*                                                                              *
*                    scale4.2  bulletin  board                                 *
*                    --------  --------  -----                                 *
*                                                                              *
*      welcome to the configuration controlled version of scale4.2.            *
*      any problems should be reported to kay martin at 4-9213.                *
*                                                                              *
*      updates that have been made from version 4.1 to 4.2 include:            *
*                                                                              *
*      nitawl:  parameter added to prevent exponent underflows for very        *
*      dilute resonance calculations on workstation.  (mrr 93-011)             *
*                                                                              *
*      nitawl:   corrected discrepancies in maximum fractional energy loss     *
*      of neutron in admixed moderator calculation and simpson rule            *
*      calculation of collision density as documented in "improved             *
*      calculation of flux shapes with the resonance shielding code            *
*      nitawl", by j. oppe, ecn-i--93-003.  affects all calculations.          *
*      impact will vary, but is insignificant for hydrogen-moderated           *
*      systems. (mrr 93-030)                                                   *
*                                                                              *
*      sas4:  added option of axial source profile input for both radial       *
*      and axial dose calculations. also added option idr = 2 for              *
*      estimation to point detectors from collisions in both top and           *
*      bottom halves of geometry.  (mrr 92-016)                                *
*                                                                              *
*      morse:  modifications made for compatibility with the new options in    *
*      sas4 (i.e., the axial source profile input option and                   *
*      the option idr = 2 for estimation to point detectors from collisions    *
*      in both top and bottom halves of geometry).  (mrr 92-016)               *
*                                                                              *
*      csas & keno-v.a:  error checking during input processing was added      *
*      so that these modules terminate with an error message if input          *
*      errors are encountered.  (mrr 93-013, 93-014, 93-015, 93-018)           *
*                                                                              *
*      keno-v.a:  corrections made for applying differential albedo            *
*      boundary conditions to supergrouped problems where global unit          *
*      contains only an array specification.  effect on keff is very large     *
*      for this type of problem.  (mrr 93-033)                                 *
*                                                                              *
*      keno-v.a:  corrected an error introduced with modification on may 24,   *
*      1993 (mrr 93-033). this error affected problems with mirror or          *
*      periodic boundary conditions and could cause problem to loop, fail,     *
*      or run incorrectly.                                                     *
*                                                                              *
*      xsdrnpm:  corrected calculation of number of direct access data         *
*      blocks needed to weight the cross sections to prevent occasional        *
*      failure.  improved calculation of balance tables.  (mrr 93-021)         *
*                                                                              *
*      origen-s:  modified program to read combined binary libraries that      *
*      include multi-cycle cross sections.  add option to edit binary          *
*      library.  (mrr 93-026)                                                  *
*                                                                              *
*      sas2:  modified to produce combined binary libraries for origen-s.      *
*      (mrr 93-027)                                                            *
*                                                                              *
*      couple:  modified to allow combined binary libraries to be made by      *
*      sas2.  (mrr 93-031)                                                     *
*                                                                              *
*      origen-s couple, sas2:  modified programs to accept the new updated     *
```

```
*      and expanded decay data and fission product yield libraries.  (mrr     *
*      92-088, 92-025, 92-026)                                                *
*                                                                             *
*      origen-s libraries:  the six standard origen-s card image libraries    *
*      have been replaced by two new libraries, end6dec and xsectpho.         *
*      end6dec contains the updated and expanded decay data library based     *
*      on endf/b-vi data.  xsectpho contains the basic cross section and      *
*      photon spectra data and updated fission product yield data based on    *
*      endf/b-v data.  (drr 92-006, 007, 008, 009, 010, and drr 93-001,       *
*      002, 003, 006, 008, 009)                                               *
*                                                                             *
*      std. comp. library:  in drr 92-033, the following nuclides were        *
*      changed to turn on resonance processing flag but should not have       *
*      been changed:  niss, fess, mnss, crss, niinconel, crinconel,           *
*      feinconel.  flags for these nuclides have now been returned to off.    *
*      (drr 93-014)                                                           *
*                                                                             *
*      heating7:  replaced heating6 with version 7.2.  (mrr 93-038)           *
*                                                                             *
*      htas1:  updated for compatibility with heating7 and to interact        *
*      effectively with ocular.  fin effectiveness technique was added.       *
*      (mrr 93-036)                                                           *
*                                                                             *
*      ocular:  made compatible with heating7 and htas1 on mainframe and      *
*      workstation.  (mrr 93-037)                                             *
*                                                                             *
*      sas2:  corrected so that 'parm=skipshipdata' would work on             *
*      workstation.  (mrr 93-051)                                             *
*                                                                             *
*      aim:  ft47ft001 is no longer require for aim to execute on             *
*      workstation.  (mrr 93-052)                                             *
*                                                                             *
*      27group, 27burnup, and 218group - these libraries have been            *
*      updated to correct an error found in the chlorine cross-sections.      *
*      (drr93-022)                                                            *
*                                                                             *
*      bonami:  corrected so that a case with a number density of zero        *
*      for a nuclide that has bondarenko data will run without failing.       *
*      (mrr 93-060)                                                           *
*                                                                             *
*      csas:  corrected calculation of dancoff correction factor for          *
*      cylindrical cells.  note that previous calculations of small           *
*      cylindrical cells (o.d. < 0.3 cm) gave non-conservative keff           *
*      values.  also corrected dancoff factor for multiregion slab            *
*      cell with vacuum boundary conditions to be set to zero.                *
*      (mrr 93-065)                                                           *
*                                                                             *
*      csas, sas1, sas2, sas3, sas4:  error in miplib was corrected.  for     *
*      resonance materials that are not part of the unit cell in lattice-     *
*      cell or multiregion problems, the dancoff factor defaulted  to -1.     *
*      check your nitawl output in any previous scale-4.2 calculations        *
*      for dancoff factors =-1.                                               *
*      (mrr 93-070)                                                           *
*                                                                             *

SAS2H Number Density Worksheet:

Number Density = (mass/assembly) / (volume) * (Na) / (Aw) * correction to 96% density for fresh fuel
Avogadro's Number [Na] 0.602252
Atomic Weight [Aw]

Volume= Pi X .468122 X .468122 X 360.172 X 208
= 51575.24014

SAS2H UO2 density=10.206
U mass=.464kg
UO2 mass= 526.38 kg
Correction to 96% density
1.030928
