponding to full direct voltage in rectifying and in inverting operation and means for controlling the second convertor connection with a variable control angle are also included.

5102 IRON--AIR BATTERY BUS COULD GO FURTHER. Electr. Rev. (London); 185: No. 13, 440(11 Oct 1974).
Iron-air battery systems with outputs of ''several hundred kW'' could be engineered immediately, states a report prepared for the Government Transport and Road Research Laboratory as a result of a 12 month study by the Electrical Research Association and City University's Electrochemical Technology Unit. (Fuel Abstr)

5103 NEW ASSAULT ON BATTERY VEHICLES. Electr. Rev. (London); 195: No. 12, 412-413(4 Oct 1974).
Discusses whether any of the newer and potentially more powerful systems, such as fuel cells, metal-air, nickel-zinc or sodium sulfur, will replace the tried and trusted, but weighty, lead-acid battery in commercial service. (Fuel Abstr.)

5109 ACCUMULATORS FOR ELECTRIC ROAD VEHICLES. Fischer, W. (BBC, AG, Heidelburg, Germany). Elektrizitaetsverwertung; 49: No. 7-8, 296-303(Jul-Aug 1974).
ELECTRIC-POWERED VEHICLES;LEAD-ACID BATTERIES;ELECTRIC BATTERIES;AUTOMOBILES;ENERGY; PLANNING

5110 SYSTEMATIC BATTERY CONCEPTION FOR ELECTRIC VEHICLES. D'Arey, R.L. (Varta Batteries AG, Hannover, Germany). Elektrizitaetsverwertung; 49: No. 7-8, 312-15(Jul-Aug 1974).
ELECTRIC-POWERED VEHICLES;ELECTRIC BATTERIES; MARKET;ECONOMICS;PLANNING;USES

5111 FOCUS ON STANDBY SUPPLIES. Electr. Times; No. 4287, 11(27 Jun 1974).
Standby plant makers foresee technical advance across a broad front. Static switching and sealed, maintenance-free cells are promoting battery acceptability; better power/weight ratios and new thinking in control will advance engined units. Technical implications are considered. (Fuel Abstr.)

5112 NO ASSAULT ON LEAD--ACID BATTERY UNTIL 1980. Electr. Rev. (London); 194: No. 22, 696(14 Jun 1974).
The Chloride Co views are given on time-scale card areas of breakthrough for introduction of lead--acid batteries for vehicles and ''exotic'' batteries.

5113 HOW FORD EVALUATES THREE TYPES OF ELECTRIC VEHICLES. Automot. Eng. (N.Y.); 82: No. 6, 37-41, 75, 77(Jun 1974).
ELECTRIC-POWERED VEHICLES;AUTOMOBILES; ELECTRIC BATTERIES;PERFORMANCE TESTING;RANGE; VELOCITY;COST;ACCELERATION

5114 LITHIUM POWER MAY PUT ELECTRIC CAR IN YOUR FUTURE. Iron Age; 213: No. 19, 64-6(13 May 1974).
3000-lb vehicle, 60 to 70 mph, lifetime of 3 to 5 years. AUTOMOBILES;ELECTRIC-POWERED VEHICLES;LITHIUM-SULFUR BATTERIES;OFF-PEAK ENERGY STORAGE;PERFORMANCE

5115 WHAT'S AVAILABLE. Cusano, A.J. (Dual-Lite Co., Newton, CT). Light. Des. Appl.; 4:

No. 5, 6-8(May 1974).
The trend is away from the tackle-box look. Battery-operated systems, particularly inverter units, offer the installation owner new options. A typical emergency system consists of a fully automatic, solid-state charger, lead or nickel--cadmium battery, a dc-to-ac static inverter, and a transfer relay. The standard equipment normally powered by utility output immediately switches over to the emergency ac system when normal ac power fails.

5116 PACKING, SORTING, AND PREPARING FOR SHIPMENT BY MEANS OF CONTINUOUS CONVEYORS. Salzer, J. (Salzer, Offenbach, Ger.). Foerdern Heben; 24: No. 7, 676-680(May 1974). (In German).
Based on the consideration that should lead to a development of the right concept of material flow, this paper discusses guidelines for planned materials-flow systems. As a case-in-point, planning and operation of a central warehouse in a plant manufacturing automobile parts and accessories are described. The system uses conveyors (horizontal and vertical), automatic paletting, and storage battery vehicles.

5117 ANOTHER CHANCE FOR ELECTRICS. Gottesman, C.A.; Pond, J.B. Automot. Ind.; 150: No. 8, 29-34(15 Apr 1974).

5150 NEW PROPULSION SYSTEMS FOR VEHICLES IN URBAN TRAFFIC. Sale, B.; Breelle, Y. Rev. Inst. Fr. Pet.; 29: No. 6, 901-915(1974). (In French).
Alternate propulsion systems for reducing exhaust emissions from motor vehicles in urban traffic are reviewed. Both thermomechanical and electrochemical propulsion systems are considered. Developments in thermomechanical propulsion systems reviewed include: catalytic converters, stratified charge engines, diesel engines, external combustion engines, stirling cycle engines, and gas turbines. Electrochemical propulsion systems discussed include: the sodium-sulfur storage battery, the zinc-air fuel cell, and the hydrogen-air fuel cell. The last of these is seen as playing a prominent future role in motor vehicle propulsion since hydrogen is anticipated to be an important chemical vector for nuclear energy production and electricity storage.

5151 CASE FOR ELECTRIC AND FUEL-CELL POWERED VEHICLES. Bockris, J.M. (Flinders Univ., Bedford Park, Australia). Ambio; 3: No. 1, 15-23(1974).
A hybrid fuel cell-battery system for powering vehicles is advocated. Research areas for development of such systems are discussed.

5152 ELECTRIC CARS: PRESENT STATE OF DEVELOPMENT AND FUTURE PROSPECTS. Dunn, P.D. (Univ. of Reading, Eng.). pp 142-149 of Vehicle engines fuel consumption and air pollution. Volume 3. Janota, M.S. (ed.). Stevenage, Eng.; Peter Peregrinus Ltd. (1974).
From Vehicle engines fuel consumption and air pollution; London, UK (Apr 1973).
See CONF-730499--.
A present and future technology assessment is given of electric cars, covering energy storage (electric batteries and fuel cells), electric motors, control systems, battery charging, and hybrid systems. The following conclusions are drawn: (1) only electric cars really offer hope as a satisfactory long-term solution in technical, economic and health terms; (2) a great deal of development is required before electric cars can achieve technical and economic acceptability; and (3) the rate of development could be accelerated partly by legislation and partly by increasing research and development funds, particularly into the development of electrochemical cells, both storage batteries and fuel cells.

5153 ELECTRIC CARS: ENERGY STORAGE AND CONVERSION. Dunn, P.D. (Univ. of Reading, Eng.). pp 128-141 of Vehicle engines fuel consumption and air pollution. Volume 3. Janota, M.S. (ed.). Stevenage, Eng.; Peter Peregrinus Ltd. (1974).
From Vehicle engines fuel consumption and air pollution; London, UK (Apr 1973).
See CONF-730499--.
The current position and future possible development of electrochemical converters for electric-powered vehicles are considered. Topics discussed include primary energy sources, energy storage, electrochemical conversion, electric batteries, and fuel cells. Factors considered for electrochemical convertors are size, cost, safety, cycle life, recharging time, range, and performance. (PMA)

5154 CRITICAL CONSIDERATIONS OF INTEGRATING ELECTRICITY DRIVEN COMMERCIAL VEHICLES WITH CITY TRAFFIC. Albrecht, H.; von Scarpatetti, D. (Daimler-Benz, Stuttgart). Elektrotech. Z., A; 94: No. 11, 661-665(Nov 1973). (In German).
The air pollution in areas of high population density could demand new developments in goods and personal transport in the future. Electrically powered vehicles with different kinds of energy supply--depending on the kind of transport required--can be achieved from the technical point of view, as examples produced by Daimler-Benz AG for specific operating conditions show. The extra cost compared with Diesel engine-powered vehicles, mainly caused by the expensive lead--acid batteries with their low energy density, is the decisive argument against the general use of electrically powered vehicles.

5155 ELECTRIC PROPULSION FOR ROAD VEHICLES, STATE OF THE ART AND PRESENT PROBLEMS. Bader, C.; Plust, H.G. (Dtsch Automobilges, Hanover). Elektrotech. Z., A; 94: No. 11, 637-645(Nov 1973). (In German).
An analysis of various all-electric and

electro-hybrid drive versions has revealed that at the moment the only possible source of energy for electro-powered vehicles is the lead--acid battery, but that in the future also alkaline and high-temperature accumulators might gain increasing importance since using these units might mean a reduction in operating costs of the vehicles thus equipped. As a result, optimization of electrical propulsion systems for road vehicles at the moment means minimizing the weight of the energy storage unit that is necessary to meet the specified transport requirements and to make the fullest possible use of the limited amount of energy available. Future developments in the field of electrical drive units should aim at cutting down the considerable cost of operation in the starting range due to the power electronic system in accordance with the comparatively short periods of operation within this range.

5156 NEW FORMS OF PROPULSION, FOR AUTOMOTIVE VEHICLES. Lachnitt, J. Equip. Ind. Achats and Entretien (France); 22: No. 247, 115-17(Oct 1973). (In French).

5178 DEVELOPMENT OF ELECTRIC AUTOMOBILES. Strifler, P. Automobiltech. Z.; 74: No. 6, 244-248(Jun 1972). (In German).
The status of the development of electrically driven automobiles is presented by summarizing the content of 38 reports submitted at a seminar held in Brussels. Problems facing current car designers are outlined. In spite of disadvantages of lead storage batteries, there are good prospects for electric cars for use within cities.

5206 REQUIREMENTS OF AN ELECTROCHEMICAL POWER SOURCE FOR A DUAL-MODE URBAN TRANSPORTATION SYSTEM. Beck, T.R. (Boeing Scientific Research Labs., Seattle). pp 379-383 of From electrocatalysis to fuel cells. Sandstede, G. (ed.). Seattle; University of Washington Press (1972).
A great deal of discussion has been carried on about replacing the internal combustion engine in automobiles by batteries or fuel cells, and there are certainly some promising electrochemical systems under development. A possible alternative to the present automobile, less demanding on an electrochemical power source is described. This is a dual-mode system utilizing a small vehicle operated on a secondary electrochemical power source on city streets and on electric power supplied through a trolley while on an electrified rail system. Power and energy requirements for the dual-mode vehicle are within the present state of the art of lead-acid batteries, although a higher energy density electrochemical system would be desirable.

5208 ALTERNATIVES TO THE INTERNAL COMBUSTION ENGINE: IMPACTS ON ENVIRONMENTAL QUALITY.

Ayres, R.U.; McKenna, R.P. Baltimore; Johns Hopkins University Press (1972). 337p. $12.00.

A comprehensive analysis is given of existing and potential power plants for automotive vehicles. While technological and economic features of these devices are treated in detail, the whole discussion revolves around the environmental effects of the alternatives considered. The text gathers together in one place what is known about the technology and economics of reducing automobile emissions, as well as presenting some original analyses. It should help the reader assess what is technologically feasible, and provide a basis for consideration of policies for reducing automotive externalities. Some parts of the book are moderately technical, but a special effort is made to present material clearly. Some knowledge of basic physics and chemistry plus a feeling for how mechanical things work should carry the reader comfortably through the bulk of the book. In Part I (chapters 1 and 2) the authors establish the context of the study and describe the internal combustion engine as a source of environmental problems. In Part II they examine energy conversion and energy storage and analyze the various technological options, including further modification of the internal combustion engine. These subjects, which are examined in considerable detail in chapters 3-12, are summarized in chapter 13 (primarily for readers who are not interested in so much detail), and the various options are compared in terms of performance and cost in chapter 14. In Part III (chapter 15) the authors conclude their study with a brief comment on some policy aspects of controlling automotive externalities.

5209 STATE OF DEVELOPMENT OF THE ELECTRIC STREET VEHICLE AND ITS FUTURE TRENDS. Oehms, K.J. (RWE-Hauptverwaltung, Essen). Elektrizitaetswirtschaft; 70: No. 17, 511-517(16 Aug 1971). (In German).

The important electric drive components for the electric road vehicle, the dc motor, thyristor control, the lead--acid accumulator and battery-changing technique are found to be satisfactory in test vehicles for use in West German towns. The impact of the electrically driven vehicles on air pollution is discussed.

5212 CLEAN AIR CAR RACE. THE WORCESTER GREMLIN KVA-SST. Beardsley, C.W. IEEE Trans. Veh. Technol.; VT-20: No. 2, 18-23(May 1971).

On August 24, 1970, 42 low-emission vehicles left Massachusetts Institute of Technology on the first leg of the Clean Air Race. In the electric-hybrid category, the Worcester Polytechnic Institute entry used an internal-combustion engine running on unleaded gas in combination with a battery-powered drive system. In city driving, it uses batteries to drive its electric motor. In the country, an internal-combustion engine running on unleaded gas drives an alternator to provide power to drive the motor as well as to recharge the batteries.

5224 DUAL BATTERY ELECTRIC POWERPLANT. Hietbrink, E.H.; Winebrener, G.L.; Witherspoon, R.R. New York; Society of Automotive Engineers (1971). 8p.
General Motors has powered an Opel Kadett with a set of mechanically rechargeable zinc--air batteries, which have sufficient power density to have potential as a power source for low performance vehicles. A lead--acid battery system is used as the augmenting power source. Control is provided by a frequency and pulse width modulation system. Testing developed two problems that preclude economical production of this propulsion system--excessive electrolyte evaporation and the difficulty of keeping batteries at operating temperature (150°F) while maintaining adequate air distribution to prevent cathode oxygen starvation.

5225 SECONDARY ALKALI METAL--CHALCOGEN BATTEREIS IN URBAN TRANSPORTATION. Ng, D.Y.C.; Appleby, A.J. (Inst. of Gas Tech., Chicago). pp 265-282 of Seventh international symposium on power sources. III. Collins, D.H. (ed.). Newcastle upon Tyne, Eng.; Oriel Press (1971).
The possibility that a Li/S battery system could meet the power needs of an urban bus are considered. (RWR)

5226 NO-BREAK POWER SUPPLY FOR RADIO LINK STATIONS IN VENEZUELA. Ungeheuer, E. AEG-Telefunken Prog.; No. 4, 122-125(1971).
The construction and method of operation of no-break power supply equipment for radio link stations in Venezuela are described. The power supply equipment works either from the public network with a standby generating set or with two Diesel sets in continuous duty. Two self-regulating chargers feed two lead--acid batteries, to which the radio link equipment is connected. The main components of the installations are described in detail.

5227 UNINTERRUPTED POWER SUPPLY FOR RADIO RELAY STATIONS IN VENEZUELA. Ungeheuer, E. Tech. Mitt. AEG-Telefunken; 61: No. 3, 171-174(1971). (In German).
The power supply is either from the public network with a standby station, or by two Diesel power plants in continuous operation. Two self-regulating charging devices are used for supplying two lead storage batteries. Details are given on the main components of the power supply installations.

5229 NEMO PROVIDES NEW LOOK AT OCEAN DEPTHS. Undersea Technol.; 11: No. 6, 28-29(Jun 1970).
The Navy's new NEMO acrylic submersible made of Rohm and Haas Plexiglas G is $2^1/_2$ in. thick and bonded with a special acrylic adhesive. The 66-in.-diam sphere, constructed from 12 identical curved pentagons, was successfully tested to a depth of 500 ft. Life support for the NEMO is an oxygen bleed system and a baralyme absorbent system capable of sustaining two men for 8 h, plus 24 h in an emergency. The vehicle has two independent power sources. The main power supply, located in the service module below the sphere, consists of 21 Exide 6-V lead--acid batteries. The life-support emergency power supply, located inside the pressure hull, is a silver--zinc 24-V dc battery. In operation, NEMO is lowered into the water from a surface support ship. Ballast tanks are flooded for controlled descent. When NEMO reaches a desired depth, crewmen operate a winch in the service module to lower an anchor for station keeping. The crew can also winch the craft downward and upward along the anchor cable as the situation requires. By adjusting the ballast, the vehicle can also be tilted forward for a better view, and two reversible rotation motors are used to turn the submersible.

5230 NEMO PROVIDES NEW LOOK AT OCEAN DEPTHS. Undersea Technol.; 11: No. 6, 28-29(Jun 1970).
The Navy's new NEMO acrylic submersible,

made of Rohm and Haas Plexiglas G, is $2^1/_2$ in. thick and bonded with a special acrylic adhesive. The 66 in. diam sphere, constructed from 12 identical curved pentagons, was successfully tested to a depth of 500 ft. Life support for the NEMO is an oxygen bleed system and a baralyme $CO_2$ absorbent system capable of sustaining two men for 8 h, plus 24 h in an emergency. The vehicle has two independent power sources. The main power supply, located in the service module below the sphere, consists of 21 Exide 6-V lead--acid batteries. The life-support emergency power supply, located inside the pressure hull, is a silver--zinc 24-V dc battery. In operation, NEMO is lowered into the water from a surface support ship. Ballst tanks are flooded for controlled descent. When NEMO reaches a desired depth, crewmen operate a winch in the service module to lower an anchor for station keeping. The crew can also winch the craft downward and upward along the anchor cable as the situation requires. By adjusting the ballast, the vehicle can also be tilted forward for a better view, and two reversible rotation motors are used to turn the submersible.

5231 COMPATIBLE CONTROLLER--MOTOR SYSTEM FOR BATTERY-ELECTRIC VEHICLE. Byrne, J.V. (University Coll., Dublin); Lacy, J.G. Proc. Inst. Electr. Eng. (London); 117: No. 2, 369-376(Feb 1970).

The thyristor controller and the dc motor of a battery-electric vehicle are considered as a system. The advantage of combining a current-controlled chopper regulator, using digital techniques, with a laminated-field series motor is outlined, design criteria are suggested, and an experimental system is described. Performance measurements using specially developed wattmeters are presented, which show the division of losses in the system, and the exceptionally high overall efficiencies over the speed range.

5237 QUESTIONS TO ASK ABOUT BATTERIES PROPOSED FOR ELECTRIC CARS. Ammermann, F.A. New York; Society of Automotive Engineers, Inc. (1970). 7p.

This assessment of battery technology aims to provide working criteria for the evaluation and selection of batteries in automotive propulsion applications. Certain assumptions are derived and recommended as guidelines. It is assumed that optimum system performance will not exceed 20% of theoretical capacity and that any improvement in performance will come from product and process development. Any modification of known systems involving chemical changes is assumed to require consideration as a totally new system.

5238 EXPERIMENTAL BATTERY-POWERED FORD CORTINA ESTATE CAR. Foote, L.R.; Hough, J.F. New York; Society of Automotive Engineers, Inc. (1970). 8p.

The drive train of this converted Cortina consists of a light weight dc commutator motor rated at 40 hp, 100 V and 26.4 lb-ft torque at 8000 rpm. The motor is geared to the rear wheels through a 3.0 to 1 rear axle and 2.23 to 1 transmission, resulting in a vehicle speed of 58.6 mph at 8000 rpm motor speed. Paralleled thyristors are used as electronic time ratio controllers. 90 nickel--cadmium aircraft-type cells are connected in series, 10 cells per battery. Each battery is rated 110 Amph at 1-h rate. At a constant 25 mph driving speed, a range of 39.9 mi is obtained.

5239 DESIGN CONSIDERATIONS FOR AN ELECTRIC CAR. Thornton, R.D. New York; Society of Automotive Engineers, Inc. (1970). 6p.

An electric spot-car is conceived and described. The car would have a gross unloaded weight of 3300 lb and be capable of driving a level 62 mi in 1 h. Regenerative braking and a fossil-fueled alternator are included in the design so as to extend range. Power requirements of 25 kWh restrict battery material choices to nickel--cadmium or lead--acid. Projected cost of the car is quite high, 5000 to 5500 dollars, and even this figure is dependent upon a fairly sizable market.

5300 ROLE OF SMALL BATTERY-POWERED STACKER IN MATERIALS HANDLING. Aust. Chem. Eng.; 6: No. 12, 17-18(Dec 1965).
ELECTRIC-POWERED VEHICLES;LEAD-ACID BATTERIES;TRUCKS;PERFORMANCE;COST;USES

5301 BATTERY DRIVEN TRACTION. Raphael, H. Elektrotek. Tidsskr.; 78: No. 26, 477-484(15 Oct 1965). (In Norwegian).
ELECTRIC-POWERED VEHICLES;ELECTRIC BATTERIES; SEMICONDUCTOR DEVICES;ELECTRONIC CIRCUITS; CONTROL SYSTEMS;ELECTRIC CONDUCTIVITY; FORECASTING;USES

5302 (AD--474192) EXPERIENCE IN THE OPERATION OF ELECTRIC LOADERS. EXPERIENCE IN MECHANIZATION OF LOADING AND UNLOADING OPERATIONS AT POINTS ADJOINING TRACKS OF DIFFERING USAGE. Oct 1965. Translated from Russian text. 20p.
ELECTRIC-POWERED VEHICLES;FEASIBILITY STUDIES;MAINTENANCE;ELECTRIC MOTORS;OPERATION

5303 APPLICATION OF THYRISTORS AS CONTROLLING DEVICES OF ELECTRIC LOCOMOTIVES. Wolski, A. Oesterr. Ing.-Z.; 8: No. 8, 264-273(Aug 1965).
TRAINS;ELECTRIC-POWERED VEHICLES;THYRISTORS; CONTROL SYSTEMS;ELECTRIC BATTERIES

5304 APPLICATION OF CONTROLLED SILICON CELLS TO ELECTRIC TRACTION VEHICLES. Kliemann, N. Glasers Ann.; 89: No. 7, 279-290(Jul 1965). (In German).
ELECTRIC-POWERED VEHICLES;SILICON DIODES; SEMICONDUCTOR SWITCHES;SWITCHING CIRCUITS; ELECTRIC BATTERIES

5305 (AD--630856) ELECTRIC BATTERY STACKER ESH-182. Golovkin, M.P. Translated from Byull. Tekh.-Ekon. Inf., Gos. Nauchno-Issled. Inst. Nauchn. Tekh. Inf.; No. 2, 55-56(1965). 9p. (FSTC-HT--23-49-66). NTIS.
Description of fork-lift. ELECTRIC-POWERED VEHICLES;ELECTRIC BATTERIES;USES;PERFORMANCE

5306 COMMUTATORLESS TRACTION MOTOR WITH PULSE INVERTER FOR STORAGE BATTERY VEHICLES. Steimel, K.; Heumann, K. AEG Mitt.; 55: No. 3, 220-226(1965). (In German).
ELECTRIC-POWERED VEHICLES;ELECTRIC MOTORS; ELECTRIC BATTERIES;INVERTERS;THYRISTORS

5307 PUBLIC TRANSPORT AT TURN OF KEY. Engineering (London); 198: No. 5145, 684(27 Nov 1964).
ELECTRIC-POWERED VEHICLES;ELECTRIC BATTERIES; FUEL CELLS;RESEARCH PROGRAMS;AUTOMOBILES

5308 STORAGE BATTERY APPLICATIONS IN POWER PLANT. Law, G.G. Power Eng.; 68: No. 10, 44-46(Oct 1964).
Emergency power supply. POWER PLANTS; ELECTRIC BATTERIES;USES;SAFETY

5309 WIDENING WORLD OF SCR. Hey, J.C. Electronics; 37: No. 25, 78-85(21 Sep 1964).
SEMICONDUCTOR RECTIFIERS;SILICON;TRIGGER CIRCUITS;ELECTRIC-POWERED VEHICLES;ELECTRIC BATTERIES;CONTROL

5310 FUTURE OF BATTERY--ELECTRIC CAR. Hender, B.S. Electron. Power; 10: 250-254(Aug 1964).
AUTOMOBILES;ELECTRIC-POWERED VEHICLES; ELECTRIC BATTERIES;FORECASTING

5311 USE OF SEMICONDUCTOR RECTIFIERS FOR ELECTRIC TRACTION. Hartmann, O.; Tietze, C. Elektrotech. Z., A; 85: No. 7, 198-205(3 Apr 1964). (In German).
SEMICONDUCTOR RECTIFIERS;TRAINS;ELECTRIC-POWERED VEHICLES;PULSE TECHNIQUES;CONTROL SYSTEMS;ELECTRIC BATTERIES

5312 DC CHOPPER REGULATOR FOR CONTROLLING SPEED OF ELECTRIC VEHICLES. Wagner, R. Siemens-Z.; 38: No. 1, 14-19(Jan 1964). (In German).
Periodic interruption of supply voltage avoid high power losses in resistors. CONTROL SYSTEMS;VELOCITY;TRAINS;PULSE TECHNIQUES; ELECTRIC BATTERIES;ELECTRIC-POWERED VEHICLES; ELECTRONIC CIRCUITS

5313 LEAD ACID STORAGE BATTERIES AS STANDBY POWER SUPPLY. Sanders, C.E. Direct Curr.; 8: No. 10, 274-277(Oct 1963).
LEAD-ACID BATTERIES;OPERATION;BATTERY CHARGING;ACCIDENTS;POWER SUPPLIES;ELECTRIC POWER;BLACKOUTS

5314 DESIGNING WITH BATTERIES. Fried, S. Electron. Equip. Eng.; 10: No. 1, 40-44(Jan 1962).
Outline of battery types and application to electronic circuits. ELECTRONIC CIRCUITS; ELECTRIC BATTERIES;PLANNING;USES;PERFORMANCE

5315 POWER FOR UNDERWATER VEHICLES AND SYSTEMS. Padwo, S. Undersea Technol.; 3: No. 3, 19-21(1962).
SILVER-ZINC BATTERIES;SILVER-CADMIUM BATTERIES;LEAD-ACID BATTERIES;NICKEL-CADMIUM BATTERIES;SUBMARINES;MISSILES;USES

5316 SELECTION, DESIGN, CONSTRUCTION, AND PERFORMANCE OF APPROVED TYPE BATTERY MINING LOCOMOTIVES. Forbes, C.L.; Battye, E.A. Min. Electr. Mech. Eng.; 42: No. 491, 74-82(Sep 1961).
MINES;ELECTRIC-POWERED VEHICLES;TRAINS; ELECTRIC BATTERIES;DESIGN;FABRICATION; PERFORMANCE;MAINTENANCE

5317 UNMANNED ELECTRIC TROLLEYS IN PRACTICAL SERVICE. Handl., Conveying, Autom.; No. 3, 103-104(Mar 1961).
ELECTRIC-POWERED VEHICLES;ELECTRIC BATTERIES; MATERIALS HANDLING;OPERATION

5318 ETA 150 ACCUMULATOR RAILCAR AND RESPECTIVE ESA 150 VEHICLE WITH DRIVING CAB DESCRIBED. Wittig, P. Glasers Ann.; 85: No. 1, 11-20(Jan 1961). (In German).
ELECTRIC-POWERED VEHICLES;ELECTRIC BATTERIES; USES;DESIGN;TRAINS;CONFIGURATION;OPTIMIZATION

5319 ENERGY STORAGE FOR SATELLITES. Walker, C.L.; Matchett, J.D. Eng. Dig. (Toronto); 7: No. 3, 30-1(Jul-Sep 1960).
ENERGY STORAGE;ELECTROCHEMICAL CELLS;SOLAR ENERGY;SPACECRAFT POWER SUPPLIES

5320 NONPROPULSIVE POWER SYSTEMS FOR MISSILES AND SPACE VEHICLES. Breaux, D.K.; Schultz, R.L. Can. Aeronaut. J.; 6: 170-177(May 1960).
Characteristics, applications and state of development are discussed for so-called primary conversion (batteries, cells, reactors, gas generators) and secondary conversion (heat engines, turbines, pumps, engines) methods.

5321 POWER SOURCES FOR SATELLITES AND SPACE VEHICLES. Zahl, H.A.; Ziegler, H.K. (US Army Signal Res. and Dev. Lab., Fort Monmouth, NJ). Sol. Energy; 4: No. 1, 32-38(Jan 1960).
SPACECRAFT POWER SUPPLIES;SOLAR CELLS; ELECTRIC BATTERIES

5322 PARKE, DAVIS' CURE FOR TRUCK BREAKDOWNS. Berko, M. Mod. Mater. Handl.; 14: No. 9, 122-123(Sep 1959).
TRUCKS;MAINTENANCE;ELECTRIC BATTERIES; MATERIALS HANDLING;ELECTRIC-POWERED VEHICLES

5323 UNIVERSAL ELECTRIC MINING LOCOMOTIVE WITH GE RECTIFIER. Vilim, J.; Zvolanek, F.; Halek, Z.; Kroczek, J. Elektrotech. Obz.; 48: No. 7, 363-367(Jul 1959).
ELECTRIC-POWERED VEHICLES;MINES;GERMANIUM; SEMICONDUCTOR RECTIFIERS;ELECTRIC BATTERIES; ELECTRIC CURRENTS;DIAGRAMS

5324 WHERE WILL ELECTRIC POWER COME FROM IN SPACE SHIPS. Gustavson, J. Aviat. Age; 29: 186-189(Apr 1958).

The three most likely sources for power--chemical batteries, atomic batteries, and thermocouples--are discussed.

5325 SYSTEMS APPROACH WINNING OUT IN APU DESIGN. BATTERIES AND TURBINES COMPETING AS APU ENERGY SOURCES. Aviat. Age; 28: 101-105(Nov 1957).
Comparisons in size and weight are given.

5326 MINING: UNDERGROUND TRANSPORTATION. COMPARISON OF BATTERY AND DIESEL LOCOMOTIVES. Cumberbatch, J.V. Iron Coal Trades Rev.; 174: No. 4648, 1451-1454(21 Jun 1957).
MINES;TRAINS;COMPARATIVE EVALUATIONS;DIESEL ENGINES;ELECTRIC-POWERED VEHICLES;ECONOMICS; ELECTRIC BATTERIES

5327 DESIGN, CONSTRUCTION, AND PERFORMANCE OF APPROVED TYPE BATTERY MINING LOCOMOTIVES AND FACTORS GOVERNING THEIR SELECTION. Forbes, C.L.; Battye, E. Proc. S. Wales Inst. Eng.; 72: No. 2, 80-102(May 1957).
DESIGN;PERFORMANCE;FABRICATION;ELECTRIC BATTERIES;MINES;TRAINS;ELECTRIC-POWERED VEHICLES

5328 SIDE-LOADING FORK LIFT TRANSPORTER WITH FOUR-WHEEL STEERING. Mech. Handl.; 44: No. 3, 145-153(Mar 1957).
F9CZ Mark IV. TRUCKS;ELECTRIC BATTERIES; ELECTRIC-POWERED VEHICLES;DESIGN

5329 REDUCING POWER CONSUMPTION IN HYDRAULIC CIRCUITS. Carliss, O.S. Mech. Eng.; 78: No. 12, 1110-1113(Dec 1956).
TRUCKS;ELECTRIC-POWERED VEHICLES;MOTORS; HOISTS;PUMPS;HYDRAULIC CONTROL DEVICES;ELECTRIC CONDUCTIVITY;ELECTRIC BATTERIES;OPERATION; ENERGY CONSUMPTION;ENERGY LOSSES

5330 NEWEST TWIST IN HEAVY HANDLING. Fact. Manage. Maint.; 114: No. 12, 80-81(Dec 1956).
TRUCKS;ELECTRIC-POWERED VEHICLES;MATERIALS HANDLING;DESIGN

5331 PLATFORM TRUCKS FOR DIE HANDLING. Mass Prod.; 32: No. 8, 67-70(Aug 1956).
ELECTRIC-POWERED VEHICLES;ELECTRIC BATTERIES; PERFORMANCE;TRUCKS

5332 REPORT ON REACH TRUCK. Mumby, K. Mech. Handl.; 43: No. 7, 434-441(Jul 1956).
ELECTRIC-POWERED VEHICLES;ELECTRIC BATTERIES; OPERATION;TRUCKS

5333 HOW INDUSTRIAL TRUCKS ARE MAINTAINED AT E. B. EDDY CO. Hall, D.D. Pap. Trade J.; 140: No. 10, 16-22(5 Mar 1956).
TRUCKS;ELECTRIC-POWERED VEHICLES;MAINTENANCE

5334 CHALLENGE TO DIESEL RAILCARS. Gas Oil Power; 51: No. 611, 53-57(Mar 1956).
TRAINS;ELECTRIC-POWERED VEHICLES;STEAM; ELECTRIC BATTERIES;DIESEL ENGINES;COMPARATIVE EVALUATIONS

5335 PREVENTIVE MAINTENANCE PROGRAM FOR INDUSTRIAL TRUCKS. Greener, C. Steel Process.; 42: No. 1, 36, 47(Jan 1956).
RECOMMENDATIONS;OPERATION;COST;ELECTRIC-POWERED VEHICLES;ELECTRIC BATTERIES;MAINTENANCE; TRUCKS

5336 PLANNED MAINTENANCE CUTS TRUCK COSTS. Sauerman, D.M. Mill Fact.; 57: No. 4, 108-109(Nov 1955).
MAINTENANCE;TRUCKS;COST;ELECTRIC-POWERED VEHICLES;ELECTRIC BATTERIES

5337 HOW TO SELECT RIGHT LIFT TRUCK. Meddick, W.A. Purchasing; 39: No. 3, 98-100(Sep 1955).
TRUCKS;ELECTRIC-POWERED VEHICLES;SIZE;WEIGHT; PERFORMANCE;ELECTRIC BATTERIES;DESIGN; RECOMMENDATIONS

5338 SUBSTITUTE CONTACT DISCS INCREASE LIFE OF ELECTRICAL CONTROL POINTS. Thomas, D.B. South. Power Ind.; 73: No. 5, 70(May 1955).
ELECTRIC CONTACTS;TUNGSTEN ALLOYS;SILVER ALLOYS;CONTROL SYSTEMS;TRUCKS;ELECTRIC-POWERED VEHICLES

5339 IT HAD TO BE SMALLER AND LIGHTER. Warshaw, N. Electr. Manuf.; 55: No. 4, 114-120(Apr 1955).
SIZE;WEIGHT;DESIGN;ELECTRIC BATTERIES;TRUCKS; ELECTRIC-POWERED VEHICLES

5340 DRIVER-LESS TRACTOR TRAINS. Mod. Mater. Handl.; 10: No. 4, 104-106(Apr 1955).
TRAINS;ELECTRONIC GUIDANCE;ELECTRIC BATTERIES;ELECTRIC-POWERED VEHICLES

5341 WHAT TO CONSIDER WHEN BUYING ELECTRIC LIFT TRUCKS. Meddick, W.A. Iron Age; 175: No. 5, 116-118(3 Feb 1955).
ELECTRIC-POWERED VEHICLES;TRUCKS; RECOMMENDATIONS;SIZE;PERFORMANCE;ELECTRIC BATTERIES

5342 TIRES: EFFECT OF TIRE DESIGN ON ELECTRIC TRUCK PERFORMANCE. Ayers, E.H. Flow; 9: No. 11, 89-91(Aug 1954).
TRUCKS;ELECTRIC-POWERED VEHICLES;PERFORMANCE; TIRES;NATURAL RUBBER;DESIGN

5343 BATTERY SELECTION FOR ELECTRIC TRUCKS. Electr. Constr. Maint.; 53: No. 6, 105, 107, 110(Jun 1954).
TRUCKS;ELECTRIC-POWERED VEHICLES;ELECTRIC BATTERIES;PERFORMANCE;COMPARATIVE EVALUATIONS

5344 MECHANICAL HANDLING VEHICLES. Engineering (London); 177: No. 4593, 186-187(5 Feb 1954).
Description of battery-powered electric pallet truck for materials handling. MATERIALS HANDLING;ELECTRIC-POWERED VEHICLES;ELECTRIC BATTERIES;TRUCKS

5345 FORK TRUCK EFFICIENCY TESTS SHOW IF CORRECTIONS NEEDED. Milz, H. 65: No. 2, 171, 174, 176, 188, 190(Feb 1954).
TRUCKS;ELECTRIC-POWERED VEHICLES;TESTING; EQUIPMENT;MAINTENANCE;PERFORMANCE

5346 ELECTRIC TRUCKS FOR PARCEL HANDLING AT S.N.C.F. Bouchon, M. Electricite; 38: No. 201, 7-11(Jan 1954).
TRUCKS;ELECTRIC-POWERED VEHICLES;ELECTRIC BATTERIES;COMPARATIVE EVALUATIONS;OPERATION

5347 ELECTRIC TRUCKS SHOW 98% AVAILABILITY.

Railw. Locomot. Cars; 128: No. 1, 51-54(Jan 1954).
225- and 281-Ah batteries. TRUCKS;ELECTRIC-POWERED VEHICLES;PERFORMANCE;ELECTRIC BATTERIES

5348 ALKALINE BATTERIES FOR MARINE PURPOSES. Atkinson, G.S. Shipbuild. Mar. Engine Build.; 60: No. 545, 689-691(Dec 1953).
NICKEL-CADMIUM BATTERIES;SILVER-CADMIUM BATTERIES;SHIPS;SHEETS;TUBES;PLATES;USES

5349 TESTING QUALITY OF MECHANICAL HANDLING EQUIPMENT. Turner, E.F. Mech. Handl.; 40: No. 11, 556-557(Nov 1953).
NOISE;MECHANICAL VIBRATIONS;MECHANICAL TESTS; TRUCKS;ELECTRIC-POWERED VEHICLES

5350 ELECTRIFICATION INCREASES L C L TRUCKING EFFICIENCY IN PRR 11TH STREET FREIGHT HOUSE, PITTSBURGH. Storage Battery Power; 23: No. 5, 8-11(Sep 1953).
TRUCKS;EFFICIENCY;ELECTRIC-POWERED VEHICLES; MATERIALS HANDLING;ELECTRIC BATTERIES; MAINTENANCE

5351 FORK-LIFT TRUCK. Engineer; 196: No. 5088, 203(31 Jul 1953).
PF.100, light-weight model for use where extra weight is prohibited. TRUCKS;ELECTRIC-POWERED VEHICLES;ELECTRIC BATTERIES

5352 RECOMMENDED VOLTAGES FOR INDUSTRIAL TRUCKS. Schroeder, C.S. Iron Steel Eng.; 30: No. 1, 84-86(Jan 1953).
RECOMMENDATIONS;ELECTRIC POTENTIAL;TRUCKS; ELECTRIC BATTERIES;SIZE;ELECTRIC-POWERED VEHICLES

5353 ELECTRIC ROAD VEHICLES. Diederich, R. Wirtschaftsrecht; 8: No. 7, 11-17(Jan 1953). (In German).
ELECTRIC-POWERED VEHICLES;ELECTRIC BATTERIES; SAFETY;HEALTH HAZARDS;ECONOMICS;ENERGY POLICY; AUTOMOBILES;BUSES;TRUCKS;COMPARATIVE EVALUATIONS;COST; REVIEWS

5354 TWO INDUSTRIAL FORK-LIFT TRUCKS. Engineer; 194: No. 5056, 845-846(19 Dec 1952).
TRUCKS;ELECTRIC-POWERED VEHICLES;ELECTRIC BATTERIES;PERFORMANCE

5355 PHILBLACK PLANT OF PHILLIPS CHEMICAL COMPANY RECEIVES AND SHIPS IN UNIT PLALLET LOADS. Storage Battery Power; 22: No. 6, 9-10(Nov 1952).
TRUCKS;ELECTRIC-POWERED VEHICLES;COST; STORAGE;IRON-NICKEL BATTERIES;PERFORMANCE;DUSTS; USES

5356 STUDEBAKER FOUNDRY'S INDUSTRIAL TRUCKING SYSTEM IS MODERNIZED TO KEEP PACE WITH INCREASED PRODUCTION. Storage Battery Power; 22: No. 6, 3-8(Nov 1952).
TRUCKS;MATERIALS HANDLING;IRON-NICKEL BATTERIES;ELECTRIC-POWERED VEHICLES;USES

5357 CAMDEN REFRIGERATING AND TERMINALS COMPANY APPLIES PALLET--FORK-TRUCK SYSTEM TO COLD-STORAGE ROOMS. Storage Battery Power; 22: No. 6, 11-12(Nov 1952).
TRUCKS;IRON-NICKEL BATTERIES;HYDROXIDES; ELECTRIC-POWERED VEHICLES;USES

5358 ECONOMIC BASIS OF BATTERY ELECTRIC ROAD VEHICLE OPERATION AND MANUFACTURE. Heyman, H.W. Proc. Inst. Electr. Eng. (London); 99: No. 71, 465-478(Oct 1952).
ELECTRIC-POWERED VEHICLES;ECONOMICS;ELECTRIC BATTERIES;COMPARATIVE EVALUATIONS

5359 ELECTRICAL EQUIPMENT OF BATTERY ROAD VEHICLES. Sheers, W.D. Proc. Inst. Electr. Eng. (London); 99: No. 71, 457-464, 473-478(Oct 1952).
ELECTRICAL EQUIPMENT;ELECTRIC BATTERIES; ELECTRIC-POWERED VEHICLES;ELECTRIC MOTORS; CONTROL SYSTEMS;ELECTRONIC CIRCUITS;MAINTENANCE

5360 POWER TRUCKING HANDLES ALL LCL ''FLOATING FREIGHT'' IN SOUTHERN RAILWAY'S NORFOLK--PINNERS POINT TERMINALS. Storage Battery Power; 22: No. 5, 6-8(Sep 1952).
42-cell A8 batteries. TRUCKS;MATERIALS HANDLING;ELECTRIC-POWERED VEHICLES;ELECTRIC BATTERIES;IRON-NICKEL BATTERIES;BATTERY CHARGING;USES

5361 POST OFFICE DEPARTMENT APPLIED POWER TRUCKING TO HANDLING OF PARCEL POST IN BALTIMORE. Storage Battery Power; 22: No. 4, 8-10(Jul 1952).
10-cell, 12-V D6A Edison batteries of 450-Ah capacity. ELECTRIC-POWERED VEHICLES;TRUCKS; MATERIALS HANDLING;IRON-NICKEL BATTERIES;USES; OPERATION

5362 PHILADELPHIA STEEL AND WIRE HANDLES 95% OF RECEIPTS, 60% OF SHIPMENTS IN UNIT LOADS. Storage Battery Power; 22: No. 4, 11-14(Jul 1952).
10-, 24-, and 30-cell C8 batteries. SHEETS; STEELS;TRUCKS;ELECTRIC-POWERED VEHICLES;IRON-NICKEL BATTERIES;OPERATION;USES

5363 FEDERAL BEARINGS CO. INC. COMPLETE FIVE-YEAR MATERIAL-HANDLING DEVELOPMENT PROGRAM. Storage Battery Power; 22: No. 4, 3-7, 18(Jul 1952).
MATERIALS HANDLING;TRUCKS;ELECTRIC-POWERED VEHICLES;ELECTRIC BATTERIES;OPERATION

5364 PENNSYLVANIA RAILROAD DEVELOPS NEW ELECTRIC TRUCKING SYSTEM FOR LCL FREIGHT AT CHICAGO. Storage Battery Power; 22: No. 3, 6(May 1952).
24-cell A6 batteries, 30-cell A8 and D8 batteries. TRUCKS;ELECTRIC-POWERED VEHICLES; ELECTRIC BATTERIES;OPERATION;MAINTENANCE

5365 CANADA STEAMSHIP LINES EXTENDS UNIT-LOAD HANDLING TO POINTS OF TRANSSHIPMENT IN WATER--RAIL SERVICES. Storage Battery Power; 22: No. 1, 3-11, 19(Jan 1952).
MATERIALS HANDLING;EFFICIENCY;TRUCKS; ELECTRIC-POWERED VEHICLES;ELECTRIC BATTERIES; OPERATION

5366 MILLER BREWING COMPANY ADOPTS INDUSTRIAL TRUCKING TO MEET DEMANDS OF INCREASED PRODUCTION. Storage Battery Power; 21: No. 5, 9-10(Nov 1951).
10-cell D4A Edison batteries. TRUCKS; MATERIALS HANDLING;IRON-NICKEL BATTERIES; BATTERY CHARGING;AUTOMATION;ELECTRIC-POWERED VEHICLES;OPERATION;USES

5367 TIMBERING MACHINE BUILT BY MAINTENANCE DEPARTMENT OF HUDSON COAL CO. OPERATES ON

BATTERY POWER. Storage Battery Power; 21: No. 5, 11-12(Nov 1951).
MINES;IRON-NICKEL BATTERIES;USES;ELECTRIC-POWERED VEHICLES;OPERATION

5368 PONTIAC PARTS WAREHOUSE SHIPMENTS TO G.M. PARTS WAREHOUSES NOW MORE THAN 75% PALLETIZED. Storage Battery Power; 21: No. 5, 3-8(Nov 1951).
10-cell D4S (3.6 kW) to 30-cell D8S (21.6 kW) batteries. MATERIALS HANDLING;TRUCKS; ELECTRIC-POWERED VEHICLES;IRON-NICKEL BATTERIES; USES;OPERATION

5369 HOW TO INCREASE FORK TRUCK HOISTING SPEEDS. Flow; 7: No. 1, 55, 78(Oct 1951).
30- vs 36-V batteries. TRUCKS;ELECTRIC-POWERED VEHICLES;ELECTRIC BATTERIES;ELECTRIC POTENTIAL;PERFORMANCE

5370 RAILWAY ELECTRIFICATION: PROSPECTIVE CONSUMER OF CENTRAL STATION POWER. Evans, L. Electron. Eng.; 70: No. 8, 700(Aug 1951).
Battery locomotive. TRAINS;ELECTRIC-POWERED VEHICLES;DIESEL ENGINES;COST;OPERATION; COMPARATIVE EVALUATIONS;ELECTRIC BATTERIES; RECTIFIERS;BATTERY CHARGERS

5371 MATERIALS HANDLING. South. Power Ind.; 69: No. 7, 46-47(Jul 1951).
Types of trucks and use in handling glass, etc. TRUCKS;MATERIALS HANDLING;ELECTRIC BATTERIES;ELECTRIC-POWERED VEHICLES;GLASS; OPERATION

5372 BATTERY TRUCKS IN STOREHOUSE SERVICES. Railw. Mech. Eng.; 125: No. 7, 65-67(Jul 1951).
Stations for 10- and 30-cell batteries. ELECTRIC-POWERED VEHICLES;TRUCKS;ELECTRIC BATTERIES;BATTERY CHARGERS;ELECTRONIC CIRCUITS

5373 ELECTRICAL MACHINERY IN CARGO LINER. Peacock, J.B. Trans. Inst. Mar. Eng.; 63: No. 6, 99-108(Jun 1951).
Battery equipment for steering motor operation during emergencies. SHIPS;SAFETY; ELECTRIC BATTERIES;ELECTRICAL EQUIPMENT

5374 HOW TO DETERMINE INDUSTRIAL TRUCK BATTERY REQUIREMENTS. Vaughan, J.E. Mill Fact.; 48: No. 5, 88-89(May 1951).
TRUCKS;ELECTRIC BATTERIES;ELECTRIC-POWERED VEHICLES;SPECIFICATIONS;PLANNING

5375 840-HP ELECTRIC-BATTERY LOCOMOTIVE. Engineering (London); 171: No. 4444, 383(30 Mar 1951).
TRAINS;ELECTRIC-POWERED VEHICLES;ELECTRIC BATTERIES;DESIGN;PERFORMANCE

5376 MINE ELECTRIC LOCOMOTIVE. Rosenfeld, V.E.; Nekrasov, O.A. Gorn. Zh.; No. 9, 27-32(Sep 1950). (In Russian).
KE-1 locomotive. MINES;ELECTRIC-POWERED VEHICLES;TRAINS;ELECTRIC BATTERIES;PERFORMANCE TESTING;DIAGRAMS

<LOCATION>UT
<SP NAME>Ford Motor Co., Dearborn, Mich. ; Utah Univ.,
Salt Lake City
<FUNDING>252.4;281.7;0
<DESCRIPT>In 1973 the Department of Materials Science
and Engineering at the University of Utah entered into
a sub-contract with the Ford Motor Company and the
National Science Foundation (RANN) to conduct research
on the fabrication and characterization of the ceramic
beta-alumina membrane which is the electrolyte for
the sodium-sulfur battery. Since over a billion ceramic
tubes will be needed eventually on an annual basis,
it is essential that economical fabrication techniques
be developed for the manufacture of these ceramic electrolytes.
This project involves extensive studies on powder development,
synthesis and characterization, tubular green forming
techniques such as isostatic pressing and extrusion;
high temperature (1400-1650 degrees C) sintering and
firing operations; and optimization of electrolyte
properties such as strength, electrical conductivity,
thermal shock and creep resistance as a function of
the microstructure. It is essential that thin-walled
beta (approximately 1 mm) beta alumina tubing be available
at an economical price and possess optimal electrical
and mechanical properties. In addition to work on the
ceramic electrolyte, work was also initiated in July
1975 on the development of a ceramic container and/or
current collector for the cathode (sulfur) of the sodium-sulfur
battery. In this application the ceramic must be (1)
resistant to corrosive attack by molten sulfur and
sodium polysulfide at 300-400 degrees C and (2) a good
conductor of electrons. A cooperative effort between
faculty in the Physics and Materials Science and Engineering
Departments has resulted in the development an electronic
ceramic (TiO2) which is currently under consideration
for use in the sodium-sulfur battery as the cathode
container and current collector.

<SP NAME>Tennessee Valley Authority, Chattanooga. Office
of Power
<FUNDING>12;31;32
<DESCRIPT>The project objectives are to follow research,
development, and demonstration programs in the area
of electrochemical energy conversion and storage; to
assess the potential application of electrochemical
energy conversion and storage devices to the TVA power
system, recommending when appropriate TVA participation
in research projects to develop especially promising
technologies; to work with EPRI to develop and coordinate
the research programs of EPRI and other organizations.
Research, development, and demonstration programs related
to electrochemical energy conversion and storage (batteries,
fuel cells, hydrogen production) are followed, and
the technical and economic feasibility (including commercial
applicability) of utilizing devices based on these
concepts in the TVA power system is assessed in-house
or with the aid of consultants. Participation in national
conferences and in EPRI industry advisory task forces
and project committees in this subject area gives TVA
the opportunity to closely follow and influence national
programs aimed at developing the various conversion
and storage possibilities to the point of commercial
availability. Review and evaluation of research related
to developing energy conversion and storage devices
and assessing their potential for application to power
systems are on-going continuous functions of the Power
Research Staff.

<FUNDING>0;410.4;0
<DESCRIPT>The objectives of this program include (1)
the development of isostatic pressing techniques and
sintering methods for large (3 cm OD, 46 cm long, 2
+- 1 mm wall) electrolyte tubing of polycrystalline
beta''-Al2O3. (2) Scaling-up of the continuous, pass-through
sintering process for the firing of tubes of beta''-Al2O3
with the size, 1.5 cm OD, 20 cm long and 1 mm wall.
(3) Transfer of alpha-beta'' sealing technology from
Ford. (4) Batch production of beta''-Al2O3 tubing (1.5-3.0
cm OD, 20-30 cm long, 1-3 mm wall) at rates up to 200/month
in a pre-pilot facility (batch plant) which will be
placed into operation by October 1976. (5) Non-destructive
electrical impedance measurements on polycrystalline
beta''-Al2O3 over a range of frequencies. (6) Measurements
of elastic modulus and thermal expansion on polycrystalline
beta''-Al2O3. This pre-pilot electrolyte development
and evaluation program will be conducted in Phases
I, II, and III on facilities at the University of Utah.
This project has been subcontracted.

<DESCRIPT>The purpose of this project is to assist
ERDA to ensure the timely development of control technologies
for energy storage needs. The objectives of the project
are (1) define the environmental issues which may arise
from the increased use of energy storage systems batteries,
pumped hydro, magnetic, compressed air, flywheels,
and thermal energy storage; (2) identify the available
and advanced technology to control adverse health and
environmental effects; (3) evaluate the efficacy and
practicability of control options relative to existing,
proposed or anticipated standards; and (4) recommend
specific strategies for the development of control
technologies consistent with the timing of the implementation
of the storage systems.

<LOCATION>UT
<SP NAME>Ford Motor Co., Dearborn, Mich.
<FUNDING>0;802.7;0
<DESCRIPT>In cooperation with Ford and funded by the Energy Research and Development Administration, a program has begun on the pilot-plant production of beta alumina electrolyte tubing. This pilot-plant, which is to be located in the Research Park of the University of Utah, will be used to supply electrolytes for two prototype sodium-sulfur batteries: (1) a 35 kilowatt peak power battery for test in an electric vehicle and (2) a one megawatt storage battery for test in the National Battery Energy Storage Test (BEST) Facility operated in conjunction with the government (ERDA), the Electric Power Research Institute (EPRI) and representatives from the electric utilities. This five year program will be funded at approximately 18 million dollars, with the University's (including the Research Institute) share comprising about 3 million. Once successful prototype batteries have been tested in the BEST facility and in electric cars, commercial production of sodium-sulfur batteries should begin in the early 1980's. The state of Utah should be in a very advantageous position at that time for the formation of a local industry which can supply beta alumina electrolyte tubing and possibly electronic ceramic cathode containers for sodium-sulfur battery production. The pilot plant will be capable of producing annually 40,000-113,000 units of sealed beta''-Al2O3 tubing of various sizes which will be suitable for use as the electrolyte in the sodium-sulfur battery. This project has been subcontracted.

<DESCRIPT>Lignin and cellulose are the major components
of sawdust, newsprint, municipal solid wastes and other
byproducts of the wood and pulp industry. In our laboratory,
these waste products have been converted to solids
which conduct electricity and retain an electrical
charge. Working batteries have been constructed from
these solids. In this proposal, we plan to examine
the chemical nature of these solids in order to optimize
their performance for low-cost storage batteries.

<FUNDING>20;0;0
<DESCRIPT>The efficiency of direct-current power sources,
such as batteries and fuel-cells used by the Navy or
contemplated for use, depends on the efficiency of
the individual electrodes involved. It is the purpose
of this research to elucidate the factors which adversely
affect the course of fast electrode reactions. The
adsorption of molecules and ions at the electrode/electrolyte
interface and the course of fast electrode reactions
are studied by observing electrical relaxation phenomena.
Digital computer control and analysis of the experiments
are an important part of this research.

<FUNDING>50;0;0
<DESCRIPT>Communications and flight operations depend
on auxiliary battery sources for power. Lighter-weight,
higher-temperature, longer-life, and higher-energy
batteries are needed to meet the requirements. This
research involves an understanding of the solution
processes by which solute materials interact with certain
acid solvents. These solvents are promising as battery
fluids, and as systems for metallurgical separations.
Research results have the potential of improvement
in high-energy-density batteries, corrosion prevention,
new approaches for thermal batteries, and innovations
for auxiliary power sources. This research concerns
a study of the behavior of oxides in chloroaluminate
melts. These high-valent metal oxides are candidates
for cathode materials. A study is to be made on sulfur
and sulfides in the chloroaluminate systems as they
are soluble in the acid melts. In addition, the solvent,
solute properties of low-temperature Lewis acid systems,
such as ethylpyridinium bromide--aluminum chloride
melt, will be investigated, due to its potential as
a solvent for both sulfides and oxides, high temperature
ring-disc electrodes will be used in these studies.

<LOCATION>CO
<SP NAME>Department of the Army, Washington, D.C.
<DESCRIPT>Electrochemical reactions of organic compounds
in low melting fused salts will be investigated. The
basic research generated by this proposal has direct
relevance to achieving fuel cell systems utilizing
hydrocarbons as fuel. It may also serve as the basis
for high power density, secondary battery systems,
and in developing low-temperature molten salt batteries.
Research will include: (1) surveying anodic reactions
of several classes of organic compounds in order to
select for further study a number of synthetically
and mechanistically important reactions; (2) investigation
of chemical electrochemical reactions of aromatic and
aliphatic hydrocarbons; (3) surveying possible cathodic
processes with particular reference to those systems
having strongly complexed substrates and to species
whose follow-up chemical reactions could have large
driving forces; and (4) investigation of possible solute-solvent
interactions in AlCl3 solvent systems and comparison
with other aprotic solvents.

# CORPORATE INDEX

In the Corporate Index, report literature is indexed using the name of the organization or institution responsible for issuing the report. Headings are provided for all report literature and for published literature for which a corporate approach is especially desirable, e.g., symposium and conference proceedings.

Each entry under a corporate heading gives the report title and the citation number. Report numbers, if applicable, are given in parentheses at the end of the entry.

DOE Energy Information Data Base: Corporate Author Entries (TID-4585) is used in the standardization of corporate entries. TID-4585 is available for purchase from the National Technical Information Service (NTIS), U. S. Department of Commerce, Springfield, Virginia 22161.

Interrelation of logistics costs in managing the nickel--cadmium battery program. Master's thesis, 1818 (AD--750907)
AIR FORCE MATERIALS LAB., WRIGHT-PATTERSON AFB, OHIO (USA)
Initial production test of truck, forklift, 2000-pound, electric-motor-driven, solid-rubber-tired. Final report, 13 Mar-26 Jun 1972, 4843 (AD--905126L)

Materials briefs. Number 9, 2845 (AD--489912)
AIR PROVING GROUND, EGLIN AFB, FLA. (USA)
Development test and evaluation of the AN/PRC-66 uhf manpack transceiver. Final report, 11 September--3 October 1967, 1863 (AD--826132)
ALLIS-CHALMERS MFG. CO., GREENDALE, WIS. (USA). ADVANCED ELECTROCHEMICAL PRODUCTS DIV.
Evaluation of metal--air electrochemical energy storage system for vehicle propulsion. Semiannual report, 27 May--27 November 1969, 3057 (AD--866639)
Evaluation of metal--air electrochemical energy storage system for vehicle propulsion. Final report, May 1969--November 1970, 1904 (AD--880899)
ALLIS-CHALMERS MFG. CO., MILWAUKEE, WIS. (USA). SPACE AND DEFENSE SCIENCES DEPT.
Study of standby fuel cell power systems. Final report, 30 Jun-30 Sep 1965, 14 (AD--477113L)
AMERICAN INST. OF BIOLOGICAL SCIENCES, WASHINGTON, D.C.
Batteries: for biotelemetry and other applications, 1751 (AD--654703)
AMERICAN MACHINE AND FOUNDRY CO., VANDALIA, OHIO. LELAND AIRBORNE PRODUCTS DIV.
Battery sensing generator control system. Final report, 3053 (AD--860882)
AMERICAN METEOROLOGICAL SOCIETY, BOSTON, MASS.
Oxidation of hydrogen on a porous nickel electrode, 2860 (AD--612497)
AMERICAN UNIV., WASHINGTON, D.C.
High-energy electrochemical couples. II. Gas electrodes in organic solvents, 2894 (AD--653779)
Research into fundamental phenomena associated with spacecraft electrochemical devices: calorimetry of nickel--cadmium cells. Progress report, 1 July--30 September 1968, 2057 (N--69-39418)
Research into fundamental phenomena associated with spacecraft--electrochemical devices and calorimetry of nickel--cadmium cells. Progress report, 1 October 1968--31 August 1969, 2058 (N--69-40947)
Research on electrochemical energy conversion systems. Semiannual research report No. 5, November 1967--May 1968, 505 (AD--846063)
Research on electrochemical energy conversion systems. Interim technical report No. 7, November 1968--May 1969, 520 (AD--863071)
Research on electrochemical energy conversion systems. Report No. 12 (final), 4839 (AD--740210)
Research on electrochemical energy conversion systems. Interim technical report No. 11, Nov 1970-May 1971, 409 (AD--737703)
Research on electrochemical energy conversion systems. Semi-annual report No. 10, May-Nov 1970, 399 (AD--729923)
Research on electrochemical energy conversion systems. Interim technical report No. 8, May--November 1969, 529 (AD--873240)
ARGONNE NATIONAL LAB., EVANSTON, ILL. (USA)
Lithium/chalcogen secondary cells for components in electric vehicular propulsion generating systems. Interim technical summary report No. 5, 23 May-22 Nov 1971, 1810 (AD--741801)
ARGONNE NATIONAL LAB., ILL. (USA)
AMU-ANL conference on direct energy conversion, Nov 4-5, 1963, 4974 (N--64-19826)
ANL high-energy batteries for electric vehicles, 4922 (CONF-740215--1)
Applications and prospect of energy storage batteries, 655 (CONF-760416--2)
Batteries for utility load leveling, 4953 (CONF-760469--3)
Battery research sponsored by the U.S. Energy Research and Development Administration, 4952 (CONF-760112--1)
Calcium/iron sulfide secondary cells, 3177 (CONF-770531--5)
Cost estimate for the commercial manufacture of lithium/iron sulfide cells for load-leveling, 618 (ANL--76-12)
Design and cost study of nickel--zinc batteries for electric vehicle. Final report, 636 (ANL-K--76-3541-1)
Design and performance of Li--Al/iron sulfide cells for utility energy storage and electric vehicles, 656 (CONF-760617--3)
Design and testing of lithium/iron sulfide batteries for electric vehicle propulsion, 657 (CONF-760866--2)
Development of high-energy batteries for electric vehicles. Progress report for the period July 1970--June 1971, 749 (TID--26731)
Development of high-energy batteries for electric vehicles. Progress report for the period February 1969--June 1970, 642 (APTD--1126)
Development of high-specific-energy batteries for electric vehicles. Progress report, August 1972--January 1973, 628 (ANL--7998)
Development of high-specific-energy batteries for electric vehicles. Progress report, February 1973--July 1973, 631 (ANL--8039)
Development of high-specific-energy batteries for electric vehicles. Progress report, August 1973--January 1974, 633 (ANL--8058)
Development of lithium/metal sulfide batteries at Argonne National Laboratory: summary report, 1976, 624 (ANL--77-18)
Development of lithium/metal sulfide batteries at Argonne National Laboratory: summary report for 1974, 606 (ANL--75-20)
Development of lithium/metal sulfide batteries at Argonne National Laboratory: summary report for 1975, 620 (ANL--76-45(Rev.))
Development of lithium/sulfur cells for application to electric automobiles, 653 (CONF-740805--7)
Effects of metal additives on the performance characteristics of lithium--aluminum alloy electrodes, 3176 (CONF-770531--4)
Electric car, 4921 (CONF-730848--1)
Electrochemistry of lithium/metal sulfide and calcium/metal sulfide cells using molten salt electrolytes, 2044 (CONF-770531--1)
Engineering analysis of thermal phenomena for lead--acid batteries during recharge processes, 2033 (ANL--77-24)
Evaluation of lithium/sulfur batteries for automobiles, 654 (CONF-750123--1)
High-energy battery program at Argonne National Laboratory, 634 (ANL--8064)
High-performance batteries for off-peak energy storage. Progress report for the period January--June 1973, 630 (ANL--8038)
High-performance batteries for off-peak energy storage. Progress report, July--December 1973, 632 (ANL--8057)
High-performance batteries for off-peak energy storage and electric-vehicle propulsion. Progress report for the period January--June 1974, 635 (ANL--8109)
High-performance batteries for off-peak energy storage and electric-vehicle propulsion. Progress report for the period July--December 1974, 605 (ANL--75-1)
High-performance batteries for off-peak energy storage and electric-vehicle propulsion. Progress report, January--June 1975, 607 (ANL--75-36)
High-performance batteries for off-peak energy storage and electric-vehicle propulsion. Progress report, July--December 1975, 617 (ANL--76-9)
High-performance batteries for off-peak energy storage and electric-vehicle propulsion. Progress report, January--March 1976, 619 (ANL--76-35)
High-performance batteries for off-peak energy storage and electric-vehicle propulsion. Progress report, April--June 1976, 621 (ANL--76-81)
High-performance batteries for off-peak energy storage and electric-vehicle propulsion. Progress report for the period July--September 1976, 622 (ANL--76-98)
High-performance batteries for stationary energy storage and electric-vehicle propulsion. Progress report, October--December 1976, 623 (ANL--77-17)
High-performance batteries for stationary energy storage and electric-vehicle propulsion. Progress report, January--March 1977, 625 (ANL--77-35)
Instrumentation for automatic cycling of lithium--aluminum/iron sulfide secondary cells, 3163 (ANL--76-119)
Liquid metal electrodes in secondary batteries, 3175 (CONF-760503--10)
Lithium requirements for high-energy lithium--aluminum/iron sulfide batteries for load-leveling and electric-vehicle applications, 3173 (CONF-760112--3)
Lithium/calcogen secondary cells for components in electric vehicular propulsion generating systems. Interim technical summary report No. 3, 23 May--22 November 1970, 533 (AD--880894)
Lithium/chalcogen secondary cells for components in electric vehicular-propulsion generating systems. Interim technical summary report No. 3, May 23--November 22, 1970, 2035 (ANL--7777)
Lithium/chalcogen secondary cells for components in electric vehicular-propulsion generating systems. Interim technical summary report No. 4, November 23, 1970--May 22, 1971, 627 (ANL--7863)
Lithium/chalogen secondary cells for components in electric vehicular-propulsion generating systems. Interim technical summary report No. 5, May 23, 1971--November 11, 1971, 629 (ANL--7999)
Lithium/selenium secondary battery for implantation. Annual technical progress report No. 1, 23 June 1969--22 June 1970, 719 (PB--202374)
Lithium/selenium secondary battery for implantation. Annual report, 23 June 1970--30 July 1971, 721 (PB--215623)
Lithium/selenium secondary cells for components in electric vehicular propulsion generating systems. Interim technical summary report No. 2, 23 November 1969--22 May 1970, 532 (AD--876828)
Lithium/selenium secondary cells for components in electric vehicular-propulsion generating systems. First semiannual technical summary report, May 23--November 22, 1969, 2034 (ANL--7663)
Lithium/selenium secondary cells for components in electric vehicular-propulsion generating systems. Interim technical summary report No. 2, November 23, 1969--May 22, 1970, 626 (ANL--7745)

Lithium/sulfur batteries for off-peak energy storage: a preliminary comparison of energy storage and peak power generation systems, 4856 (ANL--7958)
Need for development of high-energy batteries for electric automobiles, 4857 (ANL--8075)
Proceedings of the symposium and workshop on advanced battery research and design, March 22--24, 1976, 71 (ANL--76-8)
Some aspects of the application of nuclear energy to small portable and automotive power supplies, 72 (ANL--6483)
ARIZONA STATE UNIV., TEMPE (USA)
Intercell heat pipe for fuel cell and battery cooling. Final report, June 1972--July 1973, 2978 (AD--782888)
Intercell heat pipe for fuel cell and battery cooling. Final report, Jun 1972-Jul 1973, 2979 (AD--782888)
ARMOUR RESEARCH FOUNDATION, CHICAGO, ILL. (USA)
Thin-cell storage battery. Final technical report, 309 (AD--499967)
ARMY ADVANCED MATERIAL CONCEPTS AGENCY, ALEXANDRIA, VA. (USA)
High intensity tactical power sources for the 1990 army. Final report, 521 (AD--865063)
High-intensity tactical power sources for the 1990 Army. Final report, 522 (AD--865063)
ARMY AIRBORNE ELECTRONICS AND SPECIAL WARFARE BOARD, FORT BRAGG, N.C. (USA)
Service test of zinc--air battery, BA-536( )/U. Final report, Jan-Mar 1973 and Jul-Oct 1973, 1995 (AD--919263L)
Supplemental service test of radar set AN/PPS-5, battery charger PP-4127( )/U, pintle-mounting adaptor for AN/PPS-4 and AN/PPS-5, and test facilities kit MK-980( )/PPS-5. Final report, Aug--Dec 1967, 3021 (AD--831349)
ARMY ARCTIC TEST CENTER, SEATTLE, WASH. (USA)
Test methodology research investigation of maintenance performance in arctic environment investigation. Final report, 10 Jan-28 Feb 1972, 1933 (AD--905683L)
ARMY AVIATION MATERIAL LABS., FORT EUSTIS, VA. (USA)
Survey and evaluation of electrical power sources as to their potential application with the 500-pound Controlled Airdrop Cargo System. Final report, 1903 (AD--877278)
ARMY CONSTRUCTION ENGINEERING RESEARCH LAB., CHAMPAIGN, ILL. (USA)
Advanced electrical power generation and distribution concepts for military facilties, 433 (AD--765476)
Facility simulation model for advanced BMD systems. Volume IVA. Power module: user's manual. Final report, 2007 (AD-A--011227)
Facility simulation model for advanced BMD systems. Volume IVC. Power module: program listing. Final report, 2008 (AD-A--011231)
ARMY ELECTRONIC PROVING GROUND, FORT HUACHUCA, ARIZ. (USA)
Development test II (engineering phase) of zinc--air battery BA-536( )/U. Final report, Aug 1973--Jan 1974, 563 (AD--918965L)
ARMY ELECTRONICS COMMAND, FORT MONMOUTH, N.J. (USA)
60/240 watt hydrazine fuel cell system, 379 (AD--681201)
Alkaline cadmium anode studies. Research and development technical report, 2942 (AD--732830)
Anodic behavior of zinc electrodes in potassium hydroxide electrolytes. Technical report, 2928 (AD--706596)
Battery chargers and hand crank generators, 2898 (AD--662969)
Battery--fuel cell system, 362 (AD--662960)
Cadmium--air cells studies. Research and development technical report, 403 (AD--733290)
Catalyzed removal of hydrogen from electronic equipment. Technical report, 2011 (AD-A--013498)
Characteristics of conventional design nickel--zinc batteries for hybrid vehicle operation. Research and development technical report, 426 (AD--756431)
Charging the silver--zinc secondary battery system. Part I. Formation characteristics, 1767 (AD--691710)
Data acquisition test report on OH-58A NiCad battery operation. Final technical report, 1998 (AD/A--001526)
DC to dc conversion for improved power sources. Research and development technical report, 2968 (AD--762181)
Difference frequency coulometer, 1744 (AD--646903)
Dry process divalent silver oxide electrodes, 2882 (AD--640053)
Effect of carbonated electrolyte on the performance of sintered plate nickel--cadmium cells, 1733 (AD--614104)
Electrode reactions in molten sodium nitrate--barium nitrate eutectic at 350 degrees C, 2927 (AD--703842)
Engineering evaluation of aircraft batteries. Research and development technical report, 1796 (AD--733289)
Engineering evaluation of the zinc--mercuric oxide battery/nickel--cadmium battery hybrid system, 1999 (AD/A--001529)
Engineering evaluation of zinc--silver oxide battery BB-622B/U used with radar set AN/PPS-5. Technical report, 1775 (AD--700959)
Evaluation of foreign S-12 silver--zinc cells, 1755 (AD--662737)
Fast transient response fuel cell - battery hybrid power source. Research and development technical report, 384 (AD--687260)
Fast transient response fuel cell-battery hybrid power source, 389 (AD--692538)
Feasibility investigation of plastic parts for vented, nickel--cadmium battery BB-607( )/U, 2918 (AD--680893)
Fuel cell manpack power source. Technical report, 1764 (AD--680894)
High energy density, long life zinc--silver oxide secondary battery BB-534( )/U (engineering evaluation), 1778 (AD--708866)
Improved Army silver--zinc batteries, 380 (AD--681203)
Integrated cell stacks, 376 (AD--681178)
Investigation of charging methods for nickel--cadmium batteries. Technical report, 2014 (AD-A--016132)
Investigation of new cell components for vented nickel--cadmium batteries. Technical report, 3124 (AD-A--017117)
Limiting factors for zinc--air batteries at low and elevated temperatures. Technical report, 1808 (AD--741340)
Lithium--inorganic electrolyte battery systems, 429 (AD--758856)
Low-cost, high-energy cathodes for magnesium perchlorate batteries, 2880 (AD--634100)
Low-cost oxygen electrodes. Research and development technical report, 2932 (AD--715707)
Maintenance-free lead acid batteries, 1771 (AD--695626)
Mechanically rechargeable zinc--air battery, 1769 (AD--693865)
Metal--air cells, 381 (AD--683461)
New designs for zinc--air batteries. Research and development technical report, 390 (AD--697125)
Nickel--cadmium batteries. 4. Self-discharge on $Ni(OH)_2$ electrodes, 2886 (AD--643798)
Organic electrolyte permselective membranes. Report No. 4 (final), 1 April 1968--15 September 1970, 3067 (AD--882890)
Organic-electrolyte, high-energy-density batteries: a status report, 351 (AD--644285)
Performance characteristics of magnesium--manganese dioxide/nickel--cadmium hybrid system. Technical report, 1945 (AD--908198)
Performance characteristics of magnesium--manganese dioxide/nickel--cadmium hybrid system. Technical report, 1946 (AD--908198)
Performance of battery BB-641/A in OH-6A helicopter. Research and development technical report, 1831 (AD--774797)
Portable military charger for zinc--silver oxide batteries, 2912 (AD--673717)
Power conditioning and control module for hydrazine-air battery, type I, PP-6204( )/U, 2940 (AD--732339)
Power sources conference (22nd annual) held 14--16 May 1968. Proceedings, 41 (AD--696427)
Power sources conference (23rd annual) held 20--22 May 1969. Proceedings, 42 (AD--696428)
Power sources conference (21st annual) held 16--18 May 1967. Proceedings, 40 (AD--696426)
Power sources conference (18th annual), held 19--21 May 1964. Proceedings, 36 (AD--696423)
Power sources conference (19th annual), held 18--20 May 1965. Proceedings, 38 (AD--696424)
Power sources for electric cars. Technical report, 4834 (AD--666773)
Preliminary safety analysis of lithium batteries. Technical report, 2002 (AD/A--006149)
Proc. 16. Annual Power Sources Conference, 22-24 May 1962; Army Electronic Command, Fort Monmouth, NJ, 87 (N--70-72939)
Proceedings of 17th annual power sources conference held 21--23 May 1963, 4835 (AD--696422)
Proceedings of the 18th annual power sources conference; Army Electronics Command, Fort Monmouth, NJ, 88 (N--70-73385)
Proceedings, 16th Annual Power Sources Conference, 22-24 May 1962, Fort Monmouth, NJ, 33 (AD--696421)
Proceedings, 18th Annual Power Sources Conference, 19-21 May 1964, Fort Monmouth, NJ, 35 (AD--696423)
Proceedings, 19th Annual Power Sources Conference, 18-20 May 1965, Fort Monmouth, NJ, 37 (AD--696424)
Proceedings, 17th Annual Power Sources Conference, 21-23 May 1963, Fort Monmouth, NJ, 34 (AD--696422)
Proceedings, 20th Annual Power Sources Conference, 24-26 May 1966, Fort Monmouth, NJ, 39 (AD--696425)
Proceedings, 15th Annual Power Sources Conference, 9-11 May 1961, Fort Monmouth, NJ, 7 (AD--421601)
Proceedings, 14th Annual Power Sources Conference, 17-19 May 1960, Fort Monmouth, NJ, 23 (AD--607425)
Quality assurance program for zinc anode--electrolyte composites, 2922 (AD--695610)
Rechargeable metal oxide--hydrogen cells. Research and development technical report, 592 (AD-A--036280)
Replaceable zinc anodes, 2919 (AD--681189)
Sealed nickel--cadmium battery assembly BB-655( )/U (engineering evaluation). Research and development technical report, 1789 (AD--723978)
Sealed zinc--oxygen cells. Technical report, 448 (AD--783490)

Secondary cadmium--air cells, 378 (AD--681200)
Secondary zinc--air cell investigations. Technical report, 413 (AD--741342)
Separator materials for the lithium--chlorine battery, 2921 (AD--686285)
Solar charger kit: experimental, 4988 (N--72-19066)
Solid electrolyte batteries, 377 (AD--681199)
Standard alkaline cells and secondary batteries, 366 (AD--668654)
Standard family of power sources. Technical report, 44 (AD--710951)
Standard family of power sources for manpack equipments. Technical report, 385 (AD--687263)
State-of-the-art alkaline cadmium anodes, 2916 (AD--680169)
Sulfur-based lithium--organic electrolyte secondary batteries. Quarterly report No. 2, March 3--June 3, 1974, 569 (AD/A--002701)
Thermoelectric silent battery charger, 2911 (AD--673119)
Transition metal compounds as cathodic materials in rechargeable lithium cells. Technical report, 595 (AD-A--037676)
Two-kilowatt long-life battery. Final technical documentary report, 1 January 1969--31 July 1970, 531 (AD--876484)
Zinc--air (oxygen) cell studies. Technical report, 435 (AD--772903)

ARMY ELECTRONICS COMMAND, FORT MONMOUTH, N.J. (USA). ELECTRONIC COMPONENTS LAB.
Adsorption of cadmium ions from KOH solution at a platinum electrode, 2963 (AD--757288)
Battery--fuel cell system, 359 (AD--662234)
Dry process divalent silver oxide electrodes, 2872 (AD--622698)
Fuel cell - energy storage hybrid systems for vehicles, 361 (AD--662236)
Fuel cell, battery power sources for electric cars, 360 (AD--662235)
Secondary cadmium--air cells, 1774 (AD--699480)
Study of electrodes and electrode reactions. I. The energy necessary to remove an oxygen molecule from a charged nickel oxide electrode in a vacuum, 2877 (AD--627248)
Study of electrodes and electrode reactions. II. The relation of the energy necessary to remove an oxygen molecule from charged nickel oxide electrodes in vacua and solutions of potassium hydroxide, 2876 (AD--627216)

ARMY ELECTRONICS COMMAND, FORT MONMOUTH, N.J. (USA). INST. FOR EXPLORATORY RESEARCH
Rechargeable thin-film solid-electrolyte battery, 341 (AD--634626)
Thin-film rechargeable solid-electrolyte batteries. Revised ed., 335 (AD--629501)

ARMY ELECTRONICS LABS., FORT MONMOUTH, N.J. (USA)
Low cost oxygen electrodes. Research and development technical report, 2933 (AD--715707)
Proceedings of 14th annual power sources conference, 17--19 May 1960, 4830 (AD--607425)
Standard line alkaline secondary batteries, 319 (AD--610010)
Standard line of secondary batteries, 265 (AD--452481)

ARMY ELECTRONICS TECHNOLOGY AND DEVICES LAB., FORT MONMOUTH, N.J. (USA)
Capabilities of mechanically rechargeable zinc--air batteries, 1823 (AD--757440)
Metal--air (oxygen) batteries, 1822 (AD--757438)
Nickel--zinc batteries for hybrid vehicle operation, 4968 (EPA--460/3-74-025)
Primary--secondary battery hybrid systems, 427 (AD--757296)

ARMY ENGINEER RESEARCH AND DEVELOPMENT LABS., FORT BELVOIR, VA. (USA)
Automated charge-discharge facility for study of direct-current electrical power sources. Report for Oct 1965-Nov 1966, 358 (AD--660336)

ARMY ENGINEER TOPOGRAPHIC LABS., FORT BELVOIR, VA. (USA)
Charging equipment, mobile (CEM). Final report Oct 1972--Nov 1974, 3139 (AD-A--036071)

ARMY MATERIAL COMMAND, TEXARKANA, TEX. (USA). INTERN TRAINING CENTER
Economic comparison of four electric power sources for forklift trucks, 2003 (AD/A--006479)

ARMY MISSILE COMMAND, REDSTONE ARSENAL, ALA. (USA)
Investigation of electrical power sources for missile-borne applications, 1662 (AD--459406)
Operating characteristics of storage batteries for use on ground support equipment, 1684 (AD--470655)
TOW weapon system check test program for TOW initial production battery chargers. Test evaluation report, 3079 (AD--902276L)

ARMY MISSILE COMMAND, REDSTONE ARSENAL, ALA. (USA). PHYSICAL SCIENCES LAB.
New laser power supply, 293 (AD--483724)

ARMY MOBILITY EQUIPMENT RESEARCH AND DEVELOPMENT CENTER, FORT BELVOIR, VA. (USA)
No-break, 1.5-kW, direct-current, 22- to 28-volt power supply, 4836 (AD--699351)
Production and engineering methods for Carb-Tek (trade name) batteries in fork lift trucks. Final report, July 1973--December 1974, 574 (AD/A--006548)
Use of direct-current voltage converter to maintain constant 27.5-volt terminal voltage from lead--acid battery power supply, 2930 (AD--710249)

ARMY SIGNAL MISSILE SUPPORT AGENCY, WHITE SANDS MISSILE RANGE, N.MEX. (USA)
Lightweight, extremely high-power electrical sources, 98 (NP--11716)

ARMY SIGNAL RESEARCH AND DEVELOPMENT LAB., FORT MONMOUTH, N.J. (USA)
Proceedings of the 16th Annual Power Sources Conference, Fort Monmouth, NJ, May 22-24, 1962, 85 (N--63-14123)

ARMY TANK-AUTOMOTIVE CENTER, WARREN, MICH. (USA). INSTRUMENT-ELECTRICAL LAB.
Arctic troop tests of type 6TNC nickel--cadmium batteries. Final report, 1852 (AD--806478)
High-impact, plastic case, lead--acid storage battery, type 2HN, 457 (AD--804814)

ARMY TANK-AUTOMOTIVE COMMAND, WARREN, MICH. (USA)
Analysis and survey of battery heating techniques, 1900 (AD--868158)
Application of heat pipes to military vehicle winterization methods, 3058 (AD--868159)

ARMY TEST AND EVALUATION COMMAND, ABERDEEN PROVING GROUND, MD. (USA)
Arctic instrumentation consideration. Final report on test operations procedure, 1824 (AD--758170)
Electrical power requirements. Final report on material test procedure, 4838 (AD--719099)

ASSOCIATION EURATOM-CEA, CENTRE D'ETUDES NUCLEAIRES DE FONTENAY-AUX-ROSES, 92 (FRANCE). GROUPE DE RECHERCHES SUR LA FUSION CONTROLEE
Research group activity report for the period 1 Jan 1968-31 Mar 1969, 64 (AD--914449)

ATLANTIC RESEARCH CORP., COSTA MESA, CALIF. (USA). MISSILE SYSTEMS DIV.
Athena program bibliography of research and development reports. Revised edition, 60 (AD--830318)

ATLANTIC RESEARCH NUCLEAR CORP., ALEXANDRIA, VA. (USA)
Electrochemical instrumentation and cell evaluation. Final report, Feb-Aug 1966, 1857 (AD--816711L)

ATOMICS INTERNATIONAL DIV., CANOGA PARK, CALIF. (USA)
Cathodic discharge controlled by dissolution kinetics, 2952 (AD--743769)
Development of a lightweight secondary battery system, 243 (AD--290326)
Development of lithium-metal sulfide batteries for load leveling. Progress report, 3262 (PB--253164)
Development of lithium--metal sulfide batteries for load leveling. Progress report No. 3, July 1, 1975--September 30, 1976, 676 (EPRI-EM--460)
Effects of radiation on nickel--cadmium battery electrodes. II. Midpoint report for 13 Mar--13 Jun 1964, 1725 (AD--604037)
Electrochemistry of interhalogen cathodes. Final report, 21 April 1969--21 March 1970, 527 (AD--870799)
New cathode material for high energy density batteries, 2964 (AD--757883)
New cathode material for high-energy-density batteries. Final report, 1 Sep 1972--30 Jun 1973, 440 (AD--777857)
Rechargeable lithium--sulfur battery. Executive summary, progress through 1973, 604 (AI--74-55)
Rechargeable lithium--sulfur battery executive summary progress report through 1973, 724 (PB--237672)

AUSTRALIAN POST OFFICE RESEARCH LABS., MELBOURNE
Time delay cut-out for battery-operated equipment, 3232 (N--76-18352)

AUTONETICS, DOWNEY, CALIF. (USA)
Battery, 28 volt, remotely activated, hermetically sealed, dual section, 1644 (AD--448165)

B

BATTELLE COLUMBUS LABS., OHIO (USA)
Annotated bibliography of the thermal properties of primary and secondary cells, 62 (AD--871108)
Battery information: personalizing this emerging resource. Technical report, 30 June 1966--1 May 1969, 1892 (AD--853350)
Current-density effects in single-pore electrodes, 3046 (AD--854593)
Depths of discharge for accelerated life tests of cadmium electrodes. Special technical report, 2951 (AD--743017)
Development of stress--strain models for energy-storing systems, 423 (AD--752257)
Failure mechanisms and accelerated life tests for batteries, 1878 (AD--838775)
Failure mechanisms and analyses of sealed batteries. Technical report, 1 February 1968--30 April 1969, 1896 (AD--859690)
Failure mechanisms in sealed batteries. Final technical report, 1 July 1966--30 April 1969, 1620 (AD--85592)
Failure mechanisms in sealed batteries. Part II. Semiannual technical progress report No. 2, 31 December 1966--30 June 1967, 1860 (AD--821895)

Failure mechanisms in sealed batteries. Part IV. Semiannual technical report No. 4, 1 January--30 June 1968, 1884 (AD--848981)
Failure mechanisms in sealed batteries. Semiannual technical report No. 3, July--31 December 1967, 1866 (AD--831437)
Failure mechanisms in sealed batteries. Semiannual technical report No. 5, 1 July--31 December 1968, 1887 (AD--851056)
Failure mechanisms in sealed batteries. Semiannual technical summary report No. 1, 30 June--31 December 1966, 1855 (AD--813731)
Heat transfer in sealed nickel--cadmium spacecraft cells and batteries. Special technical report, March--December 1968, 1889 (AD--851880)
Investigation of porous lithium battery electrodes. Quarterly technical progress report No. 1, 15 Jul--15 Oct 1965, 2826 (AD--474692)
Investigation of porous lithium battery electrodes. Quarterly technical progress report No. 2, 15 Oct 1965--15 Jan 1966, 2830 (AD--478016)
Investigation of porous lithium battery electrodes. Quarterly technical progress report No. 3, 15 Jan--15 Apr 1966, 2839 (AD--484218)
Investigation of porous lithium battery electrodes. Quarterly technical progress report No. 4, 15 Apr--15 Jul 1966, 2840 (AD--487623)
Investigation of porous lithium battery electrodes. Final technical report, 15 July 1965--15 November 1966, 2996 (AD--808937)
Lithium battery development. Annual report No. 3, 1 April 1970--31 March 1971, 2935 (AD--726607)
Lithium battery development. Annual report No. 3, 1 Apr 1970-31 Mar 1971, 397 (AD--726607)
Lithium battery development. Final report, 406 (AD--735269)
Lithium battery research. Annual report No. 1, 1 April 1968--31 March 1969, 515 (AD--854368)
Lithium battery research. Annual report No. 2, 1 April 1969--31 March 1970, 526 (AD--870688)
Measurements of quantities which change in battery performance and analysis, 1876 (AD--835219)
Physical properties and chemical analyses of electrolytes for sealed silver--zinc batteries. Special technical report, July 1966--March 1969, 3044 (AD--853490)
Rate of discharge of accelerated life tests of nickel--cadmium cells. Special technical report, 1815 (AD--748253)
Simulated orbital life tests for spacecraft cells. Part I. Procedures and manually acquired data. Special technical report, 1800 (AD--736471)
Simulated orbital life tests for spacecraft cells. Part II. Automatically acquired data, review, and recommendations. Special technical report, 1813 (AD--748251)
Temperature and temperature gradients for accelerated life tests of nickel--cadmium cells. Technical report, 1814 (AD--748252)
Thermal conductivity of sealed nickel--cadmium cells. Technical report, 1801 (AD--737519)
Thermal properties and behavior of nickel--cadmium and silver--zinc cells and their components, 1874 (AD--834300)
Workshop proceedings on ceramics for energy applications, 77 (CONF-751194--)

BATTELLE-INSTITUT E.V., FRANKFURT AM MAIN (GERMANY, F.R.)
Research and development concerning the sodium--sulfur battery. Subproject: development of unconventional processes for the production of the β alumina solid electrolyte and development of the sodium electrode, 3164 (BMFT-FB-T--76-40)

BATTELLE MEMORIAL INST., GENEVA (SWITZERLAND)
Exploratory study of hydrogen/silver oxide batteries for space application. Final report, 711 (N--76-26702)

BECHTEL CORP., SAN FRANCISCO, CALIF. (USA)
Conceptual design of a Battery Energy Storage Test (BEST) facility, 3185 (EPRI--255(TR2))
Engineering design and cost analysis of chlorine storage concepts for a zinc--chlorine load-leveling battery. Final report, 737 (PB--262016)

BECHTEL POWER CORP., SAN FRANCISCO, CALIF. (USA)
Engineering study of a 20 MW lead--acid battery energy storage demonstration plant. Final report for the period ending October 1976, 663 (CONS/1205--1)

BEST FACILITY STUDY PROJECT TEAM (USA)
National Battery Energy Storage Test (BEST) facility: conceptual design and cost estimate, 3184 (EPRI--255(TR1))

BOEING CO., SEATTLE, WASH. (USA)
Acceptance functional test requirements: Minuteman ground power and control equipment, 1713 (AD--490288)
Battery unit, emergency power supply, WS-133A/M, 263 (AD--445415)
Cadmium electrode: review of the status of research, 3240 (N--77-19572)
Contract end item detail specification. Part II. Product configuration and acceptance test requirements. Airborne data subsystem, 1846 (AD--801812)
Contract end item detail specification (prime equipment). Part I. Performance/design and product confirmation requirements. Airborne data subsystem for Burner II space booster system, 1845 (AD--801811)
Equipment weight prediction methods - electrical, 259 (AD--442315L)
Evaluation of silver--cadmium batteries. Final report, 1680 (AD--469615)
In-plant engineering test program, Engineering Development Laboratory/performance test (EDL/PT) report figure A 1288M launch control facility battery set. Final test report, 1850 (AD--805403)
Model specification for storage battery, launch control system (S-133-111-1-10), 262 (AD--444969)
Qualification test report for model specification S-133-111-1-4 and qualification supplement I thereof, battery, storage, launch control facility, 1631 (AD--436943)
Shock and vibration tests on C and D Batteries, Inc., lead--acid batteries, WS 133A, 1871 (AD--832538)
Shock and vibration tests on Electric Storage Battery Company lead--acid batteries, 1872 (AD--832539)
Shock and vibration tests on Gould-National Batteries, Inc., lead--acid batteries, 1870 (AD--832535)

BOEING CO., SEATTLE, WASH. (USA). AEROSPACE DIV.
Report of qualification test for battery, nickel--cadmium, special purpose S-3 satellite, Boeing part number 10-70428-1, Eagle-Picher part number SAR-8088, 1959 (AD--911407L)

BOSCH (R.) G.M.B.H., STUTTGART (GERMANY, F.R.)
Development of batteries for automobiles with electric propulsion, 4982 (N--69-34689)

BOSE CORP., FRAMINGHAM, MASS. (USA)
Battery charger PP-4126( )/U. Final report, 1 Jul 1971--Jun 1974, 3120 (AD-A--013364)
Battery charger PP-6309( )/U. Final report, 1 Jul 1969--30 Jul 1970, 3065 (AD--882182)
Battery charger PP-4126( )/U. Final report, 1 Jul 1969--30 Jul 1970, 3066 (AD--882183)

BROOKHAVEN NATIONAL LAB., UPTON, N.Y. (USA)
Neutron scattering studies of solid electrolytes, 3165 (BNL--21367)
Nickel based alloys as electrocatalysts for oxygen evolution from alkaline solutions, 3166 (BNL--22275)

BUREAU OF LABOR STATISTICS, WASHINGTON, D.C. (USA)
Industrial accidents and hygiene series, No. 6. Lead poisoning in the manufacture of storage batteries. Final report, 735 (PB--254596)

BUREAU OF MINES, COLLEGE PARK, MD. (USA). COLLEGE PARK METALLURGY RESEARCH CENTER
A new sulfur dioxide-free process for recovering lead from battery scrap. Report of investigations, 1976, 3260 (PB--252615)

BUREAU OF MINES, WASHINGTON, D.C. (USA)
Bureau of Mines approval system as applied to permissible storage-battery locomotives (first complete investigation under Schedule 15), 4862 (BM-RI--2449)
Cadmium: a materials survey, 2917 (AD--680443)
Development and safety of the storage-battery locomotive, 4861 (BM-IC--6068)
Diatomite as a filler in battery boxes, 646 (BM-RI--3078)
Endurance tests of storage batteries for use in permissible mine locomotives, 2036 (BM-RI--2358)
Permissible storage-battery locomotives and power trucks, 4860 (BM-BULL--313)
Preliminary investigations of storage-battery locomotives: specifications, laboratory tests, permissible schedule, 4863 (BM-TP--264)
Recovery of cadmium and nickel from scrap batteries, 720 (PB--204136)

DEFENCE RESEARCH ESTABLISHMENT, OTTAWA, ONTARIO (CANADA)
Battery design for aerospace power supplies, 393 (AD--709273)
Carbon-based oxygen electrodes for metal--air batteries. II. Operation in bicells with magnesium or zinc anodes, 1905 (AD--890113)
Carbon-based oxygen electrodes for metal--air batteries. I. Experimental electrodes, 3071 (AD--887653)
Charge-discharge cycling of DREO air electrodes, 3122 (AD-A--016721)
dc charger and recondition charger for tellurometer batteries, 3055 (AD--863309)
Electrical power sources communications and special equipment for Canadian forces; batteries for Canadian satellites. Quarterly progress notes, 1 Apr-30 Jun 1973, 550 (AD--912804)
Electrical power sources communications and special equipment for Canadian forces; batteries for Canadian satellites. Quarterly progress notes, 1 Jul-30 Sep 1973, 558 (AD--915962)
Electrical Power Sources Division. Quarterly progress notes, 1 October 1974--31 December 1974, 740 (PD--18289)
Electrical Power Sources Division quarterly progress notes, 1 January 1976--31 March 1976, 600 (AD-B--013277)
Electrical Power Sources Division, quarterly progress notes, 1 April 1975--30 June 1975, 601 (ADB--007328)
Electrical Power Sources Division, quarterly progress notes, 1 July 1975--30 September 1975, 602 (ADB--008547)
Electrochemical storage and disposition of energy, 66 (AD--919015)
Electrochemical storage and disposition of energy, 67 (AD--919015)
Electron spin resonance study of molybdenum trioxide-doped manganese dioxides. Technical note, 3125 (AD-A--017295)
Lithium batteries: an overview. Technical note, 581 (AD-A--016643)
Low temperature recharge of the lead--acid system, 2006 (AD-A--011027)
Nickel/cadmium aircraft batteries: float charge test, 2000 (AD/A--002767)
Nickel/cadmium aircraft batteries: float charge test equipment. Technical note, 3085 (AD--905408)
Nickel/cadmium aircraft batteries: thermal considerations, 2009 (AD-A--011995)
Nickel/cadmium aircraft batteries: battery alarm unit. Technical note, 2027 (AD-A--039521)
Nickel/cadmium aircraft batteries: failure prediction in battery shops by gassing rate measurements. Technical note, 2020 (AD-A--026197)
Nickel/cadmium aircraft batteries: high rate discharge equipment. Technical note, 3135 (AD-A--031866)
Nickel/cadmium aircraft batteries: multichannel gassing-rate meter. Technical note, 3144 (AD-A--039735)
Nickel/cadmium aircraft batteries: rapid electrolyte exchange technique. Technical note, 3142 (AD-A--039335)
Nickel/cadmium aircraft batteries: single sensor temperature monitoring. Technical note, 2025 (AD-A--037722)
Oxygen electrode based on sintered nickel plaque impregnated with manganese dioxide, 3087 (AD--906063)
Quarterly progress notes, 1 Apr-30 Jun 1973, 551 (AD--912804)
Quarterly progress notes, 1 April 1974--30 June 1974, 564 (AD--922405)
Quarterly progress notes, 1 January 1975--31 March 1975, 598 (AD-B--004545)
Quarterly progress notes, 1 Jul 1973--30 Sep 1973, 557 (AD--915962)
Quarterly progress notes, 1 July 1973--30 September 1973, 65 (AD--915962)
Quarterly progress notes, 1 July 1974--30 September 1974, 597 (AD-B--002753)
Quarterly progress notes, 1 October 1975--31 December 1975, 599 (AD-B--009796)
Research on several small electrochemical energy sources for emergency use, 68 (AD--B004198)
Storage of charged nickel hydroxide electrodes, 3072 (AD--891776)
Sulfur electrode, 2929 (AD--709272)
Superconducting motors and lithium-water batteries for torpedo propulsion. Technical note, 4851 (AD-A--031704)
Survey of continuous sources of electrical power for

under-ice propulsion of small submersibles. Part II. New high energy density systems, 596 (AD-A--037721)
Survey of continuous sources of electrical power for under-ice propulsion of small submersibles. Part I. Conventional secondary batteries, 2024 (AD-A--035996)
The cyclic voltammetry of lead and lead--antimony battery grid alloy in aqueous sulphuric acid at 25 to -40 C, 3140 (AD-A--036290)
DEFENSE DOCUMENTATION CENTER, ALEXANDRIA, VA. (USA)
Batteries. Report bibliography, Jan 1967--April 1973, 52 (AD--768500)
Batteries. Report bibliography, Jan 1967--Apr 1973, 697 (N--74-14792)
Bibliography of bibliographies in the DDC collection. Volume II. Report bibliography, Nov 1967-Nov 1971, 422 (AD--752160)
DEFENSE INTELLIGENCE AGENCY, WASHINGTON, D.C. (USA)
Electric vehicle research, development and technology-foreign, 4852 (AD-A--036458)
DELTA ELECTRONIC CONTROL CORP., COSTA MESA, CALIF. (USA)
Development of a low-cost, light-weight, efficient, 1.5 kW inverter. Final report, 3123 (AD-A--016792)
DEPARTMENT OF NATIONAL DEFENCE, OTTAWA, ONTARIO (CANADA)
Battery life cycle tester, 1667 (AD--462305)
Evaluation tests of batteries, storage, lead--acid, type BB--46, 1683 (AD--470201)
Evaluation tests on batteries, storage, lead--acid, type 2SM, 1656 (AD--457447)
Evaluation tests on batteries, storage, lead--acid, type HDD-2SM, 1657 (AD--457674)
Evaluation tests on batteries, storage, lead--acid, type BB-248/U, 1668 (AD--462380)
Evaluation tests on batteries, storage, lead--acid, type 2S-70, 1645 (AD--448872)
Evaluation tests on batteries, storage, lead--acid, type SMR-2SM, 1682 (AD--470200)
Evaluation tests on batteries, storage, lead--acid, type BB-248/U, 1671 (AD--465487)
Evaluation tests on batteries, storage, lead--acid, type TB-1275, 1638 (AD--440717)
Evaluation tests on batteries, storage, lead--acid, type 2S-60, 1641 (AD--446461)
Evaluation tests on nickel--cadmium batteries type FC-23, 1634 (AD--438094)
Evaluation tests on nickel--cadmium batteries, type S-101, Size AA, 1633 (AD--437713)
Evaluation tests on type BB-249/U battery containers, 2798 (AD--453678)
Qualification tests on batteries, storage, lead--acid, type BB-249/U, 1629 (AD--433360)
Qualification tests on batteries, storage, lead--acid, type BB-249/U, 1632 (AD--437071)
Qualification tests on batteries, storage, lead--acid, type BB-46, 1652 (AD--455450)
DEPARTMENT OF THE ARMY, WASHINGTON, D.C. (USA)
Method for determining battery state of charge by measuring a.c. electrical phase angle change, 3378
DETROIT ARSENAL, CENTER LINE, MICH. (USA)
Tests on battery terminal posts, 2846 (AD--494974)
DOUGLAS AIRCRAFT CO., INC., NEWPORT BEACH, CALIF. (USA)
Sealing of silver oxide--zinc storage cells, 3242 (NASA-CR--94104)
DOUGLAS AIRCRAFT CO., INC., NEWPORT BEACH, CALIF. (USA). ASTROPOWER LAB.
Sealing of silver oxide--zinc storage cells. Quarterly report, 23 September--23 December 1967, 3193 (N--68-16346)
Sealing of silver oxide--zinc storage cells. Quarterly report, 23 December 1967--23 March 1968, 3195 (N--68-27645)
Separators for high-rate, nonreserve zinc--silver oxide batteries. Semiannual report No. 1, 20 February--July 1967, 2897 (AD--659465)
Separators for high-rate, nonreserve zinc--silver oxide batteries. Final report, 20 February--19 November 1967, 2901 (AD--665631)
Stable inorganic matrix materials for high temperature batteries. Final report No. 1, 2 June 1967--2 February 1968, 2913 (AD--676106)
DOUGLAS AIRCRAFT CO., INC., NEWPORT BEACH, CALIF. (USA). MISSILE AND SPACE SYSTEMS DIV.
Sealing of silver oxide--zinc storage cells. Quarterly report, June 23--September 23, 1967, 3192 (N--68-11839)
DOUGLAS AIRCRAFT CO., INC., SANTA MONICA, CALIF. (USA)
Auxiliary power generating system for a large space laboratory, 4975 (N--64-28373)
Battery assembly, missile electrical power subsystem, GAM-87A, 1621 (AD--355102)
DOW CHEMICAL U.S.A., WALNUT CREEK, CALIF.
Development of a potassium--sulfide glass fiber cell and studies on impurities in alkali metal--sulfur cells, 714 (N--77-23602)
Development of the hollow fiber sodium--sulfur battery. Quarterly progress report 14 Oct 1971-14 Jan 1972, 547 (AD--909450L)
Research and development in the glass fiber sodium--sulfur battery. Semi-annual technical report, 593 (AD-A--037215)
Research and development in the glass fiber sodium--sulfur battery. Annual technical report, 2013 (AD-A--014474)
Research and development in the glass fiber sodium--sulfur battery. Semiannual technical report, 577 (AD-A--008849)
Research and development of the glass fiber sodium, 594 (AD-A--037216)
Research and development on the glass fiber sodium--sulfur battery. Semi-annual technical report, 445 (AD--782059)
Research development in the glass fiber sodium--sulfur battery. Semi-annual report 1 Jul--31 Dec 1975, 590 (AD-A--026359)
Sodium--sulphur battery system. Annual report, May 19, 1975--May 19, 1976, 668 (COO--2565-4)
DUGWAY PROVING GROUND, UTAH (USA)
Fast charging techniques for mass charging of nickel--cadmium batteries. Technical report, 3074 (AD--896566L)

E

EAGLE-PICHER CO., JOPLIN, MO. (USA)
Advanced development models of vented nickel--cadmium batteries. Final report for 5 Apr 1964--15 Mar 1965, 326 (AD--617406)
Investigations leading to the design and development of magnesium/magnesium perchlorate batteries. Quarterly progress report No. 2, 1 Oct--31 Dec 1964, 324 (AD--615342)
Investigations leading to the design of a reliable sealed nickel--cadmium cell. Final report, 1 May 1963--30 Apr 1964, 271 (AD--460165)
Investigations leading to the design of a reliable sealed nickel--cadmium cell. Report No. 7 (quarterly progress report No. 3), 1 Nov 1963--31 Jan 1964, 310 (AD--600251)
New mechanically rechargeable zinc-air batteries. Final report, 15 Apr 1973--30 Apr 1975, 579 (AD-A--015018)
Research and development study of field performance of ordnance batteries to determine the major and minor electrochemical and physical types of failures of ordnance lead--acid storage batteries. Final report, 19 May 1960--19 May 1963, 1858 (AD--820160)
Services, facilities, and materials leading to the design, development, and production of special purpose batteries. Quarterly report No. 7, 305 (AD--496061)
EAGLE-PICHER CO., JOPLIN, MO. (USA). STORAGE BATTERY DIV.
Laboratory investigation and engineering design leading towards the development of a lightweight secondary or primary cell type battery for one-shot application. Quarterly report No. 9, 278 (AD--471947)
Laboratory investigation and engineering design leading towards the development of a lightweight secondary or primary cell type battery for one-shot application. Quarterly report No. 10, 279 (AD--471950)
Laboratory investigation and engineering design leading towards the development of a lightweight secondary or primary cell type battery for one-shot application. Quarterly report No. 2, 281 (AD--471972)
Laboratory investigation and engineering design leading towards the development of a lightweight secondary or primary cell type battery for one-shot application. Quarterly report No. 4 (annual), 282 (AD--471973)
Laboratory investigation and engineering design leading towards the development of a lightweight secondary or primary cell type battery for one-shot application. Quarterly report No. 8 (final), 283 (AD--471978)
Laboratory investigation and engineering design leading towards the development of a lightweight secondary or primary cell type battery for one-shot application. Quarterly report No. 7, 31 May--31 Aug 1949, 284 (AD--471979)
Laboratory investigation and engineering design leading towards the development of a lightweight secondary or primary cell type battery for one-shot application. Quarterly report No. 1, 280 (AD--471971)
EAGLE-PICHER INDUSTRIES, INC., COLORADO SPRINGS, COLO. (USA). PRECISION PRODUCTS DEPT.
Nickel--cadmium monoblock battery BB-433(X-1)/A. Final report, Apr 1971--Feb 1974, 437 (AD--774811)
Vented nickel--cadmium battery assembly, BB-661( )/U, 568 (AD/A--002566)
EAGLE-PICHER INDUSTRIES, INC., JOPLIN, MO. (USA). COUPLES DEPT.
850 and 4000 A.h. secondary silver--zinc cells. Engineering report (final), 1825 (AD--761186)
Advanced development model of sealed nickel--cadmium batteries. Test report, 1750 (AD--654057)
Advanced development models of sealed nickel--cadmium batteries. Final report for 5 April 1964--16 August 1965, 333 (AD--623024)
Advanced development models of vented nickel--cadmium batteries. Test report, 1747 (AD--651961)
Advanced development models of vented nickel--cadmium batteries. Acceptance test report, 1740 (AD--629419)

BA-530( )/U mechanically rechargeable zinc--air battery. Final report, May 1970-Feb 1973, 549 (AD--910396L)
Battery BB-674( )/U, nickel--zinc secondary. Final report, Apr 1970-May 1971, 404 (AD--733422)
Battery, nickel--cadmium BB-460( )/U. Final report, Mar 1970-Apr 1971, 1797 (AD--733890)
Design, Development, qualification, and testing of battery BA-494( )/U. Final report, Mar 1964--Jan 1965, 1655 (AD--457141)
Design of standard line of vented silver--zinc batteries. Acceptance test report, 10 June 1967--29 February 1968, 495 (AD--840560)
Design of standard line of vented silver--zinc batteries. Final report, January 1967--August 1968, 500 (AD--843503)
Design of standard line of vented silver--zinc batteries. Quarterly report No. 1, 10 January--9 April 1967, 357 (AD--656623)
Design of standard line of vented silver--zinc batteries. Quarterly report No. 2, 10 April--9 July 1967, 1757 (AD--663793)
Design of standard line of vented silver--zinc batteries. Quarterly report No. 3, 10 July--31 October 1967, 479 (AD--827683)
Development of the BB-520( )/U nickel--cadmium battery for hybrid applications. Semi-annual report Nov 1972--May 1973, 556 (AD--915855L)
Development of the HARP battery. Final report, 364 (AD--665409)
Electric vehicle propulsion batteries: design and cost study for nickel/zinc battery manufacture. Task A, 638 (ANL-K--77-3542-1)
Final technical report for BA 494 /U, 2023 (AD-A--035722)
High-power lithium--organic electrolyte--CF cell, 567 (AD/A--000845)
Investigations leading to the design and development of magnesium/magnesium perchlorate batteries. Quarterly progress report No. 3, 1 Jan--31 Mar 1965, 327 (AD--618497)
Investigations leading to the design and development of magnesium/magnesium perchlorate batteries. Report No. 4 (final), 1 July 1964--30 June 1965, 330 (AD--622822)
Lead--acid reserve battery, 446 (AD--782910)
Lead--acid reserve battery. Final report, 447 (AD--782910)
Manufacturing methods and technology measure for nickel--zinc secondary batteries. Quarterly report No. 5, 1 Jul-30 Sep 1972, 1942 (AD--906676L)
Manufacturing methods and technology measure for nickel--zinc secondary batteries. Quarterly report No. 6, 1 Oct-31 Dec 1972, 546 (AD--908970L)
Manufacturing methods and technology measure for nickel--zinc secondary batteries. Quarterly report No. 8, 1 Apr-30 Jun 1973, 553 (AD--913197L)
Manufacturing methods and technology measure for nickel--zinc secondary batteries. Quarterly report No. 3, 1 Jan-31 Mar 1972, 536 (AD--900475L)
Manufacturing methods and technology measure for nickel--zinc secondary batteries. Quarterly report No. 4, 1 Apr-30 Jun 1972, 538 (AD--902749L)
Manufacturing methods and technology measure for nickel--zinc secondary batteries. Quarterly report No. 7, 1 Jan-31 Mar 1973, 1958 (AD--911406L)
Manufacturing methods and technology measure for standard battery cases. Quarterly report No. 3, 1 May--31 July 1970, 3059 (AD--877313)
Manufacturing methods and technology measure for standard battery cases. Quarterly report No. 4, 1 August--31 October 1970, 3063 (AD--880896)
Manufacturing methods and technology measure for standard battery cases. Final report, 14 Oct 1969-30 Sep 1972, 3084 (AD--904964L)
Manufacturing methods and technology measure for standard battery cases. Quarterly report No. 9, 1 Nov 1971-31 Jan 1972, 3073 (AD--894816L)
Production and acceptance testing of battery BA-494( )/U. Final report, 1 May--31 Dec 1965, 1694 (AD--478026)
Sealed nickel--cadmium battery assembly BB-553( )/U. Final report, Jan 1970-Apr 1972, 418 (AD--748454)
Sealed nickel--cadmium battery assembly BB-655( )/U. Report No. 1 (final), 1 Jun 1969-30 Sep 1970, 394 (AD--714243)
Study of process variables associated with manufacturing hermetically-sealed nickel--cadmium cells. Final report, 702 (N--74-26501)
Vented nickel--cadmium battery assembly BB-500 ( )/U. Final report, 15 Dec 1967-30 May 1969, 391 (AD--698030)
Vented nickel--cadmium battery assembly BB-607( )/U, 375 (AD--674228)

EAGLE-PICHER INDUSTRIES, INC., JOPLIN, MO. (USA). ELECTRONICS DIV.
Study of oxygen gas production phenomenon during stand and discharge in silver--zinc batteries. Final report, 703 (N--74-34545)

EIC CORP., NEWTON, MASS. (USA)
Low temperature lithium/sulfur secondary battery. Annual progress report, December 1, 1974--December 1, 1975, 666 (COO--2520-2)

EIC, INC., NEWTON, MASS. (USA)
Lithium--inorganic electrolyte batteries. Quarterly progress report No. 13, 1 January--31 March 1977, 2028 (AD-A--041867)
Low temperature lithium/sulfur secondary battery. Semiannual progress report, December 1, 1974--June 1, 1975, 3181 (COO--2520-1)
Passive-lithium secondary batteries. Final technical report, 1 Jan 1974-31 Jan 1975, 575 (AD/A--006748)
Sulfur-based lithium--organic electrolyte secondary batteries. Quarterly report No. 6, 4 Mar 1975--3 Jun 1975, 583 (AD-A--017642)
Sulfur-based lithium--organic electrolyte secondary batteries. Quarterly report, 3 Dec 1973--3 Mar 1974, 2976 (AD--782241)
Sulfur-based lithium--organic electrolyte secondary batteries. Quarterly report No. 3, 4 June--3 September 1974, 570 (AD/A--003309)
Sulfur-based lithium--organic electrolyte secondary batteries. Final report, 3 Dec 1973--29 Aug 1975, 588 (AD-A--023496)
Sulfur-based lithium-organic electrolyte secondary batteries. Quarterly report No. 4, 4 September--3 December 1974, 576 (AD/A--008044)
Sulfur-based lithium-organic electrolyte secondary batteries. Quarterly report No. 5, 4 Dec 19743--Mar 1975, 578 (AD-A--014881)
The effect of additives in lithium cycling in methyl acetate. Final technical report, 1 Jan 1974-31 Jan 1975, 2005 (AD/A--006572)
The effect of additives on lithium cycling in propylene carbonate. Final technical report, 1 Jan 1974-31 Jan 1975, 2004 (AD/A--006571)

ELECTRIC POWER RESEARCH INST., PALO ALTO, CALIF. (USA)
Near-term energy storage technologies: the lead--acid battery. A compilation of workshop papers presented on November 18--19, 1975, 730 (PB--251490)
Stibine formation and detection in lead acid batteries, 2046 (EPRI-EM--448-SR)

ELECTRIC STORAGE BATTERY CO., YARDLEY, PA. (USA)
High-energy storage system (organic electrolyte). Quarterly report No. 3, 15 December 1965--15 March 1966, 340 (AD--634491)
High-energy system (organic electrolyte). Final report, 15 June 1965--14 June 1966, 349 (AD--639709)
High-energy system (organic electrolyte). Quarterly report No. 1, 15 June--15 September 1965, 334 (AD--628961)
High-energy system (organic electrolyte). Quarterly report No. 2, 15 September--15 December 1965, 336 (AD--630691)

ELECTRIC STORAGE BATTERY CO., YARDLEY, PA. (USA). CARL F. NORBERG RESEARCH CENTER
High-energy system (organic electrolyte)., 2892 (AD--648920)
High-energy system (organic electrolyte). Quarterly report No. 1, 15 June--15 September 1966, 2887 (AD--643935)
High-energy system (organic electrolyte). Quarterly report No. 3, 15 December 1966--15 March 1967, 352 (AD--653785)

ELECTRIC VEHICLE COUNCIL, NEW YORK (USA)
International electric vehicle symposium, Atlantic City, New Jersey, 8--10 November 1971, 4892 (CONF-711166--)
International electric vehicle symposium, Phoenix, Arizona, 5--7 November 1969, 4866 (CONF-691143--)

ELECTROCHIMICA CORP., MENLO PARK, CALIF. (USA)
High-energy nonaqueous battery system. Final report, 1 December 1965--31 August 1967, 477 (AD--825181)
Research and development of a high-energy nonaqueous battery. Quarterly technical report No. 3, 18 Sep--18 Dec 1963, 244 (AD--347494)
Research and development of a high-energy nonaqueous battery. Quarterly technical report No. 4, 18 Dec 1963--18 Mar 1964, 246 (AD--352854)
Research and development of a high-energy nonaqueous battery. Quarterly technical report No. 5, 18 Mar--18 Jun 1964, 247 (AD--354554)
Research and development of a high-energy nonaqueous battery. Quarterly technical report No. 6, 18 Jun--18 Sep 1964, 248 (AD--356992)
Research and development of a high-energy nonaqueous battery. Quarterly progress report No. 7, 18 Sep--18 Dec 1964, 249 (AD--359290)
Research and development of a high-energy nonaqueous battery. Final report, 18 Mar 1963--18 Mar 1965, 250 (AD--369426)
Research and development of a high-energy nonaqueous battery. Quarterly technical report No. 2, 18 Jun--18 Sep 1963, 245 (AD--347495)
Research on a high-energy nonaqueous battery system. Quarterly progress report No. 1, 1 Dec 1965--1 Mar 1966, 294 (AD--484014)
Research on a high-energy nonaqueous battery system. Quarterly progress report No. 2, 1 Mar--31 May 1966, 295 (AD--484015)
Research on a high-energy nonaqueous battery system. Quarterly progress report No. 6, 1 December 1968--28 February 1969, 514 (AD--853976)

Research on a high-energy nonaqueous battery system. Quarterly progress report No. 7, 1 March--31 May 1969, 516 (AD--856423)
Research on a high-energy nonaqueous battery system. Quarterly progress report No. 4, 1 June--31 August 1968, 501 (AD--843741)
Research on a high-energy nonaqueous battery system. Quarterly progress report No. 3, 1 June--31 August 1966, 452 (AD--802208)
Research on a high-energy nonaqueous battery system. Quarterly progress report No. 3, 1 March--31 May 1968, 3029 (AD--837458)
Research on a high-energy nonaqueous battery system. Quarterly progress report No. 4, 1 September--30 November 1966, 458 (AD--808475)
Research on a high-energy nonaqueous battery system. Quarterly progress report No. 5, 1 December 1966--28 February 1967, 460 (AD--813321)
Research on a high-energy nonaqueous battery system. Quarterly progress report No. 2, 1 December 1967--29 February 1968, 486 (AD--832005)
Research on a high-energy nonaqueous battery system. Quarterly progress report No. 6, 1 March--31 May 1967, 464 (AD--818935)
Research on a high-energy nonaqueous battery system. Quarterly progress report No. 5, 1 September--30 November 1968, 508 (AD--848884)
Research on electrochemical parameters for nonaqueous batteries: task 1. Quarterly progress report No. 1, 524 (AD--868947)
Research on electrochemical parameters for nonaqueous batteries: task I. Quarterly progress report No. 2, 525 (AD--870181)

ELECTROCHIMICA CORP., MOUNTAIN VIEW, CALIF. (USA). RESEARCH AND DEVELOPMENT LAB.
Exploratory development of non-aqueous high rate batteries. Phase I. Quarterly progress report No. 2, 15 Apr-15 Jun 1972, 3081 (AD--903276L)

ELECTRO-OPTICAL SYSTEMS, INC., PASADENA, CALIF. (USA)
Ion engine orbital flight test program. Final technical report, 2827 (AD--476205)

ELPOWER CORP., SANTA ANA, CALIF. (USA)
High energy density, long life secondary battery (silver--zinc) assembly BB-634( )/U. Final report, 31 Oct 1968-15 Oct 1971, 401 (AD--732495)

EMR-AEROSPACE SCIENCE, COLLEGE PARK, MD. (USA)
Rapid charger for maintenance free batteries. Final report, 2970 (AD--772072)

ENERGY DEVELOPMENT ASSOCIATES, MADISON HEIGHTS, MICH. (USA)
Evaluation of a 1-kWh zinc chloride battery system. Interim report, 2107 (PB--260683)

ENERGY RESEARCH CORP., BETHEL, CONN. (USA)
Design and fabrication of silver--hydrogen cells, 709 (N--75-33496)
Development of stable zinc electrodes and inorganic separators for use in submarine type silver--zinc cells. Interim report 15 Mar 1973--15 Mar 1974, 1994 (AD--919148L)
Development of zinc electrodes and inorganic separators for large size silver--zinc batteries. Final technical report, 4 Mar 1974--31 Oct 1975, 3130 (AD-A--022467)
Evaluation of improved separator material in large silver--zinc cells for use in submersible vehicles. Final report, 1 Aug 1972--31 Jan 1974, 2973 (AD--774674)
High energy sealed nickel--zinc batteries. First annual report, 1 Mar 1972--1 Oct 1973, 1830 (AD--772944)
High energy sealed nickel--zinc batteries. Semi-annual report, 1 Mar-1 Sep 1972, 425 (AD--755550)
Low power metal hydride fuel cell/battery hybrid systems. Final report, 15 June 1973--15 October 1974, 571 (AD/A--005079)
Low power metal hydride fuel cell/battery hybrid systems, 669 (ECOM--0227-F)
Sealed nickel--zinc rechargeable batteries. Final report, 31 Mar 1971-30 Mar 1972, 1817 (AD--748896)
Sealed nickel--zinc rechargeable batteries. Semi-annual report 1 Apr-30 Sep 1971, 405 (AD--734927)
Secondary zinc--oxygen batteries, 670 (ECOM--0272-F-72)
Secondary zinc--oxygen batteries. Final report, 421 (AD--751751)
Secondary zinc--oxygen batteries. Final report, Jun 1972--Jun 1973, 700 (N--74-17805)
Secondary zinc--oxygen batteries. Semi-annual report, 412 (AD--740234)
Secondary zinc--oxygen batteries. Semi-annual report, 3097 (AD--911460L)

ENERGY RESEARCH CORP., DANBURY, CONN. (USA)
Investigation of metal hydride materials as hydrogen reservoirs for metal--hydrogen batteries, 3233 (N--76-27667)

ENVIRONMENTAL PROTECTION AGENCY, DENVER, COLO. (USA)
Battery wedge for submarines or other installations, 3146 (AD-D--003275)
Digital amp-hour monitor, 3147 (AD-D--003476)

ESB, INC., PHILADELPHIA, PA. (USA)
Cost and design study for electric vehicle lead--acid batteries, 640 (ANL-K--77-3621-1(Vol.1))

ESB, INC., YARDLEY, PA. (USA). C.F. NORBERG TECHNOLOGY CENTER
Design and cost study for state-of-the-art lead acid load leveling and peaking batteries. Final report, 675 (EPRI-EM--375)

ESB, INC., YARDLEY, PA. (USA). ESB TECHNOLOGY CENTER
Production and engineering methods for Carb-Tek (trade name) batteries in fork lift trucks. Interim report Sep 1974--Feb 1975, 584 (AD-A--018106)
Production and engineering methods for Carb-Tek (trade name) batteries in fork lift trucks. Interim report Mar 1975--Mar 1976, 591 (AD-A--035983)

ESB, INC., YARDLEY, PA. (USA). POWER TECHNOLOGY DEPT.
BA-528( )/U mechanically rechargeable zinc--air battery. Final report, 419 (AD--749779)
Sodium chloride battery development program for load leveling. Interim report, 1 Apr--31 Dec 1974, 726 (PB--243872/9ST)

EUROPEAN SPACE AGENCY, 75 - PARIS (FRANCE)
Space power systems: energy storage, 86 (N--70-26430)

EUROPEAN SPACE RESEARCH AND TECHNOLOGY CENTRE, NOORDWIJK (NETHERLANDS)
Hermetic covers for European Ni/Cd cells, 3234 (N--76-27697)
Nickel--cadmium, silver--cadmium, and silver--zinc batteries, 694 (N--70-29061)
Satellite power-conditioning and control: summary of design possibilities, 4978 (N--68-18466)
Space-rated nickel/cadmium batteries and their charge control, 2059 (N--70-30138)

F

FEDERAL AVIATION ADMINISTRATION, WASHINGTON, D.C. (USA). SYSTEMS RESEARCH AND DEVELOPMENT SERVICE
Feasibility of recharging FAA in-service dry cell batteries. Final report, 1734 (AD--620018)

FEDERAL POWER COMMISSION, WASHINGTON, D.C. (USA). BUREAU OF POWER
Development of electrically powered vehicles, 4996 (PB--174982)

FLORIDA UNIV., GAINESVILLE (USA). ENGINEERING AND INDUSTRIAL EXPERIMENT STATION
Separators for lithium alloy--iron sulfide fused salt batteries. First annual report, 3248 (ORO--4874-2)

FOERSVARETS FORSKNINGSANSTALT, STOCKHOLM (SWEDEN)
Test on sealed Ni/Cd cells for satellite use, 2092 (N--76-11560)

FOOTE MINERAL CO., EXTON, PA. (USA)
Active energy storage materials for integrated cell stacks. Final report, 1 Jul 1970-30 Jun 1971, 2937 (AD--728839)
Active energy storage materials for integrated cell stacks. Technical report, 1 Jul 1970-15 Jan 1971, 2934 (AD--720600)

FORD MOTOR CO., DEARBORN, MICH. (USA)
Ford/ERDA sodium--sulfur battery development, Phase I. Final report, June 15, 1975--March 31, 1976, 752 (TID--27055)
Research on electrodes and electrolyte for Ford sodium-sulfur battery. Appendix a. List of research contributors. Report for 30 Jun 1974--29 Jun 1975, 3256 (PB--244290)
Research on electrodes and electrolyte for the Ford sodium--sulfur battery. Quarterly report, June 30, 1973--September 30, 1973, 3247 (NSF/RA/N--73-109)
Research on electrodes and electrolyte for the Ford sodium--sulfur battery. Quarterly report, 1 Jan-31 Mar 1974, 3251 (PB--234561)
Research on electrodes and electrolyte for the Ford sodium--sulfur battery. Quarterly report covering the period January 1, 1974 to March 31, 19754, 723 (PB--234561)
Research on electrodes and electrolyte for the Ford sodium--sulfur battery. Quarterly report, 30 Jun--30 Sep 1973, 3217 (N--74-19713)
Research on electrodes and electrolyte for the Ford sodium--sulfur battery. Quarterly report covering the period January 1, 1974 to March 31, 19754, 3252 (PB--234561)
Research on electrodes and electrolyte for the Ford sodium--sulfur battery. Annual report, 30 June 1973--29 June 1974, 3253 (PB--235484)
Research on electrodes and electrolyte for the Ford sodium-sulfur battery. Annual report, 30 Jun 1974--29 Jun 1975, 3255 (PB--244289)
Research on electrodes and electrolyte for the Ford sodium--sulfur battery. Semiannual report, 30 Jun--30 Dec 1975, 3261 (PB--252827)

FOREIGN TECHNOLOGY DIV., WRIGHT-PATTERSON AFB, OHIO (USA)
Certain questions concerning the reliability of multiple element chemical current sources, 1819 (AD--754725)

GTE LABS., INC., WALTHAM, MASS. (USA)
Lithium battery with inorganic electrolyte. Final report, 1 Dec 1971--31 May 1973, 2068 (N--74-12745)
Lithium battery with inorganic electrolyte. Quarterly progress report No. 3, 1 May-31 Jul 1972, 543 (AD--907704)
GTE SYLVANIA, INC., NEEDHAM HEIGHTS, MASS. (USA)
Sealed lithium inorganic electrolyte cell. Quarterly report No. 1, 1 Mar-31 May 1974, 449 (AD--784072)
GULTON INDUSTRIES, INC., HAWTHORNE, CALIF. (USA)
Maintenance-free battery system, model No. EMBC114C. Battery system, sealed cell, nickel cadmium, integral charge control, aircraft. Final report, 428 (AD--757535)
Study of high-current densities in nickel cadmium bipolar batteries. Final report, 1745 (AD--647468)
GULTON INDUSTRIES, INC., METUCHEN, N.J. (USA)
Acceptance testing of sealed, rechargeable silver--cadmium cells. Final report, 1765 (AD--691354)
Acceptance testing of vented, rechargeable silver--cadmium cells. Final report, September 1968--January 1969, 1766 (AD--691355)
Cycle life testing of sealed, rechargeable silver--cadmium cells. Final report, September 1968--June 1969, 1768 (AD--693844)
Cycle life testing of vented, rechargeable silver--cadmium cells. Final report, Sep 1968--Jun 1969, 1772 (AD--697863)
Design, fabrication, and testing of sealed, rechargeable silver--cadmium cells. Semiannual progress report, 6 December 1964--6 June 1965, 1737 (AD--624410)
Design, fabrication, and testing of sealed, rechargeable silver--cadmium cells. Quarterly progress report No. 2, 1 Oct--31 Dec 1963, 320 (AD--610763)
Design, fabrication, and testing of sealed, rechargeable silver--cadmium cells. Quarterly progress report No. 3, 1 Jan--31 Mar 1964, 2796 (AD--449231)
Design, fabrication, and testing of vented, rechargeable silver--cadmium cells, 1736 (AD--624407)
Design, fabrication, and testing of vented, rechargeable silver--cadmium cells. Quarterly progress report No. 2, 1 Oct--30 Dec 1963, 256 (AD--434061)
Design, fabrication, and testing of vented, rechargeable silver--cadmium cells. Final report, May 1966--August 1967, 363 (AD--664777)
Design, fabrication and testing of vented, rechargeable silver--cadmium cells. Quarterly progress report No. 3, 1 Jan--31 Mar 1964, 315 (AD--601583)
Design, fabrication of prototypes, and testing of sealed, rechargeable silver--cadmium cells. Final report, February 1967--October 1968, 382 (AD--683466)
Design, fabrication of prototypes, and testing of sealed rechargeable silver--cadmium cells. Interim quarterly report No. 2, June 1965--March 1968, 373 (AD--672502)
Design, fabrication of prototypes and testing of vented, rechargeable silver--cadmium cells. Interim quarterly report, 2883 (AD--640387)
Investigation of hermetically sealed, high-rate, maintenance-free, nickel--cadmium batteries for aircraft applications. Final technical report, Jul 1964--Jun 1966, 1712 (AD--489830)
Investigation of hermetically sealed, maintenance-free, high-rate, nickel--cadmium batteries for aircraft applications. Quarterly technical progress report No. 7, 296 (AD--484494)
Investigation of hermetically sealed, maintenance-free, high-rate, nickel--cadmium batteries for aircraft applications. Quarterly technical progress report No. 6, 2833 (AD--479652)
Investigation of hermetically sealed maintenance-free, high-rate, nickel--cadmium batteries for aircraft applications. Quarterly technical progress report No. 4, 1676 (AD--468644)
Investigation of hermetically sealed maintenance-free, high-rate, nickel--cadmium batteries for aircraft

applications. Quarterly technical progress report No. 5, 1691 (AD--473883)
Investigation of hermetically sealed maintenance-free, high-rate, nickel--cadmium batteries for aircraft applications. Quarterly technical progress report No. 3, 1670 (AD--463855)
Investigation of hermetically sealed, maintenance-free, high-rate, nickel--cadmium batteries for aircraft application. Quarterly technical progress report No. 1, 1729 (AD--608662)
Investigation of hermetically sealed maintenance-free, high-rate, nickel--cadmium batteries for aircraft applications. Quarterly technical progress report No. 2, 1731 (AD--611404)
Investigation of maintenance-free, high-rate, nickel-cadmium battery power system for aircraft application. Final technical report, 3062 (AD--879606)
Investigation of maintenance-free, high-rate, nickel--cadmium batteries for aircraft application. Quarterly technical progress report No. 2, 2989 (AD--805274)
Investigation of maintenance-free high-rate, nickel--cadmium batteries for aircraft application. Quarterly technical progress report No. 4, 1 March--1 June 1967, 463 (AD--818309)
Investigation of maintenance-free, high-rate, nickel--cadmium battery power system for aircraft application. Quarterly technical progress report No. 8, 1 March--31 May 1968, 490 (AD--837898)
Investigation of maintenance-free, high-rate, nickel--cadmium batteries for aircraft application. Quarterly technical progress report No. 1, 451 (AD--800799)
Investigation of maintenance-free high-rate, nickel--cadmium batteries for aircraft application. Quarterly technical progress report No. 7, 1 September 1967--29 February 1968, 484 (AD--831150)
Investigation of maintenance-free, high-rate, nickel--cadmium batteries for aircraft application. Quarterly technical report No. 3, December 1966--March 1967, 1856 (AD--814002)
Investigation of maintenance-free, high-rate, nickel--cadmium batteries for aircraft application. Quarterly progress report No. 5, 1 June--31 August 1967, 1861 (AD--822449)
Investigation of methods leading to the determination of the state of charge of nickel--cadmium batteries. Final report, 1 Jan--30 Dec 1963, 1630 (AD--435989)
Lithium--nickel fluoride secondary battery investigation. Quarterly technical progress report No. 2, 27 July--27 October 1966, 2986 (AD--803529)
Lithium--nickel fluoride secondary battery investigation. Quarterly technical progress report No. 7, 27 October 1967--27 January 1968, 3020 (AD--829093)
Lithium--nickel fluoride secondary battery investigation. Final report, 27 April 1966--27 April 1968, 489 (AD--836554)
Lithium--nickel fluoride secondary battery investigation. Quarterly technical progress report No. 4, 27 January--27 April 1967, 3003 (AD--815027)
Lithium--nickel fluoride secondary battery investigation. Quarterly technical progress report No. 5, 27 April--27 July 1967, 3007 (AD--820259)
Lithium--nickel fluoride secondary battery investigation. Supplement to quarterly technical progress report No. 3, 3004 (AD--816378)
Lithium--nickel fluoride secondary battery investigation. Quarterly technical progress report No. 3, 27 October 1966--27 January 1967, 2995 (AD--808839)
Lithium--nickel fluoride secondary battery investigation. Quarterly technical progress report No. 6, 27 July--27 October 1967, 3013 (AD--824659)
Lithium--nickel fluoride secondary battery investigation. Quarterly technical progress report No. 1, 27 Apr--27 Jul 1966, 2841 (AD--487828)
Lithium--nickel halide secondary battery investigation. Final technical report, Dec 1964--Nov 1965, 2832 (AD--478992)
Lithium--nickel halide secondary battery investigation. Final technical report, December 1963--December 1964, 2859 (AD--612492)
Lithium--nickel halide secondary battery investigation. Quarterly technical progress report No. 2 for period ending 18 Jun 1965, 2813 (AD--468352)
Lithium--nickel halide secondary battery investigation. Final technical report, Dec 1973--Dec 1974, 323 (AD--612492)
Lithium--nickel halide secondary battery investigation. Quarterly technical progress report No. 3, 1727 (AD--605754)
Lithium--nickel halide secondary battery investigation. Quarterly technical progress report No. 3 for period ending 18 Sep 1965, 2824 (AD--474394)
Lithium--nickel halide secondary battery investigation. Quarterly technical progress report No. 1, 256 (AD--433618)
Lithium--nickel halide secondary battery investigation. Quarterly technical progress report No. 1, 10 Mar 1965, 2806 (AD--464485)
Lithium--nickel halide secondary battery investigation. Quarterly technical progress report No. 2, 314 (AD--601148)
Lithium--nickel halide secondary battery investigation. Quarterly technical progress report No. 3, 317 (AD--605754)
Long-life stable zinc electrode for alkaline secondary battery. Quarterly report No. 2, 1 March--31 May 1967, 3015 (AD--824719)
Production of uniform nickel--cadmium battery plate materials. Quarterly report, 13 September--12 December 1969, 3213 (N--71-28053)
Production of uniform nickel--cadmium battery plate materials. Quarterly report, 13 June--12 September 1969, 3208 (N--70-17675)

HARRY DIAMOND LABS., WASHINGTON, D.C. (USA)
Comparison of potential step and triangular voltage sweep methods of double layer capacitance measurements. III. Porous zinc electrodes, 2949 (AD--742219)
Fast-charge power supply, 468 (AD--821594)
Metadinitrobenzene--zinc cell performance in ammonia--methanol--ammonium thiocyanate electrolyte, 1899 (AD--866617)
Power supplies for ordnance fuzing, 4840 (AD--780028)
Small, ultrastable, transistor-regulated multivoltage power supply, 2850 (AD--601946)
Stability of lead dioxide electrode stock during storage at 160°F, 3082 (AD--903317L)
TM research program. High-g tests of components, 1735 (AD--622405)
HELIOTEK, SYLMAR, CALIF. (USA)
High energy density sintered plate-type nickel--cadmium battery cells. Part II. Electrochemical impregnation methods to produce nickel oxide electrodes. Technical report, December 1972--December 1973, 3114 (AD/A--002142)
High-energy-density sintered plate-type nickel--cadmium battery cells. Part I. The positive electrode/plaque relationship. Interim report, December 1972--December 1973, 565 (AD/A--000103)
Sinter of uniform, predictable, blemish-free nickel pleque for large aerospace nickel cadmium cells, 3225 (N--75-18717)
HONEYWELL, INC., HOPKINS, MINN. (USA)
Research and development of a dc--dc converter. Final report, 1 Jun 1971--31 Jul 1972. (Includes supplement), 539 (AD--903861L)
HORNER AND SHIFRIN, INC., ST. LOUIS, MO. (USA)
Qualification tests of one type MS 90365-2 nickel--cadmium aircraft battery, manufactured by Marathon Battery Company, under contract N00383-71-C-0063, 1927 (AD--904404L)
HOWARD (P.L.) ASSOCIATES, INC., CENTREVILLE, MD. (USA)
Kinetic study of the zinc electrode by modified pulse techniques and concentration gradients. Final technical report, 3040 (AD--847223)
HUGHES AIRCRAFT CO., CULVER CITY, CALIF. (USA)
Nickel--cadmium batteries. Bibliography for 1940--Dec 1965, 18 (AD--484505)
TOW. Monthly technical report No. 118, 1-31 May 1972, 3075 (AD--900561L)
HUGHES AIRCRAFT CO., CULVER CITY, CALIF. (USA). LASER DIV.
Lightweight laser designator battery evaluation tests. Final report, 2017 (AD-A--019511)
HUGHES AIRCRAFT CO., EL SEGUNDO, CALIF. (USA)
Low earth orbit battery development project. Final report, 1 Jul 1970-30 Jun 1972, 537 (AD--902570L)
Nickel hydrogen energy storage for satellites. Final report, 1 Jul 1973-31 Oct 1974, 572 (AD/A--006427)
Nickel hydrogen energy storage for satellites. Supplement to final report, Dec 1974--Feb 1975, 2010 (AD-A--012303)
HUGHES AIRCRAFT CO., EL SEGUNDO, CALIF. (USA). SPACE SYSTEMS DIV.
Design and performance of the TACSAT Power Subsystem, 1420

I

IDAHO STATE UNIV., POCATELLO (USA)
Investigation of electrode materials for alkaline batteries. Quarterly report, 3211 (N--70--32647)
IIT RESEARCH INST., CHICAGO, ILL. (USA)
Tellurium chloride thermoregenerative galvanic cell. Final report, 1 Mar 1968--28 Feb 1969, 582 (AD-A--016770)
ILLINOIS UNIV., URBANA (USA)
Investigations on storage batteries at -65°F. Progress report No. 8 (final), 1 Sep 1946--1 Sep 1948, 1717 (AD--491591)
Investigations on storage batteries at -65°F. Quarterly progress report No. 6, 1 Dec 1947--1 Mar 1948, 1715 (AD--491583)

Investigations on storage batteries at -65°F. Quarterly progress report No. 7, 1 Mar--1 Jun 1948, 1716 (AD--491587)
INDEPENDENT BATTERY MANUFACTURERS ASSOCIATION, INC., LARGO, FLA. (USA)
IBMA 39th annual convention, 78 (CONF-7610115--)
INLAND TESTING LABS., DAYTON, OHIO (USA)
Alkaline battery evaluation. Final report, 30 Jun 1960--15 Mar 1964, 1724 (AD--602676)
Alkaline battery evaluation. Report for Apr 1962--15 Oct 1964, 1672 (AD--465888)
Alkaline cell evaluation and analysis. Quarterly technical progress report No. 5, 15 May--15 Aug 1965, 1690 (AD--472416)
Alkaline cell evaluation and analysis. Quarterly technical progress report No. 2, 15 Aug--15 Nov 1964, 1730 (AD--608666)
Alkaline cell evaluation and analysis. Quarterly technical progress report No. 4, 15 Feb--15 May 1965, 1673 (AD--466263)
Alkaline cell evaluation and analysis. Quarterly technical progress report No. 3, 15 Nov 1964--15 Feb 1965, 1732 (AD--611850)
Alkaline cell evaluation and analysis. Quarterly technical progress report No. 1, 15 May--15 Aug 1964, 1642 (AD--447480)
Investigations leading to the development of the optimum method(s) for charging sealed nickel--cadmium batteries. Final report, 1 Oct 1962--30 Sep 1963 and addendum, 4 May--4 Oct 1964, 1653 (AD--456387)
INSTITUTE FOR DEFENSE ANALYSES, ARLINGTON, VA. (USA)
Battery research, 251 (AD--428659)
Power sources for remote-area counterinsurgency. Survey and recommendations, 1627 (AD--430689)

Diode control research. Quarterly technical progress report No. 9, 1 June--1 September 1968, 1882 (AD--845341)
Diode control research. Quarterly technical progress report No. 10, 1 September--1 December 1968, 1885 (AD--850093)
Diode control research. Quarterly technical progress report No. 4, 1 March--1 June 1967, 3011 (AD--822337)
Diode control research. Quarterly technical progress report No. 7, 1867 (AD--832025)
Diode control research. Quarterly technical progress report No. 3, 1 December 1966--1 March 1967, 2998 (AD--810831)
Diode control research. Quarterly technical progress report No. 2, 1 September--1 December 1966, 2988 (AD--805146)
Diode control research. Quarterly technical progress report No. 11, 1 December 1968--1 March 1969, 3045 (AD--854317)
Diode control research. Quarterly technical progress report No. 1, 1 Jun--1 Sep 1966, 2844 (AD--489882)
Evaluation of rechargeable lithium--copper chloride organic electrolyte battery system. Technical report No. 2, March 1966--March 1967, 356 (AD--654451)
Evaluation of rechargeable lithium--copper chloride organic electrolyte battery system. Technical report No. 1, March--September 1966, 1743 (AD--643378)
Evaluation of rechargeable lithium--copper chloride organic electrolyte battery system. Final report, March--October 1967, 3016 (AD--825241)
Research and development of a capacity nonaqueous secondary battery. Fourth quarterly report, July--September 1965, 683 (N--66-15787)
Research and development of a high capacity, nonaqueous secondary battery. Final report, October 1964--December 1965, 2053 (N--66-35218)
Research and development of a high-capacity nonaqueous secondary battery. First quarterly report, 680 (N--65-18935)
Research and development of a high-capacity, nonaqueous secondary battery. Second quarterly report, 682 (N--65-36782)
Research on electrochemical parameters for nonaqueous batteries: task I. Quarterly progress report No. 3, 530 (AD--874598)
MALLORY (P.R.) AND CO., INC., BURLINGTON, MASS. (USA). LAB. FOR PHYSICAL SCIENCE
Sealed primary lithium-inorganic electrolyte cell. Quarterly report No. 7, 1 Sep--30 Nov 1975, 2019 (AD-A--023437)
MALLORY (P.R.) AND CO., INC., INDIANAPOLIS, IND. (USA)
Mercury cell battery investigation. Final report, 16 Dec 1962--15 Dec 1963, 252 (AD--430404)
MARATHON BATTERY CO., WACO, TEX. (USA)
Design and development of high charge rate nickel cadmium batteries. Interim progress report Oct 1970-Nov 1972, 545 (AD--908765L)

Design and development of high charge rate nickel--cadmium batteries. Final report, Mar 1970-Nov 1973, 559 (AD--917235L)
MARE ISLAND NAVAL SHIPYARD, VALLEJO, CALIF. (USA)
Evaluation of 'Daramic' polyethylene separators using Gould type TPX-61-E, Guppy I, lead--antimony submarine main storage battery cells on a service life test. Technical report, 3076 (AD--900702L)
Evaluation of Gould type TLX-39B, Guppy I mod C (black oxide) submarine main storage battery cells by the '23-1' float-charge procedure. Final report, 1979 (AD--916361L)
Evaluation of Gould-National Battery Company type ODX-77 SARGO II submarine main storage battery cells by the service life test. Technical report, 1939 (AD--906360L)
Evaluation of high-rate charging of DSRV batteries. Final report, 1953 (AD--910187L)
Evaluation of OZX-47, SARGO I, lead--antimony submarine main storage battery cells. Final report, 1956 (AD--910857L)
Investigation of submarine main storage battery cell air lift tube deposits. Final report, Dec 1971-Oct 1972, 1968 (AD--913676L)
Silver--zinc battery maintenance and casualty protection. Final report, 1954 (AD--910631L)
Standard deviation and acceptance sampling of silver--zinc storage batteries. Final report, 1957 (AD--910972L)
MARINE CORPS LANDING FORCE DEVELOPMENT CENTER, QUANTICO, VA. (USA)
Evaluation of the silver--zinc battery as a power source for the infrared weaponsight under extreme cold weather operating conditions, 1649 (AD--453083)
High accuracy voltmeter evaluation. Final report, 2981 (AD--800315L)
Multichannel engine powered battery charger. Final report, 2816 (AD--470065)
MARINE ENGINEERING LAB., ANNAPOLIS, MD. (USA)
Nickel--cadmium battery reconditioner, 2881 (AD--638603)
Shunt voltage regulator circuit for nickel--cadmium cells with auxiliary electrodes, 2878 (AD--631951)
MARTIN CO., BALTIMORE, MD. (USA)
Battery rechargeable, manually activated, 264 (AD--446604)
Qual. testing of Martin Co. battery, part No. PS940300011-001, 1646 (AD--448883)
MARTIN CO., BALTIMORE, MD. (USA). ELECTRONIC SYSTEMS AND PRODUCTS DIV.
Design specification for battery power supply A/E 24A-9, 260 (AD--444555)
Economic aspects of major extensions in spacecraft life (S-2). Volume III. Sections VII and VIII, 2785 (AD--375061)
Operation of electronic components under severe hydrostatic pressures (part 2). Progress report No. 2, 1660 (AD--459150)
Operation of electronic components under severe hydrostatic pressure (part 1 of 2). Progress report No. 1, 1661 (AD--459153)
MARTIN MARIETTA AEROSPACE, DENVER, COLO. (USA)
Development of single-cell protectors for sealed silver--zinc cells. Phase 1. Final report, Apr 1975--Apr 1976, 3236 (N--76-32651)
MARTIN MARIETTA CORP., DENVER, COLO. (USA)
Viking Lander spacecraft battery. Final report, 713 (N--77-20557)
MASSACHUSETTS INST. OF TECH., LEXINGTON (USA). LINCOLN LAB.
Research for preparation of cation-conducting solids by high-pressure synthesis and other methods. Final report, 1 Aug 1973--28 Feb 1975, 3226 (N--75-24504)
Solid electrolytes: alkali-ion transport in skeleton structures. Semiannual technical summary report, 1 Jan--30 Jun 1976, 3136 (AD-A--032342)
Solid electrolytes: alkali-ion transport in skeleton structures. Semiannual technical summary No. 2, 1 Jul-31 Dec 1975, 3129 (AD-A--022199)
Solid electrolytes and photoelectrolysis. Semiannual technical summary report, 1 Mar--31 Dec 1974, 3119 (AD-A--009145)
MASSACHUSETTS UNIV., AMHERST (USA)
High energy density storage system with encapsulated silver--zinc cells for deep ocean applications, 420 (AD--750719)
Some deep sea vehicle personnel hulls and energy storage subsystems, 4837 (AD--717950)
MCDONNELL CO., ST. LOUIS, MO. (USA)
Operation and service manual for ACPU EFC charger/tester 52E270071, 3048 (AD--857173)
Operation and service manual for spacecraft battery balancing unit 52E230131, 3047 (AD--857146)
MCDONNELL DOUGLAS ASTRONAUTICS CO., NEWPORT BEACH, CALIF. (USA). ASTROPOWER LAB.
Development of improved zinc electrodes for secondary batteries. Final report, July 1968--July 1969, 3203 (N--69-40063)
Sealing of silver oxide--zinc storage cells. Final report, 3197 (N--69-12309)
MCDONNELL DOUGLAS ASTRONAUTICS CO., ST. LOUIS, MO. (USA)
Operation and service manual for Blockhouse Power Backup Battery Rack 52E230049 and External Power Control and Monitor Backup Battery Rack 52E230058, 1894 (AD--856788)
MCDONNELL DOUGLAS CORP., ST. LOUIS, MO. (USA)
Interdependence of the airlock module/orbital workshop thermal control and electrical power systems on Skylab, 2275
MELPAR, INC., FALLS CHURCH, VA. (USA)
Design and development of a low-temperature balloon battery. Phase 1 final report, 22 May-5 Aug 1968, 687 (N--69-16975)
MINICARS, INC., GOLETA, CALIF. (USA)
Emission optimization of heat engine/electric vehicle, 4859 (APTD--0957)
Emission optimization of heat engine/electric vehicle, 100 (NP--20354)
MINISTERIE VAN DEFENSIE, THE HAGUE (NETHERLANDS). TECHNISCH DOCUMENTATIE EN INFORMATIE CENTRUM VOOR DE KRIJGSMACHT
Electric drive for vehicles. Annotated bibliography from 1965 to 1968, 4841 (AD--877701)
MOLECULAR ENERGY CORP., MURRAY HILL, N.J. (USA)
Construction of 850 and 4,000 ampere-hour silver--zinc cells using inorganic separator. Final report, Jul 1972--Oct 1973, 699 (N--74-17798)

NAVAL AIR TEST CENTER, PATUXENT RIVER, MD. (USA)
Arinc Research Corporation evaluation of electric power equipment on aircraft, technical administration of. Final report, 1636 (AD--439635)
Arinc Research Corporation evaluation of electric power equipment on aircraft, technical administration of. Final report, 1637 (AD--439635)
Battery vibration investigation on H-3 helicopter. Report No. 1 (final), Dec 1972-Mar 1973, 1955 (AD--910807L)
H-2 battery system investigation. Interim report No. 1, Apr--Oct 1973, 1975 (AD--915478L)
H-3 helicopter battery system investigation. Interim report No. 1, Apr-Sep 1973, 1974 (AD--915448L)
Investigation of unregulated converters as battery charges in A-6 aircraft. Report No. 1 (final), Nov 1971-Jun 1972, 3086 (AD--905612L)
OV-10A aircraft Ni--Cd battery and charging system investigation. Report No. 1, (final), Apr-Sep 1973, 3109 (AD--919452L)
Service evaluation of aircraft battery charger, Electro Development Corporation model EDC 2-301-3. Report No. 2 (final), Apr 1970-Aug 1972, 3093 (AD--909458L)
Service evaluation of silver--cadmium batteries. Report No. 1 (final), Jul 1964--Jul 1965, 1709 (AD--487671)
T-28 battery system investigation. Final report Apr--Oct 1973, 1978 (AD--916042L)
Temperature investigation of OV-10A battery and battery compartment. Report No. 1 (final), 20 May-30 Dec 1971, 1932 (AD--905610L)
NAVAL AMMUNITION DEPOT, CRANE, IND. (USA)
Alkaline battery charger and state-of-charge indicator, developed by Leland Irborne Products Division of the American Machine and Foundry Company; valuation of , 2817 (AD--470687)
Analysis and evaluation of spacecraft battery accelerated life test data, 1783 (AD--713457)
Analysis and evaluation of spacecraft battery life test data (phase 2). Summary report, 1773 (AD--697938)
Capabilities for testing primary and secondary batteries, 1701 (AD--481870)
Cell capacities and life cycling capabilities versus storage time and temperature [for] sealed silver secondary cells, 1902 (AD--870855)
Evaluation of a forced-air-cooled battery manufactured by Marathon Battery Company, 1944 (AD--907585L)
Evaluation of high rate life test, authorized by AIRTASK A05-536-805/323-2/6178, employing one type MS 18045-74 nickel--cadmium battery. Final report, 1924 (AD--903445L)
Evaluation of high rate life test employing one type MS 18045-75 nickel--cadmium battery. Final report, 1922 (AD--903420L)
Evaluation of high rate life test employing one type MS 90365-2 nickel--cadmium battery. Final report, 1923 (AD--903421L)
Evaluation of lead--acid storage battery vent plugs to proposed revision of Mil-V-8800, 3102 (AD--913488L)
Evaluation of maintenance-free battery power system manufactured by Gulton Industries, Inc., 1920 (AD--903374L)
Evaluation of nickel--cadmium batteries with non-cellulosic separators, 1916 (AD--901311L)
Evaluation of storage methods, open circuit versus continuous trickle charge, for Sonotone 3.5 ampere-hour sealed nickel--cadmium secondary spacecraft cells, 1785 (AD--715803)
Evaluation of studies of LN-7(R) rechargeable nonaqueous cells, 1921 (AD--903381L)
Evaluation of two splash-proof aircraft batteries, nickel--cadmium, type MS18122, manufactured by General Electric Company, 1706 (AD--485571)
Evaluation of water-activated lead--acid aircraft storage batteries, 1917 (AD--901714L)
Evaluation program for secondary spacecraft cells. Acceptance test of McDonnell--Douglas Astropower Division 40.0 ampere-hour silver--zinc cells, 1798 (AD--734694)

Evaluation program for secondary spacecraft cells. Acceptance tests of Eagle-Picher 12.0 ampere-hour nickel--cadmium cells with auxiliary electrodes. Report for 16 Mar-26 Apr 1971, 1799 (AD--735003)
Evaluation program for secondary spacecraft cells. Annual report No. 8, 1802 (AD--738880)
Evaluation program for secondary spacecraft cells. Acceptance test of McDonnell Douglas, Astropower Division 5.0 ampere-hour silver--zinc cells, 1895 (AD--859323)
Evaluation program for secondary spacecraft cells. Acceptance test of McDonnell--Douglas, Astropower Division 5.0 ampere-hour silver--zinc cells, 1901 (AD--869422)
Evaluation program for secondary spacecraft cells. General performance test of Gulton Industries, Inc. 20 ampere-hour adhydrode nickel--cadmium cells, 1880 (AD--840860)
Evaluation program for secondary spacecraft cells. General performance test of Svenska Ackumulator Aktiebolaget Jungner of Sweden 4.0 ampere-hour nickel--cadmium cells, 1881 (AD--845234)
Evaluation program for secondary spacecraft cells. Synchronous orbit testing of General Electric Company 6.0 ampere-hour nickel--cadmium cells, 1779 (AD--711592)
Evaluation program for secondary spacecraft cells. Acceptance test of Gulton Industries, Inc., and General Electric Company 6.0 ampere-hour nickel--cadmium cells, 1781 (AD--711595)
Evaluation program for secondary spacecraft cells. Acceptance test of Sonotone Corporation 20 ampere-hour nickel--cadmium cells, 1782 (AD--711847)
Evaluation program for secondary spacecraft cells. Acceptance test of Gulton Industries 5.0 ampere-hour nickel--cadmium spacecraft cells with cobalt additive, 1784 (AD--714161)
Evaluation program for secondary spacecraft cells. Acceptance tests of Gulton Industries 6.0 ampere-hour nickel--cadmium cells with Gulton plates, 1780 (AD--711594)
Evaluation program for secondary spacecraft cells. Annual report No. 7, 1786 (AD--718854)
Evaluation program for secondary spacecraft cells. Acceptance test of 6.0 ampere-hour nickel--cadmium secondary cells (ceramic seals with nickel braze) manufactured by General Electric Company, 1787 (AD--720770)
Evaluation program for secondary spacecraft cells. Annual report No. 9, 1826 (AD--762602)
Evaluation program for secondary spacecraft cells: initial evaluation tests of Eagle--Picher Industries, Incorporated, 20.0-ampere-hour nickel--cadmium spacecraft cells, 1835 (AD--778671)
Evaluation program for secondary spacecraft cells: initial evaluation tests of General Electric Company 8.0 ampere-hour nickel--cadmium spacecraft cells with auxiliary electrodes for the small astronomy satellite (SAS-C), 1837 (AD--781788)
Evaluation program for secondary spacecraft cells. Annual report No. ; report on cycle life test, 1838 (AD--781835)
Evaluation program for secondary spacecraft cells: general performance test of General Electric Company 6.0 ampere-hour nickel--cadmium secondary spacecraft cells, 1763 (AD--679699)
Evaluation program for secondary spacecraft cells. Evaluation of storage methods, open circuit versus continuous trickle charge, Sonotone 3.5 ampere-hour sealed nickel--cadmium secondary spacecraft cells, 2063 (N--71-13426)
Evaluation program for secondary spacecraft cells. Acceptance tests of Heliotek Division, Textron, Inc. 20-0 ampere-hour nickel--cadmium cells, 1804 (AD--739740)
Evaluation program for secondary spacecraft cells. Acceptance test of Eagle-Picher 100 ampere-hour nickel--cadmium cells with auxiliary electrodes, 1806 (AD--740061)
Evaluation program for secondary spacecraft cells. Acceptance tests of Eagle-Picher 20.0 ampere-hour nickel--cadmium cells with auxiliary electrodes, 1807 (AD--740105)
Evaluation program for secondary spacecraft cells. Acceptance tests of General Electric 4.5 ampere-hour nickel--cadmium cells, NIMBUS type, 1809 (AD--741704)
Evaluation program for secondary spacecraft cells. Evaluation of storage methods, open circuit versus continuous trickle charge, for Sonotone 3.5 ampere-hour sealed nickel--cadmium secondary spacecraft cells, 1805 (AD--740060)
Evaluation program for secondary spacecraft cells. Acceptance test of General Electric Company 6.0 ampere-hour nickel--cadmium cells w/ signal and recombination electrodes, 1790 (AD--725848)
Evaluation program for secondary spacecraft cells. Synchronous orbit testing of General Electric Company 12.0 ampere-hour nickel--cadmium cells, 1792 (AD--726407)
Evaluation program for secondary spacecraft cells. Acceptance test of Eagle-Picher Industries, Inc. 6.0 ampere-hour nickel--cadmium cells, 1791 (AD--725849)
Evaluation program for secondary spacecraft cells. Acceptance tests of Gulton Industries 100.0 ampere-hour nickel--cadmium cells, 1794 (AD--729291)
Evaluation program for secondary spacecraft cells. Acceptance test of Gulton Industries, Inc., 12 and 20 ampere-hour adhydrode cells, 1795 (AD--732712)
Evaluation program for secondary spacecraft cells. Fifth annual report of cycle life test, 1890 (AD--852580)
Evaluation program for secondary spacecraft cells: acceptance test of General Electric Company 12 ampere-hour auxiliary electrode nickel--cadmium cells, 1770 (AD--694010)
Evaluation program for secondary spacecraft cells. Acceptance test of Sonotone Corporation 3.5 ampere-hour nickel--cadmium cells, 1873 (AD--834213)
Evaluation program for secondary spacecraft cells. Fourth annual report of cycle life test, 1875 (AD--834600)
Evaluation program for secondary spacecraft cells. Acceptance test of Gulton Industries, Inc. 6.0 ampere-hour adhydrode nickel--cadmium cells, 1877 (AD--837084)
Evaluation program for secondary spacecraft cells: initial evaluation tests of Gulton Industries, Incorporated, 20.0 ampere-hour nickel--cadmium spacecraft cells with auxiliary electrodes, 2069 (N--74-13761)
Evaluation program for secondary spacecraft cells. Initial evaluation tests of Eagle-Picher Industries, Incorporated, 3.0 ampere-hour nickel--cadmium spacecraft cells, 2071 (N--74-13763)
Evaluation program for secondary spacecraft cells: initial evaluation tests of 20.0 ampere-hour nickel--cadmium spacecraft cells manufactured by Gulton Industries, Incorporated, 2079 (N--74-17803)
Evaluation program for secondary spacecraft cells: initial evaluaton tests of General Electric Company 6.0 ampere hour nickel--cadmium spacecraft cells with auxiliary electrodes for the atmospheric explorer satellite C and D, 2080 (N--74-19703)
Evaluation program for secondary spacecraft cells: cycle life test. Annual report, 2081 (N--74-26502)
Evaluation program for secondary spacecraft cells. Initial evaluation tests of General Electric Company standard and teflonated negative electrode 20.0 ampere-hour, nickel--cadmium spacecraft cells with auxiliary electrodes, 2082 (N--74-31530)
Evaluation program for secondary spacecraft cells. Initial evaluation tests of Gulton Industries, Incorporated 6.0 ampere-hour nickel--cadmium spacecraft cells for the San Marco spacecraft, 2084 (N--75-17788)
Evaluation program for secondary spacecraft cells: initial evaluation tests of Eagle-Picher Industries, Incorporated 6.0 ampere-hour, nickel--cadmium spacecraft cells for separator material evaluation, 2085 (N--75-17789)
Evaluation program for secondary spacecraft cells: synchronous orbit testing of General Electric Company 6.0 ampere-hour sealed nickel--cadmium cells, 2070 (N--74-13762)
Evaluation program for secondary spacecraft cells: acceptance test of C and D batteries, 5.0 ampere-hour sealed-calcium cells, 2052 (N--66-31896)
Evaluation program for secondary spacecraft cells. Evaluation of storage methods, open circuit versus continuous trickle charge, Sonotone 3.5 ampere-hour sealed nickel--cadmium secondary spacecraft cells, 2056 (N--69-38275)
Evaluation program for secondary spacecraft cells. Acceptance test of General Electric Company 12 ampere-hour auxiliary electrode nickel--cadmium cells, 2055 (N--69-37830)
Evaluation tests of a nickel--zinc aircraft storage battery developed by Eagle-Picher Industries, Inc., 1914 (AD--901266L)
Evaluation tests of alkaline vent caps, 3077 (AD--901747L)
Evaluation tests of two MS 18045-49 batteries manufactured by Gulton Industries, Inc., 1918 (AD--902358L)
Evaluation tests of two MS18045-49 batteries manufactured by Marathon Battery Company to MS90365-1 and -2 requirements, 1963 (AD--912153L)
First article testing of one type MS 90365-1 nickel--cadmium battery manufactured by Gulton Battery Corporation under contract N00383-70-C-3625. Addendum. Final report, 1926 (AD--904367L)
First article testing of two type MS 90344-1, nickel--cadmium batteries, manufactured by Marathon Battery Company under contract N00383-73-C-0682, 1985 (AD--916826L)
First article testing of two type MS90321-79W nickel--cadmium cells, manufactured by Marathon Battery Company under contract N00383-73-C-0683, 1987 (AD--917330L)
First article tests of two type MS 90377-1 nickel--cadmium batteries, manufactured by Gulton Industries,

Inc., under contract N00383-71-C-4927, 1928 (AD--904428L)
First article tests of two type MS 3319-1 nickel--cadmium batteries, manufactured by Gulton Battery Corporation, 1930 (AD--904700L)
First article tests of two type MS 17334-2, nickel--cadmium batteries manufactured by Gulton Battery Corporation under contract N00383-72-C-5222, 1980 (AD--916409L)
First article tests of two type MS90365-2 nickel--cadmium aircraft batteries, manufactured by Eagle-Picher Industries, Inc., under contract N00019-72-C-0081. Final report, 1948 (AD--908388L)
First article tests of two type MS90365-1 nickel--cadmium aircraft batteries manufactured by Gulton Industries, Inc., 1915 (AD--901267L)
First article tests of two type MS90365-2 nickel--cadmium aircraft batteries manufactured by Gulton Industries, Inc. Final report, 1913 (AD--901265L)
First article tests of two type MS18045-45 nickel--cadmium batteries, manufactured by Gulton Battery Corporation under contract N00383-73-C-0819, 1988 (AD--917331L)
First article tests of two type MS 90321-68W nickel--cadmium cells manufactured by General Electric Company under contract N00383-72-C-1556, 1925 (AD--904366L)
First article tests of two type MS90321-78W nickel--cadmium cells, manufactured by General Electric Company under contract N00383-72-C-2798, 1952 (AD--910142L)
First article tests of two 12-volt, type MS 90379-1A lead--acid batteries, manufactured by Teledyne Inc., Gill Electric Division, under contract N00383-72-C-5202. Final report, 1983 (AD--916499L)
Immobilized electrolyte feasibility study. Final report, 25 June--25 December 1965, 2915 (AD--678594)
Improved method of high-rate discharge testing of aircraft storage batteries, 1931 (AD--905118L)
Modification of three type MS 18122-1 aircraft batteries for use in type H2 helicopters, Naval Air Station, Lakehurst, NJ, 540 (AD--905759L)
Preproduction tests of two aircraft batteries, lead--acid, type MS 18045-42 (WEP), manufactured by Gould-National Batteries, Inc., 1704 (AD--485498)
Preproduction tests of two aircraft batteries, lead--acid, type MS 18045-41 (WEP), manufactured by Gould-National Batteries, Inc., 1705 (AD--485499)
Qualification of Gulton Industries, Inc., type MS90377-1 nickel--cadmium battery, employing modified low frequency vibration test, 1977 (AD--915890L)
Qualification test of five aircraft batteries, lead--acid, type MS25211-2, manufactured by Gould-National Batteries, Inc., 1635 (AD--438889)
Qualification test of five aircraft batteries, lead--acid, type MS25211-2, manufactured by Gill Electric Manufacturing Corporation, 1628 (AD--430864)
Qualification testing of one type MS90365-2 battery, manufactured by Gulton Battery Corporation under contract N00383-70-C-3405. Addendum to final report, 1937 (AD--906102L)
Qualification tests of four type MS3509, style 1, battery receptacles, manufactured by Elcon, division of Icore International, Inc., 3108 (AD--918225L)
Qualification tests of one type MS18045-75 nickel--cadmium battery, manufactured by Gulton Battery Corporation, 1949 (AD--908534L)
Qualification tests of two aircraft batteries, lead--acid, type MS 18045-42(WEP), manufactured by Gill Electric Manufacturing Corporation, 1703 (AD--484519)
Qualification tests of two aircraft batteries, nickel--cadmium, type MS17334-2(WP), manufactured by the Sonotone Corporation, 1843 (AD--801355L)
Qualification tests of two type BB-638/A batteries, 1938 (AD--906172L)
Qualification tests of two type MS3319-1 nickel--cadmium batteries, manufactured by Marathon Battery Company, 1951 (AD--910115L)
Sample testing of five 12-volt, type MS90379-1, lead--acid batteries manufactured by Teledyne Battery Products, a division of Teledyne, Inc., under contract N00383-72-C-5202. Final report, 1992 (AD--917760L)
Sampling and life cycle costing tests of 53 production lots of types MS 18045-41 and MS 18045-42 lead--acid aircraft batteries, manufactured by Teledyne, Inc. Final report, 1934 (AD--905686L)
Sampling and life cycle costing tests of type MS 18045-42, lead--acid, aircraft batteries from 22 production lots manufactured by Teledyne Inc., Teledyne Battery Products Division under contract N00383-72-C-4027, 1986 (AD--917329L)
Sampling tests of 80 type MS90321-84W nickel--cadmium cells, manufactured by Gulton Battery Corporation under contract N00383-72-C-1543, 1947 (AD--908374L)
Sampling tests of 37 type MS90321-77W nickel--cadmium cells, manufactured by Gulton Battery Corporation under contract N00383-71-C-4998, 1950 (AD--909904L)
Sampling tests of 17 type MS90321-66W nickel--cadmium cells, manufactured by Marathon Battery Company under contract N00383-73-C-2016, 1991 (AD--917732L)
Sampling tests of eight type MS 90321-86 nickel--cadmium cells, manufactured by Marathon Battery Company, under contract N00383-73-C-1216, 1984 (AD--916703L)
Sampling tests of eight type MS 90321-86 nickel--cadmium cells, manufactured by Marathon Battery Company under contract N00383-72-C-2039, 1973 (AD--915260L)
Sampling tests of eight type MS90321-78W, nickel--cadmium battery cells, representing lots 1 through 8, manufactured by Gulton Industries, Inc., under contract N00383-73-C-0627, 1976 (AD--915568L)
Sampling tests of four type MS17334-2 nickel--cadmium batteries, manufactured by Marathon Battery Company, 1907 (AD--894791L)
Sampling tests of one type MS 90365-2 nickel--cadmium aircraft battery, manufactured by Gulton Battery Corporation, under contract N00383-72-C-4036. Final report, 1965 (AD--912664L)
Sampling tests of one type MS 90365-1 nickel--cadmium aircraft battery, manufactured by Gulton Industries, Inc. under contract N00383-70-C-3625. Final report, 1908 (AD--894797L)
Sampling tests of one type MS 90447-2 nickel--cadmium battery, manufactured by Gulton Industries, Inc. under contract N00383-71-C-0012, 1929 (AD--904429L)
Sampling tests of one type MS 3319-1 nickel--cadmium battery, manufactured by Gulton Battery Corporation under contract N00383-72-C-3184, 1981 (AD--916410L)
Sampling tests of one type MS 18045-44 nickel--cadmium battery, manufactured by Marathon Battery Company, 1940 (AD--906369L)
Sampling tests of one type MS 3319-1 nickel--cadmium battery, manufactured by Gulton Battery Corporation under contract N00383-70-C-2922, 1971 (AD--915258L)
Sampling tests of one type MS18045-44 nickel--cadmium aircraft battery manufactured by Gulton Industries, Inc., 1906 (AD--894790L)
Sampling tests of one type MS90365-1 nickel--cadmium aircraft battery, manufactured by Gulton Battery Corporation under contract N00383-71-C-5767. Final report, 1941 (AD--906370L)
Sampling tests of one type MS90447-2 nickel--cadmium battery, manufactured by Marathon Battery Company, 1935 (AD--905687L)
Sampling tests of one type MS90365-2 nickel--cadmium battery, manufactured by Gulton Battery Corporation under contract N00383-73-C-0135, 1989 (AD--917332L)
Sampling tests of one type MS18045-74 nickel--cadmium battery, manufactured by Marathon Battery Company under contract N00383-73-C-1824, 1993 (AD--918123L)
Sampling tests of one type MS3319-1 nickel--cadmium battery, manufactured by Marathon Battery Company under contract N00383-71-C-5772, 1943 (AD--906794L)
Sampling tests of two type MS 90321-86 nickel--cadmium cells, manufactured by Gulton Battery Corporation under contract N00383-72-M-3749, 1982 (AD--916497L)
Sampling tests of two type MS18045-44 nickel--cadmium batteries, manufactured by Marathon Battery Company, 1967 (AD--913295L)
Sampling tests two type MS 90365-2 nickel--cadmium aircraft batteries manufactured by Marathon Battery Company under contract N00019-72-C-0563. Final report, 1972 (AD--915259L)

NAVAL APPLIED SCIENCE LAB., BROOKLYN, N.Y. (USA)
Positive plate sulfation characteristics of the lead--calcium grid battery. Final report, 2828 (AD--476224)
Techniques for the use of phosphoric acid additive in the lead--calcium grid battery. Progress report No. 3, 2799 (AD--456245)

NAVAL CIVIL ENGINEERING LAB., PORT HUENEME, CALIF. (USA)
Evaluation of acid eaters, 2793 (AD--442706)
High-pressure performance of voltaic cells. Final technical report, January--February 1965, 1739 (AD--627931)

NAVAL ENGINEERING EXPERIMENT STATION, ANNAPOLIS, MD. (USA)
Low-temperature performance of 12- and 24-volt cranking motors and batteries for cold starting of Gray marine diesel engine model 64HN9, 1888 (AD--851418)

NAVAL EXPLOSIVE ORDNANCE DISPOSAL FACILITY, INDIAN HEAD, MD. (USA)
Effect of cryogenic temperatures on various commercial batteries. Technical report, 1960 (AD--911451)
Effect of cryogenic temperatures on various commercial batteries. Technical report, 1961 (AD--911451)

NAVAL ORDNANCE LAB., CORONA, CALIF. (USA)
Chemoelectric energy conversion for nonaqueous reserve batteries. Quarterly report No. 11, January--March 1966, 339 (AD--633957)

NAVAL ORDNANCE LAB., WHITE OAK, MD. (USA)
Battery separator mechanisms: literature survey report, 2884 (AD--642779)
Characterization of cellophane as an ionic barrier, 2791 (AD--437997)
Chlorine storage and distribution system for the lithium--chlorine battery. Annual progress report, 3090 (AD--908253L)
Development of sintered zinc battery electrodes. Progress report, 3060 (AD--878215)
Examination of ELCA experimental nonaqueous electrochemical cells and batteries, 1879 (AD--838988)

Method for the quantitative analysis of the silver oxide cathode. Final report, 2866 (AD--618479)
Solid-state controlled battery-load simulator, 3027 (AD--837032)
NAVAL POSTGRADUATE SCHOOL, MONTEREY, CALIF. (USA)
A review of materials and mechanisms which affect the performance of lead--acid storage batteries. Interim report Jun--Sep 76, 1997 (AD--A032299)
High-g testing of electronic components. Master's thesis, 1803 (AD--738907)
Microstructural comparison of positive float and trickle discharge operations on the positive electrodes of submarine storage batteries with lead--calcium alloy grids. Master's thesis, 3110 (AD--A032298)
Study of the cyclic performance of submarine type lead--acid storage batteries by examination of the positive plate structures, 3137 (AD-A--033764)
NAVAL RESEARCH LAB., WASHINGTON, D.C. (USA)
Active material retention in the lead--acid battery. The role of $PbSO_4$.4PbO and alpha-$PbO_2$, 2808 (AD--466484)
Changing the discharge capacity of a silver oxide electrode by charging with periodically interrupted current, 2889 (AD--644616)
Crystallographic changes during oxidation (charging) of the silver electrode. Part I. Initial oxidation of an industrial sintered plaque, 2903 (AD--671050)
Crystallographic changes during oxidation (charging) of the silver electrode. Part II. Oxidation following five charge--discharge cycles at a low rate, 2909 (AD--671771)
Cycling anodic coatings on pure and antimonial lead in $H_2SO_4$, 2936 (AD--728431)
Direct energy conversion - literature abstracts, 84 (N--63-11677)
Direct energy conversion literature abstracts, 99 (NP--13277)
Direct energy conversion literature abstracts, 6 (AD--269892)
Direct energy conversion literature abstracts, 8 (AD--430693)
Direct energy conversion literature abstracts, 26 (AD--635584)
Effects of constant-current reversals during charge of the silver oxide electrode, 1758 (AD--670733)
Electrolytic cell for x-ray diffraction studies of electrode phenomena, 2852 (AD--605707)
Feasibility of microscopy for investigating the silver oxide electrode, 2900 (AD--664993)
High-rate batteries, 2890 (AD--645942)
Increasing the discharge capacity of a silver oxide electrode by charging with 60-cycle asymmetric ac, 1756 (AD--663551)
Investigation of the intergranular corrosion of lead--antimony grid alloys, 2879 (AD--633078)
Investigation of the plate materials of the lead--acid cell: compound formation between lead monoxide and lead sulfate. Report No. 1, 2869 (AD--620552)
Lead calcium battery. Part 4. Comparison of lead calcium and lead antimony cells in float, 1723 (AD--602378)
Micrography of tubular-type battery plates. Final report, 2885 (AD--643750)
Microporosity in lead--antimony grid alloys, 2910 (AD--672889)
Microscopic observations supporting the theory of lead ion supersaturation as the cause of the initial voltage minimum in the discharge curve of the lead--acid battery, 1675 (AD--466483)
Microstructure of sintered silver electrodes. IV. Formation of AgO during charges, 2938 (AD--728894)
Morphology of $PbO_2$ in the positive plates of lead--acid cells, 2857 (AD--609986)
Nickel cadmium power source for acoustic transponders, 1654 (AD--456992)
Oxides on the silver electrode. Part 2. X-ray diffraction studies of the working silver electrode. Final report, 2862 (AD--614058)
$PbO_2$ in the lead--acid cell. II. Cycling and overcharge on pure and antimonial lead grids, 1777 (AD--707192)
Plate materials of the lead--acid cell. Part 4. Anodic oxidation of three representative oxides. Final report, 2914 (AD--677033)
Plate materials of the lead--acid cell. Part 3. Anodic oxidation of tetragonal PbO. Final report, 2899 (AD--664827)
Plate materials of the lead--acid cell. Part I. Anodic oxidation of the basic sulfates of lead. Final report, 2874 (AD--625693)
Plate materials of the lead--acid cell. Part II. Anodic oxidation of $PbSO_4$, $Pb_3SO_4$, $^2PbCO_3$, $Pb(OH)_2$, and orthorhombic PbO. Final report, 2888 (AD--644599)
Positive plate of the lead--acid cell. A critical review of recent literature, 2920 (AD--684765)
Refractometric sensing of $H_2SO_4$ specific gravity in lead--acid cell operation, 2896 (AD--658747)
Study of methods of removing stibine from submarine storage battery ventilation gas, 1720 (AD--499599)
Submarine storage batteries. Relation of current and voltage during the gassing phase of charge, 1714 (AD--491500)
Theoretical design of primary and secondary cells. Part IV. Further studies of the battery discharge equation, 325 (AD--617333)
NAVAL SURFACE WEAPONS CENTER, SILVER SPRING, MD. (USA)
Development of an improved separator material for alkaline silver--zinc batteries. Preliminary study Dec 75--May 76, 3141 (AD-A--038754)
Independent research, 1975. Final report, 69 (AD-A--015337)
Structure of lithium--boron alloys and their performance as potential anodes for high power molten salt batteries. Progress report, 1 Aug 1974--30 Jun 1975, 3132 (AD-A--025202)
NAVAL UNDERWATER ORDNANCE STATION, NEWPORT, R.I. (USA)
Introduction of the battery MK 53 Mod 1. Technical document, 1962 (AD--911812L)

International symposium (5th) of the Joint Services Electrical Power Sources Committee, 1966, 56 (AD--801852)
OFFICE OF NAVAL RESEARCH, WASHINGTON, D.C. (USA)
Some aspects of Japanese energy-conversion research and development, 48 (AD--739325)
OHIO STATE UNIV. RESEARCH FOUNDATION, COLUMBUS (USA)
Improved batteries. Quarterly report No. 11, 15 Dec 1948--15 Mar 1949, 308 (AD--499477)
Subject index of research reports, 20 (AD--499478)
OKLAHOMA STATE UNIV., STILLWATER (USA). SCHOOL OF ELECTRICAL ENGINEERING
Development of an electrical generator and electrolysis cell for a wind energy conversion system. Final report, 1 Jul 1973--1 Jul 1975, 727 (PB--243909)
ORDNANCE RESEARCH, INC., FORT WALTON BEACH, FLA. (USA)
Battery charger PP-7041( ). Final report, 30 Apr 1974-31 Jan 75, 3118 (AD-A--009116)
OREGON STATE UNIV., CORVALLIS (USA)
Electrode reactions and rate processes in nonaqueous electrolytes. Final report for 16 Feb 1961--30 Jun 1965, 2868 (AD--620296)
OTTAWA UNIV., ONTARIO (CANADA). DEPT. OF CHEMISTRY
Electrochemistry of the nickel oxide electrode. V. Self-passivation effects in oxygen-evolution kinetics, 2954 (AD--744605)

P

PENNSYLVANIA STATE UNIV., UNIVERSITY PARK (USA). MINERAL INDUSTRIES EXPERIMENT STATION
Review of fundamental investigations of silver oxide electrodes, 2831 (AD--478632)
PENNSYLVANIA UNIV., PHILADELPHIA (USA)
Electrochemical engineering of battery systems. Final report, 10 Nov 1971--9 Nov 1972, 1970 (AD--914248)
Electrochemical engineering of battery systems. Final report, 10 Nov 1971--9 Nov 1972, 3104 (AD--914248)
PENNSYLVANIA UNIV., PHILADELPHIA (USA). DEPT. OF CHEMICAL AND BIOCHEMICAL ENGINEERING
Electrochemical engineering of battery systems. Final report, 10 Nov 1971--9 Nov 1972, 3105 (AD--914248)
Lithium sulfuryl chloride battery. Semiannual report, 1 Dec 1974--31 May 1975, 2015 (AD-A--018852)
PENNSYLVANIA UNIV., PHILADELPHIA (USA). DEPT. OF CHEMISTRY
Fundamental studies connected with electro-chemical energy storage. Final report, 708 (N--75-30647)
PENNSYLVANIA UNIV., PHILADELPHIA (USA). ELECTROCHEMISTRY LAB.
Studies in fundamental chemistry of fuel cell reactions. Semiannual progress report, 1 January--30 June 1968, 688 (N--69-25396)
Studies in fundamental chemistry of fuel cell reactions. Semiannual progress report, 1 July--31 December 1968, 689 (N--69-25397)
Studies in fundamental chemistry of fuel cell reactions. Quarterly report, 1 April--30 June 1969, 3206 (N--70-10779)
Studies in fundamental chemistry of fuel cell reactions. Quarterly report, 1 April--30 June 1969, 3207 (N--70-16379)
Studies in fundamental chemistry of fuel cell reactions. Quarterly report, 1 July--30 September 1969, 3209 (N--70-25705)
Studies in fundamental chemistry of fuel cell reactions. Quarterly report, 1 January--31 March 1970, 2061 (N--70-39718)
Studies in fundamental chemistry of fuel cell reactions. Quarterly report, 1 July--30 September 1970, 2064 (N--71-26289)
Studies in fundamental chemistry of fuel cell reactions. Quarterly report, 1 January--31 March 1971, 2065 (N--71-30827)
Studies in fundamental chemistry of fuel cell reactions. Quarterly report, 1 April--30 June 1970, 2062 (N--70-41390)
Studies in fundamental chemistry of fuel cell reactions. Quarterly report, 1 October--31 December 1969, 693 (N--70-25303)
PENNSYLVANIA UNIV., PHILADELPHIA (USA). INST. FOR DIRECT ENERGY CONVERSION
Electrochemical engineering, 684 (N--68-21038)
PENNSYLVANIA UNIV., PHILADELPHIA (USA). POWER INFORMATION CENTER
Background material for the study of the national space power program (1964). Volume I. Electrochemical papers, 11 (AD--452617)
Background material for the study of the national space power program (1964). Volume VI. Miscellaneous papers, 4828 (AD--448957)
Metal--air batteries symposium: compendium of papers presented for publication, 32 (AD--684898)
PHILCO CORP., NEWPORT BEACH, CALIF. (USA). AERONUTRONIC DIV.
Ion-specific permeable membranes. Quarterly status report No. 1, 1 on Project Agile, 1 Mar--31 May 1965, 2814 (AD--468770)
PITTSBURGH UNIV., WASHINGTON, D.C. (USA). RESEARCH STAFF
Electric forklift trucks of 2,000-, 4,000-, and 6,000-pound capacity, 4833 (AD--637459)
60-watt liquid hydrazine fuel cell. Technical information report, 3025 (AD--835257)
Zinc--air hybrid fuel cells, 488 (AD--834903)
Zinc-air hybrid fuel cells. Technical information report, 487 (AD--834903)
PRESTOLITE CO., TOLEDO, OHIO (USA)
Development of the 12TN 24 volt storage battery. Final report, May 1972--Feb 1974, 560 (AD--917525L)
Water-activated lead-acid dry-charged battery, 742 (SAE-TP--720040)
PRINCETON UNIV., N.J. (USA)
Electrical power systems for the manned orbiting laboratory, 1738 (AD--624668)
PURDUE UNIV., LAFAYETTE, IND. (USA). DEPT. OF CHEMISTRY
Electrode mechanisms using reflection and electron spectroscopy. Final report 15 Jan 1972--14 Jan 1976, 3134 (AD-A--027694)

R

RADIAN CORP., AUSTIN, TEX. (USA)
State of charge determination for aerospace batteries. Final report, Oct 1973--Aug 1975, 2016 (AD-A--019480)
RADIO CORP. OF AMERICA, PRINCETON, N.J. ASTRO-ELECTRONICS DIV.
Nimbus-D solar-conversion power supply subsystem. Quarterly technical report, 15 Dec 1968-15 Mar 1969, 4981 (N--69-32305)
RAI RESEARCH CORP., HAUPPAUGE, N.Y. (USA)
Development of the sealed zinc--silver oxide secondary battery system. Final technical report No. 8, 1 July 1963--30 June 1965, 343 (AD--635776)
Long-life stable zinc electrodes for alkaline secondary battery. Quarterly technical progress report No. 1, 1 December 1966--28 February 1967, 2895 (AD--655285)
Manufacturing methods for high performance polyethylene battery separators. Interim engineering progress report No. 4, 1 September 1970--31 January 1971, 3064 (AD--881187)
Manufacturing methods for high-performance polyethylene battery separators. Interim engineering report No. 5, 1 February--31 May 1971, 3070 (AD--884722)
Production of dry process divalent silver oxide electrodes by continuous rolling. Quarterly report No. 9, December 1969--February 1970, 3061 (AD--878841)
RAI RESEARCH CORP., LONG ISLAND CITY, N.Y. (USA)
Manufacturing methods for high performance grafted-

polyethylene battery separators. Final report, 1 Dec 1970-30 Jan 1972, 2956 (AD--745571)
RAND CORP., SANTA MONICA, CALIF. (USA)
Brief study of rocket-powered magnetohydrodynamic generators and energy-storage devices, 5 (AD--251281)
Electric motor cars, 4832 (AD--615883)
RCA LABS., PRINCETON, N.J. (USA)
Thermoelectric power conversion feasibility. Quarterly progress report No. 3, 26 Dec 1964--25 Mar 1965, 2819 (AD--472340)
READING BATTERIES, INC., PA. (USA)
Study of a membrane venting system for the USAF type K-1 battery. Quarterly progress report No. 9, 15 Jul--1 Nov 1956, 3002 (AD--814601)
RENSSELAER POLYTECHNIC INST., TROY, N.Y. (USA)
Electrochemical power sources, 3112 (AD/A--001610)
Electrochemical power sources. Final technical report, 18 September 1968--31 January 1974, 3113 (AD/A--001610)
Research on electrodes and electrolyte for the Ford sodium--sulfur battery. Quarterly report covering the period January 1, 1974 to March 31, 19754, 723 (PB--234561)
Research on electrodes and electrolyte for the Ford sodium--sulfur battery. Quarterly report covering the period January 1, 1974 to March 31, 19754, 3252 (PB--234561)
RESEARCH TRIANGLE INST., DURHAM, N.C. (USA)
RANN utilization experience (case studies 22 through 31). Final report, 738 (PB--263682)
ROCKWELL INTERNATIONAL CORP., CANOGA PARK, CALIF. (USA)
Development of lithium-metal sulfide batteries for load leveling. Interim report, 728 (PB--244390)
Development of lithium--metal sulfide batteries for load leveling, 671 (EPRI--116)
ROYAL AIRCRAFT ESTABLISHMENT, FARNBOROUGH (UK)
Characteristics affecting the operation of the UK 3 satellite battery, 1696 (AD--478910)
Continuous charge--discharge cycling studies on hermetically sealed nickel--cadmium cells operating at a 10% depth of discharge, 1849 (AD--802841)
Effect of cationic impurities on the silver--silver oxide electrode: the silver--copper--iron--palladium system, 1996 (AD--921643)
Preliminary design of the power system for the UK 3 satellite. Technical memorandum, May 1964-Feb 1965, 4977 (N--66-26772)
Selection of cells for the U.K. 3 flight satellite battery, 1853 (AD--809237)
Study of the effect of temperature and depth of discharge on the performance and cycle life of hermetically sealed nickel--cadmium cells, 1859 (AD--820467)

S

SANDIA LABS., ALBUQUERQUE, N.MEX. (USA)
Characteristics and development of the TC-765 thermal battery, 744 (SAND--74-0041)
Design, development, and testing of a cable assembly for use in severe electrochemical environments, 3265 (SC-DR--69-398)
Development and performance of a miniature, high-voltage thermal battery, 747 (SLA--74-5363)
Electrical and environmental testing of lithium $V_2O_5$ cells. II. Temperature and shock studies, 2112 (SAND--75-5933)
Electrical and environmental testing of lithium $V_2O_5$ cells. I. Storage and discharge rate studies, 2113 (SAND--75-5934)
Lithium--organic electrolyte cell studies, 2111 (SAND--75-0646)
Pellet-type thermal battery, 743 (SAND--74-0007)
Preliminary study into the feasibility of a sixty-minute thermal battery, 745 (SLA--73-0412A)
Review of thermal battery technology, 748 (SLA--74-5381)
Sixty-minute thermal battery, 2108 (SAND--75-0454)
Sixty-minute thermal battery: a feasibility study, 746 (SLA--73-5888)
Storage and discharge tests of lithium-organic electrolyte cells, 2110 (SAND--75-0645)
Temperature and shock testing of lithium-organic electrolyte cells, 2109 (SAND--75-0536)
Use of Hysol US0009 polyurethane encapsulant in battery cables, 3264 (SAND--77-0411)
SCHOOL OF AEROSPACE MEDICINE, BROOKS AFB, TEX. (USA)
Portable, self-contained digital thermometer. Report for Feb-Sep 1969, 407 (AD--735662)
Test and evaluation of the Ohio air-vac transport incubator for use in aeromedical airlift. Final report 1972--73, 1990 (AD--917455L)
SEE ALSO- 9500532 PENNSYLVANIA STATE UNIV., UNIVERSITY PARK (USA). DEPT. OF MATERIALS SCIENCE
Study of the discharge of porous Ag/$Ag_2O$ electrodes in concentrated potassium hydroxide electrolyte. Doctoral thesis, 2941 (AD--732349)
SIGNAL CORPS ENGINEERING LABS., FORT MONMOUTH, N.J. (USA)
Method and device for testing Ni--Cd batteries, 1719 (AD--492038)
SONOTONE CORP., ELMSFORD, N.Y. (USA)
Design improvement of BB 501( )/U battery assembly. Final report, 29 March 1967--November 1968, 386 (AD--687336)
Optimum structures for miniature Ni--Cd sealed cells and batteries. Report No. 4 (final), October 1967--November 1968, 387 (AD--688520)
Optimum structures for miniature Ni--Cd sealed cells and batteries. Quarterly report No. 2, 11 November 1966--10 February 1967, 1749 (AD--652700)
Optimum structures for miniature Ni--Cd sealed cells and batteries. Quarterly report No. 3, 11 February--10 October 1967, 365 (AD--665443)
Optimum structures for miniature Ni--Cd sealed cells and batteries. Quarterly report No. 1, 11 August--10 November 1966, 1746 (AD--649628)
R/D contract for the development of a 20-cell fiberglass cased BB501( )/U battery. Final report, 30 June 1965--15 March 1966, 346 (AD--637157)
Standard line-battery assembly BB-610( )/U nickel cadmium vented. Quarterly report No. 1, 25 June--28 October 1965, 337 (AD--631271)
Standard line-battery assembly BB-610( )/U nickel cadmium vented. Quarterly report No. 2, 29 October 1965--28 January 1966, 338 (AD--633060)
Standard line-battery assembly BB-610( )/U nickel cadmium vented. Final report, 29 April 1966--17 January 1967, 355 (AD--654130)
Standard line-battery assembly BB-610( )/U nickel cadmium, vented. Quarterly technical report No. 3, 29 January--28 April 1966, 345 (AD--637156)
SPECTROLAB, INC., SYLMAR, CALIF. (USA)
Development of nickel--alkaline batteries for aerospace lightweight secondary power. Final report, 1 Dec 1972--30 Jun 1975, 587 (AD-A--022350)
Electrochemical impregnation of sintered nickel structures with cadmium using constant current step and alternating-current pulse techniques. Interim report, Jan 1971--Jun 1974, 3121 (AD-A--013931/1ST)
SPERRY RAND CORP., GREAT NECK, N.Y. (USA)
General Electric 20-ampere hour nickel--cadmium battery. Interim test report, 2087 (N--75-25290)
SPERRY RAND CORP., HUNTSVILLE, ALA. (USA)
Nickel--cadmium batteries for Apollo telescope mount, 2101 (NASA-CR--120747)
SPERRY RAND CORP., NEW YORK (USA)
Experimental investigation and model development of the skylab ATM secondary nickel--cadmium batteries, 2102 (NASA-CR--120749)
SPRAGUE ELECTRIC CO., NORTH ADAMS, MASS. (USA)
Quarterly report No. 6, 17 Jul--17 Oct 1947, 1718 (AD--491650)
STANDARD OIL CO., CLEVELAND, OHIO (USA)
Analytical studies of the energy storage process at porous carbon electrodes in molten salt electrolytes. Interim technical report, 8 March--7 September 1968, 502 (AD--845273)
Analytical studies of the energy storage process at porous carbon electrodes in molten salt electrolytes. Final technical report, 8 March 1968--7 March 1969, 1893 (AD--853881)
Development of electrochemical energy storage unit for vehicle propulsion. Interim technical report, 30 June--30 December 1966, 354 (AD--653791)
Development of electrochemical energy storage unit for vehicle propulsion. Final technical report, 30 June 1966--30 September 1967, 476 (AD--825167)
Development of electrochemical energy storage unit for vehicle propulsion. Final technical report No. 3, 3 March 1966--30 June 1968, 496 (AD--841130)
Development of electrochemical energy storage unit for vehicle propulsion. Final technical report, 3 March 1966--30 June 1968, 497 (AD--841130)
Evaluation of electrochemical energy storage systems for vehicle propulsion. Interim technical report, 3 March--3 December 1966, 353 (AD--653790)
Production and engineering methods for Carb-Tek (trade name) batteries in fork-lift trucks. Final report, Jul 1973--Dec 1974, 573 (AD/A--006548)
Production and engineering methods for Carb-Tek (trade name) batteries in fork lift trucks. Final report, July 1973--December 1974, 574 (AD/A--006548)
STANFORD RESEARCH INST., MENLO PARK, CALIF. (USA)
Fabrication and test of inorganic/organic separators. Final report, Nov 1972-Jan 1974, 3220 (N--74-26511)
Long term energy alternatives for automotive propulsion: synthetic fuel versus battery/electric system. Executive summary, 5013 (PB--262512)
Pollution-free electrochemical power generation from low grade coal, 3250 (PB--228006/3)
STANFORD UNIV., CALIF. (USA)
Solid electrolyte battery materials. Technical report, 2977 (AD--782365)
STANFORD UNIV., CALIF. (USA). CENTER FOR MATERIALS RESEARCH
Solid electrolyte battery materials. Technical report, 3145 (AD-A--039899)
Solid electrolyte battery materials. Technical report, 3131 (AD-A--024658)

STANFORD UNIV., CALIF. (USA). STANFORD ELECTRONICS LABS.
Review of the U. S. Army random-access discrete-address system program and the Martin Company design plan. Part I, 1864 (AD--828639)
SYLVANIA ELECTRONIC SYSTEMS, MOUNTAIN VIEW, CALIF. (USA)
Noncommunication expendable jammer investigations. Volume 1. Power sources, 4826 (AD--441993)
SYLVANIA ELECTRONIC SYSTEMS, MOUNTAIN VIEW, CALIF. (USA). ELECTRONIC DEFENSE LABS.
Noncommunication expendable jammer investigations. Volume 1. Power sources, 1640 (AD--441993)
SYLVANIA ELECTRONIC SYSTEMS, WALTHAM, MASS. (USA)
Design, development, and environmental test report on radio set AN/PRC-63 (XN-1), 328 (AD--620178)

T

TECHNICAL OPERATIONS, INC., BURLINGTON, MASS. (USA)
Fabrication of ultrathin solid electolyte batteries. Report No. 4 (final), 1 April 1967--31 March 1968, 492 (AD--840076)
Fabrication of ultrathin solid electrolyte batteries. Quarterly progress report No. 2, 1 July--1 October 1967, 474 (AD--824398)
Fabrication of ultrathin solid electrolyte batteries. Quarterly progress report No. 1, 1 April--1 July 1967, 466 (AD--820687)
Fabrication of ultrathin solid electrolyte batteries. Quarterly progress report No. 3, 1 October 1967--1 January 1968, 483 (AD--829655)
TECHNION-ISRAEL INST. OF TECH., HAIFA
Energy research at Technion, 716 (NP--20116)
TECHNISCHE UNIV. MUENCHEN (GERMANY, F.R.)
Reversible electrode reactions of difficult-to-dissolve materials in nonaqueous electrolytes (a contribution to the knowledge on potential cathodes for secondary high-energy-density batteries with special consideration of graphite compounds, 3221 (N--74-30505)
TENNESSEE UNIV., KNOXVILLE (USA). DEPT. OF CHEMISTRY
High energy cathodes for fused salt batteries, 2975 (AD--779385)
TEXAS INSTRUMENTS, INC., ATTLEBORO, MASS. (USA)
Development of lower cost nickel--zinc batteries. Report No. 1 (final), February 1969--May 1970, 528 (AD--873119)
Heat sterilizable and impact reistant Ni--Cd battery development. Quarterly report, 1 April--30 June 1969, 3204 (N--69-40742)
Heat sterilizable and impact resistant Ni--Cd battery development. Quarterly report, 1 July--30 September 1969, 692 (N--70-18977)
THOMAS A. EDISON INDUSTRIES, BLOOMFIELD, N.J. (USA). PRIMARY BATTERY DIV.
Auxiliary electrode for charge control of sealed nickel--cadmium batteries. Quarterly progress report No. 4, 15 Mar--14 Jun 1965, 1679 (AD--469278)
Auxiliary electrode for charge control of sealed nickel--cadmium batteries. Quarterly progress report No. 1, 15 Jun--14 Sep 1964, 2800 (AD--456849)
Auxiliary electrode for charge control of sealed nickel--cadmium batteries. Quarterly progress report No. 2, 15 Sep--14 Dec 1964, 2801 (AD--458044)
Auxiliary electrode for charge control of sealed nickel--cadmium batteries. Quarterly progress report No. 3, 15 Dec 1964--14 Mar 1965, 1674 (AD--466291)
Auxiliary electrode for charge control of sealed nickel--cadmium batteries. Quarterly progress report No. 5, 15 Jun--14 Sep 1965, 1692 (AD--475526)
THOMAS A. EDISON INDUSTRIES, WEST ORANGE, N.J. (USA)
Progress report, 302 (AD--495876)
Progress report, 303 (AD--495877)
Progress report, 304 (AD--495878)
Progress report number 5, 306 (AD--499435)
TRACOR, INC., AUSTIN, TEX. (USA)
Review of ammonia battery systems and ammonia electrolytes. Literature survey, 1 Jun 1966--9 Jun 1967, 462 (AD--816308)
TRW DEFENSE AND SPACE SYSTEMS GROUP, REDONDO BEACH, CALIF. (USA)
Development program for solid electrolyte batteries. Final report, 736 (PB--260719)
TRW, INC., CLEVELAND, OHIO (USA)
Investigation of high-temperature battery systems. Final technical report, 1 Jul 1972-31 Oct 1973, 436 (AD--774308)
TRW SPACE TECHNOLOGY LABS., LOS ANGELES, CALIF. (USA)
Secondary power for space flight, 1623 (AD--358628)
Study of Sonotone Corporation nickel--cadmium size F battery cells. Final report, 1663 (AD--459797)
Study of Sonotone Corporation nickel--cadmium size F battery cells: failure analysis. Addendum to final report, 2797 (AD--449249)
TRW SYSTEMS GROUP, REDONDO BEACH, CALIF. (USA)
A study of short test and charge retention test methods for nickel-cadmium spacecraft cells. Final report, 2088 (N--75-27566)
Analysis and advanced design study of an electromechanical transmission, 4992 (NP--20357)
Develop high charge and discharge rate lead/acid battery technology. Final report, 28 April 1971--18 March 1972, 5003 (PB--213257)
Develop high charge and discharge rate lead/acid battery technology. Final report, 643 (APTD--1345)
Development program for solid electrolyte batteries. Interim report, 729 (PB--248326)
Development program for solid electrolyte batteries. Final report, 1 January 1973--30 June 1974, 672 (EPRI--127-1)
Investigation of high temperature battery systems. Final report, 1 Jul 1974--31 Aug 1975, 585 (AD-A--020164)
Investigation of high temperature battery systems. Final technical report, 1 Jul 1972--31 Oct 1973, 701 (N--74-20708)
Short test and charge retention test methods for nickel--cadmium spacecraft cells, 2103 (NASA-CR--143189)
Study of degradation of plates for nickel--cadmium spacecraft cells. Interim report, 3216 (N--74-16808)
Study of degradation of plates for nickel--cadmium spacecraft cells. Final report, 3223 (N--75-15164)
Two kilowatt long life battery. Interim technical report, 15 May 1971-15 Sep 1972, 541 (AD--906407L)
Two kilowatt long life battery. Interim technical report No. 3, 15 Sep 1972-15 Sep 1973, 562 (AD--917874L)
Two-kilowatt long-life battery. Interim technical report No. 1, 15 June 1970--15 May 1971, 534 (AD--885799)
TRW SYSTEMS GROUP, REDONDO BEACH, CALIF. (USA). CHEMICAL SCIENCES DEPT.
Development program for solid electrolyte batteries. Final report, 1 January 1973--30 June 1974, 3254 (PB--238691)
TRW SYSTEMS, REDONDO BEACH, CALIF. (USA)
Research investigation of corrosion-resistant materials for electrochemical cells. Interim report No. 4, 1 September 1968--28 February 1969, 3043 (AD--853250)
Research investigation of corrosion-resistant materials for electrochemical cells. Progress report No. 3, January--July 1968, 3033 (AD--841560)
TRW SYSTEMS, SAN BERNARDINO, CALIF. (USA)
Lead--calcium sulfuric acid batteries and their application to Minuteman. Technical report, Nov 1964--Jun 1965, 1685 (AD--471769)
TYCO LABS., INC., WALTHAM, MASS. (USA)
Composition of nonaqueous solutions of potential use in high energy density batteries. Final report, 15 Nov 1969--14 Nov 1972, 432 (AD--763140)
Development of uniform and predictable battery materials for nickel--cadmium aerospace cells. Quarterly report, 8 November 1968--7 February 1969, 3201 (N--69-38423)
Development of uniform and predictable battery materials for nickel--cadmium aerospace cells. Quarterly report, 8 May--7 August 1968, 3202 (N--69-39395)
Development of uniform and predictable battery materials for nickel--cadmium aerospace cells. Quarterly report, 8 February--7 May 1969, 3205 (N--69-40923)
Development of uniform and predictable battery materials for nickel--cadmium aerospace cells. Interim annual report, 8 August 1968--7 July 1969, 3210 (N--70-28473)
Development of uniform and predictable battery materials for nickel--cadmium aerospace cells. Quarterly report, 8 September--7 December 1969, 3212 (N--70-35576)
Electrode passivation studies. Quarterly report No. 2, 1 Mar--31 May 1966, 2838 (AD--484216)
High energy batteries. Final report, 472 (AD--823304)
High energy battery systems based on propylene carbonate, 2924 (AD--697037)
Hydrogen--nickel regenerative fuel cells, 1839 (AD--784902)
Hydrogen--nickel regenerative fuel cells, 450 (AD--784902)
Lead/acid battery development for heat engine/electric hybrid vehicles. Final report, 722 (PB--221280/1)
Lead/acid battery development for heat engine/electric hybrid vehicles. Final report, 644 (APTD--1346)
Lead/acid battery development for heat engine/electric hybrid vehicles. Final report, 645 (APTD--1346)
Low temperature electrochemical system. Semiannual technical report No. 1, 1 Jul-31 Dec 1971, 2950 (AD--742720)
Low temperature electrochemical systems. Annual technical report No. 1, 1 Jul 1971-30 Jun 1972, 2961 (AD--749270)
Low temperature electrochemical systems. Final report, 2972 (AD--773053)
Low temperature electrochemical systems. Semiannual technical report No. 2, 1 Jul-31 Dec 1972, 2965 (AD--758171)
Nickel-cadmium cells. Final report, 30 Mar. 1972--30 May 1973, 710 (N--76-13598)
Nickel--cadmium cells. Final report, 30 March 1972--30 May 1973, 707 (N--75-21792)
Preferential solvation effects of water on electrode

reactions in propylene carbonate, 1793 (AD--726814)
Studies of reserve batteries. Semiannual report, 3001 (AD--813774)
Study of the composition of nonaqueous solutions of potential use in high energy density batteries. Final report, 1 Sep 1966-31 Aug 1969, 2925 (AD--699589)

U

UKAEA WEAPONS GROUP, ALDERMASTON. ATOMIC WEAPONS RESEARCH ESTABLISHMENT
Measurement of the conductivity of copper sulfate solutions. Energy storage and dissipation notes: Note 4, 3246 (NP--21315)
UNIDYNAMICS, PHOENIX, ARIZ. (USA)
Fabrication and inspection procedures for gas generators, 950 cc and 8000 cc (instantaneous and delay), 2815 (AD--469277)
Research and development directed toward the development of gas generators. Final report for Jul 1961--May 1963, 2867 (AD--620212)
UNIFIED SCIENCE ASSOCIATES, INC., PASADENA, CALIF. (USA)
Gaseous electrolytes for batteries and fuel cells. Final report, 21 August 1964--31 July 1967, 3199 (N--69-29708)
UNION CARBIDE CONSUMER PRODUCTS CO., CLEVELAND, OHIO (USA)
Alkaline--$MnO_2$ battery. Quarterly report No. 7, 1 Nov 1963--31 Jan 1964, 1665 (AD--462026)
UNITED AIRCRAFT CORPORATE SYSTEMS CENTER, FARMINGTON, CONN. (USA)
Stellar inertial guidance studies. Volume IIA. Appendices to Vol. II, 1622 (AD--357497)
UNITED TECHNOLOGY CENTER, SUNNYVALE, CALIF. (USA)
Qualification testing of United Technology Center battery UTC P/N 4T4506, Yardney P/N 61403, 1651 (AD--454684)
Reliability and quality assurance program. Quarterly status report No. 14, Jan--Mar 1966, 1700 (AD--480956)
USAEC DIVISION OF APPLIED TECHNOLOGY, WASHINGTON, D.C.
Government-wide report to Office on Management and Budget on energy storage R and D program strategies and implementation plans, 750 (TID--26751)
USAEC, WASHINGTON, D.C.
Electric power systems: C-3 energy storage, transmission and distribution, electric power apparatus and systems, 751 (TID--26756)
UTAH UNIV., SALT LAKE CITY (USA)
Effect of high pressure on the voltage and current output of silver oxide--zinc and mercury oxide--zinc miniature batteries, 1776 (AD--705904)
Research on electrodes and electrolyte for the Ford sodium--sulfur battery. Quarterly report covering the period January 1, 1974 to March 31, 19754, 3252 (PB--234561)
Research on electrodes and electrolyte for the Ford sodium--sulfur battery. Quarterly report covering the period January 1, 1974 to March 31, 19754, 723 (PB--234561)

V

VARTA BATTERIE A.G., KELKHEIM (GERMANY, F.R.). FORSCHUNGS- UND ENTWICKLUNGSZENTRUM
Electrochemical power sources in ocean engineering, 2029 (AED-CONF--76-203-006)
Traction batteries for existing and future electric road vehicles, 603 (AED-Conf--76-444-016)
VERSAR, INC., SPRINGFIELD, VA. (USA)
Assessment of industrial hazardous waste practices, storage and primary batteries industries. Final report, Apr--Sep 1974, 725 (PB--241204)
Technical and microeconomic analysis of cadmium and its compounds. Final report on Task 1, 3257 (PB--244625)

W

WASHINGTON UNIV., SEATTLE (USA)
Method for calculating the conductivity of simulated silver chloride--magnesium battery electrolytes (sea water--$MgCl_2$ solutions), 3052 (AD--860591)
WATERLOO UNIV., ONTARIO (CANADA). DEPT. OF PHYSICS
Optical study of the growth and oxidation of nickel hydroxide films, 2967 (AD--761281)
WENTWORTH INST., BOSTON, MASS. (USA)
Support devices for sounding rocket instrumentation systems. Universal time delay and automatic test system, 2018 (AD-A--020299)
WESTINGHOUSE ELECTRIC CORP., EAST PITTSBURGH, PA. (USA)
Ac/dc power conditioning and control equipment for advanced conversion and storage technology. Key phase report No. 1, 3259 (PB--247217)
WESTINGHOUSE ELECTRIC CORP., PITTSBURGH, PA. (USA)
ac/dc power conditioning and control equipment for advanced conversion and storage technology. Final report, 3186 (EPRI-EM--271)
Development of an iron--air battery system for electric vehicles. Progress report, August 1, 1976--August 31 1976, 753 (TID--27211)
Executive summary study of lead-acid battery systems for peaking power. Final report for the period ending October 1976, 664 (CONS/2114--1)
Study of the auxiliaries for lead--acid battery systems for peaking power. Final report for the period ending October 1976, 3180 (CONS/2114--3)
Study of the manufacturing costs of lead--acid batteries for peaking power. Final report for the period ending Oct. 1976, 665 (CONS/2114--2)
WHITTAKER CORP., SAN DIEGO, CALIF. (USA)
Advanced design battery power source for aircrew survival transceivers and beacons. Interim technical report, March 1968--August 1969, 519 (AD--861947)
Electrochemical characterization of nonaqueous systems for secondary battery application, 690 (N--69-36829)
WHITTAKER CORP., SAN DIEGO, CALIF. (USA). NARMCO RESEARCH AND DEVELOPMENT DIV.
Electrochemical characterization of nonaqueous systems for secondary battery application. Quarterly report, February--April 1968, 3196 (N--68-28554)

Y

YARDNEY ELECTRIC CORP., NEW YORK (USA)
Development of manufacturing methods and techniques for the production of improved alkaline batteries. Interim engineering progress report, 1 Apr--30 Jun 1965, 288 (AD--472261)
Development of manufacturing methods and techniques for the production of improved alkaline batteries. Final technical report, 1 April 1965--30 June 1966, 453 (AD--802279)
Development of the sealed zinc--silver oxide secondary battery system. Quarterly progress report No. 4, 1 Apr--30 Jun 1964, 266 (AD--453792)
Development of the sealed zinc--silver oxide secondary battery system. Quarterly progress report No. 5, 1 Jul--30 Sep 1964, 268 (AD--457834)
Development of the sealed zinc--silver oxide secondary battery system. Quarterly progress report No. 6, 1 Oct--31 Dec 1964, 273 (AD--464470)
Development of the sealed zinc--silver oxide secondary battery system. Quarterly progress report No. 7, 1 Jan--31 Mar 1965, 329 (AD--621583)
Long-life stable zinc electrode for alkaline secondary battery. Quarterly report No. 5, 1 December 1967--29 February 1968, 3028 (AD--837262)
Long-life stable zinc electrodes for alkaline secondary batteries. Quarterly technical progress report No. 6, 1 March--30 May 1968, 3038 (AD--847053)
Long-life stable zinc electrodes for alkaline secondary battery. Quarterly report No. 4, 1 September--30 November 1967, 3026 (AD--835961)
Long-life stable zinc electrodes for alkaline secondary batteries. Quarterly technical progress report No. 7, 1 June--31 August 1968, 3042 (AD--849523)
Long-life stable zinc electrodes for alkaline secondary batteries. Quarterly report No. 3, 1 June--3 August 1967, 3018 (AD--828224)
Long-life stable zinc electrodes for alkaline secondary batteries. Report No. 8 (final), December 1966--February 1969, 3049 (AD--857500)
Maintenance-free silver--cadmium batteries for aircraft emergency applications. Technical report No. 8 (final), June 1965--August 1969, 518 (AD--860708)
Maintenance-free silver--cadmium batteries for aircraft emergency applications. Quarterly technical progress report No. 6, 1 September--30 November 1966, 1851 (AD--805540)
Maintenance-free silver--cadmium batteries for aircraft emergency applications. Quarterly progress report No. 4, 1 Mar--31 May 1966, 1707 (AD--485873)
Maintenance-free silver--cadmium batteries for aircraft emergency applications. Quarterly progress report No. 1, Jun--30 Sep 1965, 2821 (AD--473358)
Maintenance-free silver--cadmium batteries for aircraft emergency applications. Quarterly technical progress report No. 7, 1 December 1966--28 February 1967, 1854 (AD--811439)
Maintenance-free silver--cadmium batteries for aircraft emergency applications. Quarterly progress report No. 3, 1 Dec 1965--28 Feb 1966, 1699 (AD--480501)
Maintenance-free silver--cadmium batteries for aircraft emergency applications. Quarterly technical progress report No. 5, 1 June--31 Aug 1966, 454 (AD--802355)
Maintenance-free silver--cadmium batteries for aircraft emergency applications. Quarterly technical progress report No. 2, 1 Sep--30 Nov 1965, 1693 (AD--476516)
Silver--zinc missile power supply. Quarterly progress report No. 7, 1 January--31 March 1967, 461 (AD--814021)
Silver--zinc missile power supply. Quarterly progress

report No. 9, 30 June--30 September 1967, 471 (AD--823190)
Silver--zinc missile power supply. Quarterly technical progress report No. 4, 1 Apr--30 Jun 1966, 297 (AD--488983)
Silver--zinc missile power supply. Quarterly technical progress report No. 5, 1 July--1 October 1966 on Phase 1, 456 (AD--804558)
Silver--zinc missile power supply. Quarterly technical progress report No. 6, 1 October--31 December 1966, 459 (AD--811343)
Silver--zinc missile power supply. Quarterly technical progress report No. 3, 1 Jan--31 Mar 1966, 291 (AD--482897)
Silver--zinc missile power supply. Quarterly technical progress report No. 10, 1 October 1967--1 January 1968, 485 (AD--831452)
Silver--zinc power supply. Quarterly progress report No. 8, 31 March--30 June 1967 on Phase 2B, 465 (AD--819494)

YARDNEY ELECTRIC CORP., PAWCATUCK, CONN. (USA)
BA-525( )/U and BA-526( )/U mechanically rechargeable zinc/air batteries. Final report, 555 (AD--914149L)
Design and cost study of a zinc/nickel oxide battery for electric vehicle propulsion. Final report, 637 (ANL-K--76-3543-1)
Development and fabrication of large vented nickel--zinc cells. Final report, 712 (N--76-28642)
Development and fabrication of sealed silver--zinc cells, Phase 1. Final report, 698 (N--74-17791)
Development of battery, BA 536( )/U 150 amp hour (advanced development engineering design type), 414 (AD--743214)
Evaluation of improved separator material in large silver zinc cells. Final report, 3107 (AD--917948L)
Fabrication and testing of sealed silver--zinc cells. Final report, 2099 (N--76-27673)
New mechanically rechargeable zinc/air battery design. Interim technical report No. 3, 1 Feb-1 May 1972, 424 (AD--753361)
New mechanically rechargeable zinc/air battery design. Interim technical report No. 1, 1 Jul-1 Nov 1971, 417 (AD--748434)
New mechanically rechargeable zinc/air battery design. Interim technical report No. 2, 1 Nov 1971-1 Feb 1972, 1816 (AD--748455)
New mechanically rechargeable zinc/air battery design. Final report, 431 (AD--762573)
Standard line rechargeable battery, silver--zinc BB519/U. Final report Jul 1973--Jan 1975, 586 (AD-A--020365)

YARDNEY ELECTRIC CORP., PAWCATUCK, CONN. (USA). ELECTRIC DIV.
Evaluation of inorganic/organic separators. Final report, 3237 (N--77-10639)

YARDNEY LABS., INC., NEW YORK (USA)
Development of the sealed zinc--silver oxide secondary battery system. Quarterly progress report No. 1, 1 Jul--30 Sep 1963, 253 (AD--432195)
Development of the sealed zinc--silver oxide secondary battery system. Quarterly progress report No. 2, 1 Oct--30 Dec 1963, 311 (AD--600395)
Development of the sealed zinc--silver oxide secondary battery system. Quarterly progress report No. 3, 1 Jan--31 Mar 1964, 261 (AD--444798)

Z

Influence of the chemical reaction of the solid electrolyte material with liquid sodium on the electromotive force of solid electrolyte cells, 3273 (ZfK--292)

# AUTHOR INDEX

Authors' surnames are indexed in the form appearing in the abstracted publication; given names are reduced to initials. Each author entry gives the publication title and the citation number. Report numbers, if applicable, are given in parentheses at the end of the entry. For publications with multiple authors, an author entry is provided for each. Entries for the second and succeeding author give a reference to first author.

Because of problems involved in the mechanical preparation of this index, all accent marks are omitted. Changes in spelling introduced as a result of accent omission follow standard conventions.

# SUBJECT INDEX

The subject index is based on the use of subject descriptors selected from a controlled thesaurus of terms. Subject descriptors and qualifiers (subheadings) are selected and presented in the following format:

SUBJECT DESCRIPTOR/QUALIFIER
Title, (supplementary information), citation number, (report number)

The title may be supplemented with additional words, or a phrase, if it appears additional information would be helpful. In cases for which thetitle contains little or no information related to the subject entry, it may be replaced entirely by the supplementary information. A qualifier is not always required, and in such cases the title will follow the unqualified subject descriptor.

The descriptors selected for use as subject terms are generally the names of specific materials, things, or processes. To the extent possible, a qualifier is selected to describe the properties of, or processses applied to, the subject term.

Index entries are selected to indicate the important ideas and concepts presented in a document, rather than words that may appear in the text.
Within the available thesaurus terms, the most probable or logical place to look for typical information is selected. ''See references'' are included to guide users from synonymous terms or phrases to the descriptor selected as a subject heading for the concept. (e.g. Pipeline Quality Gas see HIGH BTU GAS). ''See also references'' are used to indicate where to find references to subject concepts that are narrower, broader, or related to a particular subject heading. To complete an exhaustive search of a given subject, all such headings should be reviewed.

A

AC SYSTEMS/CONTROL SYSTEMS
Batteries back up new control system, 218
ACID ELECTROLYTE FUEL CELLS/ELECTRODES
Titanium electrodes for fuel cells and batteries containing acid electrolyte (Patent; acid-resistant coating), 4238
ACID ELECTROLYTE FUEL CELLS/RESEARCH PROGRAMS
Batteries: today and tomorrow, 131
ACTUATORS/DESIGN
Activator for dry-charged electrochemical batteries and the like (Patent), 4723
AEROSOLS/X-RAY FLUORESCENCE ANALYSIS
RANN utilization experience (case studies 22 through 31). Final report, 738 (PB-263682)

dc power systems for aircraft, 2715
Electric equipment for automotive use (Textbook), 2733
AIRCRAFT/ENERGY SOURCES
Systems approach winning out in APU design. Batteries and turbines competing as APU energy sources, 5325
AIRCRAFT/LEAD-ACID BATTERIES
Aircraft storage batteries, 2637
Arinc Research Corporation evaluation of electric power equipment on aircraft, technical administration of. Final report, 1636 (AD-439635)
Arinc Research Corporation evaluation of electric power equipment on aircraft, technical administration of. Final report, 1637 (AD-439635)
Engineering evaluation of aircraft batteries. Research and development technical report, 1796 (AD-733289)
Evaluation of water-activated lead--acid aircraft storage batteries, 1917 (AD-901714L)
First article tests of two 12-volt, type MS 90379-1A lead--acid batteries, manufactured by Teledyne Inc., Gill Electric Division, under contract N00383-72-C-5202. Final report, 1983 (AD-916499L)
Lead-antimony-cadmium alloys for battery grids, 4482
Preproduction tests of two aircraft batteries, lead-acid, type MS 18045-42 (WEP), manufactured by Gould-National Batteries, Inc., 1704 (AD-485498)
Preproduction tests of two aircraft batteries, lead-acid, type MS 18045-41 (WEP), manufactured by Gould-National Batteries, Inc., 1705 (AD-485499)
Qualification test of five aircraft batteries, lead-acid, type MS25211-2, manufactured by Gill Electric Manufacturing Corporation, 1628 (AD-430864)
Qualification tests of two aircraft batteries, lead-acid, type MS 18045-42(WEP), manufactured by Gill Electric Manufacturing Corporation, 1703 (AD-484519)
Sample testing of five 12-volt, type MS90379-1, lead--acid batteries manufactured by Teledyne Battery Products, a division of Teledyne, Inc., under contract N00383-72-C-5202. Final report, 1992 (AD-917760L)
Sampling and life cycle costing tests of type MS 18045-42, lead--acid, aircraft batteries from 22 production lots manufactured by Teledyne Inc., Teledyne Battery Products Division under contract N00383-72-C-4027, 1986 (AD-917329L)
Sampling and life cycle costing tests of 53 production lots of types MS 18045-41 and MS 18045-42 lead--acid aircraft batteries, manufactured by Teledyne, Inc. Final report, 1934 (AD-905686L)
T-28 battery system investigation. Final report Apr--Oct 1973 (Need for replacing lead--acid by nickel--cadmium batteries), 1978 (AD-916042L)
AIRCRAFT/METAL-NONMETAL BATTERIES
Battery with chromic acid--sulfuric acid electrolyte feeding at first use (Zn/C; patent), 1282
Lithium-silver chloride secondary battery investigation. Quarterly technical progress report No. 2, 718 (PB-167327)
AIRCRAFT/NICKEL-CADMIUM BATTERIES
Aircraft storage batteries, 2637
Analysis of aircraft battery thermal runaway, 2286
Arinc Research Corporation evaluation of electric power equipment on aircraft, technical administration of. Final report, 1636 (AD-439635)
Arinc Research Corporation evaluation of electric power equipment on aircraft, technical administration of. Final report, 1637 (AD-439635)
Battery vibration investigation on H-3 helicopter. Report No. 1 (final), Dec 1972-Mar 1973, 1955 (AD-910807L)
Commercial applications of advanced battery technology, 5260
Coulometer control of battery charging, 4521
Data acquisition test report on OH-58A NiCad battery operation. Final technical report, 1998 (AD/A-001526)

Development of an aircraft battery conditioner/analyzer. Final report, 19 June 1972-18 December 1973, 3116 (AD/A-005055)
Development of an aircraft battery conditioner/analyzer. Final report, 9 June 1972-18 December 1973, 3117 (AD/A-005055/9ST)
Development of uniform and predictable battery materials for nickel-cadmium aerospace cells. Quarterly report, 8 November 1968-7 February 1969, 3201 (N-69-38423)
Development of uniform and predictable battery materials for nickel-cadmium aerospace cells. Quarterly report, 8 May-7 August 1968, 3202 (N-69-39395)
Development of uniform and predictable battery materials for nickel-cadmium aerospace cells. Quarterly report, 8 February-7 May 1969, 3205 (N-69-40923)
Development of uniform and predictable battery materials for nickel-cadmium aerospace cells. Quarterly report, 8 September-7 December 1969, 3212 (N-70-35576)
Diode control research. Quarterly technical progress report No. 3, 1 December 1966-1 March 1967, 2998 (AD-810831)
Diode control research. Quarterly technical progress report No. 4, 1 March-1 June 1967 (Stabistor diode charge control system), 3011 (AD-822337)
Diode control research. Quarterly progress report No. 6, 1 September-1 December 1967 (Stabistor charge control), 1862 (AD-825660)
Electrolyte carbonate contamination versus electrical performance of sintered plate nickel-cadmium aircraft batteries. Summary report, April 1965-January 1966, 2992 (AD-806812)
Engineering evaluation of aircraft batteries. Research and development technical report, 1796 (AD-733289)
Evaluation tests of two MS18045-49 batteries manufactured by Marathon Battery Company to MS90365-1 and -2 requirements, 1963 (AD-912153L)
Evaluation of a forced-air-cooled battery manufactured by Marathon Battery Company, 1944 (AD-907585L)
Evaluation of maintenance-free battery power system manufactured by Gulton Industries, Inc., 1920 (AD-903374L)
Evaluation of high rate life test, authorized by AIRTASK A05-536-805/323-2/6178, employing one type MS 18045-74 nickel--cadmium battery. Final report, 1924 (AD-903445L)
Evaluation of two splash-proof aircraft batteries, nickel-cadmium, type MS18122, manufactured by General Electric Company, 1706 (AD-485571)
Evaluation and improvement of a sealed battery system for aircraft. Final technical report, Nov 1971-Jul 1974, 2012 (AD-A-014337)
Fabrication and investigation of nickel-alkaline cells. Part I. Fabrication of nickel-hydroxide electrodes using electrochemical impregnation techniques. Technical report, 1 Jan 1971-1 Jan 1974, 3127 (AD-A-018517)
First article testing of two type MS90321-79W nickel--cadmium cells, manufactured by Marathon Battery Company under contract N00383-73-C-0683, 1987 (AD-917330L)
First article tests of two type MS18045-45 nickel--cadmium batteries, manufactured by Gulton Battery Corporation under contract N00383-73-C-0819, 1988 (AD-917331L)
First article tests of two type MS 17334-2, nickel--cadmium batteries manufactured by Gulton Battery Corporation under contract N00383-72-C-5222, 1980 (AD-916409L)
First article tests of two type MS90365-2 nickel--cadmium aircraft batteries, manufactured by Eagle-Picher Industries, Inc., under contract N00019-72-C-0081. Final report, 1948 (AD-908388L)
First article tests of two type MS90365-2 nickel--cadmium aircraft batteries manufactured by Gulton Industries, Inc. Final report, 1913 (AD-901265L)
First article tests of two type MS90365-1 nickel--cadmium aircraft batteries manufactured by Gulton Industries, Inc., 1915 (AD-901267L)
First article testing of two type MS 90344-1, nickel--cadmium batteries, manufactured by Marathon Battery Company under contract N00383-73-C-0682, 1985 (AD-916826L)
First article tests of two type MS 90377-1 nickel--cadmium batteries, manufactured by Gulton Industries, Inc., under contract N00383-71-C-4927, 1928 (AD-904428L)
First article tests of two type MS 3319-1 nickel--cadmium batteries, manufactured by Gulton Battery Corporation, 1930 (AD-904700L)
H-2 battery system investigation. Interim report No. 1, Apr--Oct 1973, 1975 (AD-915478L)
H-3 helicopter battery system investigation. Interim report No. 1, Apr-Sep 1973, 1974 (AD-915448L)
High rate battery charger system, 4524
Improved aircraft battery, 1239
Improved method of high-rate discharge testing of aircraft storage batteries, 1931 (AD-905118L)
Investigation of unregulated converters as battery charges in A-6 aircraft. Report No. 1 (final), Nov 1971-Jun 1972, 3086 (AD-905612L)
Investigation of maintenance-free high-rate, nickel-cadmium batteries for aircraft application. Quarterly technical progress report No. 4, 1 March-1 June 1967, 463 (AD-818309)
Investigation of maintenance-free, high-rate, nickel-cadmium batteries for aircraft application. Quarterly technical report No. 3, December 1966-March 1967, 1856 (AD-814002)
Investigation of maintenance-free, high-rate, nickel-cadmium batteries for aircraft application. Quarterly progress report No. 5, 1 June-31 August 1967, 1861 (AD-822449)
Investigation of maintenance-free, high-rate, nickel-cadmium batteries for aircraft application. Quarterly technical progress report No. 2, 2989 (AD-805274)
Investigation of maintenance-free high-rate, nickel-cadmium batteries for aircraft application. Quarterly technical progress report No. 7, 1 September 1967-29 February 1968, 484 (AD-831150)
Investigation of maintenance-free, high-rate, nickel-cadmium battery power system for aircraft application. Quarterly technical progress report No. 8, 1 March-31 May 1968, 490 (AD-837598)
Investigation of hermetically sealed, maintenance-free, high-rate, nickel-cadmium batteries for aircraft applications. Quarterly technical progress report No. 7, 296 (AD-484494)
Investigation of hermetically sealed maintenance-free, high-rate, nickel-cadmium batteries for aircraft applications. Quarterly technical progress report No. 3, 1670 (AD-463855)
Investigation of hermetically sealed maintenance-free, high-rate, nickel-cadmium batteries for aircraft applications. Quarterly technical progress report No. 4, 1676 (AD-466644)
Investigation of hermetically sealed maintenance-free, high-rate, nickel-cadmium batteries for aircraft applications. Quarterly technical progress report No. 5, 1691 (AD-473883)
Investigation of hermetically sealed, high-rate, maintenance-free, nickel-cadmium batteries for aircraft applications. Final technical report, Jul 1964-Jun 1966, 1712 (AD-489830)
Investigation of hermetically sealed, maintenance-free, high-rate, nickel-cadmium batteries for aircraft application. Quarterly technical progress report No. 1, 1729 (AD-608662)
Investigation of hermetically sealed maintenance-free, high-rate, nickel-cadmium batteries for aircraft applications. Quarterly technical progress report No. 2, 1731 (AD-611404)
Investigation of hermetically sealed, maintenance-free, high-rate, nickel-cadmium batteries for aircraft applications. Quarterly technical progress report No. 6, 2833 (AD-479652)
Investigation of maintenance-free, high-rate, nickel-cadmium battery power system for aircraft application. Final technical report, 3062 (AD-879606)
Long-life, high energy Ni-Cd aerospace cells, 4266
Maintenance-free battery system, model No. EMBC114C. Battery system, sealed cell, nickel cadmium, integral charge control, aircraft. Final report, 428 (AD-757535)
Methods for charging batteries on aircraft, 2287
Modification of three type MS 18122-1 aircraft batteries for use in type H2 helicopters, Naval Air Station, Lakehurst, NJ, 540 (AD-905759L)
New handle for nickel--cadmium batteries (Gas turbine engine starting capability), 2357
Nickel--cadmium batteries. 6. Sealed aircraft batteries, 1509
Nickel--cadmium aircraft battery run-a-way, 2269
Nickel--cadmium monoblock battery BB-433(X-1)/A. Final report, Apr 1971--Feb 1974, 437 (AD-774811)
Nickel/cadmium aircraft batteries: float charge test equipment. Technical note, 3085 (AD-905408)
Nickel/cadmium batteries in aircraft engine starting, 2281
Nickel/cadmium batteries in aircraft engine starting, 2308
Nickel/cadmium aircraft batteries: float charge test, 2000 (AD/A-002767)
Nickel/cadmium aircraft batteries: thermal considerations, 2009 (AD-A-011995)
Nickel/cadmium aircraft batteries: failure prediction in battery shops by gassing rate measurements. Technical note, 2020 (AD-A-026197)
Nickel/cadmium aircraft batteries: high rate discharge equipment. Technical note (Apparatus to study battery performance at high discharge rates), 3135 (AD-A-031866)
Nickel/cadmium aircraft batteries: single sensor temperature monitoring. Technical note, 2025 (AD-A-037722)
Nickel/cadmium aircraft batteries: battery alarm unit. Technical note, 2027 (AD-A-039521)
Nickel/cadmium aircraft batteries: rapid electrolyte exchange technique. Technical note, 3142 (AD-A-039335)
Nickel/cadmium aircraft batteries: multichannel gassing-rate meter. Technical note, 3144 (AD-A-039735)
On-board aircraft battery charging, 4049
OV-10A aircraft Ni--Cd battery and charging system investigation. Report No. 1, (final), Apr-Sep 1973, 3109 (AD-919452L)

Peak programmed charge method, 2288
Performance of battery BB-641/A in OH-6A helicopter. Research and development technical report, 1831 (AD-774797)
Qualification of Gulton Industries, Inc., type MS90377-1 nickel--cadmium battery, employing modified low frequency vibration test, 1977 (AD-915890L)
Qualification tests of two aircraft batteries, nickel--cadmium, type MS17334-2(WP), manufactured by the Sonotone Corporation, 1843 (AD-801355L)
Qualification testing of one type MS90365-2 battery, manufactured by Gulton Battery Corporation under contract N00383-70-C-3405. Addendum to final report, 1937 (AD-906102L)
Qualification tests of one type MS18045-75 nickel--cadmium battery, manufactured by Gulton Battery Corporation, 1949 (AD-908534L)
Qualification tests of one type MS 90365-2 nickel--cadmium aircraft battery, manufactured by Marathon Battery Company, under contract N00383-71-C-0063, 1927 (AD-904404L)
Rapid recharging of nickel-cadmium batteries, 4420
Redesign of battery BB-433/A, 1459
Sampling tests of 17 type MS90321-66W nickel--cadmium cells, manufactured by Marathon Battery Company under contract N00383-73-C-2016, 1991 (AD-917732L)
Sampling tests of one type MS18045-74 nickel--cadmium battery, manufactured by Marathon Battery Company under contract N00383-73-C-1824, 1993 (AD-918123L)
Sampling tests of one type MS90447-2 nickel--cadmium battery, manufactured by Marathon Battery Company, 1935 (AD-905687L)
Sampling tests of one type MS 90365-2 nickel--cadmium aircraft battery, manufactured by Gulton Battery Corporation, under contract N00383-72-C-4036. Final report, 1965 (AD-912664L)
Sampling tests of one type MS 18045-44 nickel--cadmium battery, manufactured by Marathon Battery Company, 1940 (AD-906369L)
Sampling tests of one type MS90365-1 nickel--cadmium aircraft battery, manufactured by Gulton Battery Corporation under contract N00383-71-C-5767. Final report, 1941 (AD-906370L)
Sampling tests of two type MS18045-44 nickel--cadmium batteries, manufactured by Marathon Battery Company, 1967 (AD-913295L)
Sampling tests of one type MS3319-1 nickel--cadmium battery, manufactured by Marathon Battery Company under contract N00383-71-C-5772, 1943 (AD-906794L)
Sampling tests of one type MS18045-44 nickel--cadmium aircraft battery manufactured by Gulton Industries, Inc., 1906 (AD-894790L)
Sampling tests of four type MS17334-2 nickel--cadmium batteries, manufactured by Marathon Battery Company, 1907 (AD-894791L)
Sampling tests of one type MS 90365-1 nickel--cadmium aircraft battery, manufactured by Gulton Industries, Inc. under contract N00383-70-C-3625. Final report, 1908 (AD-894797L)
Sampling tests of one type MS 3319-1 nickel--cadmium battery, manufactured by Gulton Battery Corporation under contract N00383-70-C-2922, 1971 (AD-915258L)
Sampling tests two type MS 90365-2 nickel--cadmium aircreft batteries manufactured by Marathon Battery Company under contract N00019-72-C-0563. Final report, 1972 (AD-915259L)
Sampling tests of one type MS 90447-2 nickel--cadmium battery, manufactured by Gulton Industries, Inc. under contract N00383-71-C-0012, 1929 (AD-904429L)
Sealed aircraft battery with integral power conditioner, 1347
Sealed aircraft batteries, 344 (AD-636153)
Sealed nickel-cadmium batteries for aircraft electrical systems, 342 (AD-634845)
Service evaluation of aircraft battery charger, Electro Development Corporation model EDC 2-301-3. Report No. 2 (final), Apr 1970-Aug 1972, 3093 (AD-909458L)
Sinter of uniform, predictable, blemish-free nickel plaque for large aerospace nickel cadmium cells, 3225 (N-75-18717)
Temperature investigation of OV-10A battery and battery compartment. Report No. 1 (final), 20 May-30 Dec 1971, 1932 (AD-905610L)
Temperature responsive battery charging circuit (Patent), 3560

AIRCRAFT/NICKEL-ZINC BATTERIES
Evaluation tests of a nickel--zinc aircraft storage battery developed by Eagle-Picher Industries, Inc., 1914 (AD-901266L)

AIRCRAFT/SILVER-CADMIUM BATTERIES
Diode control research. Quarterly technical progress report No. 3, 1 December 1966-1 March 1967, 2998 (AD-810831)
Diode control research. Quarterly progress report No. 6, 1 September-1 December 1967 (Stabistor charge control), 1862 (AD-825660)
Maintenance-free silver-cadmium batteries for aircraft emergency applications. Quarterly technical progress report No. 5, 1 June-31 Aug 1966, 454 (AD-802355)
Maintenance-free silver-cadmium batteries for aircraft emergency applications. Quarterly technical progress report No. 7, 1 December 1966-28 February 1967, 1854 (AD-811439)
Maintenance-free silver-cadmium batteries for aircraft emergency applications. Technical report No. 8 (final), June 1965-August 1969, 518 (AD-860708)
Maintenance-free silver-cadmium batteries for aircraft emergency applications. Quarterly technical progress report No. 2, 1 Sep-30 Nov 1965, 1693 (AD-476516)
Maintenance-free silver-cadmium batteries for aircraft emergency applications. Quarterly progress report No. 3, 1 Dec 1965-28 Feb 1966, 1699 (AD-480501)
Maintenance-free silver-cadmium batteries for aircraft emergency applications. Quarterly progress report No. 4, 1 Mar-31 May 1966, 1707 (AD-485873)
Maintenance-free silver-cadmium batteries for aircraft emergency applications. Quarterly progress report No. 1, Jun-30 Sep 1965, 2821 (AD-473358)
Maintenance-free silver-cadmium batteries for aircraft emergency applications. Quarterly technical progress report No. 6, 1 September-30 November 1966, 1851 (AD-805540)
Service evaluation of silver-cadmium batteries. Report No. 1 (final), Jul 1964-Jul 1965, 1709 (AD-487671)

AIRCRAFT/SILVER-ZINC BATTERIES
Aircraft storage batteries, 2637
BuAer test silver-zinc aircraft battery (Can start jet aircraft engines several times on one charge), 2685
Diode control research. Quarterly technical progress report No. 3, 1 December 1966-1 March 1967, 2998 (AD-810831)
Diode control research. Quarterly technical progress report No. 4, 1 March-1 June 1967 (Stabistor diode charge control system), 3011 (AD-822337)
Diode control research. wuarterly progress report No. 6, 1 September-1 December 1967 (Stabistor charge control), 1862 (AD-825660)
Engineering evaluation of aircraft batteries. Research and development technical report, 1796 (AD-733289)
Modification of three type MS 18122-1 aircraft batteries for use in type H2 helicopters, Naval Air Station, Lakehurst, NJ, 540 (AD-905759L)
Rechargeable pile type silver zinc battery investigations for use in high power airborne applications (2 A/in.$^2$, 4 MW), 2248
Sealed zinc-silver oxide batteries, 2601
Sealed zinc-silver oxide batteries, 1555
Silver-zinc batteries as source: primary electric power for pilotless aircraft, 1586

ALCOHOL FUEL CELLS/CATHODES
Gas diffusion electrode for a battery (Patent), 3382

ALCOHOL FUEL CELLS/ELECTROLYTES
Properties of LiCl and $(CH_3)_4NCl$ solutions in water--methanol mixtures, 4174

ALCOHOL FUEL CELLS/PERFORMANCE
Small size liquid fuel air and zinc air primary cells, 1487

ALCOHOLS
Synthetic fuels. Where we stand today (Review), 160

ALCOHOLS/AUTOMOTIVE FUELS
Synthetic fuels: where we stand today, 5104

ALKALI METAL COMPOUNDS/CHEMICAL REACTION KINETICS
Electrode kinetics of the alkali metals in $AlCl_3$-propylene carbonate solution, 2263

ALOUETTE SATELLITES/NICKEL-CADMIUM BATTERIES
Some factors of the importance in establishing the ratio of negative to positive plate capacities in sealed nickel-cadmium cells, 2991 (AD-805859)

ALPHA REACTIONS
Spacecraft power: guidance and control division (Neutron yield from (d,n) reactions; fuel cells with liquid amalgam electrodes), 696 (N-71-10258)

ALTERNATORS/DESIGN
Use of alternators on British passenger cars, 4557

ALTERNATORS/PERFORMANCE
Facility simulation model for advanced BMD systems. Volume IVA. Power module: user's manual. Final report, 2067 (AD-A-011227)

ALUMINIUM/POLARIZATION
Anodic polarization of aluminum in organic electrolytes (Nitromethane, acetonitile, propylene carbonate, formamide, or tetrahydrofuran in $AlCl_3$), 4037

ALUMINIUM 27/NUCLEAR MAGNETIC RESONANCE
$^7$Li self diffusion in LiAl: an NMR study (Electrodes in Li-S battery system), 3467

ALUMINIUM ALLOYS
*See also* ALUMINIUM BASE ALLOYS

ALUMINIUM ALLOYS/CHEMICAL PREPARATION
Method of preparing a negative electrode including lithium alloy for use within a secondary electrochemical cell (Patent), 3478
Method of preparing an electrode material of lithium-aluminum alloy (Patent), 3429

ALUMINIUM ALLOYS/CORROSION
Magnesium and magnesium alloys as anodes in electrochemical alkaline-electrolyte power sources, 3852

ALUMINIUM ALLOYS/FABRICATION
Mixed powder hydrogen electrode (Al-Ni alloy), 4597

ALUMINIUM ALLOYS/SELF-DIFFUSION
$^7$Li self diffusion in LiAl: an NMR study (Electrodes in Li-S battery system), 3467

ALUMINIUM BASE ALLOYS/DISSOLUTION
Anodic dissolution of lithium--aluminum alloys in a lithium chloride--potassium chloride melt, 1110

ALUMINIUM BASE ALLOYS/FABRICATION

Anodic dissolution of lithium--aluminum alloys in a lithium chloride--potassium chloride melt, 1110
ALUMINIUM CHLORIDES/CHEMICAL REACTIONS
Structure of aluminum chloride--sodium chloride melts. Scientific report, 411 (AD-739353)
ALUMINIUM OXIDES/CHEMICAL ANALYSIS
Determination of sodium and magnesium in β-aluminate materials by atomic absorption spectrophotometry, 4072
ALUMINIUM OXIDES/CHEMICAL PREPARATION
Electrodes including mixed transition metal oxides (Patent), 3539
Optimization of MgO-doped β-$Al_2O_3$ with respect to electrical conductivity, 3150 (ANL-76-8)
Properties of a solid electrolyte from β-alumina synthesized by a gas-flame method, 4098
ALUMINIUM OXIDES/CHEMICAL PROPERTIES
Properties of a solid electrolyte from β-alumina synthesized by a gas-flame method, 4098
ALUMINIUM OXIDES/CRYSTAL STRUCTURE
Neutron scattering studies of solid electrolytes, 3165 (BNL-21367)
ALUMINIUM OXIDES/DECOMPOSITION
Comparison of the thermal stability of a β- and β''-alumina at high pressures (5 to 50 kb, room temperature to 1400°C), 3325
ALUMINIUM OXIDES/ELECTRIC CONDUCTIVITY
Optimization of MgO-doped β-$Al_2O_3$ with respect to electrical conductivity, 3150 (ANL-76-8)
Substructure and properties of sodium beta alumina solid electrolytes. Interim report, June 1, 1974-May 31, 1975, 3183 (EPRI-252)
ALUMINIUM OXIDES/ELECTRICAL PROPERTIES
High-temperature insulation, 4386
Study of a beta-alumina electrolyte for sodium--sulfur battery, 4156
ALUMINIUM OXIDES/FABRICATION
Producing β-alumina electrolytes (Patent), 4314
ALUMINIUM OXIDES/IONIC CONDUCTIVITY
Conductivity of beta-alumina and its dependence on sodium and magnesium content, 4225
Ionic conduction in beta-alumina. Interim technical report No. 6, 8 Feb-8 Aug 1969, 2926 (AD-702938)
Substructure and properties of sodium beta alumina solid electrolytes, 3149 (ANL-76-8)
Substructure and properties of sodium beta-alumina solid electrolytes. Interim report, June 1, 1975-May 31, 1976, 3188 (EPRI-EM-494)
ALUMINIUM OXIDES/MECHANICAL PROPERTIES
Conductive ceramics for use in the sodium-sulfur battery ($Al_2O_3$ with 8.5 to 10% $Na_2O$ and 0.6 to 1.1% $Li_2O$), 3841
Research on electrodes and electrolyte for the Ford sodium-sulfur battery. Annual report, 30 June 1973-29 June 1974, 3253 (PB-235484)
ALUMINIUM OXIDES/MICROSTRUCTURE
Substructure and properties of sodium beta alumina solid electrolytes, 3149 (ANL-76-8)
Substructure and properties of sodium beta alumina solid electrolytes. Interim report, June 1, 1974-May 31, 1975, 3183 (EPRI-252)
Substructure and properties of sodium beta-alumina solid electrolytes. Interim report, June 1, 1975-May 31, 1976, 3188 (EPRI-EM-494)
ALUMINIUM OXIDES/PHASE DIAGRAMS
Study of a beta-alumina electrolyte for sodium--sulfur battery, 4156
ALUMINIUM OXIDES/PHYSICAL PROPERTIES
Study of a beta-alumina electrolyte for sodium--sulfur battery, 4156
ALUMINIUM OXIDES/SINTERING
Sintering of β-aluminium oxide, 4079
Sintering processes and heat treatment schedules for conductive, lithia-stabilized β''-$al_2o_3$, 3330
ALUMINIUM OXIDES/STABILITY
Comparison of the thermal stability of a β- and β''-alumina at high pressures (5 to 50 kb, room temperature to 1400°C), 3325
AMALGAMS
See MERCURY ALLOYS
AMMETERS/DESIGN
Mercury coulometers, 4523
AMMONIA
Synthetic fuels. Where we stand today (Review), 160
AMMONIA/AUTOMOTIVE FUELS
Synthetic fuels: where we stand today, 5104
AMMONIA FUEL CELLS/CHEMICAL REACTION KINETICS
Electrochemical fuel cells, 3444
AMMONIA FUEL CELLS/MATERIALS
Chemoelectric energy conversion for nonaqueous reserve batteries. Quarterly report No. 11, January-March 1966 (Quarterly report), 339 (AD-633957)
AMMONIA FUEL CELLS/RESEARCH PROGRAMS
Batteries: today and tomorrow, 131
AMMONIA FUEL CELLS/THERMODYNAMICS
Electrochemical fuel cells, 3444
ANL
(Argonne National Laboratory.)
ANL/RESEARCH PROGRAMS
Near term battery development projects, 4970 (ERDA-76-136)
ANODES/CADMIUM-AIR BATTERIES
Formation of porous metal plates by electrolytic reduction, 4680
Forming rechargeable electrodes utilizing an unsintered fluorocarbon binder (Patent; fabrication), 4309
High-rate battery electrodes (Performance of plates produced by electrolytic reduction), 4550
Method of producing electrodes (Patent), 3400
Producing porous metal structures for battery electrodes (Patent; Zn, Cd), 4254
ANODES/CHEMICAL ANALYSIS
Methods for chemical analysis of thermal battery components, 3189 (GEPP-299)
ANODES/ELECTRIC BATTERIES
Activity coefficients of dilute solutions of lithium in liquid aluminum-tin alloys: electromotive force measurements and interpretation, 3341
Adsorption of unsaturated and aromatic ketones on mercury (Corrosion inhibition by $(CH_3)_2C{:}CHCOCH_3$), 4094
Alkaline cell (Patent; Zn anode and alkaline electrolyte) 1036
Alkaline cells with anodes made from zinc fibers and needles (Patent; process for preparing fibers and needles), 3917
Amalgamation of zinc powders (Patent), 3665
Analysis of porous alkaline cadmium electrodes. I. Anodic high rate transients, 4095
Anode collectors for zinc alkaline batteries (Patent; fabrication as coated Fe nets), 3752
Anode for galvanic cells (Patent; gas-permeable matrix of cross-linked polyacrylamide saturated with electrolyte and incorporating Zn particles), 3604
Anodes for alkaline batteries (Patent; gel-like anode for alk. batteries using air, O, $Ag_2O$, HgO, or $MnO_2$ cathodes and Fe or Zn anodes), 3678
Anodes for alkaline storage batteries (Patent; 165 mAh/g, 700 mAh/$cm^3$), 3608
Anodic behavior of zinc electrodes in potassium hydroxide electrolytes. Technical report, 2928 (AD-706596)
Anodic behavior of zinc in potassium hydroxide solution, 4457
Anodic behaviour of indium and indium/bismuth alloys in alkaline solutions, 3834
Anodic passivation by ''CdO'' studied by ESR (Aqueous KoH), 3570
Anodic polarization of aluminum in organic electrolytes (Nitromethane, acetonitile, propylene carbonate, formamide, or tetrahydrofuran in $AlCl_3$), 4037
Apparatus and method for charging a zinc electrode (Patent; bubbling of air to prevent dendrite formation and slope change), 3650
Battery with silicon metal anodes (Patent; fabrication), 3296
Battery zinc electrode kinetics investigation. Annual report No. 2, 15 Dec 1970--15 Dec 1971 (KOH electrolyte), 2945 (AD-736460)
Cadmium anodes for alkaline batteries (Patent; fabrication method for improved mechanical strength), 3670
Cadmium anodes for alkaline cells (Patent), 3671
Cadmium anode for alkaline storage batteries (Patent; fabrication), 3618
Cadmium-containing active material for negative electrodes of alkaline storage batteries (Patent; chemical preparation), 4343
Cadmium fibers and galvanic cell anodes made from them (Patent; prepared by electrolysis of electrolyte of Cd salt), 3578
Dependence of electrical erosion of anode on distance between electrodes, 4736
Device for drying negative plates and plates made therewith (Patent), 3703
Distinguishing features of different types of anodes, 3821
Effect of additives on lithium cycling in propylene carbonate ($SO_2$, nitromethane, $H_2O$), 3344
Effect of additives on lithium cycling in methyl acetate (Nitromethane, $SO_2$, $H_2O$), 3345
Electrochemical generator with a zinc electrode (Patent), 3888
Electrochemical engineering of battery systems. Final report, 10 Nov 1971-9 Nov 1972 (Changes in diffusely reflected light from electrode monitor battery performance), 1970 (AD-914248)
Electrochemical engineering of battery systems. Final report, 10 Nov 1971-9 Nov 1972 (Monitoring by changes in diffusely reflected light from electrodes), 3105 (AD-914248)
Electrode formed of lithium and a metal conductor metallurgically bound (Patent), 4026
Electrode of lithium-aluminum alloy (Patent; preparation) 3996
Electrode assembly for electric batteries or accumulators (Patent; Zr active material coated on one side with Cu), 4786
Ferrite-based active material for alkaline storage battery negative electrodes (Patent; preparation of $CdFe_2O_4$ and $CuFe_2O_4$), 4335
Formation of porous metal plates by electrolytic reduction, 4680
Gas evolution studies with powder compact zinc anodes, 4365
Gel-like zinc anode mix for alkaline cells (Patent), 3661
High-energy system (organic electrolyte). Quarterly report No. 1, 15 June-15 September 1965, 334 (AD-628961)

High-energy density electrochemical cells (Aluminium anodes for use in molten salt electrolytes), 3194 (N-68-23941)
Influence of sulfur-containing additives on characteristics of cast zinc anodes in alkaline cells, 4499
Investigation of the electrode migration and reaction process occurring in alkaline-zinc batteries. Quarterly technical progress report No. 13, 1 Dec 1968-1 Mar 1969, 1886 (AD-850474)
Investigation of the electrode migration and reaction process occurring in alkaline-zinc batteries. Quarterly technical progress report No. 6, 1 Mar-1 Jun 1967 (Solubility of ZnO in KOH), 3005 (AD-816527)
Iron--alkaline battery (Patent; effects of EDTA addition to KOH electrolyte on utilization coefficient of anode-active mass), 3639
Iron--alkali batteries (Patent; effect of tartrate addition on utilization coefficient of Fe anode-active mass), 3640
Iron electrode paste for alkaline battery plates, 3886
Kinetic study of the aluminium electrode in molten 60 mole percent aluminium chloride--40 mole percent sodium chloride at 453°K, 4071
Lithium--magnesium electrodes in propylene, carbonate (Li deposition, anodic stripping, electrochemistry), 4002
Long-life stable zinc electrodes for alkaline secondary batteries. Report No. 8 (final), December 1966-February 1969, 3049 (AD-857500)
Magnesium alloys for anodes in alkaline-electrolyte power sources, 3833
Magnesium and magnesium alloys as anodes in electrochemical alkaline-electrolyte power sources, 3852
Micrography of tubular-type battery plates. Final report, 2885 (AD-643750)
Negative active substance for a storage cell ($PbO_2/H_2SO_4$/Mo oxides; patent; $MoO_3.4MoO_2$ + 2H+2e equil. $5MoO_2 + H_2O$), 1030
Negative battery electrodes for reversible storage and regeneration of hydrogen (Patent), 3635
Negative cobalt electrodes (Patent; fabrication by pressing and sintering), 3534
Negative cobalt-powder electrodes for alkaline storage batteries (Patent; fabrication method, 0.6 Ah/g), 4321
Negative electrode grid (Patent), 3536
Negative electrode in gas-tight alkaline storage batteries, 4485
Oxidation of copper-containing films at room temperature, 3307
Paste type cadmium anodes for alkaline batteries (Patent; CdS base, mixed with $H_2O$, $H_2O$-miscible organic solvent, and binder), 3645
Physical changes at lithium electrodes during charge-discharge cycling, 4406
Point of passivation of a zinc electrode in alkali, 3302
Porous cobalt anode for alkaline batteries (NiO(OH)/alk./Co; patent), 3985
Positive electrode for chemical power source (USSR patent), 2971 (AD-772421)
Preparing lithium-filled foraminous metal substrates (Patent), 4261
Process for manufacturing a negative accumulator electrode for the reversible storage and restitution of hydrogen (Patent), 3401
Properties of some mixed organic electrolyte solutions and their effects on the anodic performances of Mg electrodes (Polarization characteristics of Mg anodes), 3461
Reaction of oxygen at metallic negative electrode (lead and cadmium), 4395
Recent advances in insoluble anodes (Review, device unspecified), 4305
Rechargeable cell having improved cadmium negative electrode and method of producing same (Patent), 3649
Rechargeable cell having improved cadmium negative electrode and method of producing same (Patent), 3582
Rechargeable electric accumulator cell with at least one zinc electrode (Patent; means to vibrate anode and/or separator to prevent dendrite formation), 3308
Self-discharge of iron electrodes with hydrogen evolution in alkaline solutions, 4276
Storage battery with zinc electrodes containing titanium dioxide (Patent; anode preparation), 3707
Structure and anodic discharge behavior of lithium-boron alloys in the licl-kcl eutectic melt., 3447
Structure of lithium-boron alloys and their performance as potential anodes for high power molten salt batteries. Progress report, 1 Aug 1974-30 Jun 1975, 3132 (AD-A-025202)
Studies in fundamental chemistry of fuel cell reactions. Quarterly report, 1 April-30 June 1969 (Dendritic deposition of zinc from alkaline solution), 3206 (N-70-10779)
Studies in fundamental chemistry of fuel cell reactions. Quarterly report, 1 April-30 June 1969 (Dendritic deposition of zinc from alkaline solution), 3207 (N-70-16379)
Studies in fundamental chemistry of fuel cell reactions. Quarterly report, 1 July-30 September 1969 (Dendritic deposition of zinc from alkaline solution), 3209 (N-70-25705)
Substitution of silver by various metal ions in modified agi solid electrolytes, 3984
Substrate materials for platinized anodes (Emphasis on Ta, Ti, Zr), 3820
Trial preparation of negative plates of pressed-type alkaline storage battery (CdO, $Cd(O)_2$, polyethylene and polyethylene oxide), 4540
Use of nickel hydroxide in pressed plate electrodes (Patent), 3686
Zinc--alkaline battery containing carbazole as a zinc corrosion inhibitor (Patent), 1001
Zinc alkaline secondary batteries (Patent; dendrite growth suppressed by In and Tl), 3627
Zinc anode battery (Patent; coating of 2,6-di-tert-butyl-p-cresol to extend shelf life and inhibit H evolution), 981
Zinc anodes for secondary batteries (Patent; fabrication, polyethyleneimine to prevent electrodeposition of Zn on anode), 3675
Zinc anodic mixes for alkaline batteries (Patent), 3638
Zinc as a secondary battery electrode (Review of attempts to improve cycling behavior), 4405
Zinc-container electrode (Patent; support with chemically active mass on each side), 3668
Zinc-containing electrode (Patent; preparation by electrodeposition), 4030
Zinc electrode investigation. Quarterly technical progress report No. 4, 1 Apr-1 Jul 1965 (Recombining gases formed during overcharge), 2810 (AD-467031)
Zinc electrodes for secondary batteries (Patent; Cd additive improves Zn adherence), 3299
Zinc fibers and needles and galvanic cell anodes made therefrom (Patent), 3866

ANODES/FABRICATION
Control of adhesion in anode mass consisting of petroleum coke, 3348
Negative electrode grid (Patent), 3536

ANODES/FUEL CELLS
Activated stable oxygen electrode (Patent; activated transition metal chelate catalyst), 4012
Magnesium and magnesium alloys as anodes in electrochemical alkaline-electrolyte power sources, 3852
Positive electrode for chemical power source (USSR patent), 2971 (AD-772421)

ANODES/HIGH-TEMPERATURE FUEL CELLS
High-energy density electrochemical cells (Aluminium anodes for use in molten salt electrolytes), 3194 (N-68-23941)

ANODES/HYDROGEN FUEL CELLS
Influence of certain additives to activated carbon on its properties as hydrogen electrode material, 4644
Mixed powder hydrogen electrode (Al-Ni alloy), 4597
Studies on the bipolar liquid metal electrode, 3159 (ANL-76-8)

ANODES/IRON-AIR BATTERIES
Formation of porous metal plates by electrolytic reduction, 4680
High performance, rechargeable sintered iron electrodes. I. The effect of preparative methods and additives on the structure and performance of sintered iron electrodes, 3443

ANODES/IRON-NICKEL BATTERIES
Active iron mass for electrodes (Patent; fabrication), 3949
Alkaline iron electrode (History, performance, fabrication), 4525
Application of electron spectroscopy for chemical analysis to the study of iron-based battery electrodes, 3782
Beneficial effect of lithiated electrolyte on iron battery electrodes, 4632
Determination of the degree of reduction of active masses of a storage cell iron electrode ([FeO] proportional to magnetic susceptibility), 4431
Effect of initial raw material and the method of preparing the negative electrode masses of an iron--nickel storage battery on their magnetic characteristics, 4129
Effect of matrix structure on the electrochemical performance of p/m iron electrodes in an alkaline battery environment, 4140
Electrode for secondary storage battery (Ni fibers with iron oxide as active agent, additives; patent), 3925
Electrode for alkaline storage battery and method for manufacture thereof (Patent), 3349
Feasibility of using magnetic measurements for the selection of concentrations of sulfur additives in the active mass of an iron electrode, 4432
Formation of porous metal plates by electrolytic reduction, 4680
Influence of conductivity and porosity on the behavior of the iron plate in an alkaline storage cell (Effects of introducing As, Sb, Ni, Cd, or Sn), 4157
Influence of electrical conductivity of the active material on the behavior of the iron plate in an alkaline storage cell, 4158
Iron--alkaline battery (Patent; effects of EDTA addition to KOH electrolyte on utilization coefficient of anode-active mass), 3639
Iron--alkali batteries (Patent; effect of tartrate addition on utilization coefficient of Fe anode-active mass), 3640

Iron electrode paste for alkaline battery plates, 3886
Iron electrode for an alkaline battery (Patent; Fe/air batteries, electrode fabrication), 3615
Iron electrodes (Patent; preparation by mixing Fe or Fe oxides, C black, and resin, casting, and heating), 3520
Iron electrode (Process for preparing electrodes (Patent)), 3544
Magnetic separation of active materials of an iron electrode (For electrode fabrication), 4435
Mechanisms of self-discharge of negative of alkaline accumulators, 4751
Moessbauer spectroscopy investigation of the iron electrode during cycling in alkaline solution, 3810
Negative iron active mass adhering toan electrically conducting carrier (Patent; preparation), 3702
Performance of nonlaminated iron plates in alkaline storage cells, 4459
Potentiodynamic study of the effect of aluminum on the behavior of an iron electrode in alkaline solution, 4298
Preparation of an alkaline iron electrode material using sulfur acids (Patent), 4180
Reasons for the poisoning effect of small quantities of some impurities on the cathode reduction process for metal oxides and hydroxides in an alkali solution, 4134
Scientific research on improving the characteristics of iron and nickel oxide electrodes, 3792
Self-discharge of iron electrodes with hydrogen evolution in alkaline solutions, 4276
Self-discharge of the alkaline iron electrode, 3442
SEM studies of discharge products from alkaline iron electrodes, 3370
Sintered iron electrode, 4526
Slow potentiodynamic studies of porous alkaline iron electrodes, 3424

ANODES/LEAD-ACID BATTERIES
1971 F. M. Becket Memorial Award report. Preliminary investigation into the behavior of lead alloy anodes in sulfuric and chromic acid solutions (Effects of alloying with tin and antimony), 4300
Addition agents for negative plates of lead-acid storage batteries. II (Carbohydrates, phenols), 4765
Anode for lead batteries (Patent; Sn coating for Cu grid to prevent undesirable electrochemical reactions), 3537
Anode of lead storage battery (Patent), 3592
Anodic behavior of ternary lead-calcium alloys in lead storage batteries, 4809
Anodic corrosion of large-surface plates of lead, 4790
Anomalies of the negative plate in the lead-acid battery, 4412
Autoradiographic recording of partially discharged negative grid plates of lead storage batteries, 4484
Battery paste expander material (Patent), 4331
Battery performance negative-plate improvements, 4603
Behavior of some surface-active materials in the lead storage batteries, 4345
Corrosion: Tension factor in the anodic peroxidation of lead, 4709
Cyclic voltammetry on lead electrodes in sulphuric acid solution, 3305
Cycling anodic coatings on pure and antimonial lead in $H_2SO_4$, 2936 (AD-728431)
Device for drying negative plates and plates made therewith (Patent), 3703
Differential capacitance and cyclic voltametric studies on smooth lead in $H_2SO_4$ solutions, 2470
Discharge characteristics of lead/lead sulfate electrode, 4578
Dry-charged, storable negative plates for lead storage batteries (Patent; preparation), 4257
Drying of battery plates (Patent; inducting heating), 3747
Effect of the anode thickness on the operation of a lead--acid storage battery at high discharge current densities, 4052
Effect of additives on the reaction mechanism of the $Pb/PbSO_4$ electrode ($BaSO_4$, lignin), 4023
Effect of an industrial expander on the discharge process of a lead microelectrode in 4.5 M sulfuric acid (Vanisperce), 3369
Effect of pressure on discharge characteristics of a negative electrode, 2466
Effect of surface-active additions on the polarization distribution in the depth of porous electrodes, 4344
Evaluation of fillers used in the negative lead battery electrode (Acetylene black, $BaSO_4$, lignin, humic acid, wood flours), 4073
Evaluation of expanders used in the negative lead battery electrode, 3904
Expander action in the lead--acid battery. 2. Inhibition of nucleation processes, 4017
Expander for lead battery anode (Patent), 3899
Expander for the negative electrode of a lead-acid storage battery (Patent; chemical preparation), 4356
Expander for the negative electrode of a lead-acid storage battery (Patent; procedure for preparation), 4357
Extruding an electrode and a cell having an electrode made thereby (Patent), 3887
Formation processes of the lead--acid battery negative plates (Processes within bulk of the negative plate), 3993
Forming lead-based anodes (Patent), 4291
Functions and behavior of components of expanders for negative plates of lead-acid storage batteries, 4779
Highly active dense pastes made from lead powder, 4401
Hydrogen overpotential on porous lead electrodes, 4726
Influence of surface-active agents on passivation of lead electrode, 4618
Instantly usable storage battery (Patent; anode with oxidation-preventing resin coating decomposed by electrolyte), 1164
Ion selectivity and diffusion potentials in corrosion layers. $PbSO_4$ films on Pb in $H_2SO_4$, 4277
Ion selectivity and diffusion potentials in corrosion layers: $PbSO_4$ films on Pb in $H_2SO_4$, 2335
Kinetics of anodic lead dissolution of $H_2SO_4$, 3822
Lead battery storable without electrolyte (Patent; oxidation of anode prevented by Pb--10 percent Na alloy), 2258
Lead dioxide--titanium composite anodes (Patent), 3681
Lead-platinum bi-electrodes (Change in electrode behavior effected by introducing small piece of Pt into Pb electrode), 4727
Lead storage battery (Patent; fabrication), 3632
Lead sulfate distribution in discharged negative electrode plates of lead batteries (Dependence on discharge current density and degree of discharge), 4233
Mechanical and corrosion properties of low antimony lead alloys, 3459
Mechanism of formation of lead anodes in $H_2SO_4$-$HClO_4$ mixtures, 4612
Mechanism of the formation of blisters on the lead electrode of the lead-acid battery, 4292
Mechanism of the effect of organic additives on the operation of a negative lead battery electrode (Effects on $PbSO_4$ crystallization), 2467
Method of manufacturing lead electrodes for storage cells (Patent), 3515
Migration of arsenic and antimony on the negative electrode of a lead battery and self-discharge of the negative electrode, 4100
Negative electrode plate for lead storage batteries (Patent; lignin and PVA additives extend battery lifetime), 4173
Negative plates for dry-charged lead storage batteries (Patent; higher charging capacity when impregnated with tannin solution), 4378
New experimental technique for study of films produced at electrochemical interfacees (Corrosion films), 4722
New technology for manufacture of dry-charged lead batteries, 1250
Oxidation of Pb in $H_2SO_4$, 4271
Physicochemical properties of oxide films on lead and its alloys, 3801
Polymer-bonded negative electrodes for lead--acid batteries (Evaluation vis a vis conventional posted electrodes), 4054
Positive grid design principles, 4379
Reproducibility of lead electrode and electromotive force of lead stick-lead amalgam cell at 0 to 60°C, 4817
Role of barium sulfate in negative plate of lead storage battery, 4645
Some aspects of charge and discharge processes in lead-acid storage batteries, 4755
Storage battery plates (Patent), 3976
Structure of the lead/lead sulfate electrode in the reduced state and the changes produced by lignin derivatives and barium sulfate, 4085
Studies on active materials for lead storage battery plates (on the relation between acid absorption curves and anode performances), 4775
Theory of the lead storage battery, 2577
Theory of porous electrodes. XII. Negative plate of the lead--acid battery, 4066
Theory of porous electrodes. XII. Negative plate of the lead--acid battery (Transport of mass and electricity), 4070
Tubular electrodes for batteries (Patent; Pb or Pb-Sb alloys), 3633
Voltammetric investigations of negative lead battery electrodes: the effect of organic expanders (Formation process of Pb sheets in $H_2SO_4$), 4230
Volumetric determination of lead sulfate content in the active masses of lead battery electrodes, 4429

ANODES/LITHIUM-CHLORINE BATTERIES
Activity coefficients of dilute solutions of lithium in liquid aluminum-tin alloys: electromotive force measurements and interpretation, 3341
Investigation of porous lithium battery electrodes. Final technical report, 15 July 1965-15 November 1966, 2996 (AD-808937)
Lithium electrode (Patent; fabrication, improved cycle life), 3622
Metal-air batteries symposium: compendium of papers presented for publication, 32 (AD-684898)
Preparing lithium-filled foraminous metal substrates (Patent), 4261
Studies on the negative alloy electrode (Li-Al, Li-Zn, Li-Sn-Zn electrodes), 3157 (ANL-76-8)
Studies on the bipolar liquid metal electrode, 3159 (ANL-76-8)
Studies on the alkali metal alloy-chlorine secondary battery (Liquid and solid electrodes), 3360

ANODES/LITHIUM-COPPER CHLORIDE BATTERIES
Activity coefficients of dilute solutions of lithium in liquid aluminum-tin alloys: electromotive force measurements and interpretation, 3341
Investigation of porous lithium battery electrodes. Final technical report, 15 July 1965-15 November 1966, 2996 (AD-808937)
Investigation of porous lithium battery electrodes. Quarterly technical progress report No. 1, 15 Jul-15 Oct 1965, 2826 (AD-474692)
Preparing lithium-filled foraminous metal substrates (Patent), 4261
Research and development of a high-energy nonaqueous battery. Quarterly technical report No. 2, 18 Jun-18 Sep 1963 (Li anode fabrication), 245 (AD-347495)
Research and development of a high-energy nonaqueous battery. Quarterly technical report No. 5, 18 Mar-18 Jun 1964 (40 to 50 Wh/lb), 247 (AD-354554)
Research on a high-energy nonaqueous battery system. Quarterly progress report No. 4, 1 September-30 November 1966 (4 Ah), 458 (AD-808475)
ANODES/LITHIUM-SULFUR BATTERIES
Activity coefficients of dilute solutions of lithium in liquid aluminum-tin alloys: electromotive force measurements and interpretation, 3341
Anode for a secondary, high-temperature electrochemical cell (Patent; method of preparation), 3717
Anode for a secondary, high-temperature electrochemical cell (Patent; Li/LiF-LiCl-KCl/$FeS_2$-$Li_2S$), 3456
Anodic dissolution of lithium--aluminum alloys in a lithium chloride--potassium chloride melt, 1110
Bonded metal electrodes (Patent; improved contact achieved by cold pressing etched collector sheet), 3693
Characterization of porous Li-Al alloy electrodes (Effects of electrolyte void fraction, electrode thickness, and type of current collector), 2032 (ANL-76-8)
Development of lithium-metal sulfide batteries for load leveling (Li/KCl-LiCl/Fe sulfides, Li and Li-Si negative electrodes), 671 (EPRI-116)
Effects of metal additives on the performance characteristics of lithium-aluminum alloy electrodes (Sn, Pb, Cu, In), 3176 (CONF-770531-4)
Electrode formed of lithium and a metal conductor metallurgically bound (Patent), 4026
Electrode of lithium-aluminum alloy (Patent; preparation), 3996
Investigation of porous lithium battery electrodes. Final technical report, 15 July 1965-15 November 1966, 2996 (AD-808937)
Kinetic study of the aluminium electrode in molten 60 mole percent aluminium chloride--40 mole percent sodium chloride at 453°K, 4071
Lithium-aluminum electrode (Voltage-time curves), 3454
Lithium electrode (Patent; fabrication, improved cycle life), 3622
Lithium electrode and an electrical energy storage device containing the same ( Li-Si/Li and other halide/sulfide; patent), 3404
Lithium-silicon electrodes for the lithium-iron sulfide battery, 3158 (ANL-76-8)
Metal-air batteries symposium: compendium of papers presented for publication, 32 (AD-684898)
Method of preparing a negative electrode including lithium alloy for use within a secondary electrochemical cell (Patent), 3478
Method of preparing an electrode material of lithium-aluminum alloy (Patent), 3429
Method of preparing a negative electrode including lithium alloy for use within a secondary electrochemical cell (Patent; Li-Al/KCl-LiCl/FeS), 3309
Performance characteristics of solid lithium-aluminum alloy electrodes (Li-Al/$FeS_2$), 3371
Physical changes at lithium electrodes during charge-discharge cycling, 4406
Rechargeable lithium/iron sulfide battery (Li--Si/KCl--LiCl/Fe sulfide), 3785
Structure of lithium-boron alloys and their performance as potential anodes for high power molten salt batteries. Progress report, 1 Aug 1974-30 Jun 1975, 3132 (AD-A-025202)
Thermodynamic properties of the lithium-silicon system (Feasibility study), 3356
ANODES/LITHIUM-WATER-AIR BATTERIES
Activity coefficients of dilute solutions of lithium in liquid aluminum-tin alloys: electromotive force measurements and interpretation, 3341
Anodic behavior of lithium in aqueous electrolytes. II. Mechanical passivation, 3408
Metal-air batteries symposium: compendium of papers presented for publication, 32 (AD-684898)
Preparing lithium-filled foraminous metal substrates (Patent), 4261
ANODES/METAL-GAS BATTERIES
Alkaline cadmium anode studies. Research and development technical report (Cadmium--air batter), 2942 (AD-732830)
Aluminium anode for biogalvanic metal-oxygen -cells (Patent), 3710
Anodes for refuelable magnesium-air batteries, 4443
Anodic oxidation of sodium and lithium amalgams, 4288
Biogalvanic metal--oxygen battery (Poly (vinyl alc.) membranes on anode; patent), 3716
Disposable anode package (Patent; for mechanically rechargeable metal-air batteries), 4253
Electrical resistivity of K-Hg and Na-Hg systems and diffusivity of K-Hg system at high temperatures, 1532
Electrodes for iron-air secondary cells (Emphasis on iron), 4275
Iron electrodes for metal/air cells, 4195
Iron electrode for an alkaline battery (Patent; Fe/air batteries, electrode fabrication), 3615
Liquid metal cells (Differential K-Hg cells), 1541
Magnesium and magnesium alloys for anodes in alkaline batteries, 3809
Metal--air systems as sources of electric current (Al, Mg, Zn anode corrosion), 2217
Porous cobalt electrodes for alkaline accumulators and hybrid cell therewith and air electrode (Patent), 3376
Rechargeable metal-air cell. Final report, 1 May 1967-30 November 1968 (Study of Cd, Pb, and Zn anodes), 513 (AD-853037)
Sodium reaction powers new fuel cell, 1564
State-of-the-art alkaline cadmium anodes (0.30 A-hr/g), 2916 (AD-680169)
Studies on the alkali metal alloy-chlorine secondary battery (Liquid and solid electrodes), 3360
Survey and analysis on metal-air cells. Technical report (final), 20 January 1966-4 January 1968, 482 (AD-829289)
ANODES/METAL-METAL OXIDE BATTERIES
Engineering analysis of shape change in zinc secondary electrodes. I. Theoretical, 3372
Laboratory investigation and engineering design leading towards the development of a lightweight secondary or primary cell type battery for one-shot application. Quarterly report No. 8 (final) (Pb/Pb oxides), 293 (AD-471978)
Long-life stable zinc electrodes for alkaline secondary battery. Quarterly report No. 4, 1 September-30 November 1967 (Teflonated anodes), 3026 (AD-835961)
ANODES/METAL-NONMETAL BATTERIES
Anode for a secondary, high-temperature electrochemical cell (Patent; method of preparation), 3717
Anodic behavior of lithium in aqueous electrolytes. II. Mechanical passivation (Li/$H_2O$), 3408
Calcium alloy as active material in secondary electrochemical cell ( Patent; Ca alloy/halide/oxides, sulfides), 3354
Calcium/iron sulfide secondary cells (Ca-Mg-Si), 3177 (CONF-770531-5)
Electrodes for use in zinc-halogen electrolytic cells and (or) batteries (Patent), 4307
Lithium-anode limited cycle battery investigation. Annual report, Feb-Dec 1965 (Development of Li/$CuF_2$ and Li/$CoF_3$ batteries), 290 (AD-481543)
Lithium anode limited-cycle battery investigation. Quarterly technical progress report No. 3 (Li/$CuF_2$, Li/$CoF_3$), 2822 (AD-474219)
Lithium anode properties in a nonaqueous cell (Li/$AlCl_3$ in propylene carbonate/AgCl), 4442
Lithium-nickel halide secondary battery investigation. Quarterly technical progress report No. 1 (1.24 Ah/in.$^2$), 255 (AD-433616)
Negative electrode for solid electrolyte cells (Patent; negative electrode liquid at room temperature), 3496
Patent; improved aluminum anode for Al or Al-Li/S battery, 3518
Porous cobalt electrodes for alkaline accumulators and hybrid cell therewith and air electrode (Patent), 3376
Production and engineering methods for Carb-Tek (trade name) batteries in fork lift trucks. Interim report Mar 1975-Mar 1976, 591 (AD-A-035983)
Scanning electron microscopic studies of lithium and cycle behavior of lithium nonaqueous cells with transition metal chalcogenide cathodes, 3836
Zinc-halide battery with molten electrolyte (Patent; method for preventing dendrite formation during charging), 2191
ANODES/NICKEL-CADMIUM BATTERIES
Alkaline cadmium anode studies. Research and development technical report, 2942 (AD-732830)
Analysis of porous alkaline cadmium electrodes. I. Anodic high rate transients, 4095
Analysis of porous alkaline cadmium electrodes. II. Potential recovery transients after a period of discharge (Influence of porosity), 4096
Analysis of porous alkaline cadmium electrodes. III. Application of charge porosity diagrams in electrode design, 4097
Analysis of porous alkaline cd-electrodes. IV. Optimization of current efficiency, 3547
Anode for nickel--cadmium batteries (Patent; Ni-plated nylon fabric coated with $H_2O$, CdO dextrose, and ethylene glycol), 3617
Anode of alkaline storage battery (Patent; Cd with 1 to 5 percent of a nitrate), 3599
Anodes for alkaline storage batteries (Patent; 165 mAh/g, 700 mAh/cm$^3$), 3608
Anodic passivation by ''CdO'' studied by ESR (Aqueous KoH), 3570
Cadmium anodes for alkaline batteries (Patent; fabrication method for improved mechanical strength), 3670
Cadmium anodes for alkaline cells (Patent), 3671
Cadmium anode for alkaline storage batteries (Patent;

fabrication), 3618
Cadmium anode for alkaline batteries (Patent), 3587
Cadmium-containing active material for negative electrodes of alkaline storage batteries (Patent; chemical preparation), 4343
Cadmium electrodes (Preparation;patent), 3666
Cadmium electrodes, 4167
Cadmium fibers and galvanic cell anodes made from them (Patent; prepared by electrolysis of electrolyte of Cd salt), 3578
Cadmium migration in aerospace nickel cadmium cells, 2095 (N-76-24703)
Cadmium paste electrodes for alkaline cells (Patent), 3643
Cell having anode containing silver additive for enhanced oxygen recombination (Patent), 3647
Change of the electrolyte concentration in metalloceramic cadmium electrodes of alkaline storage battery, 4034
Charging behavior of cadmium hydroxide electrodes at low temperatures, 4563
Commutator bar-free cadmium electrode for an alkaline battery (Patent), 3507
Controlled potential reactions of cadmium and silver in alkaline solution, 2645
Current-density effects in single-pore electrodes, 3046 (AD-854593)
Current distribution and pH gradients in a model of a battery plate, 4418
Cyclic charge-discharge behaviour of sintered plate and planar cadmium electrodes, 3449
Cylindrical nickel--cadmium battery (Patent; anode = substrate posted with CdO, electroconductive material, $H_2O$, organic solvent, and binder), 985
Depths of discharge for accelerated life tests of cadmium electrodes. Special technical report, 2951 (AD-743017)
Direct electrochemical reduction of cadmium oxide in alkaline electrolyte, 4089
Dissolution and passivation of metals in alkaline solutions in the presence of surfactants, 4137
Distribution of the active mass on the power-metallurgical anode of nickel--cadmium batteries, 4104
Effect of state-of-charge of cadmium electrode on oxygen recombination in sealed nickel-cadmium cells, 2592
Effect of the method of production on the capacity of sintered nickel electrodes for alkaline electric storage batteries, 4396
Effects of charge rate and cycling on the morphology of Cd and $Cd(OH)_2$ in sintered plate electrodes, 3392
Electrochemically active cadmium composition for battery elements (Patent), 3575
Electrochemical impregnation of sintered nickel structures with cadmium using constant current step and alternating-current pulse techniques. Interim report, Jan 1971-Jun 1974 (9.8 Ah/in.$^3$, retained 80% of capacity after 750 cycles at 100% depth of discharge), 3121 (AD-A-013931/1ST)
Electrochemical engineering of battery systems. Final report, 10 Nov 1971-9 Nov 1972 (Changes in diffusely reflected light from electrode monitor battery performance), 1970 (AD-914248)
Electrochemically active cadmium mass for galvanic elements (Patent), 3576
Electrochemical engineering of battery systems. Final report, 10 Nov 1971-9 Nov 1972 (Monitoring by changes in diffusely reflected light from electrodes), 3105 (AD-914248)
Electrode phenomena of cadmium in alkaline battery: discharge mechanism, 4695
Electron microbeam probe analyses of nickel-cadmium battery plates, 4564
Exchange reaction at polycrystalline cadmium electrodes. I, 2471
Formation of porous metal plates by electrolytic reduction, 4680
Forming a high surface area metallic cadmium powder and an electrode therefrom (Patent), 3580
High-rate battery electrodes (Performance of plates produced by electrolytic reduction), 4550
Impregnation of electrodes for nickel cadmium batteries (Patent), 3421
Improvement of the technology of sintered cadmium [battery] electrodes, 4067
Investigations into the mechanism of capacity loss by porous cadmium electrodes during cycling, 3830
Investigation of new cell components for vented nickel-cadmium batteries. Technical report, 3124 (AD-A-017117)
Manufacturing variables (20 Wh/lb), 768 (X-711-77-28)
Mechanisms of self-discharge of negative of alkaline accumulators, 4751
Method of incorporating an electro-chemically active cadmium compound into a porous nickel plaque (Patent), 4715
Morphology and capacity of a cadmium electrode, 4198
Oxygen reduction on porous cadmium electrodes of alkaline accumulators, 3402
Paste type cadmium anodes for alkaline batteries (Patent; CdS base, mixed with $H_2O$, $H_2O$-miscible organic solvent, and binder), 3645
Porous cadmium metal for alkaline storage batteries (Patent; Cd powder + urea heated and washed), 3606
Preparation of cadmium electrodes (Patent), 3943
Preparation and structure of electrodeposited sponge cadmium electrodes, 4488
Pressed-type alkaline storage battery. V. Addition of antimony to the negative active material of the pressed-type nickel-cadmium storage battery, 4306
Producing porous metal structures for battery electrodes (Patent; Zn, Cd), 4254
Production of a cadmium electrode for the alkaline storage battery (Patent), 3998
Reasons for changes in the characteristics of hermetic nickel--cadmium storage batteries under long-term operation (Formation of $Cd_{21}Ni_5$ in anode, gas adsorption rate instability, shorting, case corrosion), 2233
Reasons for the poisoning effect of small quantities of some impurities on the cathode reduction process for metal oxides and hydroxides in an alkali solution, 4134
Rechargeable cell having improved cadmium negative electrode and method of producing same (Patent), 3649
Rechargeable cell having improved cadmium negative electrode and method of producing same (Patent), 3582
State-of-the-art alkaline cadmium anodes (0.30 A-hr/g), 2916 (AD-680169)
Trial preparation of negative plates of pressed-type alkaline storage battery (CdO, $Cd(O)_2$, polyethylene and polyethylene oxide), 4540
Use of nickel hydroxide in pressed plate electrodes (Patent), 3686

ANODES/NICKEL-HYDROGEN BATTERIES
Absorption and desorption rates of $H_2$ and $D_2$ for $LaNi_5$, $LaCo_5$, $LaNi_2Co_3$, and FeTi. Interim report, 3143 (AD-A-039518)
Activated stable oxygen electrode (Patent; activated transition metal chelate catalyst), 4012
Electrochemical oxidation kinetics of the nickel support of a powder-metallurgical nickel oxide electrode in a high-pressure hydrogen atmosphere, 4075
Influence of certain additives to activated carbon on its properties as hydrogen electrode material, 4644
Low pressure nickel hydrogen cell (Patent; uses rare earth intermetallic hydride capable of absorbing and desorbing hydrogen in response to pressure changes), 3955
Mixed powder hydrogen electrode (Al-Ni alloy), 4597
Negative battery electrodes for reversible storage and regeneration of hydrogen (Patent), 3635
Oxygen equilibrium measurements in nickel-hydrogen cells (Activity of electrodes for oxygen reduction), 2132 (X-711-77-28)
Process for manufacturing a negative accumulator electrode for the reversible storage and restitution of hydrogen (Patent), 3401
Selection of the negative electrode for the nickel-hydrogen secondary cell ($H_2$/KOH/NiOOH), 3284

ANODES/NICKEL-ZINC BATTERIES
Accumulator battery apparatus and method (Patent; prevents dendrite buildup by causing vibrations and turbulence in electrolyte), 3293
Alkaline cell (Patent; Zn anode and alkaline electrolyte) 1036
Alkaline cells with anodes made from zinc fibers and needles (Patent), 3915
Alkaline cells with anodes made from zinc fibers and needles (Patent; process for preparing fibers and needles), 3917
Alkaline storage battery and zinc negative electrode therefor (Patent), 3487
Amalgamation of zinc powders (Patent), 3665
Anode collectors for zinc alkaline batteries (Patent; fabrication as coated Fe nets), 3752
Anode for galvanic cells (Patent; gas-permeable matrix of cross-linked polyacrylamide saturated with electrolyte and incorporating Zn particles), 3604
Anodic behavior of zinc electrodes in potassium hydroxide electrolytes. Technical report, 2928 (AD-706596)
Anodic behavior of zinc in flowing electrolyte systems, 3781
Anodic behavior of zinc in potassium hydroxide solution, 4457
Apparatus and method for charging a zinc electrode (Patent; bubbling of air to prevent dendrite formation and slope change), 3650
Battery zinc electrode kinetics investigation. Annual report No. 2, 15 Dec 1970--15 Dec 1971 (KOH electrolyte), 2945 (AD-736460)
Comparison of amalgamated and non-amalgamated zinc electrodes, 4425
Corrosion in alkali hydroxide solutions of electrolytic zinc powder containing codeposited lead, 3448
Coulogravimetric investigation of zinc electrode in potassium hydroxide, 4492
Dissolution and passivation of metals in alkaline solutions in the presence of surfactants, 4137
Double layer capacitance of zinc electrodes in KOH solutions, 4496
Effect of the method of production on the capacity of sintered nickel electrodes for alkaline electric storage batteries, 4396
Effect of OP-45 additives and a copolymer of styrene with maleic anhydride on the properties of a zinc electrode in alkaline solutions, 4367

Electrochemical generator with a zinc electrode (Patent), 3888
Electrochemical behavior of zinc in alkaline media, 4462
Electrode migration and reaction process occurring in alkaline-zinc batteries. Quarterly technical progress report No. 4, 1 Sep-1 Dec 1966, 2987 (AD-804559)
Electrode migration and reaction processes occurring within alkaline-zinc batteries. Quarterly technical progress report No. 10, 1 Mar-1 Jun 1968 (Amalgamated and nonamalgamated zinc in KOH), 3024 (AD-834995)
Electrode migration and reaction processes occurring within alkaline-zinc batteries. Quarterly technical progress report No. 12, 1 Sep-1 Dec 1968, 3039 (AD-847067)
Electrode passivation studies. Quarterly report No. 2, 1 Mar-31 May 1966, 2838 (AD-484216)
Evolution of polarization curves of monocrystalline zinc electrodes as function of crystallographic orientation, 4728
Formation of porous metal plates by electrolytic reduction, 4680
Fundamental studies connected with electro-chemical energy storage. Final report (Adsorption of dendrite inhibitors on Zn), 708 (N-75-30647)
Gel-type zinc anode for alkaline batteries (Patent), 3584
High-rate battery electrodes (Performance of plates produced by electrolytic reduction), 4550
Influence of sulfur-containing additives on characteristics of cast zinc anodes in alkaline cells, 4499
Influence of the porous structure of a zinc electrode on its electrical characteristics, 4391
Investigation of the electrode migration and reaction process occurring in alkaline-zinc batteries. Quarterly technical progress report No. 13, 1 Dec 1968-1 Mar 1969, 1886 (AD-850474)
Investigation of the electrode migration and reaction process occurring in alkaline-zinc batteries. Quarterly technical progress report No. 6, 1 Mar-1 Jun 1967 (Solubility of ZnO in KOH), 3005 (AD-816527)
Investigation of the electrode migration and reaction process occurring in alkaline-zinc batteries. Quarterly technical progress report No. 8, 1 Sep-1 Dec 1967, 3014 (AD-824687)
Investigation of the electrode migration and reaction process occurring in alkaline-zinc batteries. Quarterly technical progress report No. 1, 1 Dec 1965-1 Mar 1966, 1697 (AD-480149)
Investigation of the electrode migration and reaction process occurring in alkaline-zinc batteries. Quarterly technical progress report No. 3, 1 Jun-1 Sep 1966, 2842 (AD-488605)
Kinetic study of the zinc electrode by modified techniques, 4424
Long-life stable zinc electrode for alkaline secondary battery. Quarterly report No. 2, 1 March-31 May 1967, 3015 (AD-824719)
Long-life stable zinc electrodes for alkaline secondary batteries. Quarterly report No. 3, 1 June-3 August 1967, 3018 (AD-828224)
Long-life stable zinc electrodes for alkaline secondary battery. Quarterly report No. 4, 1 September-30 November 1967 (Teflonated anodes), 3026 (AD-835961)
Long-life stable zinc electrode for alkaline secondary battery. Quarterly report No. 5, 1 December 1967-29 February 1968 (5 Ah), 3028 (AD-837262)
Long-life stable zinc electrodes for alkaline secondary batteries. Quarterly technical progress report No. 6, 1 March-30 May 1968, 3038 (AD-847053)
Long-life stable zinc electrodes for alkaline secondary batteries. Report No. 8 (final), December 1966-February 1969, 3049 (AD-857500)
Macrokinetics of the processes at the zinc electrode of an alkali current source, 3800
Method for preparing electrodes for an electrochemical storage cell (Patent), 3405
Negative electrode for electrochemical generator (Patent), 3676
Point of passivation of a zinc electrode in alkali, 3302
Producing porous metal structures for battery electrodes (Patent; Zn, Cd), 4254
Rechargeable electrochemical cells (Additive to suppress dendritic growth on Zn; patent), 2261
Rechargeable zinc electrodes (Patent; fabrication), 3532
Rechargeable electric accumulator cell with at least one zinc electrode (Patent; means to vibrate anode and/or separator to prevent dendrite formation), 3308
Rechargeable nickel-zinc battery (Patent; improved zinc electrode construction), 782
Storage battery with zinc electrodes containing titanium dioxide (Patent; anode preparation), 3707
Storage cell with dissoluble negative line electrodes (Patent; means the vibrate anodes during charging), 925
Storage cell with dissoluble negative line electrodes (Patent; means for vibrating anodes and stirring Zn oxide deposit on bottom of battery), 926
Studies in fundamental chemistry of fuel cell reactions. Semiannual progress report, 1 January-30 June 1968 (Dendritic deposition of zinc from alkaline solution), 688 (N-69-25396)
Studies in fundamental chemistry of fuel cell reactions. Semiannual progress report, 1 July-31 December 1968 (Formation mechanisms of zinc dendrites), 689 (N-69-25397)
Studies in fundamental chemistry of fuel cell reactions. Quarterly report, 1 April-30 June 1969 (Dendritic deposition of zinc from alkaline solution), 3206 (N-70-10779)
Studies in fundamental chemistry of fuel cell reactions. Quarterly report, 1 April-30 June 1969 (Dendritic deposition of zinc from alkaline solution), 3207 (N-70-16379)
Studies in fundamental chemistry of fuel cell reactions. Quarterly report, 1 July-30 September 1969 (Dendritic deposition of zinc from alkaline solution), 3209 (N-70-25705)
Texture of a zinc oxide residue formed during the anodic oxidation of porous zinc in an alkaline solution, 2228
Zinc--alkaline battery containing carbazole as a zinc corrosion inhibitor (Patent), 1001
Zinc alkaline secondary batteries (Patent; dendrite growth suppressed by In and Tl), 3627
Zinc anodes for secondary batteries (Patent; 13.4 W-hr/kg, 1.54 V, 500 cycles, controlled dendritic growth) 3709
Zinc anode battery (Patent; coating of 2,6-di-tert-butyl-p-cresol to extend shelf life and inhibit H evolution), 981
Zinc anodes for secondary batteries (Patent; fabrication, polyethyleneimine to prevent electrodeposition of Zn on anode), 3675
Zinc anodic mixes for alkaline batteries (Patent), 3638
Zinc as a secondary battery electrode (Review of attempts to improve cycling behavior), 4405
Zinc-container electrode (Patent; design and performance) 3667
Zinc-container electrode (Patent; support with chemically active mass on each side), 3668
Zinc-containing electrode (Patent; preparation by electrodeposition), 4030
Zinc electrodes for rechargeable batteries (Patent; preparation), 3742
Zinc electrodes for rechargeable batteries (Patent; synthetic latex coating to prevent dendrite formation), 3585
Zinc electrode investigation. Quarterly technical progress report No. 4, 1 Apr-1 Jul 1965 (Recombining gases formed during overcharge), 2810 (AD-467031)
Zinc electrode investigation. Quarterly technical progress report No. 5, 1 Jul-1 Oct 1965, 2818 (AD-471222)
Zinc electrode investigation. Quarterly technical progress report No. 6, 1 Oct 1965-1 Jan 1966, 2829 (AD-476991)
Zinc electrode investigation, 2843 (AD-489498)
Zinc electrode investigation. Quarterly technical progress report No. 1, 1 Jul-1 Oct 1964 (Pd-on-alumina catalyst), 2853 (AD-606999)
Zinc electrode investigation. Quarterly technical progress report No. 3, 1 Jan-1 Apr 1965, 2863 (AD-614119)
Zinc electrodes in alkaline medium, 1464
Zinc electrode for an electrochemical power source (Patent), 3480
Zinc electrodes for secondary batteries (Patent; Cd additive improves Zn adherence), 3299
Zinc fibers and needles and galvanic cell anodes made therefrom (Patent), 3866
Zinc plate shape change inhibition (Patent; frame near electrode saturated with $Fe(OH)_2$), 1006
Zinc powder for batteries (Patent), 3679

ANODES/PRIMARY BATTERIES
Anodic behavior of lithium in aqueous lithium hydroxide solutions (Lithium-water battery), 766 (UCRL-78156)

ANODES/SILVER-CADMIUM BATTERIES
Analysis of porous alkaline cadmium electrodes. I. Anodic high rate transients, 4095
Analysis of porous alkaline cadmium electrodes. II. Potential recovery transients after a period of discharge (Influence of porosity), 4096
Analysis of porous alkaline cadmium electrodes. III. Application of charge porosity diagrams in electrode design, 4097
Analysis of porous alkaline cd-electrodes. IV. Optimization of current efficiency, 3547
Anodes for alkaline storage batteries (Patent; 165 mAh/g, 700 mAh/cm$^3$), 3608
Anodic passivation by ''CdO'' studied by ESR (Aqueous KoH), 3570
Cadmium anodes for alkaline batteries (Patent; fabrication method for improved mechanical strength), 3670
Cadmium anodes for alkaline cells (Patent), 3671
Cadmium anode for alkaline storage batteries (Patent; fabrication), 3618
Cadmium-containing active material for negative electrodes of alkaline storage batteries (Patent; chemical preparation), 4343
Cadmium electrodes (Preparation;patent), 3666
Cadmium paste electrodes for alkaline cells (Patent), 3643
Change of the electrolyte concentration in metalloceramic cadmium electrodes of alkaline storage battery, 4034
Charging behavior of cadmium hydroxide electrodes at low

temperatures, 4563
Commutator bar-free cadmium electrode for an alkaline battery (Patent), 3507
Current distribution and pH gradients in a model of a battery plate, 4418
Cyclic charge-discharge behaviour of sintered plate and planar cadmium electrodes, 3449
Effects of gamma radiation on the behavior of nickel and cadmium electrodes, 4454
Effects of charge rate and cycling on the morphology of Cd and $Cd(OH)_2$ in sintered plate electrodes, 3392
Efficiency of a cadmium electrode in a silver--cadmium battery with different degrees of charge, 4347
Electrochemically active cadmium composition for battery elements (Patent), 3575
Electrochemical engineering of battery systems. Final report, 10 Nov 1971-9 Nov 1972 (Changes in diffusely reflected light from electrode monitor battery performance), 1970 (AD-914248)
Electrochemical engineering of battery systems. Final report, 10 Nov 1971-9 Nov 1972 (Monitoring by changes in diffusely reflected light from electrodes), 3105 (AD-914248)
Electrode phenomena of cadmium in alkaline battery: discharge mechanism, 4695
Formation of porous metal plates by electrolytic reduction, 4680
Forming a high surface area metallic cadmium powder and an electrode therefrom (Patent), 3580
Improvement of the technology of sintered cadmium [battery] electrodes, 4067
Intrinsic charging rate capability of the cadmium anode (Cd/AgCl cells in Cd chloride solution capable of fast charging), 2476
*Investigations into the mechanism of capacity loss by* porous cadmium electrodes during cycling, 3830
Mechanisms of self-discharge of negative of alkaline accumulators, 4751
Method for making nickel and cadmium electrodes for batteries (Patent), 3375
Morphology and capacity of a cadmium electrode, 4198
Nickel or cadmium electrodes for alkaline cells (Patent; chemical preparation), 3588
Oxygen reduction on porous cadmium electrodes of alkaline accumulators, 3402
Paste type cadmium anodes for alkaline batteries (Patent; CdS base, mixed with $H_2O$, $H_2O$-miscible organic solvent, and binder), 3645
Porous cadmium metal for alkaline storage batteries (Patent; Cd powder + urea heated and washed), 3606
Potentiostatic study of a porous cadmium electrode, 3807
Preparation and structure of electrodeposited sponge cadmium electrodes, 4488
Processes occurring during the storage of a porous cadmium electrode in the charged state, 4112
Producing porous metal structures for battery electrodes (Patent; Zn, Cd), 4254
Production of a cadmium electrode for the alkaline storage battery (Patent), 3998
Reasons for the poisoning effect of small quantities of some impurities on the cathode reduction process for metal oxides and hydroxides in an alkali solution, 4134
Rechargeable cell having improved cadmium negative electrode and method of producing same (Patent), 3649
Rechargeable cell having improved cadmium negative electrode and method of producing same (Patent), 3582
Trial preparation of negative plates of pressed-type alkaline storage battery (CdO, $Cd(O)_2$, polyethylene and polyethylene oxide), 4540
Use of nickel hydroxide in pressed plate electrodes (Patent), 3686

ANODES/SILVER-ZINC BATTERIES
Accumulator battery apparatus and method (Patent; prevents dendrite buildup by causing vibrations and turbulence in electrolyte), 3293
Alkaline cell (Patent; Zn anode and alkaline electrolyte), 1036
Alkaline cells with anodes made from zinc fibers and needles (Patent), 3915
Alkaline cells with anodes made from zinc fibers and needles (Patent; process for preparing fibers and needles), 3917
Amalgamation of zinc powders (Patent), 3665
Anode collectors for zinc alkaline batteries (Patent; fabrication as coated Fe nets), 3752
Anode for galvanic cells (Patent; gas-permeable matrix of cross-linked polyacrylamide saturated with electrolyte and incorporating Zn particles), 3604
Anodes for alkaline batteries (Patent; gel-like anode for alk. batteries using air, O, $Ag_2O$, HgO, or $MnO_2$ cathodes and Fe or Zn anodes), 3678
Anodic behavior of zinc electrodes in potassium hydroxide electrolytes. Technical report, 2928 (AD-706596)
Anodic behavior of zinc in flowing electrolyte systems, 3781
Anodic behavior of zinc in potassium hydroxide solution, 4457
Anodic dissolution of zinc electrodes with porous active material in voltaic cells with alkaline electrolyte, 2509
Apparatus and method for charging a zinc electrode (Patent; bubbling of air to prevent dendrite formation and slope change), 3650
Battery zinc electrode kinetics investigation. Annual report No. 2, 15 Dec 1970--15 Dec 1971 (KOH electrolyte), 2945 (AD-736460)
Chronopotentiometric measurements of zinc electrodeposition kinetics from concentrated KOH solutions, 3115 (AD/A-004071)
Comparison of amalgamated and non-amalgamated zinc electrodes, 4425
Control experiments on active material migration in zinc electrodes. Technical report, 2944 (AD-736016)
Controlled current deposition of zinc from alkaline solution, 4467
Corrosion of zinc electrode in silver-zinc-alkali cell, 4733
Corrosion in alkali hydroxide solutions of electrolytic zinc powder containing codeposited lead, 3448
Corrosion of pure and amalgamated zinc in concentrated alkali hydroxide solutions, 3905
Coulogravimetric investigation of zinc electrode in potassium hydroxide, 4492
Development of the sealed zinc-silver oxide secondary *battery system. Quarterly progress report No.* 4, 1 Apr-30 Jun 1964 (12 Ah), 266 (AD-453792)
Development of the sealed zinc-silver oxide secondary battery system. Quarterly progress report No. 6, 1 Oct-31 Dec 1964, 273 (AD-464470)
Development of sintered zinc battery electrodes. Progress report (0.075 to 225 ma/$cm^2$), 3060 (AD-878215)
Development of zinc electrodes and inorganic separators for large size silver-zinc batteries. Final technical report, 4 Mar 1974-31 Oct 1975 (40 and 850Ah) 3130 (AD-A-022467)
Double layer capacitance of zinc electrodes in KOH solutions, 4496
Dry-charged zinc electrode for pasted type silver--zinc cells and storage batteries (Anodes of improved quality;patent), 3748
Effect of surfactant additions to zinc plate on cycle life performance of secondary silver oxide-zinc cells (25-Ah cells), 2524
Elastomer-bonded zinc dust electrodes used for high-rate secondary zinc-silver oxide batteries., 3766
Electrochemical generator with a zinc electrode (Patent), 3888
Electrochemical behavior of zinc in alkaline media, 4462
Electrode migration and reaction process occurring in alkaline-zinc batteries. Quarterly technical progress report No. 4, 1 Sep-1 Dec 1966, 2987 (AD-804559)
Electrode migration and reaction processes occurring within alkaline-zinc batteries. Quarterly technical progress report No. 10, 1 Mar-1 Jun 1968 (Amalgamated and nonamalgamated zinc in KOH), 3024 (AD-834995)
Electrode migration and reaction processes occurring within alkaline-zinc batteries. Quarterly technical progress report No. 12, 1 Sep-1 Dec 1968, 3039 (AD-847067)
Electrode passivation studies. Quarterly report No. 2, 1 Mar-31 May 1966, 2838 (AD-484216)
Engineering analysis of shape change in zinc secondary electrodes. I. Theoretical (Zn-$Ag_2O$ secondary cell), 3372
Engineering analysis of shape change in zinc secondary electrodes. II. Experimental (Zn-$Ag_2O$), 3373
Engineering analysis of shape change in zinc secondary electrodes. Final report Nov 73-Nov 75, 3133 (AD-A-026551)
Evolution of polarization curves of monocrystalline zinc electrodes as function of crystallographic orientation, 4728
Formation of porous metal plates by electrolytic reduction, 4680
Fundamental studies connected with electro-chemical energy storage. Final report (Adsorption of dendrite inhibitors on Zn), 708 (N-75-30647)
Gel-type zinc anode for alkaline batteries (Patent), 3584
Influence of sulfur-containing additives on characteristics of cast zinc anodes in alkaline cells, 4499
Influence of the porous structure of a zinc electrode on its electrical characteristics, 4391
Investigation of the electrode migration and reaction process occurring in alkaline-zinc batteries. Quarterly technical progress report No. 13, 1 Dec 1968-1 Mar 1969, 1886 (AD-850474)
Investigation of the electrode migration and reaction process occurring in alkaline-zinc batteries. Quarterly technical progress report No. 6, 1 Mar-1 Jun 1967 (Solubility of ZnO in KOH), 3005 (AD-816527)
Investigation of the electrode migration and reaction process occurring in alkaline-zinc batteries. Quarterly technical progress report No. 8, 1 Sep-1 Dec 1967, 3014 (AD-824687)
Investigation of the electrode migration and reaction process occurring in alkaline-zinc batteries. Quarterly technical progress report. No. 9, 1 Dec 1967-1 Mar 1968, 3019 (AD-829092)
Investigation of the electrode migration and reaction process occurring in alkaline-zinc batteries. *Quarterly technical progress report No.* 1, 1 Dec 1965-1 Mar 1966, 1697 (AD-480149)
Investigation of the transport and reaction process

occurring within silver oxide-zinc batteries. Quarterly technical progress report No. 2, 1 Apr-1 Jul 1965, 2809 (AD-466909)
Investigation of the transport and reaction process occurring within silver oxide-zinc batteries. Quarterly technical progress report No. 3, 1 Jul-1 Oct 1965, 2820 (AD-472627)
Investigation of the electrode migration and reaction process occurring in alkaline-zinc batteries. Quarterly technical progress report No. 3, 1 Jun-1 Sep 1966, 2842 (AD-488605)
Investigation of recrystallization of zinc oxide in zincate solution using isotope tracing method (44 references), 4638
Kinetic study of the zinc electrode by modified techniques, 4424
Laboratory investigation and engineering design leading towards the development of a lightweight secondary or primary cell type battery for one-shot application. Quarterly report No. 2, 281 (AD-471972)
Laboratory investigation and engineering design leading towards the development of a lightweight secondary or primary cell type battery for one-shot application. Quarterly report No. 7, 31 May-31 Aug 1949 (Cd/Pb oxides), 284 (AD-471979)
Laminated silver oxide battery (Patent; Zn or ZnO anode, fabrication), 1024
Long life zinc silver-oxide cells (Improved Zn electrode structures and inorganic separators), 2283
Long-life stable zinc electrodes for alkaline secondary battery. Quarterly technical progress report No. 1, 1 December 1966-28 February 1967, 2895 (AD-655285)
Long-life stable zinc electrodes for alkaline secondary batteries. Quarterly report No. 3, 1 June-3 August 1967, 3018 (AD-828224)
Long-life stable zinc electrodes for alkaline secondary battery. Quarterly report No. 4, 1 September-30 November 1967 (Teflonated anodes), 3026 (AD-835961)
Long-life stable zinc electrode for alkaline secondary battery. Quarterly report No. 5, 1 December 1967-29 February 1968 (5 Ah), 3028 (AD-837262)
Long-life stable zinc electrodes for alkaline secondary batteries. Quarterly technical progress report No. 6, 1 March-30 May 1968, 3038 (AD-847053)
Long-life stable zinc electrodes for alkaline secondary batteries. Quarterly technical progress report No. 7, 1 June-31 August 1968, 3042 (AD-849523)
Long-life stable zinc electrodes for alkaline secondary batteries. Report No. 8 (final), December 1966-February 1969, 3049 (AD-857500)
Macrokinetics of the processes at the zinc electrode of an alkali current source, 3800
Method for preparing electrodes for an electrochemical storage cell (Patent), 3405
Negative electrode for electrochemical generator (Patent), 3676
Point of passivation of a zinc electrode in alkali, 3302
Producing porous metal structures for battery electrodes (Patent; Zn, Cd), 4254
Rate of hydrogen evolution of zinc electrodes in alkaline solutions, 4635
Rechargeable zinc electrodes (Patent; fabrication), 3532
Rechargeable electric accumulator cell with at least one zinc electrode (Patent; means to vibrate anode and/or separator to prevent dendrite formation), 3308
Silver-zinc electrodes and separator research. Quarterly technical progress report No. 2, 1 Oct 1966-1 Jan 1967 (Effects of additives on cycle life performance), 2990 (AD-805413)
Silver-zinc electrodes and separator research. Quarterly technical progress report No. 3, 1 Jan-1 Apr 1967 (Effects of additives on anode cycle life), 3000 (AD-813526)
Silver-zinc electrodes and separator research. Annual technical report No. 1 (Additives to prolong plate cycle life), 3006 (AD-819967)
Silver-zinc electrodes and separator research. Quarterly technical progress report No. 5, 1 Jul-1 Oct 1967 (Effects of $Ca(OH)_2$, carbowax, and Pb on cycle life), 3010 (AD-822335)
Silver-zinc electrodes and separator research. Quarterly technical progress report No. 7, 1 Jan-1 Apr 1968, 3022 (AD-832212)
Silver-Zinc electrodes and separator research. Quarterly progress report No. 9, 1 Jul-1 Oct 1968 (25 Ah), 3035 (AD-842501)
Silver-zinc electrodes and separator research. Technical report, 30 Jun 1967-30 Jun 1969, 3051 (AD-860365)
Sintered zinc electrode (Patent; fabrication), 4323
Stable zinc electrodes (Maintenance of Zn electrode shape), 4527
Storage battery with zinc electrodes containing titanium dioxide (Patent; anode preparation), 3707
Storage cell with dissoluble negative line electrodes (Patent; means the vibrate anodes during charging), 925
Storage cell with dissoluble negative line electrodes (Patent; means for vibrating anodes and stirring Zn oxide deposit on bottom of battery), 926
Studies in fundamental chemistry of fuel cell reactions. Semiannual progress report, 1 January-30 June 1968 (Dendritic deposition of zinc from alkaline solution), 688 (N-69-25396)
Studies in fundamental chemistry of fuel cell reactions. Semiannual progress report, 1 July-31 December 1968 (Formation mechanisms of zinc dendrites), 689 (N-69-25397)
Studies in fundamental chemistry of fuel cell reactions. Quarterly report, 1 April-30 June 1969 (Dendritic deposition of zinc from alkaline solution), 3206 (N-70-10779)
Studies in fundamental chemistry of fuel cell reactions. Quarterly report, 1 April-30 June 1969 (Dendritic deposition of zinc from alkaline solution), 3207 (N-70-16379)
Studies in fundamental chemistry of fuel cell reactions. Quarterly report, 1 July-30 September 1969 (Dendritic deposition of zinc from alkaline solution), 3209 (N-70-25705)
Texture of a zinc oxide residue formed during the anodic oxidation of porous zinc in an alkaline solution, 2228
Zinc--alkaline battery containing carbazole as a zinc corrosion inhibitor (Patent), 1001
Zinc alkaline secondary batteries (Patent; dendrite growth suppressed by In and Tl), 3627
Zinc anode battery (Patent; coating of 2,6-di-tert-butyl-p-cresol to extend shelf life and inhibit H evolution), 981
Zinc anodes for secondary batteries (Patent; fabrication, polyethyleneimine to prevent electrodeposition of Zn on anode), 3675
Zinc anodic mixes for alkaline batteries (Patent), 3638
Zinc as a secondary battery electrode (Review of attempts to improve cycling behavior), 4405
Zinc-container electrode (Patent; design and performance) 3667
Zinc-container electrode (Patent; support with chemically active mass on each side), 3668
Zinc-containing electrode (Patent; preparation by electrodeposition), 4030
Zinc electrodes for rechargeable batteries (Patent; preparation), 3742
Zinc electrodes for rechargeable batteries (Patent; synthetic latex coating to prevent dendrite formation), 3585
Zinc electrode investigation. Quarterly technical progress report No. 4, 1 Apr-1 Jul 1965 (Recombining gases formed during overcharge), 2810 (AD-467031)
Zinc electrode investigation. Quarterly technical progress report No. 5, 1 Jul-1 Oct 1965, 2818 (AD-471222)
Zinc electrode investigation. Quarterly technical progress report No. 6, 1 Oct 1965-1 Jan 1966, 2829 (AD-476991)
Zinc electrode investigation. Quarterly technical progress report No. 7, 1 Jan-1 Apr 1966, 2836 (AD-480735)
Zinc electrode investigation, 2843 (AD-489498)
Zinc electrode investigation. Quarterly technical progress report No. 1, 1 Jul-1 Oct 1964 (Pd-on-alumina catalyst), 2853 (AD-606999)
Zinc electrode investigation. Quarterly technical progress report No. 2, 1 Oct 1964-1 Jan 1965 (Effects of catalysts, pressure, and impurities), 2856 (AD-609984)
Zinc electrode investigation. Quarterly technical progress report No. 3, 1 Jan-1 Apr 1965, 2863 (AD-614119)
Zinc electrodes in alkaline medium, 1464
Zinc electrode for an electrochemical power source (Patent), 3480
Zinc electrode containing an additive to reduce gassing at the zinc electrode in a heat-sterilized silver-zinc alkaline battery (Patent; HgS or HgS-PbS), 4259
Zinc electrodes for secondary batteries (Patent; Cd additive improves Zn adherence), 3299
Zinc fibers and needles and galvanic cell anodes made therefrom (Patent), 3866
Zinc plate shape change inhibition (Patent; frame near electrode saturated with $Fe(OH)_2$), 1006
Zinc powder for batteries (Patent), 3679

ANODES/SODIUM-SULFUR BATTERIES
Development program for solid electrolyte batteries. Final report, 1 January 1973-30 June 1974, 672 (EPRI-127-1)
Investigation into the immobilization of the sodium electrode in the sodium-sulfur battery, 3329
Research and development concerning the sodium-sulfur battery. Subproject: development of unconventional processes for the production of the β alumina solid electrolyte and development of the sodium electrode, 3164 (BMFT-FB-T-76-40)
Sodium as an electrical conductor: an annotated bibliography, 2999 (AD-812898)
Sodium borate glass compositions and batteries containing same (Patent), 3975

ANODES/THERMAL BATTERIES
Thermal battery (Patent), 3471

ANODES/ZINC-AIR BATTERIES
25- and 48-ampere hour anode/electrolyte composite production program. Final report, Jan 1968-Feb 1969, 2923 (AD-696790)
Accumulator battery apparatus and method (Patent; prevents dendrite buildup by causing vibrations and turbulence in electrolyte), 3293
Amalgamation of zinc powders (Patent), 3665

Anode collectors for zinc alkaline batteries (Patent; fabrication as coated Fe nets), 3752
Anodes for alkaline batteries (Patent; gel-like anode for alk. batteries using air, O, $Ag_2O$, HgO, or $MnO_2$ cathodes and Fe or Zn anodes), 3678
Anodic behavior of zinc in silicate-containing alkaline solutions, 4055
Anodic behavior of the zinc electrode in alkaline solution. I. Discharge behavior of the zinc-bed electrode, 3804
Anodic behavior of zinc in potassium hydroxide solution, 4457
Capacities of zinc-potassium hydroxide interfaces, 4461
Comparison of amalgamated and non-amalgamated zinc electrodes, 4425
Corrosion in alkali hydroxide solutions of electrolytic zinc powder containing codeposited lead, 3448
Corrosion of pure and amalgamated zinc in concentrated alkali hydroxide solutions, 3905
Coulogravimetric investigation of zinc electrode in potassium hydroxide, 4492
Development of sintered zinc battery electrodes. Progress report (0.075 to 225 ma/cm$^2$), 3060 (AD-878215)
Double layer capacitance of zinc electrodes in KOH solutions, 4496
Electrode migration and reaction process occurring in alkaline-zinc batteries. Quarterly technical progress report No. 4, 1 Sep-1 Dec 1966, 2987 (AD-804559)
Electrode migration and reaction processes occurring within alkaline-zinc batteries. Quarterly technical progress report No. 12, 1 Sep-1 Dec 1968, 3039 (AD-847067)
Electrode passivation studies. Quarterly report No. 2, 1 Mar-31 May 1966, 2838 (AD-484216)
Electrodes for zinc--air batteries (Cathodes with unmetallized C and effect on Zn anode of peroxide generated by cathodes), 4530
Estimation of the self-discharge of the zinc electrode in an oxygen--zinc battery with circulated electrolyte, 4045
Evaluation of metal-air electrochemical energy storage system for vehicle propulsion. Semiannual report, 27 May-27 November 1969, 3057 (AD-866639)
Evolution of polarization curves of monocrystalline zinc electrodes as function of crystallographic orientation, 4728
Formation of porous metal plates by electrolytic reduction, 4680
Formation of electrodes for alkaline batteries (Patent), 3542
Forming rechargeable electrodes utilizing an unsintered fluorocarbon binder (Patent; fabrication), 4309
Fundamental studies connected with electro-chemical energy storage. Final report (Adsorption of dendrite inhibitors on Zn), 708 (N-75-30647)
High quality zinc anodes (Quality assurance procedures), 4473
High-rate battery electrodes (Performance of plates produced by electrolytic reduction), 4550
Influence of sulfur-containing additives on characteristics of cast zinc anodes in alkaline cells, 4499
Influence of the porous structure of a zinc electrode on its electrical characteristics, 4391
Investigation of the electrode migration and reaction process occurring in alkaline-zinc batteries. Quarterly technical progress report No. 8, 1 Sep-1 Dec 1967, 3014 (AD-824687)
Investigation of the electrode migration and reaction process occurring in alkaline-zinc batteries. Quarterly technical progress report. No. 9, 1 Dec 1967-1 Mar 1968, 3019 (AD-829092)
Investigation of the electrode migration and reaction process occurring in alkaline-zinc batteries. Quarterly technical progress report No. 1, 1 Dec 1965-1 Mar 1966, 1697 (AD-480149)
Kinetic study of the zinc electrode by modified techniques, 4424
Long-life stable zinc electrodes for alkaline secondary batteries. Quarterly report No. 3, 1 June-3 August 1967, 3018 (AD-828224)
Long-life stable zinc electrodes for alkaline secondary batteries. Report No. 8 (final), December 1966-February 1969, 3049 (AD-857500)
Method for preparing electrodes for an electrochemical storage cell (Patent), 3405
Method of producing electrodes (Patent), 3400
Negative electrode for electrochemical generator (Patent), 3676
Point of passivation of a zinc electrode in alkali, 3302
Producing porous metal structures for battery electrodes (Patent; Zn, Cd), 4254
Quality assurance program for zinc anode-electrolyte composites, 2922 (AD-695610)
Rechargeable zinc electrodes (Patent; fabrication), 3532
Rechargeable metal-air cell. Quarterly report No. 2, 1 August-31 October 1967, 480 (AD-828589)
Rechargeable cell having moving tape and rotating electrodes (Patent), 1378
Replaceable zinc anodes (Recent progress in development and performance), 4529
Replaceable zinc anodes (3-p progress report), 2919 (AD-681189)
Sealed zinc--oxygen cells. Technical report, 448 (AD-783490)
Storage cell with dissoluble negative line electrodes (Patent; means the vibrate anodes during charging), 925
Strain electrometry and corrosion. IV (Film properties and strain potential), 4730
Zinc--air cell with neutral electrolyte (Behavior of air cathode and Zn anode), 4152
Zinc-air system (Prevention of Zn corrosion, determination of best membranes), 1316
Zinc alkaline secondary batteries (Patent; dendrite growth suppressed by In and Tl), 3627
Zinc anode battery (Patent; coating of 2,6-di-tert-butyl-p-cresol to extend shelf life and inhibit H evolution), 981
Zinc-containing electrode (Patent; preparation by electrodeposition), 4030
Zinc electrodes for rechargeable batteries (Patent; preparation), 3742
Zinc electrodes for rechargeable zinc/air cells, 4193
Zinc electrode investigation. Quarterly technical progress report No. 4, 1 Apr-1 Jul 1965 (Recombining gases formed during overcharge), 2810 (AD-467031)
Zinc electrode investigation. Quarterly technical progress report No. 5, 1 Jul-1 Oct 1965, 2818 (AD-471222)
Zinc electrode investigation. Quarterly technical progress report No. 6, 1 Oct 1965-1 Jan 1966, 2829 (AD-476991)
Zinc electrode investigation, 2843 (AD-489498)
Zinc electrode investigation. Quarterly technical progress report No. 1, 1 Jul-1 Oct 1964 (Pd-on-alumina catalyst), 2853 (AD-606999)
Zinc electrodes in alkaline medium, 1464
Zinc electrode for an electrochemical power source (Patent), 3480
Zinc electrodes for secondary batteries (Patent; Cd additive improves Zn adherence), 3299

ANODES/ZINC-CHLORINE BATTERIES

Anode collectors for zinc alkaline batteries (Patent; fabrication as coated Fe nets), 3752
Anodic behavior of zinc in potassium hydroxide solution, 4457
Comparison of amalgamated and non-amalgamated zinc electrodes, 4425
Corrosion in alkali hydroxide solutions of electrolytic zinc powder containing codeposited lead, 3448
Coulogravimetric investigation of zinc electrode in potassium hydroxide, 4492
Double layer capacitance of zinc electrodes in KOH solutions, 4496
Electrode migration and reaction process occurring in alkaline-zinc batteries. Quarterly technical progress report No. 4, 1 Sep-1 Dec 1966, 2987 (AD-804559)
Electrode migration and reaction processes occurring within alkaline-zinc batteries. Quarterly technical progress report No. 12, 1 Sep-1 Dec 1968, 3039 (AD-847067)
Electrode passivation studies. Quarterly report No. 2, 1 Mar-31 May 1966, 2838 (AD-484216)
Electrodes for use in zinc-halogen electrolytic cells and (or) batteries (Patent), 4307
Evolution of polarization curves of monocrystalline zinc electrodes as function of crystallographic orientation, 4728
Formation of porous metal plates by electrolytic reduction, 4680
Formation of electrodes for alkaline batteries (Patent), 3542
Forming rechargeable electrodes utilizing an unsintered fluorocarbon binder (Patent; fabrication), 4309
Fundamental studies connected with electro-chemical energy storage. Final report (Adsorption of dendrite inhibitors on Zn), 708 (N-75-30647)
High-rate battery electrodes (Performance of plates produced by electrolytic reduction), 4550
Influence of sulfur-containing additives on characteristics of cast zinc anodes in alkaline cells, 4499
Influence of the porous structure of a zinc electrode on its electrical characteristics, 4391
Investigation of the electrode migration and reaction process occurring in alkaline-zinc batteries. Quarterly technical progress report No. 8, 1 Sep-1 Dec 1967, 3014 (AD-824687)
Investigation of the electrode migration and reaction process occurring in alkaline-zinc batteries. Quarterly technical progress report. No. 9, 1 Dec 1967-1 Mar 1968, 3019 (AD-829092)
Investigation of the electrode migration and reaction process occurring in alkaline-zinc batteries. Quarterly technical progress report No. 1, 1 Dec 1965-1 Mar 1966, 1697 (AD-480149)
Long-life stable zinc electrodes for alkaline secondary batteries. Quarterly report No. 3, 1 June-3 August 1967, 3018 (AD-828224)
Long-life stable zinc electrodes for alkaline secondary batteries. Report No. 8 (final), December 1966-February 1969, 3049 (AD-857500)
Method for preparing electrodes for an electrochemical storage cell (Patent), 3405

Method of producing electrodes (Patent), 3400
Producing porous metal structures for battery electrodes (Patent; Zn, Cd), 4254
Rechargeable zinc electrodes (Patent; fabrication), 3532
Strain electrometry and corrosion. IV (Film properties and strain potential), 4730
Zinc alkaline secondary batteries (Patent; dendrite growth suppressed by In and Tl), 3627
Zinc anode battery (Patent; coating of 2,6-di-tert-butyl-p-cresol to extend shelf life and inhibit H evolution), 981
Zinc-containing electrode (Patent; preparation by electrodeposition), 4030
Zinc electrode investigation. Quarterly technical progress report No. 4, 1 Apr-1 Jul 1965 (Recombining gases formed during overcharge), 2810 (AD-467031)
Zinc electrode investigation. Quarterly technical progress report No. 5, 1 Jul-1 Oct 1965, 2818 (AD-471222)
Zinc electrode investigation. Quarterly technical progress report No. 6, 1 Oct 1965-1 Jan 1966, 2829 (AD-476991)
Zinc electrode investigation, 2843 (AD-489498)
Zinc electrode investigation. Quarterly technical progress report No. 1, 1 Jul-1 Oct 1964 (Pd-on-alumina catalyst), 2853 (AD-606999)
Zinc electrodes in alkaline medium, 1464
Zinc electrodes for secondary batteries (Patent; Cd additive improves Zn adherence), 3299

ANODES/ZINC-MANGANESE BATTERIES
Alkaline cell (Patent; Zn anode and alkaline electrolyte), 1036
Alkaline cells with anodes made from zinc fibers and needles (Patent; process for preparing fibers and needles), 3917
Amalgamation of zinc powders (Patent), 3665
Anode for galvanic cells (Patent; gas-permeable matrix of cross-linked polyacrylamide saturated with electrolyte and incorporating Zn particles), 3604
Anodes for alkaline batteries (Patent; gel-like anode for alk. batteries using air, O, $Ag_2O$, HgO, or $MnO_2$ cathodes and Fe or Zn anodes), 3678
Anodic behavior of zinc electrodes in potassium hydroxide electrolytes. Technical report, 2928 (AD-706596)
Anodic behavior of zinc in flowing electrolyte systems, 3781
Anodic behavior of zinc in potassium hydroxide solution, 4457
Battery zinc electrode kinetics investigation. Annual report No. 2, 15 Dec 1970--15 Dec 1971 (KOH electrolyte), 2945 (AD-736460)
Comparison of amalgamated and non-amalgamated zinc electrodes, 4425
Corrosion in alkali hydroxide solutions of electrolytic zinc powder containing codeposited lead, 3448
Coulogravimetric investigation of zinc electrode in potassium hydroxide, 4492
Double layer capacitance of zinc electrodes in KOH solutions, 4496
Electrochemical generator with a zinc electrode (Patent), 3888
Electrode migration and reaction process occurring in alkaline-zinc batteries. Quarterly technical progress report No. 4, 1 Sep-1 Dec 1966, 2987 (AD-804559)
Electrode migration and reaction processes occurring within alkaline-zinc batteries. Quarterly technical progress report No. 10, 1 Mar-1 Jun 1968 (Amalgamated and nonamalgamated zinc in KOH), 3024 (AD-834995)
Electrode migration and reaction processes occurring within alkaline-zinc batteries. Quarterly technical progress report No. 12, 1 Sep-1 Dec 1968, 3039 (AD-847067)
Electrode passivation studies. Quarterly report No. 2, 1 Mar-31 May 1966, 2838 (AD-484216)
Evolution of polarization curves of monocrystalline zinc electrodes as function of crystallographic orientation, 4728
Formation of porous metal plates by electrolytic reduction, 4680
Forming rechargeable electrodes utilizing an unsintered fluorocarbon binder (Patent; fabrication), 4309
Fundamental studies connected with electro-chemical energy storage. Final report (Adsorption of dendrite inhibitors on Zn), 708 (N-75-30647)
Gel-type zinc anode for alkaline batteries (Patent), 3584
Hermetically sealed alkaline galvanic element of zinc-manganese system (Patent), 4823 (AD-758917)
High-rate battery electrodes (Performance of plates produced by electrolytic reduction), 4550
Influence of sulfur-containing additives on characteristics of cast zinc anodes in alkaline cells, 4499
Influence of the porous structure of a zinc electrode on its electrical characteristics, 4391
Investigation of the electrode migration and reaction process occurring in alkaline-zinc batteries. Quarterly technical progress report No. 13, 1 Dec 1968-1 Mar 1969, 1886 (AD-850474)
Investigation of the electrode migration and reaction process occurring in alkaline-zinc batteries. Quarterly technical progress report No. 6, 1 Mar-1 Jun 1967 (Solubility of ZnO in KOH), 3005 (AD-816527)
Investigation of the electrode migration and reaction process occurring in alkaline-zinc batteries. Quarterly technical progress report No. 8, 1 Sep-1 Dec 1967, 3014 (AD-824687)
Investigation of the electrode migration and reaction process occurring in alkaline-zinc batteries. Quarterly technical progress report. No. 9, 1 Dec 1967-1 Mar 1968, 3019 (AD-829092)
Investigation of the electrode migration and reaction process occurring in alkaline-zinc batteries. Quarterly technical progress report No. 1, 1 Dec 1965-1 Mar 1966, 1697 (AD-480149)
Investigation of the electrode migration and reaction process occurring in alkaline-zinc batteries. Quarterly technical progress report No. 3, 1 Jun-1 Sep 1966, 2842 (AD-488605)
Long-life stable zinc electrode for alkaline secondary battery. Quarterly report No. 2, 1 March-31 May 1967, 3015 (AD-824719)
Long-life stable zinc electrodes for alkaline secondary batteries. Quarterly report No. 3, 1 June-3 August 1967, 3018 (AD-828224)
Long-life stable zinc electrodes for alkaline secondary battery. Quarterly report No. 4, 1 September-30 November 1967 (Teflonated anodes), 3026 (AD-835961)
Long-life stable zinc electrode for alkaline secondary battery. Quarterly report No. 5, 1 December 1967-29 February 1968 (5 Ah), 3028 (AD-837262)
Long-life stable zinc electrodes for alkaline secondary batteries. Quarterly technical progress report No. 6, 1 March-30 May 1968, 3038 (AD-847053)
Long-life stable zinc electrodes for alkaline secondary batteries. Report No. 8 (final), December 1966-February 1969, 3049 (AD-857500)
Macrokinetics of the processes at the zinc electrode of an alkali current source, 3800
Manganese dioxide (Patent; chemical preparation), 3929
Method for preparing electrodes for an electrochemical storage cell (Patent), 3405
Method of producing electrodes (Patent), 3400
New process for the production of synthetic battery grade manganese dioxide (Chloride process), 4106
Producing porous metal structures for battery electrodes (Patent; Zn, Cd), 4254
Rechargeable zinc electrodes (Patent; fabrication), 3532
Strain electrometry and corrosion. IV (Film properties and strain potential), 4730
Studies in fundamental chemistry of fuel cell reactions. Semiannual progress report, 1 January-30 June 1968 (Dendritic deposition of zinc from alkaline solution), 688 (N-69-25396)
Studies in fundamental chemistry of fuel cell reactions. Semiannual progress report, 1 July-31 December 1968 (Formation mechanisms of zinc dendrites), 689 (N-69-25397)
Studies in fundamental chemistry of fuel cell reactions. Quarterly report, 1 April-30 June 1969 (Dendritic deposition of zinc from alkaline solution), 3206 (N-70-10779)
Studies in fundamental chemistry of fuel cell reactions. Quarterly report, 1 April-30 June 1969 (Dendritic deposition of zinc from alkaline solution), 3207 (N-70-16379)
Studies in fundamental chemistry of fuel cell reactions. Quarterly report, 1 July-30 September 1969 (Dendritic deposition of zinc from alkaline solution), 3209 (N-70-25705)
Texture of a zinc oxide residue formed during the anodic oxidation of porous zinc in an alkaline solution, 2228
Use of ion-exchange compounds in chemical current sources, 2301
Zinc--alkaline battery containing carbazole as a zinc corrosion inhibitor (Patent), 1001
Zinc alkaline battery (Patent), 1019
Zinc alkaline secondary batteries (Patent; dendrite growth suppressed by In and Tl), 3627
Zinc anode battery (Patent; coating of 2,6-di-tert-butyl-p-cresol to extend shelf life and inhibit H evolution), 981
Zinc anodes for secondary batteries (Patent; fabrication, polyethyleneimine to prevent electrodeposition of Zn on anode), 3675
Zinc anodic mixes for alkaline batteries (Patent), 3638
Zinc as a secondary battery electrode (Review of attempts to improve cycling behavior), 4405
Zinc-containing electrode (Patent; preparation by electrodeposition), 4030
Zinc electrodes for rechargeable batteries (Patent; synthetic latex coating to prevent dendrite formation), 3585
Zinc electrode investigation. Quarterly technical progress report No. 4, 1 Apr-1 Jul 1965 (Recombining gases formed during overcharge), 2810 (AD-467031)
Zinc electrode investigation. Quarterly technical progress report No. 5, 1 Jul-1 Oct 1965, 2818 (AD-471222)
Zinc electrode investigation. Quarterly technical progress report No. 6, 1 Oct 1965-1 Jan 1966, 2829 (AD-476991)
Zinc electrode investigation, 2843 (AD-489498)
Zinc electrode investigation. Quarterly technical progress report No. 1, 1 Jul-1 Oct 1964 (Pd-on-alumina

catalyst), 2853 (AD-606999)
Zinc electrode investigation. Quarterly technical progress report No. 3, 1 Jan-1 Apr 1965, 2863 (AD-614119)
Zinc electrodes in alkaline medium, 1464
Zinc electrodes for secondary batteries (Patent; Cd additive improves Zn adherence), 3299
Zinc plate shape change inhibition (Patent; frame near electrode saturated with $Fe(OH)_2$), 1006
Zinc powder for batteries (Patent), 3679
ANTIMONY ALLOYS/CASTING
Electric storage battery grids (Patent; alloy with improved casting properties), 3642
Lead--antimony alloy for battery grids (Sb 0.5-3.0, Cu 0.01-0.07, As 0.10-0.30, S 0.002-0.005, Sn 0.02-0.08, Te 0.05-0.1 percent; patent), 3723
Lead-acid batteries with low antimony alloys (1 to 4% Sb with Se additions), 3418
ANTIMONY ALLOYS/CHEMICAL PREPARATION
Use of cathodic antimony for the production of special alloys, 3808
ANTIMONY ALLOYS/CHEMICAL REACTIONS
Role of antimony in the lead--acid battery. 1. Effect of antimony on the anodic behavior of lead, 2319
ANTIMONY ALLOYS/CORROSION
Corrosion of lead alloys at high anodic potentials, 3434
Effect of grid cast structure on the anodic corrosion of lead (Pb--0.09 Ca, Pb--0.46 Ag, Pb--6 Sb, Pb--11.6 Sb, Pb--6 Sb--0.2 Ag--0.2 As--0.5 Sn), 4234
Effect of copper on anodic corrosion rate in $H_2SO_4$, mechanical properties, and fluidity of lead and lead antimony alloys, 4236
Investigation of the intergranular corrosion of lead-antimony grid alloys, 2879 (AD-633078)
Mechanical and corrosion properties of low antimony lead alloys, 3459
Mechanical and corrosion properties of low antimony lead alloys, 3460
Mechanism of the effect of arsenic on the corrosion behavior of lead--antimony storage battery alloys, 3794
ANTIMONY ALLOYS/CREEP
Creep resistance of lead casting alloys for battery grids (5 to 9% Sb, additions of As, Cu, Ca), 4159
ANTIMONY ALLOYS/FABRICATION
Development of low antimony lead alloys for starter batter grids, 4090
ANTIMONY ALLOYS/MECHANICAL PROPERTIES
Development of low antimony lead alloys for starter battery grids (1.6 to 3.5 percent Sb), 3963
Effect of copper on anodic corrosion rate in $H_2SO_4$, mechanical properties, and fluidity of lead and lead antimony alloys, 4236
Mechanical and corrosion properties of low antimony lead alloys, 3459
ANTIMONY ALLOYS/METALLOGRAPHY
Corrosion of lead alloys at high anodic potentials, 3434
ANTIMONY ALLOYS/OXIDATION
Corrosion of lead alloys at high anodic potentials, 3434
ANTIMONY ALLOYS/PICKLING
Removal of surface antimony from antimony lead alloys by sulfuric acid-hydrogen peroxide pickling, 4235
ANTIMONY ALLOYS/POROSITY
Microporosity in lead-antimony grid alloys, 2910 (AD-672889)
ANTIMONY ALLOYS/STRAIN HARDENING
Strain hardening of Pb-Sb alloys (1 to 7% Sb, <0.2% As), 3727
ANTIMONY ALLOYS/TENSILE PROPERTIES
Development of low antimony lead alloys for starter batter grids, 4090
Lead alloy for producing attention-free lead--acid batteries, 3581
Mechanical and corrosion properties of low antimony lead alloys, 3460
Study of lead-rich Pb-Cd-Sb alloys (Pb-3.0Cd-2.5Sb), 4263
ANTIMONY ALLOYS/YIELD STRENGTH
Lead alloy for producing attention-free lead--acid batteries, 3581
ANTIMONY HYDRIDES/DECOMPOSITION
Decomposition of stibine (Stibine evolved from lead storage batteries), 2652
ANTIMONY OXIDES/ELECTRIC CONDUCTIVITY
New solid conductors of $Na^+$ and $K^+$ ions ($NaTaWO_6$; $NaTa_2O_5F$; $NaSbO_3$; Na and K niobates), 3433
APOLLO PROJECT/ENERGY SOURCES
Electrical power systems study for an independent carrier for the applications a and b experiments, 89 (N-74-70909)
APPLIANCES/ELECTRIC BATTERIES
New look in rechargeable batteries, 2581
APPLIANCES/NICKEL-CADMIUM BATTERIES
Characteristics of sealed nickel-cadmium rechargeable batteries ''PANANICA'', 2444
ARGONNE NATIONAL LABORATORY

AUTOMOBILES/ALTERNATORS
Advances in automobile battery charging equipment, 4609
Choice of alternator or dynamo, 4480
Electrical equipment, 4650
Keeping car batteries charged, 4778
Rectifier assembly for automobile alternators, 4374
Trends and development of automotive electric equipment, 4749
Use of alternators on British passenger cars, 4557
AUTOMOBILES/BATTERY CHARGING
Care and feeding of the ''new baby'', 2156
AUTOMOBILES/ELECTRIC BATTERIES
Automotive battery voltage indicator for 12 volts, 3363
Current status of alternative automotive power systems and fuels. Volume IV. Electric and hybrid power systems, 5108 (EPA-460/3-74-013-d(Vol.4))
Development of lithium-sulfur cells for application to electric automobiles, 1306
Manufacture and use of storage batteries, 1614
Some news of European starter batteries, 4601
Study of motive power of storage batteries, 2770
AUTOMOBILES/ELECTRIC GENERATORS
Advances in automobile battery charging equipment, 4609
Choice of alternator or dynamo, 4480
Conveyorized testing of generator regulators, 4780
High speed production of automobile generator frames by automatic metallic arc welding, 4816
It's still 12 volts, 4737
Swaged generator pole shoes conserve copper wire, 4783
Trends and development of automotive electric equipment, 4749
AUTOMOBILES/ELECTRIC MOTORS
Emission optimization of heat engine/electric vehicle, 100 (NP-20354)
Prospects for electric vehicles. A study of low-pollution-potential vehicles-electric, 4991 (NP-20344)
AUTOMOBILES/ELECTRICAL EQUIPMENT
Automotive electrical equipment, its operation and maintenance (Book), 4791
Electric equipment for automotive use (Textbook), 2733
AUTOMOBILES/ENERGY SOURCES
Energy for road transport in the United Kingdom, 4966 (CONF-770430-P5(Draft))
AUTOMOBILES/ENGINES
Automotive power plants. Long-term outlook, 5126
Current status of alternative automotive power systems and fuels. Volume I. Executive summary, 5107 (EPA-460/3-74-013-a(Vol.1))
Why the piston engine lives on, 5142
AUTOMOBILES/ENVIRONMENTAL EFFECTS
Alternatives to the internal combustion engine: impacts on environmental quality (Book), 5208
AUTOMOBILES/EXHAUST GASES
Automotive power plants. Long-term outlook, 5126
Emission optimization of heat engine/electric vehicle, 100 (NP-20354)
Evaluation of hybrid heat engine/electric systems for low exhaust emission potential in automotive applications, 5219
AUTOMOBILES/FLYWHEELS
Battery-flywheel hybrid electric power system for near-term application. Volume I. System description, 5023 (UCID-17098(Vol.1))
Current status of alternative automotive power systems and fuels. Volume IV. Electric and hybrid power systems, 5108 (EPA-460/3-74-013-d(Vol.4))
Which are better for electric vehicles: flywheels or batteries, 4919 (CONF-711166-)
AUTOMOBILES/GAS TURBINES
General Motors looks to future, 5288
New forms of propulsion, for automotive vehicles, 5156
Unconventional power plants (Test vehicles with alternative power plants), 204
AUTOMOBILES/HYBRID SYSTEMS
Battery-flywheel hybrid electric power system for near-term application. Volume I. System description, 5023 (UCID-17098(Vol.1))
Current status of alternative automotive power systems and fuels. Volume IV. Electric and hybrid power systems, 5108 (EPA-460/3-74-013-d(Vol.4))
Electric- and hybrid-vehicle powertrain development, 4960 (CONF-770430-P4(Draft))
Evaluation of hybrid heat engine/electric systems for low exhaust emission potential in automotive applications, 5219
AUTOMOBILES/HYDROGEN STORAGE
Current developments in electric ground propulsion systems, research and development worldwide (Review, 40 references), 5128
AUTOMOBILES/INTERNAL COMBUSTION ENGINES
Emission optimization of heat engine/electric vehicle, 100 (NP-20354)
AUTOMOBILES/IRON-NICKEL BATTERIES
Nonlaminated nickel oxide electrode with plastic binder, 4569
AUTOMOBILES/LEAD-ACID BATTERIES
Alternators: types, advantages, and applications, 4703
Alternator and control systems, 4692
Application of semiconductors to automotive charging circuitry, 4691

BATTERY CHARGERS/CONTROL SYSTEMS
Apparatus and method for terminating the charge of storage batteries (Patent), 3531
Automatic control of lead-acid-battery charging equipment, 4798
Battery sensing generator control system. Final report, 3053 (AD-860882)
Careful battery maintenance reduces truck downtime (15-cell 275-A batteries), 2716
Cd-Cd coulometer controls battery charge (Prevents overcharging), 4542

Cell equalization techniques. Quarterly technical progress report No. 3, 1 Aug-1 Nov 1965 (Stabistor for charge control), 2823 (AD-474282)
Cell equalization techniques. Final technical report, Feb 1965-Feb 1966 (Charge control of Ni/Cd cells by stabistor composed of forward-biased diodes), 2837 (AD-482052)
Charge control devices. 4. Coulometric control of charging of Ni-Cd secondary batteries, 2994 (AD-807067)
Charging requirements of automotive propulsion-type batteries, 5267
Control concepts for silent battery chargers (Advanced power conversion and modulation techniques), 4554
Control of storage battery charging (Methods of measuring state of charge based on voltage), 4810
Coulometric charging control of sealed nickel-cadmium cells, 2803 (AD-462403)
Diode control research. Quarterly technical progress report No. 3, 1 December 1966-1 March 1967, 2998 (AD-810831)
Diode control research. Final report, May 1966-15 July 1969, 3054 (AD-861077)
Diode control research. Quarterly technical progress report No. 1, 1 Jun-1 Sep 1966, 2844 (AD-489882)
Integral electronic charge controls for high performance secondary batteries, 4449
Investigation of hermetically sealed, maintenance-free, high-rate, nickel-cadmium batteries for aircraft applications. Quarterly technical progress report No. 6, 2833 (AD-479652)
New charge control system for satellite batteries, 2792 (AD-439673)
New fuel gage for electrically powered vehicles (Unit has automatic stop when 100 percent of capacity is reached), 4534
Protection of overcharge and overdischarge with contactless voltage switch, 4394
Rectifier assembly for automobile alternators, 4374
Review of some modern power supplies, 499 (AD-843245)
Some new electrochemical devices (Description of devices resulting from battery research), 2864 (AD-617832)
Storage battery charging, 4797
System for controlling a pulse convertor for accumulator charging, 3983
Ultrarapid charging of batteries (Senses electrolyte temperature), 4789

BATTERY CHARGERS/DESIGN
Automatic charger for storage batteries (Patent), 2955 (AD-745361)
Automatic battery charger (designed for lead--acid batteries), 4033
Automatic charging of unspillable lead accumulators, 4621 (AD-807778)
Automatic battery formation cycler and controller. Research and development report, 2812 (AD-467988)
Automatic charging methods for portable battery operated equipment, 4567
Automatic charge cut-off for silver-zinc storage batteries (Patent), 4824
Battery charger PP-7041( ). Final report, 30 Apr 1974-31 Jan 75, 3118 (AD-A-009116)
Battery charger PP-6309( )/U. Final report, 1 Jul 1969-30 Jul 1970, 3065 (AD-882182)
Battery charger PP-4126( )/U. Final report, 1 Jul 1969-30 Jul 1970, 3066 (AD-882183)
Capacitance chargers for space employ controlled rectifiers, 4659
Charger/analyzer for battery maintenance, 4051
Charger-controller for the CF-104 aircraft, 3030 (AD-839298)
Charging circuit for battery-operated devices powered by solar cells, 3485
Charging equipment, mobile (CEM). Final report Oct 1972-Nov 1974, 3139 (AD-A-036071)
Charging system design can cut vehicle maintenance costs, 4507
Constant-voltage battery charger ( UR-type utility charger), 4708
Cycling battery electrodes in bulk (Patent; rotating cylinders contain electrodes to be regenerated), 4255
dc charger and recondition charger for tellurometer batteries, 3055 (AD-863309)
DC converter for charging batteries on vehicles, 4132
Electric trucks of the novel design and their possible uses, 5411
Electronic analog simulation of satellite thermal and power system characteristics, 2871 (AD-622481)
Fast charging systems for NiCd batteries, 4535
High rate battery charger system, 4524
IC timer automatically monitors battery voltage (Keeps full charge on standby battery), 4168
Industrial battery charger for mobile equipment use (20 A), 4227
Investigation of maintenance-free, high-rate, nickel-cadmium batteries for aircraft application. Quarterly technical progress report No. 2, 2989 (AD-805274)
Investigation of maintenance-free high-rate, nickel-cadmium batteries for aircraft application. Quarterly technical progress report No. 7, 1 September 1967-29 February 1968, 484 (AD-831150)
Investigation of maintenance-free, high-rate, nickel-cadmium battery power system for aircraft application. Quarterly technical progress report No. 8, 1 March-31 May 1968 (Breadboard circuit tested from -40 to +140 F) 490 (AD-837598)
Investigation of maintenance-free, high-rate, nickel-cadmium battery power system for aircraft application. Final technical report, 3062 (AD-879606)
Ion engine orbital flight test program. Final technical report (Automatic charger for batteries charged by SNAP-10A reactor (for ion thruster)), 2827 (AD-476205)
Lightweight automatic charger/controller, 4519
Magnetically regulated portable battery charger (dc output of 10A at 50V), 4752
Methods for charging batteries on aircraft, 2287
Mining locomotive battery charger with silicon rectifier, 4684
Multichannel engine powered battery charger. Final report (6, 12, and 24 V at up to 2.5 A), 2816 (AD-470065)
New developments in maintenance free battery systems (Cells plus integral charger), 4050
Portable military charger for zinc--silver oxide batteries, 4520
Rapid charger for maintenance-free batteries. Final report, 3103 (AD-913957L)
Rapid charger for maintenance-free batteries. Semi-annual report, 1 May-31 Dec 1971, 3098 (AD-911508)
Rapid charger for maintenance-free batteries. Semi-annual report 1 May-31 Dec 71, 3099 (AD-911508)
Road shock energy converter for charging vehicle batteries (Patent), 3288
Voltage and current regulation of generators with permanent magnets (For automobiles), 4710

BATTERY CHARGERS/DIAGRAMS
Discharge monitoring media and system of automatic charging of alkali storage batteries, 4702 (AD-638870)

BATTERY CHARGERS/ELECTRIC POTENTIAL
Rectifiers for battery charging, 2778

BATTERY CHARGERS/ELECTRONIC CIRCUITS
Alkaline battery charger and state-of-charge indicator, developed by Leland Irborne Products Division of the American Machine and Foundry Company; valuation of , 2817 (AD-470687)
Atmosphere explorer power subsystem, 4056
Automatic battery charger shuts itself down, 4008
Automatic storage battery charger (Patent; charges from three-phase ac line), 4819 (AD-781250)
Battery cell with third electrode performance test results, 2410
Battery trucks in storehouse services (Stations for 10- and 30-cell batteries), 5372
Charge-current control circuit for nickel-cadmium cells with control electrodes. Final report, 2804 (AD-462426)
Charging 112-volt Diesel batteries, 4773
Charging nickel--cadmium and lead--acid batteries from common generator, 4270
Circuit arrangement facilitates use of charger, 4699
Controls for charging secondary cells, 4474
Design of choke-condenser charging circuit, 4796
Diode control research. Quarterly technical progress report No. 2, 1 September-1 December 1966 (Solid-state charge control system), 2988 (AD-805146)
Electric circuits particularly for automatic battery charging apparatus (Patent), 3554
Investigation of maintenance-free, high-rate, nickel-cadmium batteries for aircraft application. Quarterly progress report No. 5, 1 June-31 August 1967, 1861 (AD-822449)
Investigation of hermetically sealed maintenance-free, high-rate, nickel-cadmium batteries for aircraft applications. Quarterly technical progress report No. 2, 1731 (AD-611404)
Lightweight battery charger, 4628
Motor-controlled charger, 4787
Peak programmed charge method, 2288
Protecting rechargeable batteries against abusive deep discharging, 2548
Rapid recharging of nickel-cadmium batteries (Tests up to 4000 C rate), 4420
Recharging of Leclanche dry cells, 2608
Semiconducting charge-discharge devices for storage batteries, 4215 (AD-785970)
Shunt voltage regulator circuit for nickel-cadmium cells with auxiliary electrodes, 2878 (AD-631951)
Simple battery charger for gel cells detects full charge and switches to float, 3403
Storage battery charging system with alternator output fault indicating circuit (Patent), 3350
Switch-off circuits for SCR's operating on dc, 4667
Temperature responsive battery charging circuit (Patent), 3560
Thyristor battery charger for ships, 3106 (AD-914883L)
Universal input battery charger, 3316

BATTERY CHARGERS/EQUIPMENT
Battery charging and replacement station for multicell accumulators of battery-powered vehicles (Patent), 5078

BATTERY CHARGERS/FABRICATION
Automatic battery charger (designed for lead--acid batteries), 4033
DC converter for charging batteries on vehicles, 4132
Rapid charger for maintenance-free batteries. Semi-annual report 1 May-31 Dec 71, 3099 (AD-911508)

BATTERY CHARGERS/FUEL CELLS
New concepts for recharging electrochemical batteries, 1429
BATTERY CHARGERS/IMPEDANCE
Influence of circuit element parameters on capacitance characteristics of silver--zinc storage batteries during charging with asymetric alternating current, 1821 (AD-756955)
BATTERY CHARGERS/JUNCTION DIODES
Investigation of semiconductor equalizer diodes for secondary battery cells, 2870 (AD-621080)
BATTERY CHARGERS/LOGIC CIRCUITS
Battery charger PP-4126( )/U. Final report, 1 Jul 1971-Jun 1974, 3120 (AD-A-013364)
BATTERY CHARGERS/MANUALS
Operation and service manual for ACPU EFC charger/tester 52E270071, 3048 (AD-857173)
Rapid charger for maintenance free batteries. Final report, 2970 (AD-772072)
BATTERY CHARGERS/MEETINGS
Power sources conference (22nd annual) held 14-16 May 1968. Proceedings, 41 (AD-696427)
BATTERY CHARGERS/ON-LINE CONTROL SYSTEMS
Computer-controlled battery pulse charging, 4035
BATTERY CHARGERS/OPERATION
Automatic charging of lead acid batteries using silicon controlled rectifiers, 4036
Automatic battery charger for field use (For several 12-V batteries simultaneously), 4598
Avostat-controlled dry plate rectifiers with battery reserve, 4813
Battery chargers and hand crank generators, 4553
Charger-controller for the CF-104 aircraft, 3030 (AD-839298)
DC converter for charging batteries on vehicles, 4132
Power for portables, 4375
Recharging accessory improves cordless devices, 4610
Understanding chargers for motive-power batteries: basic principles, 3285
Understanding chargers for motive-power batteries: optional features, 3277
BATTERY CHARGERS/PERFORMANCE
Analysis of voltage-limited battery charging systems (4 Ah), 4494
Application of charging systems to farm, construction, and industrial machinery, 4426
Automatic battery charging system, 4629
Battery charger PP-4126( )/U. Final report, 1 Jul 1971-Jun 1974, 3120 (AD-A-013364)
Battery charger PP-6309( )/U. Final report, 1 Jul 1969-30 Jul 1970, 3065 (AD-882182)
Battery charger PP-4126( )/U. Final report, 1 Jul 1969-30 Jul 1970, 3066 (AD-882183)
Charge-discharge behavior of the C.G.E. circulating zinc-air vehicle battery, 5046
Chloride unveils the ''Silent Rider'' (Battery-powered 50-passenger city bus), 5120
Demand pulse charging for nickel--cadmium batteries, 4472
High rate battery charger system, 4524
Investigation of maintenance-free, high-rate, nickel-cadmium battery power system for aircraft application. Quarterly technical progress report No. 8, 1 March-31 May 1968 (Breadboard circuit tested from -40 to +140 F), 490 (AD-837598)
Modern electric battery locomotives and chargers for underground mining operations, 2641
Thermoelectric silent battery charger (Gasoline, diesel, JP-4, JP-5, or fuel oil; 10A, 28V), 2911 (AD-673119)
Thermoelectric power conversion feasibility. Quarterly progress report No. 3, 26 Dec 1964-25 Mar 1965 (Propane heated 5W unit for charging storage batteries), 2819 (AD-472340)
Use of alternators on British passenger cars, 4557
BATTERY CHARGERS/PERFORMANCE TESTING
Charging equipment, mobile (CEM). Final report Oct 1972-Nov 1974, 3139 (AD-A-036071)
Development of an aircraft battery conditioner/analyzer. Final report, 9 June 1972-18 December 1973, 3117 (AD/A-005055/9ST)
Generator and battery system evaluation in city traffic, 2625
On-board aircraft battery charging, 4049
Service evaluation of aircraft battery charger, Electro Development Corporation model EDC 2-301-3. Report No. 2 (final), Apr 1970-Aug 1972, 3093 (AD-909458L)
Thermoelectric silent battery charger, 4531
BATTERY CHARGERS/POWER CONDITIONING CIRCUITS
Bilateral power conditioner, 4219
BATTERY CHARGERS/RECTIFIERS
Charging equipment for the auxiliary batteries of electric rolling stock, 4351
Rectifier equipment for supply of telephone exchanges (Capacity: >500 A at 60 V), 4639
BATTERY CHARGERS/REVIEWS
Automatic-type battery chargers insure longer battery life, 4812
Developments in alternator systems for vehicles, 4479
BATTERY CHARGERS/SEMICONDUCTOR DIODES
Cell equalization techniques. Quarterly technical progress report, 1 Jan-1 Mar 1964, 2790 (AD-435833)
Cell equalization techniques. Quarterly technical progress report, 1 Apr-1 Jul 1964 (Stabistors for charge control), 2794 (AD-443065)
Cell equalization techniques. Quarterly technical progress report No. 1, 1 Feb-1 May 1965 (Stabistor as charge control device), 2807 (AD-465239)
Cell equalization techniques. Quarterly technical progress report No. 2, 1 May-1 Aug 1965 (Stabistors as charge control devices), 2811 (AD-467872)
Cell equalization techniques. Quarterly technical progress report No. 3, 1 Jul-1 Oct 1964, 2855 (AD-609895)
Diode control research. Quarterly progress report No. 5, 1 June-1 September 1967 (Stabistor diodes for control of battery charging), 3009 (AD-821811)
Diode control research. Quarterly technical progress report No. 4, 1 March-1 June 1967 (Stabistor diode charge control system), 3011 (AD-822337)
Diode control research. Quarterly technical progress report No. 7 (Stabistor-protected 12-Ah Ni-Cd and 25-Ah Ag-Zr batteries), 1867 (AD-832025)
Diode control research. Quarterly technical progress report No. 8, 1 May-1 June 1968, 3036 (AD-845340)
Diode control research. Quarterly technical progress report No. 11, 1 December 1968-1 March 1969 (Testing of 12-Ah battery with automatic charge-control by means of stabistor diodes), 3045 (AD-854317)
There's no overcharge for fast-charged batteries (Thermal switch to shunt high charge currents when cell is fully charged), 4514
BATTERY CHARGERS/SPECIFICATIONS
Automatic charge-discharge device for testing storage batteries (12 to 24 V), 4352 (AD/A-005978)
OV-10A aircraft Ni--Cd battery and charging system investigation. Report No. 1, (final), Apr-Sep 1973, 3109 (AD-919452L)
BATTERY CHARGERS/STABILIZATION
Cell equalization techniques, 1664 (AD-461856)
BATTERY CHARGERS/SWITCHING CIRCUITS
MEL research and development phase report (Voltage monitor and switching circuit for satellite power supplies), 2786 (AD-428945)
Portable battery chargers. Quarterly process report No. 2, 1 Oct-31 Dec 1963, 2849 (AD-600044)
BATTERY CHARGERS/TESTING
Charger-controller for the CF-104 aircraft, 3030 (AD-839298)
Investigation of unregulated converters as battery charges in A-6 aircraft. Report No. 1 (final), Nov 1971-Jun 1972, 3086 (AD-905612L)
Rapid charger for maintenance-free batteries. Final report, 3103 (AD-913957L)
Rapid charger for maintenance-free batteries. Semi-annual report 1 May-31 Dec 71, 3099 (AD-911508)
Supplemental service test of radar set AN/PPS-5, battery charger PP-4127( )/U, pintle-mounting adaptor for AN/PPS-4 and AN/PPS-5, and test facilities kit MK-980( ) PPS-5. Final report, Aug-Dec 1967, 3021 (AD-831349)
TOW. Monthly technical report No. 118, 1-31 May 1972, 3075 (AD-900561L)
TOW weapon system check test program for TOW initial production battery chargers. Test evaluation report, 3079 (AD-902276L)
Twelve-volt caboose power, 4795
BATTERY CHARGERS/THYRISTORS
Semiconductor charging device for auxiliary batteries on short distance transport vehicles, 4516
BATTERY CHARGERS/VOLTAGE REGULATORS
Storage-battery life can be stretched (Methods for charging 60-cell batteries using M-G sets), 4781
Transistorized regulator gives reliable control of battery charging rate, 4672
BATTERY CHARGING
Baker and Williams adopt pallet-fork-truck system to simplify warehouse handling, 5395
Battery-charging simplified for coal-mine service, 2706
Charging industrial truck batteries by means of copper oxide rectifiers, 2755
Charging loco batteries, 2777
Charging of an accumulator (Method in which spent electrolyte is replaced by electric charged electrolyte), 2253
Charging of storage batteries, 2766
Charging silver oxide electrode with periodically varying current. II, 2549
Electricity vs gasoline (Principles, advantages, and uses of electric automobiles), 5391
How do you lay out battery room, 2707
How to charge repaired battery, 2690
How to take care of industrial truck batteries, 2717
Lead-nickel glass of controlled chemical durability for storage battery use (Adds Ni ions to electrolyte to decrease end-of-charge voltage), 4814
Local-battery charging over subscribers' lines, 2331
Mercury electrochemical coulometer as a battery state-of-charge indicator, 4403
Modified battery charging method prolongs battery life, 2729
More power to you, 5407
Multicelled batteries for battery-powered vehicles (Patent), 5079
New charging method for electric batteries, 2665
Selecting battery charging methods, 2655
Simplified handling increases battery life (Description of industrial truck battery charging room), 2638
Storage battery charging with modified constant-voltage

method, 2718
BATTERY CHARGING/AUTOMATION
Present status and further development of electric motor vehicle, 5403
BATTERY CHARGING/AUTOMOBILES
Care and feeding of the ''new baby'', 2156
BATTERY CHARGING/COMPARATIVE EVALUATIONS
Spot welding using storage batteries as an energy source, 5054
BATTERY CHARGING/CONTROL
Control of storage battery charging, 2764
Indication of gas formation at battery electrodes (Patent), 3730
Transient pressure considerations in charge control of sealed batteries, 2395
BATTERY CHARGING/CONTROL SYSTEMS
Auxiliary electrode charge control, 4522
Coulometer control of battery charging, 4521
Mercury coulometers, 4523
BATTERY CHARGING/COST
Don't charge batteries at end of shift, 2148
BATTERY CHARGING/DENDRITES
Reducing dendrite formation when charging accumulator batteries (Patent), 2251
BATTERY CHARGING/ELECTRIC BATTERIES
ABC's of small electric vehicles, 5105
Apparatus and method for charging a zinc electrode (Patent; bubbling of air to prevent dendrite formation and slope change), 3650
Basic requirements for charging equipment for electric road vehicles as seen by the utilities with special emphasis on harmonics, 126
Battery charge condition monitoring: techniques and applications, 4946 (CONF-740215-P2)
Battery control system for battery operated vehicles (Patent), 5031
Battery emergency lighting plant, 2654
Charging silver oxide electrode with periodically varying current, 2589
Device for separating electrolyte carried by hydrogen during recharging of a storage battery (Patent), 2265
Don't toss that battery yet: dry cells are rechargeable, 2570
Effect of recharge on the capacity of the silver electrode of an alkaline battery operating under forced discharge conditions, 2425
Effect of the charge time on the life of a silver battery electrode, 4433
Method to operate multicell accumulators for battery-powered vehicles (Patent), 138
Microprocessor-controlled battery protection system, 3786
Microstructure of sintered silver electrodes. IV. Formation of AgO during charges (KOH electrolyte), 2938 (AD-728894)
New fuel gage for electrically powered vehicles, 4534
Optimization of charging conditions of storage battery silver electrode and calculation of capacity loss during continuous use, 3805
Review of batteries and fuel cells for space power systems (Overcharge rate, end-of-charge voltage, cycle life), 2546
Secondary alkaline batteries (Patent; Zn anode, addition of polycationic polymers enables charging without Zn deposition), 1000
Testing device for the discharge state of a battery (Patent), 3741
Theoretical design of primary and secondary cells. Part IV. Further studies of the battery discharge equation, 325 (AD-617333)
BATTERY CHARGING/ELECTRIC-POWERED VEHICLES
Ac drive electric vehicle, 5143
American Fork and Hoe Co. handles work by combination skid-lift-truck and tractor-trailer systems, 5413
Baker and Williams adopt pallet-fork-truck system to simplify warehouse handling (2000-lb capacity), 5395
Battery charge condition monitoring: techniques and applications, 4946 (CONF-740215-P2)
Charging process, 2040 (CONF-711166-)
Charging requirements of automotive propulsion-type batteries, 5267
End-of-run charging for metropolitan area electrically-powered buses, 4882 (CONF-691143-)
Method to operate multicell accumulators for battery-powered vehicles (Patent), 138
Multicelled batteries for battery-powered vehicles (Patent), 5079
Selecting battery charging methods, 2655
BATTERY CHARGING/ELECTRONIC CIRCUITS
New battery state-of-charge indicator especially for use in electric vehicles, 3829
Some simple battery circuits, 4766
BATTERY CHARGING/FEASIBILITY STUDIES
Feasibility of recharging FAA in-service dry cell batteries. Final report, 1734 (AD-620018)
BATTERY CHARGING/GASES
Determination of the degree of supersaturation of a potassium hydroxide solution by oxygen in the interelectrode space of a storage battery during charging, 2316
Submarine storage batteries. Relation of current and voltage during the gassing phase of charge, 1714 (AD-491500)
BATTERY CHARGING/IRON-NICKEL BATTERIES
Accumulators for traction: new accumulators charging processes, 2326
Apparatus and method for terminating the charge of storage batteries (Patent), 3531
Maintenance of electrical cap lamps, 2680
Principles of battery charging, 2746
Study of operating modes of Diesel locomotive alkaline storage batteries, 2416 (AD-781224)
BATTERY CHARGING/LEAD-ACID BATTERIES
Accumulators for traction: new accumulators charging processes, 2326
Apparatus and method for terminating the charge of storage batteries (Patent), 3531
Automotive battery cars (Series of monthly articles), 1618
Batteries used with law enforcement communications equipment: chargers and charging techniques, 3249 (PB-221475)
Battery charging at low temperature, 2242
Battery charge condition monitoring: techniques and applications, 4946 (CONF-740215-P2)
Battery emergency lighting plant, 2654
Charge acceptance of the lead cell at various charging rates and temperatures (0 to 40°C), 2457
Charge acceptance characteristics of the lead-acid cell, 2041 (CONF-711166-)
Charging Ni-Cd and Pb-acid batteries from common generator, 2375
Charging performance of over-discharged lead-acid batteries, 2421
Clean transportation for new towns: DAIHATSU electric vehicles in the Senboku area, 5044
Custom chargers and matched cells increase life of sealed batteries, 2160
Design of vibrating type regulator for automobiles, 4676
Desulfation of the lead storage-battery plates (Patent), 2250
Desulphurization of electric storage batteries, 2679
Development of effective means of low-temperture charging of lead-acid batteries. Progress report No. 1, 1 Mar-1 Jun 1949, 1686 (AD-471952)
Development of effective means of low-temperature charging of lead-acid batteries. Quarterly progress report No. 2, 1 Jun-1 Sep 1949 (Behavior of positive plates), 1687 (AD-471953)
Development of effective means of low-temperature charging of lead-acid batteries. Quarterly progress report No. 3, 1 Sep-1 Dec 1949 (-40°), 1688 (AD-471954)
Development of effective means of low-temperature charging of lead-acid batteries. Quarterly progress report No. 4, 1 Dec 1949-1 Mar 1950 (-40°), 1689 (AD-471955)
Effect of the electrolyte temperature during charging of plates on the characteristics of electrodes and cells of lead-acid automotive storage batteries (20 to 64°), 4286 (AD/A-006079)
Electric vehicle batteries: usage and abusage, 2042 (CONF-711166-)
Emergency lighting battery systems, 2658
Engineering analysis of thermal phenomena for lead-acid batteries during recharge processes, 2033 (ANL-77-24)
Expander action in the lead--acid battery. 2. Inhibition of nucleation processes, 4017
Fast charging lead storage batteries (Evaluated mathematical model for cathode), 2224
Fast charging of car batteries (Recommendations), 2743
Float behavior of the lead-acid battery system, 2436
Fluctuation of the voltage of batteries during charging with an asymmetrical alternating current, 1820 (AD-756557)
Gas liberation in a lead-acid storage battery (Recommendations for reducing), 2049 (EPRI-EM-448-SR)
How to keep your battery happy while charging (Constant-current vs modified-constant-potential methods), 2668
Interferometric study of low temperature charging of the lead-acid cell, 2147
Investigation on floating voltage of lead-acid storage batteries, 4353
Lead-acid battery and its associated controlgear: survey of applications and operating principles, 2682
Low temperature recharge of the lead--acid system (Effects of temp. and $H_2SO_4$ concn. on formation of peroxydisulfuric acid at $PbO_2$ electrode), 2006 (AD-A-011027)
Low temperature oxidation kinetics of anodic films on lead in sulfuric acid solution (0° to -50°C), 2141
Mechanism of the formation of blisters on the lead electrode of the lead-acid battery, 4292
New battery state-of-charge indicator especially for use in electric vehicles, 3829
Principles of battery charging, 2746
Rapid charging of lead acid batteries, 2360
Rapid charging batteries for electric propulsion systems (24-Ah Ni/Cd in 5 to 10 min, 190-Ah lead-acid in 20 to 30 min.), 2396
Reducing dendrite formation when charging accumulator batteries (Patent), 2251
Regular battery PM gives you lift trucks when you need them, 2569
Safety device against overcharging for mainenance-free storage batteries, 3956
Some aspects of charge and discharge processes in lead-acid storage batteries, 4755

Specific properties of small closed lead accumulators using an immobilized electrolyte, 2459
Storage batteries: review of recent patents (Patents from 1944 to 1947), 2753
Storage battery: its part in engine tune-up, 2758
Storage batteries (Effects of charging temperature on life and low-temperature performance), 2772
Studies on charging performance of over-discharged lead--acid batteries, 1964 (AD-912262L)
Temperature dependence of charging rate of $Pb/PbO_2$ storage batteries, 2550
Temperature influences battery life and performance, 2138
Voltage at end of charge of lead plate accumulators, 2748
BATTERY CHARGING/LITHIUM-CHLORINE BATTERIES
Lithium-chlorine electrochemical energy storage system. Final technical report, 13 December 1965-13 March 1967 (Attempts to increase charge rate), 469 (AD-822442)
BATTERY CHARGING/MATHEMATICAL MODELS
"Vicious Cycle" in secondary batteries: mathematical approach, 2612
Charging process, 2040 (CONF-711166-)
BATTERY CHARGING/MEASURING INSTRUMENTS
Development of an alkaline-battery state-of-charge indicator, 4348
BATTERY CHARGING/METAL-GAS BATTERIES
Hydraulically rechargeable,depolarized metal--gas battery system (Gas-Zn system), 2254
Recharging of metal-air batteries (Patent), 2206
BATTERY CHARGING/METAL-METAL OXIDE BATTERIES
Lead-silver oxide cell, 2428
BATTERY CHARGING/METAL-NONMETAL BATTERIES
Zinc-halide battery with molten electrolyte (Patent; method for preventing dendrite formation during charging), 2191
BATTERY CHARGING/MONITORING
Battery charge condition monitoring: techniques and applications, 4946 (CONF-740215-P2)
BATTERY CHARGING/NICKEL-CADMIUM BATTERIES
Adhydrode control of Ni-Cd battery charging to evaluate charging methods, 2519
Alkaline batteries, 1439
Analysis of aircraft battery thermal runaway, 2286
Atmosphere explorer power subsystem, 4056
Auxiliary electrode charge control, 4522
Auxiliary electrode for charge control of sealed nickel-cadmium batteries. Quarterly progress report No. 3, 15 Dec 1964-14 Mar 1965, 1674 (AD-466291)
Auxiliary electrode for charge control of sealed nickel-cadmium batteries. Quarterly progress report No. 4, 15 Mar-14 Jun 1965, 1679 (AD-469278)
Auxiliary electrode for charge control of sealed nickel-cadmium batteries. Quarterly progress report No. 5, 15 Jun-14 Sep 1965, 1692 (AD-475526)
Auxiliary electrode for charge control of sealed nickel-cadmium batteries. Quarterly progress report No. 1, 15 Jun-14 Sep 1964, 2800 (AD-456849)
Auxiliary electrode for charge control of sealed nickel-cadmium batteries. Quarterly progress report No. 2, 15 Sep-14 Dec 1964, 2801 (AD-458044)
Batteries for biotelemetry and other applications, 1477
Batteries used with law enforcement communications equipment: chargers and charging techniques, 3249 (PB-221475)
Battery and third electrode performance characteristics for varying charge and discharge rates (20 A-h, 24 cell, sealed battery), 2409
Battery cell with third electrode performance test results (20 A-h cell), 2410
Battery charge condition monitoring: techniques and applications, 4946 (CONF-740215-P2)
Cadmium--oxygen study on sealed Ni--Cd system, 2642
Cell rechargeability, 2565
Charge control devices. 3. Amp-Gate diode for charge control of sealed rechargeable cells, 4585
Charge control devices. 2. Charge control methods for Ni--Cd batteries, 4586
Charge control devices. 1. Third electrode charge control (VCB Black $O_2$-reduction control system), 4587
Charge control devices. 6. Auxiliary electrode instrumentation, 4591
Charge control devices. 4. Coulometric control of charging of Ni--Cd secondary batteries, 4595
Charge control for secondary batteries. Part 1 - Auxiliary electrode for charge control, 4653
Charge control for secondary batteries. Part 2 - Adhydrode in charge control, 4654
Charge control for secondary batteries. Part 3 - Stabistors, their application in battery operation, 4655
Charge control of nickel-cadmium batteries. Auxiliary electrodes for overcharge and overdischarge control, 4623
Charge control of nickel-cadmium batteries, 2573
Charging behavior of cadmium hydroxide electrodes at low temperatures, 4563
Charging characteristics of a sealed-type nickel-cadmium cell, 2422
Charging methods for nickel--cadmium batteries (Effects of pulsed and direct current charging on battery performance), 2320
Charging Ni-Cd and Pb-acid batteries from common generator, 2375
Chemical charging of nonlamellar cadmium electrode of an alkaline battery (Patent; soaking in Ni chloride, hydrazine as reducing agent), 2781 (AD-781983)
Coulometer control of battery charging, 4521
Coulometric charging control of sealed nickel-cadmium cells, 2803 (AD-462403)
Custom chargers and matched cells increase life of sealed batteries, 2160
DC to dc conversion for improved power sources. Research and development technical report (Charging process for Ni battery electrode), 2968 (AD-762181)
Design and test of the SAS-A power system. Technical memo, 395 (AD-716771)
Determination of state of charge of nickel--cadmium batteries (Reliability of measuring equipment), 4700
Development of a power module using third electrode battery charge control, 2295
Development of a power module using third electrode battery charge control (150 to 250 W, two 6-Ah batteries), 1265
Diode control research. Quarterly progress report No. 6, 1 September-1 December 1967 (Stabistor charge control), 1862 (AD-825660)
Diode control research. Quarterly technical progress report No. 7 (Stabistor-protected 12-Ah Ni-Cd and 25-Ah Ag-Zr batteries), 1867 (AD-832025)
Diode control research. Quarterly technical progress report No. 10, 1 September-1 December 1968 (Stabistor-controlled 12-Ah spacecraft battery), 1885 (AD-850093)
Direct electrochemical reduction of cadmium oxide in alkaline electrolyte, 4089
Dry-charging nickel-cadmium accumulator, 2180
Engineering evaluation of the zinc-mercuric oxide battery/nickel-cadmium battery hybrid system, 2310
Evaluation of auxiliary electrode materials, 4624
Fast charging of sealed nickel-cadmium batteries: theory and practice, 2243
Fast-rechargeable sealed nickel-cadmium battery cells combined with excess pressure and temperature controls (Patent), 4320
Heat generation in sealed batteries, 2520
Heat release in the operation of hermetic nickel--cadmium storage batteries (Heat absorbed during charging), 2219
Hermetically sealed nickel-cadmium batteries for the initial defense communication satellite program/augmentation (IDCSP/A), 1467
High capacity sealed nickel-cadmium batteries, 1554
Investigation of charging methods for nickel-cadmium batteries (Pulsed and direct currents, BB-616 batteries, -40 to 125°F, C/2 to 4C charge rates), 2285
Investigation of maintenance-free, high-rate, nickel-cadmium batteries for aircraft application. Quarterly progress report No. 5, 1 June-31 August 1967 (-40 to -10°F, polypropylene separator), 1861 (AD-822449)
Investigation of maintenance-free, high-rate, nickel-cadmium batteries for aircraft application. Quarterly technical progress report No. 2, 2989 (AD-805274)
Investigation of hermetically sealed maintenance-free, high-rate, nickel-cadmium batteries for aircraft applications. Quarterly technical progress report No. 4, 1676 (AD-468644)
Investigation of hermetically sealed, high-rate, maintenance-free, nickel-cadmium batteries for aircraft applications. Final technical report, Jul 1964-Jun 1966, 1712 (AD-489830)
Investigation of hermetically sealed maintenance-free, high-rate, nickel-cadmium batteries for aircraft applications. Quarterly technical progress report No. 2, 1731 (AD-611404)
Investigation of charging methods for nickel-cadmium batteries. Technical report (-20 to +100 F), 2014 (AD-A-016132)
Investigations leading to the development of the optimum method(s) for charging sealed nickel-cadmium batteries. Final report, 1 Oct 1962-30 Sep 1963 and addendum, 4 May-4 Oct 1964, 1653 (AD-456387)
Methods for charging batteries on aircraft, 2287
Microprocessor-controlled battery protection system, 3786
Nickel--cadmium batteries. 2. High-temperature effects on sealed Ni--Cd batteries (25, 46, 67°C: charging efficiency effects of Li cycling), 2556
Nickel--cadmium battery evaluation for Apollo telescope mount application, 2452
Nickel--cadmium cells for optimum overcharge capability, 2522
Nickel/cadmium aircraft batteries: float charge test equipment. Technical note, 3085 (AD-905408)
Nickel/cadmium aircraft batteries: thermal considerations, 2009 (AD-A-011995)
Optical study of the growth and oxidation of nickel hydroxide films, 2967 (AD-761281)
Optimum charge procedures for sealed nickel-cadmium batteries, 2603
Oxygen evolution during recharging of positive nickel oxide sinter electrodes, 2363
Parametric charge studies for aerospace nickel--cadmium batteries, 2486
Parametric charge studies for aerospace nickel-cadmium batteries, 2460
Peak programmed charge method, 2288
Personality of nickel-cadmium batteries, 2462

Pressure characteristics of sealed nickel-cadmium cells, 2580
Rapid charging batteries for electric propulsion systems (24-Ah Ni/Cd in 5 to 10 min, 190-Ah lead-acid in 20 to 30 min.), 2396
Rapid recharging of nickel-cadmium batteries (Tests up to 4000 C rate), 4420
Sealed nickel-cadmium batteries (Failure study), 1548
Shunt voltage regulator circuit for nickel-cadmium cells with auxiliary electrodes, 2878 (AD-631951)
Space-rated nickel/cadmium batteries and their charge control, 2059 (N-70-30138)
Temperature investigation of OV-10A battery and battery compartment. Report No. 1 (final), 20 May-30 Dec 1971, 1932 (AD-905610L)
Two kilowatt long life battery. Interim technical report, 15 May 1971-15 Sep 1972 (For satellites, solar cell charger), 541 (AD-906407L)
Why nickel-cadmium batteries fail, and how to revive them, 2145
BATTERY CHARGING/NICKEL-ZINC BATTERIES
Accumulator battery apparatus and method (Patent; prevents dendrite buildup by causing vibrations and turbulence in electrolyte), 3293
Apparatus and method for charging a zinc electrode (Patent; bubbling of air to prevent dendrite formation and slope change), 3650
Oxygen evolution during recharging of positive nickel oxide sinter electrodes, 2363
*Performance characteristics of nickel--zinc cells* (Study of charge-discharge cycles and battery seprators), 2492
Rechargeable electrochemical cells (Additive to suppress dendritic growth on Zn; patent), 2261
Secondary alkaline batteries (Patent; Zn anode, addition of polycationic polymers enables charging without Zn deposition), 1000
BATTERY CHARGING/ON-LINE CONTROL SYSTEMS
Microprocessor-controlled battery protection system, 3786
BATTERY CHARGING/OPTIMIZATION
Optimization of charging conditions of storage battery silver electrode and calculation of capacity loss during continuous use, 3805
BATTERY CHARGING/OXYGEN
Oxygen evolution during recharging of positive nickel oxide sinter electrodes, 2363
BATTERY CHARGING/PRIMARY BATTERIES
Don't toss that battery yet: dry cells are rechargeable, 2570
Feasibility of recharging FAA in-service dry cell batteries. Final report, 1734 (AD-620018)
Reactivating dry cell (Method useful for cells subjected to heavy discharge for brief time), 2700
Recharging of Leclanche dry cells, 2605
Recharging of Leclanche dry cells, 2608
Some problems associated with charging of dry batteries, 2656
BATTERY CHARGING/PULSE TECHNIQUES
Fast charging of sealed nickel-cadmium batteries: theory and practice, 2243
Investigations leading to the development of the optimum method(s) for charging sealed nickel-cadmium batteries. Final report, 1 Oct 1962-30 Sep 1963 and addendum, 4 May-4 Oct 1964, 1653 (AD-456387)
BATTERY CHARGING/RECOMMENDATIONS
Five sound tips for stretching battery life, 2709
Guide to choice and use of battery charging methods, 2568
Industrial truck battery charging, 4802
Storage battery charging and full-floating operation, 2768
Storage battery charging and full-floating operation, 2767
Storage battery: its part in engine tune-up, 2758
BATTERY CHARGING/SILVER-CADMIUM BATTERIES
Anodic polarization of sintered silver electrode in alkaline solution: efficiency of charging, 2586
Automatic battery charging system, 4629
Charge control devices. 5. Charge control of Ag--Cd cells and Ag--Zn cells, 4594
Charge of the cadmium electrode of a current source having an alkaline electrolyte (Recommended current density, temperature, additives), 2235
Charging behavior of cadmium hydroxide electrodes at low temperatures, 4563
Charging silver oxide electrode with periodically varying current, 2589
Charging silver oxide electrode with periodically varying current. II, 2549
Charging silver oxide electrode with periodically varying current. IV, 2505
Charging silver oxide electrode with periodically varying current. III, 4500
Constant-potential and constant-current charging of silver-cadmium cells, 1681 (AD-469933)
Constant-potential and constant-current charging of silver-cadmium cells, 2542
Crystallographic changes during oxidation (charging) of the silver electrode. Part I. Initial oxidation of an industrial sintered plaque, 2903 (AD-671050)
Crystallographic changes during oxidation (charging) of the silver electrode. Part II. Oxidation following five charge-discharge cycles at a low rate, 2909 (AD-671771)
Diode control research. Quarterly progress report No. 6, 1 September-1 December 1967 (Stabistor charge control), 1862 (AD-825660)
Effect of the charge time on the life of a silver battery electrode, 4433
Heat generation in sealed batteries, 2520
Intrinsic charging rate capability of the cadmium anode (Cd/AgCl cells in Cd chloride solution capable of fast charging), 2476
Maintenance-free silver-cadmium batteries for aircraft emergency applications. Quarterly technical progress report No. 6, 1 September-30 November 1966, 1851 (AD-805540)
Method of using a sealed storage battery, 1828 (AD-770721)
Microstructure of sintered silver electrodes. IV. Formation of AgO during charges (KOH electrolyte), 2938 (AD-728894)
Optimization of charging conditions of storage battery silver electrode and calculation of capacity loss during continuous use, 3805
Reduction of the capacity of silver electrodes operating in forced discharge systems, 4438
BATTERY CHARGING/SILVER-ZINC BATTERIES
Accumulator battery apparatus and method (Patent; prevents dendrite buildup by causing vibrations and turbulence in electrolyte), 3293
Anodic polarization of sintered silver electrode in alkaline solution: efficiency of charging, 2586
Apparatus and method for charging a zinc electrode (Patent; bubbling of air to prevent dendrite formation and slope change), 3650
Changing the discharge capacity of a silver oxide electrode by charging with periodically interrupted current, 2889 (AD-644616)
Charge control devices. 5. Charge control of Ag--Cd cells and Ag--Zn cells, 4594
Charging silver oxide electrode with periodically varying current, 2589
Charging silver oxide electrode with periodically varying current. II, 2549
Charging silver oxide electrode with periodically varying current. IV, 2505
Charging silver oxide electrode with periodically varying current. III, 4500
Charging the silver-zinc secondary battery system. Part I. Formation characteristics, 1767 (AD-691710)
Crystallographic changes during oxidation (charging) of the silver electrode. Part I. Initial oxidation of an industrial sintered plaque, 2903 (AD-671050)
Crystallographic changes during oxidation (charging) of the silver electrode. Part II. Oxidation following five charge-discharge cycles at a low rate, 2909 (AD-671771)
Diode control research. Quarterly progress report No. 6, 1 September-1 December 1967 (Stabistor charge control), 1862 (AD-825660)
Diode control research. Quarterly technical progress report No. 7 (Stabistor-protected 12-Ah Ni-Cd and 25-Ah Ag-Zr batteries), 1867 (AD-832025)
*Effect of the design parameters on the capacitive* characteristics of the silver zinc storage batteries when charged by asymmetrical alternating current, 2439
Effect of the charge time on the life of a silver battery electrode, 4433
Effect of the charge time on the life of a silver battery electrode, 4433
Effect of the design parameters on the capacitive characteristics of the silver-zinc storage batteries when charged by asymmetrical alternating current, 2441
Effects of constant-current reversals during charge of the silver oxide electrode, 1758 (AD-670733)
Evaluation of high-rate charging of DSRV batteries. Final report (KOH electrolyte), 1953 (AD-910187L)
Fluctuation of the voltage of batteries during charging with an asymmetrical alternating current, 1620 (AD-756557)
Heat generation in sealed batteries, 2520
Improvement of certain operational characteristics of silver--zinc storage batteries (By charging with asymmetrical ac), 1812 (AD-742887)
Increasing the discharge capacity of a silver oxide electrode by charging with 60-cycle asymmetric ac, 1756 (AD-663551)
Influence of circuit element parameters on capacitance characteristics of silver--zinc storage batteries during charging with asymetric alternating current, 1821 (AD-756955)
Microstructure of sintered silver electrodes. IV. Formation of AgO during charges (KOH electrolyte), 2938 (AD-728894)
*Optimization of charging conditions of storage* battery silver electrode and calculation of capacity loss during continuous use, 3805
Reduction of the capacity of silver electrodes operating in forced discharge systems, 4438
Secondary alkaline batteries (Patent; Zn anode, addition of polycationic polymers enables charging without Zn deposition), 1000
Theoretical evaluation of hot spot temperature of silver-zinc batteries, 2521
BATTERY CHARGING/SODIUM-SULFUR BATTERIES
Model for degradation of ceramic electrolytes in Na-S batteries, 3767

Process for recharging secondary batteries (Vapor transport of S during recharging improved by maintaining temperature gradient in cathodic reaction zone; patent), 2164
BATTERY CHARGING/SOLAR ENERGY
Another chance for electrics, 5117
BATTERY CHARGING/STANDARDS
New SAE standards for battery charge acceptance (55 and 65 Ah), 2619
BATTERY CHARGING/VARIATIONS
Charging silver oxide electrode with periodically varying current. IV, 2505
Charging silver oxide electrode with periodically varying current. III, 4500
BATTERY CHARGING/ZINC-AIR BATTERIES
Accumulator battery apparatus and method (Patent; prevents dendrite buildup by causing vibrations and turbulence in electrolyte), 3293
Charge-discharge behavior of the C.G.E. circulating zinc-air vehicle battery, 5046
BATTERY CHARGING/ZINC-CHLORINE BATTERIES
System for improving charge efficiency of a zinc-chloride battery (Patent; system to improve charging efficiency by reducing chlorine concentration in flowing electrolyte), 815
BATTERY CHARGING/ZINC-MANGANESE BATTERIES
Reversibility on charge and discharge of manganese dioxide electrode in alkaline electrolyte, 2445
BATTERY PASTE/RADIOMETRIC GAGES
Manufacture. Radiation gage regulates paste dispensing, 4717
BATTERY SEPARATORS
Phenolic resin and battery separator impregnated therewith (Patent), 4576
BATTERY SEPARATORS/CHEMICAL COMPOSITION
Separator for an alkaline storage battery (Patent), 3586
Sodium borate--sodium halide glass (Patent), 3620
BATTERY SEPARATORS/CHEMICAL PREPARATION
Battery separator (Patent), 3297
Hydrophilic microporous film (Patent), 3864
Ionene membrane separator (Patent; N, N, N¹, N¹-tetramethylhexaonediamine-1,6-dibromohexene copolymers with PVA), 4311
Modified regenerated cellulose separator films, 4113
New type of inorganic separator for alkaline silver batteries, 3831
Phenolic resin and battery separator impregnated with it (Patent), 3563
Separator for electric storage battery (Patent; coated phenol--aldehyde resin-impregnated cellulose paper), 3688
Separator for alkaline cells (Patent; preparation), 3935
Separator films made from low-substituted carboxymethylcellulose, 4114
Separator for an alkaline battery (Patent), 3564
Silver batteries. 3. Electrodeposited inorganic separator for Ag--Cd batteries (Films of $Ca(OH)_2$ or $Mg(OH)_2$), 4589
Sintered alumina with good ion permeability properties (Patent), 4189
Wettable battery separator and process therefor (Patent), 3936
Wood for storage battery separators, 4815
BATTERY SEPARATORS/CHEMICAL PROPERTIES
Electrochemical properties of sodium beta-alumina in $ZnCl_2$-NaCl melts (Unsuitability of β-alumina in applications involving ions other than $Na^+$), 3411
BATTERY SEPARATORS/CHEMICAL REACTIONS
Characterization of cellophane as an ionic barrier, 2791 (AD-437997)
Development of the sealed zinc-silver oxide secondary battery system. Quarterly progress report No. 4, 1 Apr-30 Jun 1964, 266 (AD-453792)
Phase equilibrium diagram of the system $Na_2S_4$--S, 3874
BATTERY SEPARATORS/COMPARATIVE EVALUATIONS
Evaluation program for secondary spacecraft cells: initial evaluation tests of Eagle-Picher Industries, Incorporated 6.0 ampere-hour, nickel-cadmium spacecraft cells for separator material evaluation, 2085 (N-75-17789)
BATTERY SEPARATORS/DESIGN
Battery separator (Patent), 3352
Electrode-separator combination for use in batteries (Patent), 4315
Lead storage battery (Patent; acid- and oxidation-resistant separator with improved performance), 3957
Separator for controlling alkali metal ion flow in an electrode-active material or electrolyte (Patent), 4166
Separator for electric batteries (Patent), 4711
Separators for alkaline batteries (Patent; 180 cycles, mid-life voltage = 1.55 V), 3966
Separators for alkaline batteries (Patent; natural or synthetic cellulosic materials, styrene, nylon, glass fiber, Teflon, etc.), 3384
Sodium borate glass compositions for reversible batteries (Patent), 3601
Structure and function of an inorganic--organic separator for electrochemical cells, 3243 (NASA-TM-X-3080)
BATTERY SEPARATORS/ELECTRIC CONDUCTIVITY
Factors influence flexibility, resistivity, and zinc dendrite penetration rate of inorganic separators for alkaline batteries, 3224 (N-75-17807)
Hydrophilic microporous film (Patent), 3864
BATTERY SEPARATORS/ELECTROCHEMISTRY
Factors influencing flexibility, resistivity, zinc dendrite penetration rate of inorganic separators for alkaline batteries, 3244 (NASA-TM-X-3199)
BATTERY SEPARATORS/FABRICATION
Acid-resistant glass fiber for tubular separators, 4409
Active energy storage materials for integrated cell stacks. Technical report, 1 Jul 1970-15 Jan 1971 (Li and Ca aluminates, Ca zirconate), 2934 (AD-720600)
Active energy storage materials for integrated cell stacks. Final report, 1 Jul 1970-30 Jun 1971 (Molten Li, fused LiCl--KCL eutectic), 2937 (AD-728839)
Alkaline battery separator (Patent), 3910
Alkaline battery (Patent), 3890
Battery and battery separator (Patent; organic compounds) 3941
Battery separators made from polymeric fibers (Patent), 4007
Battery separators (Patent; $BaSO_4$ or diatomaceous earth), 3658
Battery separator (Patent), 3990
Battery separator construction (Patent; K titanate paper or nylon), 3743
Battery separator (Patent), 3994
Battery separator (Patent; fibers of a hydrophobic organic polymer containing a tenside), 3991
Battery separator manufacturing process (Patent; improved retention of wetting agent), 3685
Battery separator manufacturing process (Patent), 3856
Battery separator embodying ribs applied from composition of plastisol and aqueous phenolic resin (Patent), 4581
Battery separator for alkaline storage batteries (Patent) 4329
Battery separators made from porous sintered polymer materials (Patent), 4308
Battery separator (Patent), 4251
Electrochemical cell electrode separator and method of making it and fuel cell containing same (Patent; asbestos, teflon, ethylene-propylene copolymer), 3324
Fabrication and test of inorganic/organic separators. Final report, Nov 1972-Jan 1974, 3220 (N-74-26511)
Flexible, porous battery separator (Patent), 4317
Flexible matrix and battery separator embodying it (Patent; asbestos mat impregnated with poly(phenylene oxide)), 4318
Forming and placing tubular battery separators (Patent; machine for manufacture), 3559
Heat resistant substrates and a battery separator made therefrom (Patent), 4183
Inorganic separators, 2907 (AD-671685)
Interelectrode separator for electrochemical cell (Patent), 3494
Manufacturing methods for high performance grafted-polyethylene battery separators. Final report, 1 Dec 1970-30 Jan 1972, 2956 (AD-745571)
Manufacturing methods for high performance polyethylene battery separators. Interim engineering progress report No. 4, 1 September 1970-31 January 1971, 3064 (AD-881187)
Manufacturing methods for high-performance polyethylene battery separators. Interim engineering report No. 5, 1 February-31 May 1971, 3070 (AD-884722)
Metal oxide fabrics (Patent; continuation of US Patent 3, 385,915; for use as fuel cell or battery separators), 4237
Method of making separators for alkaline batteries (Patent), 3555
Microporous separator for battery (Patent), 3919
Microporous ceramic separator for batteries (Patent), 4162
Nonwoven mat battery separators (Patent), 3517
Oxygen (air) waterproofed gas-diffusion electrodes for electrochemical power sources operating with liquid fuels or solid fuels dispersed in an electrolyte, 4099
Papers or unwoven cloths for alkaline cell separators (Patent), 3699
Permselective battery separator membranes (Ethylene-potassium acrylate-styrene graft copolymer, irradiation grafting), 4216
Polypropylene separators for batteries (Patent), 3664
Resin sheet or strip with porous coating, useful as electrode separator (Patent; fabrication procedures), 4153
Resin sheet having porous layered structure useful as electrode separator for electric cells (Patent, olefin resin with finely divided inorganic substace and surfactant), 3406
Sealed zinc--silver oxide batteries. III (Fabrication and testing of separators), 4631
Separator for silver--zinc electric button-type cell, 3746
Separator for a dry-charge lead storage battery (Patent), 4325
Separators for storage batteries (Patent; discontinuous ribs of thermoplastic resins on flexible sheets of synthetic resin), 3692
Separators for lead storage batteries (Patent), 3603
Separators for alkaline batteries (Patent), 3561
Separators for electrochemical cells (Patent), 4338
Sintered PVC separator for batteries (Patent), 3981
Sintering of β-aluminium oxide, 4079

Sodium or potassium ion-permeable separator (Patent), 3757
Wire belts speed production of glass battery separators, 4671
BATTERY SEPARATORS/FAILURES
Electrophoretic mobilities of cadmium hydroxide, nickel hydroxide, and silver oxide in NiCd and Ag--Zn battery electrolytes. Interim report, 2980 (AD-783853)
Structure and function of an inorganic--organic separator for electrochemical cells, 3243 (NASA-TM-X-3080)
BATTERY SEPARATORS/FLEXIBILITY
Factors influence flexibility, resistivity, and zinc dendrite penetration rate of inorganic separators for alkaline batteries, 3224 (N-75-17807)
BATTERY SEPARATORS/ION EXCHANGE MATERIALS
Use of ion exchange membranes as separators in batteries, 4582
BATTERY SEPARATORS/IONIC CONDUCTIVITY
Ionic conduction in beta-alumina. Interim technical report No. 6, 8 Feb-8 Aug 1969, 2926 (AD-702938)
BATTERY SEPARATORS/MASS TRANSFER
Battery separator mechanisms: literature survey report, 2884 (AD-642779)
Silver migration and transport mechanism studies in silver oxide-zinc batteries. Final report, 2858 (AD-610563)
BATTERY SEPARATORS/MATERIALS
Applied research investigation of sealed silver-zinc batteries, 2805 (AD-463102)
Battery separator materials, 4371
Ceramic separators for a high temperature lithium battery ($CaZrO_3$ was best), 4232
Current trends in battery separators, 3846
In-house battery separator investigation (Method for screening possible separator materials; Aeronautical Systems Div., Wright-Patterson AFB), 2787 (AD-430044)
Ion exchange membranes in electrochemical cells, 3490
Ion-specific permeable membranes. Quarterly status report No. 1, 1 on Project Agile, 1 Mar-31 May 1965, 2814 (AD-468770)
Laboratory investigation and engineering design leading towards the development of a lightweight secondary or primary cell type battery for one-shot application. Quarterly report No. 10, 279 (AD-471950)
Organic electrolyte permselective membranes. Report No. 4 (final), 1 April 1968-15 September 1970, 3067 (AD-882890)
Separator materials for the lithium-chlorine battery, 2921 (AD-686285)
Stable inorganic matrix materials for high temperature batteries. Final report No. 1, 2 June 1967-2 February 1968, 2913 (AD-676106)
Study of a membrane venting system for the USAF type K-1 battery. Quarterly progress report No. 9, 15 Jul-1 Nov 1956, 3002 (AD-814601)
Timbers for battery separators (Test results), 4768
BATTERY SEPARATORS/MATERIALS WORKING
Battery separator sheet (Patent), 3489
BATTERY SEPARATORS/MICROSTRUCTURE
Microstructure of storage battery separators (Comparison of wooden and newer separators), 4707
BATTERY SEPARATORS/PERFORMANCE
Capillary properties of separator fabrics and performance of the fabrics in sealed storage batteries, 4402
Evaluation of improved separator material in large silver--zinc cells for use in submersible vehicles. Final report, 1 Aug 1972--31 Jan 1974, 2973 (AD-774674)
Long life zinc silver-oxide cells (Improved Zn electrode structures and inorganic separators), 2283
Separators for alkaline batteries, 4675
BATTERY SEPARATORS/PERFORMANCE TESTING
Evaluation of 'Daramic' polyethylene separators using Gould type TPX-61-E, Guppy I, lead--antimony submarine main storage battery cells on a service life test. Technical report, 3076 (AD-900702L)
Fabrication and test of inorganic/organic separators. Final report, Nov 1972-Jan 1974, 3220 (N-74-26511)
Long life, rechargeable nickel-zinc battery. Final report, 3222 (N-74-34539)
Performance with stable separators, 4528
Sealed zinc--silver oxide batteries. III (Fabrication and testing of separators), 4631
Selection of separator materials, 2908 (AD-671685)
BATTERY SEPARATORS/PHYSICAL PROPERTIES
Microstructure of storage battery separators (Comparison of wooden and newer separators), 4707
BATTERY SEPARATORS/POROSITY
Electrochemical determination of the rate of zincate diffusion through a hydrate-cellulose separator, 4297
BATTERY SEPARATORS/PRODUCTION
Atomic instrumentation at Delco-Remy battery plant ($^{90}Sr$ thickness gage), 4739
BATTERY SEPARATORS/REVIEWS
Development of separators for heavy-duty batteries, 3774
BATTERY SEPARATORS/STABILITY
Note on the stability of impregnated paper separators, 3771
BATTERY SEPARATORS/STERILIZATION
Application of bench tests in the development of heat-sterilizable battery separators (Polybenzimidazoles, ethylene-acrylic acid copolymer, zirconium oxide and binder on polypropylene mesh, 2-vinylpyridine-methylmethacrylate copolymer, polyethylene, cellophane, teflon), 4471
BATTERY SEPARATORS/TESTING
Active energy storage materials for integrated cell stacks. Technical report, 1 Jul 1970-15 Jan 1971 (Li and Ca aluminates, Ca zirconate), 2934 (AD-720600)
Application of bench tests in the development of heat-sterilizable battery separators (Polybenzimidazoles, ethylene-acrylic acid copolymer, zirconium oxide and binder on polypropylene mesh, 2-vinylpyridine-methylmethacrylate copolymer, polyethylene, cellophane, teflon), 4471
Heat sterilizable battery, 1489
Long-life, high energy Ni-Cd aerospace cells, 4266
Studies on sealed nickel--cadmium batteries, 4701
BATTERY SEPARATORS/THICKNESS
Atomic instrumentation at Delco-Remy battery plant ($^{90}Sr$ thickness gage), 4739
BERYLLIUM FLUORIDES/DIFFUSION
Electrochemical studies of mass transport in high temperature electrolytes (Molten $BeF_2$-LiF mixtures), 3342
BERYLLIUM OXIDES/ELECTRICAL PROPERTIES
High-temperature insulation, 4386
BETA BACKSCATTERING GAGES
See RADIOMETRIC GAGES
BIBLIOGRAPHIES
Bibliography of bibliographies in the DDC collection. Volume II. Report bibliography, Nov 1967-Nov 1971, 422 (AD-752160)
BIBLIOGRAPHIES/BATTERY CHARGERS
Secondary battery charge control: an annotated bibliography. Literature search, 1962-1964 (198 references), 2834 (AD-479784)

C

CADMIUM/ELECTROCHEMISTRY
Electro-chemical properties of cadmium in alkaline solutions, 2664 (AD-682564)
CADMIUM/ELECTRON MICROPROBE ANALYSIS
Electron microbeam probe analyses of nickel-cadmium battery plates, 4564
CADMIUM/FABRICATION
Porous cadmium metal for alkaline storage batteries (Patent; Cd powder + urea heated and washed), 3606
CADMIUM/PASSIVATION
Anodic passivation by ''CdO'' studied by ESR (Aqueous KoH), 3570
CADMIUM/REVIEWS
Cadmium: a materials survey, 2917 (AD-680443)
CADMIUM ALLOYS/TENSILE PROPERTIES
Lead alloy for producing attention-free lead--acid batteries, 3581
Study of lead-rich Pb-Cd-Sb alloys (Pb-3.0Cd-2.5Sb), 4263
CADMIUM ALLOYS/YIELD STRENGTH
Lead alloy for producing attention-free lead--acid batteries, 3581
CADMIUM FLUORIDES/SOLUBILITY
Composition of nonaqueous solutions of potential use in high energy density batteries. Final report, 15 Nov 1969-14 Nov 1972 (Solubility equilibria of $CuF_2$, $NiF_2$, $ZnF_2$, $CdF_2$, $AgF_2$), 432 (AD-763140)
CADMIUM IODIDES/ELECTRICAL PROPERTIES
Basic research on ceramic materials for energy storage and conversion systems. Progress report, December 1, 1975-November 30, 1976. 3182 (COO-2564-2)
CADMIUM-AIR BATTERIES/ANODES
Formation of porous metal plates by electrolytic reduction, 4680
Forming rechargeable electrodes utilizing an unsintered fluorocarbon binder (Patent; fabrication), 4309
High-rate battery electrodes (Performance of plates produced by electrolytic reduction), 4550
Method of producing electrodes (Patent), 3400
Producing porous metal structures for battery electrodes (Patent; Zn, Cd), 4254
CADMIUM-AIR BATTERIES/CATHODES
Dispersed-catalyst electrodes for fuel cells and batteries, 4481
Effect of the inert component on mass transfer in the gas phase of a porous electrode. II. Oxygen electrode (C hydrophobized electrode), 3819
Influence of certain additives to activated carbon on its properties as hydrogen electrode material, 4644
Metal/air cells and air cathodes for use therein (Patent) 3477
Oxygen electrode. I (Isotopic investigation of electrode mechanisms), 4731
CADMIUM-AIR BATTERIES/DESIGN
Rechargeable metal-air cell. Quarterly report No. 1, 1 May-31 July 1967, 475 (AD-824467)
Rechargeable metal-air cell. Quarterly report No. 2, 1 August-31 October 1967, 480 (AD-828589)
Secondary cadmium-air cells (40 to 45 Wh/lb), 512 (AD-850292)
Secondary cadmium-air cells (300 cycles, 50 Wh/lb), 1444
CADMIUM-AIR BATTERIES/PERFORMANCE
Secondary cadmium-air cells (300 cycles, 50 Wh/lb), 1444
CADMIUM-AIR BATTERIES/REVIEWS
Characteristics of metal-air systems (67 references; 10 different anodes described), 1366
CADMIUM-AIR BATTERIES/TESTING
Rechargeable metal-air cell. Quarterly report No. 3, 1 November 1967-31 January 1968, 491 (AD-839644)
CALCIUM/CHEMICAL ANALYSIS
Methods for chemical analysis of thermal battery components, 3189 (GEPP-299)
CALCIUM ALLOYS/CORROSION
Corrosion of lead alloys at high anodic potentials, 3434
CALCIUM ALLOYS/MECHANICAL PROPERTIES
Maintenance-free batteries: the lead-calcium-tin approach, 3178 (CONF-7610115-)
CALCIUM ALLOYS/METALLOGRAPHY
Corrosion of lead alloys at high anodic potentials, 3434
CALCIUM ALLOYS/OXIDATION
Corrosion of lead alloys at high anodic potentials, 3434
CALCIUM COMPOUNDS/CHEMICAL PREPARATION
Synthesis of calcium chromate (For thermal batteries), 81 (GEPP-226)
CALCIUM COMPOUNDS/PHASE DIAGRAMS
Phase diagram of system LiCl-KCl-$CaCrO_4$, 4447
CALCIUM COMPOUNDS/SURFACE PROPERTIES
Surface analysis of pyrotechnic material, 3190 (GEPP-324)
CALORIMETERS/DESIGN
Design and development of a continuous flow calorimeter and measurements of the thermal characteristics of nickel-cadmium batteries, 2544
CANADA/ENERGY POLICY
Electrochemical storage and disposition of energy, 66 (AD-919015)
CAPACITORS/SEALS
Method for testing seals of electrical energy storage devices (Patent; effects of pressurization by O on potential), 3282
CARBON DIOXIDE/REMOVAL
Removal of carbon dioxide from air required for fuel cells (Patent), 3863
CARBONATES/QUANTITATIVE CHEMICAL ANALYSIS
Determination of carbonate impurities in nickel hydroxide, 4069
CARBONIC ACID ESTERS/ELECTROCHEMISTRY
Advances in electrochemistry and electrochemical engineering. Volume 8. Electrochemical engineering (Book), 2430
CARDIAC PACEMAKERS/BIOCHEMICAL FUEL CELLS
Some studies related to electricity generation from biological fuel cells and galvanic cells, in vitro and in vivo, 5124
CARDIAC PACEMAKERS/DESIGN
Cardiac pacemaker (Patent; electric-battery powered), 5057
CARDIAC PACEMAKERS/ELECTRIC BATTERIES
Some studies related to electricity generation from biological fuel cells and galvanic cells, in vitro and in vivo, 5124
CARDIAC PACEMAKERS/POWER SUPPLIES
Batteries kick off new markets-1. Dry batteries with high energy density, minimal self-discharge promise solid demand from ME, 2167
CARDIAC PACEMAKERS/SEALS
Technological progress in pacemaker design: hermetic sealing, 2240
CARDIAC PACEMAKERS/ZINC-AIR BATTERIES
Selection of a power supply for electric heart stimulators and study of the characteristics of the ''Krona VTs'' battery, 2186
CATALYSTS/RESEARCH PROGRAMS
Basic and applied research in materials. Annual technical report, 1 Jun 1975-30 Jun 1976 (Materials Research Center, Northwestern Univ.), 3138 (AD-A-034074)
CATHODES/ALCOHOL FUEL CELLS
Gas diffusion electrode for a battery (Patent), 3382
CATHODES/CADMIUM-AIR BATTERIES
Dispersed-catalyst electrodes for fuel cells and batteries, 4481
Effect of the inert component on mass transfer in the gas phase of a porous electrode. II. Oxygen electrode (C hydrophobized electrode), 3819
Influence of certain additives to activated carbon on its properties as hydrogen electrode material, 4644
Metal/air cells and air cathodes for use therein (Patent) 3477
Oxygen electrode. I (Isotopic investigation of

electrode mechanisms), 4731
CATHODES/CHEMICAL ANALYSIS
Methods for chemical analysis of thermal battery components, 3189 (GEPP-299)
CATHODES/ELECTRIC BATTERIES
Activation of nickel battery plates (Patent; electrolytic process), 3871
Activation of nickel battery plates (Patent; electrolytic process), 3557
Active carbon-paraffin electrode (Patent; fabrication), 4342
Active material electrode and cell comprising improved battery-grade divalent silver oxide (Patent; additive of Hg, Se, Te, or Hg combined with Pb or Sn), 4243
Additive for an alkaline battery using divalent silver oxide positive active material (Patent), 3865
Alkaline manganese battery (Patent), 3614
Analytical studies of the energy storage process at porous carbon electrodes in molten salt electrolytes. Final technical report, 8 March 1968-7 March 1969 (LiCl-KCl electrolyte), 1893 (AD-853881)
Cathode for a silver battery (Patent), 3628
Cathode material for use in nonaqueous electrolytes (Patent; fluorinated graphite), 3569
Cathode mix for alkaline cell (Patent), 3971
Cathodes for alkaline batteries (Patent), 3926
Cathodes for multilayer batteries (Patent; fabrication, $MnO_2$ + C with teflon binder), 3644
Cathodic discharge controlled by dissolution kinetics (Model of inner structure of porous cathode), 2952 (AD-743769)
Cathodic discharge controlled by dissolution kinetics (Analytical model), 4302
Characteristics in charged or discharged condition of pressed-type nickel positive electrodes made by using polystyrene as a binder (Comparison with polyethylene), 4053
Chemistry of $TiS_3$ and $NbSe_3$ cathodes (Nonaqueous Li batteries), 3407
Computer-aided determination of physical parameters of porous electrode materials by porosity measurements (O-diffusion electrodes based on C), 3775
Electrochemical application of amalgamated-nickel bodies, 4196
Evaluation of organic battery electrodes: voltammetric study of the redox behavior of solid quinones, 4231
Forming process in nickel positive electrodes, 4622
Galvanic cells containing cathodes of iron-doped beta-alumina, 1231
High-energy system (organic electrolyte). Quarterly report No. 1, 15 June-15 September 1965, 334 (AD-628961)
High-energy system (organic electrolyte). Quarterly report No. 1, 15 June-15 September 1966 (Screening program to study electrochemical behavior of organic and inorganic cathodes in nonaqueous electrolytes), 2887 (AD-643935)
High-rate oxidation of silver electrodes in chloride solutions, 4444
High rate oxidation of silver electrodes in chloride solutions, 4446
Increasing the energy storage capacity of an electrode of amorphous carbon (Patent), 3898
Influences of foreign metal ions on the performances of nickel positive electrodes, 4278
Investigation on various cathodic materials in copper solid-state power sources (Copper solid electrolyte reversible cells), 3416
Lead chloride electrode (Patent; $PbCl_2$ + graphite with formaldehyde-urea polymer binder and metal grid), 3562
Lead/lead chloride electrode (Patent; preparation), 3530
Lithium battery development. Annual report No. 3, 1 April 1970-31 March 1971, 2935 (AD-726607)
Microstructure of sintered silver electrodes. IV. Formation of AgO during charges (KOH electrolyte), 2938 (AD-728894)
Molybdenum trioxide, a new electrode material for nonaqueous secondary battery applications (Chemical behavior in $LiAlCl_4$-butyrolactone), 4358
New rechargeable mercury/mercury oxide electrode, 4272
Nickel cathode for alkaline batteries (Patent), 3705
Nickel cathodes for alkaline cells (Patent; fabrication), 3708
Nickel cathodes for alkaline batteries (Patent), 3598
Nickel electrodes for alkali batteries (Patent; preparation), 3902
Nickel electrodes for alkaline batteries (Patent), 3704
Nickel electrode for an alkaline battery (Patent; fabrication), 4327
Nickel hydroxide electrode (Chemical preparation;patent), 3680
Nickel hydroxide cathodes for storage batteries (Patent; fabrication), 3755
Nickel hydroxide cathodes for storage batteries (Patent; fabrication), 3756
Optimization of charging conditions of storage battery silver electrode and calculation of capacity loss during continuous use, 3805
Organic cathodes with air regeneration (Quinones mixed with graphitized C), 4280
Oxides on the silver electrode. Part 2. X-ray diffraction studies of the working silver electrode. Final report, 2862 (AD-614058)
Porous nickel plates for electrodes (Method for fabrication), 3965
Porous nickel for alkaline battery and fuel cell electrodes: production by roll-compaction (Roll-compaction of carbonyl nickel powders), 4506
Positive electrode for a battery (Patent; Mn-containing mineral, carbon black, and polyethylsiloxane-impregnated C), 3855
Positive electrode for chemical power source (Patent), 4820 (AD-772421)
Protective coatings on positive nickel electrodes (Patent), 4170
Quinones as rechargeable and regenerable battery cathode and materials, 4368
Quinones as redox systems for oxygen cathodes or secondary cell cathodes, 4296
Rechargeable electrochemical cell (Patent; La/sub 1-y/R/sub y/Ni/sub 5-z/M/sub z/H/sub x, where R is a rare earth, Ca, or Th and M is Co, Cu, or Fe), 3333
Relations of the structural characteristics of the powder metallurgical nickel oxide electrode, 4063
Role of metallic oxides in processes at electric battery electrodes, 4642
Sealed type alkaline storage battery (Patent; improved Ni hydroxide cathode containing $Ba(OH)_2$), 3565
Selected articles (Effects of ultrasonics), 4689 (AD-655021)
Some new synthetic approaches to graphite-fluorine chemistry (Potential use of poly(carbon monofluoride)), 4062
Stable nickel oxyhydroxide (NiOOH) (Patent; chemical preparation), 3499
Study of fluid-gas electrodes (Cathode evolution of $H_2$ in glass capillary on Ni film), 4505
Use of hydrogen-absorbing electrode in alkaline battery (For protection against electrochemical damage due to battery reversal; patent), 3386
CATHODES/ELECTROCHEMICAL CELLS
Hydrogen permeation studies (Suitability of V in lithium hydride cell), 4607
CATHODES/ELECTROLYTIC CELLS
Protective coatings on positive nickel electrodes (Patent), 4170
CATHODES/FUEL CELLS
Active carbons for use in fuel cell air electrodes or metal-air systems, 4222
Carbon-air electrode for metal-air batteries and fuel cells (Ag impregnated activated carbon on nickel plated iron screen), 4223
Carbon oxygen electrode in electrochemical current sources and transducers, 3812
Cathode for the reduction of oxygen and a rechargeable cell comprising said cathode (Patent), 3684
Cathodes for metal-air-type fuel cells (Patent), 4041
Chemoelectric energy conversion for nonaqueous batteries and fuel cells, 507 (AD-847137)
Electrode structures for metal/oxygen batteries and fuel cells (Patent), 4241
Electrodes including mixed transition metal oxides (Patent), 3539
Experimental approach to reversible oxygen electrode, 4648
Fuel cell electrode (Patent), 4028
Investigation of active carbon for use in fuel cell air electrode or metal-air systems, 4206
Low-cost oxygen electrodes. Research and development technical report, 2932 (AD-715707)
Method of manufacturing fuel cell electrodes (Patent; silver oxide and activated carbon catalyst), 3475
Novel air electrode (For use in free liquid electrolyte or matrix-electrolyte cells), 4551
Oxygen electrode material (Patent), 4019
Oxygen electrode. I (Isotopic investigation of electrode mechanisms), 4731
Positive electrode for chemical power source (Patent), 4820 (AD-772421)
Properties, construction, and technical applications of oxygen-diffusion electrodes, 4545
Protective coatings on positive nickel electrodes (Patent), 4170
Raney metal sheet material for use as electrodes (Patent; Ag, Ni, Pt, Fe, Co, preparation of sheets), 4260
Reduction of oxtgen on nickel-cobalt oxides. II. Correlation between crystal structure and activity of $Co_2NiO_4$ and related oxides, 4141
Reduction of oxygen on nickel-cobalt oxides. I. The influence of composition and preparation method on the activity of nickel-cobalt oxides, 4142
CATHODES/HYDRAZINE FUEL CELLS
Fuel cells, 4131
CATHODES/HYDROCARBON FUEL CELLS
Gas diffusion electrode for a battery (Patent), 3382
CATHODES/HYDROGEN FUEL CELLS
Gas diffusion electrode for a battery (Patent), 3382
Metal/air cells and improved air electrodes for use therein (Patent), 3394
Method to produce a protective oxide on the surface of positive nickel electrodes for galvanic cells (Patent), 3428
CATHODES/IRON-AIR BATTERIES
Air-metal cell systems, 1434
Influence of certain additives to activated carbon on its properties as hydrogen electrode material, 4644

Metal/air cells and air cathodes for use therein (Patent), 3477
Metal/air cells and improved air electrodes for use therein (Patent), 3394
Oxygen electrode. I (Isotopic investigation of electrode mechanisms), 4731
CATHODES/IRON-NICKEL BATTERIES
Activation of nickel battery plates (Patent; electrolytic process), 3871
Activation of nickel battery plates (Patent; electrolytic process), 3557
Active mass of the nickel oxide electrode for an alkaline storage battery (Patent; preparation), 4354
Active substance for the nickel oxide electrode of an alkaline storage battery (Patent; preparation of active material), 4355
Analysis of charge-discharge characteristics of nickel oxide electrodes by infrared spectroscopy, 4606
Applications of nickel. Annual report (Ni production and consumption; possibility for substitutions in event of shortage), 3037 (AD-846999)
Battery electrode support (Patent), 3589
Battery electrode supports (Patent), 3590
Behavior of nickel oxide electrodes of alkaline cells in concentrated solutions of nickel salts, 4387
Cathodes for alkaline batteries (Patent), 3926
Characteristics in charged or discharged condition of pressed-type nickel positive electrodes made by using polystyrene as a binder (Comparison with polyethylene), 4053
Charge, discharge, and self-discharge characteristics of thin film nickel oxide electrodes, 2905 (AD-671685)
Coated nickel electrodes (Preparation by anodization of an active form of Ni), 4419
Determination of carbonate impurities in nickel hydroxide, 4069
Effect of the increase of porosity on the current distribution in nickel hydroxide electrodes containing Raney nickel, 4001
Effect of lithium hydroxide additions on the electrochemical behavior of nickel(II) hydroxide thin-layer electrodes, 4101
Electrochemical processes on nickel oxide, 2902 (AD-667607)
Electrochemical properties of nickel hydroxide electrodes, 4363
Electrodes for alkaline batteries (Patent; preparation), 3613
Electrophoretic method of preparation of electrodes from nickel(II) hydroxide, 3780
Formation of electrodes for alkaline batteries (Patent), 3542
Forming process in nickel positive electrodes, 4622
Forming rechargeable electrodes utilizing an unsintered fluorocarbon binder (Patent; fabrication), 4309
Information about nickel hydroxide electrode (Chemical reactions), 4571
Infrared spectroscopic study of the properties of a nickel oxide electrode. I. Effect of charging conditions on the ir spectra of a nickel oxide electrode in charged and discharged states, 4092
Investigation toward the development of carbonyl nickel powder suitable for the manufacture of sintered nickel plaques for use in alkaline storage batteries, 2873 (AD-622916)
Laminated diffusion bonded battery plaques (Patent; preparation), 3952
Manufacture of a dry-charged nickel oxide electrode by chemical oxidation (KOH--$K_2S_2O_8$ solution), 4083
Method for making nickel and cadmium electrodes for batteries (Patent), 3375
Method for making a nickel positive electrode for an alkaline battery (Patent; suspension of nickel hydroxide, cobalt hydroxide, and graphite entrained in polyvinylidene fluoride binder), 3353
Method of manufacturing positive nickel hydroxide electrodes (Patent), 3473
Method of producing electrodes (Patent), 3400
Method to produce a protective oxide on the surface of positive nickel electrodes for galvanic cells (Patent), 3428
Methods for determining the structural and stoichiometric changes of $Ni(OH)_2$ electrodes during polarization in alkaline electrolyte, 4565
Modulation-spectroscopic investigations on nickel electrodes (Structure of semiconducting passive layers), 4360
Nickel cathode for alkaline batteries (Patent), 3705
Nickel cathodes for alkaline cells (Patent; fabrication), 3708
Nickel cathodes for alkaline batteries (Patent), 3598
Nickel electrodes for alkali batteries (Patent; preparation), 3902
Nickel electrodes for alkaline batteries (Patent), 3704
Nickel electrodes for alkaline cells (Patent), 3663
Nickel electrode for alkaline batteries (Patent; preparation by polarizing Ni sponge in aqueous metal nitrate solution), 3619
Nickel electrode for an alkaline battery (Patent; fabrication), 4327
Nickel hydroxide electrode (Chemical preparation;patent), 3680
Nickel hydroxide cathodes for storage batteries (Patent; fabrication), 3755
Nickel hydroxide cathodes for storage batteries (Patent; fabrication), 3756
Nickel hydroxide electrode research. Interim technical report No. 1, 1 January 1969-2 February 1970 (Effects of cation additions to active material), 3056 (AD-866147)
Nickel hydroxide electrode (Patent), 4334
Nickel or cadmium electrodes for alkaline cells (Patent; chemical preparation), 3588
Nonlaminated nickel oxide electrode with plastic binder, 4569
Oxidation of powder-metallurgical electrodes by potassium hypochlorite, 4076
Oxidation of hydrogen on a porous nickel electrode, 2860 (AD-612497)
Oxidation of sintered nickel bases with ozone (Chemical preparation), 4434
Polarization studies on sintered plate electrodes containing various amounts of $Ni(OH)_2$, 4579
Porous nickel plates for electrodes (Method for fabrication), 3965
Porous nickel alkaline-battery electrodes made from woven cotton cloth (Fabrication and testing, porous structure derived from woven cotton cloth), 4349
Porous nickel for alkaline battery and fuel cell electrodes: production by roll-compaction (Roll-compaction of carbonyl nickel powders), 4506
Possibilities of improving the electrical characteristics of nonlamellar nickel oxide electrodes of alkaline storage batteries, 4068
Potassium distribution in nickel oxide electrodes, 4577
Powder-metallurgy electrode of an alkaline storage battery (Patent), 3853
Production of porous membranes for batteries and fuel cells, 4620
Production of porous nickel for alkaline-battery and fuel-cell electrodes: practical and economic considerations, 4611
Production of porous nickel electrodes for gas-tight batteries, 4604
Products of oxidation of nickel with ozone (Chemical preparation of nickel oxide electrode active mass), 4436
Protective coatings on positive nickel electrodes (Patent), 4170
Rational degree of filling of pores of powder-metallurgical nickel oxide electrode by the active media, 4118
Relations of the structural characteristics of the powder metallurgical nickel oxide electrode, 4063
Removal of nitrates from sintered nickel storage-battery plaques impregnated with nickel salts (Patent), 4247
Sealed type alkaline storage battery (Patent; improved Ni hydroxide cathode containing $Ba(OH)_2$), 3565
Selected articles (Effects of ultrasonics), 4689 (AD-655021)
Self-discharge of nickel oxide electrodes, 4213
Self-discharge mechanism of a powder-metallurgy nickel oxide electrode in concentrated potassium hydroxide solutions, 4135
Self-discharge of a nickel oxide electrode, 4417
Sintered nickel matrix cathode (Performance), 4734
Sintered type alkaline storage battery. XV. Effect of lithium ion on the formation of active material from nickel plaque at various temperatures, 4087
Stable nickel oxyhydroxide (NiOOH) (Patent; chemical preparation), 3499
Structure of a double electric layer and features of the electrode processes on a sodium nickelate single crystal, 4136
Study of electrodes and electrode reactions. II. The relation of the energy necessary to remove an oxygen molecule from charged nickel oxide electrodes in vacua and solutions of potassium hydroxide, 2876 (AD-627216)
Study of electrodes and electrode reactions. I. The energy necessary to remove an oxygen molecule from a charged nickel oxide electrode in a vacuum, 2877 (AD-627248)
Thermal decomposition of nickel ammine complexes for producing the positive active mass in sintered electrodes (Fabrication), 4350
Thermogalvanic potentials. II. Nickel in neutral subgate solution, 4769
Use of stereometric metallography for determination of structural characteristics of porous nickel bodies for alkaline storage cell plates, 4463
CATHODES/LEAD-ACID BATTERIES
Antimony plating of lead-acid storage batteries grids (Patent), 4022
Application of autoradiographic techniques to battery research, 4633
Autoradiographic recording of partially discharged negative grid plates of lead storage batteries, 4484
Behavior of lead alloys as $PbO_2$ electrodes (Corrosion behavior), 3327
Cathodes for lead--acid batteries (Patent; fabrication), 3967
Characterization of the cycled cathode-active mass of the lead storage battery (Phase compn., crystallite size, sp. surface area, pore vol., pore-size distribution), 3791
Characterization of positive plates of lead batteries by

x-ray diffraction, 4575
Clad-type electrodes for lead storage batteries (Patent; fabrication), 3583
Composition and performance of positive plate material in lead-acid battery (Influence of α-$PbO_2$), 4696
Computer-aided determination of physical parameters of porous electrode materials by porosity measurements, 3775
Crystallographic changes encountered in processing of positive lead-acid battery active material, 4558
Current distribution in the porous lead dioxide electrode, 4192
Cyclovoltametric study of lead--acid battery electrodes (α- and β-$PbO_2$), 4086
Dependence of the properties of the lead-acid battery positive plate paste on the processes occurring during its production, 3412
Dependence of the properties of the lead-acid battery positive plate paste on the processes occurring during its production, 3413
Development of effective means of low-temperature charging of lead-acid batteries. Quarterly progress report No. 2, 1 Jun-1 Sep 1949 (Behavior of positive plates), 1687 (AD-471953)
Double walled tubes for positive plates of lead cells (Patent; fabrication method), 3497
Effect of depth of discharge on the cycle life of positive lead-acid plates, 2904 (AD-671685)
Effect of technological factors on the structure of pastes and the formed active substance of the positive electrode of a lead battery, 4119
Effect of sample configuration on its corrosion deformation (Behavvior of grid fibers, polygonal shapes), 4121
Effect of the addition of polypropylene fiber on the strength of the positive electrode material of a lead storage battery, 3795
Effect of some inorganic additives on the cycle life of the positive electrodes in the lead-acid cell ($Sb_2O_3$, $As_2O_3$, $P_2O_5$), 3315
Effect of low-frequency acoustical vibrations on the formation of active materials of a lead battery positive electrode (100 Hz), 4437
Effect of lead structure of the positive electrode of secondary electric batteries on its electric efficiency, 3492
Effects of technological parameters on changes in phase composition of pastes and positive electrodes of acid storage batteries (27 to 100°), 2302
Effects of discharges on positive plates in lead batteries, 3361
Electrical properties of electrodeposited $PbO_2$ films, 4455
Electrochemical behavior of the lead dioxide electrode, 3826
Electrolytic behavior of lead dioxide, 2620
Fast charging lead storage batteries (Evaluated mathematical model for cathode), 2224
Formation of negative plates of lead accumulators. IV. Effect of raw materials and mixing solutions on the conditions of formation, 4776
Function of ac superimposed on dc in anodic oxidation of lead in sulfuric acid, 4674
Hydrogen-loss concept of battery failure: the $PbO_2$ electrode, 4151
Important factors that influence composition of positive plate material in lead-acid battery, 4697
Investigation of the surface structure of some lead dioxide and related electrodes, 3301
Kinetics of the $PbSO_4/PbO_2$ electrode at low temperatures (-50° to 0°C), 3827
Laboratory investigation and engineering design leading towards the development of a lightweight secondary or primary cell type battery for one-shot application. Quarterly report No. 4 (annual), 282 (AD-471973)
Lead-acid storage batteries (Investigation of possible contamination of cathode with negative paste mixture), 4753
Lead-acid storage batteries. Changes in positive active material density during various conditions of service (15 plates, 100 Ah), 2649
Lead-acid batteries: use of carbon fiber-lead wire grids at the positive electrode (Advantages of use), 3526
Lead calcium battery. Part 4. Comparison of lead calcium and lead antimony cells in float (Performance comparison for Ca and Sb in grids), 1723 (AD-602378)
Lead dioxide as a soluble electrode (Cathodic dissolution and anodic deposition), 3768
Lead dioxide battery plate (Patent), 3625
Lead oxide sulfuric acid battery having a positive electrode comprising a titanium-molybdenum-zirconium alloy grid (Patent), 4328
Lead storage battery (Patent; electrode fabrication), 3594
Lead storage battery oxides with metallic additions, 2662
Lead storage battery electrode and method (Patent; lacquer coating to reduce peak effect in tube-type plates), 3295
Lead-tin-barium alloy for positive grids of lead/acid batteries, 4724
Low-rate cathodic linear sweep voltammetry (LSV) studies on anodized lead, 3571
Low temperature recharge of the lead--acid system (Effects of temp. and $H_2SO_4$ concn. on formation of peroxydisulfuric acid at $PbO_2$ electrode), 2006 (AD-A-011027)
Mechanism of the effect of arsenic on the corrosion behavior of lead--antimony storage battery alloys, 3794
Mechanism of the processes of formation of lead-acid battery positive plates, 4299
Method and apparatus for filling adjacent insulating tubes forming the positive plate of a lead--acid storage battery (Patent), 970
Method for the production of lead storage battery electrodes (Patent), 3422
Microstructural aspects of grid corrosion in the $PbO_2$ electrode, 3357
Microstructural comparison of positive float and trickle discharge operations on the positive electrodes of submarine storage batteries with lead-calcium alloy grids. Master's thesis, 3110 (AD-A032298)
Morphology of $PbO_2$ in the positive plates of lead-acid cells, 2857 (AD-609986)
New grid casting improves battery life, 4799
New technology for manufacture of dry-charged lead batteries, 1250
Oxygen overvoltage and electrode potentials of α and β-$PbO_2$, 4720
$PbO_2$ in lead-acid cell. I (Fabrication), 4470
Phase properties of positive active elements of lead storage batteries, 4543
Plate materials of the lead-acid cell. Part 4. Anodic oxidation of three representative oxides. Final report, 2914 (AD-677033)
Positive electrodes for lead storage batteries (Patent), 3610
Positive plate of the lead-acid cell. A critical review of recent literature, 2920 (AD-684765)
Positive plate sulfation characteristics of the lead-calcium grid battery. Final report, 2828 (AD-476224)
Positive plate sulfation processes in thin- and thick-plate Pb-Ca grid batteries, 4560
Positive-plate self-discharge in lead-acid cell, 4770
Positive plates for lead-acid storage battery cells (Patent; formation), 4313
Potentiostatic forming of positive lead electrodes, 4493
Prevention of adhesion of piled pasted lead--acid battery cathodes (Patent), 1152
Progress of the discharge reaction of positive active masses of the lead-acid storage battery, 3359
Reaction layers and electrochemical properties in tubular electrodes due to engineering design, 4273
Recent developments in the NRL-ILZRO investigation of the porous $PbO_2/PbSO_4$ electrode, 3823
Reserve battery electrodes using bonded active materials (Patent; preparation), 4312
Role of antimony in positive plate behavior in lead-acid cell, 4643
Role of porosity in the modern technology of batteries, 4376
Self-discharge of lead-acid batteries, 2647
SEM [scanning electron microscope] observation of the charge-discharge process at the positive electrode in a lead--acid battery, 3813
Some properties of electrodeposited lead dioxide (Supremacy of deposition from nickel chloride electrolyte), 3572
Stability of lead dioxide electrode stock during storage at 160°F, 3082 (AD-903317L)
Stability and reactivity of lead oxides (α- and β-$PbO_2$), 4669
Structural transformations of lead(IV) oxide active material during cycling, 4125
Study of some of the crystallographic and microscopic aspects of the curing of positive lead-acid battery plates, 4415
Study of the cyclic performance of submarine type lead-acid storage batteries by examination of the positive plate structures, 3137 (AD-A-033764)
Techniques for bonding the positive plates, 4381
Tetrabasic lead sulfate as a paste material for positive plates, 4384
Theoretical model for the porous lead(IV) oxide electrode in the lead--acid battery, 4282
Theory of porous electrodes. XI. Positive plate of the lead--acid battery, 4160
Theory of the positive plate of the lead-acid battery, 3778
Thermal decomposition mechanism of formed and cycled lead dioxide electrodes and its relation to capacity loss and battery failure, 2306
Transfer of lead in positive electrode of lead battery, 4651
Tubular-type positive plates for use in lead-acid storage batteries (Patent), 4248
Unusual exposure to oxidation for polyethylene (Polyethylene container for lead peroxide cathodes in lead-acid batteries), 4666
Use of an antimony cathode for production of a unified storage battery alloy, 4218
Use of cathode antimony for a standard battery alloy, 4210
Use of humic acids in storage batteries, 4200
Use of ion exchangers as an addition to the mass of positive plates in lead storage batteries, 4080

Water-activated battery (Patent; hydrophilic resin on cathode), 986
CATHODES/LITHIUM-CHLORINE BATTERIES
Battery electrode (Li/LiCl/$Cl_2$; patent), 4466
Impurity effects in high current density $Cl_2$ electrodes, 4541
Influence of certain additives to activated carbon on its properties as hydrogen electrode material, 4644
New reversible chlorine electrode (Employs certain properties of iodine), 4792
Physico-chemical changes at the interface of a graphite chlorine electrode with lithium chloride electrolyte, 4122
Valve electrode for use in fused salts (Fabrication), 4555
CATHODES/LITHIUM-COPPER CHLORIDE BATTERIES
Research on a high-energy nonaqueous battery system. Quarterly progress report No. 4, 1 September-30 November 1966 (4 Ah), 458 (AD-808475)
CATHODES/LITHIUM-SULFUR BATTERIES
Alkali metal/sulfur cell with gas fuel cell electrode (Patent), 937
Cathode composition for electrochemical cell (Patent; Li/LiCl-KCl/FeS-$Cu_2S$), 3445
Cathode for a secondary electrochemical cell (Li/LiF--LiCl--KCl/$FeS_2$, $Li_2S$; patent), 3514
Cathodes for secondary electrochemical power-producing cells (Patent; layers of porous substrates impregnated with S alternate with layers containing electrolyte), 4191
Ceramics in advanced batteries, 3170 (CONF-751194-)
Design work on lithium-sulfur battery (and others), 647 (CONF-691143-)
Development of high-performance iron sulfide electrodes with porous current collector structures (Li-Al/Fe sulfides), 3790
Development of a compact, high-capacity $FeS_2$ electrode, 4139
Development of a compact, high-capacity $FeS_2$ electrode (Li-Al/LiCl-KCl/$FeS_2$, Mo current collector, 430°C, >150 Wh/kg), 3463
Development of uncharged Li-Al/FeS cells (Cathode formed by hot-pressing $Li_2S$ and Fe powder), 612 (ANL-76-8)
Development of lithium-metal sulfide batteries for load leveling. Interim report (FeS; KCl-LiCl electrolyte; Li-Si alloy cathode), 728 (PB-244390)
Development of lithium-metal sulfide batteries for load leveling (Li/KCl-LiCl/Fe sulfides, Li and Li-Si negative electrodes), 671 (EPRI-116)
Engineering evaluation of solid transition-metal sulfide electrodes for use in high energy-density batteries, 3191 (LBL-5186)
Engineering evaluation of solid transition-metal sulfide electrodes for use in high energy-density batteries, 3465
Increasing the energy storage capacity of an electrode of amorphous carbon (Patent), 3898
Lithium--molten salt cell with transition metal chalcogenide positive electrode (Patent; Li/alkali or alkaline earth metal halides with $Li^+$/transition metal chalcogenide), 941
Low temperature lithium/sulfur secondary battery. Annual progress report, December 1, 1974-December 1, 1975 (Ambient-temperature battery with dissolved S), 666 (COO-2520-2)
Low temperature lithium/sulfur secondary battery. Semiannual progress report, December 1, 1974-June 1, 1975 (Development of dissolved sulfur cathode operable at ambient temperatures), 3181 (COO-2520-1)
Metal sulfide electrodes for secondary lithium batteries (Li/$FeS_2$ and Li/CuS with LiCl-KCl electrolyte, 400°, 77 and 52 Wh/lb), 3811
Metallic sulfide additives for positive electrode material within a secondary electrochemical cell (Patent; Fe sulfide electrode with sulfide additives of Co, Ni, Cu, Ce, Mn), 3366
Method of preparing an electrochemical cell in uncharged state (Patent; cathode of Li sulfide, transition metal, and electrolytic salt), 811
Multicomponent cathodes for a cell with molten lithium chloride--potassium chloride electrolytes (Patent; C + $Sb_2S_3$, $WS_2$, or $MoS_2$, >210 Wh/lb at 450°), 3528
Overcharge studies of the $FeS_2$ electrode in Li/$FeS_2$ cells (Both Li and Li-Al alloy anodes used in study of performance and reaction mechanism), 3154 (ANL-76-8)
Rechargeable lithium/iron sulfide battery (Li--Si/KCl--LiCl/Fe sulfide), 3785
Sulfur-based lithium-organic electrolyte secondary batteries. Quarterly report, 3 Dec 1973-3 Mar 1974 (Development of positives based on higher sulfides), 2976 (AD-782241)
Sulfur-based lithium-organic electrolyte secondary batteries. Final report, 3 Dec 1973-29 Aug 1975, 588 (AD-A-023496)
Sulfur electrode (Li/organic electrolyte/S), 2929 (AD-709272)
Sulfur electrode (Li(Ni)/DMSO-$KClO_4$/S-C(M)), 1431
Sulfur-sulfide electrode in molten salts. I. Chronopotentiometric behavior in lithium chloride-potassium chloride eutectic, 3482
Uncharged positive electrode composition (Patent), 3310
CATHODES/METAL-GAS BATTERIES
Active carbons for use in fuel cell air electrodes or metal-air systems, 4222
Air electrode (Patent; preparation), 3595
Air-metal cell systems, 1434
Battery cell (Patent; air- or oxygen-depolarized cathode) 4468
Carbon air electrode with regenerative short time overload capacity. II. Effects of duroquinone and 2-amino-1,4-naphthoquinone (Concentrated KOH), 3842
Carbon-based oxygen electrodes for metal-air batteries. II. Operation in bicells with magnesium or zinc anodes (Mechanically rechargeable over 25 times), 1905 (AD-890113)
Carbon-based oxygen electrodes for metal-air batteries. I. Experimental electrodes, 3071 (AD-887653)
Carbon oxygen electrode in electrochemical current sources and transducers, 3812
Catalyst suitable for an oxygen electrode (Patent), 3873
Cathode for metal-air-type fuel cells (Patent), 4042
Cathodes for metal-air-type fuel cells (Patent), 4041
Charge-discharge cycling of DREO air electrodes (Sintered Ni surface containing Ag, Hg, and teflon), 3122 (AD-A-016721)
Current distribution at gas-electrode-electrolyte interface (Electrolyte film above intrinsic meniscus on Ni and Ag oxygen cathodes), 4574
Electrochemistry of interhalogen cathodes. Final report, 21 April 1969-21 March 1970 (Li/$ClF_3$ in NaF--HF electrolyte, theoretical 2120 Wh/lb), 527 (AD-870799)
Electrode structures for metal/oxygen batteries and fuel cells (Patent), 4241
Electrodes for iron-air secondary cells (Emphasis on iron), 4275
Electrolyte distribution and shift through carbon electrodes for the electroreduction of air oxygen, 4274
Experimental approach to reversible oxygen electrode, 4648
Gas diffusion of electrodes for air cells (Patent), 3690
Halogen storage by means of hydrates; patent, 3451
High-energy electrochemical couples. II. Gas electrodes in organic solvents (Li/air), 2894 (AD-653779)
Hybrid electrodes for metal--air cells (Patent), 3550
Hybrid electrode for metal/air cells (Patent), 3734
Hydrophilic treatment for hydrophobic gas electrodes (Patent), 4372
Increasing the catalytic activity of rare metal-doped activated carbon for oxygen electrodes of electrochemical cells with acid electrolytes (Patent), 3969
Investigation of active carbon for use in fuel cell air electrode or metal-air systems, 4206
Life capability of the silver electrode in alkaline electrochemical cells (Ag-$H_2$), 3235 (N-76-28648)
Lithium-moist air battery. Semiannual report No. 2 (Mechanism of air electrode in phenyltrimethyl ammonium hexafluorophosphate--nitrosodimethylamine), 2893 (AD-653774)
Lithium-moist air battery. Final report, March 1966-July 1967, 473 (AD-823679)
Low cost oxygen electrodes (Evaluation of various materials), 4407
Metal/air cells and air cathodes for use therein (Patent) 3477
Metal/air cells and improved air electrodes for use therein (Patent), 3394
Nickel based alloys as electrocatalysts for oxygen evolution from alkaline solutions (Metal-air batteries) 3166 (BNL-22275)
Novel air electrode (For use in free liquid electrolyte or matrix-electrolyte cells), 4551
Oxygen (air) waterproofed gas-diffusion electrodes for electrochemical power sources operating with liquid fuels or solid fuels dispersed in an electrolyte, 4099
Oxygen electrode for alkaline battery (Patent), 3653
Oxygen electrode material (Patent), 4019
Oxygen evolution on semiconducting oxides (Air), 3343
Raney metal sheet material for use as electrodes (Patent; Ag, Ni, Pt, Fe, Co, preparation of sheets), 4260
Rare earth cobaltites as oxygen electrode materials for alkaline solution, 3312
Rechargeable metal-air cell. Quarterly report No. 2, 1 August-31 October 1967 (Pb/air), 480 (AD-828589)
Reduction of oxtgen on nickel-cobalt oxides. II. Correlation between crystal structure and activity of $Co_2NiO_4$ and related oxides, 4141
Reduction of oxygen on nickel-cobalt oxides. I. The influence of composition and preparation method on the activity of nickel-cobalt oxides, 4142
Study of gas evolution in teflon bonded porous electrodes. II. Factors affecting the mechanical strength (Effect of electrocatalyst preparation method and catalyst/Teflon ratio), 3501
Study of gas evolution in teflon bonded porous electrodes. I. The mechanical and chemical stability of teflon bonded graphite electrodes (Air cathode mechanical disintegration), 3502
Study of gas evolution in teflon bonded porous electrodes. III. Performance of teflon bonded Pt black electrodes for $H_2$ evolution (Metal-air type), 3441
Support for electrode plates of air batteries (Patent), 3731

Use of radioisotopes in battery research (Improved electrochemical activity), 1505
Wetproofed oxygen (air)--carbon electrodes. II. Effect of the wetproofing agent on the structural, physical, and electrochemical characteristics of the electrodes, 4091

CATHODES/METAL-METAL OXIDE BATTERIES
Cathodic behavior of CuS, $MoO_3$, and $MnO_2$ in lithium cells, 4015
Electrochemistry of $V_2O_5$ in LiCl-KCl eutectic melt, 4682
High voltage organic electrolyte batteries (Patent; Li/$LiClO_4$/$CrO_3$ with tetrahydrofuran), 828
Laboratory investigation and engineering design leading towards the development of a lightweight secondary or primary cell type battery for one-shot application. Quarterly report No. 8 (final) (Pb/Pb oxides), 283 (AD-471978)
Laboratory investigation and engineering design leading towards the development of a lightweight secondary or primary cell type battery for one-shot application. Quarterly report No. 7, 31 May-31 Aug 1949 (Cd/Pb oxides), 284 (AD-471979)
Method for making a nickel positive electrode for an alkaline battery (Patent; suspension of nickel hydroxide, cobalt hydroxide, and graphite entrained in polyvinylidene fluoride binder), 3353
Method of producing electrodes (Patent), 3400
Role of ternary phases in cathode reactions. (Li/oxides or sulfides), 2174

CATHODES/METAL-NONMETAL BATTERIES
Alkali metal/sulfur cell with gas fuel cell electrode (Patent), 937
Alkali metal, sulfur battery or cell with single phase sulfur electrode (Patent; additive to cathodic reactant to improve charge/discharge capacity), 3338
Cathode for a cell (Light metal anode, nonaqueous Cl-containing electrolyte, metal halide cathode;patent), 3718
Cathode systems for aluminum-molten chloroaluminate batteries, 3156 (ANL-76-8)
Cathodic behavior of CuS, $MoO_3$, and $MnO_2$ in lithium cells, 4015
Cell with light metal anode (Halide cathode, nonaqueous Cl-containing electrolyte;patent), 1051
Composition of nonaqueous solutions of potential use in high energy density batteries. Final report, 15 Nov 1969-14 Nov 1972 (Solubility equilibria of $CuF_2$, $NiF_2$, $ZnF_2$, $CdF_2$, $AgF_2$), 432 (AD-763140)
Discharge reaction mechanism of the $MoO_3$ electrode in organic electrolytes (Li/$MoO_3$), 3306
Effect of the Lewis basicity of organic solvents on the electrochemical behavior of metal halide electrodes (Study of suitability of various cathode materials with Li in propylene carbonate), 4239
Effect of the Lewis basicity of organic solvents on the electrochemical behavior of metal halide electrodes, 4240
Electrodes based on copper(II,I) sulfide (Patent; 205 Wh/kg in Li/CuS battery), 4336
Engineering evaluation of solid transition-metal sulfide electrodes for use in high energy-density batteries, 3191 (LBL-5186)
Engineering evaluation of solid transition-metal sulfide electrodes for use in high energy-density batteries, 3465
High energy cathodes for fused salt batteries (Al anode; fluorinated graphite, $WCl_6$, quinones, I, S tested as cathodes), 2975 (AD-779385)
Homogeneous cathode mixtures for secondary electrochemical power-producing cells (Patent), 3977
Lithium--molten salt cell with transition metal chalcogenide positive electrode (Patent; Li/alkali or alkaline earth metal halides with $Li^+$/transition metal chalcogenide), 941
Lithium anode limited cycle battery investigation. Quarterly technical progress report No. 7 (Li/$CuF_2$ >25 Ah, 70 to 75 Wh/lb), 455 (AD-804103)
Lithium-anode limited cycle battery investigation. Final report, 1 January 1966-1 June 1967 (Li/$CuF_2$ with $LiClO_4$-propylene carbonate electrolyte, 30 V, 25 Ah, 50 Wh/lb, improved $CuF_2$ utilization), 467 (AD-821051)
Lithium anode limited-cycle battery investigation. Quarterly technical progress report No. 4 (Li/$CuF_2$, Li/$CoF_3$), 289 (AD-477937)
Lithium anode limited-cycle battery investigation. Quarterly technical progress report No. 5 (Development of Li/$CuF_2$ and Li/$CoF_3$ batteries, 25 Ah), 292 (AD-483237)
Lithium anode limited-cycle battery investigation. Quarterly technical progress report No. 3 (Li/$CuF_2$, Li/$CoF_3$), 2822 (AD-474219)
Lithium battery research. Annual report No. 2, 1 April 1969-31 March 1970 (Li/$CdCl_2$, Li/$CuF_2$, Li/AgF with propylene carbonate), 526 (AD-870688)
Lithium battery research. Annual report No. 1, 1 April 1968-31 March 1969 (Li/halide, most promising were AgF, $CuF_2$ and $CdCl_2$), 515 (AD-854368)
Lithium cells based on silver salts as cathodes (Performances of $Ag_2CrO_4$, $Ag_3PO_4$, and $AgIO_3$ cathodes with different electrolytes), 3362
Lithium-nickel fluoride secondary battery investigation. Quarterly technical progress report No. 3, 27 October 1966-27 January 1967, 2995 (AD-808839)
Lithium-nickel fluoride secondary battery investigation. Quarterly technical progress report No. 4, 27 January-27 April 1967 (Problems in obtaining pure anhydrous nickel fluoride), 3003 (AD-815027)
Lithium-nickel fluoride secondary battery investigation. Quarterly technical progress report No. 5, 27 April-27 July 1967 (Factorial testing of $NiF_2$ electrodes), 3007 (AD-820259)
Lithium-nickel fluoride secondary battery investigation. Quarterly technical progress report No. 2, 27 July-27 October 1966 ($NiF_2$ preparation; physical properties of electrolyte), 2986 (AD-803529)
Lithium-nickel fluoride secondary battery investigation. Quarterly technical progress report No. 6, 27 July-27 October 1967 (Electrode porosities), 3013 (AD-824659)
Lithium-nickel fluoride secondary battery investigation. Quarterly technical progress report No. 7, 27 October 1967-27 January 1968, 3020 (AD-829093)
Lithium-nickel halide secondary battery investigation. Quarterly technical progress report No. 1, 10 Mar 1965 (Protection of $NiCl_2$ electrode tabs from Cl corrosion), 2806 (AD-464485)
Lithium-nickel halide secondary battery investigation. Quarterly technical progress report No. 2 for period ending 15 Jun 1965 (Li/$NiCl_2$), 2813 (AD-468352)
Lithium-nickel halide secondary battery investigation. Quarterly technical progress report No. 3 for period ending 15 Sep 1965 (Li/$NiCl_2$, doped electrodes), 2824 (AD-474394)
Lithium-nickel halide secondary battery investigation. Final technical report, Dec 1964-Nov 1965 (Corrosion protection for tabs of $NiCl_2$ electrode), 2832 (AD-478992)
Lithium-nickel fluoride secondary battery investigation. Quarterly technical progress report No. 1, 27 Apr-27 Jul 1966, 2841 (AD-487828)
Lithium-nickel halide secondary battery investigation. Quarterly technical progress report No. 3, 317 (AD-605754)
Low-cost, high-energy cathodes for magnesium perchlorate batteries (Mg/$MgClO_4$/$MnO_2$, CuO, or meta-dinitrobenzene, -40 to +125 F), 2880 (AD-634100)
Metal permanganate and metal periodate organic electrolyte cells (Patent), 3523
Method of producing electrodes (Patent), 3400
New cathode material for high energy density batteries (Li/Li perchlorate/$CdF_2$ or $ZnF_2$), 2964 (AD-757883)
New electrode material (M/sub x/(graphite-CrO/sub n/) where M is K, Na, or L, Na/β-alumina/$CaCrO_3$ produced 3. V, storage capacity of 1.1 kWh/kg), 4217
New niobium selenide cathode for nonaqueous lithium batteries ($LiClO_4$ in propylene carbonate electrolyte), 3313
Nickel fluoride (Patent; Li/$NiF_2$ cathode preparion), 3951
Production of nickel fluoride (Patent; for lithium-nickel fluoride batteries), 3953
Rechargeable nonaqueous batteries (Patent; Li/$LiClO_4$ in propylene carbonate/NbSe/sub 4+x/, x = 0 to 0.5), 784
Research and development of a high-energy nonaqueous battery. Quarterly technical report No. 3, 18 Sep-18 Dec 1963 (Li/$CuF_2$), 244 (AD-347494)
Role of ternary phases in cathode reactions. (Li/oxides or sulfides), 2174
Secondary electrochemical cells with a chalogen cathode (Li/S or similar materials; patent), 3961
Secondary battery with nonconsumable silicon cathode (Patent; Zn/Br with $RuO_2$- coated Si cathode; preparation), 1023
Secondary battery with separate charge and discharge zones (Patent; alkali metal/sulfur), 832
Secondary battery or cell (Patent; additive to cathodic reactant to improve charge/discharge capacity), 3337
Semiconducting cathode for storage batteries (Patent), 4182
Some aspects of lithium-copper compound cells in LiCl-KCl eutectic (Li/CuS), 798
Storage battery comprising positive electrode of a graphite and lithium fluoride compound (Patent; Li/(C/sub n/F)/sub x/), 3318
Sulfur-based lithium-organic electrolyte secondary batteries. Quarterly report No. 5, 4 Dec 19743-Mar 1975 (Li/$LiAlCl_4$, $LiClO_4$, $LiBF_4$ in propylene carbonate/Nb, Ti, or V sulfide: -40 to +160°F, 100 Wh/lb, 500 cycles; development program), 578 (AD-A-014881)
Thermodynamic study of lithium metal-organic electrolyte batteries (29 substances), 4366
Transition metal sulfides as cathodes for secondary Li batteries. I. Niobium sulfides (Li/$LiAlCl_4$--propylene carbonate/Nb sulfides), 3784
Use of a hydrovibroabrasive erosion method to study the surface strength of silver oxide electrodes of chemical current sources, 4081
Use of perovskites and perovskite-related compounds as battery cathodes (Patent), 3720

CATHODES/NICKEL-CADMIUM BATTERIES
Activation of nickel battery plates (Patent; electrolytic process), 3871
Activation of nickel battery plates (Patent; electrolytic process), 3557
Active mass of the nickel oxide electrode for an alkaline storage battery (Patent; preparation), 4354
Active substance for the nickel oxide electrode of an

alkaline storage battery (Patent; preparation of active material), 4355
Analysis of charge-discharge characteristics of nickel oxide electrodes by infrared spectroscopy, 4606
Anodic corrosion of nickel sinter in positive electrodes of nickel-cadmium batteries containing carbonate, 4561
Applications of nickel. Annual report (Ni production and consumption; possibility for substitutions in event of shortage), 3037 (AD-846999)
Battery electrode support (Patent), 3589
Battery electrode supports (Patent), 3590
Behavior of nickel oxide electrodes of alkaline cells in concentrated solutions of nickel salts, 4387
Carrying out reactions between powdered and gaseous materials (Patent; means for chemical preparation of active materials), 3549
Cathodes for alkaline batteries (Patent), 3926
Characteristics in charged or discharged condition of pressed-type nickel positive electrodes made by using polystyrene as a binder (Comparison with polyethylene), 4053
Charge, discharge, and self-discharge characteristics of thin film nickel oxide electrodes, 2905 (AD-671685)
Coated nickel electrodes (Preparation by anodization of an active form of Ni), 4419
Composite nickel powder for preparing plaques for nickel cadmium batteries, 4224
DC to dc conversion for improved power sources. Research and development technical report (Charging process for Ni battery electrode), 2968 (AD-762181)
Determination of carbonate impurities in nickel hydroxide, 4069
Development of uniform and predictable battery materials for nickel-cadmium aerospace cells. Interim annual report, 8 August 1968-7 July 1969 (Preparation of porous nickel plaques), 3210 (N-70-28473)
Effect of the increase of porosity on the current distribution in nickel hydroxide electrodes containing Raney nickel, 4001
Effect of lithium hydroxide additions on the electrochemical behavior of nickel(II) hydroxide thin-layer electrodes, 4101
Electrochemical impregnation of nickel hydroxide into a porous nickel plate (34 mAlcm$^2$), 4117
Electrochemical processes on nickel oxide, 2902 (AD-667607)
Electrochemical precipitation of $Ni(OH)_2$ into porous electrodes, 4559
Electrochemical impregnation of electrode for rechargeable cell (Patent), 3388
Electrochemical properties of nickel hydroxide electrodes, 4363
Electrode for alkaline batteries (Patent; fabrication using loaded Ni sponge), 3651
Electrodes for alkaline batteries (Patent; preparation). 3613
Electrolytic sintering of nickel powder, 4489
Electrolytic impregnation method: nickel hydroxide electrode, 4599
Electrophoretic method of preparation of electrodes from nickel(II) hydroxide, 3780
Fabrication and investigation of nickel-alkaline cells. Part II. Analysis of ethanolic metal nitrate solutions used in fabrication of nickel hydroxide electrodes. Technical report, Jun 1972-Jan 1975, 3126 (AD-A-018478)
Fabrication and investigation of nickel-alkaline cells. Part I. Fabrication of nickel-hydroxide electrodes using electrochemical impregnation techniques. Technical report, 1 Jan 1971-1 Jan 1974, 3127 (AD-A-018517)
Failure mechanisms in sealed batteries. Part IV. Semiannual technical report No. 4, 1 January-30 June 1968, 1884 (AD-846981)
Forming process in nickel positive electrodes, 4622
High energy density sintered plate type sealed nickel cadmium battery cells. I. The positive electrode/plaque relationships ($Ni(OH)_2$), 4058
High energy density sintered plate type nickel-cadmium battery cells. II. Electrochemical impregnation methods to produce nickel oxide electrodes, 4059
High energy density sintered plate-type nickel-cadmium battery cells. Part II. Electrochemical impregnation methods to produce nickel oxide electrodes. Technical report, December 1972-December 1973, 3114 (AD/A-002142)
Influences of foreign metal ions on the performances of nickel positive electrodes, 4278
Information about nickel hydroxide electrode (Chemical reactions), 4571
Infrared spectroscopic study of the properties of a nickel oxide electrode. I. Effect of charging conditions on the ir spectra of a nickel oxide electrode in charged and discharged states, 4092
Investigation toward the development of carbonyl nickel powder suitable for the manufacture of sintered nickel plaques for use in alkaline storage batteries, 2873 (AD-622916)
Laboratory investigations and research toward the development of nickel-cadmium alkaline storage batteries. Annual progress report, 1 Jul 1946-30 Jun 1947 (Improved plate fabrication), 287 (AD-472061)
Laminated diffusion bonded battery plaques (Patent; preparation), 3952
Lightweight sponge negative plates for nickel-cadmium batteries, 4265
Manufacture of a dry-charged nickel oxide electrode by chemical oxidation (KOH--$K_2S_2O_8$ solution), 4083
Method for making a nickel positive electrode for an alkaline battery (Patent; suspension of nickel hydroxide, cobalt hydroxide, and graphite entrained in polyvinylidene fluoride binder), 3353
Method of manufacturing positive nickel hydroxide electrodes (Patent), 3473
Method to produce a protective oxide on the surface of positive nickel electrodes for galvanic cells (Patent), 3428
Methods for determining the structural and stoicniometric changes of $Ni(OH)_2$ electrodes during polarization in alkaline electrolyte, 4565
Modulation-spectroscopic investigations on nickel electrodes (Structure of semiconducting passive layers) 4360
Nickel--cadmium batteries. 5. Gassing behavior of $Ni(OH)_2$ electrodes, 4592
Nickel--cadmium batteries. 4. Self discharge on $Ni(OH)_2$ electrodes, 4593
Nickel-cadmium batteries. 4. Self-discharge on $Ni(OH)_2$ electrodes, 2886 (AD-643798)
Nickel cathode for alkaline batteries (Patent), 3705
Nickel cathodes for alkaline cells (Patent; fabrication), 3708
Nickel cathodes for alkaline batteries (Patent), 3598
Nickel electrodes for alkali batteries (Patent; preparation), 3902
Nickel electrodes (Patent), 3978
Nickel electrodes for alkaline batteries (Patent), 3704
Nickel electrodes for alkaline cells (Patent), 3663
Nickel electrode for alkaline batteries (Patent; preparation by polarizing Ni sponge in aqueous metal nitrate solution), 3619
Nickel electrode for an alkaline battery (Patent; fabrication), 4327
Nickel hydroxide electrode (Chemical preparation;patent), 3680
Nickel hydroxide cathodes for storage batteries (Patent; fabrication), 3755
Nickel hydroxide cathodes for storage batteries (Patent; fabrication), 3756
Nickel hydroxide battery electrode development. Annual interim report No. 2, 1 January-31 December 1970 (20 Ah), 3069 (AD-883905)
Nickel hydroxide electrode research. Interim technical report No. 1, 1 January 1969-2 February 1970 (Effects of cation additions to active material), 3056 (AD-866147)
Nickel hydroxide electrode (Patent), 4334
Nickel hydroxide electrode. V. Analysis and electrochemical behavior of cadmium-nickel-hydroxides, 4293
Nickel hydroxide electrodes (Migration of active material), 3271 (X-711-77-28)
Nondestructive method of monitoring the quality of powder-metallurgical nickel electrodes of nickel--cadmium batteries, 4084
Nonlaminated nickel oxide electrode with plastic binder, 4569
Optical study of the growth and oxidation of nickel hydroxide films, 2967 (AD-761281)
Oxidation of powder-metallurgical electrodes by potassium hypochlorite, 4076
Oxidation of hydrogen on a porous nickel electrode, 2860 (AD-612497)
Oxidation of sintered nickel bases with ozone (Chemical preparation), 4434
Polarization studies on sintered plate electrodes containing various amounts of $Ni(OH)_2$, 4579
Porous nickel plates for electrodes (Method for fabrication), 3965
Porous nickel alkaline-battery electrodes made from woven cotton cloth (Fabrication and testing, porous structure derived from woven cotton cloth), 4349
Porous nickel for alkaline battery and fuel cell electrodes: production by roll-compaction (Roll-compaction of carbonyl nickel powders), 4506
Positive nickel masses from nickel--cadmium accumulators of variable capacities. 1. X-ray studies, 3789
Possibilities of improving the electrical characteristics of nonlamellar nickel oxide electrodes of alkaline storage batteries, 4068
Potassium distribution in nickel oxide electrodes, 4577
Powder-metallurgy electrode of an alkaline storage battery (Patent), 3853
Pressed-type alkaline storage battery. VII. Behavior of silver oxide added to pressed-type nickel positive electrodes, 2303
Production of porous membranes for batteries and fuel cells, 4620
Production of porous nickel for alkaline-battery and fuel-cell electrodes: practical and economic considerations, 4611
Production of porous nickel electrodes for gas-tight batteries, 4604
Production of uniform nickel-cadmium battery plate materials. Quarterly report, 13 September-12 December 1969 (Effect of material and process

variables on plaque and plate characteristics), 3213 (N-71-28053)
Products of oxidation of nickel with ozone (Chemical preparation of nickel oxide electrode active mass), 4436
Protective coatings on positive nickel electrodes (Patent), 4170
Rational degree of filling of pores of powder-metallurgical nickel oxide electrode by the active media, 4118
Relations of the structural characteristics of the powder metallurgical nickel oxide electrode, 4063
Removal of nitrates from sintered nickel storage-battery plaques impregnated with nickel salts (Patent), 4247
Sealed nickel--cadmium alkaline storage battery (Patent; $Ni(OH)_2$ cathode, $Cd(OH)_2$ anode), 958
Sealed nickel--cadmium alkaline storage battery (Patent; cathode impregnated with LiOH), 959
Sealed type alkaline storage battery (Patent; improved Ni hydroxide cathode containing $Ba(OH)_2$), 3565
Selected articles (Effects of ultrasonics), 4689 (AD-655021)
Self-discharge of nickel oxide electrodes, 4213
Self-discharge mechanism of a powder-metallurgy nickel oxide electrode in concentrated potassium hydroxide solutions, 4135
Self-discharge of a nickel oxide electrode, 4417
Sintered nickel electrodes for alkaline storage batteries (Patent), 3694
Sintered nickel matrix cathode (Performance), 4734
Sintered type alkaline storage battery. XV. Effect of lithium ion on the formation of active material from nickel plaque at various temperatures, 4087
Stable nickel oxyhydroxide (NiOOH) (Patent; chemical preparation), 3499
Strain electrometry and corrosion. IV (Film properties and strain potential), 4730
Structure of a double electric layer and features of the electrode processes on a sodium nickelate single crystal, 4136
Studies on sealed nickel--cadmium batteries, 4701
Study of electrodes and electrode reactions. II. The relation of the energy necessary to remove an oxygen molecule from charged nickel oxide electrodes in vacua and solutions of potassium hydroxide, 2876 (AD-627216)
Study of electrodes and electrode reactions. I. The energy necessary to remove an oxygen molecule from a charged nickel oxide electrode in a vacuum, 2877 (AD-627248)
Study of electrode phenomena in storage batteries, 4743
Swelling of the active positive material in a nickel-cadmium alkaline storage battery, 4361
Thermal decomposition of nickel ammine complexes for producing the positive active mass in sintered electrodes (Fabrication), 4350
Thermogalvanic potentials. II. Nickel in neutral subgate solution, 4769
Use of hydrogen-absorbing electrode in alkaline battery (For protection against electrochemical damage due to battery reversal; patent), 3386
Use of stereometric metallography for determination of structural characteristics of porous nickel bodies for alkaline storage cell plates, 4463
Zinc additive in nickel-cadmium cells (Patent), 4330

CATHODES/NICKEL-HYDROGEN BATTERIES
Advances in component technology for nickel-zinc cells (300 Ah, approaching 1000 deep cycles and $50/kWh; electrode testing in $Ni/H_2$ cells), 3464
Analysis of charge-discharge characteristics of nickel oxide electrodes by infrared spectroscopy, 4606
Applications of nickel. Annual report (Ni production and consumption; possibility for substitutions in event of shortage), 3037 (AD-846999)
Coated nickel electrodes (Preparation by anodization of an active form of Ni), 4419
Current generation at the hydrogen electrode of nickel--hydrogen batteries, 4102
Development of nickel oxide electrodes for use in nickel-hydrogen cells, 3272 (X-711-77-28)
Formation of electrodes for alkaline batteries (Patent), 3542
Forming process in nickel positive electrodes, 4622
Forming rechargeable electrodes utilizing an unsintered fluorocarbon binder (Patent; fabrication), 4309
Hydrogen energy storage electrode, 4164
Investigation toward the development of carbonyl nickel powder suitable for the manufacture of sintered nickel plaques for use in alkaline storage batteries, 2873 (AD-622916)
Method of producing electrodes (Patent), 3400
Method to produce a protective oxide on the surface of positive nickel electrodes for galvanic cells (Patent), 3428
Methods for determining the structural and stoichiometric changes of $Ni(OH)_2$ electrodes during polarization in alkaline electrolyte, 4565
Nickel cathodes for alkaline cells (Patent; fabrication), 3708
Oxidation of hydrogen on a porous nickel electrode, 2860 (AD-612497)
Polarization studies on sintered plate electrodes containing various amounts of $Ni(OH)_2$, 4579
Porous nickel plates for electrodes (Method for fabrication), 3965
Porous nickel for alkaline battery and fuel cell electrodes: production by roll-compaction (Roll-compaction of carbonyl nickel powders), 4506
Potassium distribution in nickel oxide electrodes, 4577
Production of porous membranes for batteries and fuel cells, 4620
Production of porous nickel for alkaline-battery and fuel-cell electrodes: practical and economic considerations, 4611
Production of porous nickel electrodes for gas-tight batteries, 4604
Selected articles (Effects of ultrasonics), 4689 (AD-655021)
Self-discharge of a nickel oxide electrode, 4417
Sintered nickel matrix cathode (Performance), 4734
Strain electrometry and corrosion. IV (Film properties and strain potential), 4730

CATHODES/NICKEL-ZINC BATTERIES
Activation of nickel battery plates (Patent; electrolytic process), 3871
Activation of nickel battery plates (Patent; electrolytic process), 3557
Active mass of the nickel oxide electrode for an alkaline storage battery (Patent; preparation), 4354
Active substance for the nickel oxide electrode of an alkaline storage battery (Patent; preparation of active material), 4355
Analysis of charge-discharge characteristics of nickel oxide electrodes by infrared spectroscopy, 4606
Applications of nickel. Annual report (Ni production and consumption; possibility for substitutions in event of shortage), 3037 (AD-846999)
Battery electrode support (Patent), 3589
Battery electrode supports (Patent), 3590
Behavior of nickel oxide electrodes of alkaline cells in concentrated solutions of nickel salts, 4387
Cathodes for alkaline batteries (Patent), 3926
Characteristics in charged or discharged condition of pressed-type nickel positive electrodes made by using polystyrene as a binder (Comparison with polyethylene), 4053
Charge, discharge, and self-discharge characteristics of thin film nickel oxide electrodes, 2905 (AD-671685)
Coated nickel electrodes (Preparation by anodization of an active form of Ni), 4419
Commutator bar-free nickel oxide electrode for an alkaline nickel-zinc battery (Patent), 3508
Determination of carbonate impurities in nickel hydroxide, 4069
Development and fabrication of large vented nickel-zinc cells. Final report (300 Ah), 712 (N-76-28642)
Effect of the increase of porosity on the current distribution in nickel hydroxide electrodes containing Raney nickel, 4001
Effect of lithium hydroxide additions on the electrochemical behavior of nickel(II) hydroxide thin-layer electrodes, 4101
Effect of cobalt on the characteristics of lamellar structure nickel oxide electrodes operating in a zincate electrolyte, 4285 (AD/A-005060)
Electrochemical processes on nickel oxide, 2902 (AD-667607)
Electrochemical precipitation of $Ni(OH)_2$ into porous electrodes, 4559
Electrochemical properties of nickel hydroxide electrodes, 4363
Electrodes for alkaline batteries (Patent; preparation), 3613
Electrophoretic method of preparation of electrodes from nickel(II) hydroxide, 3780
Forming process in nickel positive electrodes, 4622
Information about nickel hydroxide electrode (Chemical reactions), 4571
Infrared spectroscopic study of the properties of a nickel oxide electrode. I. Effect of charging conditions on the ir spectra of a nickel oxide electrode in charged and discharged states, 4092
Investigation toward the development of carbonyl nickel powder suitable for the manufacture of sintered nickel plaques for use in alkaline storage batteries, 2873 (AD-622916)
Manufacture of a dry-charged nickel oxide electrode by chemical oxidation ($KOH--K_2S_2O_8$ solution), 4083
Method for making nickel and cadmium electrodes for batteries (Patent), 3375
Method for making a nickel positive electrode for an alkaline battery (Patent; suspension of nickel hydroxide, cobalt hydroxide, and graphite entrained in polyvinylidene fluoride binder), 3353
Method of manufacturing positive nickel hydroxide electrodes (Patent), 3473
Method to produce a protective oxide on the surface of positive nickel electrodes for galvanic cells (Patent), 3428
Methods for determining the structural and stoichiometric changes of $Ni(OH)_2$ electrodes during polarization in alkaline electrolyte, 4565
Modulation-spectroscopic investigations on nickel electrodes (Structure of semiconducting passive layers) 4360
Nickel cathode for alkaline batteries (Patent), 3705
Nickel cathodes for alkaline cells (Patent; fabrication),

3708
Nickel cathodes for alkaline batteries (Patent), 3598
Nickel electrodes for alkali batteries (Patent; preparation), 3902
Nickel electrodes for alkaline batteries (Patent), 3704
Nickel electrodes for alkaline cells (Patent), 3663
Nickel electrode for alkaline batteries (Patent; preparation by polarizing Ni sponge in aqueous metal nitrate solution), 3619
Nickel electrode for an alkaline battery (Patent; fabrication), 4327
Nickel hydroxide electrode (Chemical preparation;patent), 3680
Nickel hydroxide cathodes for storage batteries (Patent; fabrication), 3755
Nickel hydroxide cathodes for storage batteries (Patent; fabrication), 3756
Nickel hydroxide electrode research. Interim technical report No. 1, 1 January 1969-2 February 1970 (Effects of cation additions to active material), 3056 (AD-866147)
Nickel hydroxide electrode (Patent), 4334
Nickel or cadmium electrodes for alkaline cells (Patent; chemical preparation), 3588
Novel nickel electrode for electric vehicles, 3168 (CONF-711166-)
Oxidation of powder-metallurgical electrodes by potassium hypochlorite, 4076
Oxidation of hydrogen on a porous nickel electrode, 2860 (AD-612497)
Oxidation of sintered nickel bases with ozone (Chemical preparation), 4434
Polarization studies on sintered plate electrodes containing various amounts of $Ni(OH)_2$, 4579
Porous nickel plates for electrodes (Method for fabrication), 3965
Porous nickel alkaline-battery electrodes made from woven cotton cloth (Fabrication and testing, porous structure derived from woven cotton cloth), 4349
Porous nickel for alkaline battery and fuel cell electrodes: production by roll-compaction (Roll-compaction of carbonyl nickel powders), 4506
Potassium distribution in nickel oxide electrodes, 4577
Powder-metallurgy electrode of an alkaline storage battery (Patent), 3853
Production of porous membranes for batteries and fuel cells, 4620
Production of porous nickel for alkaline-battery and fuel-cell electrodes: practical and economic considerations, 4611
Production of porous nickel electrodes for gas-tight batteries, 4604
Products of oxidation of nickel with ozone (Chemical preparation of nickel oxide electrode active mass), 4436
Protective coatings on positive nickel electrodes (Patent), 4170
Rational degree of filling of pores of powder-metallurgical nickel oxide electrode by the active media, 4118
Relations of the structural characteristics of the powder metallurgical nickel oxide electrode, 4063
Removal of nitrates from sintered nickel storage-battery plaques impregnated with nickel salts (Patent), 4247
Sealed type alkaline storage battery (Patent; improved Ni hydroxide cathode containing $Ba(OH)_2$), 3565
Selected articles (Effects of ultrasonics), 4689 (AD-655021)
Self-discharge of nickel oxide electrodes, 4213
Self-discharge mechanism of a powder-metallurgy nickel oxide electrode in concentrated potassium hydroxide solutions, 4135
Self-discharge of a nickel oxide electrode, 4417
Sintered nickel matrix cathode (Performance), 4734
Sintered type alkaline storage battery. XV. Effect of lithium ion on the formation of active material from nickel plaque at various temperatures, 4087
Stable nickel oxyhydroxide (NiOOH) (Patent; chemical preparation), 3499
Storage of charged nickel hydroxide electrodes, 3072 (AD-891776)
Structure of a double electric layer and features of the electrode processes on a sodium nickelate single crystal, 4136
Study of electrodes and electrode reactions. II. The relation of the energy necessary to remove an oxygen molecule from charged nickel oxide electrodes in vacua and solutions of potassium hydroxide, 2876 (AD-627216)
Study of electrodes and electrode reactions. I. The energy necessary to remove an oxygen molecule from a charged nickel oxide electrode in a vacuum, 2877 (AD-627248)
Thermal decomposition of nickel ammine complexes for producing the positive active mass in sintered electrodes (Fabrication), 4350
Thermogalvanic potentials. II. Nickel in neutral subgate solution, 4769
Use of hydrogen-absorbing electrode in alkaline battery (For protection against electrochemical damage due to battery reversal; patent), 3386
Use of stereometric metallography for determination of structural characteristics of porous nickel bodies for alkaline storage cell plates, 4463

CATHODES/PRIMARY BATTERIES

Discharge characteristic and performance of lithium-silver tungstate and lithium-silver molybdate organic solvent batteries, 2144
Experimental optimization of $Li/SOCl_2$ primary cells with respect to the electrolyte and the cathode compositions, 3393
Role of porosity in the modern technology of batteries, 4376
Sodium-water primary cell with a rotating cathode, 851

CATHODES/SILVER-CADMIUM BATTERIES

Active material electrode and cell comprising improved battery-grade divalent silver oxide (Patent; additive of Hg, Se, Te, or Hg combined with Pb or Sn), 4243
Additive for an alkaline battery using divalent silver oxide positive active material (Patent), 3865
Analysis of porous electrodes with sparingly soluble reactants. III. Short time transients, 3390
Analysis of porous electrodes with sparingly soluble reactants. IV. Application to particulate bed electrode: Ag/AgCl system, 3391
Anodic behavior of silver in alkaline solutions, 3525
Cathode for a silver battery (Patent), 3628
Coulogravimetric study of sintered silver electrode in 1 molar potassium hydroxide (Slope changes in weight change/Coulomb curves), 4548
Crystallographic changes during oxidation (charging) of the silver electrode. Part I. Initial oxidation of an industrial sintered plaque, 2903 (AD-671050)
Crystallographic changes during oxidation (charging) of the silver electrode. Part II. Oxidation following five charge-discharge cycles at a low rate, 2909 (AD-671771)
Cycling characteristics of silver electrode in alkaline solutions, 4596
Decomposition of silver oxide in alkaline solutions. Technical report No. 2 (Aqueous KOH), 2851 (AD-603306)
Decomposition of AgO in alkaline solutions, 4456
Effect of the substrate on the anodic behavior of silver oxide electrode, 4110
Effect of zincate ions on the course of cathodic processes on the silver oxide electrode, 4111
Effect of the discharge temperature on operational and structural characteristics of a silver oxide electrode (-10 to +90°), 4430
Effect of the charge time on the life of a silver battery electrode, 4433
Electrolytic cell for x-ray diffraction studies of electrode phenomena, 2852 (AD-605707)
Feasibility of microscopy for investigating the silver oxide electrode, 2900 (AD-664993)
Hermetically-sealed nickel-cadmium and silver-cadmium storage batteries, 4685
Increase and stabilization of silver electrode capacity, 4410
Influence of sinter temperature on capacity of silver electrodes, 4556
Interaction of a silver oxide electrode with a regenerated cellulose separator film in silver-cadmium storage batteries, 3845
Investigation of interaction between silver oxide electrode and hydrated cellulose film separator in silver-cadmium accumulators, 3546
Kinetics of oxygen liberation at a silver oxide electrode, 3803
Life capability of the silver electrode in alkaline electrochemical cells ($Ag-H_2$), 3235 (N-76-28648)
Low temperature cycling behavior of the silver electrode. Technical report No. 3, 2854 (AD-609876)
Maintenance-free silver-cadmium batteries for aircraft emergency applications. Quarterly progress report No. 1, Jun-30 Sep 1965, 2821 (AD-473358)
Microstructure of sintered silver electrodes. I and II (Higher electrode capacity maintained at higher current densities), 4460
Optimization of charging conditions of storage battery silver electrode and calculation of capacity loss during continuous use, 3805
Oxides on the silver electrode. Part 2. X-ray diffraction studies of the working silver electrode. Final report, 2862 (AD-614058)
Preparation and electrochemical properties of dislocation-free (100) faces of monocrystal silver electrodes, 4544
Processes at the silver oxide electrode of an alkali current source (State-of-the-art review (1975)), 3798
Production of dry process divalent silver oxide electrodes by continuous rolling. Quarterly report No. 9, December 1969-February 1970, 3061 (AD-878841)
Reaction of the silver electrode with the regenerated cellulose film in charged silver--cadmium batteries, 2313
Reduction of the silver oxide electrode in CsOH solutions (Comparison with KOH), 4003
Reduction of the capacity of silver electrodes operating in forced discharge systems, 4438
Relating structural variables of porous electrodes (Method gives specific surface area), 1089
Reproducible and stable silver-silver oxide electrode, 4744
Review of fundamental investigations of silver oxide electrodes, 2831 (AD-478632)
Scanning electron-microscopy studies of silver oxide

electrodes, 4093
Scanning electron microscope investigations on silver oxide electrodes (Morphological changes in sintered powder metallurgy electrodes due to oxidation during cycling), 4024
Scanning electron microscope investigations on silver oxide electrodes, 4025
Sealed silver oxide storage battery (Patent; Ag/Zn yielded 400 mAh/g), 3673
Self-discharge kinetics of silver oxide electrodes in alkaline batteries, 4078
Silver electrodes for chemical sources of electric power (Patent), 3942
Silver electrode for battery (Patent; fabrication), 3914
Silver oxide battery electrode (Patent; preparation by electrochemical oxidation of Ag powder), 3739
Silver oxide electrode (Electrochemistry), 4725
Silver/silver-oxide electrode. II. Influence of a superimposed sinusoidal potential on the anodising of silver, 3839
Silver/silver-oxide electrode. III. Anodising of silver with asymmetric sinusoidal current, 3840
Stabilization of the capacity of a silver--cadmium battery during prolonged cycling by adding magnesium oxide to the silver electrode, 2232
Strain electrometry and corrosion. IV (Film properties and strain potential), 4730
Studies on the stability of oxides of silver, 2875 (AD-626229)
Studies on silver oxide. I. Analytical techniques. II. Thermal decomposition of AgO. III. Charging efficiency studies, 2993 (AD-806861)
Studies on the silver/silver oxide electrode, 3837
Study of the discharge of porous $Ag/Ag_2O$ electrodes in concentrated potassium hydroxide electrolyte. Doctoral thesis, 2941 (AD-732349)
Study of the silver(I) oxide-silver(II) oxide electrode, 4732
Trends in usage of silver. Annual report, 3023 (AD-832582)
Use of a hydrovibroabrasive erosion method to study the surface strength of silver oxide electrodes of chemical current sources, 4081
Use of hydrogen-absorbing electrode in alkaline battery (For protection against electrochemical damage due to battery reversal; patent), 3386

CATHODES/SILVER-ZINC BATTERIES
Active material electrode and cell comprising improved battery-grade divalent silver oxide (Patent; additive of Hg, Se, Te, or Hg combined with Pb or Sn), 4243
Additive for an alkaline battery using divalent silver oxide positive active material (Patent), 3865
Alkaline battery cathode (Patent; Zn amalgam/KOH/$Ag_2O$), 3759
Analysis of porous electrodes with sparingly soluble reactants. III. Short time transients, 3390
Analysis of porous electrodes with sparingly soluble reactants. IV. Application to particulate bed electrode: Ag/AgCl system, 3391
Anodic behavior of silver in alkaline solutions, 3525
Cathode for a silver battery (Patent), 3628
Changes in microstructure of sintered silver electrode after repeated cycling at low current, 4483
Changing the discharge capacity of a silver oxide electrode by charging with periodically interrupted current, 2889 (AD-644616)
Controlled potential reactions of cadmium and silver in alkaline solution, 2645
Coulogravimetric study of sintered silver electrode in 1 molar potassium hydroxide (Slope changes in weight change/Coulomb curves), 4548
Crystallographic changes during oxidation (charging) of the silver electrode. Part I. Initial oxidation of an industrial sintered plaque, 2903 (AD-671050)
Crystallographic changes during oxidation (charging) of the silver electrode. Part II. Oxidation following five charge-discharge cycles at a low rate, 2909 (AD-671771)
Cycling characteristics of silver electrode in alkaline solutions, 4596
Decomposition of silver oxide in alkaline solutions. Technical report No. 2 (Aqueous KOH), 2851 (AD-603306)
Decomposition of AgO in alkaline solutions, 4456
Dry process electrodes for Zn--AgO batteries (Fabrication and properties), 4630
Dry process divalent silver oxide electrodes (Mechanical strength of dry process electrodes), 2882 (AD-640053)
Dry process divalent silver oxide electrodes (Fabrication method), 2872 (AD-622698)
Effect of the substrate on the anodic behavior of silver oxide electrode, 4110
Effect of zincate ions on the course of cathodic processes on the silver oxide electrode, 4111
Effect of the discharge temperature on operational and structural characteristics of a silver oxide electrode (-10 to +90°), 4430
Effect of the charge time on the life of a silver battery electrode, 4433
Effects of constant-current reversals during charge of the silver oxide electrode, 1758 (AD-670733)
Electrolytic cell for x-ray diffraction studies of electrode phenomena, 2852 (AD-605707)
Feasibility of microscopy for investigating the silver oxide electrode, 2900 (AD-664993)
High energy batteries. Final report, 472 (AD-823304)
Increase and stabilization of silver electrode capacity, 4410
Increasing the discharge capacity of a silver oxide electrode by charging with 60-cycle asymmetric ac, 1756 (AD-663551)
Influence of sinter temperature on capacity of silver electrodes, 4556
Investigation of the transport and reaction process occurring within silver oxide-zinc batteries. Quarterly technical progress report No. 2, 1 Apr-1 Jul 1965, 2809 (AD-466909)
Investigation of the transport and reaction process occurring within silver oxide-zinc batteries. Quarterly technical progress report No. 3, 1 Jul-1 Oct 1965, 2820 (AD-472627)
Kinetics of decomposition of the active material in silver oxide electrodes of chemical sources of current, 4346
Laboratory investigation and engineering design leading towards the development of a lightweight secondary or primary cell type battery for one-shot application. Quarterly report No. 2, 281 (AD-471972)
Laboratory investigation and engineering design leading towards the development of a lightweight secondary or primary cell type battery for one-shot application. Quarterly report No. 7, 31 May-31 Aug 1949 (Cd/Pb oxides), 284 (AD-471979)
Life capability of the silver electrode in alkaline electrochemical cells ($Ag-H_2$), 3235 (N-76-28648)
Method for the quantitative analysis of the silver oxide cathode. Final report, 2866 (AD-618479)
Method of manufacturing positive electrodes for silver-zinc batteries, 4617 (AD-620123)
Microstructure of sintered silver electrodes. IV. Formation of AgO during charges (KOH electrolyte), 2938 (AD-728894)
Microstructure of sintered silver electrodes. I and II (Higher electrode capacity maintained at higher current densities), 4460
Optimization of charging conditions of storage battery silver electrode and calculation of capacity loss during continuous use, 3805
Oxides on the silver electrode. Part 2. X-ray diffraction studies of the working silver electrode. Final report, 2862 (AD-614058)
Preparation and electrochemical properties of dislocation-free (100) faces of monocrystal silver electrodes, 4544
Processes at the silver oxide electrode of an alkali current source (State-of-the-art review (1975)), 3798
Production of a silver--silver oxide electrode for the silver--zinc storage battery (Patent), 3999
Production of dry process divalent silver oxide electrodes by continuous rolling. Quarterly report No. 9, December 1969-February 1970, 3061 (AD-878841)
Production of positive plates for silver oxide-zinc batteries, 4665
Reduction of the silver oxide electrode in CsOH solutions (Comparison with KOH), 4003
Reduction of the capacity of silver electrodes operating in forced discharge systems, 4438
Relating structural variables of porous electrodes (Method gives specific surface area), 1089
Reproducible and stable silver-silver oxide electrode, 4744
Review of fundamental investigations of silver oxide electrodes, 2831 (AD-478632)
Scanning electron-microscopy studies of silver oxide electrodes, 4093
Scanning electron microscope investigations on silver oxide electrodes (Morphological changes in sintered powder metallurgy electrodes due to oxidation during cycling), 4024
Scanning electron microscope investigations on silver oxide electrodes, 4025
Sealed silver oxide storage battery (Patent; Ag/Zn yielded 400 mAh/g), 3673
Silver electrodes for chemical sources of electric power (Patent), 3942
Silver electrode for battery (Patent; fabrication), 3914
Silver migration and transport mechanism studies in silver oxide-zinc batteries. Quarterly technical progress report No. 1, 1 Dec 1963-1 Mar 1964, 2789 (AD-432346)
Silver oxide battery electrode (Patent; preparation by electrochemical oxidation of Ag powder), 3739
Silver oxide cell (Patent; amorphous C added to cathodes to eliminate second voltage level), 951
Silver oxide electrode (Electrochemistry), 4725
Silver/silver-oxide electrode. II. Influence of a superimposed sinusoidal potential on the anodising of silver, 3839
Silver/silver-oxide electrode. III. Anodising of silver with asymmetric sinusoidal current, 3840
Silver-zinc cells with electrolytically deposited calcium hydroxide separators (Separation deposited on cathode; performance), 4532
Studies on the stability of oxides of silver, 2875 (AD-626229)
Studies on silver oxide. I. Analytical techniques. II. Thermal decomposition of AgO. III. Charging

efficiency studies, 2993 (AD-806861)
Studies on the silver/silver oxide electrode, 3837
Study of the discharge of porous $Ag/Ag_2O$ electrodes in concentrated potassium hydroxide electrolyte. Doctoral thesis, 2941 (AD-732349)
Study of the silver(I) oxide-silver(II) oxide electrode, 4732
Trends in usage of silver. Annual report, 3023 (AD-832582)
Use of a hydrovibroabrasive erosion method to study the surface strength of silver oxide electrodes of chemical current sources, 4081
Use of hydrogen-absorbing electrode in alkaline battery (For protection against electrochemical damage due to battery reversal; patent), 3386
CATHODES/SODIUM-SULFUR BATTERIES
Alkali metal/sulfur cell with gas fuel cell electrode (Patent), 937
Alkali metal, sulfur battery or cell with single phase sulfur electrode (Patent; additive to cathodic reactant to improve charge/discharge capacity), 3338
Anodic evolution of sulphur from sodium polysulphide melts. I. Voltammetric measurements on planar carbon electrodes, 2142
Cathode cell casing portion, a cell casing, and a hermetically sealed sodium-sulfur cell (Patent), 3427
Ceramics in advanced batteries, 3170 (CONF-751194-)
Ceramics in the sodium-sulfur battery (Properties, requirements, fabrication, performance), 3172 (CONF-751194-)
Development program for solid electrolyte batteries. Final report, 1 January 1973-30 June 1974, 672 (EPRI-127-1)
Development of a compact, high-capacity $FeS_2$ electrode, 4139
Distribution of potential and electrochemical reaction rate in molten polysulphide electrodes, 4016
Electrical conductivity increasing agent for positive electrode mix of sodium--sulfur fuel cells (Patent; C cloth of 1.2 percent graphitization, 300 W/kg), 3753
Engineering evaluation of solid transition-metal sulfide electrodes for use in high energy-density batteries, 3191 (LBL-5186)
Engineering evaluation of solid transition-metal sulfide electrodes for use in high energy-density batteries, 3465
Improvements of electrolyte and seal technology for sodium-sulfur and sodium antimony trichloride load leveling batteries. Final report, 3187 (EPRI-EM-413(6-77))
Metallic sulfide additives for positive electrode material within a secondary electrochemical cell (Patent; Fe sulfide electrode with sulfide additives of Co, Ni, Cu, Ce, Mn), 3366
Review of the kinetics of the sulfur electrode in molten sodium polysulfide, 3155 (ANL-76-8)
Secondary battery or cell with dual electrode (Patent; alkali metal/S, usually Na/S), 842
Secondary battery with separate charge and discharge zones (Patent; alkali metal/sulfur), 832
Secondary battery or cell (Patent; additive to cathodic reactant to improve charge/discharge capacity), 3337
Sodium--sulfur storage battery (Patent), 3616
Sodium sulphur cells (Carbon tube with solid metal core and liquid metal interface; patent), 3380
Sulfur-sulfide electrode in molten salts. I. Chronopotentiometric behavior in lithium chloride-potassium chloride eutectic, 3482
Transient response of the sulfur/polysulfide electrode based on a varying concentration model, 3328
CATHODES/ZINC-AIR BATTERIES
Air electrodes for mechanically rechargeable zinc-air batteries, 4408
Air electrode (Patent; preparation), 3595
Carbon-air electrode for metal-air batteries and fuel cells (Ag impregnated activated carbon on nickel plated iron screen), 4223
Carbon-based oxygen electrodes for metal-air batteries. II. Operation in bicells with magnesium or zinc anodes (Mechanically rechargeable over 25 times), 1905 (AD-890113)
Carbon-based oxygen electrodes for metal-air batteries. I. Experimental electrodes, 3071 (AD-887653)
Cathode for the reduction of oxygen and a rechargeable cell comprising said cathode (Patent), 3684
Cathode for a zinc--air battery with forced circulation (Fabrication of electrode containing carbon black, Ag-containing activated carbon, and poly (tetrafluoroethylene)), 3882
Charge-discharge cycling of DREO air electrodes (Sintered Ni surface containing Ag, Hg, and teflon), 3122 (AD-A-016721)
Development and test of zinc air batteries for motor vehicles, 4146
Effect of the inert component on mass transfer in the gas phase of a porous electrode. II. Oxygen electrode (C hydrophobized electrode), 3819
Electrodes for zinc--air batteries (Cathodes with unmetallized C and effect on Zn anode of peroxide generated by cathodes), 4530
Electrodes including mixed transition metal oxides (Patent), 3539
Fuel cell electrode (Patent), 4028
Fuel cells, 4131
Fuel cells with liquid fuel. I. Oxygen electrode (Structure, electrochemical properties, preparation), 4144
Gas diffusion of electrodes for air cells (Patent), 3690
Gas diffusion electrode for a battery (Patent), 3382
Gas electrodes for electrochemical cells (Patent; fabrication), 3878
Influence of certain additives to activated carbon on its properties as hydrogen electrode material, 4644
Low-cost oxygen electrodes. Research and development technical report, 2932 (AD-715707)
Low temperature electrochemical system. Semiannual technical report No. 1, 1 Jul-31 Dec 1971 (Factors influencing performance of air electrode), 2950 (AD-742720)
Low temperature electrochemical systems. Annual technical report No. 1, 1 Jul 1971-30 Jun 1972 (Study of air cathode behavior at low temperatures), 2961 (AD-749270)
Low temperature electrochemical systems. Final report, 2972 (AD-773053)
Metal/air cells and air cathodes for use therein (Patent) 3477
Method of manufacturing fuel cell electrodes (Patent; silver oxide and activated carbon catalyst), 3475
Oxygen electrode based on sintered nickel plaque impregnated with manganese dioxide, 3087 (AD-906063)
Oxygen electrodes (Patent; 2-phase La--Sr cobaltites, fabrication), 3763
Oxygen electrode. I (Isotopic investigation of electrode mechanisms), 4731
Porous oxygen or air electrode for use in zinc--air batteries, 3078 (AD-901918L)
Properties, construction, and technical applications of oxygen-diffusion electrodes, 4545
Quinones as rechargeable and regenerable battery cathode and materials, 4368
Semiconductor electrode depolarizer (Patent; Ag--CuO electrode), 3543
Use of palladium-catalyzed air cathodes in a secondary zinc-air cell, 4252
Use of palladium-catalyzed air cathodes in a secondary zinc-air cell (Degradation study), 2394
Zinc--air cell with neutral electrolyte (Behavior of air cathode and Zn anode), 4152
Zinc-air batteries (Air electrode preparation), 2494
Zinc/air or zinc/oxygen cells (Patent; improved aging by enclosing cathode in sheath), 4176
CATHODES/ZINC-CHLORINE BATTERIES
Chlorine electrodes in the zinc--chlorine battery system (50 V, 1 kWh), 4208
Engineering design and cost analysis of chlorine storage concepts for a zinc-chlorine load-leveling battery. Final report, 737 (PB-262016)
Halogen storage by means of hydrates; patent, 3451
Impurity effects in high current density $Cl_2$ electrodes, 4541
Influence of certain additives to activated carbon on its properties as hydrogen electrode material, 4644
New reversible chlorine electrode (Employs certain properties of iodine), 4792
CATHODES/ZINC-MANGANESE BATTERIES
Alkaline manganese battery (Patent), 3614
Alkaline manganese dioxide electrode. I (Kinetics of cathodic reduction processes), 4546
Anodic oxidation of manganese oxides in alkaline electrolytes, 4515
Application of intermittent discharges to electrochemical determination of depolarizing capacity of manganese dioxide, 4663
Cathodic reduction of manganese dioxide in alkaline electrolyte, 4652
Cathodic reduction of manganese dioxide in alkaline electrolyte, 4719
Change of potential of manganese dioxide electrodes on standing, 4745
Current distribution in porous manganese dioxide electrodes, 4668
Effect of heat treatment of various kinds of manganese dioxide on their adsorption and depolarization properties, 4662
Electric conductivity of Braunstein powder under compression, 4044
Electrochemistry of manganese dioxide and production and properties of electrolytic manganese dioxide (EMD), 4109
Electrochemistry of $\beta$-$MnO_2$ and $\gamma$-$MnO_2$ in alkaline electrolyte, 3838
Electrode kinetics of manganese dioxide electrodes in alkaline solution, 2515
Electrode potentials and related properties of some potassium-containing $\alpha$-manganese dioxides, 4423
Electrolytic synthesis of battery-grade manganese dioxide, 4677
Extraction of battery-grade manganese dioxide from low-grade manganese ores, 4187
Influence of active surface on cathodic reduction of $MnO_2$, 4686
Ion-exchange property of manganese dioxide, 4721
Manganese dioxide electrode in alkaline electrolyte-electron-proton mechanism for discharge process from $MnO_2$ to $MnO_{1.5}$, 4570

Manganese dioxide electrode. III. Relationship between activities and stoichiometry for compositions near to $MnO_2$, 3425
Manganese dioxide electrode at potentials at and close to the open circuit potential of the electrode, 3940
Molybdenum trioxide doped manganese dioxide electrode. I and II, 3414
Overpotential of manganese dioxide electrode. II, 4741
Polarization of manganese dioxide electrode, 4683
Pore dimensions and surface capacity of manganese dioxide, 4698
Potential of manganese dioxide electrode and surface composition of oxide (Effect of heating), 4729
Rechargeability of manganese dioxide electrode (KOH solution), 4510
Relation of conditions of electrodeposition of manganese dioxide to discharge characteristics (Influence of temperature, current density, and impurities in preparation of electrodeposited electrodes), 4735
Reversibility on charge and discharge of manganese dioxide electrode in alkaline electrolyte, 2445
Use of hydrogen-absorbing electrode in alkaline battery (For protection against electrochemical damage due to battery reversal; patent), 3386
Zinc-container electrode (Patent; design and performance), 3667
CELLS (ELECTROLYTIC)
See ELECTROLYTIC CELLS
CERAMICS/CHEMICAL PREPARATION
Basic research on ceramic materials for energy storage and conversion systems. Progress report, April 1, 1975-November 30, 1975, 667 (COO-2564-1)
CERAMICS/SINTERING
Research on electrodes and electrolyte for the Ford sodium-sulfur battery. Quarterly report covering the period January 1, 1974 to March 31, 19754, 723 (PB-234561)
Research on electrodes and electrolyte for the Ford sodium-sulfur battery. Quarterly report covering the period January 1, 1974 to March 31, 19754, 3252 (PB-234561)
CESIUM IODIDES/ELECTRICAL PROPERTIES
Basic research on ceramic materials for energy storage and conversion systems. Progress report, December 1, 1975-November 30, 1976, 3182 (COO-2564-2)
CHEMISTRY
See also PHYSICAL CHEMISTRY
CHEMISTRY/RESEARCH PROGRAMS
Independent research, 1975. Final report (Naval Surface Weapons Center, Silver Spring, Md.), 69 (AD-A-015337)
CHLORANIL/REDOX POTENTIAL
Evaluation of organic battery electrodes: voltammetric study of the redox behavior of solid quinones, 4231
CHROMATES/CHEMICAL PREPARATION
Synthesis of calcium chromate (For thermal batteries), 81 (GEPP-226)
CHROMATES/PHASE DIAGRAMS
Phase diagram of system LiCl-KCl-$CaCrO_4$, 4447
CHROMATES/SURFACE PROPERTIES
Surface analysis of pyrotechnic material, 3190 (GEPP-324)
COAL
See also COAL GASIFICATION
COAL LIQUEFACTION
COAL/TRANSPORT
Battery vehicle fleet demands careful maintenance, 5037
COAL GASIFICATION
IEEE Power Engineering Society papers. Energy development, 156
COAL GASIFICATION/MEETINGS
Workshop proceedings on ceramics for energy applications, 77 (CONF-751194-)
COAL GASIFICATION PLANTS/WASTE WATER
168th national meeting of the American Chemical Society, Fuel Chemistry Division, Atlantic City, New Jersey, September 8-13, 1974. Volume 19, No. 5, 1266
COAL LIQUEFACTION/MEETINGS
Workshop proceedings on ceramics for energy applications, 77 (CONF-751194-)
COAL MINES/ELECTRIC RAILWAYS
Preliminary investigations of storage-battery locomotives: specifications, laboratory tests, permissible schedule, 4863 (BM-TP-264)
COAL MINES/ELECTRIC-POWERED VEHICLES
Battery vehicle fleet demands careful maintenance, 5037
COAL MINES/SAFETY
Development and safety of the storage-battery locomotive, 4861 (BM-IC-6068)
COAL MINES/TRANSPORTATION SYSTEMS
Portable electricity, prime mover underground, 4872 (CONF-691143-)
Trolley-wire-operated underground locomotive with manual and remote control, including fully automatic control and speed regulation, 5070
COBALT/CORROSION
Electrode passivation studies. Quarterly report No. 2, 1 Mar-31 May 1966, 2838 (AD-484216)
COBALT ALLOYS/SORPTIVE PROPERTIES
Absorption and desorption rates of $H_2$ and $D_2$ for $LaNi_5$, $LaCo_5$, $LaNi_2Co_3$, and FeTi. Interim report, 3143 (AD-A-039518)
COBALT OXIDES/CHEMICAL PREPARATION
Electrodes including mixed transition metal oxides (Patent), 3539
COBALT OXIDES/CRYSTAL STRUCTURE
Reduction of oxtgen on nickel-cobalt oxides. II. Correlation between crystal structure and activity of $Co_2NiO_4$ and related oxides, 4141
COBALT OXIDES/FABRICATION
Reduction of oxygen on nickel-cobalt oxides. I. The influence of composition and preparation method on the activity of nickel-cobalt oxides, 4142
COKE/USES
Pollution-free electrochemical power generation from low grade coal (Pb/air battery with PbO reduced by coke), 3250 (PB-228006/3)
COLLIERIES
See COAL MINES
COMMUNICATIONS/ELECTRIC BATTERIES
Modern cells and batteries used in communications equipment, 2713
COMMUNICATIONS/LEAD-ACID BATTERIES
Improved telephone battery, 4782
COMMUNICATIONS/POWER SUPPLIES
Power sources for compact communications and electronic equipment, 1593
Present solutions and future prospects for the power supply of self-contained telecommunication stations, 871
COMPRESSED AIR/ENERGY STORAGE
Economic competitiveness of new 'superbatteries' vs pumped hydro, compressed air, and thermal energy storage, 2146
COMPUTER CODES
Method for calculating the conductivity of simulated silver chloride-magnesium battery electrolytes (sea water-$MgCl_2$ solutions), 3052 (AD-860591)
COMPUTER CODES/P CODES
Facility simulation model for advanced BMD systems. Volume IVC. Power module: program listing. Final report (POWERM, in FORTRAN), 2008 (AD-A-011231)
COMPUTERS/ELECTRIC BATTERIES
Operation and service manual for ACPU EFC charger/tester 52E270071, 3048 (AD-857173)
COMPUTERS/SECURITY
RANN utilization experience (case studies 22 through 31). Final report, 738 (PB-263682)
CONNECTORS/STANDARDS
Charging plugs-and-sockets for electric battery vehicles (50 and 150 A), 4805
CONSOLES/ELECTRIC BATTERIES
Battery power supply console assembly, part No. 1593449-501. Operation and service manual, 1711 (AD-488954)
COPPER/CHEMICAL REACTIONS
Effects of mercury on the surfaces of polycrystalline copper, tin and zinc, 4194
COPPER/CORROSION
Electrode passivation studies. Quarterly report No. 2, 1 Mar-31 May 1966, 2838 (AD-484216)
COPPER/OXIDATION
Oxidation of copper-containing films at room temperature, 3307
COPPER ALLOYS/CORROSION
Effect of copper on anodic corrosion rate in $H_2SO_4$, mechanical properties, and fluidity of lead and lead antimony alloys, 4236
COPPER ALLOYS/MECHANICAL PROPERTIES
Effect of copper on anodic corrosion rate in $H_2SO_4$, mechanical properties, and fluidity of lead and lead antimony alloys, 4236
COPPER FLUORIDES/SOLUBILITY
Composition of nonaqueous solutions of potential use in high energy density batteries. Final report, 15 Nov 1969-14 Nov 1972 (Solubility equilibria of $CuF_2$, $NiF_2$, $ZnF_2$, $CdF_2$, $AgF_2$), 432 (AD-763140)
COPPER OXIDES/CHEMICAL PREPARATION
Electrodes including mixed transition metal oxides (Patent), 3539
COPPER SULFATES/ELECTRIC CONDUCTIVITY
Measurement of the conductivity of copper sulfate solutions. Energy storage and dissipation notes: Note 4 (Graph of dilution required for certain resistivity value), 3246 (NP-21315)
CORROSION/MEETINGS
Energy workshop on electrochemistry. A report on discussion of energy-related basic research in electrochemistry, June 27-28, 1974. Final report, 119 (PB-240132)
CORROSION PRODUCTS/ELECTRON MICROSCOPY
Corrosion of lead alloys at high anodic potentials, 3434
CORROSION PRODUCTS/OPTICAL MICROSCOPY
Corrosion of lead alloys at high anodic potentials, 3434
CORROSION PRODUCTS/X-RAY DIFFRACTION
Corrosion of lead alloys at high anodic potentials, 3434
COW-MILKERS
See RADIOISOTOPE GENERATORS
CRANES/BATTERY CHARGERS
Circuit arrangement facilitates use of charger, 4699
CRYOGENICS/RESEARCH PROGRAMS

See ION EXCHANGE MATERIALS
DENSIMETERS/DESIGN
Apparatus for determining the density of electrolyte in lead storage batteries (Patent), 3922
Densimeter for liquids especially battery electrolytes (Patent), 3982
Measuring acid density in storage batteries (Patent), 3500
DESALINATION/ECONOMICS
Transactions of the Seventh World Energy Conference, Moscow, 1968. Volume 13. Section C4. New Sources and methods of producing electricity, 208
DETONATORS/POWER SUPPLIES
Power supplies for ordnance fuzing, 4840 (AD-780028)
DEUTERIUM/ISOTOPE EFFECTS
Manganese dioxide electrode in alkaline electrolyte-electron-proton mechanism for discharge process from $MnO_2$ to $MnO_{1.5}$ (Polarization of $MnO_2$ electrode in KOH prepared with $D_2O$ vs $H_2O$), 4570
DIESEL ENGINES/BATTERY CHARGERS
Circuit arrangement facilitates use of charger, 4699
DIESEL ENGINES/COMPARATIVE EVALUATIONS
Critical considerations of integrating electricity driven commercial vehicles with city traffic (Economics of various energy sources), 5154
Railway electrification: prospective consumer of central station power, 5370
DIESEL ENGINES/ECONOMICS
Mining: underground transportation. Comparison of battery and diesel locomotives, 5326
DIESEL ENGINES/ELECTRIC BATTERIES
Application and use of storage battery in Diesel-electric locomotives, 2752
Batteries in Diesel service, 2751
Charging 112-volt Diesel batteries, 4773
Maintaining batteries for maximum service, 2671
Maintenance of Diesel locomotive starting batteries, 2541
Starting requirements of diesel engines on locomotives, 1606
Storage batteries in marine service, 2744
Storage batteries for Diesel engine, 2711
DIESEL ENGINES/IRON-NICKEL BATTERIES
Study of operating modes of diesel locomotive alkaline storage batteries, 444 (AD-781224)
Study of operating modes of Diesel locomotive alkaline storage batteries, 2416 (AD-781224)
DIESEL ENGINES/LEAD-ACID BATTERIES
Battery grid (Patent; vertical and diagonal grid wires), 3368
DIESEL ENGINES/NICKEL-CADMIUM BATTERIES
Ni/KOH/Cd battery for heavy diesel equipment, 2648
DIESEL ENGINES/PERFORMANCE
Facility simulation model for advanced BMD systems. Volume IVA. Power module: user's manual. Final report, 2007 (AD-A-011227)

Better energy conversion devices are needed (Brief discussions), 1569
Case for electric and fuel-cell powered vehicles, 5127
Chemical current sources (Book), 217 (AD-638888)
Comparative evaluation of power system types of underseas applications (Batteries, fuel cells, radioisotope batteries, and reactors), 1392
Computer analysis of space power systems for mission analysis, 210
Defense Research Institute briefing on current sources (stromkallor). Edited translation, 57 (AD-805927)
Direct-current power for aircraft, 5409
Electric battery in its infancy (Research status), 4850 (AD-920346L)
Electric drive for vehicles. Annotated bibliography from 1965 to 1968, 4841 (AD-877701)
Electric power generation in space, 4979 (N-68-19128)
Electric vehicles' chance (Battery development), 5400
Electrical storage of solar energy, 232
Electrical battery (Design of carrying handle sub-assembly; patent), 3498
Electrochemical sources of power: batteries (Book chapter), 155
Electrochemical energy conversion, 171
Electrochemical storage and disposition of energy (Policy brief), 66 (AD-919015)
Electrochemical generators (Book), 157
Energy sources of future, 226
Energy storage problems, 225
Energy storage. I. Using electricity more efficiently, 1216
Energy storage. II. Developing advanced technologies, 1214
Energy supply and energy transformers in satellites and spacecraft, 170
Generators for the direct conversion of thermal and chemical energy into electrical. Volume I. Electrochemical generators (Book), 169
Nonpropulsive power systems for missiles and space vehicles (State of development), 5320
Power systems (Comparison of various spacecraft power supplies), 214
Power systems for the Apollo applications program (Fuel cell/battery and solar array/battery systems), 209
Preliminary survey of mobile electric power sources for application to rapid warning system (BID), Army 75-80,

63 (AD-886125L)
Prime power systems. Part 6, 4987 (N-71-19649)
Proceedings of the 16th Annual Power Sources Conference, Fort Monmouth, NJ, May 22-24, 1962, 85 (N-63-14123)
Review of ammonia battery systems and ammonia electrolytes. Literature survey, 1 Jun 1966-9 Jun 1967, 462 (AD-816308)
Role of battery related systems in offshore engineering, 5119
Secondary power (Secondary power sources for space applications including solar arrays, static and dynamic thermal systems, batteries, and fuel cells), 5242
Secondary power systems for space vehicles, 2636
Selection of power sources for remote ocean oriented applications, 2216
Standard family of power sources. Technical report, 44 (AD-710951)
Standby power for railroad-highway grade crossing warning systems. Final report Jun 1975-Jun 1976, 5014 (PB-263592)
Storage and transportation of electrical energy using hydrogen fuel or batteries (Review with 45 references), 179
Synthetic fuels. Where we stand today (Review), 160
Toward improved primary electrochemical power systems, 685 (N-68-27684)
Transactions of the Seventh World Energy Conference, Moscow, 1968. Volume 13. Section C4. New Sources and methods of producing electricity, 208
Vehicles using stored electric energy. Requirements and possibilities of applications, 134
Where will electric power come from in space ships (Brief review), 5324

ELECTRIC BATTERIES/ACTUATORS
Activator for dry-charged electrochemical batteries and the like (Patent), 4723

ELECTRIC BATTERIES/ADDITIVES
Cobalt--Mg, the power injection for your battery, 544 (AD-908263L)
Evaluation of substances sold for rejuvenating worn-out batteries, 2721

ELECTRIC BATTERIES/ANODES
Activity coefficients of dilute solutions of lithium in liquid aluminum-tin alloys: electromotive force measurements and interpretation, 3341
Adsorption of unsaturated and aromatic ketones on mercury (Corrosion inhibition by $(CH_3)_2C{:}CHCOCH_3$), 4094
Alkaline cell (Patent; Zn anode and alkaline electrolyte), 1036
Alkaline cells with anodes made from zinc fibers and needles (Patent; process for preparing fibers and needles), 3917
Amalgamation of zinc powders (Patent), 3665
Analysis of porous alkaline cadmium electrodes. I. Anodic high rate transients, 4095
Anode collectors for zinc alkaline batteries (Patent; fabrication as coated Fe nets), 3752
Anode for galvanic cells (Patent; gas-permeable matrix of cross-linked polyacrylamide saturated with electrolyte and incorporating Zn particles), 3604
Anodes for alkaline batteries (Patent; gel-like anode for alk. batteries using air, O, $Ag_2O$, HgO, or $MnO_2$ cathodes and Fe or Zn anodes), 3678
Anodes for alkaline storage batteries (Patent; 165 mAh/g, 700 mAh/cm³), 3608
Anodic behavior of zinc electrodes in potassium hydroxide electrolytes. Technical report, 2928 (AD-706596)
Anodic behavior of zinc in potassium hydroxide solution, 4457
Anodic behaviour of indium and indium/bismuth alloys in alkaline solutions, 3834
Anodic passivation by "CdO" studied by ESR (Aqueous KoH), 3570
Anodic polarization of aluminum in organic electrolytes (Nitromethane, acetonitile, propylene carbonate, formamide, or tetrahydrofuran in $AlCl_3$), 4037
Apparatus and method for charging a zinc electrode (Patent; bubbling of air to prevent dendrite formation and slope change), 3650
Battery with silicon metal anodes (Patent; fabrication), 3296
Battery zinc electrode kinetics investigation. Annual report No. 2, 15 Dec 1970--15 Dec 1971 (KOH electrolyte), 2945 (AD-736460)
Cadmium anodes for alkaline batteries (Patent; fabrication method for improved mechanical strength), 3670
Cadmium anodes for alkaline cells (Patent), 3671
Cadmium anode for alkaline storage batteries (Patent; fabrication), 3618
Cadmium-containing active material for negative electrodes of alkaline storage batteries (Patent; chemical preparation), 4343
Cadmium fibers and galvanic cell anodes made from them (Patent; prepared by electrolysis of electrolyte of Cd salt), 3578
Dependence of electrical erosion of anode on distance between electrodes, 4736
Device for drying negative plates and plates made therewith (Patent), 3703
Distinguishing features of different types of anodes, 3821
Effect of additives on lithium cycling in propylene carbonate ($SO_2$, nitromethane, $H_2O$), 3344
Effect of additives on lithium cycling in methyl acetate (Nitromethane, $SO_2$, $H_2O$), 3345
Electrochemical generator with a zinc electrode (Patent), 3888
Electrochemical engineering of battery systems. Final report, 10 Nov 1971-9 Nov 1972 (Changes in diffusely reflected light from electrode monitor battery performance), 1970 (AD-914248)
Electrochemical engineering of battery systems. Final report, 10 Nov 1971-9 Nov 1972 (Monitoring by changes in diffusely reflected light from electrodes), 3105 (AD-914248)
Electrode formed of lithium and a metal conductor metallurgically bound (Patent), 4026
Electrode of lithium-aluminum alloy (Patent; preparation) 3996
Electrode assembly for electric batteries or accumulators (Patent; Zr active material coated on one side with Cu), 4786
Ferrite-based active material for alkaline storage battery negative electrodes (Patent; preparation of $CdFe_2O_4$ and $CuFe_2O_4$), 4335
Formation of porous metal plates by electrolytic reduction, 4680
Gas evolution studies with powder compact zinc anodes, 4365
Gel-like zinc anode mix for alkaline cells (Patent), 3661
High-energy system (organic electrolyte). Quarterly report No. 1, 15 June-15 September 1965, 334 (AD-628961)
High-energy density electrochemical cells (Aluminium anodes for use in molten salt electrolytes), 3194 (N-68-23941)
Influence of sulfur-containing additives on characteristics of cast zinc anodes in alkaline cells, 4499
Investigation of the electrode migration and reaction process occurring in alkaline-zinc batteries. Quarterly technical progress report No. 13, 1 Dec 1968-1 Mar 1969, 1886 (AD-850474)
Investigation of the electrode migration and reaction process occurring in alkaline-zinc batteries. Quarterly technical progress report No. 6, 1 Mar-1 Jun 1967 (Solubility of ZnO in KOH), 3005 (AD-816527)
Iron--alkaline battery (Patent; effects of EDTA addition to KOH electrolyte on utilization coefficient of anode-active mass), 3639
Iron--alkali batteries (Patent; effect of tartrate addition on utilization coefficient of Fe anode-active mass), 3640
Iron electrode paste for alkaline battery plates, 3886
Kinetic study of the aluminium electrode in molten 60 mole percent aluminium chloride--40 mole percent sodium chloride at 453°K, 4071
Lithium--magnesium electrodes in propylene, carbonate (Li deposition, anodic stripping, electrochemistry), 4002
Long-life stable zinc electrodes for alkaline secondary batteries. Report No. 8 (final), December 1966-February 1969, 3049 (AD-857500)
Magnesium alloys for anodes in alkaline-electrolyte power sources, 3833
Magnesium and magnesium alloys as anodes in electrochemical alkaline-electrolyte power sources, 3852
Micrography of tubular-type battery plates. Final report, 2885 (AD-643750)
Negative active substance for a storage cell ($PbO_2/H_2SO_4$/Mo oxides; patent; $MoO_3.4MoO_2 + 2H^+2e$ equil. $5MoO_2 + H_2O$), 1030
Negative battery electrodes for reversible storage and regeneration of hydrogen (Patent), 3635
Negative cobalt electrodes (Patent; fabrication by pressing and sintering), 3534
Negative cobalt-powder electrodes for alkaline storage batteries (Patent; fabrication method, 0.6 Ah/g), 4321
Negative electrode grid (Patent), 3536
Negative electrode in gas-tight alkaline storage batteries, 4485
Oxidation of copper-containing films at room temperature, 3307
Paste type cadmium anodes for alkaline batteries (Patent; CdS base, mixed with $H_2O$, $H_2O$-miscible organic solvent, and binder), 3645
Physical changes at lithium electrodes during charge-discharge cycling, 4406
Point of passivation of a zinc electrode in alkali, 3302
Porous cobalt anode for alkaline batteries (NiO(OH)/alk./Co; patent), 3985
Positive electrode for chemical power source (USSR patent), 2971 (AD-772421)
Preparing lithium-filled foraminous metal substrates (Patent), 4261
Process for manufacturing a negative accumulator electrode for the reversible storage and restitution of hydrogen (Patent), 3401
Properties of some mixed organic electrolyte solutions and their effects on the anodic performances of Mg electrodes (Polarization characteristics of Mg anodes), 3461

Reaction of oxygen at metallic negative electrode (lead and cadmium), 4395
Recent advances in insoluble anodes (Review, device unspecified), 4305
Rechargeable cell having improved cadmium negative electrode and method of producing same (Patent), 3649
Rechargeable cell having improved cadmium negative electrode and method of producing same (Patent), 3582
Rechargeable electric accumulator cell with at least one zinc electrode (Patent; means to vibrate anode and/or separator to prevent dendrite formation), 3308
Self-discharge of iron electrodes with hydrogen evolution in alkaline solutions, 4276
Storage battery with zinc electrodes containing titanium dioxide (Patent; anode preparation), 3707
Structure and anodic discharge behavior of lithium-boron alloys in the licl-kcl eutectic melt., 3447
Structure of lithium-boron alloys and their performance as potential anodes for high power molten salt batteries. Progress report, 1 Aug 1974-30 Jun 1975, 3132 (AD-A-025202)
Studies in fundamental chemistry of fuel cell reactions. Quarterly report, 1 April-30 June 1969 (Dendritic deposition of zinc from alkaline solution), 3206 (N-70-10779)
Studies in fundamental chemistry of fuel cell reactions. Quarterly report, 1 April-30 June 1969 (Dendritic deposition of zinc from alkaline solution), 3207 (N-70-16379)
Studies in fundamental chemistry of fuel cell reactions. Quarterly report, 1 July-30 September 1969 (Dendritic deposition of zinc from alkaline solution), 3209 (N-70-25705)
Substitution of silver by various metal ions in modified agi solid electrolytes, 3984
Substrate materials for platinized anodes (Emphasis on Ta, Ti, Zr), 3820
Trial preparation of negative plates of pressed-type alkaline storage battery (CdO, $Cd(O)_2$, polyethylene and polyethylene oxide), 4540
Use of nickel hydroxide in pressed plate electrodes (Patent), 3686
Zinc--alkaline battery containing carbazole as a zinc corrosion inhibitor (Patent), 1001
Zinc alkaline secondary batteries (Patent; dendrite growth suppressed by In and Tl), 3627
Zinc anode battery (Patent; coating of 2,6-di-tert-butyl-p-cresol to extend shelf life and inhibit H evolution), 981
Zinc anodes for secondary batteries (Patent; fabrication, polyethyleneimine to prevent electrodeposition of Zn on anode), 3675
Zinc anodic mixes for alkaline batteries (Patent), 3638
Zinc as a secondary battery electrode (Review of attempts to improve cycling behavior), 4405
Zinc-container electrode (Patent; support with chemically active mass on each side), 3668
Zinc-containing electrode (Patent; preparation by electrodeposition), 4030
Zinc electrode investigation. Quarterly technical progress report No. 4, 1 Apr-1 Jul 1965 (Recombining gases formed during overcharge), 2810 (AD-467031)
Zinc electrodes for secondary batteries (Patent; Cd additive improves Zn adherence), 3299
Zinc fibers and needles and galvanic cell anodes made therefrom (Patent), 3866

ELECTRIC BATTERIES/APOLLO PROJECT
Electrical power systems study for an independent carrier for the applications a and b experiments, 89 (N-74-70909)

ELECTRIC BATTERIES/BATTERY CHARGERS
30-watt lithium hydride fuel cell. Technical information report, 3032 (AD-840361)
60-watt liquid hydrazine fuel cell. Technical information report (For recharging storage batteries), 3025 (AD-835257)
Bilateral power conditioner, 4219
Electric storage batteries according to recent patents, 4649
Manually operated generator using harmonic drive system, 4588
Secondary battery charge control: an annotated bibliography. Literature search, 1962-1964 (198 references), 2834 (AD-479784)

ELECTRIC BATTERIES/BATTERY CHARGING
ABC's of small electric vehicles, 5105
Apparatus and method for charging a zinc electrode (Patent; bubbling of air to prevent dendrite formation and slope change), 3650
Basic requirements for charging equipment for electric road vehicles as seen by the utilities with special emphasis on harmonics, 126
Battery charge condition monitoring: techniques and applications, 4946 (CONF-740215-P2)
Battery control system for battery operated vehicles (Patent), 5031
Battery emergency lighting plant, 2654
Charging silver oxide electrode with periodically varying current, 2589
Device for separating electrolyte carried by hydrogen during recharging of a storage battery (Patent), 2265
Don't toss that battery yet: dry cells are rechargeable, 2570
Effect of recharge on the capacity of the silver electrode of an alkaline battery operating under forced discharge conditions, 2425
Effect of the charge time on the life of a silver battery electrode, 4433
Method to operate multicell accumulators for battery-powered vehicles (Patent), 138
Microprocessor-controlled battery protection system, 3786
Microstructure of sintered silver electrodes. IV. Formation of AgO during charges (KOH electrolyte), 2938 (AD-728894)
New fuel gage for electrically powered vehicles, 4534
Optimization of charging conditions of storage battery silver electrode and calculation of capacity loss during continuous use, 3805
Review of batteries and fuel cells for space power systems (Overcharge rate, end-of-charge voltage, cycle life), 2546
Secondary alkaline batteries (Patent; Zn anode, addition of polycationic polymers enables charging without Zn deposition), 1000
Testing device for the discharge state of a battery (Patent), 3741
Theoretical design of primary and secondary cells. Part IV. Further studies of the battery discharge equation, 325 (AD-617333)

ELECTRIC BATTERIES/BATTERY SEPARATORS
Development of separators for heavy-duty batteries, 3774
Factors influencing flexibility, resistivity, zinc dendrite penetration rate of inorganic separators for alkaline batteries, 3244 (NASA-TM-X-3199)
Microporous ceramic separator for batteries (Patent), 4162
Recent patents on electric batteries (Alkaline types), 4758
Rechargeable battery which combats shape change of the zinc anode (By proper fabrication of separator; patent) 857

ELECTRIC BATTERIES/BIBLIOGRAPHIES
Annotated bibliography of the thermal properties of primary and secondary cells, 62 (AD-871108)
Applied research programs abstract bulletin, flight vehicle power and materials. Volume II, Part I. Abstracts 2-122 through 2-207, 24 (AD-609098)
Applied research programs abstract bulletin, flight vehicle power and materials. Volume II, Part I. Abstracts 2-1 through 2-81, 22 (AD-605699)
Applied research management. Abstract bulletin, abstracts 1-1448 through 1-1552, 10 (AD-448091)
Applied research management abstract bulletin. Part I. Abstracts 1-1704 through 1-1752, 21 (AD-604746)
Athena program bibliography of research and development reports. Revised edition, 60 (AD-830318)
Batteries. Report bibliography, Jan 1967--Apr 1973, 697 (N-74-14792)
Batteries. Report bibliography, Jan 1967-April 1973 (Emphasis on nickel-cadmium and organic batteries), 52 (AD-768500)
Bibliography of bibliographies in the DDC collection. Volume II. Report bibliography, Nov 1967-Nov 1971, 422 (AD-752160)
Bibliography of galvanic cells with fused electrolytes, 215
Direct energy conversion literature abstracts, 26 (AD-635584)
Direct energy conversion literature abstracts, 8 (AD-430693)
Electric automobiles. Volume 2. 1975-July 1977 (citations from the Engineering Index data base). Report for 1975-Jul 77, 116 (NTIS/PS-77/0637)
Electrochemical batteries: an annotated bibliography (1961-1962), 9 (AD-441578)
Electrochemical reactions at surfaces (a bibliography with abstracts). Report for 1964-Jul 1975, 104 (NTIS/PS-75/644)
Lithium batteries (a bibliography with abstracts). Period covered: 1964-June 1975, 102 (NTIS/PS-75/471)
Lithium batteries. Vol. I. 1964-1974 (citations from the NTIS data base). Report for 1964-1974 (175 abstracts), 106 (NTIS/PS-76/0542)
Lithium batteries. Vol. II. 1975-May 1976 (citations from the NTIS data base). Report for 1975-May 1976 (74 abstracts), 107 (NTIS/PS-76/0543)
Lithium batteries (citations from the Engineering Index data base). Report for 1970-May 1976 (115 abstracts), 108 (NTIS/PS-76/0544)
Lithium batteries. Volume 2. 1975-July 1977 (citations from the NTIS data base). Report for 1975-Jul 77 (Li/S, $Li/NiF_2$), 117 (NTIS/PS-77/0638)
Lithium batteries (citations from the Engineering Index data base). Report for 1970 (Li with $SOCl_2$ organic compound or $H_2O$), 118 (NTIS/PS-77/0639)
Magnesium batteries (citations from the NTIS data base). Report for 1964-Sep 1976, 113 (NTIS/PS-76/0941)
Magnesium batteries (citations from the Engineering Index data base). Report for 1970-Sep 1976, 114 (NTIS/PS-76/0942)
Secondary aerospace batteries and battery materials: a bibliography, 1969-1974, 93 (N-76-19549)
Secondary aerospace batteries and battery materials: a bibliography, 1969 - 1974, 94 (N-77-16437)
Silver cells. A bibliography with abstracts. Search period covered: 1964-August 1975, 105 (NTIS/PS-75/649)

Silver cells (citations from the NTIS data base). Report for 1964-Sep 76, 111 (NTIS/PS-76/0879)
Silver cells (citations from the Engineering Index data base). Report for 1970-Sep 76, 112 (NTIS/PS-76/0880)
Space vehicle (missile) power supplies. An annotated bibliography, 28 (AD-666251)
Technical reprints and reports released for unrestricted circulation, 1 July 1967-30 September 1967, 31 (AD-671913)
ELECTRIC BATTERIES/BINDERS
Suspensior containing carbonyl nickel, binder, and a solvent for a powder-metallurgical base of an alkaline battery nonlamellar electrode (Patent), 3893
ELECTRIC BATTERIES/BONDING
Positive seal for batteries employing plastic casings (Patent), 3503
ELECTRIC BATTERIES/CATALYSTS
Method of making a uranium containing catalyst for a metal electrode (Patent), 4197
ELECTRIC BATTERIES/CATHODES
Activation of nickel battery plates (Patent; electrolytic process), 3871
Activation of nickel battery plates (Patent; electrolytic process), 3557
Active carbon-paraffin electrode (Patent; fabrication), 4342
Active material electrode and cell comprising improved battery-grade divalent silver oxide (Patent; additive of Hg, Se, Te, or Hg combined with Pb or Sn), 4243
Additive for an alkaline battery using divalent silver oxide positive active material (Patent), 3865
Alkaline manganese battery (Patent), 3614
Analytical studies of the energy storage process at porous carbon electrodes in molten salt electrolytes. Final technical report, 8 March 1968-7 March 1969 (LiCl-KCl electrolyte), 1893 (AD-853881)
Cathode for a silver battery (Patent), 3628
Cathode material for use in nonaqueous electrolytes (Patent; fluorinated graphite), 3569
Cathode mix for alkaline cell (Patent), 3971
Cathodes for alkaline batteries (Patent), 3926
Cathodes for multilayer batteries (Patent; fabrication, $MnO_2$ + C with teflon binder), 3644
Cathodic discharge controlled by dissolution kinetics (Model of inner structure of porous cathode), 2952 (AD-743769)
Cathodic discharge controlled by dissolution kinetics (Analytical model), 4302
Characteristics in charged or discharged condition of pressed-type nickel positive electrodes made by using polystyrene as a binder (Comparison with polyethylene), 4053
Chemistry of $TiS_2$ and $NbSe_3$ cathodes (Nonaqueous Li batteries), 3407
Computer-aided determination of physical parameters of porous electrode materials by porosity measurements (O-diffusion electrodes based on C), 3775
Electrochemical application of amalgamated-nickel bodies, 4196
Evaluation of organic battery electrodes: voltammetric study of the redox behavior of solid quinones, 4231
Forming process in nickel positive electrodes, 4622
Galvanic cells containing cathodes of iron-doped beta-alumina, 1231
High-energy system (organic electrolyte). Quarterly report No. 1, 15 June-15 September 1965, 334 (AD-628961)
High-energy system (organic electrolyte). Quarterly report No. 1, 15 June-15 September 1966 (Screening program to study electrochemical behavior of organic and inorganic cathodes in nonaqueous electrolytes), 2887 (AD-643935)
High-rate oxidation of silver electrodes in chloride solutions, 4444
High rate oxidation of silver electrodes in chloride solutions, 4446
Increasing the energy storage capacity of an electrode of amorphous carbon (Patent), 3898
Influences of foreign metal ions on the performances of nickel positive electrodes, 4278
Investigation on various cathodic materials in copper solid-state power sources (Copper solid electrolyte reversible cells), 3416
Lead chloride electrode (Patent; $PbCl_2$ + graphite with formaldehyde-urea polymer binder and metal grid), 3562
Lead/lead chloride electrode (Patent; preparation), 3530
Lithium battery development. Annual report No. 3, 1 April 1970-31 March 1971, 2935 (AD-726607)
Microstructure of sintered silver electrodes. IV. Formation of AgO during charges (KOH electrolyte), 2938 (AD-728894)
Molybdenum trioxide, a new electrode material for nonaqueous secondary battery applications (Chemical behavior in $LiAlCl_4$-butyrolactone), 4358
New rechargeable mercury/mercury oxide electrode, 4272
Nickel cathode for alkaline batteries (Patent), 3705
Nickel cathodes for alkaline cells (Patent; fabrication), 3708
Nickel cathodes for alkaline batteries (Patent), 3598
Nickel electrodes for alkali batteries (Patent; preparation), 3902
Nickel electrodes for alkaline batteries (Patent), 3704
Nickel electrode for an alkaline battery (Patent; fabrication), 4327
Nickel hydroxide electrode (Chemical preparation;patent), 3680
Nickel hydroxide cathodes for storage batteries (Patent; fabrication), 3755
Nickel hydroxide cathodes for storage batteries (Patent; fabrication), 3756
Optimization of charging conditions of storage battery silver electrode and calculation of capacity loss during continuous use, 3805
Organic cathodes with air regeneration (Quinones mixed with graphitized C), 4280
Oxides on the silver electrode. Part 2. X-ray diffraction studies of the working silver electrode. Final report, 2862 (AD-614058)
Porous nickel plates for electrodes (Method for fabrication), 3965
Porous nickel for alkaline battery and fuel cell electrodes: production by roll-compaction (Roll-compaction of carbonyl nickel powders), 4506
Positive electrode for a battery (Patent; Mn-containing mineral, carbon black, and polyethylsiloxane-impregnated C), 3855
Positive electrode for chemical power source (Patent), 4820 (AD-772421)
Protective coatings on positive nickel electrodes (Patent), 4170
Quinones as rechargeable and regenerable battery cathode and materials, 4368
Quinones as redox systems for oxygen cathodes or secondary cell cathodes, 4296
Rechargeable electrochemical cell (Patent; La/sub 1-y/R/sub y/Ni/sub 5-z/M/sub z/H/sub x, where R is a rare earth, Ca, or Th and M is Co, Cu, or Fe), 3333
Relations of the structural characteristics of the powder metallurgical nickel oxide electrode, 4063
Role of metallic oxides in processes at electric battery electrodes, 4642
Sealed type alkaline storage battery (Patent; improved Ni hydroxide cathode containing $Ba(OH)_2$), 3565
Selected articles (Effects of ultrasonics), 4689 (AD-655021)
Some new synthetic approaches to graphite-fluorine chemistry (Potential use of poly(carbon monofluoride)), 4062
Stable nickel oxyhydroxide (NiOOH) (Patent; chemical preparation), 3499
Study of fluid-gas electrodes (Cathode evolution of $H_2$ in glass capillary on Ni film), 4505
Use of hydrogen-absorbing electrode in alkaline battery (For protection against electrochemical damage due to battery reversal; patent), 3386
ELECTRIC BATTERIES/CHARGE STATE
Control of storage battery charging, 2764
Method for measurement of the charge state of galvanic energy sources and equipment for using this method, 2205
Method for determining battery state of charge by measuring a.c. electrical phase angle change (Patent), 3378
ELECTRIC BATTERIES/CHARGED CURRENTS
New fuel gage for electrically powered vehicles, 4534
ELECTRIC BATTERIES/CHEMICAL REACTION KINETICS
Electrode kinetics of the alkali metals in $AlCl_3$-propylene carbonate solution, 2263
Investigation of the electrode migration and reaction process occurring in alkaline-zinc batteries. Quarterly technical progress report No. 13, 1 Dec 1968-1 Mar 1969, 1886 (AD-850474)
Mechanism of current generation in waterproofed electrodes, 4126
Research on electrochemical energy conversion systems. Semi-annual report No. 10, May-Nov 1970 (Reduction of benzofuroxan; rate equations), 399 (AD-729923)
ELECTRIC BATTERIES/CHEMICAL REACTIONS
Alkaline manganese dioxide electrode. II, 2512
Galvanic sources of current in past and future, 2551
Model for discharge of storage batteries, 2328
Processes at the silver oxide electrode of an alkali current source (State-of-the-art review (1975)), 3798
Research on electrochemical energy conversion systems. Interim technical report No. 8, May-November 1969, 529 (AD-873240)
Reversible electrode reactions of difficult-to-dissolve materials in nonaqueous electrolytes (a contribution to the knowledge on potential cathodes for secondary high-energy-density batteries with special consideration of graphite compounds, 3221 (N-74-30505)
Secondary lithium batteries, 2311
Studies in fundamental chemistry of fuel cell reactions. Semiannual progress report, 1 July-31 December 1968, 689 (N-69-25397)
ELECTRIC BATTERIES/CLOSURES
Aeration stopper for secondary batteries, 3894
Battery vent plug (Patent; designed to extinguish flaming battery gas), 3641
Equipment for the catalytic recombination of hydrogen and oxygen gases produced in accumulators (Patent), 3426
Filter cap for storage batteries (Patent), 3538
Sealing plug with built-in recombination catalyst for secondary batteries (Patent), 3529
Stopper for secondary batteries (Floating needle for

external electrolyte level control), 3897
ELECTRIC BATTERIES/COMPARATIVE EVALUATIONS
Batteries and fuel cells as the power source for terrestrial vehicles, 5262
Batteries. 1. Virtues of nickel--cadmium, 2271
Batteries. 3. Comparison of cost, maintenance, and life tradeoffs, 2272
Battery emergency power supplies, 1410
Characteristics of batteries for small engine applications (Starting applications of $^1/_2$- to 10-hp engines), 2626
Economic basis of battery electric road vehicle operation and manufacture, 5358
Economy of operation of electrochemical storage devices as compared to conventional peak power generators, 5051
Electric vehicles: revival of 50-year old memory, 2534
Electrochemical power sources for vehicle propulsion, 5186
Electrochemical power sources for vehicle propulsion (Pb--acid, Ni--Cd, Ag--Zn, Ni--Zn, Zn--$MnO_2$, metal--air, org. electrolyte batteries and fuel cells), 5187
Industrial trucks: what to look for and hope for in battery power, 5269
Meeting future peak electrical energy demands by means of electrochemical storage systems, 5121
Metals: key to battery-powered auto, 4490
Na/S-batteries as an energy source for electrical vehicles, 76 (CONF-741151-)
New batteries and their impact on electric vehicles, 4971 (ERDA/NASA/1011-77/3)
No-break sets, 151
Noncommunication expendable jammer investigations. Volume 1. Power sources, 1640 (AD-441993)
Operating characteristics of storage batteries for use on ground support equipment, 1684 (AD-470655)
Power sources for remote-area counterinsurgency. Survey and recommendations, 1627 (AD-430689)
Prospects of electrical power for vehicles, 5266
Questions to ask about batteries proposed for electric cars, 5237
Secondary power for space flight, 1623 (AD-358628)
Some problems on the application and development of electrochemical power source, 1143
Storage battery vehicle with special consideration of electric automobile (Data on several types of batteries), 5387
Storage batteries: the case and the candidates, 843
Survey of secondary batteries (List of British manufacturers), 2585
Systems approach winning out in APU design. Batteries and turbines competing as APU energy sources, 5325
Test of low discharge-type storage batteries. Report No. 1, 1841 (AD-787125)
Transportation. 2. Two for the road, 5176
Why wait for those 'always-just-round-the-corner' power sources, 5034
ELECTRIC BATTERIES/CONNECTORS
Alloy for through-the-partition intercell connectors formed by an extrusion-fusion technique (Patent), 3696
Battery cell connector improvements, 4600
Electrochemical cell (Patent; methods for mechanically linking cells in electrical series), 3339
Resistance welding improves battery cell connectors, 4509
ELECTRIC BATTERIES/CONTAINERS
Battery casing (Patent), 3937
Battery construction capable of safely venting internal pressure (Patent), 3745
Cell or battery housing of synthetic resin for maintenance-free batteries (Patent), 4171
Diatomite as a filler in battery boxes, 646 (BM-RI-3078)
Electrochemical compatibility of plastics, 4382
Evaluation tests on type BB-249/U battery containers, 2798 (AD-453678)
Heat sterilizable impact resistant cell development. Quarterly report, 1 January-31 March 1969, 3200 (N-69-36048)
Housing for battery cell with protection for pressure and temperature (Patent), 3960
It's big new market for propylene copolymer: automotive battery cases (R and D, economics, fabrication), 4501
Manufacturing methods and technology measure for standard battery cases. Quarterly report No. 9, 1 Nov 1971-31 Jan 1972, 3073 (AD-894816L)
Manufacturing methods and technology measure for standard battery cases. Final report, 14 Oct 1969-30 Sep 1972, 3084 (AD-904964L)
Manufacturing methods and technology measure for standard battery cases. Quarterly report No. 3, 1 May-31 July 1970, 3059 (AD-877313)
Metal cases for alkaline batteries, 3884
Metallic cases for alkaline batteries (Patent), 3911
Molded catalyst body for storage batteries (Patent), 3609
One-piece molded battery case (Fabrication of 9.5-lb polystyrene case by use of 525-T transfer press), 4800
One-piece molded styrene battery case weighs 8-1/2 pounds, 4772
Plastic case for flat rechargeable cell (Patent), 3323
Qualification tests of four type MS3509, style 1, battery receptacles, manufactured by Elcon, division of Icore International, Inc., 3108 (AD-918225L)
Solid state battery enclosure (Use of evacuated interior), 1203
Some news of European starter batteries, 4601
Tests of battery heating and battery box design, 1669 (AD-462782)
Turning a component supply problem to advantage with plastics: radical redesign of storage battery boxes, 4004
Unsaturated polyester resin compositions (Patent), 3950
What's new in one-piece cover battery construction, 4602
ELECTRIC BATTERIES/CONTROL
Use of electrochemical devices for control and monitoring of chemical current sources, 2220
ELECTRIC BATTERIES/CONTROL SYSTEMS
Charge control system for batteries charged by solar cells series, 5082
ELECTRIC BATTERIES/COOLING
Active control heat pipe performance for long-life battery cooling, 4283
Analysis of a cooling concept for high-discharge-rate pile-type batteries. Technical report, March-September 1973, 566 (AD/A-000417)
Battery cell cooling system (Patent; excess battery heat usable to warm vehicle, cooling system can also cool vehicle), 3321
Development of a planar heat pipe for cooling large capacity batteries, 2946 (AD-740552)
Heat removal from large batteries for load leveling, 5133
Intercell heat pipe for fuel cell and battery cooling. Final report, Jun 1972-Jul 1973, 2979 (AD-782888)
ELECTRIC BATTERIES/CORROSION INHIBITORS
Zinc--alkaline battery containing carbazole as a zinc corrosion inhibitor (Patent), 1001
ELECTRIC BATTERIES/CORROSION PROTECTION
Cobalt--Mg, the power injection for your battery, 544 (AD-908263L)
ELECTRIC BATTERIES/COST
Batteries power urban automs, 5076
Electrona dural batteries, technical data, 1966 (AD-912989L)
Nuclear power systems for spacecraft (Weights, sizes, and costs of nuclear and nonnuclear spacecraft power systems with references to mission duration), 201
Optimum voltage of a battery for emergency illumination, 5055
ELECTRIC BATTERIES/CURRENT DENSITY
Electrode kinetics of the alkali metals in $AlCl_3$-propylene carbonate solution, 2263
ELECTRIC BATTERIES/DATA PROCESSING
Research on electrochemical energy conversion systems. Semiannual research report No. 5, November 1967-May 1968, 505 (AD-846063)
ELECTRIC BATTERIES/DC TO DC CONVERTERS
Simple regulated power supplies for battery operated equipment, 4228
ELECTRIC BATTERIES/DEGASSING
Degassing apparatus for storage batteries (Patent), 4165
ELECTRIC BATTERIES/DEPOSITS
Investigation of submarine main storage battery cell air lift tube deposits. Final report, Dec 1971-Oct 1972, 1968 (AD-913676L)
ELECTRIC BATTERIES/DESIGN
30-watt lithium hydride fuel cell (Hybrid fuel cell-electric battery), 494 (AD-840361)
Accumulator based on rod elements (Patent), 1484 (AD-654658)
Accumulator cell (Patent), 1213
Advanced battery design, 1012
Alkaline battery (Patent; $Co_2O_3$-coated Cu anode, $AlF_3$-coated Al cathode, $Ca(ClO_4)_2$ and NaOH electrolyte, coiled ribbon cell, 5 A-hr at 6.75 V), 1159
Alkaline battery (Patent; allows free access of air to cathode), 1132
Alkaline cell with double collector positive, negative, and third terminal connections (Patent), 846
Alkaline manganese--zinc galvanic cell (Patent), 945
Anhydrous hydrogen fluoride electrolyte battery (Patent application), 1321
ANL high-energy batteries for electric vehicles (Li/LiCl--KCl/S), 4922 (CONF-740215-1)
Apparatus and method for connecting cells of a battery with forced circulation (Patent), 916
Automatically activatable battery (Patent; pressurized gas), 1082
Batteries with improved shelf life (Patent), 1224
Battery--fuel cell system (For electric-powered vehicles) 359 (AD-662234)
Battery--fuel cell system (For electric-powered vehicles) 362 (AD-662960)
Battery assembly (Patent; plates and separators enclosed by continuous strip of resin or thermoplastic), 1078
Battery cell (Patent; Zn anode, aq. electrolyte with Hg salts), 969
Battery construction (Patent), 796
Battery construction (Patent; miniaturized batteries), 794
Battery filling device (Patent, automatic filling upon pulling a pin), 1011
Battery stack (Patent; electrode configuration with internal passageways), 1293
Battery with forced circulation (Patent), 956
Battery with at least one element (Patent), 957
Battery with recessed terminals and fuse (Patent), 886
Bonded component assembly for flat cells and method therefor (Patent), 1135
Cell with circulating electrolyte (Patent; primarily for

Zn/air batteries, but adaptable to other types), 841
Chemical source of electric power (Patent; alkali metal hydride/alkali metal halide in HF/halide), 1181
Chemoelectric battery (Patent; Fe, Cd, or Zn with hydroxide of Ni, Fe, or Co and/or oxides of Pb or Ag, gas release feature), 809
Conceptual design of a 164-kW lithium seawater power system. Quarterly technical progress report No. 2, 5 Jun-4 Sep 1973, 554 (AD-913308L)
Cylindrical, rechargeable cell containing an organic depolarizer (Patent; azodicarboxamide), 1377
Cylindrical electric cell (Patent), 786
Deferred action batteries (Patent), 1154
Design, development, and environmental test report on radio set AN/PRC-63 (XN-1) (Battery development), 328 (AD-620178)
*Design and development of a low-temperature balloon battery.* Phase 1 final report, 22 May-5 Aug 1968, 687 (N-69-16975)
Design of primary and secondary cells. I and II, 1525
Design studies for high rate, high energy, nonaqueous electro-chemical energy conversion systems. Final report, 1 Aug 1969-31 Jul 1970, 396 (AD-722384)
Development of high-specific-energy batteries for electric vehicles. Progress report, February 1973-July 1973 (Li/S, 400°C), 631 (ANL-8039)
Development of lithium-sulfur cells for application to electric automobiles, 1306
Development of electrochemical energy storage unit for vehicle propulsion. Interim technical report, 30 June-30 December 1966 (Developable to 100 Wh/lb), 354 (AD-653791)
Development program for solid electrolyte batteries. Interim report, 729 (PB-248326)
Discrete anode bodies for use in various cylindrical cell systems (Patent; mainly for primary batteries, but applicable in principle to secondary also), 785
Dry-charged storage batteries, 1269
Dry charged battery with a filling of electrolyte concentrate, which is above the plates in a closed container, 1162
Electric batteries in recent patents, 1580
Electric batteries (Patent; rechargeable cell similar to Leclanche cell), 1337
Electric car, 4921 (CONF-730848-1)
Electric storage battery providing high energy density (Patent), 1279
Electric storage battery (Patent; resistant to impact forces), 1375
Electric storage device (Patent; Ag, $Zn/Cl_2/AgCl,Ag$), 1546
Electrical isolation of battery cells having a circulating electrolyte system (Patent; introduction of air bubbles), 1184
Electrical energy storage battery means (Patent), 1077
Electrochemical cell with anhydrous electrolyte solution (Patent; $SO_2$-containing electrolyte of Al, reduced corrosion), 1145
Electrochemical cells having a liquid alkali metal electrode (Patent; capillary means to draw liquid metal over one face of solid electrolyte), 907
Electrochemical heat engines (Voltage of discharging cell is higher than charging voltage, difference is made up by heat converted to work which assists in charging; $2Ag + I_2 \rightarrow 2AgI$ reaction tested), 678 (LA-6632-MS)
Electrochemical batteries having nonconductive, replaceable cell partitions (Patent; replaceable as a unit), 1334
Electrochemical properties of $RbAg_4I_5$ solid electrolyte. II. Silver electrode reversibility (Importance of shape), 4301
Engineering the storage battery as an underwater power supply, 1312
Ev power sources: waiting for a superbattery, 1170
Fast transient response fuel cell - battery hybrid power source. Research and development technical report (Integrated molten carbonate fuel cell with molten electrolyte battery), 384 (AD-687260)
Fast transient response fuel cell-battery hybrid power source (Integrated molten carbonate fuel cell with molten electrolyte battery), 389 (AD-692538)
Flat alkaline cell construction (Patent; high energy density battery), 1025
Flat alkaline cell with positive and negative terminal connections and a third terminal connection for an auxiliary electrode (Patent), 852
Fuel cell, battery power sources for electric cars, 360 (AD-662235)
Fuel cell - energy storage hybrid systems for vehicles, 361 (AD-662236)
Galvanic element with negative light metal electrode with solid positive electrode and nonaqueous electrolyte (Patent), 875
Gastight alkaline battery with paste and sintered electrode (Patent), 1140
Gastight electric storage battery with charge-controlled electrodes (Patent), 950
High discharge batteries (Patent), 1151
High-power lithium--organic electrolyte--CF cell, 567 (AD/A-000845)
High-rate discharge storage battery, 1299
Hydrogen--bromine secondary battery (Patent; $H/H_3PO_4/Br$ or other halogen), 948
Integrated cell stacks (Fuel cell--battery hybrid system) 1475
Integrated cell stacks (Thermally and electrically *integral cell stack of fuel cell and storage battery*), 376 (AD-681178)
Investigations leading to the design and development of magnesium/magnesium perchlorate batteries. Quarterly progress report No. 2, 1 Oct-31 Dec 1964, 324 (AD-615342)
Laboratory investigation and engineering design leading towards the development of a lightweight secondary or primary cell type battery for one-shot application. Quarterly report No. 8 (final), 283 (AD-471978)
Lead perchlorate cell based on $HClO_4$ instead of $H_2SO_4$ (Patent), 816
Leakproof battery (Separation of small dried particles of anion and cation exchanges held together by binder; patent), 1049
Lightweight aircraft battery (Unspillable within 70° of normal upright attitude), 1615
Lithium battery development. Final report (Propylene carbonate-thiocyanate electrolyte), 406 (AD-735269)
Magnetopolypile tubular battery (Patent), 1190
Metal bromide battery (Patent; cathode includes Br-adsorbent layer), 1331
Modular battery construction (Patent), 1161
Multicell storage battery (Patent; improved positioning of electrodes and connectors), 1326
Negative active substance for a storage cell ($PbO_2/H_2SO_4$/Mo oxides; patent; $MoO_3.4MoO_2 + 2H^+2e$ equil. $5MoO_2 + H_2O$), 1030
New laser power supply (250,000 $kW/m^3$, stored energy = $75 \times 10^6$ $J/m^3$), 293 (AD-483724)
Optimum design of a space vehicle storage system, 1573
Patent; leakproof alkaline cell with good storage properties, 922
Plural cell battery (Patent; rod-shaped electrodes which may pass straight through common wall between cells), 908
Preliminary design of the power system for the UK 3 satellite. Technical memorandum, May 1964-Feb 1965 (Battery and solar cell array), 4977 (N-66-26772)
Proportioned current battery (Patent), 1155
*Prospects for applying electrochemical energy storage in future electric power systems*, 5167
Radioactive battery (Patent; voltaic cell), 976
Recent developments in battery technology, 905
Recent developments in battery technology, 906
Recent patents on electric batteries (Alkaline types), 4758
Rechargeable nonaqueous battery (Patent; solid or liquid halogen or chalcogen in host material, solid $RbAg_4I_5$ electrolyte), 1225
Rechargeable electric battery with lithium anode (Patent; CuS catholyte, LiI separator), 1069
Rechargeable thermal battery (Patent; Li anode and depolarizer (Br)-containing porous plate float on alkali metal halide electrolyte), 991
Rechargeable solid state electrochemical cell having a lithium anode (Patent; average power = 20 μW), 965
Rechargeable battery which combats shape change of the zinc anode (By proper fabrication of separator; patent) 857
*Rechargeable battery with current limiting means* (Patent; indicates if battery has been short-circuited), 859
Research and development of a dc--dc converter. Final report, 1 Jun 1971--31 Jul 1972. (Includes supplement) 539 (AD-903861L)
Sealed cells with auxiliary electrodes, 1517
Sealed lithium inorganic electrolyte cell. Quarterly report No. 1, 1 Mar-31 May 1974, 449 (AD-784072)
Secondary battery (Flexible filling spouts), 1175
Secondary power cell (Patent; alkali or alkaline earth metal anode), 942
Secondary power-producing cell (Patent; electrodes contain same two elements in different proportions), 1380
Solar array and battery electrical power subsystem for the shuttle-launched modular space station, 2371
Solar power pack apparatus (Patent), 806
Solid-electrolyte cell (Patent; doped $CaF_2$ electrolyte), 1381
Space experiment power supplies, 4984 (N-70-24832)
Storage batteries of tomorrow, 434 (AD-771753)
Storage battery (Patent; leakproof battery), 2207
Storage battery (Patent; high capacity, small volume), 939
Storage battery (Patent), 936
Storage battery (Patent; vertical ribs to ensure electrolyte circulation), 858
*Storage battery with common expansion and filler chamber* (Patent; prevents differential electrolyte levels), 810
System design considerations for a 25kW space station power system, 2372
Theoretical design of primary and secondary cells. Part IV. Further studies of the battery discharge equation, 325 (AD-617333)
Traction batteries and electronic control making low maintenance demands, 870
Types of alkaline storage batteries, 1591
Water activation and pressure equalization of electrochemical batteries (Patent; electrolyte

restoration after deployment in deep water), 802
Water-activated dry-charged storage battery having a buoyant internal tear strip plastic bag containing an electrolyte-producing substance (Patent), 1329
Zinc alkaline secondary battery (Patent; safe battery because of smooth gas removal at anode), 1032
Zinc alkaline secondary batteries (Patent; auxiliary anode and polycationic polymer prevent Zn dendrite formation and H generation), 998
ELECTRIC BATTERIES/DIELECTRIC MATERIALS
Selection of material and method of joining in the production of insulators for an alkaline storage battery, 4211
ELECTRIC BATTERIES/DIFFUSION
Effect of diffusion of sparingly soluble salt on EMF of cell without transference, 2511
ELECTRIC BATTERIES/ECONOMICS
Batteries and fuel cells in future energy handling, 190
Batteries for storage of wind-generated energy (Alkali metal batteries), 2075 (N-74-16784)
Calculation and cost optimization of certain solar generator thermobattery parameters, 3214 (N-73-25104)
Economic competitiveness of new 'superbatteries' vs pumped hydro, compressed air, and thermal energy storage, 2146
Economic selection of undersea powerplants, 2495
Electric transit bus battery requirements, 5202
Energy storage, 2609
Storage batteries: the case and the candidates (Conventional and advanced design), 2158
Storing electricity, 124
ELECTRIC BATTERIES/EFFICIENCY
C.G.E. circulating zinc/air battery: a practical vehicle power source (Comparison with other systems), 2168
Efficiency of power accumulators of different types, 173
Kilowatthours vs. liters: gas buggies may be on the ropes by the Eighties if 'super batteries' arrive on schedule (Electric- and gasoline-powered autos), 2204
Meaning of ''effectiveness'' when applied to electric batteries, 2403
The effect of additives on lithium cycling in propylene carbonate. Final technical report, 1 Jan 1974-31 Jan 1975, 2004 (AD/A-006571)
The effect of additives in lithium cycling in methyl acetate. Final technical report, 1 Jan 1974-31 Jan 1975, 2005 (AD/A-006572)
ELECTRIC BATTERIES/ELECTRIC CABLES
Design, development, and testing of a cable assembly for use in severe electrochemical environments, 3265 (SC-DR-69-398)
Use of Hysol US0009 polyurethane encapsulant in battery cables, 3264 (SAND-77-0411)
ELECTRIC BATTERIES/ELECTRIC CONDUCTIVITY
Internal resistance of batteries and their electrodes. Methods to eliminate such resistance during measurements, 2337
Lead dioxide cell (Patent; $PbO_2$/Al or Mg), 3923
ELECTRIC BATTERIES/ELECTRIC CONDUCTORS
Considerations in the use of electrical measurement techniques to evaluate potential new electrolytes and mixed conductors (Emphasis on interpretation of frequency-dependent ac measurements), 3162 (ANL-76-8)
ELECTRIC BATTERIES/ELECTRIC CONTACTS
Electrochemical contact (Patent; between pole and electrolyte), 3901
ELECTRIC BATTERIES/ELECTRIC CONTROLLERS
Control system for battery hybrid system (Patent), 5030
ELECTRIC BATTERIES/ELECTRIC CURRENTS
Current distributions in electrolytic cells. VI. The influence of change of size on current distributions in galvanic cells or corrosion cells, 2714
ELECTRIC BATTERIES/ELECTRIC GENERATORS
Portable generating set and low-voltage electrical aids for external work (24/30-V, 500-W dc generator using 98-$cm^3$ air-cooled gasoline engines), 4750
ELECTRIC BATTERIES/ELECTRIC IMPEDANCE
Impedance spectrum of electrochemical current sources, 2393
ELECTRIC BATTERIES/ELECTRIC MEASURING INSTRUMENTS
Apparatus for determining the state of charge of storage batteries (Patent), 3558
ELECTRIC BATTERIES/ELECTRIC POTENTIAL
Battery peak charge voltage monitor for dual air density satellite, 3228 (N-75-30512)
Calculating the characteristics of a silver--cadmium storage battery (Application to other batteries), 2218
Control device for the discharge state of a battery, 3883
EMF of the cells (Pt)$H_2$/HHAL, $Hg_2HAL_2Hg$ in organic solvents and their mixtures with water, 1362
IC timer automatically monitors battery voltage, 4168
Interphasial components of conventional electrode potentials, 4392
One lamp can monitor battery voltage, 4181
Optimum acceleration performance of an electric car and its storage-battery voltage in view of energy consumption for the run, 5162
Optimum voltage of a battery for emergency illumination, 5055
Self-testing battery discharge indicator (Patent), 3725
Thermodynamics of a reversible galvanic cell, 2237
Tunnel-diode detects battery voltage levels, 4613
ELECTRIC BATTERIES/ELECTRICAL PROPERTIES
Concentration cell as electric power generator, 2481
ELECTRIC BATTERIES/ELECTROCHEMISTRY
Adsorption of molecules at the electrodes of batteries and fuel cells. Final technical report 1 Jan 1968--30 Jun 1973, 1836 (AD-778968)
Analytical studies of the energy storage process at porous carbon electrodes in molten salt electrolytes. Interim technical report, 8 March-7 September 1968, 502 (AD-845273)
Analytical studies of the energy storage process at porous carbon electrodes in molten salt electrolytes. Final technical report, 8 March 1968-7 March 1969 (LiCl-KCl electrolyte), 1893 (AD-853881)
Association of electric potential and crystallization, 2361
Batteries and fuel cells, 1091
Battery zinc electrode kinetics investigation. Annual report No. 2, 15 Dec 1970--15 Dec 1971 (KOH electrolyte), 2945 (AD-736460)
Cathodic reduction mechanism of MnOOH to $Mn(OH)_2$ in alkaline electrolyte, 2504
Design studies for high rate, high energy, nonaqueous electro-chemical energy conversion systems. Final report, 1 Aug 1969-31 Jul 1970, 396 (AD-722384)
Detection of elementary processes within porous electrodes. Interim report, 2026 (AD-A-038915)
Effect of foreign atoms on the properties of electrolytic zinc powders, 2329
Effect of recharge on the capacity of the silver electrode of an alkaline battery operating under forced discharge conditions, 2425
Electrochemical behavior of certain types of metallic oxides for electrochemical energy conversion cells, 2347
Electrochemical engineering, 684 (N-68-21038)
Electrode migration and reaction processes occurring within alkaline-zinc batteries. Final report, Dec 1965-Sep 1969, 1897 (AD-862506)
Electrode reactions and rate processes in nonaqueous electrolytes. Final report for 16 Feb 1961-30 Jun 1965, 2868 (AD-620296)
Electrode phenomena of cadmium in alkaline battery: discharge mechanism, 4695
Fundamental studies connected with electro-chemical energy storage. Final report, 708 (N-75-30647)
High energy battery systems based on propylene carbonate, 2924 (AD-697037)
High-energy batteries (Book with 377 publications references and 427 patent references), 2547
Kinetic study of the zinc electrode by modified pulse techniques and concentration gradients. Final technical report, 3040 (AD-847223)
Limitations of present storage batteries and the chances of developing new systems, 1272
Limitations of present storage batteries and the chances of developing new systems, 1273
New theory of storage batteries, 2759
Performance and failure mechanisms of secondary batteries, 1912 (AD-901015L)
Periodic electrode processes, 220
Preferential solvation effects of water on electrode reactions in propylene carbonate, 1793 (AD-726814)
Recent developments in advanced secondary batteries, 1115
Rechargeable metal halide battery (Patent; electroplatable metal halide), 1332
Research on electrochemical energy conversion systems. Semi-annual report No. 10, May-Nov 1970 (Reduction of benzofuroxan; rate equations), 399 (AD-729923)
Research on electrochemical energy conversion systems. Interim technical report No. 11, Nov 1970-May 1971, 409 (AD-737703)
Research on electrochemical energy conversion systems. Report No. 12 (final), 4839 (AD-740210)
Research on electrochemical energy conversion systems. Interim technical report No. 7, November 1968-May 1969, 520 (AD-863071)
Role of the electron in batteries and fuel cells, 50 (AD-740616)
Some electrical relations in galvanic couples, 2725
Structure of aluminum chloride--sodium chloride melts. Scientific report, 411 (AD-739353)
Texture of a zinc oxide residue formed during the anodic oxidation of porous zinc in an alkaline solution, 2228
Why alkaline cells leak, 2139
ELECTRIC BATTERIES/ELECTRODES
Active mass of the nickel oxide electrode for an alkaline storage battery (Patent; preparation), 4354
Active substance for the nickel oxide electrode of an alkaline storage battery (Patent; preparation of active material), 4355
Alkaline battery (Patent; improvement consisting in welding their conductive plates to electrodes), 3493
Alkaline battery electrodes (Patent; method for electrode activation), 4673
Analysis of porous alkaline cadmium electrodes. II. Potential recovery transients after a period of discharge (Influence of porosity), 4096
Analysis of porous alkaline cadmium electrodes. III. Application of charge porosity diagrams in electrode design, 4097
Analysis of charge-discharge characteristics of nickel oxide electrodes by infrared spectroscopy, 4606
Analysis of porous electrodes with sparingly soluble reactants. III. Short time transients, 3390

Analysis of porous electrodes with sparingly soluble reactants. IV. Application to particulate bed electrode: Ag/AgCl system, 3391
Analysis of porous electrodes with sparingly soluble reactants IV. Application to particulate bed electrode: Ag/AgCl system. Technical report, 3128 (AD-A-019580)
Analysis of porous alkaline cd-electrodes. IV. Optimization of current efficiency, 3547
Analysis of porous electrodes with sparingly soluble reactants, III short time transients. Technical report, 70 (AD-A-024031)
Anodic behavior of silver in alkaline solutions, 3525
Anodic dissolution of lithium--aluminum alloys in a lithium chloride--potassium chloride melt, 1110
Anodic oxidation of manganese oxides in alkaline electrolytes, 4515
Apparatus and method for making battery electrodes (Patent; pouring suspension of soot, teflon, and cellulose through cylindrical Ni mesh and heat testing), 4020
Application of electron spectroscopy for chemical analysis to the study of iron-based battery electrodes, 3782
Application of autoradiographic techniques to battery research, 4633
Basic research on ceramic materials for energy storage and conversion systems. Progress report, December 1, 1975-November 30, 1976 ($Tl_2ZnI_2$, $In_4CdI_8$, $Tl_4CdI_6$, and $In_2ZnI_4$; solid electrolytes and electrodes), 3182 (COO-2564-2)
Battery electrode made of a number of individual small tubes bound in series (Patent), 3527
Battery electrode support (Patent), 3589
Battery electrode supports (Patent), 3590
Battery electrode matrixes (Patent; fabrication), 4316
Battery paste pumping and metering system (Patent), 4000
Battery paste and battery plate structure (Patent), 3541
Behavior of sintered plate nickel hydroxide electrodes in lithiated electrolyte solutions, 4204
Behavior of nickel oxide electrodes of alkaline cells in concentrated solutions of nickel salts, 4387
Behavior of the silver/silver chloride electrode in concentrated aqueous sodium chlorides, 4179
Beneficial effect of lithiated electrolyte on iron battery electrodes, 4632
Bonded metal electrodes (Patent; improved contact achieved by cold pressing etched collector sheet), 3693
Cadmium paste electrodes for alkaline cells (Patent), 3643
Carbon-coated zinc electrode for laminated batteries (Patent), 3761
Carbon electrode (Paten; fabrication and physical properties), 3701
Carrying out reactions between powdered and gaseous materials (Patent; means for chemical preparation of active materials), 3549
Catalytic paste and electrode (Patent; C, binder, catalyst, $H_2O$, thickener), 3648
Cathodic polarization characteristics of poly(4-vinylpyridine) bromine complex, 4177
Change of the electrolyte concentration in metalloceramic cadmium electrodes of alkaline storage battery, 4034
Charge, discharge, and self-discharge characteristics of thin film nickel oxide electrodes, 2905 (AD-671685)
Chemical and electrochemical behavior of lithium electrodes in dimethyl sulfite, electrolytic solutions ($LiClO_4$--dimethyl sulfide), 4147
Chemoelectric energy conversion for nonaqueous batteries and fuel cells. Quarterly report No. 20, Apr-Jun 1968, 498 (AD-843141)
Chemoelectric energy conversion for nonaqueous batteries and fuel cells, 507 (AD-847137)
Choice of an eddy current transformer for monitoring the quality of the nickel cermet electrode bases of a low-voltage cable storage battery, 4209
Coated nickel electrodes (Preparation by anodization of an active form of Ni), 4419
Comments on current distribution in and on porous electrodes, 4536
Comparison of potential step and triangular voltage sweep methods of double layer capacitance measurements. III. Porous zinc electrodes, 2949 (AD-742219)
Comparison of amalgamated and non-amalgamated zinc electrodes, 4425
Complex apparatus for potential dynamic methods of studying surface condition and kinetics of electrochemical reactions in conjunction with the use of ring-disk electrode, 4128
Composite porous electrode (Patent), 3933
Continuous production of covers for tubular battery electrodes (Patent), 3495
Corrosion in alkali hydroxide solutions of electrolytic zinc powder containing codeposited lead, 3448
Coulogravimetric investigation of zinc electrode in potassium hydroxide, 4492
Crystallographic changes during oxidation (charging) of the silver electrode. Part I. Initial oxidation of an industrial sintered plaque, 2903 (AD-671050)
Crystallographic changes during oxidation (charging) of the silver electrode. Part II. Oxidation following five charge-discharge cycles at a low rate, 2909 (AD-671771)
Current discharge frame for electrodes of lead storage batteries (Alkaline battery; patent), 3096 (AD-910738L)
Current distribution and potential profile at linear wire electrode of significant ohmic resistance, 4508
Cyclic charge-discharge behaviour of sintered plate and planar cadmium electrodes, 3449
Cycling battery electrodes in bulk (Patent; rotating cylinders contain electrodes to be regenerated), 4255
Cycling characteristics of silver electrode in alkaline solutions, 4596
Decomposition of silver oxide in alkaline solutions. Technical report No. 2 (Aqueous KOH), 2851 (AD-603306)
Decomposition of AgO in alkaline solutions, 4456
Determination of the surface area of battery electrodes, 4475
Determination of carbonate impurities in nickel hydroxide, 4069
Determination of parameters of equivalent electrode circuits, 4495
Determination of the degree of reduction of active masses of a storage cell iron electrode ([FeO] proportional to magnetic susceptibility), 4431
Development of physico-chemical methods to study the structure and composition of active electrode materials and electrolytes at All-Union Scientific-Research Project-Construction Technological Storage Battery Institute, 3799
Development of a compact, high-capacity $FeS_2$ electrode, 4139
Development of sintered zinc battery electrodes. Progress report (0.075 to 225 ma/cm²), 3060 (AD-878215)
Development of improved zinc electrodes for secondary batteries. Final report, July 1968-July 1969, 3203 (N-69-40063)
*Difference between waterproofed and hydrophilic* electrodes. II. Biporous model, 4088
Diffusion-bonded battery electrode plaques (Patent), 3552
Diffusion-bonded battery electrode plaques (Patent; steel fibers), 3553
Disperse catalyst generators, 4478
Dissolution and passivation of metals in alkaline solutions in the presence of surfactants, 4137
Double layer capacitance of zinc electrodes in KOH solutions, 4496
Effect of electrode structure on performance of porous electrodes (Oriented toward primary $Ag/Ag_2O$ cells), 4476
Effect of technological factors on the properties of cast electrodes for chemical current sources with copper(I) chloride. II, 4077
Effect of the increase of porosity on the current distribution in nickel hydroxide electrodes containing Raney nickel, 4001
Effect of the substrate on the anodic behavior of silver oxide electrode, 4110
Effect of zincate ions on the course of cathodic processes on the silver oxide electrode, 4111
Effect of technological factors on the properties of cast electrodes for chemical current sources with copper(I) chloride. I, 4127
Effect of solvent nature on the kinetics of electrochemical reactions of salt and oxide electrodes, 4138
Effect of matrix structure on the electrochemical performance of p/m iron electrodes in an alkaline battery environment, 4140
Effect of the inert component on mass transfer in the gas phase of a porous electrode. II. Oxygen electrode (C hydrophobized electrode), 3819
Effect of various active carbon catalysts on the behavior of carbon gas-diffusion air electrodes. I, II, 3415
Effect of the discharge temperature on operational and structural characteristics of a silver oxide electrode (-10 to +90°), 4430
Effect of the charge time on the life of a silver battery electrode, 4433
Effects of mercury on the surfaces of polycrystalline copper, tin and zinc, 4194
Effects of charge rate and cycling on the morphology of Cd and $Cd(OH)_2$ in sintered plate electrodes, 3392
Electric storage battery with valve metal electrodes (Patent), 3278
Electrochemical characteristics of porous silver/silver chloride electrodes. Final report, 23 Jun 1971-23 Sep 1972, 3083 (AD-904851L)
Electrochemistry of the nickel oxide electrode. V. Self-passivation effects in oxygen-evolution kinetics, 2954 (AD-744605)
Electrochemical electrodes (Patent), 3881
Electrochemical power sources. Final technical report, 18 September 1968-31 January 1974, 3113 (AD/A-001610)
Electrochemical generators (Patent; description of electrode assembly), 3944
Electrochemical processes on nickel oxide, 2902 (AD-667807)
Electrochemical vehicle power plants, 5254
Electrochemical characterization of nonaqueous systems for secondary battery application (1000 electrode-organic electrolyte combinations), 3241 (NASA-CR-1434)
Electrochemical characterization of nonaqueous systems for secondary battery application. Quarterly report,

February-April 1968, 3196 (N-68-28554)
Electrochemical properties of $RbAg_4I_5$ solid electrolyte. II. Silver electrode reversibility (Importance of shape), 4301
Electrode for galvanic elements, especially for alkaline storage batteries, 3095 (AD-909885L)
Electrode for secondary storage battery (Ni fibers with iron oxide as active agent, additives; patent), 3925
Electrode bearing plastic strip (Patent; fabrication), 3630
Electrode for alkaline batteries (Patent; fabrication using loaded Ni sponge), 3651
Electrode plate for alkaline batteries (Patent; fabrication method), 3713
Electrode plate of alkaline storage battery (Patent; preparation of Ni or Cd electrode), 3591
Electrode kinetics of the alkali metals in $AlCl_3$-propylene carbonate solution, 2263
Electrode migration and reaction processes occurring within alkaline-zinc batteries. Final report, Dec 1965-Sep 1969, 1897 (AD-862506)
Electrode migration and reaction process occurring in alkaline-zinc batteries. Quarterly technical progress report No. 4, 1 Sep-1 Dec 1966, 2987 (AD-804559)
Electrode migration and reaction processes occurring within alkaline-zinc batteries. Quarterly technical progress report No. 7, 1 Jun-1 Sep 1967 (Study of cathodic Zn processes at 50°C), 3008 (AD-820273)
Electrode migration and reaction processes occurring within alkaline-zinc batteries. Quarterly technical progress report No. 10, 1 Mar-1 Jun 1968 (Amalgamated and nonamalgamated zinc in KOH), 3024 (AD-834995)
Electrode migration and reaction processes occurring within alkaline-zinc batteries. Quarterly technical progress report No. 12, 1 Sep-1 Dec 1968, 3039 (AD-847067)
Electrode passivation studies. Quarterly report No. 2, 1 Mar-31 May 1966, 2838 (AD-484216)
Electrode phenomena of cadmium in alkaline battery: discharge mechanism, 4695
Electrode for electrochemical power sources (Patent), 3387
Electrode mechanisms using reflection and electron spectroscopy. Final report 15 Jan 1972-14 Jan 1976, 3134 (AD-A-027694)
Electrode-separator combination for use in batteries (Patent), 4315
Electrodes for alkaline batteries (Patent; preparation), 3613
Electrodes for electrochemical cells (Patent; nickel powder in solidified poly(vinyl acetate)), 4333
Electrolytic cell for x-ray diffraction studies of electrode phenomena, 2852 (AD-605707)
Electromagnetic monitoring of the degree of oxidation of powder-metallurgy nickel [for electrodes for alkaline batteries], 4130
Electrophoretic method of preparation of electrodes from nickel(II) hydroxide, 3780
Energetics of the organic electrodes of accumulators, 3659
Evaluation of porous electrodes through cell power maximum measurements, 4178
Experimental study of reaction profiles in porous electrodes, 3770
Experimental current distribution in porous battery electrodes (Ways to ensure uniformity), 4572
Fabricating zinc oxide electrodes for secondary batteries (Patent), 4486
Failure analysis of porous electrodes. Final report (Ag/AgCl electrodes; output of $Li/LiClO_4$, DMSU/C, LiF cell), 3100 (AD-912458)
Failure analysis of porous electrodes. Final report, 3101 (AD-912458)
Feasibility of microscopy for investigating the silver oxide electrode, 2900 (AD-664993)
Feasibility of using magnetic measurements for the selection of concentrations of sulfur additives in the active mass of an iron electrode, 4432
Formation of electrodes for alkaline batteries (Patent), 3542
Forming rechargeable electrodes utilizing an unsintered fluorocarbon binder (Patent; fabrication), 4309
Framework for electrodes in electric cells (Patent), 3860
Gas diffusion electrode for batteries (Mixture of conducting material (e.g. powdered metal) and hologenated material (e.g. teflon;patent), 3909
Halogen hydrates (Patent; halogen storage by means of hydrates), 3513
High-energy system (organic electrolyte). Quarterly report No. 1, 15 June-15 September 1965, 334 (AD-628961)
High-rate batteries (Effects of plate porosity on efficiency; study included Zn, Cd, Pb, $Ag_2O$, and AgO), 2890 (AD-645942)
Hydrating a battery plaque impregnated with a metal nitrate in a hydroxide solution and subsequent recovery of the nitrate by-product as crystals (Patent; preparation), 4249
Hydrogen energy storage electrode, 4164
Hydrophilic electrode and its fabrication (Patent), 3509
Hydrophilic electrode (Patent; preparation), 3545
Improvement of the technology of sintered cadmium [battery] electrodes, 4067
In-situ preparation of electrodes for batteries (Patent), 3896
Influence of sinter temperature on capacity of silver electrodes, 4556
Influence of electrode reaction kinetics on polarization of flooded porous electrodes, 4615
Influence of ultrasound and of other precipitation conditions on the particle-size composition of nickelous hydroxide precipitates, 4452
Influence of the porous structure of a zinc electrode on its electrical characteristics, 4391
Infrared spectroscopic study of the properties of a nickel oxide electrode. I. Effect of charging conditions on the ir spectra of a nickel oxide electrode in charged and discharged states, 4092
Introduction of active materials into porous electrode frameworks for alkaline batteries, 3908
Investigation of porous lithium battery electrodes. Final technical report, 15 July 1965-15 November 1966, 2996 (AD-808937)
Investigation of the electrode migration and reaction process occurring in alkaline-zinc batteries. Quarterly technical progress report No. 8, 1 Sep-1 Dec 1967, 3014 (AD-824687)
Investigation of the electrode migration and reaction process occurring in alkaline-zinc batteries. Quarterly technical progress report. No. 9, 1 Dec 1967-1 Mar 1968, 3019 (AD-829092)
Investigation of the electrode migration and reaction process occurring in alkaline-zinc batteries. Quarterly technical progress report No. 11, 1 Jun-1 Sep 1968 (Polarographic study of zincate solutions), 3034 (AD-841829)
Investigation of porous lithium battery electrodes. Quarterly technical progress report No. 1, 15 Jul-15 Oct 1965, 2826 (AD-474692)
Investigation of porous lithium battery electrodes. Quarterly technical progress report No. 2, 15 Oct 1965-15 Jan 1966 (Rechargeable spacecraft batteries), 2830 (AD-478016)
Investigation of porous lithium battery electrodes. Quarterly technical progress report No. 3, 15 Jan-15 Apr 1966, 2839 (AD-484218)
Investigation of porous lithium battery electrodes. Quarterly technical progress report No. 4, 15 Apr-15 Jul 1966, 2840 (AD-487623)
Investigation of the electrode migration and reaction process occurring in alkaline-zinc batteries. Quarterly technical progress report No. 1, 1 Dec 1965-1 Mar 1966, 1697 (AD-480149)
Investigation of the electrode migration and reaction process occurring in alkaline-zinc batteries. Quarterly technical progress report No. 3, 1 Jun-1 Sep 1966, 2842 (AD-488605)
Investigation toward the development of carbonyl nickel powder suitable for the manufacture of sintered nickel plaques for use in alkaline storage batteries, 2873 (AD-622916)
Kinetic study of the zinc electrode by modified pulse techniques and concentration gradients. Final technical report, 3040 (AD-847223)
Kinetic study of the zinc electrode by modified techniques, 4424
Lead alloys of high creep rupture strength, 3907
Lead-calcium wrought alloys (Patent), 3973
Lead perchlorate cell based on $HClO_4$ instead of $H_2SO_4$ (Patent), 816
Life capability of the silver electrode in alkaline electrochemical cells (Ag-$H_2$), 3235 (N-76-28648)
Lignocellulose batteries. Potential sources of stored electrical energy, 1126
Liquid metal electrodes in secondary batteries (Review of developments in batteries of various types), 3175 (CONF-760503-10)
Lithium amalgam-lithium chloride and thallium amalgam-thallous chloride electrodes in lithium chloride-dimethyl sulfoxide solutions (Dissolution and deposition of Li comparatively irreversible), 1504
Lithium electrode (Patent; fabrication, improved cycle life), 3622
Long-life stable zinc electrode for alkaline secondary battery. Quarterly report No. 2, 1 March-31 May 1967, 3015 (AD-824719)
Long-life stable zinc electrodes for alkaline secondary batteries. Quarterly report No. 3, 1 June-3 August 1967, 3018 (AD-828224)
Long-life stable zinc electrode for alkaline secondary battery. Quarterly report No. 5, 1 December 1967-29 February 1968 (5 Ah), 3028 (AD-837262)
Long-life stable zinc electrodes for alkaline secondary batteries. Quarterly technical progress report No. 6, 1 March-30 May 1968, 3038 (AD-847053)
Long-life stable zinc electrodes for alkaline secondary batteries. Quarterly technical progress report No. 7, 1 June-31 August 1968, 3042 (AD-849523)
Low temperature cycling behavior of the silver electrode. Technical report No. 3, 2854 (AD-609876)
Macrokinetics of the processes at the zinc electrode of an alkali current source, 3800
Manufacture of a dry-charged nickel oxide electrode by chemical oxidation (KOH--$K_2S_2O_8$ solution), 4083
Mechanism of current generation in waterproofed

electrodes, 4126
Metal lattice for electrolyte supports of storage batteries (Patent; Pb or alkaline storage batteries), 3751
Method for preparing electrodes for an electrochemical storage cell (Patent), 3405
Method for making nickel and cadmium electrodes for batteries (Patent), 3375
Method of manufacturing a nonlamellar cadmium electrode of an alkali storage battery (USSR patent), 2966 (AD-759754)
Method of manufacturing a nonlamellar cadmium electrode of an alkali storage battery, 4822 (AD-759754)
Method of producing electrodes (Patent), 3400
Methods for determining the structural and stoichiometric changes of $Ni(OH)_2$ electrodes during polarization in alkaline electrolyte, 4565
Methods of producing electrodes for alkaline batteries (Patent; oxidative pretreatment of nickel plaque before impregnation), 3287
Mixed conductor materials for electrodes in advanced secondary batteries, 3131 (AD-A-024658)
Mixture containing powdered lead, lead oxide, and a pore-forming additive, for preparing electrodes for lead storage batteries (Patent), 3611
Mixture for making porous electrodes (Patent), 3968
Moessbauer spectroscopy investigation of the iron electrode during cycling in alkaline solution, 3810
Morphology and capacity of a cadmium electrode, 4198
New experimental technique for study of films produced at electrochemical interfacees (Corrosion films), 4722
New results from the technological development of an industrial concern (Catalytic activity of tungsten carbide electrode), 3091 (AD-908400L)
New secondary electrochemical systems (Mg/AgCl--Ag; Al/NiO-Ni; Mg/Ni), 4688
New type of reversible negative electrode for alkaline storage batteries based on metal alloy hydrides, 4201
Nickel-base electrodes for alkaline batteries (Patent; preparation procedure), 3750
Nickel electrodes for alkaline cells (Patent), 3663
Nickel hydroxide battery electrode development. Final technical report, 1 Jan 1971-31 Jan 1972, 2958 (AD-746335)
Nickel hydroxide electrode research. Interim technical report No. 1, 1 January 1969-2 February 1970 (Effects of cation additions to active material), 3056 (AD-866147)
Nickel hydroxide electrode (Patent), 4334
Nickel or cadmium electrodes for alkaline cells (Patent; chemical preparation), 3588
Nonacid battery paste (Patent), 3540
Oxidation of powder-metallurgical electrodes by potassium hypochlorite, 4076
Oxidation of organic components in a hermetic storage battery and tne stability of its characteristics (Accumulation of Cd on electrodes during cycling), 3815
Oxidation of hydrogen on a porous nickel electrode, 2860 (AD-612497)
Oxidation of sintered nickel bases with ozone (Chemical preparation), 4434
Oxygen reduction on porous cadmium electrodes of alkaline accumulators, 3402
Patent; preparation of Ni oxide, Ni hydroxide, and Fe oxide electrodes, 3762
Perforator of lamellar tapes for alkaline storage battery electrodes (Patent), 4304 (FSTC-HT-23-0343-74)
Polarization of manganese dioxide electrode, 4683
Polarization studies on sintered plate electrodes containing various amounts of $Ni(OH)_2$, 4579
Porous cadmium metal for alkaline storage batteries (Patent; Cd powder + urea heated and washed), 3606
Porous carbon material for use as a battery or fuel cell electrode (Patent), 4245
Porous carbon material for use as a battery or fuel cell electrode (Patent; chemical preparation), 4250
Porous cobalt electrodes for alkaline accumulators and hybrid cell therewith and air electrode (Patent), 3376
Porous-electrode theory with applications to batteries (and fuel cells), 3765
Porous electrode bodies for primary and secondary cells (Patent;fabrication), 4679
Porous nickel alkaline-battery electrodes made from woven cotton cloth (Fabrication and testing, porous structure derived from woven cotton cloth), 4349
Porous structure of a sintered nickel oxide electrode, 2960 (AD-748109)
Possibilities of improving the electrical characteristics of nonlamellar nickel oxide electrodes of alkaline storage batteries, 4068
Potassium distribution in nickel oxide electrodes, 4577
Potentiodynamic study of the effect of aluminum on the behavior of an iron electrode in alkaline solution, 4298
Powder-metallurgy electrode of an alkaline storage battery (Patent), 3853
Power sources conference (22nd annual) held 14-16 May 1968. Proceedings, 41 (AD-696427)
Practical aspects of electrode modeling (Reaction profiles, Ag/AgCl system), 4048
Preparation and structure of electrodeposited sponge cadmium electrodes, 4488
Preparation of an alkaline iron electrode material using sulfur acids (Patent), 4180
Preparation of highly porous nickel substrates for sintered electrodes of storage batteries, 4428
Problem on the mechanism of calcium poisonous action on powder cadmium electrode, 3491
Process for making electrochemical electrodes (Patent), 3879
Processes at the silver oxide electrode of an alkali current source (State-of-the-art review (1975)), 3798
Processes occurring in electrochemical systems with a solid silver-conducting electrolyte (Behavior of polyiodide electrode in $RbAg_4I_5$ electrolyte), 2321
Producing porous metal structures for battery electrodes (Patent; Zn, Cd), 4254
Production of a cadmium electrode for the alkaline storage battery (Patent), 3998
Production of porous membranes for batteries and fuel cells (Nickel), 4620
Production of porous nickel for alkaline-battery and fuel-cell electrodes: practical and economic considerations, 4611
Production of porous nickel electrodes for gas-tight batteries, 4604
Products of oxidation of nickel with ozone (Chemical preparation of nickel oxide electrode active mass), 4436
Quinone electrodes for primary and secondary batteries (Patent), 4319
Rational degree of filling of pores of powder-metallurgical nickel oxide electrode by the active media, 4118
Reaction possibilities in electrodes of solid-state batteries, 4108
Reasons for the poisoning effect of small quantities of some impurities on the cathode reduction process for metal oxides and hydroxides in an alkali solution, 4134
Rechargeable lithium electrodes in a propylene carbonate electrolyte, 1251
Rechargeable cell having ceramic--metal terminal seal resistant to alkali electrolyte (Patent), 3934
Rechargeable zinc electrodes (Patent; fabrication), 3532
Rechargeability of manganese dioxide electrode (KOH solution), 4510
Reduction of the silver oxide electrode in CsOH solutions (Comparison with KOH), 4003
Relating structural variables of porous electrodes (Method gives specific surface area), 1089
Reproducible and stable silver-silver oxide electrode, 4744
Reproducibility of lead electrode and electromotive force of lead stick-lead amalgam cell at 0 to 60°C, 4817
Reserve battery electrodes using bonded active materials (Patent), 4310
Reserve battery electrodes using bonded active materials (Patent; preparation), 4312
Reversible electrode reactions of difficult-to-dissolve materials in nonaqueous electrolytes (a contribution to the knowledge on potential cathodes for secondary high-energy-density batteries with special consideration of graphite compounds, 3221 (N-74-30505)
Review of fundamental investigations of silver oxide electrodes, 2831 (AD-478632)
Rugged silver--silver chloride electrode for field use (2.7 M KCl filling solution saturated with AgCl), 4175
Scanning electron-microscopy studies of silver oxide electrodes, 4093
Scanning electron microscope investigations on silver oxide electrodes (Morphological changes in sintered powder metallurgy electrodes due to oxidation during cycling), 4024
Scanning electron microscope investigations on silver oxide electrodes, 4025
Scientific research on improving the characteristics of iron and nickel oxide electrodes, 3792
Self-discharge of nickel oxide electrodes, 4213
Self-discharge mechanism of a powder-metallurgy nickel oxide electrode in concentrated potassium hydroxide solutions, 4135
Self-discharge of a nickel oxide electrode, 4417
Self-discharge of the alkaline iron electrode, 3442
Sheath for tubular storage battery electrodes and method for their production (Patent), 3399
Sheath for tubular storage battery electrodes and method for their production (Patent), 3319
Sheet-like electrodes for storage batteries (Patent; manufacturing method), 4678
Silver electrodes for chemical sources of electric power (Patent), 3942
Silver electrode for battery (Patent; fabrication), 3914
Silver oxide battery electrode (Patent; preparation by electrochemical oxidation of Ag powder), 3739
Silver oxide electrode (Electrochemistry), 4725
Silver/silver chloride electrode: charging of a porous structure, 3769
Silver/silver chloride electrodes: surface morphology on charging and discharging (37.2-μm Ag spheres, transport modes for oxidation and reduction), 4005
Silver-tungsten carbide electrode (Patent), 4021
Sintered electrodes for batteries (Patent), 3683
Sintered electrode plate for alkaline storage battery (Patent; fabrication), 3600
Sintered-metal nickel oxide electrode for an alkali

storage cell, 2959 (AD-748047)
Sintered type alkaline storage battery. XV. Effect of lithium ion on the formation of active material from nickel plaque at various temperatures, 4087
Sintered zinc electrode (Patent; fabrication), 4323
Solid electrolyte battery materials. Technical report, 3145 (AD-A-039899)
Storage-battery electrodes (Patent; preparation), 4694
Strain electrometry and corrosion. IV (Film properties and strain potential), 4730
Structure of a double electric layer and features of the electrode processes on a sodium nickelate single crystal, 4136
Studies on the stability of oxides of silver, 2875 (AD-626229)
Studies on silver oxide. I. Analytical techniques. II. Thermal decomposition of AgO. III. Charging efficiency studies, 2993 (AD-806861)
Studies on the silver/silver oxide electrode, 3837
Study of electrodes and electrode reactions. II. The relation of the energy necessary to remove an oxygen molecule from charged nickel oxide electrodes in vacua and solutions of potassium hydroxide, 2876 (AD-627216)
Study of electrodes and electrode reactions. I. The energy necessary to remove an oxygen molecule from a charged nickel oxide electrode in a vacuum, 2877 (AD-627248)
Study of electrode phenomena in storage batteries, 4743
Study of some charge transfer complexes as electrodes in solid-state cells, 3436
Study of the electrochemical properties of solid-state conjugated amines with respect to their use as electrode active materials in secondary batteries, 3331
Support frame for the active material of electrodes for batteries or fuel cells (Patent), 4011
Surface coverage during hydrogen and oxygen evolution, 2639
Susceptibility to oxidation of coal and graphite electrodes, 3080 (AD-902658L)
Texture of a zinc oxide residue formed during the anodic oxidation of porous zinc in an alkaline solution, 2228
Thermogalvanic potentials. II. Nickel in neutral subgate solution, 4769
Thickness optimization of powder-metallurgical battery electrodes, 4074
Transport processes in porous electrodes, 2229
Two-layer casing for tubular electrodes for storage batteries (Patent), 3573
Use of compound binders in the production technology of carbon battery electrodes, 3788
Use of Mg instead of Zn in electric batteries (advantages), 4794
Use of stereometric metallography for determination of structural characteristics of porous nickel bodies for alkaline storage cell plates, 4463
Viscosity, density, and electrical conductivity of aqueous NaOH solutions at low temperatures, 4451
Wrapped-electrode battery (Patent), 3317
Zinc-container electrode (Patent; design and performance), 3667
Zinc electrode investigation. Quarterly technical progress report No. 7, 1 Jan-1 Apr 1966, 2835 (AD-480735)
Zinc electrodes for rechargeable batteries (Patent; synthetic latex coating to prevent dendrite formation), 3585
Zinc electrode investigation. Quarterly technical progress report No. 5, 1 Jul-1 Oct 1965, 2818 (AD-471222)
Zinc electrode investigation. Quarterly technical progress report No. 6, 1 Oct 1965-1 Jan 1966, 2829 (AD-476991)
Zinc electrode investigation. Quarterly technical progress report No. 7, 1 Jan-1 Apr 1966, 2836 (AD-480735)
Zinc electrode investigation, 2843 (AD-489498)
Zinc electrode investigation. Quarterly technical progress report No. 1, 1 Jul-1 Oct 1964 (Pd-on-alumina catalyst), 2853 (AD-606999)
Zinc electrode investigation. Quarterly technical progress report No. 2, 1 Oct 1964-1 Jan 1965 (Effects of catalysts, pressure, and impurities), 2856 (AD-609984)
Zinc electrode investigation. Quarterly technical progress report No. 3, 1 Jan-1 Apr 1965, 2863 (AD-614119)
Zinc electrodes in alkaline medium, 1464
Zinc powder for batteries (Patent), 3679

ELECTRIC BATTERIES/ELECTROLYTES
Alumina solid electrolyte for secondary batteries (Patent; fabrication), 3736
Apparatus for indicating density threshold value and its use with storage batteries (Patent), 3947
Basic and applied research in materials. Annual technical report, 1 Jun 1975-30 Jun 1976, 3138 (AD-A-034074)
Basic research on ceramic materials for energy storage and conversion systems. Progress report, April 1, 1975-November 30, 1975, 667 (COO-2564-1)
Basic research on ceramic materials for energy storage and conversion systems. Progress report, December 1, 1975-November 30, 1976 ($Tl_2ZnI_2$, $In_4CdI_6$, $Tl_4CdI_6$, and $In_2ZnI_4$; solid electrolytes and electrodes), 3182 (COO-2564-2)
Battery additive hearings (Testimony concerning AD-X2), 4760
Battery with negative electrode of alkali metal (Li anode with $LiClO_4$ electrolyte in mixed solvent), 4006
Battery with alkaline electrolyte (Wetting prevented by covering with polyaminoamide;patent), 1043
Behavior of dimethyl sulfite as potential nonaqueous battery solvent, 4491
Beneficial effect of lithiated electrolyte on iron battery electrodes, 4632
Conductivity of beta-alumina and its dependence on sodium and magnesium content, 4225
Considerations in the use of electrical measurement techniques to evaluate potential new electrolytes and mixed conductors (Emphasis on interpretation of frequency-dependent ac measurements), 3162 (ANL-76-8)
Determination of hydroxide and carbonate contents of alkaline electrolytes containing zinc, 3245 (NASA-TN-D-8007)
Determination of hydroxide and carbonate contents of alkaline electrolytes containing zinc, 2086 (N-75-24866)
Determination of the electronic transference numbers of solid electrolytes, 4441
Development program for solid electrolyte batteries. Interim report, 729 (PB-248326)
Electrical conductivity measurements in anhydrous hydrogen fluoride (LiF, NaF, $KF.2H_2O$, $SrF_3$, $KNO_3$), 4339
Electrical conductivity of electrolytes used in alkaline storage cells (dc measuring method, -40 to +50°), 4364
Electrochemical power sources. Final technical report, 18 September 1968-31 January 1974, 3113 (AD/A-001610)
Electrochemical generator with a zinc electrode (Patent), 3888
Electrochemical studies of mass transport in high-temperature electrolytes (Chromopotentiometric determination of interdiffusion coefficients for $BeF_2$-LiF and NaCl-$AlCl_3$ melts), 3174 (CONF-760312-1)
Electrochemical vehicle power plants, 5254
Electrochemical behavior of $H_2O$ in nonaqueous electrolyte (Propylene carbonate-$LiClO_4$), 2503
Electrochemical characterization of nonaqueous systems for secondary battery application (1000 electrode-organic electrolyte combinations), 3241 (NASA-CR-1434)
Electrochemical characterization of nonaqueous systems for secondary battery application. Quarterly report, February-April 1968, 3196 (N-68-28554)
Electrochemical studies of mass transport in high temperature electrolytes (Molten $BeF_2$-LiF mixtures), 3342
Electrode reactions in molten sodium nitrate-barium nitrate eutectic at 350 degrees C, 2927 (AD-703842)
Electroinitiated polymerization of tetrahydrofuran, 3939
Electrolyte for high-temperature sodium source of electric energy (Patent; NaOH + NaI and/or NaBr), 3511
Energetics of the organic electrodes of accumulators, 3659
Fabrication and inspection procedures for gas generators, 950 cc and 8000 cc (instantaneous and delay) (For displacing electrolytes in batteries), 2815 (AD-469277)
Feasibility of electrolyte regeneration in Al batteries (80 Ah ≈ 3x amount without regeneration), 1551
Gaseous electrolytes for batteries and fuel cells. Final report, 21 August 1964-31 July 1967, 3199 (N-69-29708)
Growth of monocrystals of the gallium analog of β''-$Al_2O_3$ by $Na_2O$ evaporation, 3314
Hexamethonium--silver iodide reversible cell, 1295
High conductivity cuprous halide-metal halide systems (AC conductivity measurements), 3291
High-energy system (organic electrolyte). Quarterly report No. 1, 15 June-15 September 1965, 334 (AD-628961)
High energy batteries. Final report, 472 (AD-823304)
Immobilizing agents for electrolyte solutions in batteries (Patent; keolin), 4009
Improvements to multicelled electric batteries (Patent; automatic electrolyte level control), 3533
Investigation of the electrode migration and reaction process occurring in alkaline-zinc batteries. Quarterly technical progress report No. 11, 1 Jun-1 Sep 1968 (Polarographic study of zincate solutions), 3034 (AD-841829)
Investigations on a high conductivity solid electrolyte system, RbCl + CuCl, 3292
Ionic conduction in beta-alumina. Interim technical report No. 6, 8 Feb-8 Aug 1969, 2926 (AD-702938)
Iron--alkaline battery (Patent; effects of EDTA addition to KOH electrolyte on utilization coefficient of anode-active mass), 3639
Iron--alkali batteries (Patent; effect of tartrate addition on utilization coefficient of Fe anode-active mass), 3640
Lead-nickel glass of controlled chemical durability for storage battery use (Adds Ni ions to electrolyte to decrease end-of-charge voltage), 4814
Lithium battery electrolyte additive and method of improving discharge rate (Patent; hexamethyl phosphoramide added to lithium perchlorate-propylene carbonate electrolyte), 4190
Lithium battery development. Annual report No. 3, 1 April 1970-31 March 1971, 2935 (AD-726607)

Lithium ion conductive electrolyte composition (Patent; $Li_2SO_4$-LiOH), 3300 (SAND-77-6008)
Lithium ion conductive electrolyte composition (Patent), 3303 (SAND-77-6009)
Method of measuring conductivity of electrolytes by induced currents (Electrolyte placed in alternating or rotating magnetic field), 4804
Migrational polarization in high-current density molten salt electrochemical devices, 658 (CONF-770531-6)
Mixed solvents for high and low temperature organic electrolyte batteries (Patent), 4149
Molten-salt electrolytes-transport properties, 2540
Neutron scattering studies of solid electrolytes, 3165 (BNL-21367)
New solid conductors of $Na^+$ and $K^+$ ions ($NaTaWO_6$; $NaTa_2O_5F$; $NaSbO_3$; Na and K niobates), 3433
Nonaqueous electrolyte systems: ionic transport in nonaqueous media. Final report (For development of new battery and fuel cell systems), 2948 (AD-741804)
Nonaqueous electrolyte systems: ionic transport in nonaqueous media. Interim technical report No. 7, 2931 (AD-714680)
Organic and molten salt electrolytes (Discussion of present problems with these electrolytes), 4533
Performance characteristics of solid electrolytes under steady-state conditions (Yttria-doped thoria, 1600°C), 3111 (AD/A-001572)
Phase equilibrium studies of lithium halide-containing electrolytes, 1440
Power sources conference (22nd annual) held 14-16 May 1968. Proceedings, 41 (AD-696427)
Preparation of highly conductive β-alumina and electrochemical measurements, 4214
Properties of LiCl and $(CH_3)_4NCl$ solutions in water--methanol mixtures, 4174
Properties of some mixed organic electrolyte solutions and their effects on the anodic performances of Mg electrodes (Polarization characteristics of Mg anodes), 3461
Recent progress in the development of solid electrolyte batteries, 4373
Rechargeable galvanic cell (Patent), 1229
Rechargeable galvanic cell and electrolyte therefor-II (Patent; Zn anode, aqueous electrolyte containing soluble Zn and quaternary ammonium compound), 4377
Reduction of the silver oxide electrode in CsOH solutions (Comparison with KOH), 4003
Role of molten salts in the energy problems, 4065
Sealed alkaline batteries (Patent; addition of LiOH and NaOH to KOH), 3660
Secondary alkaline batteries (Patent; Zn anode, addition of polycationic polymers enables charging without Zn deposition), 1000
Solid electrolyte battery materials. Technical report, 2977 (AD-782365)
Solid electrolyte composition for secondary battery (NaI--$(CH_2)_6N_4CH_3I$ for Na batteries; patent), 3920
Solid electrolyte (Patent; β-alumina, fabrication), 3697
Solid electrolyte (Patent; improved electrolyte), 3698
Solid electrolytes for batteries, 4287
Solid electrolyte element (Patent), 3437
Solid electrolytes: alkali-ion transport in skeleton structures. Semiannual technical summary report, 1 Jan-30 Jun 1976 ($Na_3Zr_2Si_2PO_{12}$ and $K_{1.6}Mg_{0.8}Si_{1.2}O_4$), 3136 (AD-A-032342)
Solid-state ionics - solids with high ionic conductivity in the systems silver iodide--silver oxyacid salts, 4242
Studies of reserve batteries. Semiannual report (Physical properties at -40°F), 3001 (AD-813774)
Study, selection, and preparation of solid cationic conductors. Final report, 13 November 1972-12 November 1973, 3219 (N-74-26498)
Study of the composition of nonaqueous solutions of potential use in high energy density batteries. Final report, 1 Sep 1966-31 Aug 1969 (Organic batteries), 2925 (AD-699589)
Substitution of silver by various metal ions in modified agi solid electrolytes, 3984
Sulphate based solid electrolytes with some applications (Performance of $Mg/Li_{1.72}Mg_{0.14}SO_4/MnO_2$ cell), 3835
Technical comment on the behavior of electrolyte in a wet-cell electrochemical battery in free fall, 1626 (AD-429357)
Tellurium chloride thermoregenerative galvanic cell. Final report, 1 Mar 1968-28 Feb 1969 (Development problems), 582 (AD-A-016770)
Thermodynamic properties of solid electrolyte $RbAg_4I_5$, 4465
Water-absorbing porous materials for battery-electrolyte support (Patent), 3892
Zinc alkaline secondary batteries (Patent; dendrite growth suppressed by In and Tl), 3627

ELECTRIC BATTERIES/ELECTROMOTIVE FORCE
Effect of diffusion of sparingly soluble salt on EMF of cell without transference, 2511
New class of electric batteries and "compensated diffusion" phenomenon, 1445
Value of electromotive force of voltaic cell: magnitude without sign (Justification for sign-independent definition), 1585

ELECTRIC BATTERIES/ELECTRONIC CIRCUITS
Development of single-cell protectors for sealed silver-zinc cells. Phase 1. Final report, Apr 1975-Apr 1976, 3236 (N-76-32651)

ELECTRIC BATTERIES/ENERGY STORAGE
Research leading to the production and early use of numeric data banks of material properties and system analyses. Second quarterly progress report, April-June 1976 (Data bases for energy storage: flywheels, storage batteries), 121 (UCRL-50038-76-2)

ELECTRIC BATTERIES/ENERGY YIELD
Batteries power urban autos, 2197
Batteries power urban automs, 5076

ELECTRIC BATTERIES/EQUIVALENT CIRCUITS
Electrochemical cell equivalent circuit for storage battery/power system calculations by digital computer, 2453
Power transfer characteristics of a secondary battery for integrated system design, 1455

ELECTRIC BATTERIES/EXPLOSIONS
New explosionproof electrical equipment and conditions for its use (Explosion proof gas filter to reduce $H_2$ concentration), 1310
Sparkfree chemical current sources (Short circuits produced no ignition of explosive mixtures), 2423

ELECTRIC BATTERIES/FABRICATION
Affixing current collectors to electrolytic secondary and primary cells (Patent), 1327
Alkaline battery (Patent; packing material based on chlorosulfonated polyethylene), 971
Alkaline cell (Patent; Zn anode and alkaline electrolyte) 1036
Alkaline manganese battery (Patent), 3614
Alkaline storage battery manufacturing processes without waste solution release (Patent), 1016
Batteries with alkaline electrolyte and sintered electrodes (Sintering of electrodes to case parts), 1150
Batteries, 4513
Batteries for the '80s: the materials of energy storage, 831
Battery and method of manufacturing the same (Patent), 1211
Battery design (Patent; method for securing plates), 826
Battery elements (Li/Li compd. in aprotic org. solvent/Sb or As; patent; 0.85 V, 2.03 A-s/g), 1210
Battery sealing method receptive to injection filling (Patent), 1198
Computer aided battery production, 1222
Electric batteries formed of stacked cells (Patent), 1285
Electric battery with multi-cell stack isolation (Patent) 840
Electrical assembly by resistance welding (Conductors to battery cases), 1584
Filling of battery plate tubules with active mass (Patent), 1055
Flat alkaline cell construction and method for assembling the same (Patent), 1031
Flat alkaline batteries (Patent), 919
Laminated storage battery with titanium electroconductive plate (Patent; bipolar-electrode plates, 100 cycles), 1018
Latest trends in the battery manufacturing field in Japan, 548 (AD-909939L)
Lead oxides: chemistry, technology, battery manufacturing uses, history, 1252
Manufacture and use of storage batteries, 1614
Method of uniting battery cover and case (Patent), 1503
Method of filling tubes of accumulator plates with active mass (Patent), 1058
Methods for mounting battery plates (Patent), 918
New lighting batteries for Swiss Federal Railroads (150 Ah), 1553
Patent; plates connected to common bridge by spot welding, 1067
Possibilities for increasing the technical level and specific weight and volumetric electrical rating characteristics of chemical sources of current, 1460 (AD-777665)
Process for manufacturing storage batteries and battery produced thereby (Patent), 912
Reversible solid-state battery with $RbAg_4I_5$ as electrolyte, 1438
Sealant for galvanic batteries and cells (Patent), 1215
Solid state battery enclosure (Use of evacuated interior) 1203
Storage battery cells (Patent), 1287
Technology and armament. Number 4, 1971 (10 articles including one on battery preparation), 398 (AD-729225)
Transparent plastic battery, 1520
Zinc electrodes in alkaline medium, 1464

ELECTRIC BATTERIES/FAILURES
Alkaline cell evaluation and analysis. Quarterly technical progress report No. 4, 15 Feb-15 May 1965, 1673 (AD-466263)
Alkaline cell evaluation and analysis. Quarterly technical progress report No. 3, 15 Nov 1964-15 Feb 1965, 1732 (AD-611850)
Alkaline cell evaluation and analysis. Quarterly technical progress report No. 5, 15 May-15 Aug 1965, 1690 (AD-472416)
Battery information: personalizing this emerging resource. Technical report, 30 June 1966-1 May 1969, 1892 (AD-853350)
Failure analysis procedures for sealed cells, 2493

Failure mechanisms in sealed batteries. Semiannual technical summary report No. 1, 30 June-31 December 1966, 1855 (AD-813731)
Failure mechanisms and accelerated life tests for batteries, 1878 (AD-838775)
Investigation of storage battery failure by method of plastic impregnation (Electrolyte replaced by liquid epoxy resin), 2670
Performance and failure mechanisms of secondary batteries, 1912 (AD-901015L)
Storage battery charging with modified constant-voltage method (Premature failure often due to improper charging), 2718

ELECTRIC BATTERIES/FASTENING
Battery strapping development, 2985 (AD-803027)

ELECTRIC BATTERIES/FEASIBILITY STUDIES
Passive-lithium secondary batteries. Final technical report, 1 Jan 1974-31 Jan 1975 (Ambient temperature), 575 (AD/A-006748)

ELECTRIC BATTERIES/FOILS
Electrolyte for activating a metal foil (Patent; for alkaline batteries), 4332

ELECTRIC BATTERIES/FORECASTING
Della Mussia, J.P., 1335
Focus on standby supplies, 5111
No assault on lead-acid battery until 1980, 5112
Review of battery research and development, 1248
Secondary batteries with nonaqueous electrolytes. Present state and long-term outlook, 1106
Storage batteries for electrically driven vehicles, 2432

ELECTRIC BATTERIES/GASES
Catalyst for the reaction of hydrogen and oxygen (Patent), 4341
Catalytic oxidation reactor for hydrogen or other fuel gas in an oxygen-containing gas mixture (Patent), 3596
Catalytic device for storage battery (Patent; recombines released $H_2$ and $O_2$ into water which is returned to electrolyte), 3336
Catalyzed removal of hydrogen from electronic equipment. Technical report, 2011 (AD-A-013498)
Galvanic monitoring of battery gases, 2502
Molded catalyst body for storage batteries (Patent), 3609
Quarterly report No. 6, 17 Jul-17 Oct 1947 (Zinc electrode), 1718 (AD-491650)
Recombination of gases formed in secondary batteries (Patent), 1138
Recombining hydrogen and oxygen in a sealed battery and controlling recombination at catalytic surfaces (Patent), 1374
Research on safety of electric battery locomotives, 2661
Storage battery gas recombination catalyst device (Patent), 4010
Surface coverage during hydrogen and oxygen evolution, 2639
Transient pressure considerations in charge control of sealed batteries, 2395
Zinc anode battery (Patent; coating of 2,6-di-tert-butyl-p-cresol to extend shelf life and inhibit H evolution), 981

ELECTRIC BATTERIES/GASKETS
Alkaline cells (Patent; halogenated butyl rubber with blended styrenic and phenolic resins), 3568

ELECTRIC BATTERIES/GRIDS
Battery plate grids (Patent; fabrication method), 3749
Cadmium--antimony--lead alloy (2.0 to 2.5 percent Sb, 2.0 to 4.0 percent Cd, increased tensile strength), 3760
Manufacture. Radiation gage regulates paste dispensing, 4717
Method of manufacturing battery plate grids (Patent), 3504
Saturation kinetics of powder metallurgical grids in nickel nitrate solution (40° to 90°), 4103

ELECTRIC BATTERIES/HEAT PIPES
Active control heat pipe performance for long-life battery cooling, 4283
Development of a planar heat pipe for cooling large capacity batteries, 2946 (AD-740552)
Intercell heat pipe for fuel cell and battery cooling. Final report, June 1972-July 1973, 2978 (AD-782888)

ELECTRIC BATTERIES/HEATERS
Application of heat pipes to military vehicle winterization methods, 3058 (AD-868159)
Heater blanket, battery, Morand Electronics Company, types 1812 and 1813, 2984 (AD-801589)
Heating device for vehicle storage batteries (Patent), 4244

ELECTRIC BATTERIES/HEATING
Analysis and survey of battery heating techniques, 1900 (AD-868158)
Electrochemical cell having heat pipe means for increasing ion mobility in the electrolyte (Patent), 3719
Tests of battery heating and battery box design, 1669 (AD-462782)

ELECTRIC BATTERIES/HYBRID SYSTEMS
Economical fuel cell, 4464
Fuel battery-rechargeable accumulator combination (Patent; fuel cell for base power and accumulator for peak power requirements), 1449
Fuel cell-battery power sources, 1435
Maintenance-free storage battery having an electrolyte dissolved in water and a hydrogen-oxygen fuel cell above the electrode plates (Patent), 1376

ELECTRIC BATTERIES/IMPEDANCE
Battery impedance: farads, milliohms, microbenrys, 2644
Impedance of galvanic cells. XXVI, 2473
Impedance of galvanic cells. XXVII, 2474
Impedance of galvanic cells. XXVIII, 2469
Internal alternating current resistance of storage batteries, 2434

ELECTRIC BATTERIES/INDEXES
Building subject, author, and facility indexes for Battery Information Index, 1884 (AD-848981)
Subject index of research reports, 20 (AD-499478)

ELECTRIC BATTERIES/INFORMATION
Homegrown energy: power for the home and homestead, 145

ELECTRIC BATTERIES/INFORMATION SYSTEMS
Battery information: personalizing this emerging resource. Technical report, 30 June 1966-1 May 1969, 1892 (AD-853350)
Development of Battery Information Index (Battelle), 1866 (AD-831437)

ELECTRIC BATTERIES/INVERTERS
Ac/dc power conditioning and control equipment for advanced conversion and storage technology. Key phase report No. 1, 3259 (PB-247217)
ac/dc power conditioning and control equipment for advanced conversion and storage technology. Final report, 3186 (EPRI-EM-271)
Application of static inverters for essential loads, 4657
Development of a low-cost, light-weight, efficient, 1.5 kW inverter. Final report, 3123 (AD-A-016792)

ELECTRIC BATTERIES/LEAK TESTING
Checking the air tightness of a battery (Patent; method), 2267
Leak testing of alkaline battery cells, 2478

ELECTRIC BATTERIES/LEAKS
Leak rates in sealed cells, 2334
Means for detecting and neutralizing leaks in electrochemical cells (Patent), 804
Why alkaline cells leak, 2139

ELECTRIC BATTERIES/LEGAL ASPECTS
Product liability: legal implications, Washington activity update, ''going bare'', 660 (CONF-7610115-)

ELECTRIC BATTERIES/LIFETIME
Storage-battery life can be stretched, 4781

ELECTRIC BATTERIES/LOSSES
Recombination of gases formed in secondary batteries (Patent), 1138

ELECTRIC BATTERIES/MAINTENANCE
Advanced secondary power sources for aircraft application, 2497
Allegheny-Ludlum's modern battery shop supplies power for 24-hour industrial-truck operation, 2696
Application and use of storage battery in Diesel-electric locomotives, 2752
Arctic instrumentation consideration. Final report on test operations procedure, 1824 (AD-758170)
Batteries in Diesel service, 2751
Battery care and maintenance, 2480
Battery-charging simplified for coal-mine service, 2706
Battery-electric vehicles (Book), 5421
Battery locomotive at Calverton Colliery, 5404
Battery power supply console assembly, part No. 1593449-501. Operation and service manual, 1711 (AD-488954)
Battery service sparks savings, 2635
Battery storage and maintenance, 2727
C and O now has central battery shop, 2666
Care and charging of batteries, 2708
Care of storage batteries for electric trucks, 2773
Careful battery maintenance reduces truck downtime (15-cell 275-A batteries), 2716
Characteristics of rechargeable storage flashlight battery, 2776
Code for battery maintenance, 2745
Do you have proper tools for battery maintenance and repair, 2689
Easy maintenance schedule lowers costs of operating storage batteries, 2730
Electrification increases L C L trucking efficiency in PRR 11th street freight house, Pittsburgh, 5350
Electrona dural batteries, technical data, 1966 (AD-912989L)
Five sound tips for stretching battery life, 2709
Fundamentals of battery operation and care, 2762
General rules simplify industrial truck battery maintenance, 2747
Handling 23,000-pound coils at cold strip mills, 5406
How Consolidated Edison of N.Y. maintains its storage batteries (For stand-by power), 2728
How to extend battery life, 2323
How to get longer life from motive power batteries, 2192
How to take care of industrial truck batteries, 2717
Integrate battery maintenance with production, 2681
Maintaining batteries for maximum service, 2671
Maintenance of Diesel locomotive starting batteries, 2541
Maintenance of industrial truck batteries, 2734
Maintenance and repair: industrial truck storage battery maintenance, 2750
Meters keep close watch: extend battery life, 2595
More power to you, 5407
Pennsylvania Railroad develops new electric trucking system for LCL freight at Chicago (24-cell A6 batteries, 30-cell A8 and D8 batteries), 5364
Planned battery maintenance aids material handling, 2677
Planned maintenance cuts truck costs, 5336

Practical pointers for year-round battery maintenance, 2697
Pratt and Whitney Aircraft has model battery shop for supplying industrial trucks with power, 5389
Preventive maintenance: time and money saver, 2726
Proper battery maintenance cuts industrial truck operating costs, 2742
Saturable choke controlled rectifiers, 2763
Selecting a standby battery., 2255
Selection and maintenance of station control batteries, 2775
Shop design aids battery maintenance, 2676
Some notes on batteries and cranking motors, 2740
Storage batteries in marine service, 2744
Storage battery charging and full-floating operation, 2768
Storage battery charging and full-floating operation, 2767
Storage battery operation and maintenance, 2760
Storage battery operation and maintenance, 2761
Test methodology research investigation of maintenance performance in arctic environment investigation. Final report, 10 Jan-28 Feb 1972, 1933 (AD-905683L)
Tips on battery room layout, 2686
Try this plan for industrial truck maintenance, 2710
Union Pacific builds and equips new battery shop at eastern terminus in Council Bluffs (Capacities up to 1000 Ah), 2691

ELECTRIC BATTERIES/MANUALS
Electrotechnical handbook (extract), 54 (AD-783832)
Storage batteries (operation, tecnical servicing, and repair) (Handbook for battery repair and organization of personnel), 1811 (AD-742012)

ELECTRIC BATTERIES/MARKET
New look in rechargeable batteries (For small electric appliances), 2581
Systematic battery conception for electric vehicles, 5110

ELECTRIC BATTERIES/MASS TRANSFER
Factor affecting transport of silver in silver-alkaline battery, 2588

ELECTRIC BATTERIES/MATERIALS
Batteries, 4513
Batteries: improved with plastics, 4764
Battery industry standards and specifications, 4646
Battery materials, 1970, 4427
Development trends in lead materials, 4303
Electron spin resonance study of molybdenum trioxide-doped manganese dioxides. Technical note, 3125 (AD-A-017295)
Materials problems associated with electric vehicle batteries, 4064
Materials briefs. Number 9, 2845 (AD-489912)
Plastics in batteries and fuel cells (Likelihood of increased use), 4539
Research investigation of corrosion-resistant materials for electrochemical cells. Progress report No. 3, January-July 1968, 3033 (AD-841560)
Research investigation of corrosion-resistant materials for electrochemical cells. Interim report No. 4, 1 September 1968-28 February 1969, 3043 (AD-853250)
Research in special-purpose materials. Report No. 5 on ATD work assignment No. 72 (Compilation of abstracts based on Soviet open literature pub. 1965), 2891 (AD-648211)
Resource and environment impacts of electric cars in St. Louis and Philadelphia, 3266 (TEC-75/006c)
Scientific barriers in battery systems, 2974 (AD-777743)
Secondary aerospace batteries and battery materials: a bibliography, 1969 - 1974, 94 (N-77-16437)
Summary of patents on organic electrolyte batteries (Mostly primary, some are claimed reversible), 1413
Use of polymer materials in the storage battery industry, 3797
Water-free electrochemical cell (Patent), 3479

ELECTRIC BATTERIES/MATHEMATICAL MODELS
Battery analog, 2330
Development of stress--strain models for energy-storing systems, 423 (AD-752257)
General problems of electrochemical generators (''Functional variables''), 2599
Mathematical model of a lithium-water electrochemical power cell, 2159
Modeling, identification and control optimization of a satellite power system, 5161
Performance and failure mechanisms of secondary batteries, 1912 (AD-901015L)

ELECTRIC BATTERIES/MEETING
8th intersociety energy conversion engineering conference held at Philadelphia, Pennsylvania, August 13-17, 1973, 178

ELECTRIC BATTERIES/MEETINGS
1973 GSFC battery workshop, second day, 92 (N-75-17808)
1973 GSFC battery workshop, first day, 90 (N-75-15152)
AMU-ANL conference on direct energy conversion, Nov 4-5, 1963, 4974 (N-64-19826)
Battery Council International, 83rd Annual Convention (Phoenix, Arizona, April 26-28, 1971), 196
Energy workshop on electrochemistry. A report on discussion of energy-related basic research in electrochemistry, June 27-28, 1974. Final report, 119 (PB-240132)
Fast ion transport in solids, solid state batteries and devices. [Proceedings of the NATO-sponsored advanced study institute of fast ion transport in solids, solid state batteries and devices, Belgirate, Italy 5-15 September 1972], 182
GSFC battery workshop, 91 (N-75-16976)
IBMA 39th annual convention, 78 (CONF-7610115-)
International Symposium (5th) of the Joint Services Electrical Power Sources Committee, 1966 (Review of 38 papers on batteries, fuel cells, and thermal electricity), 55 (AD-801852)
International Power Sources Symposium (7th) held in Brighton, Sussex on 15-17 Sep 1970. Conference report, 47 (AD-718833)
International symposium (5th) of the Joint Services Electrical Power Sources Committee, 1966, 56 (AD-801852)
Performance forecast of selected static conversion devices. Meeting of Agard propulsion and energetics panel 29th, Liege, Belgium, June 12-16, 1967, 1760 (AD-671685)
Power sources. Volume 3 (39 papers; electric batteries, fuel cells, and solar cells), 205
Power sources conference (18th annual), held 19-21 May 1964. Proceedings, 36 (AD-696423)
Power sources conference (19th annual), held 18-20 May 1965. Proceedings, 38 (AD-696424)
Power sources conference (21st annual) held 16-18 May 1967. Proceedings, 40 (AD-696426)
Power sources conference (22nd annual) held 14-16 May 1968. Proceedings, 41 (AD-696427)
Power sources conference (23rd annual) held 20-22 May 1969. Proceedings, 42 (AD-696428)
Power sources 2. Research and development in non-mechanical electrical power sources. Proceedings of the 6th international symposium held at Brighton, September 1968 (Brighton, England), 206
Power sources 5. Research and development in non-mechanical electrical power sources. Proceedings of the 9th international symposium held at Brighton, England, September 1974 (Electric power sources other than rotating machinery), 146
Proc. 16. Annual Power Sources Conference, 22-24 May 1962; Army Electronic Command, Fort Monmouth, NJ, 87 (N-70-72939)
Proceedings of the 18th annual power sources conference; Army Electronics Command, Fort Monmouth, NJ, 88 (N-70-73385)
Proceedings, 14th Annual Power Sources Conference, 17-19 May 1960, Fort Monmouth, NJ, 23 (AD-607425)
Proceedings, 15th Annual Power Sources Conference, 9-11 May 1961, Fort Monmouth, NJ, 7 (AD-421601)
Proceedings, 16th Annual Power Sources Conference, 22-24 May 1962, Fort Monmouth, NJ, 33 (AD-696421)
Proceedings, 17th Annual Power Sources Conference, 21-23 May 1963, Fort Monmouth, NJ, 34 (AD-696422)
Proceedings, 18th Annual Power Sources Conference, 19-21 May 1964, Fort Monmouth, NJ, 35 (AD-696423)
Proceedings, 19th Annual Power Sources Conference, 18-20 May 1965, Fort Monmouth, NJ, 37 (AD-696424)
Proceedings, 20th Annual Power Sources Conference, 24-26 May 1966, Fort Monmouth, NJ, 39 (AD-696425)
Proceedings of 14th annual power sources conference, 17-19 May 1960, 4830 (AD-607425)
Proceedings of 17th annual power sources conference held 21-23 May 1963, 4835 (AD-696422)
Proceedings of the second international electric vehicle symposium, Atlantic City, NJ, 8-10 Nov 1971, 5222
Proceedings of the symposium and workshop on advanced battery research and design, March 22-24, 1976 (Held at ANL), 71 (ANL-76-8)
Space power systems: energy storage (6th Esro Summer School, Noordwijk, Netherlands, 1968), 86 (N-70-26430)
Tenth intersociety energy conversion engineering conference, Newark, Delaware, August 18-22, 1975, 142
Workshop proceedings on ceramics for energy applications, 77 (CONF-751194-)

ELECTRIC BATTERIES/MEMBRANES
Poly(vinylidene fluoride) membranes with fine pores (PATENT), 3870

ELECTRIC BATTERIES/MONITORING
Battery monitoring system on bottom, 3275
Digital amp-hour monitor (Patent application), 3147 (AD-D-003476)
Discharge monitoring media and system of automatic charging of alkali storage batteries, 4702 (AD-638870)
Use of electrochemical devices for control and monitoring of chemical current sources, 2220

ELECTRIC BATTERIES/NONRADIOACTIVE WASTE DISPOSAL
Assessment of industrial hazardous waste practices, storage and primary batteries industries. Final report, Apr-Sep 1974, 725 (PB-241204)

ELECTRIC BATTERIES/OFF-PEAK ENERGY STORAGE
Electrolytic and electronic processes (Further development of fuel cell and electrochemical storage technology needed), 133

ELECTRIC BATTERIES/ON-LINE MEASUREMENT SYSTEMS
Computer use in automatic data acquisition systems for battery testing, 2461

ELECTRIC BATTERIES/OPERATION
Batteries for inner space (General description of status in underground mining), 2038 (CONF-711156-)
Batteries in Diesel service, 2751
Control of the discharge state of a battery at varying discharge currents, 2268

Extending the battery discharge time by dc converters in miniature motor drives, 2336
How to get longer life from motive power batteries, 2192
How to replace standby storage batteries without service interruption, 2731
Lead dioxide cell containing various electrolytes, 1617
Low-temperature operation of batteries. Final report, 15 May 1962-14 Jul 1964, 1648 (AD-451940)
Modern cells and batteries used in communications equipment, 2713
Motive power batteries (Necessity for prompt action in event of malfunction), 2259
Operation and service manual for spacecraft battery balancing unit 52E230131, 3047 (AD-857146)
Operation of electronic components under severe hydrostatic pressures (part 2). Progress report No. 2 (Up to 10,000 and 30,000 psi), 1660 (AD-459150)
Operation of electronic components under severe hydrostatic pressure (part 1 of 2). Progress report No. 1, 1661 (AD-459153)
Protecting rechargeable batteries against abusive deep discharging, 2548
Review of the U. S. Army random-access discrete-address system program and the Martin Company design plan. Part I (Tactical communications), 1864 (AD-828639)
Seventeen ways to cut cost of operating storage batteries, 2736
Solid-state controlled battery-load simulator, 3027 (AD-837032)
Storage battery operation and maintenance, 2760
Storage battery operation and maintenance, 2761
Testing device for the discharge state of a battery (Patent), 3741

ELECTRIC BATTERIES/OPTIMIZATION
More performance from smaller package, 1519

ELECTRIC BATTERIES/OVERVOLTAGE
Applications of non-equilibrium thermodynamics to the theory of overvoltage, 2143
Thermodynamic considerations of the various contributions to overpotential. I and II, 2443

ELECTRIC BATTERIES/PACKINGS
Method of filling tubes of accumulator plates with active mass (Patent), 1058

ELECTRIC BATTERIES/PERFORMANCE
ABC's of small electric vehicles, 5105
Alkaline cell using a nickelic hydroxide cathode (Patent; $Ni(OH)_3$ cathode, catholyte containing $NaClO_3$ and KOH, analyte containing $Na_2S$ and KOH), 1080
Alkaline-$MnO_2$ battery. Quarterly report No. 7, 1 Nov 1963-31 Jan 1964, 1665 (AD-462026)
Analysis of high energy density batteries (Greater than 50 Whr/lb), 2555
Analysis of prime electrical power sources for space vehicles, 1643 (AD-448157)
Analytic representation of discharge characteristics of commercial secondary batteries (Peukert equation), 2606
ANL high-energy batteries for electric vehicles (Li/LiCl--KCl/S), 4922 (CONF-740215-1)
Application of solid electrolyte batteries to automotive propulsion, 5198
Approach to performance assessment and management of a large solar array/battery power system, 2370
Batteries for storage of wind-generated energy, 2074 (N-74-16757)
Batteries and fuel cells (48 references), 2438
Batteries for peaking generation, 4950 (CONF-740341-P1)
Batteries. 2. Virtues of gelled electrolyte, 2270
Batteries for energy storage, 5140
Batteries: for biotelemetry and other applications, 1751 (AD-654703)
Batteries for utility load leveling, 4953 (CONF-760469-3)
Batteries, 1116
Batteries for electric vehicles, 2039 (CONF-711166-)
Batteries for the '80s: the materials of energy storage, 831
Battery emergency lighting plant, 2654
Battery energy density raised by modern materials, 2264
Battery-powered automobile, 5174
Battery ratings (Performance and power rating methods), 2562
Battery selection for electric trucks, 5343
Candidate electrical power systems for space station, 2406
Capsulating energy systems for small submersibles, 2464
Cell equalization techniques. Final report, 1625 (AD-427070)
Characteristics affecting the operation of the UK 3 satellite battery, 1696 (AD-478910)
Charge transfer complexes as electrodes in solid state rechargeable batteries (Ag/AgRb iodide/P-12), 2348
Charge-transfer complexes and electrochemical cells - coal batteries (Effects of humidity), 1466
Charging of storage batteries, 2765
Comparison of solar-cell and battery-type power systems for spacecraft. Paper, 216
Computer simulation concept for a large solar array/battery power system, 2373
Contract end item detail specification (prime equipment). Part I. Performance/design and product confirmation requirements. Airborne data subsystem for Burner II space booster system, 1845 (AD-801811)
Contract end item detail specification. Part II. Product configuration and acceptance test requirements. Airborne data subsystem, 1846 (AD-801812)
dc power systems for aircraft, 2715
Design description of the power supply subsystem for the TD1/TD2 satellites, 2484
Development of lithium-sulfur cells for application to electric automobiles, 1306
Development of a battery status monitor. Final report, 2083 (N-75-12278)
Effect of cryogenic temperatures on various commercial batteries. Technical report, 1960 (AD-911451)
Effect of cryogenic temperatures on various commercial batteries. Technical report, 1961 (AD-911451)
Electric motor cars, 4832 (AD-615883)
Electric trucks show 98% availability (225- and 281-Ah batteries), 5347
Electrical power systems for the manned orbiting laboratory (Comparison of solar cells, fuel cells, and batteries and combinations), 1738 (AD-624668)
Electrochemical engineering of battery systems. Final report, 10 Nov 1971-9 Nov 1972 (Changes in diffusely reflected light from electrode monitor battery performance), 1970 (AD-914248)
Electrochemical sources of current today, 5207
Engineer design test of water-activated storage battery. Letter report No. 1 (final), Aug 1971-Sep 1973, 1969 (AD-913912L)
Exide introduces new high-power, low-displacement marine batteries (312 Ah at 1/2-h rate), 1579
Facility simulation model for advanced BMD systems. Volume IVA. Power module: user's manual. Final report, 2007 (AD-A-011227)
Fundamental limitation on low-temperature operation of electrolytic devices, 2531
Galvanic cells containing cathodes of iron-doped beta-alumina, 1231
Gravity field effects in zinc anode discharge in alkaline media, 2617
High power electrochemical systems (Developments in high-specific-power, high-specific-energy systems), 2390
Interdependence of the airlock module/orbital workshop thermal control and electrical power systems on Skylab, 2275
Introduction of the battery MK 53 Mod 1. Technical document (For torpedo propulsion), 1962 (AD-911812L)
Investigation of electrical power sources for missile-borne applications (1 to 10 kW), 1662 (AD-459406)
Lithium battery with inorganic electrolyte. Quarterly progress report No. 3, 1 May-31 Jul 1972, 543 (AD-907704)
Lithium/sulfur batteries for off-peak energy storage: a preliminary comparison of energy storage and peak power generation systems, 4856 (ANL-7958)
Low-temperature performance of 12- and 24-volt cranking motors and batteries for cold starting of Gray marine diesel engine model 64HN9, 1888 (AD-851418)
Measurements of quantities which change in battery performance and analysis, 1876 (AD-835219)
Midget batteries: power paths to new design, 2657
Modern electric battery locomotives and chargers for underground mining operations, 2641
More power for the battery (Technological advances and applications), 1206
New generation of propulsion batteries for mining locomotives in areas with explosive atmospheres, 2154
New rechargeable systems (Studies of electrodes, electrolytes, and separators for long-life, high-rate batteries), 1561
New secondary electrochemical systems (Mg/AgCl--Ag; Al/NiO-Ni; Mg/Ni), 4688
Nimbus B solar power supply. Paper (Ni--Cd battery charge control and performance under stress conditions) 2529
Operation of batteries at great ocean depths, 4664
Organic and molten salt electrolytes (Discussion of present problems with these electrolytes), 4533
Past and future electrochemical sources of electric energy, 2732
Performance forecast of selected static energy conversion devices, 4980 (N-68-28714)
Performance and failure mechanisms of secondary batteries, 1912 (AD-901015L)
Performance forecast of selected static conversion devices. Meeting of Agard propulsion and energetics panel 29th, Liege, Belgium, June 12-16, 1967, 1760 (AD-671685)
Performance ratings of secondary batteries, 2640
Portable batteries for built-in power sources (Ratings guide for designed-in use), 2738
Power system of the AEROS satellite, 4989 (N-72-31043)
Problems of the electric automobile state of the art in the field of light electric accumulator research, 2333
Proposals for further development of energy storage systems for electric road vehicles, 2149
Recent developments in batteries and voltaic cells, 5190
Recent developments in alkaline accumulators, 1583
Recent improvements in high performance secondary batteries for use on offshore platforms, 1105
Rechargeable cell having improved cadmium negative electrode and method of producing same (Patent), 3649
Reliability and quality assurance program. Quarterly status report No. 14, Jan-Mar 1966 (TVC battery), 1700 (AD-480956)
Research and investigation on satellite attitude control.

Part III. Power sources, 1677 (AD-469206)
Review of some modern power supplies, 499 (AD-843245)
Review of battery systems for electrically powered vehicles, 2527
Review of battery systems for electric vehicles, 5244
Satellite power-conditioning and control: summary of design possibilities, 4978 (N-68-18466)
Solid state energy storage device (Ag/$RbAg_4I_5$/C, 0.5 V, highly capacitive device, recyclable thousands of times), 1426
Solid-state electric batteries, 2450
Solution electric batteries (Completely exploit active mass), 1227
Some new refill cell systems (Mechanically or chemically rechargeable; fairly low output), 1432
Space power supply study. Final report (Comparison of solar cell/battery, fuel cell, fuel cell/battery, solar cell/battery/fuel cell, solar cell/fuel cell and radioisotope thermoelectric generators/battery; 300 and 600 W continuous power), 1761 (AD-672772)
Storage batteries for Diesel engine, 2711
Theoretical analysis of electrochemical energy conversion systems, 2604
Thin film galvanic cell with $RbAg_4I_5$ solid electrolyte (Te/RbAgu$I_5$/Ag), 2193
US Army type II geodetic satellites. Volume II. Appendix I, Sonotone battery data; Appendix II, solar panel data; Appendix III, thermal vacuum report; Appendix IV, thermal analysis; Appendix V, Bunker--Ramo random reports 4, 5, and 6. Final technical report, Nov 1964-Jun 1965, 1788 (AD-721646)
USAMERDC battery program: concepts and capabilities for electric propulsion, 5194
Zinc alkaline batteries (Patent; storage at 130°F), 1042

ELECTRIC BATTERIES/PERFORMANCE TESTING
Allis Chalmers ener/pak battery source for field flashing of ships service generators; qualification tests of, 1678 (AD-469242)
Astronautics flight proofing test report for telemetering battery, Yardney secondary type, missileborne, 1865 (AD-830943)
Astronautics flight proofing test report for telemetering battery, Cook secondary type, missileborne, 1868 (AD-832071)
Batteries, Eagle-Picher EP-975-WM acceleration and discharge load tests, 1847 (AD-802203)
Batteries power urban autos, 2197
Batteries power urban automs, 5076
Conceptual design of a Battery Energy Storage Test (BEST) facility, 3185 (EPRI-255(TR2))
Constant potential testing as a method of cell characterization and evaluation, 2290
Development program for solid electrolyte batteries. Interim report, 729 (PB-248326)
Electrical power requirements. Final report on material test procedure, 4838 (AD-719099)
Electrochemical instrumentation and cell evaluation. Final report, Feb-Aug 1966, 1857 (AD-816711L)
Engineering evaluation test report, cartridge, gas generator electronic battery, 1936 (AD-905944L)
Engineering evaluation test report: Destruct battery, 1910 (AD-900696L)
Evaluation of Gould-National Battery Company type ODX-77 SARGO II submarine main storage battery cells by the service life test. Technical report (Pb--Sb), 1939 (AD-906360L)
Evaluation of Gould type TLX-39B, Guppy I mod C (black oxide) submarine main storage battery cells by the '23-1' float-charge procedure. Final report, 1979 (AD-916361L)
Evaluation of studies of LN-7(R) rechargeable nonaqueous cells, 1921 (AD-903381L)
Evaluation program for secondary spacecraft cells. Annual report No. 9, 1826 (AD-762602)
Evaluation program for secondary spacecraft cells: cycle life test. Annual report, 2081 (N-74-26502)
Evaluation test report for Eagle Picher 250 ampere-hour battery, GD/A part No. 55-06102-1, 1883 (AD-847362)
Evaluation program for secondary spacecraft cells: acceptance test of C and D batteries, 5.0 ampere-hour sealed-calcium cells, 2052 (N-66-31896)
Failure analysis procedures for sealed cells, 2493
High energy density solid-state battery system, 2170
In-plant engineering test program, Engineering Development Laboratory/performance test (EDL/PT) report figure A 1288M launch control facility battery set. Final test report, 1850 (AD-805403)
National Battery Energy Storage Test (BEST) facility: conceptual design and cost estimate, 3184 (EPRI-255(TR1))
Production and acceptance testing of battery BA-494( )/U. Final report, 1 May-31 Dec 1965, 1694 (AD-478026)
Qualification test report for model specification S-133-111-1-4 and qualification supplement I thereof, battery, storage, launch control facility, 1631 (AD-436943)
Real-time simulation of loads for electric vehicle batteries, 4891 (CONF-711166-)
Secondary battery evaluation program (Ni/Cd, Ag/Cd, Ag/Zn), 2572
Selection of the parameters of an accumulator power plant for an electromobile, 5073

ELECTRIC BATTERIES/PHYSICAL RADIATION EFFECTS
Photoelectric power engineering, 2340

ELECTRIC BATTERIES/PLANNING
Accumulators for electric road vehicles, 5109
Applications and prospect of energy storage batteries (Goals, current developments, and prospects), 655 (CONF-760416-2)
Electric car-coming revolution (Status and prospects), 5268
Fundamental research on the selection of new electrochemical generators of medium power, 1033
Guide to batteries and battery development, 1156
How to determine industrial truck battery requirements, 5374
Impact of future use of electric cars in the Los Angeles region. Volume I. Executive summary and technical report. Final report, 5006 (PB-238877)
NASA objectives and the space power program, 767 (X-711-77-28)
Nonaqueous electrochemical term outlook (Li negative electrode: possibilities for making this type battery reversible), 963
Secondary batteries for load leveling (Technical and cost criteria), 4853 (ANL-76-8)
Survey of continuous sources of electrical power for under-ice propulsion of small submersibles. Part II. New high energy density systems, 596 (AD-A-037721)
Systematic battery conception for electric vehicles, 5110

ELECTRIC BATTERIES/PLATES
Current distribution and pH gradients in a model of a battery plate, 4418
Current distribution in storage battery plates with tubular components, 4608
Electroformed screens with controlled hole size for battery plaques (Fabrication), 4512
Filling of battery plate tubules with active mass (Patent), 1055
Formation of battery plates (Patent; 20 to 100 times the usual formation current), 3469
Influence of conductivity and porosity on the behavior of the iron plate in an alkaline storage cell (Effects of introducing As, Sb, Ni, Cd, or Sn), 4157
Manufacture of battery plates (Patent; production of enveloped plates), 3276
Methods for mounting battery plates (Patent), 918
Oldham ''Pg'' battery (PVC-glass fiber plate), 4740
Perforated substrate for pressed battery plates (Patent), 3612
Recent patents on electric batteries (Alkaline types), 4758

ELECTRIC BATTERIES/POWER
Study of motive power of storage batteries, 2770

ELECTRIC BATTERIES/PRESSURE MEASUREMENT
New technique for measuring internal pressure of sealed electrochemical cells, 2525

ELECTRIC BATTERIES/PRESSURE RELEASE
Battery construction capable of safely venting internal pressure (Patent), 3745

ELECTRIC BATTERIES/PRODUCTION
Battery construction (Patent), 796
Current-drawing part of a galvanic element and method for its production (Patent), 878
How manufacturers of storage batteries overcome tough insulation problems (Electrical and thermal insulation) 1590
Latest trend in the battery manufacturing field in Japan, 1407
Manufacture. Radiation gage regulates paste dispensing, 4717
New Mc-type battery goes into production (285 to 710 Ah, 3.42 to 35.78 kWh), 1594
Possibilities for increasing the technical level and specific weight and volumetric electrical rating characteristics of chemical sources of current (Lead--acid, nickel--cadmium, silver--zinc), 439 (AD-777665)
SLIG Buyer's Guide, 1977. Starting, lighting, ignition, and generating systems, 824
Special automatic equipment in new storage battery plant, 1588

ELECTRIC BATTERIES/RADIATION EFFECTS
Radiation effects on batteries: an annotated bibliography, 1708 (AD-487015)

ELECTRIC BATTERIES/RELIABILITY
Certain questions concerning the reliability of multiple element chemical current sources, 1819 (AD-754725)
Energy source requirements for reliable circuitry. Scientific report, 2861 (AD-613692)
Experience in estimating the reliability of power supply systems using renewable sources of energy by means of bimodal distribution curves, 2185

ELECTRIC BATTERIES/REPAIR
Do you have proper tools for battery maintenance and repair, 2689
Don't guess on storage battery repair, 2722
Follow these tips for your storage battery repairs, 2698
Shortcuts in battery repair, 2678
Storage batteries (operation, tecnical servicing, and repair) (Handbook for battery repair and organization of personnel), 1811 (AD-742012)

ELECTRIC BATTERIES/RESEARCH PROGRAMS
Batteries: today and tomorrow, 131
Battery development makes good progress, 125
Battery research (Institute for Defense Analyses, Arlington, VA), 251 (AD-428659)

Development of electric vehicles in Japan, 5251
Electric power systems: C-3 energy storage, transmission and distribution, electric power apparatus and systems, 751 (TID-26756)
Electrical power sources communications and special equipment for Canadian forces; batteries for Canadian satellites. Quarterly progress notes, 1 Apr-30 Jun 1973, 550 (AD-912804)
Electrical power sources communications and special equipment for Canadian forces; batteries for Canadian satellites. Quarterly progress notes, 1 Jul-30 Sep 1973, 558 (AD-915962)
Electrical Power Sources Division. Quarterly progress notes, 1 October 1974-31 December 1974 (Lead-acid and nickel-cadmium batteries; fuel cells), 740 (PD-18289)
Electrical Power Sources Division, quarterly progress notes, 1 July 1975-30 September 1975, 602 (ADB-008547)
Electrical Power Sources Division, quarterly progress notes, 1 April 1975-30 June 1975, 601 (ADB-007328)
Electrical Power Sources Division quarterly progress notes, 1 January 1976-31 March 1976, 600 (AD-B-013277)
Electrochemical power sources, 3112 (AD/A-001610)
Electrochemistry program at USAECOM, 1367
Fundamental battery studies. Quarterly progress report No. 8, 285 (AD-471988)
Fundamental battery studies. Quarterly report No. 9, 1 Dec 1948-1 Mar 1949, 286 (AD-471989)
Improved batteries. Quarterly report No. 11, 15 Dec 1948-15 Mar 1949 (Ohio State Univ.), 308 (AD-499477)
Independent research, 1975. Final report (Naval Surface Weapons Center, Silver Spring, Md.), 69 (AD-A-015337)
Near term battery development projects, 4970 (ERDA-76-136)
Nimbus-D solar-conversion power supply subsystem. Quarterly technical report, 15 Dec 1968-15 Mar 1969, 4981 (N-69-32305)
Overview of ERDA battery program, 4969 (ERDA-76-136)
Project MALLARD. Communications plan and proposals for research and development. Volume IV. Technical background and constraints. Section 1, Annex A, Appendix 16, power sources. Final report on Phase 1, 58 (AD-812841L)
Quarterly progress notes, 1 Apr-30 Jun 1973 (Defense Research Establishment, Ottawa), 551 (AD-912804)
Quarterly progress notes, 1 Jul 1973--30 Sep 1973 (Defence Research Establishment, Ottawa), 557 (AD-915962)
Quarterly progress notes, 1 July 1973-30 September 1973, 65 (AD-915962)
Quarterly progress notes, 1 July 1974-30 September 1974 (Power supplies for military applications and for satellites), 597 (AD-B-002753)
RCA's role in direct energy conversion (Solar cells, MHD, batteries, and thermionics), 679 (N-64-19376)
Research and development of a high-capacity nonaqueous secondary battery. First quarterly report (P.R. Mallory and Co. Lab. for Physical Science), 680 (N-65-18935)
Research and development of a high-capacity, nonaqueous secondary battery. Second quarterly report (P.R. Mallory and Co. Lab. for Physical Science), 682 (N-65-36782)
Research and development of a capacity nonaqueous secondary battery. Fourth quarterly report, July-September 1965, 683 (N-66-15787)
Research group activity report for the period 1 Jan 1968-31 Mar 1969, 64 (AD-914449)
Research Institute of L'Hydro-Quebec, 200
Research Institute of L'Hydro-Quebec, 1409
Review 1969 (Defence Research Board, Ottawa), 523 (AD-868205)
Semiannual progress report No. 2, 1 January-30 June 1969 (U. S. Air Force Academy faculty research in many fields), 517 (AD-859743)
Some aspects of Japanese energy-conversion research and development, 48 (AD-739325)

ELECTRIC BATTERIES/RESISTORS
Electrochemical cell and safety resistor therefor (Patent; prevents high flash currents), 3516

ELECTRIC BATTERIES/REVIEWS
Airborne batteries. Special bibliography, 12 (AD-462695)
Anniversary issue on storage batteries, 235
Applied electrochemistry (Book in Russian), 167
Background material for the study of the national space power program (1964). Volume I. Electrochemical papers, 11 (AD-452617)
Batteries for energy conversion, 195
Batteries. Volume 1. Manganese dioxide (Book), 166
Batteries, 1545
Battery energy storage for utility load leveling and electric vehicles: a review of advanced secondary batteries, 143
Battery systems for electric cars (Brief summaries of present status of batteries with possible vehicular application), 2037 (CONF-691143-)
Battery technology. Packaging more muscle into less space, 2201
Candidate batteries for electric vehicles, 1363
Cells with organic solvents as sources of high energy density (Emphasis on Li batteries), 198
Developments in storage batteries in the past 10 years, 2499
Development of electrochemical power sources for electric vehicles, 4930 (CONF-740215-P1)
DOD research program for electrochemical science with applications to energy storage and conversion, 16 (AD-482433)
DOD Research program for electrochemical science with applications to energy storage and conversion (State-of-the-art), 25 (AD-635503)
DOD research program for electrochemical science with applications to energy storage and conversion, 17 (AD-482433)
Electric batteries according to recent patents, 227
Electric engine and its generators (Overview), 4847 (AD-912002L)
Electrochemical sources of pulse power, 59 (AD-814508)
Electrochemical storage and disposition of energy, 67 (AD-919015)
Electrochemical sources of electric power, 1616
Electrochemical power sources in ocean engineering, 2029 (AED-CONF-76-203-006)
Engineering application and current capabilities of secondary batteries and fuel cells, 61 (AD-855955L)
Fuel cells and batteries, 228
Fuel for thought (electrochemical energy) (Review with 15 references), 139
German electrical equipment (Mid-1940's), 239
High-temperature batteries (Recent developments in compact, powerful cells for electric-powered vehicles, etc.), 1443
It is still possible to invent an electrochemical generator, 1428
Lithium batteries: an overview. Technical note, 581 (AD-A-016643)
Molten salt batteries and fuel cells (156 references), 1369
New batteries are coming (Developmental projects; no refs), 1088
New electrochemical sources of energy, 442 (AD-779175)
New high-temperature batteries for storage and transportation of energy, 165
Organic-electrolyte, high-energy-density batteries: a status report, 351 (AD-644285)
Physics opportunities in electrochemical energy conversion, 1264
Primary and secondary galvanic cells: history and state-of-the-art summary, 29 (AD-671685)
Primary energy sources and conversion systems, 207
Problems concerning the application and developments of electrochemical power sources, 164
Prospects and scientific problems of the application of methods of direct electrical power acquisition from chemical fuels, 53 (AD-776734)
Prospects and scientific problems of application of the methods of direct energy conversion from chemical fuels into electricity, 174
Recent developments in nonconventional batteries based on nonaqueous electrolytes (Inorganic salts in organic solvents or ionic solids, cathodes containing Li or β alumina, high specific energy), 1254
Recent developments in advanced secondary batteries, 1115
Recent progress in batteries, 1416
Recent trends in the storage battery industry of Japan, 1319
Research and development in the field of batteries, 5095
Research trends in batteries and fuel cells with regard to future energy supplies (55 references), 141
Review of candidate batteries for electric vehicles (206 references), 5058
Review of the state of the art and future trends in electrochemical battery systems. I. The more common systems, 2 (AD-209301)
Review of the state of the art and future trends in electrochemical battery systems. II. Some new developments (Emphasis on dry and reserve cells (30 to 90 Wh/lb)), 3 (AD-209301)
Review of battery systems for electric vehicles, 5244
Secondary batteries with nonaqueous electrolytes. Present state and long-term outlook, 1106
Small-sized sources of current (Book), 51 (AD-746549)
Solid electrolyte electrochemical generators, 144
Solid electrolyte batteries (Early developments), 377 (AD-681199)
Solid electrolyte galvanic cells, 1450
Solid state batteries (Conduction mechanisms of solid crystalline compounds), 1233
Solid state battery systems (Ag/$RbAg_4I_5$/$RbI_3$ and Li/LiI(doped)/$PbI_2$), 183
Spaceborne sources of electric power, 177
Special purpose batteries (Li-based cells), 1249
State of development of modern electrochemical power sources. Technical importance and applications, 172
Static power sources, contemporary state and problems, 197
Storage batteries of tomorrow, 434 (AD-771753)
Storage batteries and rechargeable cell technology (Book) 163
Storage batteries, 148
Storage batteries. A general treatise on the physics and chemistry of secondary batteries and their engineering applications (Book), 234
Storage of high-grade energy (No references), 161
Study of standby fuel cell power systems. Final report,

30 Jun-30 Sep 1965, 14 (AD-477113L)
Survey of battery types and guide to their selection, 2598
Survey of electrochemical batteries (Aid to selecting optimum battery), 2597
Survey of power sources, 229
Utilization of energy. Storing energy: smoothing out the demand, 1220
ELECTRIC BATTERIES/SAFETY
Explosion-proof venting device for electrical storage batteries (Patent), 3954
New explosionproof electrical equipment and conditions for its use (Explosion proof gas filter to reduce $H_2$ concentration), 1310
Preliminary safety analysis of lithium batteries. Technical report, 2002 (AD/A-006149)
Research on safety of electric battery locomotives, 2661
Sparkfree chemical current sources (Short circuits produced no ignition of explosive mixtures), 2423
ELECTRIC BATTERIES/SCHOTTKY EFFECT
Speculation of the possibility of a battery or fuel cell based on ionic diffusion through a Schottky barrier (Metal-semiconductor barrier), 153
ELECTRIC BATTERIES/SEALS
Alkaline battery seal and protective coating comprising a fatty acidamide (Patent), 3484
Battery having deformations in a metal layer (Patent; avoids wrinkles occurring during fabrication), 864
Battery having polyamide hot melt adhesive seal (Patent), 3355
Bonding of two rubber or plastic components (Patent), 3869
Hermetic compression seals for alkaline batteries, 4295
Hints for sealing storage battery cells, 4761
Insulating seal for molten salt battery (Patent; LiF + filler for high-temperature batteries, fabrication), 3916
Insulating seal for molten salt battery (Patent), 3895
Jar-cover seals, 4385
Method for testing seals of electrical energy storage devices (Patent; effects of pressurization by O on potential), 3282
Sealing polypropylene or its copolymer components of storage batteries (Patent), 1391
ELECTRIC BATTERIES/SEDIMENTATION
Lead dioxide cell (Patent; $PbO_2$/Mg), 1163
ELECTRIC BATTERIES/SIMULATION
Electrochemical cell equivalent circuit for storage battery/power system calculations by digital computer, 2453
ELECTRIC BATTERIES/SIZE
Recommended voltages for industrial trucks, 5352
Watch that curve when selecting your batteries, 2703
ELECTRIC BATTERIES/SOLVENTS
Lithium battery with inorganic electrolyte. Quarterly progress report 1 Nov 1971-29 Feb 1972 (Study of phosphorus oxychlorides solvent for electrolyte), 2947 (AD-741351)
ELECTRIC BATTERIES/SPACECRAFT POWER SUPPLIES
Analysis of solar array/battery lock-up by computer simulation of electric power system performance, 194
Auxiliary power generating system for a large space laboratory (Solar cells, batteries, and SNAP-8 systems), 4975 (N-64-28373)
Design and performance of the TACSAT Power Subsystem, 1420
Electric power generation (Batteries, solar cells, thermoelectric and MHD generators, fuel cells, and thermionic converters for space vehicles), 4976 (N-64-32767)
Power systems, 213
Solar and chemical space power system potential, 1384
Spaceborne sources of electric power (Book, in Russian), 176
Spacecraft power (Solar cells, electric batteries, nuclear power, and radioisotope sources), 4985 (N-70-25235)
Survey of electric power plants for space application, 1486
ELECTRIC BATTERIES/SPACERS
Battery wedge for submarines or other installations, 3146 (AD-D-003275)
ELECTRIC BATTERIES/SPECIFICATIONS
Acceptance functional test requirements: Minuteman ground power and control equipment, 1713 (AD-490288)
Design specification for battery power supply A/E 24A-9, 260 (AD-444555)
Digest of military specifications, 270 (AD-458623)
Dry cells and storage batteries, 1582
Generator-battery systems, 1581
Model specification for storage battery, launch control system (S-133-111-1-10), 262 (AD-444969)
Performance requirements and test procedure: TPC-2A bias battery, 1752 (AD-658120)
Session on requirements for power sources: NASA, 1419
Solar charger kit: experimental, 4988 (N-72-19066)
Standard family of power sources for manpack equipments. Technical report, 385 (AD-687263)
Starting requirements of diesel engines on locomotives, 1606
ELECTRIC BATTERIES/STANDARDS
Battery industry standards and specifications, 4646
Law enforcement standards program: NILECJ standard for batteries for personal/portable transceivers, 2106 (PB-251594)
Secondary batteries (acid and alkaline). I, 2482
Specifications for dry cells and batteries. Seventh edition, 2646
Supply of electrochemical energy for the Bundeswehr. Standardization measures and test equipment at NATO and national levels, 1278
ELECTRIC BATTERIES/STORAGE
Battery storage and maintenance, 2727
Zinc anode battery (Patent; coating of 2,6-di-tert-butyl-p-cresol to extend shelf life and inhibit H evolution), 981
ELECTRIC BATTERIES/SWITCHES
Time delay cut-out for battery-operated equipment, 3232 (N-76-18352)
ELECTRIC BATTERIES/TABLES
Parameters of electrochemical cells, 223
ELECTRIC BATTERIES/TECHNOLOGY ASSESSMENT
Battery manufacture's point of view, 4923 (CONF-740215-P1)
Electric cars: present state of development and future prospects, 5152
Electric cars: energy storage and conversion, 5153
Future power sources for off-the-road vehicles, 4875 (CONF-691143-)
Systematic approach to the evolution of high performance electric vehicles, 4957 (CONF-770430-P4(Draft))
ELECTRIC BATTERIES/TEMPERATURE MEASUREMENT
Device for indicating the temperature of batteries (Patent), 3862
ELECTRIC BATTERIES/TEST FACILITIES
Automated charge-discharge facility for study of direct-current electrical power sources. Report for Oct 1965-Nov 1966, 358 (AD-660336)
Battery discharge load tester, part No. 1087705-503. Operation and service manual, 2983 (AD-801501)
ELECTRIC BATTERIES/TESTING
Air tests with 'B' batteries (Research to determine causes of battery damage during pocket air tests), 1753 (AD-660168)
Automatic charge-discharge device for testing storage batteries (12 to 24 V), 4352 (AD/A-005978)
Capabilities for testing primary and secondary batteries, 1701 (AD-481870)
Computer-operated facility for research testing of secondary batteries, 2362
Development of Battery Information Index (Battelle), 1866 (AD-831437)
Difference frequency coulometer, 1744 (AD-646903)
Evaluation program for secondary spacecraft cells. Initial evaluation tests of Gulton Industries, Incorporated 6.0 ampere-hour nickel-cadmium spacecraft cells for the San Marco spacecraft, 2084 (N-75-17788)
Examination of ELCA experimental nonaqueous electrochemical cells and batteries, 1879 (AD-838988)
Failure mechanisms and accelerated life tests for batteries, 1878 (AD-838775)
High-g testing of electronic components. Master's thesis, 1803 (AD-738907)
Instrumentation for use in storage battery studies, 2663
Investigations on storage batteries at -65°F. Quarterly progress report No. 6, 1 Dec 1947-1 Mar 1948, 1715 (AD-491583)
Investigations on storage batteries at -65°F. Quarterly progress report No. 7, 1 Mar-1 Jun 1948, 1716 (AD-491587)
Investigations on storage batteries at -65°F. Progress report No. 8 (final), 1 Sep 1946-1 Sep 1948, 1717 (AD-491591)
Low-discharge storage batteries shelf life test. Progress report, 1840 (AD-786549)
Quick easy test procedure to determine battery capacity, 2674
Seeing the invisible, 2659
Some observations on the prediction of the state of discharge of batteries, 2163
Survey and evaluation of electrical power sources as to their potential application with the 500-pound Controlled Airdrop Cargo System. Final report, 1903 (AD-877278)
Testing. Improved SAE battery cycling life test equipment, 2624
ELECTRIC BATTERIES/THERMAL CONDUCTIVITY
Thermal conductivity of sealed nickel--cadmium cells. Technical report, 1801 (AD-737519)
ELECTRIC BATTERIES/THERMAL INSULATION
High temperature battery package and a method of assembling same (Patent), 3992
ELECTRIC BATTERIES/THERMODYNAMIC PROPERTIES
Thermal phenomena in fuel cells and batteries, 2407
ELECTRIC BATTERIES/THERMODYNAMICS
Kinetics and irreversible thermodynamics of batteries and fuel cells. Technical note, 27 (AD-636056)
Kinetics and irreversible thermodynamics of batteries and fuel cells, 1742 (AD-636056)
Thermodynamic processes of electrochemical energy generation, 1415
ELECTRIC BATTERIES/USES
Assessment of the future of fuel cells and rechargeable batteries in rail traction, 5236
Battery--fuel cell system (For electric-powered trucks), 5281

Battery driven traction, 5301
Case for electric and fuel-cell powered vehicles, 5151
Comparative evaluation of power-system types of underseas applications, 5214
Current status of alternative automotive power systems and fuels. Volume IV. Electric and hybrid power systems, 5108 (EPA-460/3-74-013-d(Vol.4))
Designing with batteries (Outline of battery types and application to electronic circuits), 5314
Development of batteries for automobiles with electric propulsion, 4982 (N-69-34689)
Electrochemical heat engines for direct electric power generation and energy storage, 4972 (LA-UR-75-1360)
Electrochemical power sources for electric highway vehicles, 5005 (PB-216622)
Electrochemical car propulsion has arrived, 5123
Electrochemical sources of current today, 5207
Electrochemical future, 4893 (CONF-711166-)
Energy sources for marine technology, 5077
Future power sources for off-the-road vehicles, 4874 (CONF-691143-)
Impact of future use of electric cars in the Los Angeles region. Volume I. Executive summary and technical report, 4967 (EPA-460/3-74-020-a)
Improvised power supplies. Final report, June 1964 (For civil defense shelters), 4827 (AD-445845)
New forms of propulsion, for automotive vehicles, 5156
Noncommunication expendable jammer investigations. Volume 1. Power sources (Radar jamming), 4826 (AD-441993)
Power for Arctic research, 4829 (AD-484913L)
Power sources for electric cars. Technical report, 4834 (AD-666773)
Power supplies for ordnance fuzing, 4840 (AD-780028)
Prospects for electric vehicles. A study of low-pollution potential vehicles: electric (Batteries, fuel cells, and engine-generator-battery hybrids), 5000 (PB-193254)

ELECTRIC BATTERIES/VALVES
Valve for degassing secondary batteries (Patent), 3970

ELECTRIC BATTERIES/VENTS
Evaluation tests of alkaline vent caps, 3077 (AD-901747L)
Explosion-proof venting device for electrical storage batteries (Patent), 3954
Explosion-proof vent barrel for a battery (Patent), 3335
Pressure vent-sealed primary and secondary alkaline cells (Patent; thermoplastic, polyamides, silicone, etc.), 3320
Resealable vent for plastic battery case (Patent), 3385

ELECTRIC BATTERIES/VOLTAGE REGULATORS
Approach to optimum loading of a solar array which experiences temperature changes (Taper-current battery charge system), 3198 (N-69-19806)
Precision constant current/voltage load for battery studies, 4636
Regulated DC thyristor converter as a serial compensator of battery voltage, 4212
Small, ultrastable, transistor-regulated multivoltage power supply, 2850 (AD-601946)
Solar array regulators of Explorer satellites XII, XIV, XV, XVIII, XXI, XXVI, XXVIII, and Ariel I, 2784 (N+67-30026)

ELECTRIC BATTERIES/VOLTMETERS
Automotive battery voltage indicator for 12 volts, 3363

ELECTRIC BATTERIES/WASTE DISPOSAL
Battery reclamation and disposal practices, 1141

ELECTRIC BATTERIES/WASTE PROCESSING
Reclamation of storage battery residues, 4808
Use of cathodic antimony for the production of special alloys, 3808

ELECTRIC BATTERIES/WEIGHT
Batteries power urban automs, 5076
Equipment weight prediction methods - electrical, 259 (AD-442315L)
Nuclear power systems for spacecraft (Weights, sizes, and costs of nuclear and nonnuclear spacecraft power systems with references to mission duration), 201

ELECTRIC CABLES
See also SUPERCONDUCTING CABLES
Design, development, and testing of a cable assembly for use in severe electrochemical environments, 3265 (SC-DR-69-398)

ELECTRIC CABLES/FABRICATION
Aluminium battery cable (Patent), 3626
Use of Hysol US0009 polyurethane encapsulant in battery cables, 3264 (SAND-77-0411)

ELECTRIC CONDENSERS
See CAPACITORS

ELECTRIC GENERATORS
(Rotating generators only; excludes DIRECT ENERGY CONVERTERS.)
See also ALTERNATORS
TURBOGENERATORS

ELECTRIC GENERATORS/ELECTRODES
Swaged generator pole shoes conserve copper wire, 4783

ELECTRIC GENERATORS/INFORMATION
Homegrown energy: power for the home and homestead, 145

ELECTRIC GENERATORS/MEETINGS
Proceedings, 18th Annual Power Sources Conference, 19-21 May 1964, Fort Monmouth, NJ, 35 (AD-696423)
Proceedings, 20th Annual Power Sources Conference, 24-26 May 1966, Fort Monmouth, NJ, 39 (AD-696425)

ELECTRIC GENERATORS/USES
Improvised power supplies. Final report, June 1964 (For civil defense shelters), 4827 (AD-445845)

ELECTRIC MOTORS
See also SUPERCONDUCTING MOTORS

ELECTRIC MOTORS/CONTROL SYSTEMS
Pulse length modulators, 5253

ELECTRIC MOTORS/DESIGN
Parallel-connected motor drive for battery powered vehicles, 5106

ELECTRIC POWER
Battery, essential element of safe supplies (Battery as buffer between sensitive load and lines), 2332
IEEE Power Engineering Society papers. Energy development, 156

ELECTRIC POWER/ELECTROCHEMICAL CELLS
Electrolytic and electronic processes (Further development of fuel cell and electrochemical storage technology needed), 133

ELECTRIC POWER/FORECASTING
High intensity tactical power sources for the 1990 army. Final report (100 kW to multi-MW), 521 (AD-865063)

ELECTRIC POWER/LEAD-ACID BATTERIES
Lead acid storage batteries as standby power supply, 5313

ELECTRIC POWER/LOAD MANAGEMENT
Can lead-acid batteries shave utility peaks, 5056

ELECTRIC POWER/PLANNING
Power: problems and progress, 132

ELECTRIC POWER/RESEARCH PROGRAMS
Research Institute of L'Hydro-Quebec, 200
Research Institute of L'Hydro-Quebec, 1409

ELECTRIC RAILWAYS
See also ELECTRIC-POWERED VEHICLES
RAPID TRANSIT SYSTEMS
TRAINS

ELECTRIC RAILWAYS/ELECTRIC BATTERIES
Preliminary investigations of storage-battery locomotives: specifications. laboratory tests, permissible schedule, 4863 (BM-TP-264)

ELECTRIC UTILITIES
See PUBLIC UTILITIES

ELECTRICAL EQUIPMENT
See also CAPACITORS
DC TO DC CONVERTERS
ELECTROMAGNETS

ELECTRICAL EQUIPMENT/MAINTENANCE
Preventive maintenance: time and money saver, 2726

ELECTRICAL EQUIPMENT/REVIEWS
German electrical equipment (Mid-1940's), 239

ELECTRICITY/USES
Applications of electric power (Book in French), 236

ELECTRIC-POWERED VEHICLES
See also ELECTRIC RAILWAYS
, 5292
Applications of electric power (Book in French), 236
British industrial trucks, 5414
Current status of alternative automotive power systems and fuels. Volume IV. Electric and hybrid power systems, 5108 (EPA-460/3-74-013-d(Vol.4))
Description of battery-powered electric pallet truck for materials handling, 5344
Electric battery stacker ESH-182 (Description of fork-lift), 5305 (AD-530856)
Energy for road transport in the United Kingdom, 4966 (CONF-770430-P5(Draft))
Fork-lift truck (PF.100, light-weight model for use where extra weight is prohibited), 5351
Requirements of an electrochemical power source for a dual-mode urban transportation system (Trolley-type power or battery power), 5206
Shunting locomotives, 5417
Variety of plant trucks used to relay work through processing lines, 5386

ELECTRIC-POWERED VEHICLES/AIR POLLUTION
Impacts of electric car use in Los Angeles (Predicted impacts in 1980-2000), 2043 (CONF-7 1151-)

ELECTRIC-POWERED VEHICLES/BATTERY CHARGERS
Battery charging installation for overseas center in port of Hamburg, 4547
Battery charging and replacement station for multicell accumulators of battery-powered vehicles (Patent), 5078
Battery trucks in storehouse services (Stations for 10- and 30-cell batteries), 5372
Charging equipment for the auxiliary batteries of electric rolling stock, 4351
Electric trucks of the novel design and their possible uses, 5411
Road shock energy converter for charging vehicle batteries (Patent), 3288
Semiconducting charge-discharge devices for storage batteries, 4215 (AD-785970)

ELECTRIC-POWERED VEHICLES/BATTERY CHARGING
Ac drive electric vehicle, 5143
American Fork and Hoe Co. handles work by combination skid-lift-truck and tractor-trailer systems, 5413
Baker and Williams adopt pallet-fork-truck system to simplify warehouse handling (2000-lb capacity), 5395
Battery charge condition monitoring: techniques and applications, 4946 (CONF-740215-P2)
Charging process, 2040 (CONF-711166-)
Charging requirements of automotive propulsion-type batteries, 5267
End-of-run charging for metropolitan area electrically-powered buses, 4882 (CONF-691143-)

Method to operate multicell accumulators for battery-powered vehicles (Patent), 138
Multicelled batteries for battery-powered vehicles (Patent), 5079
Selecting battery charging methods, 2655
ELECTRIC-POWERED VEHICLES/BIBLIOGRAPHIES
Electric automobiles. A bibliography with abstracts. Report for 1964-September 1974 (Sixty citations), 4865 (COM-74-11573)
Electric automobiles (a bibliography with abstracts). Report for 1964-Jun 1975 (80 citations), 4993 (NTIS/PS-75/490)
Electric automobiles (citations from the NTIS data base). Report for 1964-Jun 1976 (99 citations with abstracts), 4994 (NTIS/PS-76/0560)
Electric automobiles (citations from the Engineering Index data base). Report for 1970-Jun 1976 (284 citations with abstracts), 4995 (NTIS/PS-76/0561)
Electric automobiles. A bibliography with abstracts. Report for 1964-November 1973, 4864 (COM-74-10101/5)
Electric automobiles. Volume 2. 1975-July 1977 (citations from the Engineering Index data base). Report for 1975-Jul 77, 116 (NTIS/PS-77/0637)
Electric drive for vehicles. Annotated bibliography from 1965 to 1968, 4841 (AD-877701)
ELECTRIC-POWERED VEHICLES/COMPARATIVE EVALUATIONS
Before you buy: check some lift truck truths, 5274
Challenge to diesel railcars, 5334
Comparison between a pick-up van with internal combustion engine and an electric pick-up van, 4932 (CONF-740215-P1)

Fuel cell - battery power sources for electric cars, 5280
Research on electric propulsion (U.S. Army programs), 5282
ELECTRIC-POWERED VEHICLES/HYDROGEN FUEL CELLS
Battery-power passenger cars, and van powered by fuel cell, 5287
City car with H--air fuel cell/lead battery (one year operating experiences) (33 kWh fuel cell battery and 25 kW peak power lead battery), 5210
Current developments in electric ground propulsion systems, research and development worldwide (Review, 40 references), 5128
General Motors looks to future, 5288
Hydrogen and the electric economy, 5216
Solid-electrolyte battery, particularly for the storage of electrical energy (Patent; also relevant to fuel cells), 776
ELECTRIC-POWERED VEHICLES/IMPACT TESTS
Experimental evaluation of the Mars II electric automobile supplementary barrier collision test, 4999 (PB-185183)
ELECTRIC-POWERED VEHICLES/INFORMATION
Homegrown energy: power for the home and homestead, 145
ELECTRIC-POWERED VEHICLES/INSPECTION
Bureau of Mines approval system as applied to permissible storage-battery locomotives (first complete investigation under Schedule 15), 4862 (BM-RI-2449)
ELECTRIC-POWERED VEHICLES/IRON-AIR BATTERIES
Development of an iron-air battery system for electric vehicles. Progress report, August 1, 1976-August 31, 1976, 753 (TID-27211)
High performance, rechargeable sintered iron electrodes. I. The effect of preparative methods and additives on the structure and performance of sintered iron electrodes, 3443
Iron-air battery systems for traction purposes, 1120
Performance of iron-air secondary cells under practical operation conditions, 1119
Procedure to stabilize an iron air battery (Patent; 100 Wh/kg, 20 to 40 W/kg, addition of sulfur-containing additive to electrolyte), 3286
ELECTRIC-POWERED VEHICLES/IRON-NICKEL BATTERIES
Accumulators for traction: new accumulators charging processes, 2326
Another chance for electrics, 5117
Batteries for electrocars, 2173
Batteries for battery-powered vehicles, 2448
Camden Refrigerating and Terminals Company applies pallet-fork-truck system to cold-storage rooms, 5357
Development of an alkaline nickel--iron storage battery for electromobiles (32 Wh/kg for 5 h discharge time, for trucks), 1113
Development of electrochemical power sources for electric traction, 820
Economic comparison of four electric power sources for forklift trucks, 2003 (AD/A-006479)
Nonlaminated nickel oxide electrode with plastic binder,

4569
Philblack plant of Phillips Chemical Company receives and ships in unit plallet loads, 5355
Pontiac parts warehouse shipments to G.M. parts warehouses now more than 75% palletized, 5368
Power Trucking handles all LCL ''floating freight'' in Southern Railway's Norfolk-Pinners Point terminals (42-cell A8 batteries), 5360
Principles of battery charging, 2746
Studebaker foundry's industrial trucking system is modernized to keep pace with increased production, 5356
Traction batteries for existing and future electric road vehicles, 603 (AED-Conf-76-444-016)
Traction batteries for existing and future electric road vehicles, 819
Well-planned battery shop keeps walkie truck fleet on the go at Galion Iron Works, 2684

ELECTRIC-POWERED VEHICLES/LEAD-ACID BATTERIES
Accumulators for traction: new accumulators charging processes, 2326
Actual operating experience of lead-acid batteries for electric milk delivery cars, 5043
Actual service life and bench cycle life of lead-acid battery for electric vehicle use, 2247
Advanced batteries spur progress in electric cars, 5157
Batteries for ground transportation systems, 5193
Batteries for electric vehicles in western Europe, 2030 (ANL-76-8)
Batteries for battery-powered vehicles, 2448
Battery charge condition monitoring, 3962
Battery development in Japan, 4855 (ANL-76-8)
Battery powered jeep and van performance, 5042
Battery production handling methods, 1599
Candidate batteries for electric vehicles, 1363
Charge acceptance of the lead cell at various charging rates and temperatures, 2457
Charge acceptance characteristics of the lead-acid cell, 2041 (CONF-711166-)
Chloride unveils the ''Silent Rider'' (Battery-powered 50-passenger city bus), 5120
Choice and rational utilization of lead traction batteries, 5172
City car with H--air fuel cell/lead battery (one year operating experiences) (33 kWh fuel cell battery and 25 kW peak power lead battery), 5210
Clean transportation for new towns: DAIHATSU electric vehicles in the Senboku area, 5044
Cost and design study for electric vehicle lead-acid batteries, 640 (ANL-K-77-3621-1(Vol.1))
Current and future applications of lead batteries, 1157
Current developments in electric ground propulsion systems, research and development worldwide (Review, 40 references), 5128
Data and performance required of the lead acid battery by the electric vehicle designer, 5195
Design and cost study for development of lead-acid batteries suitable for electric vehicle propulsion. Final report, 641 (ANL-K-77-3624-1)
Development of high performance electric vehicles and support systems, 5217
Development of high performance electric vehicles and support systems (Replaceable battery packs), 5220
Development of the electric road vehicle, 5213
Development of electrochemical power sources for electric traction, 820
Discharge data of lead batteries and their influence on the optimization of the storage capacity of electric vehicles, 5160
Discharge data of lead batteries and their influence on the optimization of the storage capacity of electrical vehicles, 904 (N-76-14611)
Dynamic characterization of lead--acid batteries for vehicle applications, 2358
Economic comparison of four electric power sources for forklift trucks, 2003 (AD/A-006479)
Electric car and lead acid batteries (Two-man summer research study), 5228
Electric vehicles and lead storage batteries, 5134
Electric vehicle batteries: usage and abusage, 2042 (CONF-711166-)
Electrode of lead storage battery (Patent), 3593
Endurance tests of storage batteries for use in permissible mine locomotives, 2036 (BM-RI-2358)
Engineering analysis of thermal phenomena for lead-acid batteries during recharge processes, 2033 (ANL-77-24)
Fuel-cell/lead--acid-battery hybrid car, 5185
High power density bipolar lead-acid battery for electric vehicle propulsion, 5062
Investigation into the pulsed and steady discharge of lead acid batteries, using a thyristor chopper circuit (electric vehicles), 5163
Japanese lead-acid batteries: new technology and recent products, 2184
Laminar plate lead acid batteries for electric vehicles, 3169 (CONF-711166-)
Lead--acid battery research, 180
Lead-acid battery, 608 (ANL-76-8)
Lead batteries (citations from the NTIS data base). Report for 1964-May 1976, 109 (NTIS/PS-76/0549)
Lead batteries (citations from the Engineering Index data base). Report for 1970-May 1976, 110 (NTIS/PS-76/0550)
Limitations of present storage batteries and the chances of developing new systems, 1273
Modeling and testing of storage batteries, 2359
NEMO provides new look at ocean depths, 5230
New assault on battery vehicles, 5103
New battery state-of-charge indicator especially for use in electric vehicles, 3829
New generation of combination locomotives for underground mining (Description of locomotives using overhead power or batteries as desired), 5072
New lead-acid batteries for electric vehicles and approach to their evaluation method, 74 (CONF-740215-P1)
No assault on lead-acid battery until 1980, 5112
Optimization of the lead-acid battery for powering electric road vehicles, 818
Performance capabilities of electric highway vehicles utilizing lead acid batteries, 5201
Peripheric equipment for reducing maintenance of electric vehicle lead-acid batteries, 4955 (CONF-770430-P4(Draft))
Physical limits to modern storage batteries and the chances of the development of new systems, 1271
Principles of battery charging, 2746
Rapid charging of lead acid batteries (Roadside charging to increase range), 2360
Rapid charging batteries for electric propulsion systems (24-Ah Ni/Cd in 5 to 10 min, 190-Ah lead-acid in 20 to 30 min.), 2396
Research and future for lead-acid battery (Zn/air batteries for cars produce 60 to >100 Wh/lb), 5255
Review of battery systems for electrically powered vehicles, 2527
Role of small battery-powered stacker in materials handling, 5300
Simulation of lead-acid cells, 4940 (CONF-740215-P2)
Storage battery with electrodes of nonwoven fabric of lead fibers (Patent), 3505
Traction batteries for existing and future electric road vehicles, 603 (AED-Conf-76-444-016)
Traction batteries for existing and future electric road vehicles, 819
Understanding chargers for motive-power batteries: basic principles, 3285
Understanding chargers for motive-power batteries: optional features, 3277
Urban electrical vehicle, 5164
Vehicle storage battery cell (Patent; resilient plate supports), 830
X-ray diffraction, scanning electron microscopy study of separator failure, 3423

ELECTRIC-POWERED VEHICLES/LITHIUM-CHLORINE BATTERIES
Case for electric and fuel-cell powered vehicles, 5139
Corrosion and related problems in high-temperature cells, 1257
Description of lithium--chlorine molten electrolyte battery to be used in electric automobiles, 1493
Development of electrochemical energy storage unit for vehicle propulsion. Final technical report No. 3, 3 March 1966-30 June 1968 (Li-Al/LiCl-KCl/C, 355 to 550C, for vehicle with 200-mile range), 496 (AD-841130)
Economic comparison of four electric power sources for forklift trucks, 2003 (AD/A-006479)
Electrochemical vehicle powerplants (Review of GMC work on high-power and -energy density batteries), 1478
General Motors looks to future, 5288
Lithium-chlorine electrochemical energy storage system. Interim technical report, 13 December 1965-13 June 1966, 347 (AD-639302)
Lithium-chlorine electrochemical energy storage system. Final technical report, 13 December 1965-13 March 1967, 469 (AD-822442)
Rechargeable lithium-chlorine cell with mixed ionic molten salt electrolyte, 1235
Safety shell for retention and detoxication of chlorine released from metal--chlorine batteries, 3729
Studies on the lithium alloys--chlorine secondary battery, 2278
Transportation. 2. Two for the road (220 Wh/kg and 220 W/kg), 5176

ELECTRIC-POWERED VEHICLES/LITHIUM-SULFUR BATTERIES
Anode for a secondary, high-temperature electrochemical cell (Patent; Li/LiF-LiCl-KCl/$FeS_2$-$Li_2S$), 3456
Batteries for electrocars, 2173
Battery design and cell testing for electric-vehicle propulsion, 1103
Battery research sponsored by the U.S. Energy Research and Development Administration, 4952 (CONF-760112-1)
Cathode composition for electrochemical cell (Patent; Li/LiCl-KCl/FeS-$Cu_2S$), 3445
Ceramics in advanced batteries, 3170 (CONF-751194-)
Ceramics in lithium alloy/metal sulfide batteries, 3171 (CONF-751194-)
Characterization of porous Li-Al alloy electrodes, 2032 (ANL-76-8)
Comparison of U.S. and European high-temperature battery programs, 611 (ANL-76-8)
Corrosion and related problems in high-temperature cells, 1257
Current developments in electric ground propulsion systems, research and development worldwide (Review, 40 references), 5128
Design and testing of lithium/iron sulfide batteries for electric vehicle propulsion, 657 (CONF-760866-2)

Design and performance of Li-Al/iron sulfide cells for utility energy storage and electric vehicles, 656 (CONF-760617-3)
Design work on lithium-sulfur battery (and others), 647 (CONF-691143-)
Development of lithium/sulfur cells for application to electric automobiles, 1307
Development of high-energy batteries for electric vehicles. Progress report for the period July 1970-June 1971, 749 (TID-26731)
Development of lithium/metal sulfide batteries at Argonne National Laboratory: summary report for 1974, 606 (ANL-75-20)
Development of lithium/sulfur cells for application to electric automobiles, 1245
Development of high-energy batteries for electric vehicles. Progress report for the period February 1969-June 1970, 642 (APTD-1126)
Development of high-performance iron sulfide electrodes with porous current collector structures, 3790
Development of lithium/metal sulfide batteries at Argonne National Laboratory: summary report for 1975, 620 (ANL-76-45(Rev.))
Development of a compact, high-capacity $FeS_2$ electrode, 3463
Development of uncharged Li-Al/FeS/sub x/ cells, 892
Development status of lithium-silicon-iron sulfide load-leveling batteries ($Li_5Si/LiCl-KCl/FeS$ or $FeS_2$, 400°C), 893
Development of compact lithium/iron disulfide electrochemical cells ($Li_4Si/FeS_2$: 130 Wh/kg, 59 Wh/kg, 80 Ah, 77 cycles; Li-Al/$FeS_2$: 7800 h, 445 cycles; 425 to 500°C, KCl-LiCl electrolyte), 894
Development of lithium/metal sulfide batteries at Argonne National Laboratory: summary report, 1976 (Li-Al/LiCl-KCl/FeSorFeS$_2$, 400 to 450°C), 624 (ANL-77-18)
Effects of metal additives on the performance characteristics of lithium-aluminum alloy electrodes, 3176 (CONF-770531-4)
Electric vehicle performance with alternate batteries, 5064
Electrochemical cell assembled in discharged state (Patent; 3 to 13Ah), 881
Electrochemistry of lithium/metal sulfide and calcium/metal sulfide cells using molten salt electrolytes, 2044 (CONF-770531-1)
Electrode structure for electrical energy storage device, 3334
Engineering evaluation of solid transition-metal sulfide electrodes for use in high energy-density batteries, 3465
Evaluation of lithium/sulfur batteries for automobiles, 79 (DOT-TSC-OST-75-31)
High-performance batteries for off-peak energy storage and electric-vehicle propulsion. Progress report for the period January-June 1974, 635 (ANL-8109)
High-performance batteries for off-peak energy storage and electric-vehicle propulsion. Progress report for the period July-December 1974, 605 (ANL-75-1)
High-performance batteries for off-peak energy storage. Progress report, July-December 1973, 632 (ANL-8057)
High-performance batteries for off-peak energy storage and electric-vehicle propulsion. Progress report, January-June 1975, 607 (ANL-75-36)
High-performance batteries for off-peak energy storage and electric-vehicle propulsion. Progress report, July-December 1975, 617 (ANL-76-9)
High-performance batteries for off-peak energy storage and electric-vehicle propulsion. Progress report, January-March 1976 (Li-Al/LiCl-KCl/FeS or $FeS_2$; some work on $CaAl_2$, $Ca_2Si$, and Mg anodes and FeS, $Fe_3O_4$ and $FeS_2$ cathodes; ANL), 619 (ANL-76-35)
High-performance batteries for off-peak energy storage and electric-vehicle propulsion. Progress report, April-June 1976, 621 (ANL-76-81)
High-performance batteries for off-peak energy storage and electric-vehicle propulsion. Progress report for the period July-September 1976 (Li-Al/Kcl-LiCl/Fes or $FeS_2$; tests of Li/$TiS_2$, Na/$FeS_2$, and $CaMg_2$/FeS cells), 622 (ANL-76-98)
High-performance batteries for stationary energy storage and electric-vehicle propulsion. Progress report, October-December 1976, 623 (ANL-77-17)
High-performance batteries for stationary energy storage and electric-vehicle propulsion. Progress report, January-March 1977, 625 (ANL-77-35)
High power battery for American electric cars, 993
High temperature secondary batteries (Patent), 801
Impact of advanced batteries on electric power generation, 5138
Interelectrode separator for electrochemical cell, 3494
Lithium/metal - sulfur advanced batteries, 677 (ERDA-76-136)
Lithium power may put electric car in your future (3000-lb vehicle, 60 to 70 mph, lifetime of 3 to 5 years), 5114
Lithium requirements for high-energy lithium-aluminum/iron sulfide batteries for load-leveling and electric-vehicle applications, 3173 (CONF-760112-3)
Lithium/sulfur batteries for electric vehicle propulsion (Li halide electrolyte), 2408
Lithium/sulfur secondary cells, 2385
Lithium/sulfur batteries for electric vehicle propulsion, 2411
Lithium/sulfur cells and their potential for vehicle propulsion, 648 (CONF-691143-)
Materials corrosion in molten-salt lithium-sulfur cells, 1262
Materials development in the lithium-aluminum/iron sulfide battery program at Argonne National Laboratory, 3152 (ANL-76-8)
Metallic sulfide additives for positive electrode material within a secondary electrochemical cell (Patent; Fe sulfide electrode with sulfide additives of Co, Ni, Cu, Ce, Mn), 3366
Method of preparing electrodes with porous current collector structures and solid reactants for secondary electrochemical cells (Patent; Li-Al-Si/LiF-LiCl-KCl/$FeS_2$), 3457
Method of preparing a negative electrode including lithium alloy for use within a secondary electrochemical cell (Patent), 3478
Method of preparing an electrode material of lithium-aluminum alloy (Patent), 3429
Method of preparing a negative electrode including lithium alloy for use within a secondary electrochemical cell (Patent; Li-Al/KCl-LiCl/FeS), 3309
Method of preparing an electrochemical cell in uncharged state (Patent; cathode of Li sulfide, transition metal, and electrolytic salt), 811
Modeling approaches for molten-salt lithium/sulfide batteries, 616 (ANL-76-8)
Modular electrical energy storage device, 879
Modular electrical energy storage device (Patent; resilient body of compressed C fibers allows for differential thermal expansion), 829
Modular electrical energy storage device (Patent), 803
Need for development of high-energy batteries for electric automobiles, 4857 (ANL-8075)
Performance of lithium/iron sulfide cells, 1236
Performance characteristics of solid lithium-aluminum alloy electrodes, 3371
Research and development on a lithium-sulfur battery (Desired performance characteristics), 649 (CONF-710233-)
Review of electrode designs and fabrication techniques for lithium-aluminium/iron sulfide cells, 3466
Secondary alkali metal-chalcogen battereis in urban transportation, 5225
Transportation. 2. Two for the road (220 Wh/kg and 220 W/kg), 5176
Uncharged positive electrode composition (Patent), 3310

ELECTRIC-POWERED VEHICLES/LITHIUM-WATER-AIR BATTERIES
Lithium requirements for electric vehicles using lithium-water-air batteries, 5026 (UCRL-77440)
Lithium-water-air batteries for automotive energy, 5024 (UCRL-52000-75-9)
Researchers study new batteries, 2155
Summary of the lithium-air battery research program, 755 (UCID-17425)

ELECTRIC-POWERED VEHICLES/MAINTENANCE
Battery and electric industrial truck, 5398
Care and maintenance of electric vehicles, 4929 (CONF-740215-P1)
Easy maintenance schedule lowers costs of operating storage batteries, 2730
Fork truck efficiency tests show if corrections needed, 5345
How industrial trucks are maintained at E. B. Eddy Co., 5333
Industrial truck maintenance, 2719
Intra-plant transportation expedited by battery trucks, 5402
Parke, Davis' cure for truck breakdowns, 5322
Planned maintenance cuts truck costs, 5336
Preventive maintenance program for industrial trucks, 5335
Tin plate transportation (Materials handling with battery-powered trucks), 5396

ELECTRIC-POWERED VEHICLES/MANUFACTURING
EFP's current program (Electric Fuel Propulsion (EFP) Corporation), 4936 (CONF-740215-P2)
Electric vehicles: point of view of an automobile manufacturer, 4937 (CONF-740215-P2)
How to convert petrol-cars into electric cars, 4927 (CONF-740215-P1)

ELECTRIC-POWERED VEHICLES/MARKET
Ac drive electric vehicle, 5143
Industrial trucks: a status report on electrics in Europe, 4928 (CONF-740215-P1)
Integrating production electric vehicles into user fleets, 4933 (CONF-740215-P1)

ELECTRIC-POWERED VEHICLES/MATHEMATICAL MODELS
Analog computer study of the processes in the drive of a storage battery mine car using pulse control of the motors, 5125
Theoretical approach to electric battery vehicle performance, 4926 (CONF-740215-P1)

ELECTRIC-POWERED VEHICLES/MECHANICAL TESTS
Testing quality of mechanical handling equipment, 5349

ELECTRIC-POWERED VEHICLES/MECHANICAL TRANSMISSIONS
Electric- and hybrid-vehicle powertrain development, 4960 (CONF-770430-P4(Draft))
Electric-powered vehicle with infinitely variable speed transmission, 5052
Electrical cars: more push down under, 5048

Who needs electronics. Torque converters can do the job, 4945 (CONF-740215-P2)
ELECTRIC-POWERED VEHICLES/MEETINGS
International electric vehicle symposium, Phoenix, Arizona, 5-7 November 1969 (54 papers), 4866 (CONF-691143-)
International electric vehicle symposium, Atlantic City, New Jersey, 8-10 November 1971 (Fifty-five papers), 4892 (CONF-711166-)
NEREM 72 record, part 1: technical papers, 5191
Proceedings of the second international electric vehicle symposium, Atlantic City, NJ, 8-10 Nov 1971, 5222
Proceedings of the symposium on batteries for traction and propulsion, Columbus, Ohio, 7-8 Mar 1972, 5192
ELECTRIC-POWERED VEHICLES/METAL-GAS BATTERIES
Air-metal cell systems, 1434
Characteristics of metal-air systems, 1366
Control of generation of chlorine feed from chlorine hydrate for use in a metal chlorine electric energy storage device (Patent), 797
Electric vehicles: revival of 50-year old memory, 2534
Electrodes for iron-air secondary cells, 4275
Enclosed electrical energy storage device with halogen absorbing means (Patent; halogen oxidant), 1081
High-energy electrochemical couples. II. Gas electrodes in organic solvents (Li/air), 2894 (AD-653779)
Hydraulically rechargeable,depolarized metal--gas battery system, 2254
Iron-air battery bus could go further, 5102
Lead--oxygen dc power supply system (Patent application), 1133
Lead-oxygen dc power supply system having a closed loop oxygen and water system (Patent), 5050
Lithium-moist air battery. Final report, March 1966-July 1967, 473 (AD-823679)
Lithium-water-air battery: a new concept for automotive propulsion (Modified lithium--water battery, mechanically rechargeable), 754 (UCID-16751)
Lithium-water-air battery: a new concept for automotive propulsion, 764 (UCRL-51811)
Metal--air or metal--oxide secondary batteries, 1208
Metal halogen hydrate battery system (Patent; improved halogen hydrate forming and storage system), 833
Metals: key to battery-powered auto, 4490
Method for producing electrical energy with consumable aluminium anode (Patent; Al/chloride/Cl 135 W-hr/lb, 2 W-hr/in.$^3$), 961
Method of manufacturing a metal--air battery (Patent), 1147
New assault on battery vehicles, 5103
Problems of the electric automobile state of the art in the field of light electric accumulator research, 2333
Quiet automobiles of the future, 4848 (AD-915740L)
Rechargeable metal-air battery systems, 1359
Refuelable batteries, 1372
Research on electrochemical energy conversion systems. Semiannual research report No. 5, November 1967-May 1968, 505 (AD-846063)
Review of battery systems for electrically powered vehicles, 2527
System design implications of electric and hybrid vehicles, 5261
Zinc-bromine storage Battery for electric vehicles, 1118
ELECTRIC-POWERED VEHICLES/METAL-METAL OXIDE BATTERIES
Metal--air or metal--oxide secondary batteries, 1208
ELECTRIC-POWERED VEHICLES/METAL-NONMETAL BATTERIES
Ambient temperature electric vehicle batteries based on lithium and titanium disulfide, 5063
Calcium alloy as active material in secondary electrochemical cell ( Patent; Ca alloy/halide/oxides, sulfides), 3354
Calcium/iron sulfide secondary cells, 3177 (CONF-770531-5)
Characteristics of a tellurium-lithium/aluminum battery, 1396
Characteristics of a tellurium-lithium/aluminum battery, 1400
Commercial applications of advanced battery technology (Li/$NiF_2$ combined with Ni/Cd for electric cars), 5260
Compartmented electrode structure (Patent application), 3452
Development of high-specific-energy batteries for electric vehicles. Progress report, August 1973-January 1974 (Li--$FeS_2$ with lithium halide-containing electrolyte), 633 (ANL-8058)
Development of lithium/sulfur cells for application to electric automobiles, 653 (CONF-740805-7)
Development of electrochemical energy storage unit for vehicle propulsion. Final technical report, 30 June 1966-30 September 1967 (Li-Al/LiCl-KCl/C, 100 Wh/lb), 476 (AD-825167)
Development of electrochemical energy storage unit for vehicle propulsion. Final technical report, 3 March 1966-30 June 1968 (Li-Al/LiCl-KCl/C), 497 (AD-841130)
Electrical energy storage and intercalation chemistry, 865
Electrochemical cell with catalyzed acid peroxide electrolyte, 1194
Electrochemical vehicle powerplants (Review of GMC work on high-power and -energy density batteries), 1478
Electrochemistry of lithium/metal sulfide and calcium/metal sulfide cells using molten salt electrolytes, 2044 (CONF-770531-1)
Electrode structure for electrical energy storage device, 3334
Electrodes for use in zinc-halogen electrolytic cells and (or) batteries (Patent), 4307
Enclosed electrical energy storage device with halogen absorbing means (Patent; halogen oxidant), 1081
Engineering evaluation of solid transition-metal sulfide electrodes for use in high energy-density batteries, 3191 (LBL-5186)
Engineering evaluation of solid transition-metal sulfide electrodes for use in high energy-density batteries, 3465
ESB-Sohio Carb Tex/sup R/ molten salt cell, 1095
Evaluation of electrochemical energy storage systems for vehicle propulsion. Interim technical report, 3 March-3 December 1966 (Li alloys /LiCl--KCl/C, 100 Wh/lb possible), 353 (AD-653790)
High-energy battery program at Argonne National Laboratory (Li--Al/LiCl--KCl/$FeS_2$), 634 (ANL-8064)
High energy lithium battery system in electric vehicle propulsion (Li/$NiF_2$ and Ni/Cd in hybrid system), 5264
High-performance batteries for off-peak energy storage and electric-vehicle propulsion. Progress report, January-March 1976 (Li-Al/LiCl-KCl/FeS or $FeS_2$; some work on $CaAl_2$, $Ca_2Si$, and Mg anodes and FeS, $Fe_3O_4$ and $FeS_2$ cathodes; ANL), 619 (ANL-76-35)
Lithium/calcogen secondary cells for components in electric vehicular propulsion generating systems. Interim technical summary report No. 3, 23 May-22 November 1970, 533 (AD-880894)
Lithium/chalcogen secondary cells for components in electric vehicular-propulsion generating systems. Interim technical summary report No. 3, May 23-November 22, 1970 (Se-Tl and S-Tl mixtures, fabrication of paste electrolytes), 2035 (ANL-7777)
Lithium/chalcogen secondary cells for components in electric vehicular-propulsion generating systems. Interim technical summary report No. 4, November 23, 1970-May 22, 1971, 627 (ANL-7863)
Lithium/chalogen secondary cells for components in electric vehicular-propulsion generating systems. Interim technical summary report No. 5, May 23, 1971-November 11, 1971, 629 (ANL-7999)
Lithium/selenium secondary cells for components in electric vehicular-propulsion generating systems. First semiannual technical summary report, May 23-November 22, 1969, 2034 (ANL-7663)
Lithium/selenium secondary cells for components in electric vehicular propulsion generating systems. Interim technical summary report No. 2, 23 November 1969-22 May 1970, 532 (AD-876828)
Lithium/selenium secondary cells for components in electric vehicular-propulsion generating systems. Interim technical summary report No. 2, November 23, 1969-May 22, 1970, 626 (ANL-7745)
Lithium-water-air battery: a new concept for automotive propulsion (Modified lithium--water battery, mechanically rechargeable), 754 (UCID-16751)
Lockheed electric power source (Na or Li/$H_2O$), 2388
MARS II electric car (Pb/Co battery; 60 mph, 70 to 120 mi, recharged to 80 percent capacity in 46 min), 5265
Metal halogen hydrate battery system (Patent; improved halogen hydrate forming and storage system), 833
Method of preparing porous, active material for use in electrodes of secondary electrochemical cells (Patent application; carbonaceous matrices contain embedded active material), 3455
Molten salt electrochemical systems for battery applications (Patent: Al/$AlCl_3$-NaCl/S or I), 861
Organic electrolyte batteries (Lithium--nickel halide battery in parallel with nickel--cadmium battery), 2536
Porous carbonaceous electrode structure and method for secondary electrochemical cell (Patent), 3311
Production and engineering methods for Carb-Tek (trademark) batteries in fork lift trucks. Interim report, Jul 1973-Jan 1974 (Li--Al/KCl--LiCl/C), 443 (AD-780940)
Production and engineering methods for Carb-Tek (trade name) batteries in fork lift trucks. Final report, July 1973-December 1974, 574 (AD/A-006548)
Production and engineering methods for Carb-Tek (trade name) batteries in fork lift trucks. Interim report Sep 1974-Feb 1975, 584 (AD-A-018106)
Production and engineering methods for Carb-Tek (trade name) batteries in fork lift trucks. Interim report Mar 1975-Mar 1976, 591 (AD-A-035983)
Rechargeable calcium high-temperature cells, 2031 (ANL-76-8)
Secondary electrochemical cells with a chalogen cathode (Li/S or similar materials; patent), 3961
Secondary cells with lithium anodes and immobilized fused-salt electrolytes (Li/Bi and Li/Te), 2483
Sodium-sulfur type electric cell (Patent; cathode may also be P or Se, capable of complete recharging), 780
Solid sulfate electrolyte for batteries, 3885
ELECTRIC-POWERED VEHICLES/MOTOR VEHICLE ACCIDENTS
Safety shell for retention and detoxication of chlorine released from metal--chlorine batteries, 3729
ELECTRIC-POWERED VEHICLES/NICKEL-CADMIUM BATTERIES
Batteries for battery-powered vehicles, 2448
Battery charge condition monitoring, 3962
Battery-driven motor arrangement (Patent; design to

prevent hydrogen explosions), 887
Commercial applications of advanced battery technology ($Li/NiF_2$ combined with Ni/Cd for electric cars), 5260
Design of electric automobile employing nickel-cadmium batteries, 5249
High energy lithium battery system in electric vehicle propulsion ($Li/NiF_2$ and Ni/Cd in hybrid system), 5264
Modeling and testing of storage batteries, 2359
Nonlaminated nickel oxide electrode with plastic binder, 4569
Organic electrolyte batteries (Lithium--nickel halide battery in parallel with nickel--cadmium battery), 2536
Rapid charging batteries for electric propulsion systems (24-Ah Ni/Cd in 5 to 10 min, 190-Ah lead-acid in 20 to 30 min.), 2396
Review of battery systems for electrically powered vehicles, 2527
Storage battery cars of Oberhasli power plants, 2769
ELECTRIC-POWERED VEHICLES/NICKEL-ZINC BATTERIES
Advances in component technology for nickel-zinc cells (300 Ah, approaching 1000 deep cycles and $50/kWh; electrode testing in $Ni/H_2$ cells), 3464
Another chance for electrics, 5117
Batteries for ground transportation systems, 5193
Design and cost study of a zinc/nickel oxide battery for electric vehicle propulsion. Final report (6.4 V, 310 Ah, 1.98 kWh), 637 (ANL-K-76-3543-1)
Design and cost study of nickel-zinc batteries for electric vehicle. Final report, 636 (ANL-K-76-3541-1)
Develop nickel-zinc battery suitable for electric vehicle propulsion. Task A: design and cost study, 639 (ANL-K-77-3558-1)
Development and fabrication of large vented nickel-zinc cells. Final report (300 Ah), 712 (N-76-28642)
Electric vehicle performance with alternate batteries, 5064
Electric vehicle propulsion batteries: design and cost study for nickel/zinc battery manufacture. Task A, 638 (ANL-K-77-3542-1)
High energy nickel-zinc battery for electric vehicles, 5045
Impact of advanced batteries on electric power generation, 5138
Metals: key to battery-powered auto, 4490
New assault on battery vehicles, 5103
Nickel--zinc cells. Part 2, 2539
Nickel--zinc storage batteries as energy sources for electric vehicles, 5085
Rechargeable nickel-zinc cell with an auxiliary electrode, 1121
Researchers study new batteries, 2155
Super batteries for load leveling and electric vehicles, 799
Zinc electrodes for secondary batteries (Patent; Cd additive improves Zn adherence), 3299
Zinc-nickel oxide secondary battery, 1099
ELECTRIC-POWERED VEHICLES/OPERATION
Baker and Williams adopt pallet-fork-truck system to simplify warehouse handling (2000-lb capacity), 5395
Battery and electric industrial truck, 5398
Canada Steamship Lines extends unit-load handling to points of transshipment in water-rail services, 5365
Chloride unveils the "Silent Rider" (Battery-powered 50-passenger city bus), 5120
Elctric trucks relieve crane congestion, 5378
Electric trucks for parcel handling at S.N.C.F., 5346
Experience in the operation of electric loaders. Experience in mechanization of loading and unloading operations at points adjoining tracks of differing usage, 5302 (AD-474192)
Federal Bearings Co. Inc. complete five-year material-handling development program, 5363
Fred Rueping Leather Company speeds production by processing dress cattlehide in skid lots, 5385
Globe Machine and Stamping Co. eases manpower shortage by adoption of power trucking, 5420
Intra-plant transportation expedited by battery trucks, 5402
Materials handling (Types of trucks and use in handling glass, etc.), 5371
Materials handling at Hubbard accelerated by lift trucks, 5405
Mechanized equipment developed by the central design office of fittings (ISKBA) of the main administration of hoisting and conveying machinery manufacture (GUPTMASH) (Forklifts for materials handling), 5263 (AD-839186)
Miller Brewing Company adopts industrial trucking to meet demands of increased production (10-cell D4A Edison batteries), 5366
New pallet truck solves problem, 5377
Pennsylvania Railroad develops new electric trucking system for LCL freight at Chicago (24-cell A6 batteries, 30-cell A8 and D8 batteries), 5364
Philadelphia Steel and Wire handles 95% of receipts, 60% of shipments in unit loads (10-, 24-, and 30-cell C8 batteries), 5362
Plant-devised attachments speed handling of coiled wire, 5381
Post Office Department applied power trucking to handling of parcel post in Baltimore (10-cell, 12-V D6A Edison batteries of 450-Ah capacity), 5361
Report on reach truck, 5332
Severe grades, heavy loads feature industrial truck operations at Fred Medart Division, 5382
Textile Machine Works' industrial-trucking system is combination of simplicity and versatility, 5379
Timbering machine built by Maintenance Department of Hudson Coal Co. operates on battery power, 5367
Unmanned electric trolleys in practical service, 5317
ELECTRIC-POWERED VEHICLES/OPTIMIZATION
Power system components for battery electric vehicles, 5218
ELECTRIC-POWERED VEHICLES/PERFORMANCE
Ac drive electric vehicle, 5143
Batteries for practical electric cars, 5166
Battery development in Japan, 4855 (ANL-76-8)
Battery locomotive at Calverton Colliery, 5404
Battery powered electric buses, 4881 (CONF-691143-)
Battery vehicle fleet demands careful maintenance, 5037
Capabilities of the electric battery-powered multi-stop delivery vehicles today and in the future, 5203
DAIHATSU electric vehicles, 4895 (CONF-711166-)
Design, construction, and performance of approved type battery mining locomotives and factors governing their selection, 5327
Design and performance prediction for electric vehicles, 4884 (CONF-691143-)
Development of electrically powered vehicles, 4996 (PB-174982)
Electric car and lead acid batteries (Two-man summer research study), 5228
Electric mail delivery vans, 5092
Electric trucks show 98% availability (225- and 281-Ah batteries), 5347
Electric trucks in brick industry, 5388
Electric van for metropolitan service, 5170
Electric vehicles in commercial transport, 5060
Electric vehicle development in Japan, 4883 (CONF-691143-)
Electric vehicles and components (40 mph over 40 mile range), 5028
Electrobus: review of 9000 miles of city transit demonstrations, 5141
How to increase fork truck hoisting speeds (30- vs 36-V batteries), 5369
How to select right lift truck, 5337
Initial production test of truck, forklift, 2000-pound, electric-motor-driven, solid-rubber-tired. Final report, 13 Mar-26 Jun 1972, 4843 (AD-905126L)
Lucas Midi-bus to be evaluated in Manchester, 5080
MARS II electric car (Pb/Co battery; 60 mph, 70 to 120 mi, recharged to 80 percent capacity in 46 min), 5265
Optimum acceleration performance of an electric car and its storage-battery voltage in view of energy consumption for the run, 5162
Performance capabilities of electric highway vehicles utilizing lead acid batteries, 5201
Platform trucks for die handling, 5331
Post Office tries Lucas electrics, 5071
Progress on voltmobiles (2952-lb, 2-passenger car uses Pb-acid battery; 5850-lb, 4-passenger car uses Pb/Co battery), 5074
Research and development on a lithium-sulfur battery (Desired performance characteristics), 649 (CONF-710233-)
Ride: don't walk, 4901 (CONF-711166-)
Rivals of piston engine vie for automotive market, 5289
Selection, design, construction, and performance of approved type battery mining locomotives, 5316
Tin plate transportation (Materials handling with battery-powered trucks), 5396
Tires: effect of tire design on electric truck performance, 5342
Two industrial fork-lift trucks, 5354
University of Florida solar electric car, 2780
ELECTRIC-POWERED VEHICLES/PERFORMANCE TESTING
Actual operating experience of lead-acid batteries for electric milk delivery cars, 5043
Battery powered jeep and van performance, 5042
Case history and economic study of an electric commuter vehicle, 4908 (CONF-711166-)

New batteries use zinc-air couple, 2440
Rechargeable zinc electrochemical energy conversion device (Patent), 1204
Research and future for lead-acid battery (Zn/air batteries for cars produce 60 to >100 Wh/lb), 5255
System and method for operation of a metal-air secondary battery (Patent), 915
System design implications of electric and hybrid vehicles, 5261
Zinc--air batteries, 1495
Zinc--air batteries for traction and propulsion, 5197
Zinc-air battery systems, 1433
Zinc-air battery R and D shows promise, 2567
Zinc-air batteries, 652 (CONF-711166-)
Zinc-air batteries in vehicular applications, 4941 (CONF-740215-P2)
Zinc/air high energy density rechargeable energy storage system. Interim report, 6 January-6 May 1966 (10 kWh, 80 Wh/lb), 348 (AD-639609)
Zinc/air high-energy-density rechargeable energy storage system. Final report, 6 January-6 September 1966 (10 kWh, 83 Wh/lb), 470 (AD-822515)
Zinc electrodes for rechargeable zinc/air cells, 4193
Zinc electrodes for secondary batteries (Patent; Cd additive improves Zn adherence), 3299
ELECTRIC-POWERED VEHICLES/ZINC-CHLORINE BATTERIES
Another chance for electrics, 5117
Apparatus for circulating electrolyte around multi-section batteries (Patent), 792
Batteries comprising vented electrodes and method of using same (Patent), 3506
Batteries for practical electric cars, 5166
Batteries for electrocars, 2173
Chlorine electrodes in the zinc-chlorine battery system, 4207
Ev power sources: waiting for a superbattery, 1170
Impact of advanced batteries on electric power generation, 5138
Metal halogen hydrate battery system (Patent; improved halogen hydrate forming and storage system), 833
Performance of zinc chloride batteries, 75 (CONF-740215-P1)
Safety shell for retention and detoxication of chlorine released from metal--chlorine batteries, 3729
Super batteries for load leveling and electric vehicles, 799
System for improving charge efficiency of a zinc-

chloride battery, 815
Zinc--chloride battery: the missing link to a practical electric car (50 Wh/lb, 100,000 mile life), 5165
Zinc electrodes for secondary batteries (Patent; Cd additive improves Zn adherence), 3299
ELECTROCHEMICAL CELLS
See also ELECTRIC BATTERIES
FUEL CELLS
Electrochemical generators (Book), 157
Generators for the direct conversion of thermal and chemical energy into electrical. Volume I. Electrochemical generators (Book), 169
Past and future electrochemical sources of electric energy (Historical review), 1605
ELECTROCHEMICAL CELLS/AGING
Non-uniform aging of series-connected electrochemical cells and its suppression, 2324
ELECTROCHEMICAL CELLS/CATHODES
Hydrogen permeation studies (Suitability of V in lithium hydride cell), 4607
ELECTROCHEMICAL CELLS/CONTAINERS
Metal container for a galvanic alkali cell and method for its production (Patent), 3431
ELECTROCHEMICAL CELLS/DESIGN
Electrochemical heat engines for direct electric power generation and energy storage, 1117
Electrochemical cell with a zinc anode and alkaline electrolyte, 1333
ELECTROCHEMICAL CELLS/EFFICIENCY
Electrolytic and electronic processes (Further development of fuel cell and electrochemical storage technology needed), 133
ELECTROCHEMICAL CELLS/ELECTRIC POTENTIAL
Gibbs-Helmholtz equation and the EMF of galvanic cells. I. Inapplicability to liquid-liquid junction potentials, 2188
Gibbs-Helmholtz equation and the EMF of galvanic cells. II. Precision of its application to concentration cells, 2189
Potential distribution in local cells on corroding metals, 2177
ELECTROCHEMICAL CELLS/ELECTRODES
Diffusion electrode (Patent), 3519
Electrode for electrochemical cells (Patent; preparation of 2-layer electrode), 4258
Electrodes for electrochemical cells, comprising metal chlorides as active material (Patent), 4337
Metal electrodes containing acrylonitrile-butadiene-styrene copolymer binders (Patent; fabrication), 4262
Power cell (Patent, Ag/AgI/α-TeI/Te), 834
Procedure for fabricating electrodes for galvanic elements and accumulators using porous frameworks which are made surface conductive or designed with conducting inserts (Patent), 3510
ELECTROCHEMICAL CELLS/ELECTROLYTES
Application of oxidic and metallic protective layers on the solid electrolyte Th/sub 0.8/Y/sub 0.2/O/sub 1.9/, 3274 (ZfK-293)
Developments in application of oxygen-ion conducting solid electrolytes, 4458
Influence of the chemical reaction of the solid electrolyte material with liquid sodium on the electromotive force of solid electrolyte cells, 3273 (ZfK-292)
Migrational polarization in high-current density molten salt electrochemical devices, 658 (CONF-770531-6)
Power cell (Patent, Ag/AgI/α-TeI/Te), 834
Preparation of vacuum-deposited films on rubidium silver iodide, 4188
ELECTROCHEMICAL CELLS/ELECTROMOTIVE FORCE
Application of oxidic and metallic protective layers on the solid electrolyte Th/sub 0.8/Y/sub 0.2/O/sub 1.9/, 3274 (ZfK-293)
Influence of the chemical reaction of the solid electrolyte material with liquid sodium on the electromotive force of solid electrolyte cells, 3273 (ZfK-292)
ELECTROCHEMICAL CELLS/ENERGY STORAGE
Electrical storage of solar energy, 232
Energy storage for satellites, 5319
ELECTROCHEMICAL CELLS/LEAKS
Means for detecting and neutralizing leaks in electrochemical cells (Patent), 804
ELECTROCHEMICAL CELLS/OPERATION
Electrochemical heat engines for direct electric power generation and energy storage, 1117
ELECTROCHEMICAL CELLS/OVERVOLTAGE
Applications of non-equilibrium thermodynamics to the theory of overvoltage, 2143
ELECTROCHEMICAL CELLS/RESEARCH PROGRAMS
Batteries: today and tomorrow, 131
ELECTROCHEMICAL CELLS/REVIEWS
Electrochemical sources of electric power, 1616
New generators and electrochemical conversion of energy, 1368
Prospects and scientific problems of the application of methods of direct electrical power acquisition from chemical fuels, 53 (AD-776734)
Prospects and scientific problems of application of the methods of direct energy conversion from chemical fuels into electricity, 174
ELECTROCHEMICAL CELLS/SOLVENTS
Galvanic cells with molten bisulfate solvents (Ag/HgPt, apparent reversible operation), 1522
ELECTROCHEMICAL CELLS/SPECIFICATIONS
Primary element with negative zinc or magnesium electrode and a polyethylene glycolether as corrosion inhibitor (Patent), 872
ELECTROCHEMICAL CELLS/USES
Electrochemical heat engines for direct electric power generation and energy storage, 5088
ELECTROCHEMISTRY
Advances in electrochemistry and electrochemical engineering. Volume 8. Electrochemical engineering (Book), 2430
ELECTROCHEMISTRY/BIBLIOGRAPHIES
Electrochemical reactions at surfaces (a bibliography with abstracts). Report for 1964-Jul 1975, 104 (NTIS/PS-75/644)
ELECTROCHEMISTRY/INDEXES
Subject index of research reports, 20 (AD-499478)
ELECTROCHEMISTRY/MEETINGS
Electrochemical Society Spring meeting. Extended abstracts (Electrochemical Society Spring Meeting, Philadelphia, Pa., May 8-13, 1977), 128
Energy workshop on electrochemistry. A report on discussion of energy-related basic research in electrochemistry, June 27-28, 1974. Final report, 119 (PB-240132)
ELECTROCHEMISTRY/RESEARCH PROGRAMS
Independent research, 1975. Final report (Naval Surface Weapons Center, Silver Spring, Md.), 69 (AD-A-015337)
